ABBREVIATIONS

The titles of subjects, which are printed first in bold type, have been abbreviated within each article to the initial letter or letters.

ac., acre(s).
 agric., agricultural.
 ambas., ambassador(s).
 Amer., American.
 anot., ancient.
 ann., annual.
 arron., arrondissement.
 A.-S., Anglo-Saxon.
 A.V., Authorised Version.
 b., born.
 Biog. Dic., Biographical Dictionary.
 bor., borough.
 bp., birthplace.
 Brit., British.
 C., Centigrade.
 c., about.
 cap., capital.
 cf., compare.
 co., county.
 com., commune.
 cub. ft., cubic feet.
 d., died.
 Dan., Danish.
 dept., department.
 dist., district.
 div., division.
 E., east; eastern.
 eccles., ecclesiastical.
 ed., edition, edited.
 e.g., for example.
 Ency. Brit., Encyclopædia Britannica.
 Eng., English.
 estab., established; establishment.
 F., Fahrenheit.
 fl., flourished.
 fort. tn., fortified town.
 Fr., French.
 ft., feet.
 Ger., German.
 Gk., Greek.
 gov., government.
 Heb., Hebrew.
 hist., history.
 horticult., horticulture.
 h.p., horse-power.
 hr., hour.
 i.e., that is.
 in., inch(es).
 inhab., inhabitant(s).

is., island(s).
 It., Italian.
 Jap., Japanese.
 jour., journal.
 Lat., Latin.
 lat., latitude.
 lb., pound(s).
 l. b., left bank.
 long., longitude.
 m., mile(s).
 manuf., manufacture.
 min., minute(s).
 mrkt. tn., market town.
 MS., manuscript.
 mt., mount; mountain.
 N., north; northern.
 N.T., New Testament.
 O.E., Old English.
 O.F., Old French.
 O.T., Old Testament.
 oz., ounce(s).
 par., parish.
 parl., parliamentary.
 pop., population.
 prin., principal.
 prof., professor.
 prov., province; provincial.
 pub., published; publication.
 q.v., which see.
 R., riv., river.
 r. b., right bank.
 Rom., Roman.
 R.V., Revised Version.
 S., south; southern.
 sec., second(s).
 sev., several.
 Sp., Spanish.
 sp. gr., specific gravity.
 sq. m., square mile(s).
 temp., temperature.
 ter., territory.
 tn., town.
 trans., translated; translation.
 trib., tributary.
 univ., university.
 urb., urban.
 vil., village.
 vol., volume.
 W., west; western.
 Wm., William.
 yd., yard.

The article ABBREVIATIONS contains a list of those in general use. See also ABBREVIATION (music) and ELEMENTS (chemical symbols).

Jester, or **Gestour**, literally, a kind of minstrel or professional reciter of romances, 'gestes' (Lat. *gesta*) or legendary tales. Later 'geste' became a synonym for a witty tale or clever sally, and **gestour** meant a clownish wit, merry-andrew, or buffoon kept by great people for their amusement, in imitation of the king's 'court-fool.' This custom dates from very early times. Court Js. probably existed in England in Saxon times, Hiltard, fool of Edmund Ironside (d. c. 1016), being one of the earliest known. Gyles, fool of Wm. I., Will Somers, fool of Henry VIII., and Archie Armstrong, fool of James I., are all famous characters. In France, Thévenin de St. Leger (fourteenth century), Cailliet and Triboulet (fifteenth-sixteenth century), and Chicot (sixteenth century) are well known. As a court institution fools did not apparently outlive the Commonwealth in England. Dicky Pierce, the last jester fool, attached to Lord Suffolk's household, died in 1728. Court-fools are mentioned in the Sanskrit *Ramayana*; Philip of Macedon, Attila, Haroun-al-Raschid, and Montezuma all owned fools, and they flourished especially in the Middle Ages. The majority of professional Js. were by no means half-witted, at least not in later times, but merely assumed the cloak of folly which allowed of considerable licence of speech and behaviour. The traditional dress consists of parti-coloured garments, a fool's cap or hood with cockscorn, ass's ears, and bells, the sceptre (bauble or 'marotte'), and a large collar. See F. Douce, *Illustrations of Shakespeare*, 1839; J. Doran, *History of Court-Fools*, 1858; A. F. Nick, *Die Hof- und Volksnarren*, 1861; E. K. Chambers, *Medieval Stage*, 1903.

Jesuits' Bark, see **CLINCHONA**; **PERRUVIAN BARK**.

Jesuits, **The**. Popular name for the Society or Company of Jesus, a religious order of the Rom. Catholic Church, founded in 1534 by Ignatius Loyola (q.v.). The first object of the founder was work in the Holy Land, but the journey thither was made impossible by the Turkish war, and so the Spaniard renounced his first and cherished dream, and offered the services of his band to the pope in any capacity, but especially as missionaries. At this time the prestige and authority of the Papacy were gravely imperilled by the rapid secession of Protestant or Reformed churches, and in this way Loyola came to be intimately associated with what is called the Counter-Reformation. In 1540 he obtained the sanction of Pope Paul III. for the new rule of the Society of Jesus, and at Rome in the following year was elected as the first of its generals.

Loyola was a man of indomitable will and forceful personality, and in drawing

up the constitutions of the Society with his companions he used the greatest care and deliberation, with the result that they have undergone little change since they were finally adopted in 1558. In the training of a Jesuit, soon after his novitiate begins, thirty days are spent in meditation on the *Spiritual Exercises*, a manual which the founder himself composed; they are a systematic presentation of the truths of religion, arranged so as to appeal both to the head and the heart, and so to strengthen the will of the student and purify his motives in submission to God and love of Christ. The novitiate lasts two years, and then simple vows of poverty, chastity, and obedience are taken. Those who are to be priests then do two or three years of philosophy, five years teaching in one of the Society's schools, four years of theology, and, after an interval of several years they have another year of probation (tertianship). After the third year of theology the scholastic is ordained priest. The normal period of training is thus about thirteen years. Not all Js. proceed to solemn profession, which involves a fourth vow, of special obedience to the Pope to go on missions. The secular and menial offices of the Society are done by lay brothers, called temporal coadjutors, who also are bound by the three vows. There are no 'secret Jesuits.' The general is elected by the general congregation, in which each prov. is represented by the prov. and two elected fathers. He holds office for life, and is advised by a council of six assistants of various nationalities, whose recommendations, however, he is at liberty to disregard. The general commits the administration of the sev. provs. to chosen representatives, called provincials, and he also appoints the chief superiors of all novitiates, colleges, and professed houses or residences. A great deal of power is thus concentrated in the hands of the one man; but he cannot change the constitutions.

The main novelty of the new order lay in its abandonment of the daily office obligatory on all the older orders and also in complete centralisation. Thus it attained a flexibility hitherto unknown, which soon made itself felt in the Counter-Reformation, of which the Js. were the protagonists. The order spread rapidly over Italy, Spain, Portugal, France, Germany, the Netherlands, and sent subjects to England and Russia. In England its foothold was always insecure, owing to the penal laws against all Catholic priests. Its hist. may be divided into three periods, namely, the rise, the suppression, and the restoration. In his work of building up the Society and disseminating the new ideas and methods, Loyola was assisted by a band of eager disciples, including

James Lainez, Francis Xavier, Nicholas Bobadilla, and Francis Borgia, among his own countrymen; Simon Rodriguez, a Portuguese, and Peter le Fèvre, a native of Savoy. So successful was their work that on the celebration of its first centenary the order counted 13,112 members, dispersed over thirty-two provs. Moreover, Jesuit missionaries were sent to all corners of the earth, and wherever they went they carried with them learning and culture, besides the spiritual message of their Church. Thus they sent missions to China and Japan, Brazil and the Portuguese settlements in India, the Philippine Is., California, and Abyssinia, and not seldom suffered martyrdom. Their missions in Paraguay were particularly successful and have earned the praise of historians of all shades of opinion.

By the middle of the eighteenth century the J. were unpopular with all the sovereigns of Europe, and Portugal suppressed the J. by a royal decree in 1759; France and Spain soon followed her example. Finally, Pope Clement XIV., under pressure from the Bourbons and other sovereigns, and hoping thereby to gain their goodwill, issued his brief *Dominus ac Redemptor Noster*, by which the Society was suppressed throughout the world (1773); but it was not enforced by Catherine the Great in Russia, where the Society continued its activities. At this time there were 61 novitiates, 176 seminaries, 669 colleges, 359 residences and professed houses, and 275 missions in heathen countries; the membership was estimated at 22,500. The suppression, however, was only temporary; in 1814 Pope Pius VII. restored the J. everywhere, after having approved them locally in Russia (1801) and Naples (1804). The Society has never regained its former political influence, but its sphere of religious influence is greater than ever. Today only in Switzerland are the J. formally and by name forbidden to have estates. In England they worked in the sixteenth and seventeenth centuries under the shadow of the penal laws which imposed death on all Catholic priests. Since these were relaxed and all religious communities were tolerated they have estab. sev. houses—including Beaumont College (Old Windsor) and Stonyhurst College (Lancs.). The whole order numbers about 20,000, with 900 in England.

The causes which led to their universal expulsion in the eighteenth century were the activities of the Jansenists and other eccles. opponents, and to the civil powers, for their power and influence in new and distant lands (e.g. S. America) embroiled them in politics. And, moreover, the doctrine that the pope is Christ's vicar on earth, and therefore that the first duty of the true Catholic is complete obedience to his word in spiritual matters, was improperly stretched by some J. (and others) into the temporal domain. The lawfulness of tyrannicide was formally taught by only one Jesuit of eminence, Mariana, and so to teach was forbidden to members of the Society under severe penalties from about 1600. But from it arose their

actual or suspected complicity in a number of conspiracies and plots. They were believed to have had a hand in the Gunpowder Plot, in the formation of the Ligne de Guiso, in the revocation of the Edict of Nantes, and in the outbreak of the Thirty Years' war. It is clear that the govs. of Europe looked on the J. as a menace to the state; in particular, sovereigns were frightened by Jesuit opposition to the new-fangled doctrine of the 'divine right of kings.' Obedience was always a cardinal virtue of the J.; throughout every grade of the Society the word of a superior is law in all matters that are not sinful. The resulting solidarity of the body made it a further object of fear and suspicion to kings and to many lesser people, while its skill in casuistry was the chief ground of attack in Pascal's *Lettres Provinciales* (1622). And a certain tendency among some J. to use worldly and intellectual, rather than purely spiritual means of compassing a worthy end earned much dislike for them. It became a common impression that the J. taught that 'the end justifies the means,' though it is entirely unproved that any J. ever did so. The Society had no official connection with the Sp. (or other) Inquisition, and in some places (e.g., Paraguay) definitely opposed it. The self-devotion, enthusiasm, and, above all, the zeal for thorough and scientific education which members of the Society have continued for centuries to show cannot fail to impress the student, not only of hist., but of the more intimate field of human psychology, and to secure some measure of sincere admiration. Both the scientific works of its members and their conduct of boys' schools have been a very definite contribution to the world's intellectual progress. See *Rules of the Society of Jesus*, 1663; F. Parkman, *The Jesuits in North America*, 1868; T. Griesinger, *History of the Jesuits*, 1872; E. Taunton, *History of the Jesuits in England*, 1901; T. J. Jesuit Style, see BAROQUE.

Jesuit Christ. Our knowledge of the life of Christ depends entirely upon the canonical books of the Bible. References to Jesus in non-Christian historical literature of the first centuries are rare, and the chief of these, those of Philo and Josephus, have probably undergone Christian interpolation. Generally, however, the profane historians of the period show complete ignorance of the life of Christ. The apocryphal gospels which have come down to us consist of ridiculous legends without even the excuse of verisimilitude for their existence. Not a single fact with reference to the life of Jesus can be gained from them. Nor does the rest of early Christian literature furnish us with any certain knowledge beyond that which has received the imprimatur of the centuries. Turning, then, to the pages of the N.T., it

is in the epistles of St. Paul that we find the earliest references to the events of Christ's life. The references are incidental, being introduced on account of the lessons that may be drawn from the events referred to, rather than from any desire to insist upon the facts themselves. The Gospels were not composed as biographies, and no suggestion of a historical portrait of His appearance has ever been known. The earliest representations are purely symbolic. The earthly life of Jesus seemed then of less moment than the risen and ascended life in which all His members were sharing. It was not until certain heresies arose denying the true humanity of the Christ that the necessity for narratives of His life became clear. Even then nothing in the way of an ordered biography was produced. According to most modern Protestant authorities the first of the Gospels in point of date is that of St. Mark. Moderate criticism, which will be followed in this article, is willing to admit the Marcan authorship, and dates the Gospel shortly before the year A.D. 70; Dr. Adolf Harnack places it between 65 and 70. The Marcan narrative is the most vivid and shows fewer signs of religious decorum than do the later works. St. Mark, for instance, tells us of Christ's anger, compassion, and satisfaction, on more than one occasion, also of actions such as His groaning, embracing, and falling down. If we compare the parallel passages in St. Matthew and St. Luke we shall find that almost all of these are absent, with the notable exception of the agony. It is usual to follow the Marcan narrative, moreover, in regard to the chronology, as it is apparently less artificial than the others. It is now generally considered that the compilers of the First and Third Gospels made use of St. Mark's Gospel, and also of another source (generally spoken of as Q) which they had in common. St. Luke is accepted as the author of the Gospel which bears his name, and which is dated shortly after the year A.D. 70. Dr. Adolf von Harnack places it somewhat later, between 78 and 93. The question of the authorship and date of St. Matthew's Gospel is far more difficult, and no definite conclusions have yet been reached. Dr. Harnack dates it probably between 70 and 75. The last Gospel (see GOSPEL ACCORDING TO ST. JOHN) is obviously written from an entirely different point of view from that of the other gospels (called 'synoptic' because they give a similar view of Christ's life) and stands on a different plane. It appears to have been intended rather to supplement the other Gospels by giving information on Christ's work in Jerusalem, not recorded by them, and hence, except for two miracles and an account of the Passion, has little common ground with the others. Any attempt to appreciate its importance would be out of place here. St. Mark plunges immediately into the preparation for the ministry he is about to deal with, after the proclamation of his subject, 'the gospel of Jesus Christ the Son of God.' First John the Baptist is

introduced, and we hear his preaching of repentance and the warning of one who will follow him. Then Jesus comes from Nazareth; we hear His words, we see His actions. At first He is welcomed as a prophet, but soon His uncompromising propaganda of reform and His resolute attack on formalism brings suspicion and irritation. Then the political situation is gradually revealed, and we see how step by step, with eyes wide open, the great Teacher goes voluntarily to death—a death followed, however, by the supreme miracle of the resurrection, on which His Church was founded. It will be immediately noted how limited is the scope of St. Mark's Gospel, but some explanation of this is furnished by the passage in the Acts

W. F. Mansell

HEAD OF CHRIST, BY LEONARDO DA VINCI

which stated the requirements in candidates for the place in the apostolic band rendered vacant by the death of Judas Iscariot. Only those were eligible 'which have accompanied with us all the time that the Lord Jesus went in and went out among us, beginning from the baptism of John unto the day that He was received up from us, of these must one become a witness with us of His resurrection.' It will be seen that this period corresponds almost exactly with that covered by St. Mark's Gospel, and may well have been the substance of what an Apostle had to expound. Both the other synoptic evangelists felt that some information on the earlier life of our Lord was necessary, and tradition tells us that St. Luke's information was gathered from the Blessed Virgin herself. This renders possible a sketch of the life of Jesus as the Gospels tell it.

In the City of Nazareth in Galilee there lived a virgin named Mary, espoused to

Joseph, the carpenter, a righteous man of the family of David. To her came the Angel Gabriel with the message that she should conceive by the power of the Holy Ghost and not in the ordinary course of nature, and should bring forth a son Jesus, who should be called the Son of God. In due course this miracle came to pass, and Joseph was assured by a vision of his wife's great work. But as the time for the birth of the child drew near it became necessary for Joseph and Mary to travel to Bethlehem in Judaea, and here, in a stable, the child Jesus was born, and to Him came shepherds and Magi offering their worship. The visit of the Magi brought danger in its train, and almost immediately it became necessary for the Holy Family, after the circumcision of the child, to flee into Egypt. Here they remained until the death of Herod, when they returned and dwelt at Nazareth. It is not very easy to date all these events, but there is now general agreement that the popular chronology places the Nativity four years too late, and that the birth of Christ actually took place at least four years before that from which we date the commencement of the Christian era. The dogma of the Virgin Birth has naturally been a source of attack on the Christian faith from the beginning. It was early denied by the Gnostic heretics, but the Church then, as always, upheld this vital truth. Those who deny the *a priori* possibility of miracles are, of course, unable to accept it, but the Church shows no inclination to insist less on them. The mystery of the incarnation, clearly forming the very foundation of the belief in Christ's divinity. Only one other incident of Christ's childhood is told us, this again by St. Luke, the story of the finding of the boy Jesus in the Temple, listening to the instruction of the doctors. It is especially valuable because it testifies so clearly to the true humanity of the Christ, which has often been obscured by those anxious to lay stress on the truth of His divinity.

The apocryphal gospels show none of the delicate reticence of the canonical books. A certain number of them, such as the *Protoevangelion* and the *Gospel of the Infancy*, deal with the earlier parts of Christ's life, but the incidents recorded there are fantastic. Except for the single incidents referred to above, the canonical gospels preserve complete silence as to the life of Jesus at Nazareth. But from the reference which the men of Nazareth make to Him when He visits them in His ministry, 'Is not this the carpenter?' we may gather that during these years He quietly pursued the trade of Joseph. Then, after years spent in obscurity and humble labour, comes Christ's brief period of public ministry. Its exact length is uncertain. From the synoptic gospels we should gather that the ministry was almost entirely in Galilee, and that it lasted only one year. But the last Gospel relates only events which occurred in Judaea, and speaks of three passovers spent there. The beginning of the ministry of Jesus is closely connected with the preaching of John the Baptist. Jesus came to him for

baptism, as did those others whom his preaching had moved to repentance, and the Gospels are agreed that John bore witness of Jesus, of whom he declared himself to be merely the forerunner. The fact that Jesus came so far to seek the baptism of John seems to show that He had a close connection with John's work, and that it was as his successor that He would make His entry into public life. We do not know how long Jesus remained in the deserts of the lower Jordan, but during this period occurred the Temptation, when He was 'driven of the Spirit into the wilderness.' After this period of strong spiritual trial and, says St. Mark, 'after that John was delivered up,' i.e. thrown into prison by Herod, Jesus returned to Galilee, where His public ministry began. We hear of only one visit, and that an unsuccessful one, to His native city of Nazareth. Capernaum, called in Matt. ix. 1 'His own city,' seems to have been the city to which He most frequently returned. His ministry may well be divided into two kinds: a public ministry of preaching to the people, and the private work of teaching His disciples. The public ministry was at first carried out by teaching in the synagogue. This beginning of the preaching ministry was followed by a tour through Galilee. So far as we can say, no one of the addresses delivered by Jesus in the synagogue has been reported, and certainly none is given in its setting. But St. Luke gives us the text of the address at Nazareth from the prophet Isaiah, 'The Spirit of the Lord is upon me, because He anointed me to preach good tidings to the poor: He hath sent me to proclaim release to the captives, and recovering of sight to the blind, to set at liberty them that are bruised,' and he goes on to say that Jesus began His address with the words, 'To-day hath this scripture been fulfilled in your ears' (Luke iv. 21). From this it may be gathered that the promised kingdom of God was the main theme of Christ's discourse, and that He spoke as bearing good news and not as proclaiming a judgment, though the note of warning ever appears. Two things were required in those who heard Him—repentance and faith. Very particularly, too, was Christ's message addressed to the lower classes of Palestine. No one casually reading the Gospels can fail to be struck by the continual references to publicans and sinners, and this aspect of the Lord's preaching may well be summed up in His own words, which appear in all three of the synoptic gospels, 'I came not to call the righteous, but sinners to repentance.'

Though everywhere throughout the Gospels we see the tender love and sympathy of Christ for all that is good in man, it is easy at the present day to overlook the ascetic side. In this there was no shadow of a compromise: 'If any man will come after Me, let him take up his cross and follow Me.' The method of teaching of which Jesus made use in His public preaching was the common one—by means of parables. St. Mark says that 'with many such parables spake He

the word unto them, as they were able to hear it: and without a parable spake He not unto them' (iv. 34). Large numbers of the parables of Jesus are collected in the synoptic gospels, and all are of a homely kind, likely to be appreciated by people of all classes. No less important, however, than our Lord's public preaching ministry, the apparent success of which, if we may judge from the parable of the Sower and the preceding discourse, was very slight, was the work of instructing his disciples. The importance of this side of Christ's teaching work is shown, too, by the antithesis continually presented between the disciples and the multitudes. In St. Mark's Gospel we see this antithesis most clearly of all, and we see also the succession of attempts which Jesus makes to secure the requisite time and quiet for instructing His disciples. As the opposition of the religious authorities became more and more decided, Jesus appears to have withdrawn more and more from public life in order to devote Himself to this other work. It is possible that the excursion into Tyre and Sidon and the still more noteworthy expedition to Caesarea Philippi, which was the occasion of St. Peter's confession of Him as the Messiah and as son of God, were prompted by a desire to avoid His powerful enemies. The slow journey down to Jerusalem for the last Passover was also engaged chiefly in instruction, chiefly on the subject of His rapidly approaching death, of which the disciples still seemed completely ignorant. The depth of the tragedy of this ignorance, and the surest sign of their failure to rise as yet to the heights whither their Master called them, is shown well in St. Mark's vivid narrative.

Closely connected with our Lord's teaching work was His ministry of healing, and this comes into prominence at the beginning of the Galilean ministry with the casting out of an unclean spirit, and St. Mark's account shows that it was the miracle rather than the teaching that first struck them and brought with it a sense of power. Almost immediately afterwards we read how this work of healing was carried on even more widely in the district, when they had retired to Simon's house: 'At even, when the sun did set, they brought unto Him all that were sick and them that were possessed with devils. And all the city was gathered together at the door. And he healed many that were sick with divers diseases and cast out many devils' (i. 32-34). These are but a few of the numerous miracles recorded in the Gospels. Often, we have a large number of miracles disposed of in a group. On other occasions we have a more or less complete account, when certain peculiar circumstances or some discourse attached to the miracle render it more noteworthy. Thus we have the large class of miracles spoken of as casting out devils, where emphasis is laid upon the recognition of Jesus by the evil spirits, and His frequent command of silence. All these miracles are closely connected with the main narrative, and it is hardly reasonable to try to explain them

away as a late excrescence. The attack on the credibility of miracles has come during the last few centuries from many different quarters, and is based on an *a priori* dis-belief in their possibility, rather than an examination of the scriptural story. There may possibly be methods of scientifically explaining the way in which Christ's healing work was performed, but certainly this has not been done yet, and would not explain how Christ could have possessed such scientific knowledge by his ordinary human powers.

Christ's attitude towards the religious leaders of His time was almost entirely one of condemnation. The aim of these leaders was to secure a uniform observance of external rites, to secure the carrying out of the letter of the law even if the spirit had to be sacrificed. It is easy to misunderstand the point of Christ's judgment on them. He did not teach that they should be disregarded. What they commanded was to be observed and done, but their actions were not to be imitated. Here, again, in the question of the observance of the law, they are blamed not so much for their care of minute details as because they hypocritically allowed this care to usurp the care of weightier matters. Against one particular point in the Pharisaic formalism, the strict observance of the Sabbath day, Christ seems to have deliberately carried on a campaign, and it was His action in this respect that precipitated the conspiracy of the Pharisees and chief priests against Him. The summing up of Christ's teaching on this subject, the words, 'The Sabbath was made for man and not man for the Sabbath' (Mark ii. 27), may be taken as the essence of His whole teaching with regard to external observances. An equally sweeping generalisation is that with reference to the many washings, 'there is nothing from without the man, that going into him can defile him: but the things which proceed out of the man are those that defile the man' (Mark vii. 15).

So the leaders of the religious world took council with the Herodians (those Jews who formed a political party in support of the Idumean Herod) against Jesus, how they might put Him to death. A week before this, Jesus entered Jerusalem in triumph, as all three evangelists tell us, and thus, according to St. Matthew, a Messianic prophecy was fulfilled. The enthusiasm of the people on this occasion still further infuriated the religious leaders and His immediate death was resolved on. The week that followed was crowded with incidents. The nights were spent at Bethany and each day the little party went into Jerusalem. On the evening before the Passion occurs the Last Supper, the mystic feast of which the actions have been repeated by all Christian communities from that time till the present day in accordance with Christ's command to do this in remembrance of Him. Then follows the Agony in the Garden, and thus begins the story of the Passion. This story is narrated at considerable length by each of the four evangelists, and though

there are certain notable differences, especially in the account given by St. John, there is agreement in the main outline. All are agreed that it was by the treachery of Judas Iscariot, one of His own most intimate followers, that Jesus was betrayed, and that then He was tried in great haste. Before the Rom. governor it was the political aspect of the Messianic claim that was used against Him, and ultimately His condemnation was secured. Meanwhile, all the twelve had forsaken Him and fled, while Peter, the chief of the disciples, had actually denied his Master. The crucifixion must take place in haste, and the Christ is hurried to the hill called Golgotha. But He is too weak from exhaustion to bear His own cross, and in this He is aided by Simon of Cyrene. At Golgotha He is crucified, bearing over Him the title *King of the Jews*.

Finally the Evangelists conclude with an account of the burial, in a tomb guarded by Pilates' soldiers; then on the third day he rose again and they narrate the incidents of their life with Him. It is not the place here to enter into discussion of the doctrine of Atonement (*q.v.*), but it is necessary to point out that the work of Christ can hardly in any sense be said to have ended with the Crucifixion. Did we end the life of Christ at this point it would be a record of failure rather than of victory that we should have narrated, and the world would be left with no alternative but the most extreme pessimism. In a sense it would be true to call the earthly life of Jesus only a beginning. St. Luke for example, at the beginning of the Acts of the Apostles, speaks of his former treatise as being concerned with all that Jesus began both to do and to teach until the time that He was taken up. In this sense, the story of the life of Christ is still continuing, as He still works in His Church. That the whole key to the Gospels lies in the narration that the third day Christ rose again from the dead, and that in this He is but the first of mankind. It was the gospel of the Resurrection that the apostles went forth preaching as the Acts and the Epistles abundantly testify.

Complete bibliography is impossible. The Gospels themselves must ever form the ground-work and centre of any attempt to write the life of Christ. Tatian's *Diatessaron* was the first attempt to form a harmony of the four, and many such have been made since. Apart from such harmonies the first life of Christ is the *Vita Christi* of St. Bonaventura. The life of Christ by Renan (1863) is the work of a sceptic and unbeliever. Among the works of believers, see:

Jesus College, Cambridge, lies apart from, and to the N.E. of, most of the colleges of the unit. It was founded in 1496 by John Alcock, Bishop of Ely. Its site was previously occupied by a Benedictine nunnery dedicated to St. Radegund. The name first given to the college was 'The most blessed Virgin Mary, St. John the Evangelist, and the glorious Virgin Saint Radegund,' but the founder intended it to be known as J. C. He provided for a master and six fellows, but the foundation now consists of a master and sixteen fellows, with twenty scholarships or more. There are several other scholarships confined to the sons of the episcopalian clergy. Architecturally, Jesus is one of the most interesting colleges in Cambridge, for Alcock retained, and there still remains, a considerable part of the old buildings of the nunnery. The tower is retained; the bulk of the building is Early Eng., but there are Norman traces. The most famous name connected with the place is that of Cranmer. The college colours are red and black.

Jesus College, Oxford. This college has always had an interesting connection with Wales. Queen Elizabeth was its foundress in its charter of 1571, but Hugh ap Rice (Price), a native of Brecon, endowed it. The original foundation was for a principal, eight fellows, and eight scholars. It now consists of a principal and not less than eight or more than fourteen fellows, and there are twenty-four foundation scholarships, besides others and exhibitions, mainly on the foundation of Edmund Meyrick, a native of Merionethshire, who entered the college in 1656, and was a fellow in 1662. The college faces Turl Street; the front is a reconstruction of 1856. The chapel dates from 1621, the hall from about the same time, and the library from 1677. The college colours are green with white edges.

Jesus Sirach, *see* ECCLESIASTICUS.

Jet, kind of lignite or anthracite, which can be easily cut and carved, and takes a fine polish. It probably takes its name from Gasgas, in Lycia, where, according to Pliny, a similar substance was found. J. was used in Britain for ornaments from prehistoric times. Necklaces, beads, buttons, etc., of the Beaker period of the Bronze Age, of the Neolithic period, and of the Early Iron Age are known, and Caius Julius Solinus (third century) alludes to the abundance of J. in Britain. Caedmon, too, refers to the J. It was probably obtained from the coast of

Yorkshire and especially Whitby, where the finest quality is still found. It is also imported from Spain, but Sp. J. is generally less hard and lustrous than that found at Whitby. It is found, too, in the dept. of Aude in France, and in the Lias of Württemberg, and is known in many localities of the U.S.A. It is chiefly used for mourning ornaments, but imitations occur in vulcanite and in glass.

Jethou, one of the Channel Is., subject to Guernsey. It is an infertile, granitic is. 1 m. in circumference, separated from Herm by a narrow channel.

Jeton, or **Jetton**, round piece of metal or ivory, which was formerly used in card games for counting, as well as a pass to the gaming tables.

Jet Propulsion, form of motive power particularly applied to aircraft, by means of reaction to the mass of air ejected at

Aug. 27, 1939. After the first successes other firms in Britain and Germany were given instructions to develop J. P. engines and by the end of the war many existed in both countries; the Gers. were the first to put jet aircraft into service, but the engines were much less reliable than Brit. types. Development in France was started by Latécoère before the war, but was delayed by the occupation; while in the U.S.A. work was not started until 1911, when a Whittle engine and complete drawings were flown across the Atlantic.

Ignoring the mechanics of the different systems (*see* AERO-ENGINE) J.P. works on the principle of taking air into the engine, compressing it and reducing its velocity to a speed suitable for combustion, mixing with fuel, burning and thereby expanding the mixture and increasing its kinetic energy, before finally ejecting it at high

PURE JET PROPULSION

The original propulsive duct suggested by René Lorin in 1913, which still expresses the basic principles, although details vary.

1. Air stream due to motion.
2. Air intake.
3. Diffusor to reduce air speed and increase pressure.
4. Fuel injection.
5. Combustion chamber where the gases heat and expand.
6. Outlet venturi where kinetic energy of gas is converted from pressure to velocity.
7. High-speed propulsive jet of hot gases.

the rear of an engine. This form of propulsion is a direct application of Newton's third law of motion (to every action there is an equal and opposite reaction, *q.v.*) and the basic principles were first stated by a Fr. engineer René Lorin, who pub. patents in 1913. Although not developed to practical use, the first design contained the essentials as practised to-day and the latest high-speed engine, the ram-jet (or athodyd) is exactly like the original simple design without working parts shown in the diagram. Efficient propulsion by jet reaction can only take place at high speeds, and it was not until aircraft capable of more than 300 m.p.h. were developed that the system was of more than academic interest.

In 1930 Whittle (then a R.A.F. cadet, now Air Commodore Sir Frank Whittle) had the idea of using a gas turbine to produce the large air-flow necessary for J. P. and he, with little support until 1937, worked on a series of engines, of which the W.1 eventually flew in the Gloster E 28/39 on May 14, 1941. The other pioneer work was done independently by the Ernst Heinkel firm in Germany, where experiments started in 1930 and the first engine, the Heinkel S3B, was flown in the experimental He. 178 monoplane on

speed. Although the reaction is measured as pounds of thrust, propulsion is *not* the result of the jet pushing on the surrounding air, it is purely a reaction to the escaping jet. 100 per cent efficiency occurs when the speed of the engine is equal to that of the air in the jet and the measure of efficiency of an engine is given by the difference in these velocities.

At present any form of jet engine is lighter for its power than any other, but it also has a higher fuel consumption. Effectiveness of the jet depends upon the initial air compression (present average is about 4 : 1) and if a turbine engine is used many thousand horsepower from the gases must be absorbed in the turbine driving the compressor, while with a ram-jet, where compression is the result of forward speed only, it must be high enough to give the initial compression of 4 : 1 before reasonable return of power for fuel expended can be obtained. In both cases high air speeds (over 400 m.p.h. in the first and over 600 m.p.h. in the second) are necessary, so that the high air resistance to the aircraft means large fuel consumption to provide the necessary power.

Rockets (*q.v.*) are J.P. engines which carry their own oxygen—either in the fuel, or separately in liquid form—and are

therefore independent of atmosphere for the air supply for combustion. Rockets have been used successfully for missiles (Ger. V.2 long range, A.A. and ground short range), for the propulsion of fighter and research aircraft, and are frequently used to assist the take-off of heavily loaded aeroplanes. Characteristics are very high thrust for short periods.

All forms of J. P. engine are simpler and lighter for their power than other heat engines, but present lower thermal efficiency makes J. P. unsuitable for long range, particularly since fuel economy cannot be attained by throttling, because at lower speeds the efficiency falls. The present trend to overcome this difficulty is to group the engines in an aircraft so that when air endurance is required one or more engines can be stopped. Then, although the speed is reduced and the thermal efficiency falls, the actual fuel consumed is reduced. See also under **ARO-ENGINES**.

Jette, or **Jette-Saint-Pierre**, tn. in Belgium and N. W. suburb of Brussels. It is engaged in agriculture and manufacture of chemicals, enamelled goods, chicory, train-oil, and cigarettes. Pop. 29,100.

Jetsam, see **FIOTSAM**.

Jeunesse Dorée, La, the gilded youth of a nation, that is to say, the rich, unmarried, fashionable young men.

Jever, old tn. in Oldenburg, Germany, was formerly the cap. of the Dutch principality of Friesland. Chief manufs. are woollen and leather goods; tanning and dyeing are also carried on. Pop. about 6000.

Jevons, William Stanley (1835-82), Eng. economist and logician; b. at Liverpool. At fifteen he was sent to London to Univ. College. He already believed that important achievements as a thinker were possible to him. Whilst at Univ. College, his favourite subjects were chem. and botany. He unexpectedly received the assessorship to the new mint in Australia; he accepted the post because in financial need. He remained in Sydney for five years. In 1859 he again entered Univ. College as a student, proceeding in course to the B.A. and M.A. degrees of the Univ. of London. Not long after taking his M.A. degree, he was appointed tutor at Owens College, Manchester. In 1866 he was elected prof. of logic and mental and moral philosophy, and Cobden prof. of political economy there; in 1876 he exchanged the Owens professorship for the political economy chair in Univ. College, London; in 1880, owing to ill-health, he resigned. He wrote a number of books on logic and political economy between 1864 and 1880. His letters and *see* were ed. by his wife and pub. 1886. *See* L. Liard in *Les Logiciens anglais* (vi), 1878.

Jew, The Wandering, legendary Jew who, for some insult offered to Christ at the time of His Passion, is doomed to wander eternally throughout the world. The story is of no antiquity and does not appear at all in the E., no reference being made to it even in the great work of Jean d'Outremeuse. The tradition varies con-

siderably, and no two versions agree as to the name of the Jew. The chronicle of St. Albans Abbey for 1228 tells of the visit of an Armenian bishop who gave an account of the W. J. under the name of Kartaphilos. According to this version, he was a door-keeper of the Judgment Hall, and as Jesus passed out he struck Him saying, 'Go, Jesus, go on faster,' to which the Christ replied, 'I go, but thou shalt tarry till I come again.' Matthew Paris in 1228 continuing the same chronicle, tells us that Kartaphilos was baptised by Ananias under the name of Joseph, and henceforth, at the end of every hundred years, falls into a trance from which he wakes to find himself at the age of thirty, the age at which he was when he struck Jesus. The 'rhymed chronicle' of the W. J. was written in 1242 by Philip Mouskes, afterwards bishop of Tournai. The version given by Paul von Witten, bishop of Schleswig, in 1547, has it that Jesus, overcome by the weight of His cross, stopped to rest at the door of a cobbler, by name Ahasuerus, who pushed Him away saying 'Away, with you! Away!'; to which Jesus replied as in the version previously given. In Ger. legend the W. J. is associated with Johann Buttadaeus (or Bultadaeus) who is alleged to have been seen in Antwerp in the thirteenth, fifteenth, and sixteenth centuries (Monzel, *History of German Poetry*). In Fr. legend he is called Lakadion or Laquedem (Mitternacht, *Dissertation in Johan*). The Fr. novelist Alexandre Arnoux in July 1931 issued a book, *Carnet de Route du Juif Errant*, in which the eternal wanderer tells some of his supposed adventures in various ages and lands. In Eugène Sue's Fr. novel *Le Juif Errant* (1845) the Jew is named Salathiel, as also in G. Croly's novel *Salathiel* (1827). In both the course of the Jew is traced, but in neither is the Jew a figure of strong import, less indeed than in Southey's poem *The Curse of Kehama*, where, however, considerable violence is done to legend.

Jewel, John (1522-71), Bishop of Salisbury, b. at Berryharbor, near Ilfracombe. He was educated at Barnstaple and Oxford, where he became a lecturer. He defended the Eng. Church against Rome in his *Apologia Ecclesie Anglicane* (1592). He spent some time abroad during Mary's reign, but returned to England on the accession of Elizabeth and was made Bishop of Salisbury.

Jewellery, derived from the Fr. *jewel*, has in France two distinct branches concerned in the making of personal ornaments. J., *Bijouterie*, the working of ornaments in gold, silver, or any other metal, mineral, or material, often set with diamonds; *Joaillerie*, which is concerned in the making of mounts, with open backs, and setting therein fashioned precious stones, mainly diamonds. The making of J. is the oldest of the crafts, an ornament for the head probably being the first type, or a necklet made of almost any material, threaded korries, stones with natural holes, shells, bone, teeth, amber, jet, etc., colour, as to-day, playing an important part in

FIRUSAN ORNAMENTS IN GOLD
FOUND IN RHINLAND

the crude conceptions of early man. Five thousand years have elapsed since the goldsmiths of Ur of the Chaldees produced very delicate examples of the jeweller's art, using practically the same methods as are employed to day. Like later Greeks and Etruscan goldsmiths they relied almost entirely on gold for effect. The consummate craftsmanship of these people as shown in the museums, included wire and grain work which has never been equalled and delicately plaited broad bands comparable to the admired Milanese bracelets of to day, but infinitely finer. Imitation gems were used by Egyptian jewellers five thousand years ago to give notes of colour, and glass beads were also being made. Dainty necklaces of gold or gold capped stone beads were made in Ur at least four thousand years ago. These would appear to be the golden days of J. The commonest forms are finger rings, necklets, earrings, brooches and bracelets. Finger rings like the signet, served a useful purpose, men's neck chains were signs of authority, and remain so to this day. Bracelets were used for decorative and offensive as well as defensive purposes. Gold and silver enamelled and set with bright coloured gem-stones distinguish Byzantine, Arab, Medieval, and Renaissance J., as also that produced during the weak Gothic revival about 1830 and, to some extent, in the rococo period of the Victorian era. To the opening up of the diamond mines in Golconda and Hyderabad in the seventeenth century may be traced the greatest revolution which has taken place in the design and making of J. Prior to this, diamonds were polished on their natural facets, and the highest form of cutting was the 'table cut'. Then came the 'rose,' flat at the back, with small facets on the curved top, followed in 1643 by the *tallée-en seize* 'rose,' which was methodically

cut with sixteen facets. The invention of what is termed the 'brilliant' by Vincenzo Peruzzi at the closing of the seventeenth century made the greatest change, though slow, in the design and construction of J. *Joailerie* began to supersede *Bijouterie*, and the diamond definitely commenced its domination in the seventies of the nineteenth century. The discoveries of the great mines in S. Africa greatly strengthened a growing fashion, the diamond (q.v.) mounter became the more important factor, and the revolution became complete so far as the larger and finer pieces of J. are concerned. Diamonds were first set into very slightly conventionalised floral forms, the base of which was silver fronted gold. Then another change took place, and platinum superseded the lumpy and not very rigid mount which was so easily affected by handling and atmosphere. Gradually design changed and from the naturalistic floral type grew J. with a flavour of the Renaissance, and ultimately the saner vogue we see to day. In this diamonds and hued coloured gem stones are used as definite units in a design, and not to fill an area without taking them seriously into consideration. Meanwhile, the art of the original type of jeweller had been kept alive from the end of the nineteenth century up to 1925 by such men as René Lalique, René Boy, and Georges Fouquet in France, Hugo Schaefer in Germany, and Henry Wilson in England, who considered artistic handling of material more than its intrinsic value.

PENDANT WORN BY QUEEN MARY
OF ENGLAND (1551-58)

The painting of the queen, by Antonio Moro, in the Prado, Madrid, shows her wearing this historic jewel. The pearl was found in 1513, and the pendant was variously in the possession of Ferdinand V of Spain, Queen Mary, Napoleon III., and (1931) the duchess of Abercorn. It is known as 'La Pelegrina'.

After the Paris exhibition of 1925, jewellers discarded nature as the source for design and drew their inspiration from geometrical motifs. This phase has passed, and present trend has returned to floral, bow, and ribbon motifs. Increasing use of gold in form of coloured alloys, red, white, green, grey, with platinum, is evident. Palladium, because of its lightness, is being used. The prin. types of cut in vogue are, besides the brilliant and rose, the emerald or trap-cut, marquise, and in particular, a lavish use of narrow rectangular diamonds, called baguettes, when small, and batons when somewhat larger. An innovation dating from the Paris exhibition of 1937 is 'invisible' setting, the masking of cut gems without sign of the metal mount showing at all. The prin. centres in which J. is manufactured are London—at one time Clerkenwell was the centre, but during the last quarter of a century the industry has gradually migrated to the W. End—Birmingham, Paris, Brussels, Vienna, Berlin, Pforzheim, and Hanau. See C. J. Davenport, *Cantor Lectures on the History of Personal Jewellery from Prehistoric Times*, 1902; H. Clifford Smith, *Jewellery*, 1909; G. F. Herbert Smith, *Gemstones*, 1912. 1949; Joan Evans, *English Jewellery from 5th Century A.D. to 1800*, 1921; A. Selwyn, *Retail Jewellers' Handbook*, 1915; L. Wiener, *Handmade Jewellery*, 1918.

see BIROBJAN.

Jews. The early hist. of the Hebs. has been given in the article ISRAEL, and here a sketch will be given of the hist. of the Jewish people from the fall of Jerusalem in A.D. 70 until the present day. The fall of Jerusalem did not mean that the J. were doomed. The J. rebelled again in A.D. 115-117, this time in Babylonia, Egypt, Cyrenaca, and Cyprus (particularly in the last two ters.) and in 132-135. The discontent and desperation of the J. of Judaea, increased by the fact that Hadrian contemplated the estab. of a pagan city on the site of Jerusalem, led to the general revolt in the year 132 under Bar Cochba (q.v.), supported by the Rabbi Akiba. He kept up the revolt for three years. The rising was so successful that Rome determined to make a repetition impossible and, in A.D. 135, Jerusalem was destroyed and its site ploughed up. The ter. of Jerusalem was turned into a Rom. colony under the name of *Elia Capitolina*, and no J. was allowed even in its vicinity. The name of Jerusalem was henceforth to be obliterated from the mind of man. Many of the pop. were put to death and many more carried off to slavery. From that time Palestine steadily sank into obscurity. Its diminished pop. dwindled still further. The most violent methods were used by the Romans to reduce the J., and all J. throughout the Empire shared in the oppression. One of the most far-reaching effects of the Judeo-Rom. wars, and of the subsequent destruction of the Jewish national centre, was the wide dispersion of that people, which has remained to this day one of its distinguishing features. While the J. who had

spread themselves over most of the rest of the world increased and multiplied, there were soon only a few thousand of them left in their former homeland. Thus Jewish hist. for the time being ceased to be that of Palestine and became that of the Dispersion (*Diaspora*), which, however, really began long before the disaster of A.D. 135, large communities having already grown up in Babylonia, Egypt, Syria, the Yemen, and many other countries.

The Babylonian J. had formed a separate community since the time of the Exile, and had spread far and wide over the domains of the Persian Empire. These J. were at first of little importance from the religious point of view, but their intellectual status was raised by the arrival of leading personalities of Judaea deported by Nebuchadnezzar to Babylon in the sixth century B.C. Babylonian J. were headed by the 'Prince of the Captivity,' who claimed descent from the house of David, and lived in semi-regal state. In the same period and in the centuries which followed, large numbers of J. had also settled in Egypt, where they also formed military colonies for the defence of that country, such as Elephantine. In the later centuries they congregated at Alexandria. Here had arisen the philosophic schools of Hellenic Judaism such as that of Philo Judaeus. It is, indeed, significant that the Egyptian J., unlike the founders of the Hasmonaean (see MACCABEES) State, did not resist 'assimilation.' On the contrary they became completely 'Hellenized,' abandoning their ancient tongue for Gk. and adopting Gk. names. The Septuagint, the earliest Gk. trans. of the Heb. was their work. The J. had also travelled far and wide throughout the W., and everywhere they had met with a considerable measure of toleration. After the fall of Jerusalem, the J. were left stunned under the catastrophe. The rally of Judaism is due largely to Rabban Jochanan ben Zaccai, considered as a disciple of Hillel, who, having escaped from the besieged city, obtained permission from Emperor Vespasian to make Jamnia (Jabneh) his new centre. This place then became the seat of a great rabbinical academy, and of the reconstructed Sanhedrin. Here the study and development of the Torah received a fresh impetus, and the canon of Jewish sacred scriptures was finally settled by Rabbi Akiba. For centuries the religious head of the Jewish people was the president of the Sanhedrin at Jamnia. The great product during the first two hundred years of Jewish scholarship is the Mishnah, a collection of the results of the study of the Torah in Palestine and Babylonia, which may be considered a *corpus* of Jewish law. This was incorporated three hundred years later in the Talmud (q.v.).

It is sad to record that a period of years of oppression began for Judaism with the accession of Constantine (after having extended to Christianity all the privileges and rights that hitherto paganism alone had enjoyed), though at first the statutes directed against the J. aimed more at

restriction than at persecution. After the div. of the empire, the J. in W. Europe were deprived of the privileges granted them by previous emperors, and the canons of the Church councils of the period throw much light on the way in which they were regarded. They had a favourable period, however, under the Carolingians.

Meanwhile the spiritual leadership of Jewry passed into the hands of Babylonian J. who showed much intellectual activity. In 614, when Jerusalem fell into the hands of the Persians, the J. entered the city with the conquerors; but their triumph was short-lived. Everywhere, however, both in E. and W. we find them most active in commerce, engaged everywhere in ministering to the needs and luxuries of civilisation. The period from about 700 to 1100, though one of the darkest ages in Europe and of growing persecution of the J., has been described as the 'golden age of M.E. Judaism,' and, during this period (apart from the great E. Jewish luminaries, such as the Gaon Saadia (*Arabic* Sa'id) ben Joseph, of Fayûm (Upper Egypt), 892-942), one particular band of J. stands out in great prominence. The J. of Spain were, during that period, the representatives of the world's greatest culture. Here they flourished under the favourable rule of Islam. The rise of the Hispano-Jewish colleges dates from the arrival at Cordova of Moses ben Enoch, who had been ransomed from slavery by his co-religionists. Aided by the munificence of Chasdal ibn Shaprut, the schools of Cordova rapidly became flourishing centres of letters and of Talmudic study.

In all depts. of learning J. now became prominent. Monachem ben Saruk and Dunash ben Labrat were poet, and early students of Heb. grammar, who were soon superseded by Jonah ibn Janach, the great master of Heb. philology, who died in 1050. Some of the most beautiful of Heb. poetry was also produced at this time. The foremost of the Payetanin or liturgical poets was Eleazar ben Kalir, whose poems have now a place in the service of certain Jewish holy days. One of the greatest of Jewish poets was Solomon ibn Gebirol (1021-70), whose best-known poem, *Kether Malchuth* (The Crown of Kingdom), has been incorporated into the liturgy for the eve of the Day of Atonement. Judah Halevi (c. 1086-c. 1142) has been described as the greatest Heb. poet since the time of David, and his poems are remarkable for depth of emotion and beauty of expression. Abraham ben Meir (Ibn Ezra of Toledo, c. 1088-1167) was one of the finest Bible commentators. He also visited London, where he wrote an important work. Solomon ibn Gebirol was less famous as a poet than as a philosopher, for he first introduced, indirectly, the Gk. philosophy (as interpreted by the Arabians) to the Christians of the Middle Ages. His *Fons Vita* is a systematisation of the Gk. and Arabic philosophy, which formed later an important source of scholasticism. Medieval Judaism culminates in the figure of the intellectual giant Moses Maimonides

(1135-1204), born at Cordova. On the taking of that city by the Almohades (q.v.) the J. and Christians were compelled either to accept the faith of Islam or to emigrate if they wished to escape death. He wandered to another Sp. city, then to Fez in N. Africa, and later to Palestine, where twenty years after, being a physician by profession, he became attendant on the famous Saladin. Not only was he master of medicine but also of philosophy. He was the codifier of Jewish law. In his *Mishneh Torah* he made a systematic whole from the unwieldy mass of Jewish traditional law. In the *Moreh Nebuchim* (Guide to the Perplexed) he gave an exposition of the philosophy of Judaism as he saw it. This work, from its rationalistic bias, caused some dissensions in the Jewish communities of Christian W. Europe. Though the Sp. schools stand supreme during this period, similar institutions not destitute of learned men are to be found in France and Germany. The greatest of the Franco-Ger. Jewish luminaries was Rabbi Solomon Yischaki, known (from his initials) as Rashi. The Rashi commentary to the Talmud is most generally used in the Jewish traditional schools and academies known as *Yeshivot*. Rashi was born c. 1030 in Troyes (Champagne) and died in 1105. On the whole, however, Franco-German scholars did not attain to the polish and versatility, as well as the philosophical breadth of view, which distinguished their Sp. brethren, but they possessed in an abundant measure moral earnestness and deep piety.

But during all this period, while Judaism had been producing its ripest fruits of learning in Europe, the clouds had been gathering. Though treated as obnoxious strangers and unbelievers, at least the J. in the Carolingian empire, and even in England and Christian Spain, found some justice and occasional favour as a useful mercantile class in a state of society in which religion and arms were the only tolerable occupations. Regarded by the rulers as a very valuable source of revenue, even as an indispensable adjunct of the pop. and competing with none of them, the J. not only enjoyed the protection of the authorities, but also largely the passive good-will of their neighbours. The crusades were more instrumental than anything else in changing the condition of the J. for the worse, accompanied as they were, by wholesale massacres. The fury which had possessed the Crusaders and caused them to attack the 'Saracens of Europe' rather than the Saracens of Asia was felt in the different countries themselves. The J. had always been a separate community dwelling in the land, but not forming part of it, and this isolation led to the levelling of the most extravagant charges against them, which were eagerly believed by the credulous vulgar. Many of these charges, such as that of the slaughtering of children for ritual purposes, were, strangely enough, identical with those levelled against the Christians themselves during the first centuries of Christianity. Moreover, the wealth of

the J. made them fit objects for pillage and spoliation. The J. were excluded from possession of the soil, and from every honourable profession or handicraft. They were thus driven to money-lending, and in this pursuit acquired a reputation for avarice and extortion only less than that of the sovereigns and nobles who made use of them.

To England the J. came in large numbers with Wm. the Conqueror, and settled in the large tns. In 1144 there was a great disturbance over the accusation made against the J. of Norwich of having slain a Christian boy, known afterwards as St. William of Norwich, for their Pass-over. Such accusations continually recur in the years that follow, and the case of little St. Hugh of Lincoln, narrated by Chaucer in the *Prioresse's Tale*, is well known. The most serious event in the hist. of Jewry in medieval England occurred when a deputation of leading J. appeared at Westminster for the coronation of Richard I. in 1189. They were attacked by the mob, and a report spread that the king had ordered a general massacre. A very good attempt to carry out this supposed order was made in London and many other tns. The massacre was particularly great in York. Finally, at the end of the thirteenth century a decree was issued banishing all J. from the realm and confiscating their belongings, and by Oct. 9, 1290, 16,511 J. had left England.

In Central Europe, the lot of the J. was even more unfavourable. Only in Italy, under the influence of the popes, and particularly in Turkey and Poland, was any toleration allowed them. In other countries they were perpetually subject to extortion and persecution, and any peace that was given them seems usually to have been merely a breathing time that they might accumulate more material for plunder. They were now kept rigidly apart from Christians, confined to particular quarters of the tns. they lived in, known as ghettos, and often obliged to wear a yellow badge to distinguish them from other people. Many of them, especially in Germany, left their homes and with those expelled from France and England sought refuge in Poland and Lithuania (then in 'union' with Poland), where the J. achieved religious autonomy; regular synodal assemblies (called Va'ad Arba' Arazoth) were convened, which greatly helped to maintain unity. In the early seventeenth century a good deal more than half the J. in the world were congregated in that belt of country. The Polish kings protected them, but the respite was short-lived. In the ten years (1648-58) of the massacres by the savage Cossacks (q.v.) and in the Polish-Russian and Polish-Swedish wars a great number of J. (250,000 to 500,000) lost their lives. With the three partitions of Poland (q.v.) in the late eighteenth century, over a million J. came under Russian rule. A sort of territorial ghetto, the Jewish 'Pale of Settlement,' was estab. from the Baltic to the Black Sea near Odessa, and throughout this area the urban ghetto system was imposed.

It is hardly necessary to speak of Spain during the latter half of the Middle Ages. The atrocity of the Inquisition in that country is a byword. These persecutions in Spain caused many of the Sp. J. to make an outward profession of Christianity, and, if we may judge from the words of Torquemada, Grand Inquisitor during the latter half of the fifteenth century, many of these 'Marranos' (Sp. J. who, outwardly, but not from secret conviction, accepted the Christian faith) held high positions in the Catholic priesthood. Finally it was resolved to expel all J. from the Sp. domains, and in 1492 some 200,000 Sp. J. left their homes and the graves of their forefathers. Some went to Portugal, some to Holland, S. France, or Italy. Others sought a refuge in Ottoman terr., where they were warmly welcomed by the Sultan Bajazet II.

During this period of oppression the learning of the previous age turned to mysticism and the intricacies of the Talmud. To the mystic belongs the *Cabbala* (q.v.) strange medley of Jewish religious philosophy and spiritual quackery. To the same trend of thought may be ascribed the rise of many pseudo-Messiahs such as David Reubeni and Solomon Molcho (1510). More important still was the Turkish Jew, Sabbathai Zevi, who assumed the rôle of the Messiah in 1666, and was acclaimed by thousands of enthusiasts. The Reformation did not at first produce any change in the attitude of the Christian states towards their Jewish subjects. But the spread of the New Learning led to an intelligent interest being taken in the productions of Jewish scholars, and a landmark in the rise of tolerance is marked by the pub. in 1706-11 of Jacob Christian Basmage's *History and Religion of the Jews since Christ to the present day*. The seventeenth century also saw the rise of the famous Benedict Spinoza (1632-77), one of the greatest men that Jewry has produced. But centuries of oppression had done its work, and by the middle of the eighteenth century, when external affairs were about to take a turn for the better, the general conditions of the J. had sunk to a low ebb. As a whole, the J. remained a class of social pariahs, petty traders, or artisans despised by all.

But, during the years that have passed since then, a marvellous evolution has been seen. As the J. have become enfranchised, they have produced a host of men of distinction in all walks of life. Numerous are the outstanding men of Jewish origin in science, art, politics, and other fields: Mendelssohn, Disraeli, Hertz, Rufus Isaacs (Marquess of Reading), Ehrlich, Einstein, Gompertz, Mond, Schwarz, Graet, A. von Wassermann, Henle, Freud, Balilk, Heine, J. Wassermann, E. Ludwig, S. Zweig, Werfel, Kafka, G. D. Ascoli, Schnitzler, Zamenhof, and many others. Especially has progress been seen in the sphere of political activities. In this connection we can only deal with England. In 1793 the words 'On the true faith of a Christian' were removed from the Jewish oaths. In 1753 a Jewish Naturalisation Bill was passed, but such

was its unpopularity that it was repealed in the following year. In 1833 began a series of unsuccessful attempts to remove Jewish disabilities, the Bills being invariably thrown out by the House of Lords. A compromise by which Baron de Rothschild, who had been elected for the City of London, was allowed to sit in parliament, was arrived at in 1858, and in 1860 the parliamentary oath for both Houses was permanently amended. But Jewry has been fated never to obtain freedom and security for all its people at one time. As a set-off to their recovery in W. Europe, a new foe appeared in 'Anti-Semitism'—now because now, in the nineteenth century, the attack was grounded not on creed but on 'race'. The movement began in Germany about 1880 and spread throughout Central Europe, and the Dreyfus Case was evidence enough of the hold it obtained in France. It revived, too, the old intolerance in Russia. From 1881 onwards the plight of the J. in Russia was almost as bad as it had been in W. Europe at the time of the Crusades. A series of pogroms was initiated and repeated from time to time till as late as 1910. Between 1880 and 1910 at least 3,000,000 J. fled from E. Europe. Many found refuge on Brit. soil, in England or in the dominions; but the great majority went to the U.S.A. In 1870 the number of Amer. J. was roughly about 250,000; in 1910 it was about 1½ millions.

Jews in the First World War Period and After.—The First World War and the turmoil and confusion that followed caused widespread suffering and loss of life to Jewish people. The reasons for this were that during the War great areas in which the proportion of J. to the other inhabitants was large were constantly battle-wreathed, and in successive hordes and retreats the J. were frequently victims of the anger of both sides, as well as suffering from the ordinary ravages of war; throughout most of the European countries involved in the War much suspicion was naturally felt towards all alien or semi-alien peoples; even when order and discipline were good, the J. were subjected to many disabilities, but when restraints were broken down long-felt suspicion flamed into persecution; the War broke out at a period when great numbers of the ignorant and superstitious people of Central Europe were stirred up against the J. by means of fantastic stories of ritual murders which had gained currency. The sufferings of the J. in Russia were particularly severe, becoming, if possible, more tragic at every new change that swept over that country. The stern official discipline under the Czarist régime bore particularly heavily upon them, restricting their freedom of movement and emphasising the severity of their disabilities. The first revolution, with its consequent disorganisation, deprived many people of legal protection, and particularly those who were unpopular. In some areas individual J. were creditors to whom their neighbours owed money, and the chance of cancelling debts by means of violence was often a direct incentive to crime. As the largest

body of individualists in a Communist state, the J. suffered most of all by the change to the Soviet Gov.

After the First World War, under the special treaties relating to the separate countries, the J. received equitable treatment. It is to the credit of the U.S.A. that very much of the inspiration to help the J. came from their delegates. In the first important treaty, that in which the constitution of the new state of Poland was treated, especial care was taken to safeguard their citizen rights, particularly in connection with the Jewish unwillingness to perform work on the day of their Sabbath. Similar provisions were made in the peace settlements with the S.E. European nations, work which the League of Nations continued at the close of the Peace Conference. The very interesting development of western Palestine as a national home for the J. was one of the most dramatic post-war national movements. (For this, and for an account of the work done by the Zionists in the development of modern Palestine, see ISRAEL; JERUSALEM; PALESTINE.)

Anti-Semitism flared up anew in Nazi Germany and there were constant attacks on J. from 1932 onwards. Anti-Semitism, indeed, formed almost the central feature of the 'philosophy' of Hitler's *Mein Kampf* (q.v.) and, under the so-called *Arvan Paragraph*, J. were first expelled from the civil service; afterwards, Jewish lawyers, doctors of medicine, dentists, teachers, and editors of journals, were deprived of their livelihood; finally, Jewish business-men were boycotted, the peasantry purged of 'non-Aryans,' and Jewish trade union officials removed. By the close of 1933 all J. were, in effect, 'denationalised' and deprived of all civic rights. At the beginning of 1932 there were some 600,000 J. in Germany. Thousands fled to other countries and it is one of the tragic ironies of hist. that some five or six years later, when Nazis had overrun most of Europe, the refugees found themselves persecuted anew and quite often by those amongst whom they had sought a new home.

It seems probable that the total number of J. slaughtered by the Gers. during the Second World War was not far short of 5,000,000. According to the Inter-allied Information Committee the number of Jewish victims deported or perished in Axis-controlled Europe between 1939-42 was 2,000,000, while another 5,000,000 were in danger of extermination. In Belgium the actual extermination of the J. was decided upon in May 1942 and, according to Ger. statistics, 25,000 of the 52,000 J. living in that country in 1941 had been deported by the Gestapo. On the day of the Ger. occupation of Czechoslovakia there were 90,000 J. in Bohemia and Moravia and 95,000 in Slovakia; by May-June 1942 more than 74,000 had left Bohemia and Moravia and 65,000 had left Slovakia—all for Polish ghettos where they were cruelly exterminated. The J. in France, Holland, and Norway suffered in the same way. In Yugoslavia Ger. sadism had

resulted in the murder of 85,000 of the 86,000 J. in that country since the Ger. invasion (April 6, 1941). From the very first moment of the occupation of Poland by the Gers. the J. were the object of especial persecution. Murder and robbery were the order of the day. On Nov. 1, 1940, a ghetto was organised in Warsaw and J. were forbidden to leave its walls. In this ghetto and indeed in all the other ghettos, conditions were appalling. In some houses up to 1000 persons lived; individual rooms accommodated an average of 13 persons. Typhus and other diseases took heavy toll of the starved and half-starved. This terrible plan of systematic murder was considered too slow by the Gers., however, for in March 1942 more direct methods of annihilation were instituted. Himmler (*q.v.*), after a brief stay in Warsaw, issued an order that half the number of Polish J. were to be killed in one year. Deportations were, accordingly, begun on Aug. 17 and 10,000 persons were removed daily, while in the meantime a special Extermination Commando had been organised and trained in murder beforehand in Germany. Places of execution were organised at Chelm and Belzec, where those who survived the shootings were murdered en masse by means of electrocution and lethal gas. In fact the Gers. had transformed Poland into one vast centre for murdering J., not only those of Polish nationality, but those of other European nationalities also. See also AUSCHWITZ (OSWIECIM); BEISEN; BUCHENWALD; CONCENTRATION CAMP; DACHAU. The Anglo-U.S. Palestine Report shows that during the war of 1939-45 the Jewish pop. of Nazi-occupied Europe was reduced by slaughter and starvation by 5,721,600, or more than half the 1939 total. Statistics, however, vary. It is estimated that, before the sack of Jerusalem in A.D. 70, the J. numbered 4½ million. At the close of the fifteenth century there were only 1½ million. Before the Second World War there were, according to one widely-accepted estimate (Arthur Ruppin) some 16½ million J. in the world, of which 4½ million were in the U.S.A. Of the 10 million in Europe, 9 million were in central and E. Europe—3 million being in Poland. These totals are more or less confirmed by the Jewish Year Book and by the Amer. Jewish Committee. These sources give the 1939 total as 16,838,000 (Europe 10,000,000; Asia, 830,000; Africa, 600,000; America, N. and S. 5,375,000; and Oceania 33,000); the 1945 total as 11,000,000, the total for Europe having declined to 4,224,600.

Jew's Ear, or *Hirneola Auricula-Judae*, fungus shaped somewhat like an ear. It is found chiefly on elders, and was given its name from a legend that Judas hanged himself on an elder tree.

Jew's Harp, or Trump, small musical instrument, consisting of an elastic vibrating steel tongue riveted at one end to a frame of brass or iron. The narrow free end is at right angle to the vibrating piece. The instrument is held between the teeth, while the metal tongue is twitched by the forefinger. Sound is increased in intensity by the breath, and altered in pitch by the shape of the mouth's cavity.

JEW'S HARP

Jew's Mallow, or *Corchorus olitorius*, species of Tillaceae found in India and in other tropical countries. It is an ann. growing to a height of from 12 to 18 ft., and yields a very valuable fibre.

Jew's Thorn, see PALIURUS.

Jex-Blake, Sophia (1840-1912), Eng. doctor b. in Sussex, and was sister to Thomas Jex-Blake, D.D. She was mathematical tutor of Queen's College, London, from 1858-71, and in 1866 began to study medicine in Boston, U.S.A. She returned to England in 1868, and matriculated in the medical faculty of the Univ. of Edinburgh in 1869. In 1874 she founded the London School of Medicine for Women, and in 1878 opened a dispensary for women and children in Edinburgh, and a cottage hospital in 1885. In 1886 she founded the Edinburgh School of

Medicine for Women. She pub.: *American Schools and Colleges* (1867), *Medical Women* (1872), *Care of Infants* (1884), and *Puerperal Fever* (1877).

Jezireh Ruad, see ARAD.

Jeypure, see JAIPUR.

Jezeel, city of Canaan situated on a spur of the Mt. Gilboa range, and 11 m. distant from Nazareth. It was the well-known cap. of the Israelite monarch Ahab; here it was that Ahab coveted Naboth's vineyard, and here the Queen Jezebel had Naboth murdered. The modern vil. Zer'in, built of stone, stands on a bare and rocky knoll, where the remains of anct. cisterns and old sarcophagi are still seen.

Jezeel, The Plain of, see ESDRAELON.

Jhabua: (1) State in the Bhopawar Agency, Central India, has an area of 1336 sq. m. Now affiliated in the Madhya-Bharat group. It is mountainous and little cultivated; opium is the most valuable product. Manganese is obtained in small quantities. Pop. 80,000. (2) Tn., cap. of above state, 80 m. W. of Indore, with an important trade in opium. Pop. 4000.

Jhalrapatan, see under JHALAWAR.

Jhalawar, state in S.E. Rajputana, India, has an area of 3043 sq. m., now included in Rajasthan (q.v.). The chief crops are maize, cotton, and wheat. The exports are oil seeds, opium, brassware, and cotton. The cap. is Jhalrapatan, an anct. city of archaeological interest. Pop. 100,000.

Jhang: (1) Dist. in the Multan div. of the W. Punjab, Pakistan, has an area of 4000 sq. m., nearly all of which is under cultivation. Owing to the construction of the Chenab and Jhelum canals the soil is well irrigated, and wheat, millet, oil seed, and maize are grown. Pop. 600,000. (2) Chief tn. of above dist., forms a joint municipality with Maghiana, 2 m. away. It manufs. brass ware, soap, and leather, and has considerable trade in grain. Pop. 30,000.

Jhansi, city and dist. of India, in the United Provs. The city is 60 m. distant from Gwalior, and is the central point of the Indian Midland railway (amalgamated with the Great Indian Peninsular railway) from which four lines diverge to Agra, Cawnpore, Allahabad, and Bhopal. The dist. of J. is included in the country of Bundelkhand, and is watered by the three important rvs., Pahuj, Betwa, and Dhasan. The fort and tn. of J. were taken by the Brit. in 1853. The city was the scene of rebellion and massacre in the Mutiny of 1857, but was regained by the Brit. in 1858. J. State lapsed in the governor-generalship of Dalhousie owing to the lack of an heir to the 'gadi' and was therefore taken over by the Indian Gov. Area of dist., (including Lalitpur) 3630 sq. m. Pop. (city) 80,000.

Jhelum, tn. on the Jhelum R.; is the headquarters of the dist. of Jhelum, W. Punjab, Pakistan. It is the distributing centre for most of the trade of the dist. Timber from Kashmir forests is collected here, and boat-building is carried on. After the Second World War the Punjab Forest dept. speeded up the reclamation of

eroded land in the J. dist. by the employment of modern equipment made available from surplus war stores. Pop. 18,060.

Jhelum, The, or Jehlam, anct. Hydaspes, is one of the five rvs. of the W. Punjab in Pakistan. It rises in the hills of Kashmir, and is navigable for about 70 m. in that state. It flows through Walur Lake, thence through the snow-clad Himalayas. Upon its emergence from these mts., via the Baramula Pass, it again becomes navigable. About 250 m. from its source it enters the plain of the Punjab, and after another 200 m. joins the Chenab, also one of the five rvs., at Timmu. In the J. valley is situated the lovely and world-famous 'Happy Valley' of Kashmir.

Jhering (or Ihering), Rudolf von (1818-1892), Ger. jurist, b. at Aurich in E. Friesland. He was educated at the Univ. of Heidelberg, and at Göttingen and Berlin. Later he was a prof. at Basel, then at Rostock, in 1849 at Kiel, and in 1851 at Gießen. He set forth a fresh view of the Rom. law, adapting the old as the basis for a new system of jurisprudence. He gained a great reputation, and in 1868 was offered the chair of Rom. Law at Vienna, which he held until 1872, when he went to Göttingen as prof. His chief works are: *Geist des römischen auf den verschiedenen Stufen seiner Entwicklung* (1852-65); *Der Kampf ums Recht* (1872), 1925 (Eng. trans. 1884); *Zurück im Recht* (1877-83); *Jurisprudenz des täglichen Lebens* (1870) (Eng. trans. 1901). See study by M. Rümelin, 1922; and K. Wieland, *Andreas Heuser und Rudolf von Jhering*, 1935.

Jhind, or Jind (1) State in the Sirhind Plain, E. Punjab, India, with an area of 1300 sq. m. The chief industries are manufs. of silver ornaments, leather, and pottery. Pop. 326,000. (2) Tn. 75 m. N.W. of Delhi; contains many anct. temples and places of pilgrimage.

Jib (etymology uncertain, only found in Eng., probably connected with *gibbet*, foremast sail of a ship. It is triangular in shape, and stretches from the outer end of the jib-boom (which is the spar run out from the termination of the bowsprit) to the fore masthead. This is in the case of larger vessels; in smaller craft which have no jib-boom the J. extends from the bowsprit to the masthead. A 'flying J.' is a sail set in addition to the J., and lashed to the 'flying jib-boom', which is an extension of the 'jib-boom.' A 'middle J.' is a sail sometimes rigged in addition to the J. and flying J., extending from the end of the jib-boom when the J. is half-way down it. As many as six Js. may be carried by large vessels, the outmost being called the 'jib of jibs.'

Jibrin, Belt, see BERT.

Jibuti, Jibouti, or Djibouti, see DJIBOUTI. Jicarillas, tribe of N. Amer. Indians which inhabit the N. border of New Mexico. They were once very formidable, but are now subdued and rapidly decreasing in number. They make excellent basket work.

Jidda, Jiddah, see JEDDA.

Jig, sprightly dance tune or measure, as the Irish J. See GIGUE.

Jigger, see CHIGOR

Jihad, Muslim name for a general religious war against Christians, infidels, or other unbelievers

Jihlava, see IGLAU.

Jihum, see OXUS

Jijona, tn in the prov of Alicante, Spain, is 18 m N W of Alicante. A large quantity of fruit and honey is obtained from the dist. It also manufs shoes. Pop 8000

Jilolo, or Halmahera, is of the Molay Archipelago between Celebes and Ceram, has an area of 6500 sq m. It is very irregular and mountainous. The soil is very fertile, the climate tropical, and the chief products are dammar sago, spices, coconuts and fruits. It is part of the Dutch E Indies. The chief tns are Gelolo Galela and Patani. Pop 102,000

Jimena, or Ximena, tn in Andalusia, Spain, is 14 m from Jawn. Its trade is chiefly in the dist produce which includes grain, olives, and wine. Pop 3000

Jimena de la Fontera, tn in the prov of Cadiz, Spain is 20 m N W of Gibraltar. It has a fortified Moorish castle, and manufs leather and rugs. Pop 10,000

Jimenez de Cisneros, see CISNEROS

Jimenez de Cisneros, Francisco, see XIMENES

Jinas (literally the victorious one) as contrasted with the merely awakened one, Buddha) in the Indian religion of Jainism (q v) the deified saints who give the sect its name. A Jina is an omniscient sage who re-establishes the law in its integrity when it has become corrupt. Jainists hold that twenty-four have appeared at long intervals of time. Mahavira, founder of the Jainist sect, was the twenty-fourth Jina.

Jind, see JHIND

Jingo and Jingoism. The derivation of J is uncertain but the modern application was borrowed from the lines of a music hall song by W. Hunt very popular in 1878 the chorus of which ran—

'We don't want to fight but by Jingo
If we do.'

We've got the ships, we've got the men,
and got the money too.

The term J was at that time used as a nickname for those who supported Beaconsfield's anti-Russian policy of sending ships to the E. to assist the Turks against the Russians. From this the term has come to mean any person who advocates a bellicose or chauvinist policy and J, therefore denotes the policy of the Jingles.

Jinn, or Djinn, name of a class of spirits in Arabian mythology. The greatest of them was Iblis, who was formed out of smokeless fire. In the Arabian Nights, they are spoken of as long anterior to Solomon. There are both good and bad J, and among the latter the five sons of Iblis may be mentioned besides the Ghou, which appears in human form, the Seaah, which appears in forests, the Balhan, living on is, and the Shik, shaped like a human being halved lengthwise. Iblis is often made the equivalent of Satan. The J.

are reputed to assume various shapes, and live chiefly in the mts of Kaf but their evil influence can be averted by talismans, etc.

Jinnah, Mahomed Ali (1876-1948) Indian statesman. He was educated at Karachi and studied law in England, being called to the bar in 1906. After seeking Hindu-Muslim unity in vain he came to the conclusion that the policy was misconceived as being very likely to lead to the subordination of the Moslems to twice their number of Hindus. He helped to revive the influence of the Muslim League becoming its president in 1918 and again in 1931 until his death. In 1940 he outlined his scheme for Pakistan (q v) or the separation of Muslim areas from Hindu as far as practicable. He was an able organizer and administrator and the undisputed leader of India's 92,000,000 Moslems. On the partition of India he became the first governor-general of Pakistan.

Jinotega, tn in Nicaragua (Central America) 13 m N W of Matagalpa is the cap of Jinotega dept. Large quantities of coffee are grown in the dist. Pop 7000

Jinotepa, tn in Nicaragua (Central America) cap of the dept of Carazo is 16 m S W of Granada. It is the centre of a sugar producing dist. Pop 7000

Jirreh, see GIRRIH

Jiron, tn in the dept of Santander (Colombia) 17 m N E of Bogota has important gold mines. It has its trade in Panama hats and tobacco. Pop 11,000

Jitomir, see JIOMIR

Jiu-jitsu, see JIUJITSU

Jivaros, or Gibaros, peasant tribe of Amer Indians found in the forests of the Upper Marañon Peru. Though they had frequent internecine wars they always united. They had a custom of mummifying human heads, probably for religious purposes. They were reduced by the Spaniards after the conquest of Peru but won back their liberty in 1931 by a general insurrection.

Jizak, fortified tn in the Smikhin Darya Region (Uzbekistan) is 60 m N E of Samarkand. It is on one of the main caravan routes. In 1868 it was a centre of activity when Russia conquered Bokhara. Pop 0,000

Jmudes, or Zhmudes, name for the Lithuanians who dwell on the shores of the Baltic. The Russians and Poles so designate them to distinguish them from the Lithuanians proper.

Joab (Ichovah is a father) Israelite general the son of Zeruiah was David's nephew and general. The first mention of him occurs in 2 Sam 11 12 ff in connection with the campaign against Abner and Ishb'bal, so it is uncertain whether he was with David during his early hist. He was promoted to the position of general in the army after the capture of Zion, and we later find him as captain 'over all the host of Israel' (2 Sam 18 23), and on terms of great intimacy with the king. He occupies a prominent place in the rebellion of Absalom and the revolt of Sheba. In 1 Kings 1 7 ff. we read how,

at the end of David's life, J. took part in Adonijah's attempt to gain the crown and how he met his death on the accession of Solomon.

Joachim, Harold Henry (1868-1938), Eng. philosopher. His father was a brother of the violinist and his mother was a daughter of the organist and composer, Henry Smart. He himself was a violinist but never played in public. He became Wykeham Prof. of logic at Oxford with a fellowship of New College from 1919 to 1935 and was a writer whose works are well known to students of philosophy. He was educated at Harrow and Balliol College, Oxford. He taught moral philosophy at St. Andrews and then went to Oxford, where he became the foremost representative of the Hegelian tradition. He pub. but few works but all are of outstanding quality: *Study of the Ethics of Spinoza* (1901), *The Nature of Truth as coherence* (1908), and *de Generatione et Corruptione* (1922), both showing a profound knowledge of anc. philosophy. His unpub. lectures on Aristotle have the same authoritative character.

Joachim, Joseph (1831-1907), Hungarian virtuoso violinist, conductor and composer, b. at Kittsee near Pressburg. As a boy prodigy he visited Vienna (1841) and Leipzig (1843), where his talent won Mendelssohn's recognition, and London (1844). At the age of eighteen he became leader in the Grand Duke's band at Weimar; four years later he was appointed to the court of Hanover, and for the next thirteen years continued as director of the royal concerts. From 1862 until his death he appeared regularly every year in London, chiefly at the St. James's Hall and the Crystal Palace, where he became known pre-eminently as the untiring apostle of Brahms. In 1868 he began his official career as a teacher at the Berlin Royal Academy of Arts, and in the following year founded the Joachim quartet, famous for their wonderful playing of Brahms' chamber music. As a composer Joachim was influenced chiefly by Schumann: his finest work is his Op. 11, Violin Concerto in A major, which undoubtedly ranks as a masterpiece. A century programme of his works was performed at Queen's Hall, his grand-nieces Adela Fachini and Jelly d'Aranyi being among the artists. See life by A. Moser, 1898, 1907-10 (Eng. trans. by L. Durham, 1900).

Joachimisthal, tn. in Bohemia, Czechoslovakia, 11 m. N.E. of Carlsbad, gave its name to the *thaler* or *Joachims-thaler*, first minted here (1518). In the sixteenth century it was a mining centre, silver, nickel, and zinc were found. It now carries on manufs. of gloves, paper, lace, and cigars. Pop. 7000.

Joad, Cyril Edwin Mitchinson (b. 1891), Eng. author, specialising in works on philosophy. Educated at Mundell's School and Balliol College, Oxford. John Locke Scholar in Moral Philosophy, 1911. Entered civil service in Board of Trade, 1914, later going to Ministry of Labour, retired 1930. Chairman of the National

Peace Council, 1938. Appointed head of Dept. of Philosophy and Psychology, Birkbeck College, Univ. of London, 1930. Acquired a popular reputation by his answers as a member of the 'brains trust,' a feature of B.B.C. programmes. His numerous publications include: *Essays in Common Sense Philosophy* (1919), *Samuel Butler* (1924), *Mind and Matter* (1925), *The Present and Future of Religion* (1930), *The Horrors of the Countryside* (1931), *The Story of Civilization* (1931), *Philosophical Aspects of Modern Science* (1932), *Liberty Today* (1934), *The Book of Joad* (1935), *Great Philosophies* (1937), *The Testament of Joad* (1937), *Philosophy for our Times* (1940), *The Future of Life* (1944), *A Year More or Less* (1948), and *Decadence*. A *Philosophical Enquiry* (1948).

Joan (1328-85), the 'Fair Maid of Kent,' was the daughter of Edmund of Woodstock, earl of Kent. She became countess of Kent and Lady Wake of Liddell in her own right in 1352, and in 1361 married Edward the Black Prince, with whom she lived in Aquitaine from 1362 to 1371. She protected John of Gaunt and Henry Percy in 1377, when they were fleeing from the infuriated London populace, and in 1385 was successful in healing the breach between her son Richard II. and John of Gaunt.

Joan, Pope, mythical personage, long believed to have filled the papal chair as John VIII, about 855. She was said to have been the daughter of an Eng. missionary, and educated at Cologne. She fell in love with a monk with whom she went to Athens in male attire, but returned to Rome on his death. Here she opened a school, and entered the priesthood, eventually being elected pope, but died during a papal procession. This tale was first overthrown by Blondel in 1647, who pub. an *Éclaircissement de la question*, but was finally and completely refuted by Dollinger in his *Papstfabeln des Mittelalters* (1863; Eng. trans. 1872).

Joan of Arc, St. (Fr. *Jeune d'Arc*). (1412-31), the Maid of Orleans or 'La Pucelle,' was b. in the vil. of Domrémy near Vaucouleurs, on the borders of Champagne, on Jan. 6 of humble parentage. Her extraordinary character and conduct make her one of the most striking figures in hist. From her earliest years she was imbued with an ardent faith and love of religion, and from the age of thirteen, according to her own account, she began to hear the voices of Saints Michael, Margaret, and Catherine commanding her to deliver her country from the Eng. invader and to conduct Charles VI., king of France, to Rheims, to be crowned. Accordingly, after much hesitation, she presented herself before the governor of Vaucouleurs. She was examined by the most intelligent men and counsellors, and at length was given permission to hasten to the deliverance of Orleans, D'Anlon being appointed her constant attendant and brother-in-arms. She donned male dress and a suit of white armour, and mounted on a black charger, put herself at the head of an army of 6000 men, and advanced to aid Dauphin in the siege of

Orleans. She entered the city in April 1429, and forced the Eng. to raise the siege and retreat after fourteen days' fighting, and Charles entered Rheims and was crowned in July of the same year. Enemies soon multiplied around her, and she was at length captured by the Burgundians and sold to the Eng. She was imprisoned at Rouen, condemned as a heretic, and finally burned at the stake. In 1455 a special commission appointed by the Pope rehabilitated her. She was canonised in 1920, and May 8 is now kept as a *fête nationale* in her honour. See A. Lang, *The Maid of France*, 1908; and G. B. Shaw's play (with preface), *St. Joan*, 1924; H. Belloc, *Joan of Arc*, 1929; W. Barrett, *Trial of Jeanne d'Arc*, 1931; V. Sackville-West, *Joan of Arc*, 1936; F. Winwar, *The Saint and the Devil*, 1943; A. Buchan, *Joan of Arc and the Recovery of France*, 1948.

Joan I. of Naples (1327-82), daughter of Charles, duke of Calabria, became queen in succession to her grandfather, King Robert, in 1343. She was first married to Andrew of Hungary, but when he was assassinated at Aversa in 1345, became the wife of Philip, Prince of Taranto. She took refuge in Provence when an inquiry was made concerning the murder of Andrew of Hungary, and purchased her pardon from Pope Clement VI. by selling to him the tn. of Avignon. She returned to Naples in 1362 and married James, king of Majorca, and later Otto of Brunswick, Prince of Taranto. She had no sons and so made Louis I., duke of Anjou, her heir, with the result that Charles, duke of Durazzo, who regarded himself as the rightful future king of Naples, seized the city. J. was captured and executed at Aversa.

Joan II. of Naples (1370-1435), daughter of Charles of Durazzo, king of Naples. She succeeded her brother Ladislas in 1414, and was at that time the widow of Wm. of Austria. She next married Jacques de Bourbon, Count of La Marche, but at the same time chose Count Pandolfello as her lover, who was arrested and executed by her husband, she herself being condemned to religious seclusion. But when she regained her liberty she in her turn had Jacques imprisoned. Her whole reign was troublous, and on her death the throne passed to Alfonso of Aragon, in spite of her attempt to make Louis of Anjou her heir.

Joanes (or Juanes), Vicente (1523-79), Sp. painter, often called 'the Spanish Raphael,' b. at Fuente de la Higuera, in the prov. of Valencia. He studied chiefly at Rome, but his best works are at Valencia. All his subjects are religious, and are marked by a beauty of colour and minuteness of finish.

Joannes Damascenus, St., or Chrysostomos (c. 676-749?), theologian, hymn-writer, and one of the later Gk. fathers, b. at Damascus. He was a member of a Christian family of distinction and was educated by the It. monk Cosmas. He defended the worship of images in a controversy with Leo the Isaurian. He spent his later years in the monastery of Santa Saba, near Jerusalem. Here he

wrote his hymns and other works, which include an *Encyclopedia of Christian Theology*; treatises against Jacobite and Monophysite heretics; disputations against superstitions; homilies; *Barlaam and Jousaph*, a disguised version of the life of Buddha; *Fons Scientiarum*; and *De Imaginibus*. But he is best remembered by his hymns, some of which have been translated into Eng. by Neale. The first good ed. of his works was that of Le Quien, 1712; this was reprinted in 1718. See H. Menger, *Die Bilderlehre des Johannes von Damaskus*, 1938.

Joash, or Jehoash: (1) Son of Ahaziah and king of Judah. On Ahaziah's death the throne was usurped by his wife Athaliah, who attempted to exterminate all the princes of the house of David. But J. was hidden in the Temple by Jehoiada the high-priest, who later placed him on the throne at the age of seven and slew Athaliah. J. at first ruled well, and did much to restore the Temple, but later relapsed into the Baal-worship of his step-mother, Athaliah. He met his death at the hands of an assassin. (2) Son of Jehoahaz, king of Israel, third in the dynasty of Jehu. By three great victories over Ben-hadad, foretold by Elisha, he regained the lands which Hazael had conquered. Provoked by Amaziah's taunts, he then engaged in war with Judah, and reduced it to dependence on Israel. He died about 783 B.C.

Job, Book of (Heb. *ʾIyyōb*), one of the most remarkable books of the O.T., belonging to the section known as the Iliography. The book in its present form divides naturally into five parts: (1) The introduction (chs. i. and ii.) first shows us Job as a prosperous Edomite Emir, whose prosperity is equalled by his godliness and uprightness. At a council in Heaven we hear Jehovah express his approval of Job and also how the Adversary is allowed to torment him in order that his perfect righteousness may be made manifest. In spite of the persuasions of his wife, Job maintains his integrity, but on the arrival of three neighbouring Emirs, his friends, to condole with him, he breaks into a passionate lamentation. (2) The discussion between Job and his three friends, Eliphaz, Bildad, and Zophar (chs. iii.-xxxiii.). This contains three cycles of dialogues, each cycle consisting of three speeches by Job in answer to speeches by each of the three friends in turn. In the last cycle, however, Zophar's silence seems to show that Job has ended the discussion, but some hold that the third cycle is really complete, verses 11-23 of Chap. xxxvii being in truth Zophar, and not Job. (See Froude's essay on Job and the authorities there quoted.) The view advanced by Job's friends is that suffering is inevitably and invariably the result of sin, and that Job's case cannot be an exception. Job, in the consciousness of his innocence, is therefore almost driven to deny the justice of God. He is, however, saved from this, and ends by concluding that sin and suffering in the individual are not necessarily connected, and by adverting God to reveal the reason why he is thus afflicted. (3)

Introduces the speeches of a fresh speaker (chs. xxxiv.-xxxvii.), a young man named Elihu, who had heard the preceding discourses. He expresses his utter abhorrence of Job's utterance against God, and lays stress on the disciplinary value of suffering, a point which had already been slightly noticed by the three friends. (4) The reply of Jehovah out of the tempest (chs. xxxviii.-xli.). It is a series of marvellous poetic pictures of the mysteries of the universe, so presented as to humble Job, and draw from him a confession of his utter ignorance and worthlessness before his Creator. (5) The conclusion (ch. xli.) tells how, having thus humbled himself, Job is restored to double the prosperity he had enjoyed before. The problem with which the B. of J. deals is that greatest of all problems, the mystery of suffering, which must have engrossed the attention of the Jews in the early post-exilic period to which this work must be referred. The text is, unfortunately, in a very corrupt condition, but there is a fairly regular sequence of thought. The Elihu passages appear to be a later interpolation. There is no reason to believe that the story is historical, but it is probably founded upon a traditional legend. It doubtless owes much, however, to the poetic genius of its compiler. A vast amount of literature and art (e.g. Blake's *Vision of the Book of Job*) has grown up around it; the following eds. should be consulted: A. B. Davidson, *Job* (Cambridge Bible for Schools, 1884), and works by T. Cheyne (1897), J. Ley (1899), B. Beer (1895-98), Duhm (1897), C. Buddo (1903), A. Nairne (1935), W. B. Stevenson (1947). See also J. Wicksteed's ed. of Blake's *Vision of the Book of Job*, 1910; H. W. Robinson, *The Cross of Job*, 1938.

Jobber, professional dealer on the Stock Exchange whose business it is to 'make a market' for a special line of securities. He is precluded by the rules of the Stock Exchange from acting as a broker, but can make bargains direct with members of the public provided he does not do so in the House. He can buy securities with the intention of taking delivery, and can sell with the intention of delivering whether he has the shares or intends to obtain them subsequently. Generally speaking a J.'s business is to sell or buy immediately what he has bought or sold respectively. Js. quote securities at two prices, the higher at which they will sell, the lower at which they will buy. The difference is called the 'turn of the market.' When there is a free mkt., i.e. where the securities are being freely bought and sold, the J. contents himself with a smaller 'turn,' or closer quotation, because he knows he will have ample opportunities of getting his profits by converse bargains. Members may not act as brokers and Js. at the same time, and on their ann. application for re-election must state in which capacity they intend to act.

Job's Tears, popular name of the graminaceous plant known botanically as *Cotylachryma*. The fruit resembles tears, and the grass occurs in India.

Jocasta, wife of Laius, king of Thebes

and mother of Oedipus (q.v.). She murdered the latter, not knowing that he was her son, and on realising her crime, took her own life. The story was a favourite theme of Gk. tragedy.

Jocelin, or **Joscelin** (fl. 1200), Cistercian monk, was the author of *The Life and Miracles of Saint Waltheof of Melrose*; *A Life of David, King of Scotland*; and *A Life of Saint Kentigern*; *A Latin Narrative of the Life and Miracles of St. Patrick*. This work was first printed in 1624, and an Eng. version by E. L. Swift was pub. at Dublin in 1809.

Jocelin de Brakelonde (d. c. 1213), Benedictine monk who fl. at the end of the twelfth century. He was a native of Bury St. Edmunds, and became a member of the abbey in 1173. He wrote a chronicle of the abbey from 1173-1202, in which he gives a minute account of the abbot Samson and of his reforms, as well as of the monastic life of the time. J.'s style is clear and pleasing, and it was his life-like picture of Samson which inspired Carlyle to write his essay on the abbot in *Past and Present*.

Jockey Club, see HORSE-RACING.
Jockey Club Stakes, see RACE MEETINGS.

Joculators, see JONGLEURS.

Jode, **Pieter de** (1570-1634), the Elder, Flemish engraver, b. at Antwerp. He studied at first under Hendrik Goltzius but afterwards went to Italy and engraved sev. plates from the works of the great masters. In 1601 he returned to Antwerp and won great distinction by producing various prints after the prin. Flemish painters.

Jode, **Pieter de** (1606-74), the Younger, son of the above, was taught by his father, whom he surpassed in taste and facility. His best works are his portraits, sev. of which he engraved after Van Dyck.

Jodelle, **Etienné** (1532-73), Fr. poet, b. in Paris. He aimed at substituting classical drama for the morality and mystery plays that then occupied the Fr. stage. He produced his first play, *Cleopâtre captive*, in 1552. This was represented before the court, J. himself playing the title-role, and is famous for being the starting-point of Fr. classical tragedy. He also wrote two other plays, *Eugène*, a comedy, and *Dido*, a tragedy which follows Virgil's narrative.

Jodel, or **Jodelin**, see JOYDELLING.

Jodhpur, or **Marwar** (the region of death): (1) Largest state of Rajasthan, India, with an area of 35,000 sq. m. It is generally sterile and covered with sandhills. The Aravalli Hills form the E. boundary. The Luni is the only important riv. There are a few marshes which dry up in the hot weather and yield crops of wheat and grain, and at Sambhar is a famous salt lake. Marble is obtained from quarries at Makrana. The chief exports are salt, hides, marble, brass and lacquer ware, and cotton. Pop. 2,130,000. (2) A tc. cap. of above state, 98 m. W. of Ajmer, contains a magnificent fort on a rock 400 ft. above the surrounding plain, guarding the Maharajah's palace. The masonry is brass and iron ware, and cotton. Pop. 98,000.

Joel, second of the twelve minor prophets, is spoken of in the heading to his book as the son of Pethuel or as many important MSS read of Bethuel. His prophecies contain no clear references to contemporaneous events, nor are the sins for which he rebukes the Jews sufficiently specific to give any clue to his date. The view now generally held is that he prophesied in the reign of Joash king of Judah, though certain important critics hold that he was post exilic. The Book of J consists of three prophecies all closely connected together. The first two chapters tell of a great plague of locusts which he afflicted the land. Many have taken this figuratively as alluding to the armies of Assyria. Then comes the prophecy of the outpouring of the Holy Ghost (ii 28), which is followed by the great judgment of Jehovah over the enemies of Judah in the valley of Joshiaphat. See commentaries by C. A. Giedner 1831 R. Wunsche 1872 H. Grätz 1873 J. Schindler 1922 and L. O. Marx 1922 work on the subject *Die Prophezie des Joels*, 1879 I. D. Muefild, *Les Prophéties du livre de Joel* 1926.

Jœuf, tn in the arron of Brice, n the dept of Meurthe et Moselle, France Pop 9600

Joffre, Joseph Jacques Cesaire (1852-1931) Fr. soldier to whom is generally given the credit for making the decision to stand against the Gers at the battle of

a struggle in occupying Timbuctoo—experiences which are the subject of his book, *My March to Timbuctoo* (1915). His comparatively slight experience of actual warfare was not supplemented by any very adequate training in the theory of war and when he reached the Higher Command he had to apply himself to the study of an art which Loch, Pétain and others had been teaching for many years. Indeed the name of J was scarcely known to the Fr. people before the First World War and his rise in the military profession had been a matter of purely administrative success. Yet in character and common sense J was a great soldier. His conception of the plan to turn the Ger right flank and to so do at the moment chosen, saved Paris and with the salvation of Paris the morale of the Fr. people remained unimpaired at the one moment in the war when its impairment might have been irreparable. Joffre was a steadying influence in the early days of the war, before the world had adjusted its outlook to the altered conditions. He was one of the few soldiers to foresee the course of the war; others like the Ger leaders looked forward to a short decisive encounter. J early said: "It is no longer the General in Chief who will win the battle it will be the colonels and even the humble captains. Battles will be engaged over fronts of from 250 to 500 m in length and over such an extent the will of a single man can scarcely get a grip. Combinations and tactics are scarcely possible nowadays. The troops which will win will be those which hold out longest, which have the greatest power of endurance, the most energy and the strongest faith in the final success." Writers dispute the precise part played by the different Fr. commanders in the strategy adopted on the eve of the Marne battle. Some give the entire credit to J, asserting that Gallieni (qv) strongly advised an attack on von Klück's exposed flank by Maunoury's army alone; others—the majority—give the major share in conception to Gallieni, and attribute the rest to the legendary reputation of J. But there seems to be no doubt that the planning of the battle was the work of J. He risked all, after securing the co-operation of Gen. Sir John French on a single throw, and by hardiness and sagacity won the day. After the Marne battle, however, when the Ger resistance stiffened, rival generals conducted a campaign against J and the champions of Gallieni and of Sarraïl (qv) charged J with rejecting all superior authority and organising a military junta at Chantilly. Indeed J never seems to have inspired the supreme confidence of Gallieni, for when Gallieni in 1915 became minister of war, he cast some implied aspersions on J's conduct of the war by demanding information on the Verdun defences J tendered his resignation (Oct 1915), but the Fr. Gov retained its confidence in him. The vendetta against him, however, continued, and indeed the annals of the Fr. army are full of such incidents which may be regarded as symptomatic of the restlessness of the Fr.

MARSHAL JOFFRE

the Marne in Sept 1914. He was b at Rivesaltes, Jan 1, third son of a family of eleven children the father being a cooper in a fair way of business. Educated at the Collège of Perpignan and the École Polytechnique, he joined the army as a second-lieutenant during the Franco-Prussian War in 1871. He saw service in various colonial expeditions, among which were the Chinese expedition of 1884, when he was in charge of the fortified defences in Formosa, while in 1894 he was sent to the rescue of the Bonnier column, which was subsequently massacred by the Tuaregs, and succeeded, after

national character. Finally on Dec 13, 1916 a decree conferred on J the title of technical adviser to the gov in matters appertaining to the direction of the war with retention of the title 'commander in chief' but the command of the 1st front was to be given to Gen Nivelle. The 1st Senate were opposed to this arrangement and after Briand had appointed Gen Lyautey, war minister, Joffre's two offices were suppressed, and on Dec 26 he was created Marshal of France, the first to receive the revived honour which had

Johanna, or Anjouan, one of the Comoro Is, in the Mozambique Channel. It is the central one of the group and is 26 m long and 19 m wide. In the N stands Johanna, a walked to and the residence of the sultan of the is.

Johannesburg, city in the Transvaal Prov of the Union of S Africa, situated on the high veld, 5710 ft above sea level, 14 429 m by road from Durban and 911 m from Cape Town. J is the centre of the great gold mining industry of the Wit water-rand and the most important

been abolished after the fall of the Second Empire. In 1918 J was made a member of the Académie Française. A student of J lands outside in hotel in Cl. Italy where he had made his staff heady after early in the war. It should be noted that it was J who in Aug 1911 appointed Loch to the command of part of Germany and Weygand (then a young colonel) as chief of staff to J. J. J. was twice married and had two daughters. J was a great-hearted man and leader and his whole life was marked by great simplicity and hard work. See J. W. Halsey, *Battle of Britain and Joffe 1917*. In *Goethe, Les Trois Mousquetaires*, Joffe, Pétain 1920.

Joggs, see JOGGA

Jogjakarta, or Jogjokarta, see JOGJAKARTA

business, cultural and financial centre in S Africa. It has one of the finest climates in the world with summer rains on an average of 36 days a year and cold dry days with brilliant sunshine throughout the winter months. The average annual rainfall is 34 in, the average mean maximum temperature is 72 in Jan and 60 in July and the average mean minimum 50.2 in July and 56 in Jan. Extremes of hot and cold are rarely experienced, although a sudden drop in temperature often occurs when there is a summer thunderstorm. J was founded in 1886 on the farm Indjeslaagte on the ridge known as the Witwater-rand (1) when the main reef of gold-bearing conglomerates was discovered by George Harrison. The small mining camp was probably named after Johannes Meyer the Mining

Commissioner of that time. Its early hist. was one of rapid development and of political and civil strife. The political disabilities of the new pop., known as Uitlanders (foreigners) which had looked to the rich goldfields led in 1895 to the Jameson Raid and to the Anglo-Boer war of 1899-1902. On the outbreak of war in Oct. 1899 most of the Uitlanders left the tn. and business and mining came to a standstill. In May, 1900, Brit. troops under Lord Roberts entered J. and by the end of the war the tn. and mines were functioning normally. From bare veld in 1835, a tn. of 10,331 European inhab. had sprung up by 1890 and the European pop., increased to 83,363 in 1904, to 150,286 in 1921, 252,579 in 1938 and 336,292 in 1948. The total pop. in 1948 was 778,144, made up of 336,292 Europeans, 400,050 natives, 25,600 Europeans, and 16,202 Asiatics. The area of J. is 57,007 ac. or 89.07 sq. m.

Local gov. in 1886 was exercised by a mining commissioner assisted by a Diggers' Committee elected by the gold-seekers. In 1887 a Sanitary Board was estab. and in 1896 Johannesburg became a tn. governed by a Stadsraad (Tn. Council). In 1900 the duties of the Stadsraad passed to the military governor and in 1901 a nominated council became responsible for local affairs; this was replaced by an elected council of thirty in Dec., 1903, and since that time local gov. has been modelled on the Eng. system. A Transvaal Prov. Ordinance of 1928 transformed the tn. of J. into a city. Today (1949) local gov. is in the hands of a City Council of forty-two members. The City Council owns and operates two power stations, a gas works, an abattoir and livestock mkt., a produce mkt., fine sewage disposal works, and a transport system of trams, motor buses and trolley buses. There is a plentiful water supply obtained from the Rand Water Board and distributed by the City Engineer's Dept. The City Council has 245 parks and open spaces, with a total area of 6,314 ac. There are twelve municipal open-air swimming baths, a fine zoological garden and a municipal golf course. The council owns the Ellis Park Rugby and Cricket grounds where international games are played. Public health and social welfare work is highly developed. In 1948 the council owned 2112 sub-economic houses for Europeans and Europeans and in its sub-economic townships and hostels housed a pop. of 111,860 native Africans. The rateable value of the city at June 30, 1948, was £210,678,482 and the loan debt £27,451,619. The City Council's assets were valued at £65,145,894.

The J. Public Library is a municipal institution, with a fine central library including special collections on science and technology, fine arts and Africana, a municipal reference library, an Africana Museum, and a municipal theatre. The city also maintains branch libraries for Europeans and non-Europeans, mobile libraries, school libraries, hospital and prison libraries. The Municipal Art Gallery, designed by Sir Edwin Luytens, con-

tains a fine collection of nineteenth century and modern art, the original stock having been selected by Sir Hugh Lane. The city orchestra is subsidised by the council and in 1948-49 received approximately £50,000 from city funds. There were 221 churches and church halls in J. in 1946. St. Mary's Cathedral, designed by Sir Herbert Baker and Mr. F. L. H. Fleming is a fine building not yet completed. The Dutch Reformed Church is a modern building and the Catholic pro-Cathedral is to be rebuilt. J. is an important educational centre. The Univ. of the Witwatersrand has faculties of arts, science, medicine, engineering, commerce, law, dentistry and architecture. It includes the Bernard Price Institute of Geophysical Research, a speech and hearing clinic and a good library. The Witwatersrand Technical College provides vocational and other classes for young people and adults, and controls an art school, a trades school and a business college. The J. Teachers' Training College is a Prov. institution. The majority of primary and high schools are run by the Transvaal Prov., although there are sev. important private schools, notably St. John's College and Marist Brothers' College for boys, and Roedeaan, Kingsmead and sev. convent schools for girls.

Johannes Sootus, see ERIGENA.
Johanngeorgensadt, tn. of Saxony, Germany. It is situated about 15 m. N.N.W. of Carlsbad, and possesses iron and blismuth mines. Pop. 7200.

Johannisberg, vil. of the Rheingau, Germany, near the R. Rhine. It is famous on account of its castle and vineyards, the products of the latter being used to make the well-known Johannisberger wines. Pop. 1400.

John, Saint, the Apostle, was the son of Zebedee, and the brother of James. The narrative of the call of James and John, who with St. Peter form the inner circle of the apostolic band, is contained in all three synoptic gospels. St. J. is also generally identified (1) with the companion of St. Andrew mentioned in the Fourth Gospel who, from being a disciple of John the Baptist, became a follower of Jesus; (2) with the 'other disciple,' spoken of also as 'the disciple whom Jesus loved,' mentioned in the Fourth Gospel. St. J. took part in many incidents mentioned in the synoptic gospels, but three stand out prominently as throwing light on his character, viz. the request of the brothers (Mark x. 35-41), the rebuke given to the man casting out devils in the name of Jesus (Mark ix. 38), and the request that fire should be called down from heaven to destroy the Samaritan vil. (Luke ix. 54). St. J. appears in the early chapters of the Acts, chiefly as the companion of St. Peter, while he is spoken of in Gal. ii. 9 as one of

the pillars of the church at Jerusalem. Tradition from the time of Irenaeus (c. 175) asserts that he survived the ordeal of martyrdom under Domitian and died of old age.

John, Epistles of, three canonical epistles of which the authorship is generally ascribed to the Apostle John. It is necessary, however, to consider the First Epistle apart from the Second and Third. The great majority of critics, including Elchhorn, Credner, Lucke, Ewald, and Huther, are agreed that the writer of the Fourth Gospel was also the writer of the First Epistle (see JOHN, THE GOSPEL ACCORDING TO), and the most modern critical works support this view. It is further probable that the Epistle was written after the Gospel. The aim of the Epistle is primarily to build up the writer's 'children' in the true Christian life, but to do this he has to be polemical to some extent. There has been much discussion as to what enemies his words are directed against, but they may be classed generally as Gnostics, whose errors of life and conduct were as serious dangers to the flock as were their heretical doctrines. It is an ancient tradition that the Epistle was directed partially against Cerinthus. The language of all the Epistles shows clearly that they are not 'general,' but are addressed to a particular church or group of churches whose members were well known to the writer. This is particularly so in the case of the First Epistle. The question of the authorship of the two later Epistles is more difficult. Their authenticity was much disputed before the formation of the canon and there is no agreement as to their author. Eusebius and Jerome ascribe them to John the Presbyter. It is now generally agreed that the 'lady' to whom the Second Epistle is addressed stands for the Church itself. See commentaries by A. Plummer, 1881; B. Westcott, 1883; G. H. MacGregor, 1928. See also Brooke's 'Johannine Epistles' in the *International Critical Commentary*, 1912, and J. Carpenter, *The Johannine Writings*, 1927.

John, the Gospel According to, now more usually termed the Fourth Gospel, stands in striking contrast to the other three gospels which precede it, and which are termed the synoptic gospels. The contrast is struck in the opening passage of the Fourth Gospel. The synoptists, except St. Mark, commence with elaborate genealogies which trace the earthly ancestry of the Messiah. St. Mark commences immediately with the profuse to Christ's ministry. It has often been remarked, though, how St. John's Gospel begins with the same words as the Book of Genesis—'In the beginning.' Thus his Gospel opens with an elaborate philosophical and metaphysical statement as to the eternal life of the incarnate Word. The contrast is not lessened as one proceeds. Everywhere the abstract takes precedence of the concrete. The tone of the Fourth Gospel is throughout rather that of a dogmatic treatise than a biographical sketch. It is taken for

granted that the hearers are acquainted with the characters introduced. This is especially the case in connection with John the Baptist. Therefore, the most vital points in the actual hist. of Jesus are here omitted; perhaps the most striking omissions being the Baptism and the institution of the Eucharist, though as regards the latter John gives our Lord's promise of the Eucharist at great length in a most moving passage. Finally, it may be said that St. John's Gospel is concerned primarily with the spiritual and the eternal. The earthly life of Christ is considered not as an isolated event but in its connection with His life as God and with the whole of human experience. The incidents narrated are chosen solely for the doctrines that can be drawn from them, and Christ's words are not given as spoken, but as matured and interpreted in the mind of the writer. The question of the authorship of St. John's Gospel was a problem of the early Church, and it has also been a most important critical problem during the last century. Modern criticism now shows a tendency to return to the traditional view and ascribe it to St. John the Apostle, or possibly to John the Presbyter spoken of by Papias. The extreme anti-traditional view of the Tübingen school made the author a Gentile Christian, and placed the work in the middle of the second century: Baur suggests A.D. 160-170, Pfleiderer A.D. 140, Keim A.D. 130. Dr. Harnack, however, in his *Chronology of Early Christian Literature* places it between A.D. 80 and A.D. 110. According to this chronology, the date presents no obstacle to the authorship by St. John the Apostle, and much internal evidence is adduced in support of the traditional view that it was written by him in his old age. The traditional view well explains the peculiar characteristics of the Gospel, and the conditions under which he would have written are thus excellently expressed by Dr. Armitage Robinson: 'The old disciple needs no documents to compile as others might compile a laboured history. The whole is present in his memory, shaped by years of reflection, illuminated by the experience of a lifetime. The supposed statement of Papias that John suffered martyrdom from the Jews is not a serious objection to this view, for its authenticity is discredited by its late appearance, by the great body of tradition, and by the opinion of such critics as Zahn, Lightfoot, and Harnack. See B. Westcott *Gospel of St. John*, 1882; J. A. Robinson, *Study of the Gospels*, 1906; F. C. Burkitt, *Gospel History and its Transmission*, 1906; J. Donovan, *The Authorship of St. John's Gospel*, 1936; F. R. Hoase, *The Original Order and Chapters of St. John's Gospel*, 1944; A. O. Headlam, *The Fourth Gospel as History*, 1948; also works by A. Plummer (1882), M. F. Sadler (1883), J. Lagrange (1925), G. H. MacGregor, 1928; J. O. Murray, 1936; and P. Gardner-Smith, 1938.

John, St., of Nepomuk (c. 1330-93), patron saint of Bohemia, a native of Nepomuk, or Pomuk, near Pilsen.

• Educated at the univ. of Prague, he soon entered the church, and after a time became confessor to Sophia, the wife of Wenceslaus IV. When he refused to divulge to her husband some secret he had heard from the queen in the confessional, he was tortured and finally flung into the Moldau. His canonisation dates from 1729.

John, the name of twenty-two popes:

John I. (623-26), a native of Tuscan, succeeded Hormisdas and was a friend of Boethius. Sent to Constantinople by Theodoric to obtain toleration for Arians, but on his return was imprisoned by the king who was dissatisfied with the mission. He died in captivity.

John II. (*Mercurius*) (532-35), a native of Rome and succeeded Boniface II.

John III. (560-73), native of Rome, successor to Pelagius I. The Lombards ravaged Italy during his time.

John IV. (640-42), native of Dalmatia, succeeded Severinus. Noted for his zeal and orthodoxy, and condemned the Monothelite doctrine.

John V. (685-86), native of Antioch, successor to Benedict II. The first of several popes of E. birth.

John VI. (701-05), of Gk. birth, succeeded Sergius I. Appealed to in the conflict between St. Wilfrid of York and the see of Canterbury, decided in favour of the former.

John VII. (705-07), native of Grecco, successor to the foregoing.

John VIII. (782-82), native of Rome, succeeded Adrian II. Saracens ravaged Rome during his pontificate. He supported Charles the Bold's claim to the empire, and crowned him in 875. See A. F. De Montor, *Histoire des souverains pontifes*, 1849; F. Dvornik, *Les Slaves, Byzance et Rome du IXe siècle*, 1926.

John IX. (898-900), Benedictine, succeeded Theodore II. He accomplished little, and his position was very insecure.

John X. (914-28), native of Romagna, succeeded Lando. Placed himself at the head of an army and drove Saracens from Italy. Said to have been murdered.

John XI. (931-36), elected while under age, and governed through influence of his mother, Marozia.

John XII. (*Ottavian*) (955-64), succeeded Agapetus II. Crowned Otto I., Emperor of Germany and King of Italy.

John XIII. (965-72), native of Rome, crowned Otto II. as emperor.

John XIV. (983-84), a native of Pavia, succeeded Benedict VII. Deposed by the antipope, Boniface VIII., thrown into prison and said to have been poisoned.

John XV. (984) elected successor to John XIV., but died before his consecration.

John XVI. (986), native of Rome, set up by Crescentius, a patrician. Overthrown by the emperor and treated with cruelty.

John XVII., pope for a few months in 1003.

John XVIII. (1003-09), when he resigned his office and entered a monastery.

John XIX. (1024-33), native of Rome, succeeded Benedict VIII.

John XX. (1276-77), native of Spain, and a man of great learning, often called John XXI.

John XXI., see **John XX.**

John XXII. (1316-34), native of Cahors, France, b. at Cahors in 1249. His name was Jacques Duèze or Deuze. Endeavoured to propagate Christianity in distant lands. Important in Ger. hist. as taking active part in disputes of emperors Louis of Bavaria and Frederick of Austria.

John XXIII. (1410-15) succeeded Alexander V., and his title was disputed by Popes Benedict XIII. and Gregory II. A man of depraved morals, and committed many heinous offences. Finally deposed.

John (1166-1216), King of England, probably b. at Oxford, was the youngest son of Henry II. and Eleanor of Aquitaine, nicknamed John Lackland. In 1185 he was sent as governor to Ireland, but was soon recalled on account of his insolence to the Irish chiefs. J.'s coalition with his brother Richard and Philip of France in 1189, under circumstances of peculiar treachery, was regarded as Henry II.'s death-blow. He was no truer to his brother; during Richard's absence in the Holy Land he attempted to usurp the crown and joined Philip of France to oppose Richard's release. In 1199 J. became king, and one of his first acts is supposed to have been the murder of Arthur, the son of his elder brother, Geoffrey. The death of his able mother in 1204 removed the last restraining influence on his crimes and follies, and within a year Philip of France had annexed, with hardly any opposition, Normandy, Angou, Maine, and Touraine. In 1205 began the great struggle between J. and the pope, Innocent III., over the election to the archbishopric of Canterbury, which led to the interdict of 1208, the deposition of 1211, and the excommunication of 1212. When the pope commanded Philip of France to invade England, J. submitted, agreed to hold his kingdom as a fief of the papacy, and to accept the pope's nominee, Stephen Langton, as archbishop. But his tyranny at home, coupled with the defeat of his forces at Bouvines (1214) by Philip, and the loss of Poitou stirred the barons to revolt, and, led by Stephen Langton, they forced the king to sign Magna Carta at Runnymede (June 15, 1215). But J. had no intention of keeping his promises, and induced the pope to annul the charter. The barons, as a last resort, appealed to Philip of France, and the Dauphin Louis had landed in England when J. suddenly died at Newark. He married (1) Avise of Gloucester, (2) Isabella of Angoulême. See W. Stubbs, *Constitutional History*, 1875; and *The Early Plantagenets*, 1876; and R. Pauli, *Geschichte von England*, 1858; K. Norzgate, *John Lackland*, 1904; J. H. Ramsay, *The Angevin Empire*, 1903; E. B. D'Auvergne, *John, King of England*, 1934.

John II. (1319-64), king of France, surnamed 'the Good,' succeeded his father, Philip VI., 1350. He roused righteous indignation by his arbitrary execution of Robert, Constable of France, and then by gulfish means entraped his son-in-law,

Charles of Navarre, cast him into prison in Chateau Gaillard, and put to death his associate in intrigue, the Count d'Harcourt. This had not a little to do with the invasion of France by Edward III. and the Black Prince. J. was taken prisoner at the battle of Poitiers in 1356, and eventually died in captivity, as his subjects were too reduced by devastations, famine, wars, and civil broils to pay the ransom.

John II., or **Hans** (1481-1513), king of Denmark (from 1481) and of Norway and Sweden (from 1482), was occupied with wars and rebellions throughout his reign. Failure attended his expedition against the Dilmarchers in S. Sleswig (1500). This disaster led to revolts in both Norway and Sweden, and though the former kingdom was pacified in 1508, the latter continued the struggle till within a year of John's death. Under Sten Sture, and later under Svante Sture, who had gained the support of the Hansa tns., the Swedes succeeded in throwing off the Danish yoke.

John, kings of Poland:

John I. (1492-1501), brave soldier but a poor statesman. An insurrection in Moldavia frustrated his projected crusade against the Turks.

John II. (*Casimir*). See under CASIMIR.

John III. (*Sobieski*) (1624-96), became commander-in-chief in 1668, having gained signal victories over the Cossacks and Tartars (or Tatars) in the Ukraine. Having been heavily bribed by Louis XIV to secure the election of Michael as king, he harassed the reign of the latter by continuous conspiracy, and drove him to sign a disgraceful peace with the Turks (1672). A splendid victory over the Ottoman too in 1673 secured him the Polish throne. By the treaty of Zaravno (1676) he recovered most of Ukraine from the ignobly vanquished Ottomans. In 1683 he drove them from Vienna and after a brilliant victory forced them to retire from Hungary.

John, kings of Portugal:

John I. (1357-1433), called 'the Great' and 'father of his country,' was the father of Henry the Navigator. He proved a wise ruler, though his reign was darkened by continuous strife with John I. of Castile.

John II. (1455-95), called 'the Perfect,' curbed the power of his haughty noblemen, and drew up the celebrated treaty of Tordesillas with Castile (1494).

John III. (1502-57), bid fair to wreck the prosperity of Lisbon and his realm at large by being too partial to the whims of the clerical party.

John IV. (1603-56), b. at Villa Vicosa, became king by popular consent after the rebellion of 1640 against Philip IV. of Spain. His reign was occupied with a long struggle with Spain, and at his death his country had not yet reasserted its independence.

John V. (1689-1750), allied himself with Austria in the war which closed with the treaty of Utrecht (1713), and afterwards became a tool in the hands of the Church party.

John VI. (1769-1826), was regent from

1799 until 1816, when he became king. He lived in Brazil, and when he returned home in 1822 he agreed to govern on constitutional lines.

John Augustus Edwin (b. 1879), Brit. painter; b. at Tenby, Wales. Attended Slade School, London; afterwards lived in Paris and Provence. His pictures were first exhibited at the New English Art Club. He taught art at Univ. College, Liverpool, 1901-02. At the Arts and Crafts Exhibition, Burlington House, 1916, J. exhibited his 'Peasant Industries'—now in the Tate Gallery; along with 'The Smiling Woman' (1910), 'Robin' (1917-1918), 'Rachel,' and the 'Galway' cartoon. He was official artist to the Canadian Corps in the First World War, and designed for it a memorial cartoon, 'Canadians opposite Lens.' By 1921 he was A.R.A.; by 1928, R.A. but resigned in 1938 on account of the Academy's rejection of a sculpture by Epstein. Re-elected R.A. 1940.

He painted portraits of the chief members of the Peace Conference; also of Bernard Shaw (*q.v.*) (1916), Lord Fisher (1918), Lord Sumner (1918), the Marchesa Casati (1918-19), and the Princess Bibesco (1921). It is as a portrait painter that he has achieved most fame, his skill in directly representing character and temperament with the brush leaving him without a rival among his contemporaries in this branch of the art. An admirable example is his portrait of Lord Fisher; while the 'Portrait of a Girl' and 'Vivian' (also a portrait of a young girl, but in the symmetrical rather than the angular style) emphasise his scorn of æsthetic theory as a substitute for the expression of temperament. His absolute sense of colour values is well exemplified in his landscapes of S. France and in paintings of flowers. His fine 'Les Marlières' has been compared with the work of Cézanne (*q.v.*), but the latter is the mere artist, J. the born painter. Elected president of the Royal Academy of Wales, 1934. Trustee of Tate Gallery, 1933-41; R. Soc. of Portrait Painters, 1938. O.M. 1942. See J. Rothenstein, *Augustus John*, 1944.

John of Austria (1515-78), soldier, the natural son of Emperor Charles V. He grew up a man of far-reaching ambitions, and the tragedy of his disappointed life may be traced to the petty jealousy of his half-brother Philip II. of Spain, who was always at pains to defeat these ambitions. Philip had designed that he should become a monk, but Don John chose a soldier's career, and gained signal honours, first against Algerian pirates, then against the Moors of Granada (1570), and finally at the decisive naval battle of Lepanto (1571), when he was admiral of the combined fleets of Venice and Spain. Foiled in his project of a kingship over Tunisia, Don John was finally appointed viceroy of the Netherlands (1578). Here he was powerless from lack of funds, men, or any support from Philip. His opponent was the redoubtable William the Silent. In 1577 he was forced to surrender and to recognise the 'Pacification of Ghent.' The following year, after a conspicuous

victory over the Dutch patriots, he died of fever and, it is said, a broken heart.

John the Baptist, Saint, son of Zacharias, a priest of the Temple, and his wife Elizabeth, a kinswoman of the Virgin, born to them in their old age, according to the promise of an angel (Luke i. 5) his birthplace is unknown, but it was a tn. in the hill country of Judah. The immediate forerunner of Christ, he was the last of the great prophets to preach repentance and the coming of the Messiah. He lived apart from the haunts of men, until, probably thirty years of age, he appeared in the wilderness of the lower Jordan as a preacher. Such as came to him confessing and penitent he baptised, his baptism being the sign and seal of inward cleansing, and the beginning of a new life (Josephus, *Antiquities of the Jews*, xviii. v. 2). Jesus also came to him for baptism, and on this occasion J. makes a clear confession and acknowledgement of his own inferiority. His preaching caused a great stir, and people from all parts of the country crowded to hear him. He did no miracle; but his form, his manner of life, his intrepid rebuke of wickedness in high places, recalled the most striking prophetic figures of O.T. times. His denunciation of Herod Antipas furnished the pretext for his imprisonment, while it incurred the deadly hatred of his partner in guilt; and in due course he was murdered in prison (Matt. xiv.). Josephus lays the scene of his murder in Machærus, the great fortress of the Dead Sea; but possibly Tiberias was the place of his death. Tradition says that his body was buried at Samaria, where the Crusaders built the church of St. J., now a Moslem mosque. The head is said to have been finally buried in Damascus. The life of St. J. the B., on which the gospel histories throw much light, has been the subject of much study during recent times. See especially A. Blakeston's, *John the Baptist and his Relation to Jesus*, 1912.

John of Bohemia (1296-1316), 'the Blind,' son of Emperor Henry VII. Also known as J. of Luxembourg. In 1310 he was crowned king of Bohemia. Some years later, when the royal houses of Bavaria and Austria were measuring lances for the imperial crown, J. secured the prize for the former by his victory at Mühldorf (1322). For two years (1333-35) he fought in Italy against the Ghibellines, and eventually met his death at Crécy, where he was supporting his father-in-law, the Fr. king. Blindness overtook him towards the end of his life.

John of Gaeta, see CELASIUS II.

John of Gaunt (1340-99), Duke of Lancaster, fourth son of Edward III., b. at Ghent in Flanders. In 1359 he married Blanche, heiress to the duchy of Lancaster, and was himself created duke of Lancaster in 1362. They had one son, who was later to become Henry IV. of England. His wife died in 1369, and three years' later J. of G. married Constance, daughter of Pedro the Cruel of Castile, and assumed the title of King of Castile in 1372. J.'s efforts to establish his claim against his rival, Henry of Trastamare,

proved unsuccessful, and in 1387 he renounced all claims in favour of his daughter Catherine. He was a very ambitious man and was greatly feared by the Commons and the young king Richard II. while he opposed the greater part of the clergy by supporting John Wycliffe. After his return from Spain in 1389, he succeeded in gaining the confidence of the king and tried to promote peace between him and the barons. In 1391 his wife, Constance, died, and he married his mistress, Catherine Swynford, his children by whom were legitimised in 1397. They were the Beauforts, and included the Cardinal of that name. See S. Armitage-Smith, *John of Gaunt*, 1905.

John, Sir William Goscombe (b. 1860), Brit. sculptor; b. at Cardiff; son of Thomas J. Educated at Llandaff. Studied in Cardiff School of Art; City and Guilds of London School of Art; R.A. Schools—gold medal and travelling fellowship, 1889. Gold medal, Paris Salon, 1901. Gold Medal at the Royal Society of Brit. Sculptors, 1912. Represented in many Eng. galleries. Works include statues of: Edward VII. (eques.), Capetown and Liverpool; Prince Christian Victor, Windsor; D. Lloyd George, Carnarvon; Viscount Wolseley (eques.), Horse Guards Parade—and Arthur Sullivan memorial, Embankment Gardens, near the Savoy.

John of Kronstadt, see KRONSTADT, FATHER JOHN OF.

John Bull, see BULL, JOHN.

John Chrysostom, St., see CHRYSOSTOM.

John Dory, see DORY.

John Lewis Partnership, The, was founded by a Settlement in Trust, 1929. It comprises (1949) some 20 dept. stores in various parts of the U.K., including the business of John Lewis and Company and Peter Jones of London, about forty specialist food and other shops, farms and production units, an overseas company and a S. African affiliate. After the usual provision for reserves and payment of a fixed rate of interest on borrowed capital (averaging less than 4½ per cent on the £12 million of issued share capital) the whole of the remaining profits are divided among all the workers in all the Partnership companies. See J. Spedan Lewis, *Partnership for All*, 1949.

John of Leyden, properly Johann Beuckels, or Borkhold (1509-36), a Dutch fanatic, was a tailor, who eventually settled down in Leyden as an innkeeper. A disciple of the Anabaptist, Matthias, he was sent on a mission to Münster (1533). His fiery oratory soon gathered together a goodly company of zealous converts, who became known as the 'saints.' This success led to a strange and almost unique episode. For a twelve-month J. became king of Münster, assumed the royal purple, married several wives, dispensed justice in the market-place, and put his enemies to death. In 1535 the bishop recovered the city, and after excruciating tortures J. was executed.

John of Salisbury (d. 1180), learned scholar, studied in Paris under Abelard (1136), and also attended Oxford and

certain It. univs. His claims to high scholarship rest on his knowledge of Gk. and Latin, natural philosophy, theology, mathematics, and Heb. For many years he was secretary to Becket, whom he staunchly supported in all his vicissitudes, and whose life (together with that of Anselm) he subsequently wrote. Henry II. employed him on several embassies and received from his hands the papal bull authorising his conquest of Ireland. In his *Polycraticus de nugis curialium et vestigiis philosophorum* J. mocks at the manners and vices of the great, while *Metalogicus* reveals him as a true scholastic philosopher.

John, Knights of St., see HOSPITALIERS KNIGHTS.

John o' Groat's House, 1½ m. W. of Duncansby Head in Caithness, Scotland. The expression is proverbially used for the most northerly point of Great Britain.

John's College, St., Cambridge, see ST. JOHN'S COLLEGE, CAMBRIDGE.

John's College, St., Oxford, see ST. JOHN'S COLLEGE, OXFORD.

John's, Eve of St., see ST. JOHN'S, EVE OF.

Johns Hopkins University, situated in Baltimore, Maryland, U.S.A., is one of the newest of the great univs. It owes its existence primarily to the munificence of Johns Hopkins (1795-1893), a rich merchant of Baltimore, who contributed 7 million dollars to found a university and hospital. This gift was made in 1867, and the univ. opened its doors in 1876. In 1902 Baltimore made a gift of a large tract of land outside the city, and here a fine group of buildings now house the various schools.

John Rylands Library, library founded by the widow of John Rylands (1801-88), cotton merchant of Wigan, who died intestate leaving his widow to succeed to a fortune of over £2,000,000. In 1888 the widow bought for £250,000 the splendid library of Earl Spencer of Althorp. To house the library she built in Deansgate, Manchester, the present Gothic building there. An endowment was also provided and the collection has since been extended by the addition of many other books and MSS. making it one of the finest libraries in England.

Johnson, Amy (1905-41), Eng. airwoman, daughter of John Wm. J. of Hull, where she was born, learnt flying in 1928. Became famous in 1930 for her flight from England to Australia in nineteen days, being the first woman to accomplish the flight alone. In 1931 she flew to Tokyo across Siberia and thence back to Britain and in the following year beat by 10½ hrs. the record set up by J. A. Mollison (whom she had married in that year) in flying to the Cape. In 1933, with her husband, she made a successful crossing of the Atlantic via Newfoundland but was obliged to make a forced landing when within 60 m. of New York. Perhaps her greatest achievement was in 1936, when she flew to the Cape and back and beat both the outward and homeward records, a feat which won her the gold medal of the Royal Aero Club. Her marriage was

dissolved in 1938, when she resumed her maiden name. In the Second World War she worked as a ferry pilot for the Air Transport Auxiliary and was killed when her aircraft dived into the sea during a flight over the Thames estuary on June 5, 1941.

Johnson, Andrew (1808-75), seventeenth president of the U.S.A., b. at Rattliff, N. Carolina, his father being a porter at an inn, his mother a maid there. Was apprenticed to a tailor. After six years of this he ran away to Tennessee. At nineteen years of age he married and his wife taught him to write. From 1830 to 1834 he was mayor of Greenville, Tennessee; for four years between 1835 and 1841 he sat in the state House of Representatives, and later in the state Senate. Next year he was elected to Congress, where he remained for ten years (1843-53), and finally to the national Senate (1857-62). From 1853 to 1857 he was governor of Tennessee. On the declaration of civil war, President Lincoln made him military governor of Tennessee. In 1864 he was nominated for the vice-presidency on the same ticket as Lincoln, and after Lincoln's assassination he became president (1865-69). But the adoption of his predecessor's lenient policy with regard to the rebellious S. states was misconstrued into deliberate disloyalty, and he was accordingly impeached. The trial ended in his acquittal. Later biographies have done much to reinstate his reputation. He retired into private life in 1869, was elected to the U.S.A. Senate again in 1875, but died three months later. See lives by D. De Witt, 1903; R. W. W. Winston, 1928.

Johnson, Eastman (1824-1906), Amer. artist, b. at Lovell, Maine; studied at Düsseldorf and in Italy, France, and Holland. Among his works are: 'The Old Kentucky Home' (1867), 'The Old Stage Coach' (1871), 'Cranberry Harvest' (1880), and many portraits.

Johnson, Francis (1793?-1876), Eng. Oriental scholar. Held the chair of Sanskrit, Bengali, and Telugu at Haileybury College (1824). A revised ed. of his monumental *Persian Dictionary* appeared in 1852. Sanskrit students are indebted to his *Hilopadesa*, 1840.

Johnson, Hewlett (b. 1874), Eng. ecclesiastic, educated at Macclesfield, Victoria Univ., and Wadham College, Oxford. Vicar of St. Margaret's, Altrincham, 1908. Dean of Manchester from 1924 to 1931; and of Canterbury from 1931. Wrote *The Socialist Sixth of the World* (1940, now in its 22nd ed. and trs. into twenty-four languages, entitled in America, *The Soviet Power*). He wrote a sequel on the same theme, *Soviet Success* (1947).

Johnson, John Arthur ('Jack') (1878-1946). Amer. negro heavy-weight prize fighter, b. at Galveston, Texas. At twenty-two he was a milk-roundsman in Galveston; at twenty-three he was winning money in the ring and in his first eight years of prize fighting he was beaten only twice. He first became known in 1907 by beating Robert Fitzsimmons in

two rounds at Philadelphia. The following year he became the first coloured heavyweight champion of the world by beating French-Canadian Tommy Burns at Sydney. His most famous fight, however, was in 1910 when, at Reno, he defeated Jim Jeffries; for feeling had run high in America over the match and the defeat of the 'white man's hope,' as Jeffries had been called, caused much dissatisfaction. After J. had performed in the music-halls in the States and in this country, an attempt was made to arrange a match with Bombardier Wells in England in 1911, but the Home Secretary would not allow it to take place. Soon afterwards the suicide of J.'s white wife (Etta Duryea, whom he had married in 1909), revealed the acuteness of the race question in America. On April 3 1915, J. lost to Jess Willard at Havana but was only knocked out after twenty-six battering rounds. In all, his major fights numbered 109 in twenty-nine years in the ring. But the £100,000 he is said to have made was soon dissipated in the purchase of a luxurious restaurant in Chicago and of an expensive house in an exclusive suburb of New York. He wrestled in Paris, appeared in the bull-ring in Spain, his head bald and his great figure paunched, and once he played the part of a general in the opera *Aida* in New York. He pub. *Mes Combats* in 1914. He died in hospital at Raleigh, North Carolina, two hrs. after his car crashed into a telegraph pole.

Johnson, Lionel (1867-1902), Eng. man of letters, was a journalist in London. His best piece of literary criticism is to be found in his *Art of Thomas Hardy* (1894), and he also pub. two vols. of original poems (1897 and 1899). See A. Waugh, *Tradition and Change*, 1919; Katherine Tynan, *Memories*, 1921; B. Evans, *English Poetry in the Later Nineteenth Century*, 1933.

Johnson, Richard (1573-c. 1659), romance writer, was baptised in London. Bishop Hall speaks of the remarkable popularity of J.'s *Famous Historie of the Seaven Champions of Christendom*, 1596 (f).

Johnson, Richard Mentor (1781-1850), ninth vice-president of the U.S.A., was admitted to the Bar in 1800, and sat in Congress from 1807 to 1819, and was for many years a member of the Senate. In 1837 the Democratic party nominated him and the Senate elected him to the vice-presidency, which he retained till 1841. His chief claim to fame rests on his part in the war of 1812 with England. In command of cavalry from Kentucky, he helped to clear Michigan of the invading Eng. troops. In the victory of Thames, J. killed the famous chief Tecumseh, who led the Indians who favoured the Eng. cause.

Johnson, Robert Underwood (1853-1937), Amer. poet and editor, b. at Washington, D.C. Associate editor of *Century Magazine* from 1881-1909, editor from 1909-13, Amer. Ambas. at Rome, 1920-1921. Among his poems are: *The Winter Hour* (1891), *Songs of Liberty* (1897), *The Pact of Honor and other Poems*, *Grave or Gay* (1930), *Poems of Fifty*

Years (1931), *Aftermath* (Poems, 1933) Ed. *Rattles and Leaders of the Civil War* (1887-88).

Johnson, Samuel (1709-81), Eng. lexicographer, critic, and author, the son of a Lichfield bookseller. A precocious boy, he was from early days a great reader, and a customer of his father, struck by the lad's talents, sent J. in 1727 to Pembroke College, Oxford, where he distinguished himself by his classical erudition. After acting as an usher at Market Bosworth Grammar School, he married, in 1735, the widow (d. 1752) of Henry Porter, a Birmingham mercer, and settling at Edial, took private pupils, amongst whom was David Garrick. In 1737 he went up to London with Garrick, determined to earn a livelihood by his pen. He soon became a regular contributor to the *Gentleman's Magazine*, and for some time prepared the

SAMUEL JOHNSON

parl. reports which appeared in that periodical. He did much hack-work for Cave, the publisher of the magazine; but it was Doddsley who pub. *London* (1738), for the copyright of which the author received £10. Six years later he wrote a biography of his friend Richard Savage, with whom he had sometimes roamed the streets at night for want of the price of a lodging. In 1747 he issued the plan of his *Dictionary*, upon which, with the help of six amanuenses, he laboured for eight years. He pub. the best of his poems, *The Vanity of Human Wishes*, in 1749; and in the same year Garrick produced *Irene* at Drury Lane Theatre, where it ran for nine nights. J. in 1750 conceived the idea of a paper on the lines of the *Spectator*, which he called the *Rambler*, issued twice a week from March 20. It brought him a wider fame than any of his earlier

writings. In 1751 Chesterfield, to whom the plan of the *Dictionary* had been inscribed long ago, now repented himself of his continued neglect of its compiler, and in the *World* wrote two papers commending the work; whereupon J., whose pride had been outraged, replied in the famous oft-quoted letter (Feb. 7, 1755), in which he said that the notice, 'had it been early, had been kind,' and added, 'but it has been delayed till I am indifferent and cannot enjoy it; till I am solitary, and cannot impart it; till I am known and do not want it.' The quiet severe dignity of this inimitable letter alone would have made its author famous. J.'s mother died in 1759, and to pay the expenses of her illness and funeral he wrote *Rasselas*, the most popular of all his works. Three years later his financial troubles came to an end with the grant by Bute of a Civil List pension of £300 a year. In 1765 he brought out his long-promised *Shakespeare*, and between 1779 and 1781 pub. *The Lives of the English Poets*. J. had acquired a position in literary and artistic circles that has rewarded the efforts of no other man. He was the acknowledged dictator of 'The Club,' founded in 1765 by himself and Sir Joshua Reynolds, and numbering among its limited membership, Burke, Johnson, Beaumont, Langton, Hawkins, Boswell, Garrick, Gibbon, Fox, Sheridan, and Adam Smith. There he laid down the law to all and sundry in that witty, truculent style of conversation which Boswell has made familiar. Among his private friends were the Thrales and the Burneys, and with these he made excursions to different parts of England, a fascinating companion, if not always a pleasant guest. After Thrale's death, he quarrelled with the widow, who decided to marry Ptozli. As a writer he had a ponderous style, which was often burlesque, and was best described by Goldsmith, who said that the Doctor would make little fishes talk like big whales. He was didactic to an extraordinary degree, and he inculcated moral sentiments with gusto in season and out of season in *Rasselas* as in *The Rambler*. A man markedly disposed to belief in superstitions, he had notwithstanding very deep religious faith, as can be clearly seen in the posthumous *Prayers and Meditations* (1785). He had great courage, and a tender regard for humanity that was evinced in the kindness for and the generosity he displayed towards the unhappy, the poor, and the weak. J. is the most familiar figure of the eighteenth century, and if in the first place he owes this to his remarkable personality, in the second he is indebted for it to Boswell, who, in his biography, the masterpiece of biographies, has painted him to the life. The best ed. of Boswell's work is that brought out by Dr. Birkbeck Hill (6 vols., 1887). See S. O. Roberts, *The Story of Dr. Johnson: being an Introduction to Boswell's Life*, 1922; J. Bailey, *Dr. Johnson and his Circle*, 1927; R. Lynd, *Dr. Johnson and Company*, 1927; M. C. Struble, *A Johnson Handbook*, 1933; W. B. Watkins, *Johnson and English*

Poetry before 1660, 1936; Sir A. McNair, *Dr. Johnson and the Law*, 1948; J. W. Krutch, *Samuel Johnson*, 1948.

Johnson, William Eugene (1862-1945), Amer. temperance advocate, known as 'Pussyfoot'; Johnson; b. at Coventry, New York State. Student at Nebraska State Univ. Joined staff of *Lincoln Daily News* and wrote articles on the temperance cause, which had a wide circulation in the smaller newspapers throughout the United States. In 1895 he became associate editor of the *Voice* in New York, which was the organ of the cause. In 1905 he went to Washington to work among members of Congress for the legislation which temperance reformers wished to see enacted. The Federal gov. was, however, powerless over the liquor traffic in the various States, but there were some spheres in which it could make its influence felt, and President Theodore Roosevelt appointed J. Federal agent to enforce the law, especially in Oklahoma. By his swift and noiseless methods—whence his sobriquet of 'Pussyfoot'—he secured thousands of convictions against bootleggers within a very short space of time. In 1911 he retired to devote himself to the cause of prohibition, which was then rapidly becoming a political issue throughout the States. When victory was assured in America, he set out to convert other countries, including Sweden, China, India, Russia, and Italy. He came to London in 1919, but while preparing to address a meeting in Essex Hall, he was 'ragged' by students from King's College, in the course of which a missile was thrown at him which caused the loss of his right eye—but it is commonly assumed that the missile was not thrown by a student. J. travelled round the world three times, delivering thousands of lectures and impressing people more by his kindly manner than by the merits of his cause.

Johnson City, tn., Washington co., Tennessee, U.S.A. It manufactures silk and velvet and has iron foundries. Pop. 25,000.

Johnston, Albert Sidney (1803-62), Amer. general, b. in Kentucky, graduated at W. Point. In the Army he rapidly rose to the command of the forces of Texas and successfully banished the Indian marauders from the N. of that state. After serving in the Mexican war, he was appointed paymaster to the United States Army (1819), and in 1838 quelled the Mormon revolt without bloodshed. On the outbreak of Civil war, he joined the Confederates, but was mortally wounded at Shiloh (1862). President Davis pronounced his loss irreparable. This battle came near to being the graveyard of all Gen. U. S. Grant's hopes for fame. J. completely surprised him and the first day's fighting favoured the Confederates. But J. was hit in the thigh by a cannon ball. Had he submitted to surgical treatment, his life might have been saved; but he dismounted in the midst of his men and died fighting. The next day the reinforced Union troops won the contest.

Johnston, Alexander Keith (1804-71), Scottish geographer, was an exceptionally accomplished linguist and a skilful designer. His *magnum opus* was his *Physical Atlas* (1848), which illustrates the zoology, geology, botany, meteorology, and ethnology of the world, and was described by the Fr. Geographical Society in 1851 as 'Un des plus magnifiques monuments' of science in the century. J. pub. also a *Dictionary of Geography* (1850), a *National Atlas* (1843), and a splendid *Royal Atlas* (1861).

Johnston, Alexander Keith (1814-79), Scottish geographer, b. at Edinburgh, was the son of Alexander Keith J. (q.v.). The *Globe Atlas of Europe*, and the maps of Murray's *Scotland*, were drawn under his direction. In 1878 he was appointed to the command of an expedition to Lake Nyasa, under the auspices of the Royal Geographical Society, but he died of dysentery and was buried in Africa. 'Africa,' in Stanford's *Compendium of Geography*, and a series of treatises on physical geography are his chief works.

Johnston, Archibald, Lord Warriston (c. 1610-63), Scottish advocate and statesman, who was employed by the Covenanters in framing their protests against the attacks of Laud and the High Church party, and in answering the aggressive proclamations of Charles I. The General Assembly of 1638 chose him as clerk, and later he was deputed with seven others to negotiate with the Eng. commissioners. Throughout the Civil war he proved so staunch a parliamentarian that Cromwell raised him to the peerage and appointed him as a commissioner-judge of Scotland. At the Restoration he fled abroad, and in 1663 was executed at Edinburgh without trial, in accordance with a sentence of outlawry passed on him in his absence.

Johnston, Arthur (1587-1641), Scottish writer of Lat. verse, graduated at Padua as M.D. in 1610. During protracted foreign travels he visited Rome, Germany, the Netherlands, and Denmark, spent twenty years in France, and was for some time associated with the univ. of Sedan. About 1628 he was appointed physician to Charles I. His Lat. version of the Psalms (1637) is inferior in popularity and probably in merit to Buchanan's, but his contributions to the *Deliciae Poetarum Scotorum* (1637), his satire entitled *Consilium Collegii Medici Parisiensis* (1619), and his elegy on James VI. (1625) prove him a good Lat. scholar and no mean poet.

Johnston, Sir Harry Hamilton (1858-1927) Brit. explorer and author; b. at Kennington, S. London. After exploring Tunisia and Angola, he penetrated into the Congo dist. above Stanley Pool, 1893, and in the following year led a scientific expedition to Mt. Kilimanjaro. For three years, 1885-88, he governed Cameroon and the Niger delta as vice-consul or consul in the Brit. interests; and later, as consul for Portuguese E. Africa, he subdued the slave-trading Arabs in the region of Lake Nyasa, and estab. a large Brit. Protectorate N. of Lake Tanganyika. For five years, 1891-96, he was consul-general in Brit. Central

Africa; and for two years, 1899-1901, he was employed in the administration of Uganda. Among his books of travel and description are: *The Colonisation of Africa* (1899), and *A History of the British Empire in Africa* (1910).

Johnston, James Finlay Weir (1796-1855), chemist, studied under Berzelius in Sweden, and later became prof. of chem. at Durham Univ. He chiefly interested himself in the relation of his chosen science to agriculture, and for that purpose analysed soils from all parts of the realm. His *Elements of Agricultural Chemistry and Geology* (3rd ed., 1844), and similarly his *Lectures* (1883), did much to stimulate cultivation on scientific lines.

Johnston, Joseph Eggleston (1807-91). Amer. general, graduated at W. Point, and fought in the Black Hawk and Seminole wars. In 1861 he seceded from the United States army to join the Confederate forces, and was given the command of the army of the Shenandoah. At the first battle of Bull Run he promptly relieved Beauregard and in 1862 was seriously wounded at the battle of Fair Oaks, where he commanded. In 1864 began his famous duel with Sherman, the opposing Federal leader, who lost during the daily actions and skirmishes some 26,000 men to J.'s 10,000. In 1865, after a desperate resistance at Bentonville, he surrendered to Sherman on terms similar to those of Lee.

Johnstone, tn. in Renfrewshire, Scotland, about 3 m. S.W. of Paisley. The tn. has cotton mills, brass and iron foundries, and machine shops. There are also coal mines in the vicinity. Pop. 14,000.

Johnstone, Family of, famous Border family, notorious for its turbulence and feuds with its neighbours, especially the Douglasses and Maxwells. The family took its name from the lordship of Johnstone in Annandale, Dumfriesshire, and three branches of the family still exist: Johnstone of Annandale, Johnstone of Westerhall, and Johnstone of Hilton and Caskieben in Aberdeenshire. All three branches claimed the title of earl of Annandale which had become extinct in 1658; Charles II. decided the claim in favour of a member of the first, the earl of Hartfell, who was created marquis of Annandale in 1701.

Johnstown: (1) City and co. seat of Fulton co., New York, U.S.A., on Cayadutta Creek and 48 m. N.W. of Albany. It has some mills and gelatin factories and is, after Gloversville (3 m. to the S.), the most important glove-making centre in the U.S.A. Pop. 10,600. (2) City of Cambria co., Pennsylvania, U.S.A., on the Conemaugh R., 75 m. E. by S. of Pittsburgh. Coal, iron-ore, fire-clay, and limestone abound in the neighbourhood, and the chief industry is the smelting of iron and steel. In 1889 the bursting of the dam of the S. Fork Reservoir caused a tremendous flood which almost destroyed the city and cost a total loss of over 2000 lives. Pop. 66,600.

Johore, State of the Brit. Malayan Union, at the S. extremity of the Malay

Peninsula, under the rule of a native sultan. Before the creation of the Malayan Union in 1946 was one of what were known as the Unfederated Malay States and its relations with Great Brit. were defined by a treaty dated 1885; by an amendment of which in 1914, the Sultan agreed to accept, and to act upon the advice of, a Brit. officer called the General Adviser. The Sultan (Ibrahim, proclaimed 1895) is assisted by an Executive and a Legislative Council. The coast is swampy, and the general character of the country low-lying and covered with forest. The highest peak is Mt. Ophir (3840 ft.) and the prin. riv. the Muar. It is connected by rail with Penang and Singapore. The chief products are rubber, gambier, black pepper, opium, coffee, and timber. Principal imports are food, drink, tobacco, raw materials - the principal export rubber. Trade is conducted mainly with and through the Straits Settlements and the former Federated Malay Straits. The lack of suitable harbours precludes any great trade with foreign countries. There are 121 m. of railway in Johore and 875 m. of metalled road; thus, with the help of navigable rvs. good communication is available. Rubber estates are situated on either side along nearly the whole length of the railway. In 1926 there were 4 Eng. schools, 84 vernacular schools, and an Eng. college with 77 boarders. The Board of Education was constituted in 1921. Area 7500 sq. m., pop. (1938), 613,500, of whom 267,500 were Malays, 258,300 Chinese, and 72,600 Indians.

Brit. relations with J., most southerly state on the peninsula and therefore very near Singapore, were close throughout last century, but the formal treaty with the Sultan was only signed in 1914. Relations with Britain were always good though there was discovered a formidable 'fifth column' element before the Jap. invasion. During the Second World War the sultan contributed large sums for its prosecution. After the Jap. had landed on the Malay peninsula (early in Dec. 1941) two Brit. divs. fought a delaying action down the mainland which prevented the Jap. from coming up against the Johore line until Jan. 15, 1942. But great losses were incurred and in J. the Brit. were faced with a local Jap. superiority in numbers. The 8th (Australian) Div. fought with great distinction despite the odds against them. But in less than two weeks after the Australians first went into action against the Jap. in J. the Brit. troops were all withdrawn to Singapore is., with the J. causeway blown up and the is.'s link with the mainland destroyed. See further under MALAYA, BRITISH, JAPANESE INVASION OF 1941-42.

Johore Bahru, cap. of the state of Johore, Malay Peninsula, on the S. coast, about 15 m. N. of Singapore. It has a fine palace built by the Sultan Abubakur, and is a favourite resort from Singapore, having been termed the 'Oriental Monte Carlo.' A causeway for freight and passenger traffic was opened in 1923 across the Straits between J. B. and Singapore.

It carries a 26 ft. roadway besides the double-rail track. The rail and road cross the lock by an electrically operated rolling lift bridge. Pop. 16,000.

Joligny, tn. in the dept. of Yonne, France, situated about 17 m. N.N.W. of Auxerre. The chief productions are wine and woollen goods. Pop. 6,000.

Joinery, complementary art to carpentry (*q.v.*); the latter is concerned with the essential parts, the former with the ornamentation of buildings, etc. It includes the work done at the bench in the preparation of the finished woodwork of buildings, such as doors, window frames, cupboards, etc. The main distinction between the two lies in the fact that the joiner works almost entirely in planed or wrought wood, whilst the material used by the carpenter is not so treated. The timber for joiner's work should be seasoned until it has lost one-third of its weight. The operations of J. require greater accuracy than those of carpentry; the joints must be accurately fitted and all exposed surfaces made smooth. A separate classification of the joints used in the two arts may be employed, but no hard and fast distinction can be drawn, as many joints are used in both. The mortise and tenon joint, especially, is used in the framing of doors, cupboards, partitions, etc. The wood used by joiners is called *stuff*, and consists of planks or boards, deals, and battens, so named according to their widths. Battens vary from 2 to 7 in. in width, deals are 9 in., and planks 11 in. Matchboarding has a tongue and bead worked on one edge and a groove on the other, so that when the pieces are placed together the joint is masked by the bead, and the tongue prevents the passage of dust, etc. A slip-feather is a piece of wood which is inserted in plough grooves to strengthen a glued joint, etc. It may be of soft wood, when it is in short lengths, with the grain across the length, or in hard wood, with the grain in the direction of the length. The slip-feathers may be also double or dovetailed. When boards meet each other at right angles, a dovetail joint is most commonly used. Dovetailing is of three kinds: common, lap, and mitre. The first class shows the form both of the projection and excavation in the stuff, the second conceals the dovetails but shows the thickness of the lap in the return side, whilst the third class shows only a mitre in the edges of the planes at their surface of concourse. In cases where it is undesirable to show the end grain of the wood, mitring is employed. When two lengths of the same moulding meet at an angle, the joint always bisects the angle and is called a mitred joint. When the end of one moulding is cut to correspond with the profile of the other, the operation is called scribing, which is also the name given to the cutting away of the edge of a board in order to make it fit exactly to a plane surface. Beveling is joining two surfaces so as to make an oblique angle, or bevel; thus the boards forming a mitred joint are cut to a bevel. In almost all joints glue is used as an aid to security; glue-

Matchboarding has a tongue and bead worked on one edge and a groove on the other, so that when the pieces are placed together the joint is masked by the bead, and the tongue prevents the passage of dust, etc. A slip-feather is a piece of wood which is inserted in plough grooves to strengthen a glued joint, etc. It may be of soft wood, when it is in short lengths, with the grain across the length, or in hard wood, with the grain in the direction of the length. The slip-feathers may be also double or dovetailed. When boards meet each other at right angles, a dovetail joint is most commonly used. Dovetailing is of three kinds: common, lap, and mitre. The first class shows the form both of the projection and excavation in the stuff, the second conceals the dovetails but shows the thickness of the lap in the return side, whilst the third class shows only a mitre in the edges of the planes at their surface of concourse. In cases where it is undesirable to show the end grain of the wood, mitring is employed. When two lengths of the same moulding meet at an angle, the joint always bisects the angle and is called a mitred joint. When the end of one moulding is cut to correspond with the profile of the other, the operation is called scribing, which is also the name given to the cutting away of the edge of a board in order to make it fit exactly to a plane surface. Beveling is joining two surfaces so as to make an oblique angle, or bevel; thus the boards forming a mitred joint are cut to a bevel. In almost all joints glue is used as an aid to security; glue-

blocks are short pieces of wood glued into the angles of joints to strengthen them. Other fastenings for joints include cleats, joint bolts, wedges, pins, nails, and screws.

Beadings are extensively used at the joints of boarding, in order to hide any opening of the joint caused by shrinkage. They are curved in section, and of convex shape. A beading is stuck when it is formed from the material of the board, but laid in when it is a separate piece fastened to the board.

Mouldings are often used to ornament the arrises of joiner's work; in Gk. mouldings elliptical and parabolic curves are chiefly found, whilst in Rom. mouldings the curves are segments of circles. Different types of mouldings are known as Totus, Cavetto, Ovolo, Scotia, Cyma Recta or Ogee, Cyma Reversa or Reverse

ways folding doors are used; for improving the appearance of a wide, low doorway, a double margin door, which is a single door made to imitate folding doors, is often used. Doors which have the upper panels of glass are known as sash doors, and are used as the outer doors of shops, vestibule doors, etc. Outer doors are generally hung to solid wooden frames, consisting of two uprights called jambs and a cross-piece or head. When the doorway is higher than the door, a cross-rail called a transom is placed across at the height of the top of the door, whilst above this is a window called a fanlight. For hanging doors, tee, spring, butt, and hook and eye hinges are used.

Windows are usually made in two parts, the frame and the sashes although in some warehouses, etc., the frames holding the glass are fixed as fast sheets. The sashes

ANGLE BRIDLE

MORTISE AND TENON

BRIDLE

HAUNCHED M. & T.

Ogee, etc. *Doors* may be divided into three classes: Ledged, framed and ledged, and framed and panelled. The first class is used for the doors of outbuildings, etc. Such doors are made of vertical battens about 5½ in. wide, butted against one another and securely nailed to horizontal cross ledges. To prevent the tendency to droop at the outer edge, sloping braces are often inserted between the ledges, each brace sloping upwards from the hinged edge. The door is then called a ledged and braced door. Framed doors are formed by constructing frames of wood, between which battens or panels are fitted. The outer vertical members of the frame are called styles; the horizontal cross-pieces, which are known as rails, have different names according to their positions in the door, e.g. top rail, lock rail, bottom rail, and, in panelled doors, frieze rail. Braces are used only in framed and ledged doors. Muntins are the vertical members which separate the panels of a door. The framing, in the case of framed and ledged doors, is put together, wedged up, and finished before the battens are nailed on. The panels, which are about one-third the thickness of the door, fit into grooves in the middle of the framing, into which they are inserted as the latter is put together. The simplest style of panelled door, when the door framing is left square and the panels are plain, is known as square and flat; other styles are: stop-chamfered, single moulding, and bevelled moulding, each with many varieties. For wide door-

are of two kinds, casement sashes, when they open in a similar manner to doors and are hung to solid rebated frames, and hung sashes, which slide vertically alongside each other and are balanced by weights. The parts of the frame form a box on each side in which the weights are suspended; the outer groove is always occupied by the upper sash. The outer uprights and main cross-pieces of sashes are called styles and rails respectively, as with doors; any intermediate vertical or horizontal members are called bars. Bay windows is the name given to windows which project beyond the face of the wall. Dormer windows are windows constructed in the sloping surfaces of roofs, distinguished from skylights by standing vertically, whilst the latter lie in a surface parallel to the plane of the roof. Window shutters may consist either of hinged leaves fitting into boxes at each side of the window, or of two parts sliding vertically past each other and balanced by weights.

Stairs form an assemblage of steps for passage from one floor to another, and are contained in a staircase. Wooden stairs consist of horizontal treads supported by vertical risers under their front edges; string boards support the ends of both treads and risers. String boards may be either close or cut, the former has its long edges parallel to each other, the lowest portion being termed an apron, whilst the latter has its upper edge out to the line of the treads and risers. The string which is adjacent to the wall is generally a close string, the outer string being either cut

and mitred or cut and bracketed. A wreathed string is the name given to the outer curved string of a geometrical stair. When the different flights of a stair are not in the same line, the change of direction is obtained either by winders or landings. The latter are constructed as small floors, and called quarter-space or half-space landings according to the angle between the flights; winders are steps, the treads of which taper in plan and allow the person using them to turn to the right or left. The prin. types of stairs are straight flight, with or without landings, stairs with winders, dog-legged, open navel, and geometrical stairs. Handrails form the capping piece of the balustrading, upon which the hand rests in ascending or descending the stairs; they are usually rounded and fixed about $2\frac{1}{2}$ ft.

J. A. is also used in Scots law with the same meaning.

Joint Fir, term applied popularly to any species of Gnetaceae, an order consisting of small trees or shrubs closely allied to members of the Coniferae.

Joints. Study of anatomical J. is technically termed arthrology and includes an examination of the connections between any two or more parts of the skeleton. It is usual to divide J. into two classes, viz. *immovable* and *movable*, and the latter again into *perfect* and *imperfect*. Examples of the immovable (synarthroses) are those formed where an ossification takes place, as in a membrane, e.g. a suture of the skull. A special form of immovable junction is shown in the gomphoses or peg and socket J.s. of the fangs of teeth into tooth sockets of the jaw

LAP DOVETAILED

above the line of nosing (the imaginary line passing down the nosings, or rounded front edges, of the treads in a stair).

Architraves are fixed around the inside of door and window openings to give a finished appearance to the whole; they are called band-moulds or single architraves, or double-faced architraves.

Skirting-boards are placed at the bottom of the walls of a room for ornamental purposes; they may be plain or moulded. Both architraves and skirting-boards are generally secured by wooden battens called grounds, the backs of which are grooved, rebated, or splayed, and fixed by means of plugs, wood pallets, or joints to the wall. For the construction of floors, roofs, etc., see CARPENTRY. See also PANELING; PLYWOOD; VENERING. See J. W. Riley, *Carpentry and Joinery*, 1905; G. Ellis, *Practical Joinery*, 1904; G. L. Sutcliffe, *Modern Carpenter, Joiner, and Cabinet Maker*, 1902; C. Binn and R. Marsden, *Principles of Educational Woodwork*, 1909; G. Ellis, *Modern Practical Joinery*, 1927, and *Lessons in Carpentry and Joinery*, 1928; R. Greenhalgh (ed.) *Joinery and Carpentry*, 1929.

Joint Adventure, partnership entered into for a single adventure or undertaking. Such a partnership is usually called a syndicate, and in the absence of express stipulation, the law presumes that the partnership comes to an end on the completion of the adventure or special financial or industrial project for which the syndicate was formed. The term

Certain bones, which are distinct in early life, tend to ossify after middle age. This *synostosis* is shown in the case of the fusion of the distinct *pubis*, *ischium*, and *ilium* into the single os *innominatum*. Imperfect J. (*amphiarthroses*) are those in which the conjoined bones or cartilages present no smooth surfaces, capable of rotatory motion to one another, but are connected by cartilages or ligaments, the flexibility of which alone allows of mobility at the junction. Examples of such J. occur in the vertebral column, where thick plates of fibro-cartilage separate the flat surfaces of the vertebrae. The arrangement gives considerable springiness to the column, and tends to eradicate shocks caused by the jar in walking, jumping, etc.; at the same time the body may be bent in any direction even though the actual movement between any pair of vertebrae be slight. The *pubic symphysis* and the *sacro-iliac* are only imperfect J., but in consequence of their presence the pelvis has considerably more elasticity than it would have if it were all one bone. In all perfect J. (diarthroses) the articulating bony surfaces are covered with cartilages, the convexities of the one cartilaginous cap fitting more or less closely into the concavities of the other. In some cases these articular cartilages are separated by interarticular plates of cartilage lying between them, and in this case the opposing faces of the interarticular and of the articular cartilages fit into one another; examples of such interarticular plates are

the semi-lunar cartilages of the knee joint. The J. is enclosed by a synovial membrane forming a closed sac and containing a viscid lubricating secretion termed synovia. Outside the synovial membrane is a sleeve of fibrous tissue, the capsular ligament. Sacs known as bursae, formed from synovial membrane, are present where J.s. are subjected to pressure, e.g. the prepatellar bursa of the knee J., which becomes inflamed in 'housemaid's knee.'

STRUCTURE OF A PERFECT JOINT
(DIARTHROSIS)

B, bone; AC, articular cartilages; SM, synovia membrane; JC, joint capsule; SF, cavity filled.

The actual shape of the surfaces forming the J. varies greatly and may be spheroidal, cylindrical, or pulley-shaped, and it is suggested that in some cases the movement to which a J. is subject may determine or modify its shape so as to cause it to present divergencies in different individuals. The following are some of the chief forms of J. of the human frame: (a) Ball and socket, a spheroidal surface furnished by one bone works within a cup furnished by another; this will allow of motion of the former bone in any direction, its extent being dependent on the concavity of the cup. This is deep in the case of the hip J. and the extent of movement is sacrificed to obtain additional strength. The shoulder yields an example of an extended movement, for in this the glenoid cavity is shallow. (b) Gliding, in which the articular surfaces are flat. Examples are given in the tarsal J., the intercarpal J., and in the jaw J. in one of its movements. (c) Hinge, which has a nearly cylindrical head fitting into a corresponding socket, the movement being practically restricted to a direction perpendicular to the axis of the cylinder: examples occur in the case of the elbow, knee, ankle, and interphalangeal J., where suitable attachments or bony processes prevent a backward dislocation. (d)

Double hinge or saddle, in which the articular surface of each bone is concave in one direction and convex in a direction at right angles to this, e.g. carpo-metacarpal J. of the thumb. The tarso-metatarsal of the big toe is not a saddle J. (e) Condylod, this is similar to the saddle and allows flexion, extension, and lateral movement and no rotation, but it is usually a weaker form of J.; examples, wrist and meta-carpo-phalangeal. (f) Pivot, in which one bone furnishes a pivot on which another turns, or it turns itself on its own axis resting on another bone; an example of the former is given in the case of the atlanto-axial, in which the odontoid peg of the axis passes through a ring-like portion of the atlas; this arrangement allows of the head being turned or shaken through a considerable angle. The occipito-atlantal J., used in nodding the head, is of a different type. The case of the rotation of a bone on its own axis is illustrated by the radius, which has a shallow cup adjacent to the humerus with a concave surface at its lower end which articulates with the ulnar. In pronation (i.e. when the hand is turned so that the palm faces downwards), the radius turns on its own axis at its upper end and glides round the ulna at its lower.

Diseases.—The chief diseases of J. are those affecting the synovial membrane or the bone itself and but rarely the articular cartilages or the ligaments. Accidental injuries may cause sprains, in which the ligaments are stretched or lacerated, and there may be bleeding into the synovial cavity; swelling and chronic synovitis may result. Careful bandaging or strapping is necessary. Contusion results from the violent driving together of two opposed ends of bones. Dislocation results in a separating of the bones, and is relatively frequent at the shoulder and less so at the hip. The ankle and wrist are seldom dislocated as the J. are usually stronger than the fibula and ulna respectively, which may fracture under the strain. Synovitis, or the inflammation of the synovial membrane, may be due to micro-organisms existing during blood-poisoning, fevers, etc., or it may be caused by a punctured wound of the J. Rest and suitable supporting bandages are essential. Infection of J.s., especially of the knee, is always a serious condition. Bursitis is inflammation of the bursa, as in the condition of housemaid's knee previously mentioned.

Permanent stiffness may be due to septic causes. The synovial membrane may be destroyed and an osseous solidification may render the J. inoperative.

Rheumatoid arthritis (q.v.) is particularly prevalent in certain areas and in certain types of individuals. The articular cartilages may be worn away and replaced by an extra growth of bone at the knee, hip, or fingers. In the last case the fingers are knotted and the hands deformed. The gradual spread of the complaint in the patient and the little response which it makes to treatment add to its ill-fame.

Joints, in geology, are divisional planes in rocks. They never extend beyond the

outmost crust, i.e. beyond the 'zone of fracture' as described by Van Hise, and vary in visible width from that of a hair to well-marked fissures, which in certain rocks may be widened by the solvent action of rain water, e.g. the grykes of the limestone regions of Yorkshire and the Lake Dist. They are most abundant in coherent rocks and absent in loosely packed material. In sedimentary rocks they normally run at right angles to the bedding planes, and there are well-marked dip joints at right angles to strike joints. Daubrée has proved that folding is largely responsible for their occurrence, and movement along a J. results in the formation of a fault; such movement is shown by the striated surfaces—slickensides—of some J. The force producing them was often of the greatest intensity, for pebbles existing in conglomerates have been found divided with cleancut surfaces. The J. not only give passages for the circulation of underground water but also for highly concentrated mineral solutions; on occasion the minerals are deposited and many mineral veins, e.g. calcite barytes, ores of lead, etc., are of this type. In igneous material the J., which are fewer usually, traverse lavas vertically and dykes horizontally. In Cornwall the master joints in igneous rocks are vertical, and a horizontal J. of frequent occurrence resembles the bedding plane mentioned above. This occurrence is of the greatest value in quarrying, as it tends to divide the rock masses into definite cuboidal blocks. Contraction during desiccation or cooling also gives well-marked fissures, and the hexagonal columns of, e.g., the Giant's Causeway have doubtless been produced by the latter action.

Joint-Stock Bank, *see* BANKS AND BANKING.

Joint-Stock Company, *see* COMPANY AND COMPANY LAW.

Joint Tenancy. Where two or more persons hold the same lands by grant (q.v.) or devise (i.e. under a will), there being in the instrument of title no words indicating that they are to take in distinct shares, such common ownership is called a J. T. The prin. characteristic of a J. T. is the right of survivorship, wherein it differs from a tenancy in common (*see* under COMMON TENANCY). In an action the Chancery Court will order a sale instead of partition if those interested to the extent of one-half request it, but if less require a sale the court may direct a sale unless the others buy out the interest of the party or parties requesting sale.

Jointure, in law, is a term denoting the provision made for a wife out of her husband's property in the event of his predecease. Unlike dower, it is not limited to real estate, but now includes any provision made by a settlement for the support of the wife in the event of her surviving her husband. The doctrine of J. originated in the equity courts by way of substitution for dower in cases in which the latter had no application. The Statute of Uses originated the modern J. which usually takes the form of a yearly rent-charge or annuity created by a

marriage settlement specifying the mode and time of its payment.

Joinville, *see* DOÑA FRANCISCA.

Joinville, François Ferdinand Philippe Louis Marie d'Orléans, Prince de (1818–1900), third son of Louis Philippe, king of France, b. at Neuilly. He entered the navy and became a lieutenant in 1836, first distinguishing himself at the bombardment of San Juan de Ulloa (1838). In 1840 he was given the charge of conveying the body of Napoleon from St. Helena. In 1845 he successfully bombarded Tangier and occupied Mogador in Morocco. At the revolution of 1818, he sought refuge with the rest of his family in England. In 1870 he returned incognito to France, and fought at Orléans, but on the revelation of his name was expelled by Gambetta. From 1871–76, however, he was allowed to sit as member for Haute-Marne in the National Assembly.

Joinville, Jean Sire de (1224–1317), Fr. historian, and seigneur of Champagne. He accompanied Louis IX. (Saint Louis) in his unlucky Crusade (1248–54), and while at Acre composed his *Credo* or confession of faith (1250). He began his *Vie de St. Louis*, at the request of Jeanne de Champagne, when he was nearly eighty (completed 1309). There is an excellent critical ed. of this by Natalis de Wailly (1874). *See* A. F. Didot, *Études sur Joinville*, 1870, and A. F. Delaborde, *Jean de Joinville*, 1894.

Joinville, tn. in the dept. of Haute-Marne, France, on the R. Marne, was the bp. of Jean de Joinville and of Mary of Guise. The château was erected under the direction of the duke of Guise. The tn. contains blast furnaces, and manuf. chain cables. Pop. 3000.

Joinville-le-Pont, com., Seine, France, near the Bois de Vincennes, and 5 m. E. of Paris. Pop. 13,600.

Jókai, Maurice (1823–1904), Hungarian novelist, b. at Rév-Komárom. He qualified as an advocate, but, encouraged by the praises of the Hungarian Academy about his play *Zeido ju* (Jew Boy), he went to Pesth and embarked on a literary career. The pub. of his romance *Hétköznapiak* (1815) marked an epoch in Hungarian literature, and firmly estab. its author's reputation. For his part in the revolution of 1848–49, and his support of Kossuth, he was proscribed by the gov., and his life was only saved by a stratagem of his wife, Rosa Laborfalvy, the tragic actress. Among his romances, nearly all of which have been trans. into Eng., are: *The Golden Age of Transylvania*, and its sequel, *The Turks in Hungary* (1903); *Timar's Two Worlds* (1888), perhaps his masterpiece; *Eyes like the Sea*, which won the Academy's prize in 1890; *Midst the Wild Carpathians* (1894), with its sequel, *The Slaves of the Pashah* (1903); *Pretty Michal* (1897), *The Lion of Jamina* (1897), *A Christian, but a Roman* (1900), *The Baur's Sons* (1902), and *Tales from Jókai* (1901), with a biography by R. N. Bain. *See* H. W. Temperley, 'Maurice Jókai and the Historical Novel,' in *Contemporary Review*, July, 1904, and life by F. Zsigmond (Budapest), 1924.

Jokjokarta, residency, and the cap., of Java in the central part of the is. Area 1200 sq. m. Sugar, rice, and indigo are cultivated, and salt, coal, marble, and gold are found. Pop. about 900,000. Also the cap. of the above, at the foot of Mt. Merapi, 35 m. S. of Surakarta, on the railway from Batavia to Surabaya. Has a remarkable native palace and the ruins of an old Dutch tn. and fort. There are famous temple ruins and monuments nearby. It was the seat of the Dutch resident before the Jap. invasion in 1942. The Jogka mkt. is famous for jewelry. It was here that the only serious insurrection against Brit. rule took place, in the year 1812. The is. had been taken by an expeditionary force from India from the gov. set up by Napoleon to whom the is. had passed with the rest of the Dutch Empire. This revolt was put down speedily by the tremendous energy, daring, and leadership of one of the most extraordinary figures in the hist. of the Brit. Army, Maj. Gen. Rollo Gillespie, whom the historian Sir John Fortescue thought was 'the bravest man that ever wore a red coat.'

J. was again a hotbed of insurgent nationalism in the autumn of 1945 during the Indonesian revolt against the Allies following the defeat of Japan. Pop. 120,000.

Joliba River, see NIGER.

Joliet, Louis (1645-1700), Fr.-Canadian explorer, b. at Quebec; commissioned 1672 to explore the Mississippi, which he did, as also the Fox, Wisconsin, and Illinois Rs.

Joliet, city and co. seat of Will co., Illinois, U.S.A., on the Des Plaines R., and 40 m. S.W. of Chicago. It is a shipping centre and there is a deep waterway to Illinois R. It is connected with six railways, the Chicago Sanitary Dist. Ship Canal, and the Illinois and Michigan Canal. It is the seat of the state penitentiary, and the headquarters of large steel works. Pop. 42,300.

Joliette, or **Industry Village**, tn. in Quebec, Canada, 35 m. N. of Montreal. It is an agric. centre, and has manufs. of paper, iron goods, flour, and lumber. Pop. 4500.

Joliot-Curie, Frédéric (b. 1900), Fr. physicist; prof. of the Radium Institute, Paris. He shared the Nobel Prize for chem. in 1935 with his wife, Irene Joliot-Curie (b. 1897; daughter of Marya Skłodowska) for their joint synthesis of new radioactive elements. He is director of atomic research in France.

Jolly-boat, small clinker-built boat, not so large as a cutter; it is usually hoisted at the stern of a vessel, and used for miscellaneous services. It has a bluff bow, and a wide transom, and is about 4 ft. in beam and 12 ft. in length.

Jolo Archipelago, see SULU.

Jom Kippur, see YOM HA-KIPPURIM.

Jomada I. and II., see JUMADA.

Jomelli, Nicolo (1714-74), It. composer, b. at Aversa, near Naples. In 1737 his first opera, *L'Errore Amorofo*, was successfully produced at Naples. In 1748 one of his finest operas, *Didone*, was produced

at Vienna. In 1753 he was appointed chapel-master to the duke of Württemberg at Stuttgart. His best known works are the operas *Iphigenia* and *Armida*, a *Miserere*, and a *Requiem*. See life by H. Abert, 1908.

Jomini, Antoine Henri, Baron (1770-1869), general in the Fr. and afterwards in the Russian service, b. at Payerne, canton Vand, Switzerland. He served in the campaign of Austerlitz, and became prin. alide-de-camp to Marshal Ney in 1805. His *Traité des grandes opérations militaires* (1804-5) brought him to the notice of Napoleon, under whom he served at Jena and Eylau. He served through the Peninsular campaign (1808), but after the retreat from Moscow entered the Russian service, in which he took part in the Russo-Turkish War, especially at the siege of Varna (1828). Besides the *Traité*, he wrote: *Principes de la stratégie* (1818), *Précis de l'art de la guerre* (1830), *Histoire de la Révolution* (1806), and *Vie de Napoléon* (1827). See F. Lecomte, *Le Général Jomini*, 1861, and C. A. Sainte-Beuve, *Vie*, 1869.

Jonah, son of Amittai, is described in 2 Kings xiv. 25 as a Galilean of Gath-hepher who prophesied during the reign of Jeroboam II, announcing forthcoming victories over the Aramaeans (2 Kings xiv). The legend of his life, immensely popular in the Middle Ages, is related in the book which bears his name.

Jonah, The Book of, the only one of the books of the twelve minor prophets which does not purport to be the work of the prophet whose name it bears. This book is a narrative of the call of Jonah to prophesy against Nineveh, his attempt to avoid this duty, and his ultimate success, followed by his reproaches to God whom ultimately, on the repentance of the Ninevites, the impending punishment is avoided and thus his prophecy remains unfulfilled. The story belongs to the Midrashim: and the Midrash may be defined in the words of Dr. Driver as 'an imaginative development of a thought or theme suggested by Scripture, especially a didactic or homiletic exposition, or an edifying religious story' (*Intro. to the Lit. of the O.T.*, p. 197). It would be perilous and difficult to attempt to connect the Jonah of this book with any historical personage. The story is post-exilic, and is based to a large extent on Persian and Babylonian mythology. The incident of the whale, suggested by Persian mythology, symbolised Israel's temporary absorption by Assyria. The chief point of the parable lies in the writer's attempt to show that Jonah was mistaken firstly in supposing that Nineveh was less precious than Israel to Jehovah, and secondly in reproaching Him for His acceptance of the penitent. The writer sought to show that divine care was not limited to the chosen race. The story of the 'gourd' which terminates the book is probably an original product of the author's imagination. See S. R. Driver, *Introduction to the Literature of the Old Testament*, 1891, and commentaries on the *Twelve Minor Prophets*.

Jonas, Justus (1493-1555), Ger. Protestant reformer, b. at Nordhausen in Thuringia. He was canon of St. Severus and prof. of law at Erfurt in 1518, and prof. of theology at Wittenberg (1521). He was an intimate friend of Luther, whom he accompanied to the Diet of Worms and aided in his trans. of the Bible. See T. I. Pressel, *Monograph*, 1863, and Meyer's *Festschrift des 400. Jahrgens Geburtstag des Dr. Justus Jonas*, 1893.

Jonathan: (1) Son of Gershom and descendant of Moses, was the chief of the priests at Dan (Judges xviii. 30) in the time of Micah the Ephraimite. (2) Eldest son of Saul. The touching account of his friendship with David is a popular heritage. He was slain at Gilboa, where Saul also met his death. (3) Son of Mattathias, and brother of Judas, whom he succeeded as leader of the Maccabean party. His statesmanship was greater than his ability as a warrior, and to it he owed the favourable terms which he made for the insurgents with Bacchides, the Syrian governor. He became high-priest in 153 B.C., but was slain in captivity eleven years later.

Jonathan, Brother, personification of the U.S.A., corresponding to the Eng. 'John Bull'. The phrase has now been largely superseded by 'Uncle Sam.' The name is supposed to have come from Jonathan Trumbull (1710-85), governor of Connecticut and friend of Washington.

Joncières, Felix Ludger, called Victorin de (1839-1903), Fr. musical composer, b. in Paris. His early admiration for Wagner was the cause of his leaving the Paris Conservatoire, but although the influence of Wagner is traceable throughout his work, he adhered to the recognised forms of Fr. opera and took Gounod as his model. From 1871 he was musical critic for *La Liberté*. His chief productions are the operas, *Sardanapale* (1867), *Dernier Jour de Pompeii* (1869), *Dimitri* (1876), *La Reine Berthe* (1878), *Lancelot* (1900), the incidental music to *Hamlet* (1863-68); a symphony; and other works.

Jones, Daniel (b. 1831), Eng. philologist. Educated Radley, Univ. College School, and King's College, Cambridge. Studied for the law and was called to the Bar in 1907, in which year he also became lecturer in phonetics at Univ. College, London. In 1921 he became prof. of phonetics at London, and has also lectured at Paris, Bonn, Cologne, Hamburg, Copenhagen, Upsala, Rotterdam, and in the U.S.A., and in India. Secretary of the International Phonetic Association from 1928 and assistant ed. of its organ, *Le Maître phonétique* (1907-1940), editor since 1940. Works include: *An English Pronouncing Dictionary*, based on S. Brit. speech (1898; rev. eds. 1911, and 1947), *A Chart of English Speech Sounds* (1908), *The Pronunciation of English* (2nd ed. 1947), *An Outline of English Phonetics* (1922), and *The Pronunciation of Russian*, with M. V. Trolhoun, 1923.

Jones, Ebenezer (1820-60), Eng. poet, b. at Islington, London. The early death of his father cut short his education, and compelled him to become a clerk in a tea merchant's office. His defective educa-

tion is very apparent in his first vol. of poetry, *Studies of Sensation and Event* (1843), which was very unfavourably received, although admired by Browning and Rossetti. His three remarkable poems, *Winter Hymn to the Snow*, *When the World is Burning*, and *To Death*, were written when he was dying. See the ed. of *Studies of Sensation* by R. H. Shepherd (1879), with a memoir by Sumner Jones, also papers by T. Watts-Dunton in the *Athenæum*, Sept. 1878.

Jones, Sir Edward Burnes, see BURNES-JONES, SIR EDWARD.

Jones, Emily Elizabeth Constance (1848-1922), Eng. lecturer and schoolmistress; daughter of Dr. J. Jones, of Langstone Court, Herefordshire. At Cambridge, took a first in the Moral Sciences Tripos, 1880. She lectured on moral science at Girton from 1884, becoming mistress 1903. Her works include trans. and ed. of Lotze's *Microcosmus* (with E. Hamilton) (1885), *General Logic* (1890), *Primer of Logic* (1905), *Primer of Ethics* (1911).

Jones, Ernest Charles (1819-69), Eng. Chartist, b. in Berlin of Eng. parentage, and educated at Göttingen. In 1844 he was called to the Bar at the Middle Temple, but in 1845 joined the Chartist movement, and speedily became one of its most noted orators. His open advocacy of physical violence led to his imprisonment for sedition (1848-50). In prison he wrote *The Revolt of Hindostan*, an epic poem. He also pub. a novel, *The Wood Spirit* (1841) and a number of poems, including *The Battle Day* (1855).

Jones, Sir Harold Spencer (b. 1890), has held the position of Astronomer Royal since 1933. He was b. in London and educated at Latimer Upper School, Hammersmith, and Jesus College, Cambridge. From 1913 to 1923 he was Chief Assistant at the Royal Observatory, Greenwich, and from 1923 to 1933 held the post of H.M. Astronomer at the Cape of Good Hope. In 1913 he was awarded the Royal Medal of the Royal Society and the Gold Medal of the Royal Astronomical Society. He is a past president of the latter Society and of the Brit. Astronomical Association, and was vice-president of the International Astronomical Union from 1935 to 1938. He has pub. *General Astronomy* (1922), *Worlds Without End* (1935), *The Earth as a Clock* (1939), *Life on Other Worlds* (1940), *The Royal Observatory, Greenwich* (1943), and *John Couch Adams and the Discovery of Neptune* (1947).

Jones, Henry (1831-99), Eng. author, b. in London. He practised as a physician in London from 1852-69. In 1862 under the pseudonym of 'Cavendish' he pub. *The Laws and Principles of Whist Explained by Cavendish*. He was a member of sev. whist clubs, including the 'Cavendish.' His work became the standard authority on the game. See W. P. Courtney, *English Whist and Whist Players*, 1904.

Jones, Sir Henry (1852-1922), Eng. philosopher; b. at Llangernyw, N. Wales. First worked as a shoemaker. Graduated at Glasgow Univ. with first-class honours, 1878. Held the chairs of philosophy and

political economy at Bangor Univ. College, 1884-91; and of logic and metaphysics at St. Andrews Univ., 1891-91. From 1894 he was prof. of moral philosophy at Glasgow Univ. He was LL.D. of St. Andrews, and D.Litt. of Wales. Works include: *Browning as a Religious and Philosophical Teacher* (1891), *The Philosophy of Lotze* (1895), *Idealism as a Practical Creed* (1909), and *The Working Faith of the Social Reformer* (1910)—the first and last of which gained him considerable popularity and influence. Elected fellow of Brit. Academy, 1904. Knighted 1912.

Jones, Henry Arthur (1851-1929). Eng. playwright, b. at Grandborough, Bucks; son of Silvanus J., tenant-farmer. He attended a grammar-school at Winslow till he was thirteen. He was obliged to adopt a commercial career; but gained his first hearing as a dramatist with *Only Round the Corner*, produced at the Exeter Theatre in 1879, and *A Clerical Error* (1879), produced in London. His melodrama, *The Silver King*, written with H. Herman and produced by Wilson Barrett in 1882, scored a great success. His *Saints and Sinners* (1884) was the subject of controversy on account of its religious element. *The Middleman* (1889) and *Judah* (1890) mark an advance in technical skill. *The Dancing Girl* (1891, revised as *The Dancing Mistress* in 1913), *The Crusaders* (1891), *The Bauble Shop* (1893), *The Templer* (1893), *The Musqueraders* (1891), *The Case of Rebellious Susan* (1891), *Michael and his Lost Angel* (1896), *The Rogue's Comedy* (1896), *The Physician* (1897)—all these for the most part deal more nearly with the problems of everyday life. His poetical drama, *The Templer* (1893), was not a success; but with *The Triumph of the Philistines* (1895), he began a series of successful plays—which include: *The Laars* (1897) and *The Herne Stubbs* (1906). His later 'serious' plays include: *Carnac Sahib* and *The Manoeuvres of Jane* (1899), *The Lackey's Carnival* (1900), *Mrs. Dane's Defence* (1900), *Chance, the Idol and the Princess's Nose* (1902); *Whitewashing Julia*, 1903; *Joseph Entangled and The Chevalier*, (1904), *The Hypocrites* (1906), *Dolly Reforming Herself* (1908), *The Knife* (1909); and *The Ogre* (1911). A uniform edition of his plays began to be issued in 1891 and his views on dramatic art are given in *The Renaissance of the English Drama* (1895). When J. began playwriting, he was something of a pioneer. But he gradually settled down to parlour-comedy—if it could be called comedy at all—in which he continually preached a morality whose criterion was 'What will people think?' By the time of the First World War he had unknowingly lost touch with what people were thinking. His onslaughts on the internationalism he hated (which included the League of Nations) were chiefly: *The Pacificists*, a play which was a failure (1917), and *My Dear Wells* (1921), a book in which, not only E. G. Wells, but also everybody else (including Bernard Shaw) who had intellectually left him behind, was assailed.

Jones, Inigo (c. 1573-c. 1652), Eng. architect, b. in London. Sometimes called the 'Eng. Palladio.' J. was the first to introduce pure Renaissance architecture, adapting It. ideas, especially those of Palladio, to Eng. requirements. One of his innovations was the interval staircase. Little is known of his life, beyond the fact that he appears to have travelled a great deal, particularly in Italy. His talent for drawing was remarked by Wm. Howard, third earl of Pembroke, who sent him to Italy to study painting. At Venice he transferred his attention to architecture, and in 1604 was invited to Denmark, where he is said to have designed the palaces of Rosenborg and Frederiksborg. He accompanied Anne of Denmark to the Eng. court in 1604, and there designed the scenery for

INIGO JONES

Ben Jonson's *Masque of Blackness*, given at Whitehall. In 1615, after a second visit to Italy, J. became surveyor-general of the royal buildings, and in 1617 he began the Queen's House at Greenwich. In 1619 he was commissioned to design additions to Whitehall, including the banquet-room. He held the same offices under Charles I. The Civil War interfered with his activities, and his loyalty to the Stuarts caused him to be fined twice, so that other examples of his work are not numerous. At Greenwich Hospital, he is responsible also for King Charles's block, completed from his drawings by John A. Webb, and of his tn. houses the best examples are to be found in Lindsay's Haunt, others in Lincoln's Inn Fields. Another good example of his style is to be found in St. Paul's, Covent Garden, burnt down in 1705, but re-erected in the same style; and the double cube room at Wilton House is a splendid example of his interior decoration. See 'Life' by Peter Cunningham, 1848; W. J. Loftie, *Inigo Jones and Wren*, 1893; H. V. Cotterill, *A History of Art*, 1922; Marie Luise Gothein, *History of Garden Art* (trans. 1928).

Jones, John (c. 1765-1827), Unitarian minister, b. in Carmarthenshire. In 1795 he was appointed pastor at Plymouth

Dock, and subsequently at Halifax, Yorkshire, and in London. The introduction of Gk.-Eng. lexicons is due to him. Gk. having hitherto been studied only through Lat. books. His *Greek and English Lexicon* was pub. in 1823. He pub. *Illustrations of the Four Gospels* (1808).

Jones, John Paul (1747-92), commander and the first great hero in the Amer. navy, b. at Kirkcubright, Scotland. In 1764 he shipped as mate on a slaver and made sev. voyages to America. Born in a labourer's family, he assumed the name of Jones when he settled in Virginia, his next names being John Paul. When war broke out between England and America in 1775, J. was given a commission in the Amer. navy. In 1778 he was sent on a mission to Brest, and during a cruise round the Brit. coasts succeeded in capturing the *Drake*, and surprising the garrison of Whitehaven. In 1779 he took command in one of the most famous sea-fights in hist. He had command of three ships led by the *Bonhomme Richard* off Flamborough Head, Eng. The *Serapis* surrendered when sinking. J.'s ship sank the next day. In 1788 he joined the Russian navy, taking part in the battle of Liman (1788), but left in 1789. He died in Paris, and the record of his burial place was lost until in 1905 it was discovered in the Protestant part of the old St. Louis cemetery. His body was then escorted by a fleet of Amer. warships to Annapolis. See J. Sherburn, *Life of Paul Jones*, 1825; Janette Taylor, *Collections*, 1830; *Life* by O. Townsend Brady in Great Commanders Series, 1900; and Winston Churchill's novel, *Richard Carrel*, 1903.

Jones, Thomas Gwynne (1872-1949), Welsh poet and son of a Denbighshire farmer. He was on the staff of a Welsh newspaper (*Genedl Gymreig*) in Caernarvon when he was appointed to the staff of the newly estab. National Library of Wales. In 1913 he was appointed lecturer in Welsh literature at the Univ. College of Wales, Aberystwyth, and in 1918 became prof. His first book of verse was pub. when he was little more than a boy. His second vol. *Gulad y Gan* appeared in 1902, after he had already pub. two Welsh novels, and it was in that year that he won the National Eisteddfod chair at Bangor with his *Ymadrodd Arthur* a poem which heralded a new era in Welsh literature. He won the national chair again in 1909, with his *Gulad y Bryntau*, and from then his place in Welsh literature was assured. In 1912 he wrote a biography of Emrys ap Iwan the preacher and linguist and a 'life' of Thomas Gee, his first editor (1913); this book is in effect a hist. of Welsh politics. In his verse J. was a constant experimenter and innovator, working, however, on the foundation of the classical tradition. He also wrote some vols. of essays, sev. plays, and a book in Eng. on Welsh folk-lure. He also produced a critical ed. of the poems of Tudor Aled (1926), trans. of *Faust* and *Macbeth*, an anthology of Irish poems trans. into Welsh and a version of *Y Bardd Cwec* in Eng.

Jones, Sir William (1746-94), Eng. oriental scholar, b. in London. He devoted himself to the study of European and Oriental languages from childhood, and in 1768 rendered a Persian *Life of Nadir Shah* into Fr. at the request of King Christian of Denmark. In 1781 he pub. a trans. of some anc. Arabic poems called *Muallakat* (1781). In 1783 he was appointed to a judgeship in Bengal, which he held till his death; he devoted his leisure to the study of Hindu law, the results of which were pub. under the title *Digest of Hindu Laws* (1800). His *Persian Grammar* was pub. in 1772, but it was in the study of Sanskrit that his work was most valuable. His last work was a trans. of *Institutes of Manu* (1794). His collected works were pub. by Lord Teignmouth in 1799, with memoir prefixed in 1804. J.'s *Autobiography* was pub. by his son in 1846.

Jonesboro, co. seat of Craighead co., Arkansas, U.S.A., 60 m. N.W. of Memphis; has manufs. of leather and cotton-oil, and a large lumber trade. Agriculture is carried on in the dist. Pop. 11,700.

Jongkind, Johan Barthold (1819-91), Dutch landscape painter and engraver, b. at Lattrop. He was one of the imitators of Impressionism (q.v.).

Jongleurs, Jugglers, or Joculatores (Lat. *joculator*, a jester) were the descendants in medieval times of the Rom. mimes, the strolling players who were all that remained in the fourth century of the once great Rom. theatre. They appeared at festivals, gave their entertainment, and vanished again into obscurity; but they alone carried down such traditions as remained of the anc. pagan drama, and ultimately combined them with the new religious drama. In N. France they very early adapted the religious drama for secular purposes, and came to be confused with the *trouweres*, who corresponded with the 'minstrels' of Saxon times. But the *trouweres* or minstrels were a superior class of entertainers; they were generally attached to great households to sing of war and noble deeds, whereas the J. were vagabonds strolling from vil. to vil. to exhibit their juggling and pantomimic tricks. The requirements of a J. are quoted by Sismondi: 'He must know how to compose and rhyme well, and how to compose a *jeu parti*. He must be able to play on the tambourine and cymbals; to throw and catch little balls on the point of a knife; to imitate the songs of birds; to play tricks with the baskets; to exhibit attacks of castles, and leaps through four hoops; to play on the citole and the mandore; to handle the clavichord and the guitar; to string the wheel with seventeen chords; to play on the harp; and to adapt a jig to so as to enliven a psalm'—a combination, in fact, of the anc. minstrel and the modern conjuror (q.v.) and variety entertainer. They lived and travelled after the manner of present-day gipsies in companies, and, according to Lacroix, under 'kings' of their own, but whether they were largely composed of

the gipsy element is uncertain. See L. Sismond, *Historical View of the Literature of the South of Europe* (trans. P. Roscoe, 2nd ed.), 1846; P. Lacroix, *Manners, etc., of the Middle Ages*, 1876.

Jönköping, tn. of Sweden, the cap. of the prov. (län) of the same name, 170 m. S.W. of Stockholm and 80 m. E. of Gothenburg, at the S. end of Lake Wetter. It has a great safety-match factory, a good shipping trade, and manufs. of snuff and cigars, paper, carpets and damask, dye and asphalt. It has played an important part in Scandinavian hist., and was the scene of the conclusion of peace between Sweden and Denmark in 1809. Area of prov. 1417 sq. m. Pop. (prov.) 259,200, (tn.) 39,900.

Jonquil, popular name for *Narcissus jonquilla*, a well-known and beautiful species of *Amaryllidaceae* largely cultivated in Britain. Sev. of the flowers are borne on one stem; in colour they are yellow and the corona is well developed.

Jonson, Ben (c. 1573-1637), Eng. poet and dramatist, was b. at Westminster, posthumous son of a clergyman of Scottish descent. Educated at Westminster School under Wm. Camden, and after working for some time for his stepfather, a bricklayer, went abroad to join the Brit. army in Flanders. He returned in 1592, and soon afterwards took to the stage. He joined the Admiral's Company, and not only took part in the performances, but also acted as back-dramatist. Killing his challenger in a duel in 1598 all but cost him his life; he was branded on the thumb, imprisoned, and his goods confiscated. In prison he became a Catholic, but twelve years later reverted to Protestantism. A quarrel with the manager, Henslowe, resulted in his offering, in 1598, his first known comedy, *Every Man in his Humour*, to the rival company, the Lord Chamberlain's Servants, by whom it was produced at the Globe Theatre, with Shakespeare in the cast. The play was successful, and J. was at a bound enrolled among the list of the leading dramatists.

His next most important plays were: *Every Man out of his Humour* (1599), *Cynthia's Revels* (1600), *The Poetaster* (1601), and *Sejanus* (a tragedy, 1603). These were followed by: *Volpone*, or *The Fox* (1606), *Epicoene*, or *The Silent Woman* (1609), and *The Alchemist* (1610), his most elaborate and masterly play. In all he is credited with eighteen plays, although there were probably many more of which he was author or part-author. In addition to these he wrote sev. masques, numerous poems, and some works in prose. In 1619 he received the laureateship, and a small pension from the king. J. acquired a position to which scarcely any man of letters before him had attained. 'His conversation,' Clarendon has recorded, 'was very good and with men of most note.' He was on friendly terms with Bacon, Selden, Camden, Donne, and Fletcher, and certainly he knew Shakespeare. With Suckling, Herrick and others he founded the Apollo Club at the Devil Tavern. He was also a member of the famous Mermaid

Tavern (q.v.). He died in poverty, but was buried in Westminster Abbey, his tombstone being inscribed with the words 'O rare Ben Jonson' (meaning it has been said, 'Pray (Lat. *Orare*) for Ben Jonson.' As a dramatist, he is second only to Shakespeare, with the possible exception of Marlowe. As a satirist he was magnificent, as a humorist unrivalled except by the master-dramatist himself. His poetry was exquisite, and he gave to everything he wrote the hall-mark of his vivid personality. He wrote some thirty-five masques in the production of which Inigo Jones provided the mechanisms. His best work was his lyrics, among them 'Drink to me only with thine eyes.'

His collected works are those ed. by W. Gifford (1816), which was re-issued in 1875 with corrections by F. Cunningham; and C. N. Herford and P. Simpson (1925, in course of pub.). See lives by W. Gifford, 1816; J. A. Symonds, 1894; G. Smith, 1919; J. Palmer, 1931. See also A. O. Swinburne, *Study of Ben Jonson*, 1889; A. W. Ward, *History of English Dramatic Literature* (2nd ed. 1899); E. Arber (ed.), *British Anthologies*, 1900-01; M. Castelnau, *Ben Jonson: l'homme et l'œuvre*, 1907; T. S. Eliot, *The Sacred Wood*, 1920; A. Huxley, *On the Margin*, 1923.

Jonsong, pass in the Himalayas, at an altitude of over 21,000 ft. in the ridge connecting Kanchenjunga with Nepal.

Jonsson, Björn, see Björn.

Jonzac, tn. in the dept. of Charente-Maritime, France, on the Seudre, 18 m. S.S.W. of Cognac. Cap. of the arron. of Jonzac. Pop. 3100.

Joplin, city of Jasper co., Missouri, U.S.A., 140 m. S. of Kansas City. Has large smelting and white lead works, and rich lead and zinc mines. Prin. industries are dairying, agriculture, and fruit growing. It is on the Missouri, Kansas, and Texas and other railways. Pop. 37,100.

Joppa, ant. name of Jaffa.

Jordaens, Jakob (1593-1678), Flemish painter, b. at Antwerp. He studied under Van Oort and Rubens, being indebted to the latter for most of his artistic knowledge, and subsequently being employed by him. After Rubens's death, J. was recognised as leader of the Antwerp school. His colouring was rich and harmonious, and he excelled especially in depicting humorous scenes. He also painted allegorical subjects and religious pictures, the best known among the latter being: 'The Last Supper,' 'The Martyrdom of St. Apollonia,' 'The Adoration of the Shepherds,' and 'Christ in the Midst of the Doctors.' See P. Buschmann, *Jordaens et son Œuvre*, 1903, and a life by E. Herliès, 1920.

Jordan, Dorothea (1762-1816), Eng. actress, made her theatrical début at Dublin in 1777 as Phoebe in *As You Like It*. She acquired much experience in the proa, and it was not until 1785 she first appeared in the metropolis at Drury Lane, with which theatre she did not sever her connection until her retirement from the stage twenty-one years later. She made no mark in tragic rôles, but as a comed-

ienne she won many laurels. She had more than one intrigue before 1790, about which time she became the mistress of the duke of Clarence (afterwards William IV). She bore him many children, who took the name of Fitzclarence, and became well known in society. and the liaison lasted until 1811. Four years later she went abroad where, at St Cloud, she died in 1816. There is a biography by J. Rothen (1831).

Jordan, Sir Joseph (1603-85), Eng. admiral, who fought in the Dutch wars and was in command at the victory of Solebay in 1672, serving as vice-admiral of the Blue.

Galilee), where it is already more than 600 ft below sea level. The most important feature in its course between the Sea of Galilee and the Dead Sea is the rocky cleft known as the Ghor, some 65 m long and from 3 to 12 m in breadth, through which it passes. It then falls into the Dead Sea at a point 1292 ft below the level of the Mediterranean. The course of the J is extremely tortuous, its total length being about 160 m. Processions to the J take place from Jericho at the Orthodox Epiphany and Easter, when white shrouded pilgrims bathe in the riv - the bathing place of the pilgrim is supposed to be the scene of the baptism of

THE VALLEY OF THE JORDAN

L.N.A.

Jordan, Thomas (c. 1612-85), Eng. poet and pamphleteer, b in London. He began life as an actor at the Red Bull Theatre, Clerkenwell, publishing his first vol. of poems *Poetical Exercises* in 1637. In 1671 he was appointed laureate to the corporation of London, and composed every year a panegyric on the Lord Mayor, and arranged the pageants, celebrating them in verse. He wrote many works, some of which are preserved in the Brit. Museum.

Jordan, most important riv. of Palestine. It runs from N. to S. through a great valley some 160 m long and at times as much as 12 m broad. The highest source is 1700 ft above sea level on the W. of Mt. Hermon, near to the vil. of Hishbea, and under the name of the Hashbany flows to join the Laddan and the Banias, which have already united into one stream. Thence the J flows S. into Lake Huleh and the Lake of Tiberias (Sea of

Christ, the miraculous div. of the waters by the cloak of Elijah, and the legend of St. Christopher, who carried the Infant Christ across the river. See W. F. Lynch, *Narrative of the U.S. Expedition 1849*, see also DIAN SIA GAILLI, PALESTINE. **Jordan, The Hashimite Kingdom of**, see TRANSJORDAN.

Jordanes, or **Jornandes** (fl. 550), historian and ecclesiastic of the sixth century. Originally a notary at the Ostrogoth court in Italy, he became a monk, and finally bishop of Crotona, though the last appointment is rejected by some as unauthentic. His prin. work is *De Getarum Origine et Rebus Gestis*, the only source of information of the hist. of the Goths. The best ed. is by C. A. Closs (1938). He also wrote another lat. historical work, *De Regnorum et Temporum Successione*, a compendium of hist. from the creation to A.D. 552. J. was a good compiler, but displayed little

original thought. See Stahlberg, *Jordanides*, 1884.

Jorga, Nicolas (or *Neculai Jorga*) (1871-1940), Rumanian historian, miscellaneous writer, and statesman; b. at Botoshan; son of Neculai I., advocate. Educated at the univs. of Jassy, Berlin, and Leipzig; and at the *École des Hautes Études*, Paris. Wrote in Fr., Ger., It., and Swedish, besides his own language. Became prof. of universal hist. at Bucharest in 1894. His hist. of Rumania, based on the characteristic belief that the Rumanian people's past was the record of a homogeneous nation unnaturally divided by Magyar, Ger., and Russian, earned him the title of the 'Livy of Rumania.' He was many years chief of the Nationalist party. His *History of the Byzantine Empire* (1901) was trans. into Eng. in 1907. He wrote a large number of books on Balkan hist., and his plays were a feature in the Rumanian theatre. Tutor and friend of Prince Charles (Carol), he was largely instrumental in securing his return from exile and restoration to the throne. In 1931 he became premier of a non-party cabinet. His murder by the Iron Guard or Rumanian Nazis, may have been due partly to the antagonism between him and Codreanu (true name Zilinsky), founder of the Iron Guards, who was himself assassinated in 1938.

Jorgensen, Adolf Ditlev (1840-99), Dan. historian, b. at Graastad. In 1869 he became director of the royal archives, and in 1889 director of the Copenhagen Institute. His first book was trans. as *La Fondation et les premiers progrès de l'église Scandinave* (1874-78), treating of the hist. of the Middle Ages. Other works include *Histoire des Archives du royaume de Danemark* (1884), and *Fortællingen af Nordens Historie* (1892).

Jørgensen, Jens Johannes (b. 1866), Dan. author, b. at Svendborg. His philosophical and religious works are of high literary merit. They include *Beuron* (1898), *Bogen om Rom* (1901), and *Pilgrimshagen* (1903); *Confession* (1895), and *Poems* (1898), are better than his earlier poetical work. He pub. an examination into Ger. charges against Belgium (1915—trans., 1916, as *False Witness*). His autobiography was pub. in Eng. (1928-1929). He pub. *Charles de Foucauld* in 1931.

Jortin, John (1698-1770), Eng. church historian and critic, b. in London of Huguenot parentage. He was educated at Charterhouse and Jesus College, Camb., graduating in 1719. In 1749 he was appointed Boyle lecturer. Subsequently he became vicar of Kensington, a prebendary of St. Paul's, and archdeacon of London. Amongst his principal works are: *Miscellaneous Observations upon Authors, ancient and modern* (1731-32), *Remarks on Ecclesiastical History* (1767-73), *The Life of Erasmus* (1758-60), *Lusus Poeticus* (an early volume of Lat. verse), *Sermons and Charges* (1781), etc. See J. Disney, *Memoirs of the Life and Writings of John Jortin* (1792).

Jorullo, or Xorullo, volcano of Mexico which came into existence in Sept. 1759,

when a great eruption occurred. Has an altitude of 4315 ft.

Josaphat, see BARLAAM AND JOSAPHAT. **Josefstadt**, tn. of Bohemia, Czechoslovakia, 11 m. N. of Hradec Králové (Königgrätz), and formerly a strong fortress. It is on the R. Mettau. Pop. about 5000.

Joseph: (1) Eldest son of Jacob and Rachel, and brother of Benjamin. His hist. is told with great detail in the Book of Genesis. The important points in it are his journey to Egypt, and the ensuing journey of the whole of the Israelitish tribes, his rise to supreme power in Egypt, and the taking of his bones for burial in Shechem. The special connection of J. with Egypt is most important, and throws much light on the patriarchal hist. (2) Husband of the Virgin Mary, spoken of in the gospels as the 'father' of Jesus. It is, of course, made clear that he was not the father of Jesus in the physical sense, but rather his guardian. The Church has, moreover, always held that he was never more than a guardian to Blessed Mary, who remained Ever-Virgin. He last appears in the Gospel hist. in connection with the going up of Jesus to the Temple at the age of twelve. From the fact that he is not mentioned in connection with our Lord's ministry, it has been gathered that he had died before this began. It is probable that the 'brothers' of our Lord were the sons of J. by a former wife. (3) J. of Arimathea, a rich Israelite of high rank, and possibly a member of the Sanhedrin or Great Council, who was in secret a disciple of Jesus until His crucifixion. He then went boldly to Pilate and obtained leave to take down the sacred body. This done, he interred it in his own tomb. (4) J. called Barsabas, surnamed Justus, chosen as one of two candidates to fill the place in the apostolate left vacant by the death of Judas Iscariot. His name does not occur again in the canonical writings.

Joseph, King of Naples, see DONAPARTE — *Joseph Bonaparte*.

Joseph I. (1678-1711), Holy Rom. emperor, son of Leopold I., b. at Vienna. In 1687 he was crowned king of Hungary; in 1690 king of the Romans, succeeding his father as emperor and ruler of the Hapsburg dominions in 1705. Supported by England, Holland, and Savoy, he warred successfully against Louis XIV. (Sp. Succession War). The allies were commanded by Prince Eugene and Marlborough. J. granted privileges to the Protestants. See Lange, *Leben und Thaten des Kaisers Joseph I.*, 1712; F. Wagner, *Historia Josephi I. Caesaris Augusti*, 1745; J. Herchenhahn, *Geschichte der Regierung Kaisers Joseph I.*, 1786-89; M. Uhlirz, *Handbuch der Geschichte Österreichs* (1), 1927.

Joseph II. (1741-90), Holy Rom. emperor, son of Francis of Lorraine and Maria Theresa of Austria, b. at Vienna. He became king of the Romans in 1764, succeeding his father as emperor in 1785. In 1772 he signed a treaty with Russia and Prussia dividing Poland among the three. On his mother's death (1780) he came into

possession of Hungary and all the hereditary dominions of Austria. In the Turkish war (1788-89) his general, Laudon, won sev. victories, but the result was unsuccessful. J. made many reforms, regulating the taxes and enforcing religious toleration, but he proved over-zealous, and alienated many of his subjects. Thus attempts to correct abuses in the Rom. Catholic Church caused a rising in Belgium, and the Hungarians opposed his proposals to make the Ger. language universal. He was succeeded by his brother, Leopold II. See the lives by L. de Caraccioli, 1790; M. Huber, 1792; Ramshorne, 1845; H. Brunner, (2nd ed.) 1885; P. von Mitrofanov, 1910; and E. Benedict, 1936, 1916. See also C. Pagnoul, *Histoire de Joseph II.*, 1843; H. Schlittor, *Pius VI. und Joseph II.*, 1891.

Joseph of Exeter (L. Josephus Iscanus) (fl. about 1200), medieval Lat. poet, native of Exeter. His most important works are: *Panegyricus ad Henricum*; *De Bello Trojano* (6 books); and *Antiochus*, a poem on the third Crusade, on which he accompanied Archbishop Baldwin in 1188.

Joséphine, Maria Rose (1763-1814), empress of the Fr. and first wife of Napoleon, b. at Poissy (near Paris), Martinique, her father being captain of the port of Saint Pierre. Her maiden name was Tascher de la Pagerie, and she first married the Vicomte de Beauharnais, to whom she bore Eugène, later viceroy of Italy, and a daughter Hortense, afterwards queen of Holland and mother of the Emperor Napoleon III. Beauharnais was guillotined during the Reign of Terror (1794), and two years later his widow married Napoleon Bonaparte. She exercised a great influence over the emperor, and at the Luxembourg and the Tuilleries attracted around her the most brilliant society of France; but the union proving unfruitful, the marriage was dissolved in 1809, and the following year Napoleon married Maria Louise of Austria. See J. Aubenas, *Histoire de l'Impératrice Joséphine*, 1859; and M. Le Normand, *Memoirs of the Empress Joséphine*, 1904.

Josephus Flavius (37 to after 100 A.D.), celebrated Jewish historian (the 'Grecian Livy') and general, of both royal and sacerdotal lineage. He appears to have joined the sect. of the Essenes, and spent three years with a hermit, Banos, in the desert, but in 56 he became a Pharisee. In 63 he visited Rome as deputy to Nero to procure the release of some Jewish priests, and succeeded through the influence of Poppaea. On his return he opposed the revolutionary spirit of his countrymen, but became governor of the two Galilees at the outbreak of war with Rome. In 67 he bravely defended Jotapata against the Romans under Vespasian, but the latter was finally victorious. J. was saved for predicting that Vespasian would soon wear the imperial purple. He was kept for a time in honourable confinement, and then fought with the Rom. army at the destruction of Jerusalem by Titus (70). His influence saved the lives of many of his friends. Vespasian made him a full Rom.

citizen, and he adopted the name 'Flavius' as a compliment to the emperor. His chief works are: *History of the Jewish War* (from 170 B.C. to his own times), Ἰουδαϊκὴ Ἀρχαιολογία (from the creation to A.D. 66); *Autobiography* (Eng. trans. by Trill, 1862); and a treatise *Against Apion of Alexandria*. See ed. of the Gk. text by Ben Niese (1885-95) and S. A. Naber (1888-96); Eng. version of A. R. Whiston (1737), revised by W. Shilleto (1889). See Van Hooevell, *Flavii Josephi Vita*, 1835; A. Bärwald, *Josephus in Galiläa*, 1877; M. Krekol, *Josephus und Lukas*, 1891; J. von Destinon, *Die Quellen des Flavius Josephus*, 1882; H. Druner, *Untersuchungen über Josephus*, 1897; M. Friedländer, *Geschichte der jüdischen Apologetik*, 1903; R. Laqueur, *Der jüdische Historiker Josephus*, 1920; H. St. John Thackeray, *Josephus*, 1929; L. Fenchelwanger, *Josephus*, 1932.

Joshkar-Ola, cap. of the Mari Autonomous Republic of the R.S.F.S.R., about 80 mi. N.W. of Kazan. It lies on the Volga-Uzsha canal, and is a railway terminus.

Joshua, son of Nun, was in his early days an attendant on Moses, and on his death became leader of the Israelites in the conquest of Canaan. He is said (Num. xiii. 8 and 16) to have been of the tribe of Ephraim, and at first to have borne the name of Hosea. He died (Joshua xxiv. 29 ff.) at the age of 110, and was buried at Timnath-Serah.

Joshua, The Book of, canonical book of the O.T., being one of the books of the div. known as 'Former' Prophets. It narrates the story of the invasion and conquest of Canaan (chaps. i.-xii.) and the div. of the land among the tribes (chaps. xiii.-xxiv.). The book ends with two addresses delivered by Joshua a little before his death. It was once taken for granted that the book was written by Joshua himself, but this is obviously impossible, since it speaks of events that happened in much later times. It is closely connected with the books of the Pentateuch, forming, indeed, their complement. They are occupied chiefly with the prophecies of the conquest of Canaan, which Joshua narrates. Recent criticism has made it clear that the B. o. J. was compiled from the same sources and by the same steps as the other books of the Hexateuch (q.v.). In its present form it probably goes back to the fifth century B.C.

Joshua Tree, *Yucca brevifolia*, which attains to a height of thirty-five feet, one of a genus containing about thirty species, occurring most often in Mexico and Central America. It is fertilised entirely through the agency of the yucca-moth. This moth, called the Pronuba moth, was first observed sixty years ago to scrape the pollen off a yucca flower, roll it up into a ball, and fly off to another yucca plant, which she impregnates with four or five eggs, placing the ball of food firmly in the pistil. Her larva feed on the seeds of the yucca plant, twenty seeds to one larva; so that there remain of the plant's 200 seeds, about 100, from which the plant can be perpetuated. Only by this means can a

yucca be sure of getting its seed. The J. T. is not much known in Great Britain, but other species of yucca, the *yucca gloriosa* for example, are hardy enough to grow out of doors in the Brit. winter, and flower at rare intervals, with blossoms of singular beauty, white, creamy, tinged with green, and bell-shaped.

Josiah (c. 639-608 B.C.), son of Amon and king of Judah. He came to the throne at the age of eight, but nothing is told us of the earlier part of his reign. In the eighteenth year of his reign, however, occurred the finding of the Book of the Law (see DEUTERONOMY) which inaugurated a new era of reform. For many years after this J. ruled in peace and prosperity, but in 608 Pharaoh Neco II. came N. to press his claims in the partition of the Assyrian empire. J., about whose foreign policy we are told little, attempted to stop his progress with an army, and fell at Megiddo.

Josika, Baron Miklós (1796-1865), Hungarian novelist, b. at Torda in Transylvania. He wrote a series of romances after the style of Sir Walter Scott. They aimed at a high moral standard, though enlivened with occasional humorous touches, and achieved great popularity. J. became involved in the Revolution of 1848, and was forced to live in exile at Brussels and Dresden, where he died. His chief novels are: *Abafi* (1836), *The Last Dutory* (1837), *The Bohemians in Hungary* (1840), *Esther* (1853), *A Hungarian Family during the Revolution* (1851), etc. His collected works were pub. in 25 vols. (1901-09).

Josquin, Deprez (c. 1415-1521), Flemish musical composer, b. near St. Quentin, Hainault, one of the greatest masters of the Netherland school. For some time he was chapel-master at St. Quentin, and from 1471 to 1484 he was musician at the papal court of Sixtus IV. He was regarded as the greatest composer of his day, and gave a great impetus to music in Italy. His printed compositions consist of 19 masses, 50 secular pieces, and upwards of 150 motets.

Joss, Chinese idol. A joss-house is a Chinese temple; a joss-stick is a thin stick of fragrant timber mixed with clay, used by the Chinese as incense and burned before the statue of an ancestor or holy personage.

Jost, Isaac Markus (1793-1860), Jewish historian, b. at Bernburg, Anhalt, Germany. From 1826-35 he was a school-master at Berlin, and from 1835-60 held a similar position at Frankfurt-on-Main. His chief works were three lists, of the Israelites pub. between 1820 and 1859 including *Geschichte des Judentums und seiner Sekten* (1857-59). He also ed. a Ger. trans. of the Mishnah (1823-34). See H. Zirndorf, *Isaak Markus Jost*, 1886.

Jostedal, tn. in Norway, about 110 m. N.E. of Bergen, at the E. base of the plateau of Jostedalabrá, the largest glacier-field of Europe.

Jötun (plural Jötunn), in Norse mythology, the name of certain mythical beings hostile to men, to Thor, and to the beneficent Æsir. These 'giants' or 'de-

vourers' are types of the untamable, destructive forces of Nature, Loki being the father of the mightiest and most dreaded of the race. Their abode was Jötunheim or Utgard, desert regions in the far N., and they figure largely in the Scandinavian Eddas. See O. Keyser, *Religion of the Northmen*, 1841; B. Thorpe, *Northern Mythology*, i. 1852.

Joubert, Joseph (1751-1824), Fr. philosopher and critic, b. at Montignac, pupil and later prof. at the Jesu College at Toulouse, till about 1776. Going to Paris (1778) he became a member of the brilliant literary circles there, and was an intimate of La Fontaine, Chateaubriand pub. selected writings (not intended for pub.) as *Pensées, essais, maximes, et correspondances*, 1818 (new ed. 1842, with 'Notice' by P. de Raynal). See M. Arnold, *Essays in Criticism*, 1867; J. Condamin, *Essai sur Joseph Joubert*, 1877; A. Beauquier, *La Jeunesse de Joseph Joubert*, 1918, and *Le Roman d'une amitié, Joseph Joubert et Mme. de Beau mont*, 1921.

Joubert, Petrus Jacobus ('Slim Plot') (c. 1831-1900), Boer general and politician, b. at Camo, Natal, of Dutch-Huguenot parentage, commandant-general of the S. African Republic (1880-1900). After serving with the United States forces in the civil war he became a successful farmer and a prominent citizen of the Transvaal, being acting president (1874) during Burger's visit to Europe. J. went to England with Kruger (1878) to protest against the proposed annexation of the Transvaal, proclaiming its independence (1880) with Kruger and Pretorius. He won the victories of Laing's Nek, Ingogo, and Majuba Hill (1881) in the war with England. In 1893 J. contested the presidency with Kruger, losing by only about 665 votes. In 1896 he defeated Jameson at the time of his great raid. He devoted much time to the military organisation of his country, and on the outbreak of the Boer War (1899) commanded the army in Natal. He besieged Gen. White in Ladysmith, after which his health failed, and he retired to Pretoria. He was a brave and upright man, commanding the respect of his foes.

Jouffroy d'Abbans, Claude François Dorothee, Marquis de (1751-1832), Fr. engineer and inventor of steam navigation, b. at Rochers-sur-Rognon, Haute-Marne, a captain of infantry before the Revolution. He conceived the idea of applying steam to navigation on seeing a fire-engine at Chaillet (1775). His first attempt was on the Doubs (1776), a more successful one being on the Saône (1783). Through lack of means and influence he lost the fame which Fulton won (1803). His *Charles-Philippe* was launched on the Seine (1816), and he pub. *Les Baléus à Vapeur* (1816). The Academy recognised his rights (1840), and Fulton proclaimed them in U.S.A. See monograph by A. Prost.

Jouffroy, Théodore Simon (1796-1842), Fr. philosopher, b. at Les Pontets Doubs, entered École Normale (1813), studying under Royer-Collard and Cousin, and

became teacher there from 1817-22. He was prof. at the Collège de France (1832), leaving through ill-health to become librarian at Paris Univ. (1838). J. made Scottish philosophy known in France. His works include trans. of Dugald Stewart (1826), and Reid (1828-36); *Cours de droit naturel* (1834-42); *Mélanges Philosophiques* (1833); *Nouveaux Mélanges* (1842). See 'Notice' by F. A. M. Mignet, 1863, and life by C. J. Tissot, 1876.

Jougs, Jugs, or Joggs (Lat. *jugum*, yoke), form of pillory used in Scotland and the Low Countries as a punishment for eccles. and minor civil offences from the fifteenth to the eighteenth centuries. It consisted of a hinged iron ring or collar for the delinquent's neck, and was chained to a pillar or wall in some public place. An example remains at the church yard gate of Duddingston near Edinburgh. See also **BRANK**, **PILLOW**, and **STOCKS**.

Joule, James Prescott (1818-89), Eng. physicist, b. in Salford. A pupil of Dalton, but largely self-taught. His first discoveries were made in electro-magnetism, and in *Annals of Electricity* (1837) he pub. a description of an electro-magnetic engine which he had invented. He adopted a convenient and scientific unit of work in practical electricity, called after him 'Joule.' It is the work done in one second by the 'ampère,' or unit current flowing through the 'ohm,' or unit resistance, equal to about 10,000,000 ergs (see **ELECTRICITY**, **HEAT**). J. is considered one of the founders of the theory of the correlation of forces, and in 1847 stated the doctrine of the 'Conservation of Energy.' Much of his time after 1843 was spent in determining by different methods with the greatest possible accuracy the mechanical equivalent of heat, and he pub. *A New Theory of Heat* (1850) See O. Reynolds's memoir, 1892.

Jourdan, Jean Baptiste, Comte (1762-1833), Fr. general, b. at Lihogues, served in America, and rose to be head of the army of the N. (1793), defeating the Austrians at Wattignies. In 1794 he won the victory of Fleurus, driving the Austrians beyond the Rhine, and besieging Mainz (1795). After this he was less successful, being defeated by the Archduke Charles at Amberg and Würzburg, in 1796 and again in 1799, whereupon he resigned his command to Massena. He defended himself in *Opérations de l'Armée de Danube* (1799), and became famous as framer of the conscription law (1798). Under Napoleon he became director of affairs in Piedmont in 1800; marshal in 1804, and governor of Naples in 1806. He accompanied King Joseph to Spain in 1808. Though created a peer by Louis XVIII. in 1819, he heartily supported the revolution of 1830. His last years were spent as governor of the Invalides. See J. de Courcelles, *Dictionnaire des généraux français* (1820-22), Michaud, *Notices historiques sur le Maréchal Jourdan*.

Journal, Le, Paris daily paper, literary and artistic, founded in 1892 by Fernand Xau, not avowedly political. Henri

Letellier has been director since 1899. Among its contributors have been Anatole France, G. Hanoataux, A. Herget, E. Gautier, Dr. Doyen, J. Bois, and P. Ginisty.

Journal des Débats, Le, Paris daily literary paper of moderate Republican politics since 1870. It was founded by Beaudouin (1789) to report the sessions of the National Assembly. It was acquired by the Bertin family (1799), confiscated by Napoleon (1811-14), and then recovered by the Bertins. Etienne de Naleche has been director since 1895, and made it an evening instead of a morning paper. Among famous contributors have been P. Bourget, E. Faguet, J. Lemaitre, G. Berger, G. Perrot, and E. Rostand. It did not re-appear after the Second World War.

Journalism. The evolution of J., and especially Eng. J., is one of the romantic episodes of human hist. Names crowd upon the memory, from Dr. Johnson and Fielding at one pole to Archibald Forbes and G. W. Steevens at the other, or from the *Letters of Junius* and the polemics of Addison and Steele to the humblest 'story' of a modern reporter-journalist. In its accidental development lies the strange part of the hist. of Eng. J. To modern minds it is incredible that it was not earlier realised what a weapon against political tyranny publicity would prove. Hence the germ of J. in pure and quasi-literary efforts, redolent of opinion and often guiltless of fact. Its fortuitous development is seen in the very anomaly of the genesis of the freedom of the Press. No formal assertion of such freedom is to be found, except in the stately lines of the *Areopagitica* of Milton. Its institution was the result of the refusal of the Commons in 1695 to renew the Licensing Act, which, in its turn, was an autocratic device consequent on the development of the art of printing. The newspaper proper begins with the development of the news letter, often in MS., which purveyed the 'chit-chat' of tn. much in the manner of the modern London or Paris letters, in a single printed sheet, posted on a fixed day in the week, and circulated in the provs. under the name of the *Weekly News*. This paper was pub. before 1693 and before the necessity for the permission of the Star Chamber to publish a newspaper was a thing of the past. It was by the sufferance of the gov. that other papers were allowed to appear, like the *London Mercury*, *True News*, and the *Protestant Intelligence*. After the political controversies over the Exclusion Bill, the motive for collusion with news publishers was gone, and there was a reversion to censorship with a consequent monopoly to the *London Gazette*. But it was not for long, and the appearance of the *Intelligencer* under the editorship of the remarkable Sir Roger l'Estrange in the reigns of Charles II. and James II. inaugurated an era of discussion of public questions in the newspaper Press, which ultimately resulted in that Press attaining the virtual position of the Fourth Estate of the Realm (see **ESTATES OF THE REALM**).

The age of Anne has been well described as the classic age of Eng. literature, and its influence on the newspaper Press was no less marked than in purely literary circles. Papers like the *Teller* and the *Spectator*, filled with the pub. wit of Addison, Pope, Steele, and Swift, burked politics altogether, in favour of satires on the transient, social foibles of the age. But there were a few other papers, like the Whig *Examiner* and Defoe's *Review of the Affairs of State*, which drew their breath of life from the atmosphere of politics. Fearless and scurrilous criticism of public men was inspired and even written by some of the foremost men in the state like Bolingbroke, and it began to change the character of newspapers. Henceforth they were a power to be reckoned with, which no bureaucratic action could repress, which constituted itself the guardian of public liberty, and which was courted directly or indirectly by ministers themselves. It was the practice of reporting the speeches of the opposition of the day that paved the way for publicist articles in the Press, for the reports were the material upon which they were necessarily founded. In constitutional theory it was a gross breach of parl. privilege to publish debates or discuss political questions in the Press, but by surreptitious means, reports, meagre it is true, crept into the papers, and before the middle of the eighteenth century the Press had become firmly estab. as the backbone of ministerial or anti-ministerial support.

The triumph of John Wilkes and the *North Briton* marks a well-known epoch in the annals of Press criticism and vindicated the right of the Press to extend its criticism to the acts and words of the sovereign himself. The *Morning Chronicle* is generally credited with being the first paper to employ a regular staff of parliamentary reporters who actually took their places in relays in the gallery of the House, and James Perry, its editor, practically created the profession of J., though certainly not as we know that profession to-day. Developments in J. proceeded apace with the founding of the *Morning Post* in 1772, the *Morning Herald*, the *Courier*, the *Sun*, and the *Anti-Jacobin* before the end of the eighteenth century. The proprietors of the *Morning Herald* estab. correspondents in all the chief caps. of Europe and big tns. of Great Brit. Probably the rivalry between the *Morning Chronicle* and the *Times*, under the proprietorship of the famous John Walter, did more for the progress of Eng. newspaper J. than any other event. Each paper was constantly striving to surpass the other by the introduction of some novel feature. The 'leading article' became a work of art and no less a powerful influence in the interpretation of public opinion than a source of lively interest to readers in general. Coleridge, Peter Fraser, and John Sterling were among the most notable writers who set the earlier style of 'leaders,' and though the daily newspaper Press has not been remarkable for attracting the most distinguished writers,

it has been the Mecca of many a leader-writer of astonishing powers of pungent criticism. John Walter's adoption of printing by steam machinery in place of the slow system of printing by hand set the *Times* on the high road of its successful commercial and journalistic career. The enterprise of the *Daily Telegraph* in fitting out exploration parties in the early 'seventies and in using to the utmost the brilliant critiques and articles on social life, literature, and art of George Augustus Sala may almost be said to constitute the breaking-point with the early and mid-Victorian methods of newspaper J. The trenchant, vituperative, and slashing style, long becoming obsolescent, received its death-blow, not only from the keener public interest felt in matters outside mere politics, but from the reflection in the papers themselves of the greater culture and intellectual range of the people.

But modern J. also has its personal note, and that personal note is its outstanding characteristic. It is a different form of intimacy to that of the letters of Junius, or the fulminations of John Sterling of the 'Thunderer' (*The Times*). This is essentially the age of what is known as the 'human document.' With all its precision of diction and close adherence to classical models, there was in the J. of fifty (or even less) years ago a marked conventionality of tone. To us that tone seems to have been stilted and even 'priggish.' People generally, and writers no less, did not so much give free play to individual ideas as present everything in the form of independent or external phenomena, having no relation to human sympathies. It required the free play of democratic thought, not only to make art generally, and the art of J. in particular, conscious of itself, but to make criticism, which in its wider sense is the rock-bottom of J., really sincere. The progress of modern J. is a reflection of the restless and searching inquisitiveness of the age. The ramifications of the newspaper Press into every department of life are bounded by nothing but the discretion of its personnel and the law of libel. Perhaps, even in the later Victorian era, when monopoly and censorship were long-forgotten relics of the past, nothing existed to foreshadow the methods of the later J. which has been identified with the name of W. T. Stead. Big London dailies, which in that era were marked by a pompous dignity of style, succumbed to the influence of sensationalism. The modern craving for a paper that shall be readable in a limited space of time by a public pressed for time, necessitates the presentation of news in attractive form with headlines, and a precision in leaded type arranged in paragraphs.

Different classes of readers must be catered for in different fashions. The *Times* circulates essentially among the influential elements, whence something of old conventionality and austerity still permeates its tone and make-up. The same qualities mark the *Manchester Guardian*. C. P. Scott, the editor from 1872 to 1929 became one of the greatest figures in Brit. journalism.

One result of the progress of modern J. is the assignment to definite and separate spheres of J. proper and literature. The latter, no doubt, is present in the shape of book reviews and 'specials' (i.e. topical articles) on the 'literary page.' But these articles generally relate to matters of current public interest, and literary form in them is subordinate to the purpose

London Press

C. P. SCOTT

of the article, which is primarily to persuade. The term 'Journalism' is admittedly a wide one, and in a manner of speaking is almost one of degree. Anything that is written germane to some event or incident in a periodical that belongs to the class of so-called 'public journals' is an effort of J. But the main spring of J. proper is news, and periodicals like the *Spectator* and *The Statesman and Nation* occupy a position midway between J. proper and literature. The duties of a journalist have become extraordinarily exacting. The greater his knowledge and experience of the world and of men the more successful is he likely to be. The most liberal education is useless without the knack of getting news and presenting that news in accurate, graphic, and convincing form. The goal of a journalist is, above all, to bring off a 'scoop' for his paper, i.e. the publication of a particular item of news before its appearance in the columns of any other paper. Opportunities occur in time of war and the war Correspondent's life is a hazardous one, as has recently been exemplified in the Sino-Jap. war, the Sp.

Civil war, and the campaigns of the Second World War and in other theatres of operations, where journalists have lost their lives or been taken prisoner. In regard to the training of a journalist England was long behind America, in that she had no schools of J. like the school of Journalism of the Univ. of Missouri, where a range of subjects is taught embracing sociology, economics, political science, Eng. hist., together with the arts of reporting, editorial writing, magazine J., and newspaper administration. A similar school of J. was set up, however, in London Univ., at King's College, which prepares students for a diploma examination.

It is said by a competent authority that Amer. J. has exercised considerable influence on Eng. J. The hunt for men with 'live' ideas and methods is essentially an Amer. habit. It is not far from the truth to say that America is the home of modern J. In France the influence of Amer. methods has been no less felt than in England. But the fine literary tradition of Fr. J. still lives in the signed article, and although the transition from literature to J., or in other words, from opinion to news, has resulted, as in England, in the mere co-ordination of politics with other items of intelligence, yet the frequent appearance of signed *articles de fond* by some of the most remarkable literary men of the age indicates not only the vitality of the national literary character, but the greater importance attributed by the Fr. people to the individuality of the journalist himself. This remains as true to-day as before the Second World War. Recent years have witnessed the development in Great Britain, as in America, of enormously powerful combinations of newspapers and periodicals, dominated by strong personalities. So far as J. as a calling is concerned, the danger of the combine lies in the stereotyping of opinion to the detriment of the individual outlook. The journalist becomes only the mouthpiece of his newspaper, uttering the views which the policy of his paper demands. On a free vote (October 29, 1946), the House of Commons by 270 to 157 votes adopted the motion of a Labour M.P. asking for a Royal Commission to inquire into the finance, control, management, and ownership of the Press. A somewhat similar inquiry was instituted in the United States with special emphasis on the preservation of the freedom of the Press, but it was not an official inquiry instituted by the gov. (See further under NEWSPAPERS.) See also ADVERTISEMENTS; NEWSPAPERS and articles on various newspapers.

Journalism in the U.S.A.—From feeble, almost timid beginnings, J. in the U.S.A. has grown not only as a great power in the land, but numerically and financially into a business far exceeding in extent and resources anything known anywhere else in the world. In 1689 and 1690 two issues of the *Boston Public Occurrences* were suppressed. The *Boston News Letter* was started in 1704 by John Campbell, who was the post-master of Boston. Other

papers were started in Boston and Philadelphia in 1719. New York, to day the undisputed metropolis of J., singularly enough had no regular newspaper of its own until the *New York Gazette* was founded in 1725. New York began to take its dominating position in Amer. J. in the early thirties and forties of the last century. As a result of the enterprise of three or four strong men, James Gordon Bennett, senior, started the *New York Herald* in 1835 with very slender resources. The *New York Tribune* was founded in 1841 with Horace Greeley as editor and part owner. The Civil war gave a great impetus to the newspapers of the N. with a public avid for news of the great conflict. The *New York Herald* began to do spectacular things such as sending Stanley to find Livingstone in the heart of Africa and equipping an expedition to the Arctic. Later Bennett made an innovation which was much derided at the time, but has since been copied by newspapers all over the U.S.A. and Great Britain—the society column.

A new development in retail business gave a fresh impetus to the newspapers. This was the foundation of what are known in the U.S.A. as department stores, which embrace under one roof a multitude of shops under one ownership, seeking to serve every need of the customer. To bring more trade to these shops the proprietors availed themselves of the medium of extensive advertisements in effective journals. Instead of small cards, they began to buy space to the extent of half a page, then of full pages. This enterprise on the part of advertisers brought vastly increased revenue to the papers. The era of building rich and powerful papers had begun. It was the editor, and not the newspaper which was famous. The quotations were from what Henry Watterson said in the *Cincinnati Courier Journal*, Charles A. Dana in the *New York Sun*, Murat Halstead in the *Cincinnati Commercial Gazette*, W. R. Nelson in the *Kansas City Star*. With the death or resignation of these men came the new era when the paper itself was pushed forward and the editor's name and personality were not so well known. In 1878 J. W. Scripps (q.v.) founded with slender capital the *Penny Press* afterwards the *Cleveland Press*, in Cleveland Ohio. It was independent in politics. It aspired ardently to help the under dog in life. The paper prospered and Scripps proceeded to found other evening papers along the same lines, until to day his successors control a chain of papers from coast to coast. In 1883 inspired by somewhat similar ideas, Joseph Pulitzer (q.v.) bought the then weak *New York World*, and made of it the most liberal organ in the metropolis. Pulitzer was an aggressive opponent, and he brought to Amer. J. a touch of sensationalism which was then new. In 1898 Adolph S. Ochs (q.v.) bought the semi moribund *New York Times*, and Wm. Randolph Hearst (q.v.) the *New York Journal*. They began to fight Pulitzer for circulation. Hearst conceded his papers even more sensationally

than Pulitzer, and gave rise to the term 'yellow journalism.' Ochs proceeded on more sober lines, tried to print all the news, and gradually made of his paper one of the wealthiest in the world.

The fight for circulation and advertising brought in its train the very large papers the people of the U.S.A. know to day. The daily papers both morning and evening, in New York range from forty to sixty pages. The Sunday ed of the *New York Herald Tribune* before the Second World War often had from 100 to 140 pages. Issuing big papers, the

Topical Press
RANDOLPH HEARST

editors have a great deal of space at their disposal, and are therefore in the market for good news feature stories. This demand gave rise to another peculiar development in Amer. J. the Newspaper Enterprise Association—one of the earliest in the field—and other similar concerns, started out to supply news features to one paper in each city. This developed even beyond the dream of its founders and before long the Newspaper Enterprise Association for instance was distributing to its clients not only news features but also editorials, the contents of a sports page, a woman's page, a religious column, book reviews, news of the cinema world and the dramatic field, news photos, and many strip cartoons. A later development in Amer. J. was the imitation in New York and a few other cities of the picture papers long familiar to Londoners in the *Daily Mirror* and *Daily Sketch*. Whereas the latter had before the Second World War from sixteen to thirty two pages daily, those in New York had about sixty pages. In popular language these papers are known as 'Tabloids'.

The trend in recent years in the U.S.A. has steadily been the reverse of that in

Great Britain. Whereas in the latter the morning papers have the largest circulation and popularity, in the U.S.A. it is the evening papers which have the primacy. Another marked tendency is for the establishment under one ownership, editorial direction, and management of chains of papers. The most notable of these are the Scripps-Howard chain, with papers in eighteen cities and total circulation of over 3,600,000, and the Hearst chain, with papers in eighteen cities with 5,384,700 daily and 9,975,900 Sunday circulation.

Finally there is one feature of Amer. J. unmatched anywhere else in the world. This is the number of papers printed in foreign languages. The reason for it is the polyglot pop. of the U.S.A. It has been estimated that the average circulation of the foreign language Press in the U.S.A. is about 2,300,000, divided as follows: Bohemian, 145,780; Chinese, 31,000; Finnish, 34,000; Fr., 44,000; Ger., 335,000; Gk., 35,000; Hungarian, 70,000; It., 315,000; Jap., 65,000; Lithuanian, 55,000; Polish, 382,000; Russian, 33,000; Slovak, 30,000; Slovenian 20,000; Sp., 55,000; Yiddish, 536,000; and other languages about 109,000. See L. N. Flint, *The Conscience of the Newspaper* (New York), 1925; G. F. Carr and F. E. Stevens, *Modern Journalism*, 1931; C. Bourdon, *Le Journalisme d'aujourd'hui*, 1931; R. Christenson, *Le Développement de la Presse*, 1941; I. Rothenberg, *The Newspaper*, 1917; A. Aspinall, *Politics and the Press, 1750-1860*, 1949.

See also MAGAZINES and NEWSPAPERS. Journalists, Institute of, senior organisation of the profession, incorporated by Royal Charter in 1890. It had its origin in the National Society of Journalists, which was founded in 1883 and converted into the Institute in 1889. Its primary object, as set forth in the Charter, is 'the promotion by all reasonable means of the interests of journalists and journalists.' In addition to being a corporate professional society, the Institute is a certificated trade union and, as such, is fully recognised as a negotiating body on salaries and working conditions of journalists. There are two professional classes of membership, called fellows and members; and a class of junior members undergoing preparation for professional membership. Fellows are journalists of recognised professional standing or of special experience or distinction. Two small non-professional classes consist of associates and honorary members. There is an Overseas List, consisting of members of Brit. nationality resident overseas, and a Foreign List, comprising of members of foreign nationality resident abroad. Women are eligible for the sev. classes of membership on the same terms as men. The Institute has its own Hall at 2-4 Tudor Street, E.C. 4.

Journalists, National Union of, Brit. trade union of the 'working journalist.' Numbers in its membership most of the salaried journalists on the daily and weekly newspapers, besides most of those paid on space. It has done much to

secure improved rates of pay for reporters and sub-writers. Offices are at 96 Regent Street, London, W. 1.

Joust, see TOURNAMENT.

Jove, see JUPITER.

Jovellanos (or Jove Llanos), Don Gaspar Melchior de (1744-1810), Sp. author and statesman, magistrate at Seville and Madrid. In 1790 he shared in the disgrace of Cabarrus, but Charles III. made him minister of justice in 1797. Imprisoned in Majorca through the intrigues of Godoy (q.v.) on the latter's fall and the revolution of 1808 he returned and became a member of the Central Junta. He wrote the tragedy *El Pelago* (1769), the comedy *El Delincuente Honrado* (1773), *Memorias Políticas* (1801), and *A Mis Compatriotas* (1811), a defence of the Junta and himself against suspicions of treason. See lives by E. González Blanco (1911), J. Juderías (1913), and C. Artihano y de Caldecano (1913).

Jovianus (or Jovinianus), Flavius Claudius (A.D. 363-4), Rom. emperor, b. about 331. He was captain of the praetorian guards under Julian, accompanying him against the Persians. J. escaped with the army to the Tigris on the death of Julian (363), and was soon chosen as his successor. He was obliged to conclude a humiliating peace with the Persian king, Sapor (or Shapur), ceding various districts and fortresses, including Nisibis. He proclaimed Christianity at Antioch, upheld the Nicene Creed against the Arians, and restored Athanasius to the see of Alexandria. The manner of his death at Dadastana is uncertain. See J. de la Héroüe, *Histoire de Jovien*, 1740; E. Gibbon, *Decline and Fall of the Roman Empire* (chs. xxiv., xxv.); Ammianus Marcellinus, xxv.; Themistius, Or., v., vii. Jovinus, Gaulish usurper, perhaps grandson of Jovinus (d. 379), and Rom. general under Honorius. In A.D. 411 he assumed the imperial title, winning part of Gaul, but was attacked by the Franks and Visigoths under King Athaulphus, allies of Honorius. J. was defeated by them at Valence (412), and routed by the Rom. prefect Dardanus.

Jowett, Benjamin (1817-93), Eng. scholar, and theologian, educated at St. Paul's and Oxford, becoming fellow of Balliol (1838), tutor (1842-70), and finally master (1870). He was Regius Prof. of Gk. at Oxford (1853). One of the greatest moral teachers of his age, he became intimate with Stanley, joining him and Tait in advocating certain univ. reforms (1846). His personal influence at the Univ. was very great, and although his views met with no little hostility he had numerous supporters, his pupils being especially enthusiastic in their support. Among his pupils at Balliol were Curzon, Asquith, Grey (of Fallodon), Bowen, Loreburn, Gore, Lang (the archbishop), Morier, Tout, Caird, Swinburne, and Walter Morrison. The flow of Balliol successes bred envy and some malice outside the college and even in the college itself maintenance of the flow tended to become an objective in itself. Sir Robert Morier, J.'s best-loved pupil, certainly owed his

ambassadorial career to J.; not indeed because J. exercised any influence in official quarters but solely because he converted a lax, imperfectly-educated but able young man into a worker. In J.'s own mind the desire to see his young men succeed sprang from hatred of failure. His own father had been a failure and his boyhood one of extreme poverty and loneliness; and this gave the spur to his efforts on behalf of his pupils. Beginning from nothing, he ended as a kind of mentor-in-chief to most of the great Victorians, men and women alike. He was incomparably the greatest educator of able young men England has produced. One of the Broad Church school, his *Epistles of St. Paul to the Thessalonians, Galatians, Romans, with Critical Notes and Dissertations* (1855) and a contribution to *Essays and Reviews* (1860) roused a storm of criticism and hostility. But he undoubtedly led the way to a new understanding of St. Paul. He may be said to have rediscovered the Gk. philosophers; his outstanding work in this sphere being his trans. of Plato's *Dialogues* (1871). There followed a trans. of Thucydides (1881), and of Aristotle's *Politics* (1885). His *College Sermons* were pub. in 1895. He also played a part in the world of affairs, notably in the reform of medieval Oxford and the reconstruction of the Indian Civil Service. See Evelyn Abbott and L. Campbell, *Life and Letters of Benjamin Jowett*, 1897, and (ed.) *The Letters of Benjamin Jowett*, 1899; L. Tollenache, *Benjamin Jowett*, 1895.

Joyce, James Augustine Aloysius (1882-1941), Irish writer, b. in Dublin on Feb. 2, 1882, one of a large and poor family. Educated at the National Univ. of Ireland and graduated in 1902. Early had strong literary tendencies. In 1903-04 he was in Paris engaged first in medical studies and, later, in having his voice trained for the concert platform. He returned to Dublin and pub. a few stories but could not make a living, and therefore, with his wife, migrated to Trieste where he taught Eng., having much talent for languages. Again returned to Dublin to start a cinema theatre which, however, failed. Hitherto his only book was one of lyrics called *Chamber Music* (1907). His only other verse was *Pomes Penyeach* (1927). In 1914 appeared *Dubliners*, which had been delayed for nine years through wrangling with publishers over excisions demanded by them. *A Portrait of the Artist as a Young Man* was serialised by Ezra Pound in the *Egoist* (1914-15). At this time he was under 'free arrest' in Austria but was allowed to go to Zürich, where he formed a company of Irish players who performed his play *Exiles* (1918), which was modelled on Ibsen's work. He had already begun his chief work, *Ulysses*, in 1914, which appeared serially in the *Little Review* (New York), from 1918 to 1920, at which date it was banned by a prosecution launched by the Society for the Suppression of Vice. At Zürich his sight began to fail and, a few years after the war, he settled in Paris. *Ulysses* was pub. in book form in Paris

and London in 1922, but was not allowed to circulate in England or America. Eds. were printed in Paris and thousands of copies were smuggled into England by individual book collectors. His next work, *Work in Progress*, began to appear in 1927 in parts under various titles. In it the word-coinage which was a feature of *Ulysses* was extended to the point of incomprehensibility. *Ulysses* is a bitter and ferocious satire, which was variously hailed as a tremendous libel on humanity and as the *chef d'œuvre* of a second Terullian. Bloom, the chief character, has been described as a rag-and-tatters Hamlet, a proletarian Lear 'mirroring' life and showing it to be hideous. The book purports to relate the whole mental and physical hist. of Bloom, Jewish advertisement canvasser, and Dedalus, scholar-philosopher, during one single day in Dublin. J. claimed to have discovered his literary device in Edouard Dujardin's forgotten novel, *Les Lauriers sont coupés* (1888), and certainly it is to be found employed by Proust, Dorothy Richardson, and other writers, and it has had a far-reaching influence on the technique of many other modern writers. J. worked in great poverty for much of his life and had numerous operations for cataract. He died in Zürich on Jan. 13, 1941.

J.'s earlier books give scarcely a hint either of the power which went to the making of *Ulysses* or of the perversity which makes his even more ambitious experiment, *Finnegan's Wake* (1939), completely unintelligible. It must be admitted that even *Ulysses* would have been less widely read or carefully studied, and therefore less influential among the younger writers of its day, but for a reputation gratuitously made for it by the Brit. Customs officials, who autocratically took it upon themselves to treat the early eds., printed on the Continent, as unfit for circulation in this country. The American courts, which insisted that his picture of an Irishman's day was morally innocuous, showed greater discernment than did the Eng. officials or most of J.'s own countrymen. That J. was a genuine artist, sincere and profound, is clear from the simplicity of his early short stories, *The Dubliners* (1916), and from the well-defined autobiographical narrative, *Portrait of the Artist as a Young Man* (1916). In *Ulysses* he essayed the difficult task of presenting a complete picture of the life of the individual in our time, both conscious and sub-conscious, the simple, sinning, groping man with the hard unrelenting universe around him. In *Finnegan's Wake* he seems to be trying to break through the barriers of time, but so complex is the medium that, without commentary, few can follow the meaning. One of the inspirations of this book was the It. Giambattista Vico's *Scienza Nuova*, first pub. in 1725. To Vico in part can be traced J.'s idea of word-formations as the key to the human mind and to the various phases of experience. J.'s originality lies in his discovery of a literary form for expressing the inconsequent complexity of the human

mind and the shadowy similarity that its migrations bear to the orderliness of grammatical sentences or the appearance of time and space. In a word, he annihilated the ordinary and the normal, and revealed a chaotic world of the mental and emotional reactions which may come over men in a single day. He was not, however, so much a pioneer as a revivalist. The main-pring of all his later work was a revulsion against what he felt to be the sterility of the intellectualised modern consciousness—the same revulsion as that which characterised the work of D. H. Lawrence, who idealised the instinctive behaviour of peasants and primitive people. But whereas Lawrence was concerned with problems of conduct, personal and social, J., as an erudite scholar of markedly academic temperament, was interested particularly in questions of language and style. He sought to devise a new form of language, which would not merely convey meanings to the conscious intellect, but would stir the unconscious mind to direct experience of a poetic reality embodied in the sound and rhythm of the words. This new language was fully developed only in his last book, *Finnegans Wake*. Its obscurities, hailed as ultra-modernistic, in fact represented a return to the kind of speech which philologists believe must have been the common speech of mankind in distant ages before the invention of writing. But for J.'s readers unfortunately it was a language that had to be learnt, and probably it has been thoroughly understood by no-one save J. himself. See lives by E. Dujardin, 1931 and H. Gorman, 1941; see also C. G. Jung, in *Modern Man in Search of a Soul*, 1933.

Joyce, William (1906–1946), b. in New York, his father being a native of Co. Mayo, Ireland, and his mother a native of Crompton, Lancashire, England. The father became a naturalised Amer. citizen in Oct. 1894. A citizen of the United States, J. accepted the harbourage of Britain for eighteen years; he took an active part in its politics; by declaring himself a Brit. subject he obtained, in 1933, a Brit. passport for holidays abroad and renewed it for a year in Aug. 1939; on Sept. 18, 1940, he was in Germany, employed by the Ger. radio company. Though his broadcasts were always rather a subject for ridicule than for alarm, (he was nicknamed 'Lord Haw-Haw' by a Brit. journalist and this label certainly helped to lessen his propagandist effectiveness) their bitterness to a country which had given him hospitality for the greater part of his life disintegrated him to any sympathy when, after the Second World War, he was tried and convicted of treason at the Old Bailey (Sept. 1945). His appeal to the House of Lords was dismissed (Feb. 1, 1946) and he was executed. In all nine judges pronounced on the legal issues raised by the defence. Eight were against J. and the one dissident, Lord Porter, based his decision, not on the principles underlying the judgment of his colleagues, but on what he considered a misdirection by the trial judge and the inability of the

House of Lords to order a new trial. See further under TREASON.

Joyson-Jinks, Sir William, see BRENTFORD, VISCOUNT.

Juan, Don, see JOHN OF AUSTRIA.

Juan de Fuca, Strait of, connects Puget Sound with the Pacific Ocean, and separates Vancouver Is. on the N. from the state of Washington on the S. It is about 90 m. long and 13 m. broad, and contains sev. is., one of which, San Juan, was awarded to the U.S.A. in 1872.

Juan de la Cruz, St., see CRUZ.

Juan Fernandez, group of volcanic is. and an islet, belonging to Chile, prov. Aconcagua, which are named Mas a tierra (landward), 13 m. long and 4 m. wide, consisting of rugged rock with rich vegetation, Mas a fuera (outer), Santa Clara or Goat Is., and E. Zunque, situated about 380 m. W. of Valparaiso. They were discovered in 1572 by Juan Fernandez, who introduced goats and European plants on them. On the N. side of the inner is. is Cumberland Bay, where Alexander Selkirk lived in solitude for four years, which incident is supposed to be the basis for Defoe's *Robinson Crusoe*. The is. are now used as penal settlements.

Juan-les-Pins, small holiday resort in the Alpes, Maritimes, France, in the com. of Antibes. Pop. 1000.

Juan Manuel, see MANUEL, DON JUAN. Juarez, Benito Pablo (1806–72), Mexican statesman, b. at San Pueblo Guelatao, Oajaca, of Indian parentage. Appointed a judge of the civil court in 1842, he became governor of the state of Oajaca in 1847, greatly improving the provincial condition during his term. He was exiled from Mexico in 1853, but returned two years later and joined Alvarez and the revolutionists. Elected president in 1858. He retained this position till his death, and his vigorous and liberal policy was of great benefit to the nation. See lives by G. Baz, 1871; U. L. Burke, 1891; C. Juarez, 1907. There is a drama on J. by F. Werfel, *Juarez und Maximilian*, 1911.

Juba, one of the chief rivs. of E. Africa, formerly the boundary between Brit. and It. E. Africa. (See JUBALAND.) It rises in the N., flows E. and S.E., then S., finally draining into the Indian Ocean. Length over 1000 m.

Juba I., king of Numidia, an ally of Pompey, whom he supported against Caesar. He was defeated at Thapsus in 46 B.C., and committed suicide.

Juba II., son of the preceding, made king of Numidia about 30 B.C., and transferred to Mauritania in 25 B.C. by the Emperor Augustus on Numidia being made a Rom. prov. He was noted as an historical and general writer and wrote works on painting, botany, grammar, the theatre, etc., and hist. of Rome, Africa, Assyria, and Arabia, none of which are extant.

Jubal, or Jabal, son of Lamech and Adah. In Gen. iv. 21 he is recorded as the inventor of the harp or lyre, and hence the discoverer of musical science.

Jubaland, prov. of It. Somaliland, formerly a region of Brit. E. Africa, ad-

joining the Juba R. On July 15 1924 by treaty with Italy, Great Britain agreed to cede the Juba R. and a strip from 50 to 100 m wide on the Brit. side of the riv. The ratification took place in June 1925 and the boundaries were investigated by a Boundary Commission in 1926-27. The cap is Kismayu which was captured by Brit. forces on Feb. 15 1911 in the Second World War. Ostrich feathers, ebony gums and manilla fibre are among the prin. exports. There is a steamship service on the Juba R. from Kismayu to Baidera.

Jubbulpore, see JABALPUR

author was a rigid Pharisee of the tune of John Hyrcanus (137-107 B.C.), and in this work he rewrites the books of Genesis and Exodus, adding a commentary with the object of furthering the views of his party. In entire opposition to the Hellenist party the Pharisaic writer draws a sharp line of demarcation between Jews and Gentiles and insists upon the eternal nature of the Law. Before the revelation of the Law to man, it had ever been observed in heaven by the angels and so would be kept throughout eternity. The author sets himself in every way to glorify Judaism and insists on the rigid obser-

QUENCA, ABOVE THE VALLEY OF THE JUCAR

Jubilate, 100th Psalm, used as the second canticle in the morning service of the Church of England. The name signifies Shout ye.

Jubilee, The Year of, was a peculiar custom among the Hebs., in which every fiftieth year all land was restored to those original owners who had lost it within that period. All who through poverty had had to hire themselves out were released from their bondage, and all debts were remitted (Lev. xxv). The jubilee was proclaimed at the close of harvest, on the tenth day of the seventh month, the day of atonement when the *yobel* (horn) was sounded. The Rom. Catholics have borrowed this word from the Hebs. in their celebration of ordinary or extraordinary jubilees. The first jubilee was inaugurated by Pope Boniface VIII in 1300, when he issued a bull granting plenary indulgence to all pilgrim visitors to Rome, should they fulfil certain conditions.

Jubilees, The Book of, apocryphal book of the O.T., known also as Little Genesis, The Apocalypse of Moses, The Testament of Moses, and The Life of Adam. The

vance of its ceremonial. The work receives the name B. of J. because it calculates periods of time in jubilees, periods of seven times seven years with one year added at the end of that time, and lays stress on the mystical importance of the exact calculation of weeks and jubilees with the ever recurring number seven. The work was written in Heb., but was early trans. into Gk. and thence into Lat. and Ethiop. See C. Albeck, *Das Buch der Jubilaen und die Halacha* 1930.

Juby, Cape, on the W. coast of the Sahara Africa, a low sandy point opposite the is. of J. ucrteventura, which is one of the Canary Is.

Jucar, or Xucar, Sp. riv. in New Castile and Valencia rising in the Sierra Albaracin. It is about 300 m. long, and follows a circuitous course, irrigating rice and other plantations, and entering the Mediterranean at Oullera. On its banks are the tns of Quenca, Alarcon, Alcala, Albinque, and Algesmes.

Judæa, region in the S. of Palestine occupied by the Jews who returned from the Babylonian exile during the periods of Persian, Gk. and Rom. supremacy. Its

limits varied at different times. Josephus says (*Bell. Jud.* iii. 5) that it extended from Annath, called also Boreos, on the N. to the vil. of Jordan on the S., from Joppa on the W. to the Jordan in the E. St. Luke, however, frequently uses the title to include the whole of W. Palestine. In the time of Herod Idumaea was included in J. The plateau of J. takes the form of a long zig-zag central spine which throws out a series of steep spurs to E. and W. Modern J. came under Brit. mandatory administration. After the conquest of Palestine by the Brit. Forces in 1917-18 a military administration was set up until July 1, 1920, when a civil one took its place. The Mandate came into force Sept. 29, 1923. Under this was estab. a national home in Palestine for the Jews. The Jewish settlements are grouped in four dists.—J., Samaria, and Lower and Upper Galilee. J. is an agric. country, wheat, barley, olives, etc., being produced. See also ISRAEL; PALESTINE.

Judah, according to the Genesis narrative, was the fourth son of Jacob and Leah, b. at Haran in Mesopotamia. The tribe which bears his name was the most important of the twelve, and from it sprang the house of David. It is now generally believed, indeed, that its prominence in Israelitish hist. is due almost entirely to this king, to whom is attributed the union of clans, signified, according to the ethnic interpretation now so popular, by the incident of J. and Tamar. The cap. of Judah was Hebron, and its terr. stretched from Jerusalem on the N. to the ter. of the Amalekites on the S., and from the Dead Sea on the E. to the Mediterranean on the W. Jerusalem was taken by David, and formed a new cap. Under David the kingdom of J. and Israel attained its greatest extent. On the death of Solomon this kingdom fell into two parts: J. to the S. and Israel to the N. By the middle of the eighth century the Assyrian, had made serious encroachments upon the N. Kingdom (Israel), and it was only with their assistance that King Ahaz of J. succeeded in defending himself against Israel and Syria (or the Princes of Damascus). He, as well as his successor Hezekiah, paid tribute to the Assyrians. In 722 the Kingdom of Israel was destroyed. The kingdom of J. was practically destroyed in 597, when Nebuchadnezzar carried off King Jehoiakim with 10,000 of the prin. inhabitants, including Ezekiel, to Babylon.

Judah ben Samuel Ha-Levi (c. 1045-1140), Sp.-Jewish poet and physician, b. at Toledo in Spain. Over 1100 of his poems survive, 800 being of a secular nature, and 300 religious. His poetry represents both the sufferings and the aspirations of his people. In him the Jewish-Sp. renaissance of poetry reached its loftiest form both as regards subject-matter and nobility of conception, and he may be justly considered the greatest medieval Heb. poet. According to tradition he met his death on a pilgrimage to Jerusalem. Besides his poems, he wrote an apologetical work in Arabic, entitled *The Book of Argumentation and Demon-*

stration for the Defence of the Oppressed Religion, known as *Chozari*. See D. Kaufmann, *Jehuda Halevi*, 1877.

Judaizers, sect in the early Christian Church to which allusion is made in the N.T. writings. They laid emphasis on the necessity of the observance of the law, even by Gentile converts. They soon cut themselves off from the fellowship of the Christian Church and were known as Ebionites. They practised a strict ascetism, having much in common with the Essenes, and considered Jesus as merely one of the prophets, born in a natural fashion. They also showed hatred of the Pauline writings. Their gospel must have been somewhat on the lines of the lost Gospel of the Ebion.

Judaism, religious doctrines and rites of the Jews according to the law of Moses. The earliest form of J. was patriarchal. The anct. J. was the forerunner of Christianity. What is called the Jewish or Judaizing party in the Christian Church exercised great influence in the early days of Christianity. J. was 'so to speak, the vestibule through which alone either Jew or Gentile could enter the temple of Christianity'. Christians generally believe that all ceremonies and sacred personages of the older ceremony were types and shadows of the life and suffering of Jesus (Heb. ix., x.). But after the Jews lost their independence and after the destruction of Jerusalem, the judicial regulations of the Mosaic law ceased to be observed, and in what is called modern J. tradition acquired more authority; in the sixth century arose the Babylonian Talmud, containing the precepts, constitutions, and interpretations supplementing those of the O.T. But none the less modern J. continued to approximate closely to the anct. type of the faith. An essential part of J. is the institution of the Passover (Exod. xii., xiii.), and in its more developed form J. was characterised by a consecrated and hereditary priesthood, the maintenance of a theocratic form of gov., and the recognition of the supreme ruler, whether lawgiver, king, judge, or military leader, as the viceregent of God. See G. Hoenicke, *Das Judentum*, 1908; G. F. Moore, *Judaism*, 1927-30; E. Dhorne, *Evolution religieuse d'Israel*, 1937; K. Thiele, *Kirche und Synagoge*, 1945; J. Parkes, *Judaism and Christianity*, 1918; I. Tabak, *Judaic Lore in Heine*, 1945.

Judas, not Iscariot (John xiv, 22), spoken of in the Lucan list as *Ιουδας υἱος Βαραθ*, which may mean either 'brother' or 'son of James'. He is generally identified with the Thaddeus of Matthew and Mark.

Judas Iscariot, betrayer of Jesus, was the only one of the disciples who did not come from Galilee. His name tells us that he was a Judean of the tn. of Kerioth. All the gospels agree that he was the guide of those who took Jesus, though there are slight differences in the actual accounts. The task of unravelling the motives of his treachery is an impossible one. The gospels associate his action with avarice, but this seems a hardly sufficient explanation

and widely divergent views have been held; some, such as the Gnostics in ancient times and Noack in modern, make his action in hastening the Atonement a praiseworthy one. Others hold that he desired to test Jesus, to see whether he were indeed the Christ. It is more probable that his early love had cooled with his continued avarice, and that, turning to hate, his hasty temper led him to an act followed by all the terrors of remorse. See E. T. Thurston, *Judas Iscariot* (play), 1923.

Judas Maccabæus, son of the priest Mattathias, first to take active measures to stop the persecutions of the Jews by Antiochus Epiphanes. Mattathias died in 166 B.C., and Judas, whose surname has been explained as 'the hammer,' took command of the insurgent forces. He was a great warrior, and his leadership was marked by a series of successes over the Syrian generals, Apollonius, Seron, and Gorgias, and finally over the viceroys Lysias himself. After these successes, Judas made Jerusalem his centre of operations and here he set to work to reorganise the religious system. He restored and fortified the temple, procured new priests, and brought in once more the observance of the whole Law. The Temple was solemnly re-dedicated at the end of the year 165 B.C., three years after its profanation. Religious freedom was granted to the Jews in 162, and the main object of the war was thus achieved, but Judas and many of his friends were resolved now to strive for political independence. Judas, however, was defeated and slain by Bacchides at Eleasa (161 B.C.). The command was then taken by his brother Jonathan. See A. M. Hyamson, *Judas Maccabæus, the Hammer of God*, 1935. See also ISRAEL, *From the Exile to the Revolt of the Maccabees*.

Judas of Galilee, mentioned in Acts v. 37, was, with Sadduk the Pharisee, leader of an insurrection in A.D. 6 or 7, on the occasion of Judaea coming under direct Roman administration.

Judas Tree, name applied popularly to sev. trees, on one of which Judas is said to have hanged himself. It is given most commonly to *Cercis Siliquastrum*, a leguminous tree found in S. Europe and cultivated as a hardy plant in Britain. The purple flowers are papilionaceous, and show before the leaves.

Judd, John Wesley (1840-1916), Eng. geologist, b. at Portsmouth, and entered the Royal School of Mines, joining the Geological Survey staff in 1867. In 1876 he became prof. of geology at the School of Mines, and in 1881 held the same position at the Royal College of Science. C.B., 1895. His chief pubs. are: *Volcanoes* (1881), *The Student's Lyell* (1896), and *Geology of Rutland* (1875).

Jude, The Epistle of Saint, smallest of the general epistles and a canonical book which attained to its position only after much dispute. It does not appear in the Peshito, or Syrian version of the N.T., nor is it quoted by the greater number of Early Christian writers. Eusebius classes it among the Antilegomena, and later St.

Jerome says that its use of the apocryphal Book of Enoch was the reason of its rejection by many. The author speaks of himself as 'Jude, a servant of Jesus Christ and brother of James,' and is usually identified with Judas ('not the Iscariot'), the apostle. His epistle is directed against a kind of false teaching closely allied to Gnosticism, though there is no means of deciding against which particular sect he wrote. This Gnosticism had led to immoral and licentious practices, and against these the writer also warns his readers. His main object is to urge them to do this by contending 'earnestly for the faith once delivered to the saints.' See J. Moffatt, *The General Epistles*, 1928, and J. W. Ward, *St. Peter and St. Jude*, 1934.

Judge. A J. is one who is invested with the power to hear and determine civil and criminal causes, and generally to administer justice by making such orders, decrees, and judgments as to him seem best fitted to subserve that purpose. The status of the highest Js., at any given time, in any given community, has always been one of great dignity; but the functions have differed to a remarkable degree, varying from those above noted to those of a mere juror or J. of fact; and again, judgments have varied from the ancient conception of divinely uttered awards of the Homeric poems to the prosaic though admirable models of scientific precision of the modern High Court J. In ancient codes, as Maine has suggested, the *themistes* (Gk. *Themis*, goddess of justice) or judgments pronounced, whether by a king or priest, in a dispute between individuals, were of so exalted a nature in the vulgar mind that they were not only deemed to be due to divine dictation but took the place of all law-making, and indeed laid the foundation of customary law. In Rome, during the era of the kings, the supreme J. in all cases was the king himself, and civil causes were decided by him in his capacity of *pontifex maximus* (high priest), *jus* and *sacra* (law and sacred law) being for the most part inextricably involved in one another. In the developed Roman legal system the *judez* or J., who was generally a senator or, later, a knight, was a person with the very clearly defined duty of judging an issue submitted to him by the pretor or magistrate in a document called the *formula*. But it was the high status and delegated sovereign authority of the magistrate that invested legal proceedings with weight and solemnity; the *judez* had long since sunk to the condition of a mere arbiter, who could not exert the force of the state unless empowered so to do by the magistrate, with whom also it lay to declare what the law was in particular cases. In all developed modern systems the highest Js. combine both or all of the above functions: they not only declare the law, even altering or improving it on occasion (Bentham's 'judge-made law'), but they set in motion the machinery for enforcing their judgments. In England the term 'judge' is confined to Js. of the Courts of Appeal, High Court Js. and Co. Court Js.; Js. of Bor. Courts are

called 'recorders'; of Metropolitan Police Courts 'stipendiary magistrates'; and of Petty Sessions 'justices of the peace.' The Lord High Chancellor, the head of the Eng. judicial system, appoints the *puisne* (i.e. junior from Fr. *puisne*, meaning literally 'later born') Js., of whom there are 6 in the Chancery Div. (of which Div. the Lord Chancellor is titular president), 17 in the King's Bench Div., excluding the Lord Chief Justice (who, besides being president of the King's Bench Div., is also a member of the body of Lords of Appeal in Ordinary) and 5 in the Probate, Divorce, and Admiralty Div. The Js. of the highest Court of Appeal, the House of Lords, regarded as a tribunal, are the Lord High Chancellor, Ex-Lord High Chancellors, 7 Lords of Appeal in Ordinary, the Lord Chief Justice, the Master of the Rolls, and the President of the Probate, Divorce, and Admiralty Div. There are 5 Lords Justices, who form the penultimate Court of Appeal. All *puisne* Js. are knighted on appointment, but are addressed as 'My Lord' or styled 'Mr. Justice ____'. The Lord Chief Justice is merely the titular head of the King's Bench Div., but, since the institution in 1908 of the Court of Criminal Appeal, he presides over that Court. The Lord Mayor and Aldermen are titular Js. of the Central Criminal Court (Old Bailey), but its regular Js. are the Recorders of London, the Common Serjeant, and the 2 Js. of the City of London Court. The Co. Court Js. number 57. *See also* CIRCUITS, INFERIOR COURTS.

Judges in the U.S.A.—Each of the 48 states of the U.S.A. has its own judiciary enforcing and construing its own state laws. Compared with the Brit. system, the judiciary is rather complicated, and one outstanding difference is that all judicial offices are filled by election by the people. In many states candidates for judicial positions are nominated by political parties and their names placed on the political ballots. In a few, like New York, for the higher judiciary an endeavour is made to take the Js. out of politics by nominating an agreed 'ticket' of eminent men. Each tn. of any size elects a police J. to try cases for minor infractions of the municipal laws. Each collects a co. J. to try cases of a higher degree. Then there are elective Js. who hear the more important criminal cases or the bigger civil suits. Most of the states have a set of appellate Js. who hear appeals from those courts. And, finally, most states have each a supreme court, which is the last tribunal of resort in the commonwealth. The terms of office for which Js. are elected vary in different states from four to seventeen years.

The U.S.A. Js. deal only with the Federal laws of the nation as a whole. They are named by the president of the U.S.A., hold their positions for life, and have to be confirmed by the U.S.A. senate. The lowest order of these Js. is known as the Federal Dist. Court Js. Next above them are the U.S.A. Circuit Js. The whole country is divided into ten circuits, and there are thirty-nine of these Js.

The U.S.A. Circuit Courts of Appeal consist of the Dist. and Circuit Js. in the respective circuits, together with a Justice of the U.S.A. Supreme Court, who is assigned to that circuit. And, finally, at the apex of the entire judicial system of the country, the court of absolute last resort is the U.S.A. Supreme Court composed of a Chief Justice and eight Associate Justices. This court is so powerful that it can even abrogate a law enacted by the Congress, if it finds the statute in contravention or conflict with the U.S.A. Constitution. *See* R. C. Ensor, *Courts and Judges in France, Germany, and England*, 1933; E. Jenks, *The Book of English Law*, 1936.

Judge Advocate-General (Chief Judge Martial), army official appointed on the recommendation of the Lord Chancellor and responsible to that authority, but prior to 1948, appointed by the Crown and responsible to the secretaries of state for war and air. The responsibility for acting or not acting on his advice in particular cases still remains with the secretary of state concerned. His present title, as recommended by the Lewis Committee on army and air force courts-martial—is Chief Judge Martial and he enjoys a status and remuneration not less than that of a *puisne* judge of the High Court. Formerly the duty of the J. A. G. was to advise on the legality of proceedings at courts-martial, with power to revise sentences passed by such courts, and upon other matters relating to the army. The former J. A. G.'s dept., conformably to the Lewis Committee's recommendations, has been reconstituted so as to separate the functions of pre-trial advice and of prosecution from functions of a judicial character. The former functions are no longer the responsibility of the J. A. G. (or Chief Judge Martial), but have been transferred to directorates of legal services in the War Office and Air Ministry. The J. A. G. is no longer responsible for the collection of evidence against, and the prosecution of, war criminals. These duties, in so far as they still continue, are carried out in the directorate of the War Office to which the J. A. G.'s previous military dept. was transferred in Oct. 1948. The office of J. A. G. was originally held by a privy councillor, who was also a member of the gov., but the functions of the office were in 1892 assigned to a judge of the High Court. That arrangement not proving satisfactory, the duties were assigned to a barrister at a salary of £2000 a year. The changes of 1948 as recommended by the Lewis Committee (which endorsed similar recommendations of the Oliver Committee of 1938) are in effect a reversion to the arrangement of 1892. There is an analogous official to the J. A. G. at the Admiralty—styled the Judge Advocate of the Fleet (q.v.)—to advise on matters of naval law. *See also* COURT-MARTIAL.

Judge Advocate of the Fleet. Appointment usually given to a practising barrister. Under the Naval Discipline Act of 1866, amended by the Act of 1884, courts-martial consist of from five to nine officers of defined ranks who try the cases and make their judgments. In theory the.

Judge-Advocate sits with them not as an equal judge or with any right to interfere with their decisions, but rather as a legal adviser and as a representative of the king empowered to delay action in certain cases. In practice he is usually represented by an appointed barrister, who is in attendance and acts for him. The Judge Advocate's position becomes important when a death sentence is passed during peacetime as, though he does not constitute a Court of Appeal, and may not himself override the decision, he can, if the case warrants it, advise the king to grant a royal pardon.

Judges, The Book of (Heb. שופטים *sophetim* cf. Carthaginian *sufites*), second book of the Former Prophets of which the main section is a continuation of the

of this section is due to a Deuteronomistic editor who provided the setting but did not alter the text. (3) The last five chapters, xvii-xxi, consist of various incidents of the same period, but in no way connected with the earlier narratives. See W. O. Oesterley and F. H. Robinson *A History of Israel*, 1932.

Judgment, in law, the decision of a court of law in any cause heard therein. Final J disposes of the case, subject to any right of appeal. An interlocutory or interim J, such as the grant of an injunction (*q.v.*) in the Chancery Div. disposes only of a particular issue, leaving the merits to be adjudicated at some other time or as in the grant of a mandamus (*q.v.*) in another and inferior court (*q.v.*). A J binds only the parties to the particular case. A J

D. McLeish

THE LAST JUDGMENT

One of many similar representations of the Last Judgment in France. This appears over the main portal of Bourges Cathedral.

hist. of the Israelites from the death of Joshua to the death of Samson. The book may be divided into three parts. (1) Chs. 1-11 is a synopsis of the conquest of Canaan earlier in date than the Book of Joshua from which it varies by making the action of the various tribes more independent. (2) The main body, chs. 12-21, present an apparently consecutive and chronological account of the gov. of Israel under six major and six minor judges. The scheme of the cycles is explained in ch. 11:18-19, which shows the recurring events as they occur in the case of each judge. 'The children of Israel did that which was evil in the sight of the Lord, and they forsook the Lord, and the anger of the Lord was kindled against Israel, and he delivered them into the hands of spoilers, and they were sore distressed. And the Lord raised them up judges, and saved them out of the hands of their enemies all the days of the judge. And it came to pass when the judge was dead that they returned and corrupted themselves more than their fathers.' The final redaction

summons is one which follows non-compliance with a default summons by a debtor who in the Court's opinion, can but will not pay his debt. It asks the court to make an order for payment subject on further default to commitment to prison.

Judgment, in philosophy broadly the faculty which enables a person to arrive at the truth or at what any particular school of philosophy may consider to be the truth. In ethics, it denotes the faculty of distinguishing between right and wrong conduct. In metaphysics a proposition which, by its mere suggestion, is conceived as necessary, is an *a priori* J., and if derived from no other than another necessary proposition it is called an absolutely *a priori* J. These terms are used in the Kantian philosophy in the differentiation between knowledge gained by experience and *a priori* knowledge. In Kant's philosophy the Js of experience are never truly and strictly universal, but possess only the comparative universality of induction, i.e. experience can only tell us that, so far as our observation goes, a

particular result will follow from a particular combination of circumstances. But necessity and strict universality are sure criteria of a *priori* knowledge. Hume arguing from this position had asserted that necessary and universal J.s. could not exist as valid knowledge by reason of their very necessity and universality, but were rather the effect of an association of ideas. Kant, however, accepting the validity of universal J.s., contends that they do in fact supersadd something to our sum total of knowledge, and after arguing the possibility of passing J.s. going beyond the range of experience from the otherwise very impossibility of experience itself, goes on to show the bearing of such *intellectual* J.s. upon the supersensible world or the ultimate problems of metaphysics—God, freedom, and universality.

Judgment, The Last. Christian eschatology deals in a particularly clear manner with a final resurrection, and the doctrine of the resurrection of the body finds a place in the creed of the Christian Church. This is closely connected with the article of the L. J. The Nicene Creed says that Christ 'shall come again with glory to judge both the living and the dead.' This belief is founded upon: (1) Many parables of Christ recorded in the Gospels, such as those of the wedding-feast of the king's son, the ten virgins, the talents, and the sheep and goats. (2) Other statements of our Lord, such as that contained in John v. 28, 29. (3) The clear words of St. Paul (2 Cor. v. 10), 'we must all appear before the judgment-seat of Christ; that every one may receive the things done in his body, according to that which he hath done, whether it be good or bad.' (4) The account given in the apocalypse of St. John (Rev. xx. 12 ff.). Briefly, the general Christian idea of the L. J. is that when the end of the world comes, those who have died before that time will rise again with their own bodies, though these will be spiritualised as was Christ's body after His Resurrection. Then all, both living and dead, will be judged by Christ. The judgment is not to be considered as arbitrary but as perfectly just and in accord with Christ's work as Saviour—'out of thine own mouth will I judge thee.'

Judicature Acts. these comprise the J. A., 1873, 1874, 1875, 1877, 1878, 1879, 1881, 1883, and 1884, and the Appellate Jurisdiction Act, 1876. The main purpose of these Acts was to create a supreme tribunal out of the then existing courts (see COMMON PLEAS, EXCHEQUER, CHANCERY COURT, and KING'S BENCH) with as little change as might be consistent with the object of administering in the new court complete legal and equitable relief, and to simplify as far as possible the procedure therein by abolishing the extraordinary technicalities of old forms of action, such as trover, trespass on the case, and by other provisions designed to obviate the necessity for adherence to archaic terms of art. Under the J. A., the Supreme Court of Judicature consists of two branches, the Court of Appeal and the High Court of Justice; while the High Court is composed of the King's Bench, the

Chancery, and the Probate, Divorce, and Admiralty divs. Bankruptcy and winding-up work and the judicial functions of the Railway Commission are assigned to particular judges of the High Court (see also CHOSE IN ACTION as to assignments). The Acts endeavour as far as possible to assimilate the procedure in the King's Bench Div. and the Chancery Div. of the High Court. See under CHANCERY, EQUITY.

Judicial Committee of the Privy Council. Like the ultimate Court of Appeal in civil cases—the House of Lords or Lords of Appeal in Ordinary—the J. C. of the P. C. has really nothing to do with the body of which it is in theory a committee. In its present form it dates from 1833, when its constitution was strengthened by the addition of colonial and Indian judges, in order to meet the difficulty arising from the difference between Eng. laws and those of the colonies. As long ago as 1580 the right of appeal to the King in Council was recognised in the case of the Channel Is. The Lord President of the Council is technically the head of the J. C., and there are a number of judges holding other offices who, as privy councillors, are technically members. In practice a panel is usually drawn from the following: the Lord Chancellor, the seven Lords of Appeal in Ordinary, and, prior to the Indian Independence Act, 1917, certain judges of Indian experience who sat for the hearing of Indian appeals only. There are also a number of judges of the courts of the Dominions overseas who are members, though they do not often sit. In theory the Judicial Committee does not pronounce judgment, but merely advises the sovereign to give judgment in a particular way, a harmless fiction that finds its parallel in the conventional duty of the members not to disclose their differences of opinion in submitting their 'advice' to the Crown. Appeals in criminal cases can only be brought to the Judicial Committee by special leave of the Committee itself. The Committee also hears appeals from the eccles. courts and from the prize courts, and in this connection provision is made for the attendance of prelates and naval experts, respectively, as assessors.

As regards the dominions, appeals in ordinary litigation from overseas courts lie as follows: *Canada*, appeals from the prov. courts lie to the Supreme Court of Canada or to the Judicial Committee at the option of the appellant; but further appeal from the Supreme Court to the Judicial Committee can be granted only by special leave of the Judicial Committee, and not by leave of the Supreme Court of Canada. *Australia*, a right of appeal lies from the State Courts direct to the Judicial Committee or to the High Court, but no further appeal from the latter without special leave of the Judicial Committee. Under the Commonwealth Act, there can be no appeal from the High Court to the Judicial Committee on certain constitutional questions relating to the powers of the Commonwealth or the states, except by certification of the High Court. *New Zealand*, appeals lie as of

right to the Judicial Committee from the Court of Appeal subject to a limitation as to the minimum amount at issue. Appeals may also lie by leave of the Court of Appeal or the Supreme Court. *Union of South Africa*, there is one Supreme Court for the Union with divs. for the four provs. and an appellate div. hears appeals from the prov. divs. There is no right of appeal direct to the Judicial Committee from the prov. divs., and appeals from the appellate div. lie only by special leave of the Judicial Committee. Appeals from the Union to the Judicial Committee have been rare in the past three decades. *Irish Free State* (and *Eire*) at one time appealed to the Judicial Committee from the Supreme Court lay only by special leave of the Judicial Committee. But do Valera's Gov. abolished appeals to the Judicial Committee. Appeals from the Dominions number on an average no more than thirty a year and petitions for special leave to appeal are more often refused than granted.

Judicial Factor, see FACTOR, JUDICIAL.

Judicial Separation, decree for J. S. or divorce *a mensa et thoro* is a remedy for certain matrimonial offences which, unlike a decree of dissolution of marriage (divorce *a matrimonii vinculo*), does not leave the parties at liberty to marry again. A J. S. may be obtained by either spouse on these grounds: (1) Adultery, (2) cruelty; (3) under section 16 of the Matrimonial Causes Act, 1857, for desertion without cause for two years or upwards; (4) for statutory desertion under section 5 of the Matrimonial Causes Act, 1881, that is, where the respondent to the petition for J. S. has failed to obey a previous order of the court for restitution of conjugal rights. Against a husband J. S. may also be obtained on the ground of sodomy or an attempt to commit that offence. Acts of cruelty to children may amount to cruelty to the wife, when committed by the husband in the presence of the wife and for the purpose of giving her pain (*F. v. F.*, 38, T. L. R., decided in 1922). Desertion has only been a ground of petition for divorce or J. S. since the Matrimonial Causes Act, 1857, for in the eccles. courts it was only recognised as a ground for restitution of conjugal rights.

Where a decree is pronounced against a wife for adultery, and she has property in possession or reversion, the court may compel a settlement of so much of the property as it deems reasonable for the benefit of the husband or the children of the marriage. The petitioner for J. S. must, as in the case of a suit for dissolution, jactitation (*q.v.*), and nullity, file together with the petition an affidavit stating that there is no collusion (*q.v.*) or connivance between the two spouses. Where a wife gets a J. S. she may apply for petition for permanent alimony (financial support from the husband) provided she gives the husband eight days' notice prior to her application. The court, even before the decree for J. S. has been made final, may make such orders as it thinks fit for the custody, maintenance, and access, and education of the children of

the marriage, together with provision for their support when the final decree is pronounced. Incidentally to these purposes the court has power to vary the terms of settlements of property on the respondent. The defences to a suit for J. S. are as in a suit for dissolution: (a) Connivance at adultery; (b) condonation of adultery; (c) collusion; (d) adultery, desertion, etc., not proven. Connivance, generally speaking, means acquiescence in adulterous intercourse by wilful abstention from taking any steps to prevent it. Cruelty and desertion, however much they may induce a wife to become unfaithful, do not amount to connivance in law. Condonation implies a conditional forgiveness with a full knowledge of all antecedent guilt, the condition being that the offence shall not be repeated, or, as it has been expressed, a complete blotting out of conjugal offence followed by cohabitation with full knowledge of all the circumstances. There is no narrow definition of 'collusion,' but it exists where the originating of the petition is founded on an agreement between the parties or their agents. A suit for J. S. may be compromised by agreement, and neither party is at liberty to repudiate the agreement, except on the ground of fraud, or of such an error in its terms that they ought not to be bound by it. This principle was confirmed in the Court of Appeal in 1922. (*See Brown and Watts on Divorce*, 10th ed., 1921.) Where the Court grants the decree, it is of course no longer obligatory for petitioner to cohabit with respondent. The grant of the decree does not bar presentation of a petition for divorce upon substantially the same facts.

Judith, O.E. poem, probably of the ninth century, of which only fragments remain, and of which the author is unknown. Its theme is taken from the apocryphal book of J.; and the treatment is vivid in the extreme. The event is, of course, treated as though it were contemporary hist. and the action throughout is assimilated to Saxon methods. The metre is the ordinary A.-S. alliterative verse, but it is varied towards the end by lines of extra length.

Judith, *The Book of*, one of the best known of the books forming the Apocrypha. It tells how the city of Bethulia was besieged in the time of Nebuchadnezzar, by his general, Holofernes, and how the Jewish inhabit. were in despair. They were encouraged, however, by a widow named Judith, who exhorted them to trust in God since their tn. was free from idolatry. She then went forth to the camp of Holofernes, who was captivated by her beauty. At the banquet he drank deeply, and when left alone with him, Judith took advantage of this and slew him. She then brought his head to her city, and her success roused the enthusiasm of her townsfolk, who rushed out in force and entirely scattered the besiegers. The story has always been recognised as unhistorical, for it is perfectly saturated with Pharisaism. It is now generally dated about the time of Pompey's march on Jerusalem in 63 B.C., but some place it

earlier—about the beginning of the first century B.C. Bethulia is, of course, equivalent to Jerusalem.

Jūdō, see under JU-JITSU.

Judson, Adoniram (1788-1850), Amer. missionary, b. at Malden, Massachusetts. After graduating at Brown Univ. (1807), he studied at the Andover Theological Seminary and became a Congregational minister. He sailed for Burma in 1812, and on the voyage joined the Baptist Church. He and his wife settled in Rangoon, but subsequently moved to Ava, where J. was imprisoned during the Burmese War. His trans. of the Bible into Burmese was completed in 1833, and was followed by a *Burmese-English Dictionary*. See lives by his son E. Judson, 1883; F. Wayland, 1851, and R. Middle-ditch, 1859; also Honoré Morrow, *The Splendour of God*, 1930.

Juel, Niels (1629-97), Dan. admiral, b. at Christiania. He served under Van Tromp and De Ruyter fighting in the war with England (1652-54). He subsequently took part in the Swedo-Dan. wars (1658-60), and in the Scanian war (the Scania was a Swedish political party) when he was appointed to the supreme command in 1673. He was victorious at Jasmund (1676) and at the bay of Kjöge (1677), when he distinguished himself by his brilliant tactics.

Jugdalak, or Jagdalak, vil. and pass situated between Kabul and Jalalabad, Afghanistan, memorable for a massacre of the Brit. in 1842.

Juggernaut, or Puri, tn. situated on the Orissa coast, Bengal, India. It is one of the holy places of India, and in addition to its having for a number of centuries preserved the Golden Tooth of Buddha, it is famous for a temple built in honour of Vishnu, and in which was his idol. The name given to this idol was Jagannath or J. ('lord of the world'), and it was the representation of a god of the people. Sev. festivals are celebrated in his honour each year, the chief one being that of the car. The ceremony consists in drawing the god on a huge car to a place near by, the journey extending over sev. days. Large numbers of pilgrims assemble in the tn. for this purpose, and as some are killed during the journey, the belief has become current that it is customary for them to throw themselves under the car. This, however, has been contradicted.

Juggling, is very much the same as conjuring, prestidigitation, and legerdemain.

'Juggler' is the Eng. form of the Lat. *joculator* (jester), whilst *jongleur* (Fr.), which was used in the Middle Ages of a strolling singer or minstrel, is the Fr. equivalent. J. can be traced back to the days of the anc. Chaldees and Egyptians. The magicians of Pharaoh, Jannes and Jambres tried to outdo the miracle of Moses; and Zoroaster, who reformed the Magi, was famous for his marvellous feats. Equally so was Paracelsus of a later day (1493-1541). The Gks. and Roms. were no strangers to sleight of hand, and among the latter the so-called *acclabularii* performed wonderful tricks with tiny pebbles, whilst *ventilatores* (knife-throwers) and

pillarii (ball-players) were professional entertainers in the Imperial days. Massenet's pathetic opera, *Le Jongleur de Notre Dame*, gives an idyllic picture of a wandering J. in the great monastic days, and in olden times no country fair was complete without its conjurers and tricksters, and no vil. was for long without its afternoon's entertainment in the form of the knife-swallowings and ball-tossings of some needy and itinerant Merry-Andrew. In 'Hocus Pocus' *Anatomy of Legerdemain* (1631) there is mention of 'the greatest juggler in England,' who 'used the assistance of a familiar; he lived,' we are told, 'a tinker by trade, and used his feats as a trade by the by; he lived . . . always betattered, and died, for ought I could hear, in the same estate.' Jonas, Androletti, and Carloti enjoyed high reputations as conjurers in Paris during the eighteenth century, and about 1783 the It. Pinetti, began to give his sensational exhibitions of legerdemain. In modern times the Indians and Chinese have surpassed W. peoples in the ingenuity of their impostures and in the marvellous skill with which they juggle with fire, rings, knives, balls, and swords—conjuring properties which seem more especially to form the stock-in-trade of the professional juggler. See CONJURING; DIVANT, DAVID.

Juggs, see JOUGS.

Juglans, chief genus of Juglandaceae, contains eight species, all of which are found in N. lands; it is closely allied to *Carya*, the hickory trees. *J. regia*, the walnut, is the best-known species of the genus; it is a tree of handsome appearance, with wood used for cabinet making, while the fruit is edible and nutritious and the seeds yield oil. The other species have also edible fruits, and *J. nigra* produces valuable wood.

Jugo-Slavia, see YUGOSLAVIA.

Jugular Veins, *Ths.* Their number varies in different individuals, but the four chief ones are: (a) the *external jugular*, which can usually be seen through the skin and muscle on the side of the neck. It runs in a line drawn from the angle of the jaw and eventually pierces the deep fascia above the middle of the clavicle and joins the *subclavian*. It receives its blood from the scalp and deeper parts of the face. (b) *Anterior jugular*, smaller, runs about half an inch from the middle line of the neck. (c) *Posterior jugular*, collecting from the neck. (d) *Internal jugular*, uniting at the root of the neck with the subclavian to form the *vena innominata*; its blood is obtained from the superficial parts of the face and the deeper parts of the cranium. 'Cutting the throat' usually results in injuries to one or more of these veins. A severance of the *internal* is critical, and in the case of div. of any of the J. V. death may follow from the admission of air to the cardiac cavities.

In the development of the embryo the *primitive jugular* represents the *anterior cardinal* of the two longitudinal vein trunks formed by the junction of veins from body segments. It receives fewer

segmental veins than the *posterior cardinal* as the first site of the heart is in that portion which later becomes the neck of the embryo.

Jugurtha (d. 104 B.C.), Numidian king, natural son of Mastanabal, and grandson of Masinissa. He was brought up by his uncle, Micipsa, who left his kingdom (118) to J. and his two sons, Hiempsal and Adherbal. J., greedy for supreme authority, determined to get rid of his cousins, and assassinated Hiempsal. The Roman senate decreed that the kingdom should be equally divided between J. and Adherbal, but in 112 the former had Adherbal put to death. War was now declared between Rome and Numidia, J. having attacked the It. inhabs. of Cirta. J. drove the Rom. troops out of his kingdom (110), and in the following year fresh troops were sent from Rome, under Quintus Metellus, who was victorious at Nuthul. Metellus was superseded by Marius in 107: J. now made an alliance with his father-in-law, Bocchus, and on their united forces being defeated, withdrew into the deserts of the interior. Bocchus made his peace with Rome by betraying his relative, and delivered J. up in chains to Sulla, the questor (106). Marius led his prisoner in triumph through Rome, and afterwards threw him into a dungeon to die. The hist. of the Jugurthian War was written by Sallust.

Ju-jitsu, Jiu-jitsu, or Ju-jutsu are various ways of spelling the Eng. form of a Jap. word signifying the national art of self-defence without weapons. The word means '*gentle art*,' or is sometimes trans. as 'to conquer by yielding,' from the Jap. word *ju* (pliant); the latter interpretation is certainly a good description of the art, whatever its etymological verity. The art was known and practised as early as the seventh century B.C. Until the break-up of the feudal system in Japan, J. or as it was also called, *Taijutsu* or *yawara*, was a secret art practised only by the *samurai*, the warriors of Japan. By means of this knowledge they asserted their superiority over the common people even when deprived of their swords, which they alone were allowed to carry. Since the change in the constitution and methods of Japan took place, however, the art has been taught to all who wish to learn. It is one of the compulsory subjects in the army, the navy, the police, and in most schools. At the beginning of the twentieth century J. began to attract the attention of other nations. Schools were started in Europe, the U.S.A., and in Great Britain. Inazo Nitobe says that it is 'the application of the anatomical knowledge to purposes of offence and defence, differing from wrestling because strength is not required, and from other forms because no weapons are needed. Its feat consists in clutching or striking such part of an enemy's body as will render him numb and incapacitated for resistance. The object is not to kill, but to incapacitate for action for the time being.' The anatomical knowledge to which Nitobe refers is undoubtedly much greater among Jap. than among Europeans. In boxing, for instance, we recog-

nise such points as the solar plexus and the point of the jaw as being particularly vulnerable, and the peculiarity of the 'funny-bone' is universally known. But the Jap. J. experts know many more points which cause temporary paralysis of the parts affected when struck, among which may be mentioned the arm-pit, the ankle and wrist-bones, the tendon running down from the ear, the Adam's apple, the nerves of the upper arm, etc. If J. has to be practised in serious extremities, and all the combatants' resources are called out, or if the match taking place is very serious, any hold is permissible, and a broken or badly sprained limb is the least that may be expected by the defeated. In practice and the teaching of the art such extreme measures are of course undesirable, and when one of the combatants finds himself in a position in which he could be disabled if he resisted, he signals defeat by striking his hand on the floor, and a fresh bout is begun.

In this may be seen the essential difference between wrestling and J.; in the latter there is no set position into which the defeated competitor must be placed, as his arm or leg may be broken in any position. In this respect J. may be compared to the *pancratium* of the Olympic games, when one competitor had to admit defeat. Apart from these methods, an art of throwing has made a great development in recent years, and it is called *Jūdo* instead of J. The aim of *Jūdo* throws are to kill or disable the assailant. But with a few lessons on breakfall, the practice can be made quite safe and most enjoyable sport. It is a prevalent error that most of the 'falls' and 'holds' in J. are extraordinarily complicated, and need to be learnt in a mechanical fashion. As a matter of fact, a few simple principles govern all the practice of the art. Most of the J. holds are fouls from a wrestling point of view, and the blow, which is used in the former science, is barred in the latter. See H. J. Hancock, *Japanese Physical Training*, 1904; H. H. Skinner, *Jiu-jitsu*, 1904; K. Uyenishi, *Ju-jitsu*, 1906; H. J. Hancock, *Complete Kano Ju-jitsu* (*Judo*), 1905; K. Saito, *Ju-jitsu Tricks*, 1905; Mrs. H. Watts, *Ju-jitsu*, 1906; J. Kanō, *Judo*, 1937.

Ju-Ju, word used by the Africans of the Guinea Coast to denote any kind of fetish. It may have been adopted from Fr. *Joujou*, a toy, or corrupted from Mandingo *gru-gru*, a charm. The word, besides denoting the shrine, idol, or charm, in which a spirit was supposed to dwell, was applied to the spirit itself, and hence loosely to witchcraft, savage rites, and customs characteristic of the negroes. The 'Long Ju-Ju' of the Nigerian Aros was a sacred shrine where human beings were sacrificed until the Brit. interfered (1901-02). See also FETTERISM. See P. A. Talbot, *Peoples of Southern Nigeria*, 1926; W. R. Crocker, *Nigeria*, 1936.

Jujube, name of sev. plants of the genus *Zizyphus* in the family Rhamnaceae, which consists of shrubs and small trees found in the tropics. Many of the species bear edible fruits, and these are sometimes

dried and used as sweetmeats. *Z. vulgaris*, the common or Fr. J., flourishes in the E. and produces a small red or yellow fruit; *Z. Lotus*, the lotus, bears a small, sweet fruit said to be the lotus fruit known to antiquity; *Z. Spina-Christi*, Christ's Thorn, is fabled to have yielded the crown of thorns; the thorns are modified stipules. The confection known as J. is made of gum arabic or gelatine, glycerine, and pure sugar, and is flavoured like the J. fruit.

Jujuy: (1) Prov. of Argentina, situated in the N.W. of that republic, and having Bolivia on its N. and W. sides. Its area is 16,700 sq. m. Part of the surface is mountainous, rising to a height of over 15,000 ft. The prin. riv. is the San Francisco with its tribs. The state is rich in mineral wealth, and is a valuable source of revenue. Gold, petroleum, lime, gypsum, lead, iron, and china-clay are found. Agriculture is largely carried on and sugar cane is grown. Fruit grows prolifically and there is a large export trade in oranges. Pop. 166,700. (2) Cap. of the above prov., on the railway from Buenos Ayres to Bolivia; possesses a national college and a school for girls. Pop. 20,000.

Jukes, Joseph Beete (1811-89), Eng. geologist, b. at Sumner Hill, near Birmingham, and educated at St. John's College, Cambridge. He had studied geology under Sedgwick, and was appointed geological surveyor of Newfoundland (1839-40). In 1842 he joined an expedition to Torres Strait, New Guinea, and the E. coast of Australia, and on his return to England in 1846 was sent by the Geological Survey of the United Kingdom to survey N. Wales, becoming local director of the survey in Ireland in 1850. He lectured on his subject at Dublin, and pub. a valuable textbook, *The Students Manual* (1857). His other writings include *Excursions in and about Newfoundland* (1842), and *A Sketch of the Physical Structure of Australia* (1850). His writings throw light on the cleavage, the Devonian system, elvans, gypsum columns, Irish limestone, silurian granite, trough-faults, and numerous other subjects of geological interest. His *Lectures* were ed. by his sister, C. A. Browne, in 1871.

Julalpur, see JALALPUR.

Julia, suburb of Ispahan in Persia.

Julia, name of sev. Rom. women of rank, belonging to the gens Julia: (1) Sister of Julius Caesar, the wife of M. Atius Balbus, and the grandmother of Augustus. (2) (d. 51 B.C.) Daughter of Julius Caesar by Cornelia. She married Pompey in 59. (3) (39 B.C.-A.D. 14) Daughter of Augustus by Scribonia. In 26 she married her cousin, M. Marcellus, who died two years later. She then married M. Agrippa, by whom she had five children, Calus and Lucius Caesar, Agrippa Postumus, Julia, and Agrippina. Her third marriage, in 12 B.C., was to Tiberius Nero, who was afterwards emperor. In 2 B.C. Augustus banished her to Pandataria, an is. off Campania, on account of her adulteries, and she was subsequently removed to Rhegium, where she died.

(4) (d. A.D. 28) Daughter of the above, and wife of L. Aemilius Paulus. Like her mother she was notoriously immoral, and was banished by Augustus to Tremena, an is. off Apulia, in A.D. 9. (5) The youngest daughter of Germanicus and Agrippina, murdered by Claudius at the instigation of Messalina. (6) (d. A.D. 59) Daughter of Drusus and Livia, sister of Germanicus, also killed by Claudius at Messalina's instigation.

Juliabona, see LILIBONNE.

Julia Gens, famous patrician family of ant. Rome. It claimed descent from Julius (sometimes called Ascanius), the son of Aeneas and grandson of Venus and Anchises. Julius is supposed to have founded Alba Longa, so that the family came of Alban stock. On the destruction of that city the J. G. was removed to Rome by Tullus Hostilius.

Julia Joza or Transducta, see TARIFA.

Julian (Flavius Claudius Julianus), surnamed the Apostate (331-63), Rom. emperor, b. at Constantinople, being the youngest son of Julius Constantius and Basilina, and the nephew of Constantine the Great. On the death of Constantine in 337, at the instigation of his three sons a terrible massacre took place in which J. and his elder half-brother, Gallus, alone escaped the fate of their kinsfolk. Educated under strict supervision at Nicomedia, until 341, he and his brother were removed to Macellum in Cappadocia. In early life he became greatly attached to Gk. culture, and accepted the Gk. religion with its philosophy. In 353 J. was created Caesar at Milan by the Emperor (Constantius II., whose sister Helena (q.v.) he married). Thereupon J. was entrusted with the government of Gaul, and in 357 won a great battle against the Alemanni at Strasburg. He took up his residence in Lutetia (Paris), wisely administered the laws, and relieved the people of some of the heavy taxes. The emperor, becoming jealous of his increasing popularity, bade him lead his troops against the Persians, whom upon his soldiers proclaimed him Augustus (360). Constantius opportunely died in 361, and J. was universally acknowledged his successor. He now openly declared his apostasy, and proclaimed universal toleration within his realms; but he deprived the church of its former privileges, forbade Christians to teach rhetoric, and in the offices of state gave preference to pagans. Before long, he made great preparations for an invasion of Persia, and marched through Antioch into Mesopotamia and Assyria, until he reached the walls of Ctesiphon (363). He was misled by the treachery of a Persian nobleman who advised him to march inland to meet the forces of Shapur II. His men suffered terribly from thirst and were overcome by the heat. During the battle, J. fell, and as he died, is supposed to have cried out, 'Thou hast conquered, O Galilean.' His extant writings are *Kaisares* & *Imperatores* (a satire in Senecan vein on the Caesars), *Misopogon*, eight *Orations* (being panegyrics on Constantius and the Emperor Eusebia, and Covenants on the philosophy

of the Cynics) and a series of letters numbering upwards of seventy, though the authenticity of some is disputed. His *Karà Xpocriavon*, an attack on Christianity, is lost. See the eds. of E. Spanheim (1696) and F. Hertlein (1875-76); E. Gibbon *History of the Decline and Fall of the Holy Roman Empire*, 1862; Alice Gardner, *Julian, Philosopher and Emperor*, 1895; P. Allard, *Julien l'Apostat*, 1903; and Ibsen's drama (Eng. trans.), 1876.

Julian Calendar, Epoch, see CALENDAR, CHRONOLOGY.

Julianus, Salvius, (b. c. A.D. 100), celebrated Rom. jurist, who lived during the rule of Hadrian and the Antonines. By order of Hadrian, he was entrusted with the work of drawing up the *edictum perpetuum* from the immense mass of laws and pretors' edicts which existed at the time. His other works include *Digestorum Libri XC.*, *Ad Minitium*, and *De Ambiguitatibus Liber Singularis*. He held the position of prefectus urbi, and was twice consul.

Jüllch, tn. in Rhineland, Germany. It is situated on the r.b. of the Roer, eighteen m. N.E. of Aachen and was once the cap. of the duchy of Aix-la-Chapelle (Aachen) but in 1914 became part of Prussia. The name is the Juliaeum of the *Antonini Itinerarium*. It was a fortress in the seventeenth century and was captured by Maurice of Orange in 1610 and a few years later by the Sp. Till 1800, when its works were dismantled, it ranked as a fortress of the second class. It was the scene of heavy fighting in Feb. 1915 when the Amer. Ninth Army were ordered to hold a front on the Roer from J. to Roermond. The riv. was swollen with floods and it was not until Feb. 23 that the floods subsided sufficiently for two corps of the Amer. army to cross, the riv. in the J. sector, while a corps of the Amer. First Army began the attack over the Roer S. of Düren. J. fell on Feb. 21, Düren the following day. J. is probably the worst bombed tn. of Ger., 97 per cent. of the houses being destroyed. Pop. 8200. See WESTERN FRONT IN SECOND WORLD WAR.

Julien, Stanislas-Aignan (1799-1873), Fr. Orientalist. From 1824-26 he pub. a Lat. trans. of Mencius (Mang-tse). In 1832 he was appointed prof. of Chinese at the Collège de France, and became keeper of the Royal Library (1839) and head of the Collège Impériale (1851). His works include Fr. versions of *Holi-lan-ki* (The Circle of Chalk, 1832), *Tcheo-chi-kou-eul* (The Chinese Orphan, 1831), *Voyages du pèlerin Hien-tseung* (1853), and a *Synthese nouvelle de la langue Chinoise* (1869).

Julier Pass, one of the Alpine passes situated in the canton of Grisons, Switzerland. It connects the Rhine Valley and the Upper Engadine, and has an altitude of 7500 ft. There is now a railway tunnel under Albulu Pass (opened 1903), superseding the old route.

Julius, name of three popes:

Julius I. (337-52). In the Arian controversy he supported Athanasius, with

whom he was deposed by the E. bishops at Philippopolis.

Julius II. (*Giuliano della Rovere*) (1503-13), nephew of Sixtus IV., b. Albissola, near Savona, in 1413. During his uncle's pontificate he received many honours, and was sent as legate to France (1480), where he acquired great political influence. On his election to the pontificate he recovered Romagna from the Borgias, and devoted all his energies to suppressing nepotism and extending the temporal possessions of the church. In 1508 he joined the League of Cambrai with Maximilian, Ferdinand, and Louis XII. against Venice; but on the submission of that republic he joined the Holy League directed against Louis (1510). J. condemned duelling (1509) and simony (1513); sent missionaries to India, Africa, and America; and was a liberal patron of the fine arts. See lives by A. Dumasnil (1873), and M. Brosch (1878), also L. Pastor, *History of the Popes* (trans.), 1898, and G. Stange, *Erasmus und Julius II.: eine Legende*, 1937.

Julius III. (*Glorianni Maria del Monte*) (1550-55), b. at Rome in 1487. He was one of the three legates under whom the Council of Trent (1545) was opened. He sent Cardinal Pole to England to negotiate with Mary for the restoration of her kingdom to Rome. He was by nature pleasure-loving, and was guilty of the charge of nepotism. See L. von Ranke, *History of the Popes* (trans.), 1810-53, and L. Pastor, *History of the Popes* (Eng. trans.), 1898.

Julian, Camille (1859-1933), Fr. historian, b. at Marseilles. His most notable work was *Histoire de la Gaule* (8 vols., 1907-28), in which he displayed a wide appreciation of the scope of hist. Other works: *Histoire de Bordeaux* (1895), *Percinglorie* (1901), *De la Gaule à la France* (1922), and *La Seuil de notre histoire* (I-III, 1930 ff.). See life by A. Crequier, 1915.

Julien, Louis Antoine (1812-60), Fr. musical conductor, originally **Julien**, b. at Sisteron, Bas-see Alpes, France. He became a conductor of concerts in Paris (1836), came to London (1839) where he estab. promenade concerts, and travelled in the Brit. Isles and America. His light attractive promenade concerts drew large audiences, and his 'Monster Quadrilles' were very popular. But his sensational successes was due as much to his eccentric behaviour as to his superficial musical gifts. He became bankrupt (1857) and ultimately returned to Paris, where he was arrested for debt (1859) and died insane.

Julunder, see JALANDHAR.

Julus, or **Iulus**, genus of myriapods of the order Chilognatha, and the species are often known as gally-worms. The number of body segments varies between forty and fifty, many of which have two pairs of legs.

July, seventh month by our modern reckoning. In the old calendar, when the year began either with the vernal equinox or on March 1, it was, of course, the fifth month, and therefore called *Quintilis* by

the Romans. In honour of Julius Caesar, whose birthday fell on the 12th, it was named *Julius* in the last year of his life. The feasts of St. Swithin and St. James fall on the 15th and 25th respectively. Dog days begin on the 3rd.

Jumada I. and II., months of the Mohammedan calendar following Rabi' al II. **Jumet**, tn. in the prov. of Hainaut, Belgium, 3 m. N. of Charleroi. There are coal mines and sandstone quarries. Its chief industries are iron and copper foundries, glass-works, breweries and distilleries. Pop. 28,500.

Jumièges, Robert of, was b. in Normandy and came to reside in England as a follower of Edward the Confessor. In 1041 he became bishop of London, and in 1051 Edward appointed him archbishop of Canterbury. He was a firm friend of the king, but opposed to Earl Godwin, and on the latter's return from exile in 1052, had to flee to Jumièges where he died.

Jumièges, William of, Norman monk, and is remembered on account of his work of compiling a list of the dukes of Normandy down to 1071. This book, written in Lat., is in J. P. Migne's *Patrologiae Cursus Completus*.

Jumilla, tn. in the prov. of Murcia, Spain, situated about 37 m. N.W. of Murcia. Its chief productions are wine and brandy. Pop. 18,000.

Jummoo, see JAMNU.

Jumna, riv. of N. India. Rises near Jammu in the Himalayas and flows into the Ganges below Allahabad. Passes through Delhi, Muttra, and Agra.

Jumping, see ATHLETICS.

Jumping Hare, or *Pedetes Caffer*, called by the Dutch *Spring Haas*, rodent of S. Africa and a member of the family *Pedetidae*, being the only species of the genus *Pedetes*. The head of the animal resembles that of a hare, but its general appearance and movements are like those of a jerboa, though it is larger. It is, in fact, placed by some zoologists in the same family as the jerboas (*Dipodidae*). Its chief characteristics are its long tail, five toes to the fore feet and four on the hind, and hind limbs much longer than the fore limbs, thus enabling it to make immense leaps. It is a nocturnal animal.

Jumping Mouse, or *Zapus Hudsonius*, member of the *Jerboa* family (*Dipodidae*) and a native of N. America. It resembles a mouse, having a long tail and its hind limbs longer than the fore limbs, enabling it to leap in the same way as the other species of *Dipodidae*.

Junagadh: (1) State of India, situated on the Kathiawar Peninsula, Bombay. The chief products are cottons and cereals. After the passing of the Indian Independence Act the Muslims of J. showed their sympathy with those of Kashmir by rising against the Indian Gov. which had proposed to take over J. The dispute between India and J. was brought before the Security Council of the United Nations (March 8, 1948). The Indian representative maintained that only a few hundred of the pop. had voted against

accession to India in the plebiscite held a short while earlier; but he said that the gov. were willing to hold another plebiscite in J. under United Nations' auspices if so decided by the Security Council. Sir Muhammad Zafrullah Khan, the Pakistani representative, decried the plebiscite as a farce, without any real secrecy in the voting, and averred that over 20,000 Moslem voters dared not go to the polls or vote against India, so that Pakistan could not accept the results as valid. But following the integration of the administrations of the other Kathiawar states in the Saurashtra union, the gov. of India decided to appoint an executive council for J. of 'persons who would command the confidence of the people of J.' A three-man council presided over by the administrator appointed earlier by India, was sworn in at Rajkot (June 2). Area 3340 sq. m. Pop. 670,700 (2) Cap. of the above state, situated on the Rajputana Railway. The tn. contains sev. features of interest, among them an old citadel and some Buddhist caves. Pop. 10,000.

Junca, Etienne du, see under IRON MASK, THE MAN IN THE.

Juncaceæ, family of monocotyledons, is so named from its chief genus, *Juncus* (q.v.), which contains the rushes. There are 200 species, most of which are obscure herbaceous plants growing in colder parts of the world. The inflorescence is cymose (see INFLORESCENCE) and consists of hermaphrodite flowers; the perianth is sepaloïd and in two whorls of three, the stamens are also in two whorls of three, or only the outer whorl may be present; the ovary is superior and consists of three united carpels usually containing numerous ovules; the fruit is a loculicidal capsule. See JUNCUS.

Juncaginaceæ, order of small and unimportant monocotyledonous plants, is found in temperate lands, and consists of four genera of marsh-herbs. The chief genus is *Triglochin* (arrow-grass) of which two species occur in Britain.

Junction City, co. seat of Geary co., Kansas, U.S.A., between Republican and Smoky Hill Rs. There are stone quarries, marble works, flour mills, foundries, and machine shops. It is an important agric. centre. Fort Riley, an important military post, is three m. distant. Pop. 8500.

Juncus, chief genus of *Juncaceæ*, contains over 160 species, eighteen of which occur in Britain. These rushes are cosmopolitan in distribution and frequent damp, cold localities; in habit they are rigid, with slender stems which may contain pith or may be hollow: the flowers are small, green or brown in colour, and are borne in dense heads or panicles; pollination is effected by means of the wind. The economic importance of J. is slight; *J. squarrosus* forms a pasturage for sheep in hilly districts of Britain; other species are used to fix the soil on riverbanks; chair-bottoms, matting, and baskets are made from the long, flat leaves, and the pith forms the wick of rush-lights still used in Europe and in China.

June, sixth month by our modern reckoning. In the old calendar it was the fourth month. According to Ovid it was named after Juno (q.v.), the guardian of women, her month being regarded as favourable for marriage. In the Rom. calendar it was the fourth month and originally had twenty-six days, but later twenty-nine; to these Julius Caesar added one at the time of his reform of the calendar. The days of St. Barnabas and St. Peter are on the 11th and 29th respectively. Midsummer day falls on the 24th.

Juneau, cap. of Alaska, U.S.A., and is situated opposite Douglas Is. on Gastineau Channel. It exports gold, furs, and curios and is a large mining centre, being close to the Treadwell gold mine and the Silver Bow mine. Fishing is also an important industry. There are machine shops, saw and paper mills. Some farming and dairying are carried on. Pop. 7000-8000.

Jung, Sir Bahadur (1816-77), grand-nephew of Bhim sen Thappa, military minister and from 1804 to 1839 *de facto* ruler of Nepal. When Thappa was killed J. escaped, but in 1843 his uncle Matahar Singh became prime minister, and appointed J. chief judge. After various other changes accompanied by assassinations, J. became sole minister in 1846, and banished the king and queen. In the Indian Mutiny (1858) he strenuously supported the Brit., and was knighted for his loyalty.

Jung, Carl Gustav (b. 1875), Swiss psychologist and specialist in psychotherapy, b. at Kesswil. He collaborated with Freud in the development of the system for the analysis of mental processes known as psycho-analysis, but a conflict of opinion led to open rupture, and J. returned to Zürich to found a school of psychotherapy. Works: *Psychological Types* (1923), *Contributions to Analytical Psychology* (1928), *The Secret of the Golden Flower* (in collaboration with Richard Wilhelm) (1930), *Modern Man in Search of a Soul* (1933), *Psychology of Religion* (1933). See D. C. Daking, *Jungian Psychology and Modern Spiritual Thought*, 1933.

Jung, Sir Salar, see SALAR JUNG, Sir.

Jungbunzlau, see STARK-BENATKY.

Junger, Ernst (b. 1895), (Ger. novelist and essayist, b. in Heidelberg. After a distinguished military career in the First World War, he devoted himself to writing, using his former experiences as material. He is essentially an individualist, however, and although the substance of his writing is largely drawn from his military experience (e.g., *Feuer und Blut*, 1925), he is not guilty of (Ger. militaristic thinking. Indeed he believes that a constant exercise of human virtues is the only means of retaining a civilisation threatened by the forces of inhumanity and barbarism. Among his works are *Das Abenteuerliche Herz*, *Figuren und Capriccios* (1929) a contemplative essay; *Der Arbeiter* (1932), in which he describes the contemporary worker, and *Gärten und Strassen* (1942), which is a diary of some time he spent in France during the

Second World War. Other works include *Im Stahlgewitter* (1920, trans. 1929), *Das Wäldchen* 125 (1925), *Afrikanische Spiele* (1936), *Augen den Marinor-Klippen* (1939), and *Geheimnisse der Sprache* (1934, revised 1939).

Jungermannia, genus of liverworts which received its name in honour of the (Ger. botanist, Jungermann. The species are moss-like and are known popularly as scale-mosses; sev. have been found fossil.

Jungfrau (Ger. maiden), one of the three great peaks (Eiker, Monch) in the Bernese Oberland, situated about 7 m. W. of the Finsteraarhorn on the boundary of the canton of Bern. Its height is 13,670 ft., and it seems to have received its name from the pure whiteness and delicate shape of its snow-clad peak. It was first climbed in 1811 by the brothers Meyer, from the E., and since then has been ascended on every side, the N. face being the last to be conquered (1931). There is a railway to the Jungfraujoch (11,000 ft.).

Jungle (Sanskrit *Jangala*, desert; Hindu *Jangal*, forest, jungle), dense and almost impassable growth of trees, shrubs, reeds, grasses, inhibited by beasts of prey, snakes and monkeys.

Jungle-fowl, name applied to birds of the order Gallinae, to which belong four species. *Gallus ferrugineus*, the Red J., is generally considered to be the origin of domesticated poultry. Its back is purplish-red and orange, while the under surface, wings, and tail are greenish-black tinged with yellow. It is a native of India, Sumatra, the Philippine Is., and the Celebes, and is pugnacious towards its own kind, while the nose of both cock and hen is said to resemble that of ordinary domestic varieties. The other species of the genus are: *G. sonnerati*, the Grey J., a native of S., Central, and W. India; *G. Varius*, found in Java; and *G. lafayetii*, a native of Ceylon.

Junia gens, family of auct. Rome, of which Lucius Junius Brutus, who expelled the kings, and Marcus Junius Brutus, who killed Caesar, were members.

Junin: (1) Dept. of Peru, traversed by the Andes Mts. In this dept. is the Lake of Junin or Chinchavcocha, situated at an elevation of 13,000 ft. and drained by the R. Montaro. The lake is 36 m. long and close to Cerro de Pasco the cap. of the dept. of J. The dept. is rich in minerals, including silver. Area 22,814 sq. m. Pop. about 428,800. Chief tn. Huancayo (pop. 20,000). See also JAUJA. (2) Tn. situated in the dept. of Junin, Peru, 100 m. N.E. of Lima, standing at an elevation of 13,000 ft. It is a vitrate riv.-port. (3) Tn. of Central Argentina and rail junction 150 m. W. of Buenos Aires.

Junina, prin. trib. of the Upper Ganges, India. It rises in the Himalayas at an elevation of 12,000 ft., and pursues first an easterly and then a S.-easterly course through the United Prov., and at a distance of 3 m. below Allahabad joins the Ganges. This riv., which is about 860 m. in length, feeds the E. and W. Junina

Canals, and has sev. important tns. on its banks, among them, Delhi, Agra, Ferozabad, and Allahabad.

Juniperus, genus of coniferous plants containing thirty species, all of which are evergreen trees or shrubs and flourish in the N. hemisphere. The leaves are small, needle-shaped, and occur either as opposite leaves or in whorls of three or four; occasionally they are imbricated in four rows. The flowers are dioecious; the males form a scaly catkin and the females a small rounded cone which later develops into a fleshy fruit, known as a *giltule*, in appearance greatly resembling a true berry. *J. communis*, the common juniper, is a shrub which flourishes in Great Britain (where it is the only native conifer besides the Scots pine and the yew) as well as in other parts of N. Europe and

JUNIPER

Asia; the stem and leaves contain an aromatic principle; the blue-black fruit is used medicinally and in the flavouring of gin. *J. Virginiana*, the red cedar, of N. America, furnishes a valuable wood used by turners and cabinet-makers, and also employed in making lead pencils and cigar boxes; *J. Laramidiana* serves like purposes. *J. Sabina*, the savin, grows in S. Europe, and the topmost twigs of the plant are used in pharmacy.

Junius, Letters of, literary curiosity of the eighteenth century—a curiosity because, in spite of ingenious surmises and the most thorough and persistent perusal of contemporary documents, the identity of the author is still doubtful, and it is as true to-day as at the hour of their pub. that—to quote his own words—the mystery of Junius increases his importance. The letters, seventy in number, appeared in the London *Public Advertiser* between Jan. 21, 1769, and Jan. 21, 1772. During this period the writer invariably used the pseudonym of Junius, though he had at different times availed himself of others, 'Lucius,' 'Brutus,' and possibly of 'Nemesis.' His object was clearly to ruin the duke of Grafton's ministry, and in fulfilment of that purpose he used the weapon which nature had given him, namely satire of the most brilliant and

deadly description. The marquess of Granby, the duke of Bedford, and Lord Chief Justice Mansfield were each in turn the victims of his powerful and vilifying invective, but the most violent of Junius's onslaughts were naturally reserved for their leader, the ineffectual Grafton. Moreover, the author profited by his disguise, or rather invisibility, to speak some frank abuse of the king; indeed, it was the impudent epistle he addressed to George III. which excited a veritable storm of indignation, and at the same time sealed the writer's fame. But Junius was defeated in his aims; for the fall of Grafton (1770) was only the signal for the advent of Lord North and his tedious administration. Perhaps Junius deserved no better; for although he was a loyal and active supporter of Chatham he showed no political acumen in the steps he took towards restoring him to power. A modern reader of the 'Junius' polemics will be struck with their scurrility and venom; let him remember that these were fashionable qualities in similar writings of the day. But he will be so permanently and sincerely impressed by the vigour and dignity of their style. The careful rounding off of the lengthy periods, and a certain typically eighteenth-century pomposity, prove the author to have been an earnest admirer of the Ciceronian tirades; yet, in spite of his indebtedness to classical models, Junius, whoever he was, had a command over language which was original as well as splendid. There are cogent arguments in favour of regarding Sir Philip Francis as the unfortunably Junius, but the claims of a host of far more distinguished men, including Burke, Lord Chatham himself, Wilkes, Barré, and Horace Walpole, have one and all found eager partisans. See *The Francis Letters*, 1894; G. H. R. Francis, *Junius, Revealed by his Surviving Grandson*, 1891; J. Smith, *Junius Unravelled*, 1909; G. W. Everett, *The Letters of Junius*, 1927.

Junius, Francisus (1541-1602), b. at Bourges in France. He is b. known by his own ed. of the *Lat. t. f.*, slightly altered from the former joint ed., and with a version of the N. f. added.

Junius, Francisus (1589-1678), son of the above, b. at Heidelberg. He was brought up in Holland, but in 1620 went to England, where he became librarian to the earl of Arundel. He was a student of A.-S., Gothic, etc., and pub. the Gothic version of the Gospels, *De Pictura Veterum*, and *Etymologicum Anglicanum*, a valuable work.

Junk, flat-bottomed, sou-gong boat, peculiar to China, which is employed on the coasts and seas of China and Japan. It carries large masts with square sails of matting, and has a very high fore-castle and poop. Its progress is slow, and it is awkward to handle. (See illustration, p. 66.)

Junkers, Hugo (1859-1935), Ger. aircraft designer, b. at Rheyal. From 1897-1912 he was prof. of mechanical engineering at the technical high-school at Aachen. In 1919 he founded the J.-

Werke at Dessau for the manuf. of aero-planes, and built up his business until by 1930, it was the largest of its kind in Germany, employing 5000 workers. His machines, including transport planes, fighters, and bombers were used by the Gers. in the Second World War. See file by C. H. Poller, 1930.

Junker, Wilhelm (1810-92), Ger. explorer of Africa, b. at Moscow. He studied medicine in Göttingen, Berlin, and Prague, but going to Africa in 1871, began the work of his life, exploration. He visited Tunis and Egypt, and explored the Upper Nile and the Welle. In 1883 he was prevented from returning to Europe owing to the Mahdist rising, but succeeded in reaching Zanzibar in 1886, and received the gold medal of the Royal Geographical Society in 1887. His *Reisen in Afrika* (3 vols., Vienna, 1889-91) contains an account of his travels and is a work of high merit. An Eng. trans. by A. H. Keane was pub. in 1890-92.

A CHINESE JUNK

Junkers, political party name given in Germany to the class of young nobles of military spirit who supported Bismarck before the Franco-Prussian War. The name survives from middle High Ger. *junc-hërre*, the name given formerly to the young princes of ruling houses, but later given to young men of landed interest without any particular title. The name in modern times has been associated with the sword-rattling and reactionary party of pre-1914 Germany, and it is asserted by some that the attitude, outlook, and behaviour of the J. were not without their effect on the outbreak of the First World War.

Juno, Rom. goddess, equivalent to the Gr. Hera. She was the daughter of Saturn and Rhea, and the wife and sister

of Jupiter. She was regarded as the counterpart of Jupiter, the queen of heaven and earth. She was the protectress of all women, from the moment of birth till death. Hence *Juno Natalis* was invoked by women on their birthdays; at the marriage of women *Juno Jugalis* presided; and the help of *Juno Lucina* was cried for by women in childbirth. Her festival called the *Matronalia* was celebrated on March 1. The month of Juno was called after her, and was thought particularly lucky for marriages. She was also regarded as the guardian of finance, a temple being dedicated to *Juno Moneta* in n.c. 341, which was afterwards used as a mint. She was represented with attendant peacocks.

Juno, third asteroid to be discovered, was found by Harding in 1804, the first, 'Ceres,' being found by Giuseppe Piazzi, 1801, and the second, 'Pallas,' in 1802 by Olbers. J. and Ceres are the largest of the planetoids and present at opposition a visible disc about 1 in. in diameter, corresponding to about 100 m.

Junot, Andoche, Duc d'Abrantès (1771-1813), Fr. general, b. at Bussy-le-Grand, in Côte-d'Or. He joined the volunteer army at the outbreak of the Revolution, and came under the notice of Napoleon at the siege of Toulon. He distinguished himself in many campaigns, and in 1804 was made governor of Paris. His extravagance and profligacy, however, coupled with stories of intrigue with the Empress Josephine, impelled the Fr. Govt. to send him abroad again. Accordingly, in 1807 he was appointed to command the army for the invasion of Portugal, and was so successful that he was created Duc d'Abrantès, and made governor of Portugal, but he was defeated by Wellington at Vimiera and obliged to retire from the country, bitterly mortified that he was not made a marshal of France when he received the Cross of the Legion of Honour. He afterwards served in Germany and Russia, but being blamed, with others, for the great Russian disaster, was sent to govern Illyria. This, added to his other misfortunes, brought on mental derangement, and he took his life in a fit of madness.

Junot, Laurette de Saint-Martin-Permon, Duchesse D'Abrantès (1784-1838), wife of Andoche J. (q.v.), was an able, extravagant, and intriguing woman. Her estates being confiscated in 1814, the Emperor Alexander offered her restoration on condition of her becoming a naturalised Russian. She refused and remained in Paris, supporting herself by the labours of her pen. She gained a reputation by her *Mémoires* (1831-35), and also pub. *Femmes Célèbres* (1833-35), and *Histoire des salons de Paris* (1837-38). See C. Bearne, *A Leader of Society at Napoleon's Court*, 1904.

Junta, Sp. word designating a legislative or other distinguished assembly which meets either for political purposes or for the passing of laws. In 1808 a J. was elected to undertake the defence of Spain against Napoleon. In Eng. hist. the word is used as a term of contempt

for a legislative party, etc., e.g. the Whig J. in the reigns of King William III. and Queen Anne.

Jupille, tn. in Belgium, 3 m. N.N.E. of Liège. It stands on the Meuse and has coal mines and important ironworks, producing boilers and nails. Pop. 8,100.

Jupiter, or **Jove**, Rom. god equivalent to Zeus of the Gks. He was saved as an infant by his mother, Rhea, from his father Saturn, who swallowed his male children immediately after birth. J. married his sister Juno. He was regarded as an elemental god, his name being contracted from *Die-piter* or *Diuvipater*. He was the greatest of all the Olympian gods, (*Optimus Maximus*) and was lord of heaven. He punished offenders with his thunderbolt (*fulmen*), and was called *Pluvius*, *fulgurator*, *Tonans*, *Fulminator*, having power over rain, tempests, thunder and lightning. His temple at Rome stood on the summit of the Capitol, and when presiding over the Rom. games he was called *Jupiter Capitolinus*. He was also known as *Jupiter Latialis*, being patron of the *Feria Latina*. J. directed the course of human affairs, and was regarded as omniscient and present. He revealed the future by means of omens, *Prodigia*, i.e. the sender of prodigies. His blessing was always invoked by the consults on entering office and before any great undertaking. His worship at Rome was under the care of the *Flamen Martialis*, the highest rank of the *flamines*. He was represented as sitting on a throne with thunderbolts in one hand and in the other a sceptre of cypress. He was supposed to take delight in the sacrifice of white bulls, goats, and sheep.

Jupiter, largest of the planets, and (if the sun, moon, and comets be excluded) the second brightest object in the sky when it is nearest to the earth (having about two times more lustre than Sirius, the brightest star), is one of the outer planets, and its orbit lies between those of the minor planets and that of Saturn. J.'s mean distance from the sun is five times that of the earth (183,000,000 m.), and its period is 11.86 years. Other data of the planet are as follows: Diameter, eleven times that of the earth (equatorial, 88,700 m.; polar, 82,800 m.); mass, less than one-thousandth of the sun; density, one-third denser than water, the earth being four times as dense as J.; rotation about axis, about 10 hrs.; and gravitational pull at surface, 2.65 times more than on the earth.

J. is attended by eleven satellites, four of which are just beyond the range of naked vision, but can easily be seen with the aid of a pair of field-glasses. These four moons were discovered by Galileo in Jan. 1610, being one of the first-fruits of the newly-invented telescope. It was not till Sept. 1892 that Prof. Barnard, at the Lick Observatory, found a fifth satellite revolving between these four and J. Three more moons were discovered as follows: two by Perrine at the Lick Observatory, 1904-05, and one by Melotte at Greenwich, 1908. These recently discovered satellites can only be seen by

high-power instruments, but quite a small telescope will show the transits in front of J. of Galileo's moons and their eclipses in his shadow. The smallest of Galileo's satellites is nearly as large as the moon, and the largest has a diameter nearly half that of the earth. The surface of J. presents the appearance of a number of belts, and they can be detected with the aid of a small telescope. The surface of the planet is continually changing, but since 1878 the equatorial belt has had a large red spot. The spot has varied in brightness, and was last visible in 1907. It has been found that the belts or currents rotate at different velocities. These differences go to prove that J. is not a solid body, and the permanence of the red spot also favours the conclusion. The red spot would appear to be something in the nature of a floating is., as is, having its base in the more solid regions.

Jura (Scandinavian *deor-oe*, deer island), is. of the Inner Hebrides, Scotland, off the coast of Argyllshire. It is separated from Scarba on the N. by the whirlpool of Corrie-crakan, from Islay on the S. by the Sound of Islay, and from the mainland on the E. by the Sound of J. The greatest length is 27 m., the width varying from 1 m. to 8½ m. Area 160 sq. m. It has a range of mts., culminating in the conical Paps of Jura (2751 and 2112 ft. high). The inhabs. are engaged in fishing, agriculture, and the raising of live stock. Pop. 750.

Jura, dept. of France, originally part of Fribourg-Comte, having Switzerland for its E. boundary. The dept. consists of a mountainous region, traversed by the Jura Mts., a vine region, and a plain situated in the W. The chief rivers are the Doubs and the Ain, both of which belong to the basin of the Rhone. The soil is fertile, and produces grain, the vine also being largely cultivated. The chief minerals are iron, coal, marble, and rock salt, while the industries comprise the manufact. of watches and clocks, and the making of Gruyère cheese. There are three arrons., Dôle, St. Clément, and Lons-le-Saunier, which is the cap. of the dept. The headquarters of the salt trade. Area 1951 sq. m. Pop. 216,300.

Jura Mountains. This range of mts., extends for about 100 m. from the dept. of Ain in France in a N.-easterly direction through Switzerland, traversing the cantons of Vaud, Neuchâtel, and Bern to the R. Rhine. They are made up of parallel ranges, the chief heights in which are Crot de la Neige (5675 ft.), situated W. of Geneva, the Dôle (5005 ft.), Columbière de Gex (5548 ft.), and Mont Tendre (5519 ft.). These consist chiefly of limestone, known as *Jurassic*, a term applied to the whole system in this div. of geology owing to the preponderance of this limestone in these particular mts. The mts. are covered with forests and intersected with fissures.

Jurassic System, The middle system of the Mesozoic or secondary group above from the Triassic system below. The rock members of the J. S. are widely distributed, e.g. a large tract surrounds the

Paris basin—a big area exists in Silesia, Franconia and N. W. Germany; the Jura Mts. give their name to the system, more or less isolated patches occur in Central and N. Russia in the Crimea, Caucasus, Carpathians, etc. though the development is less complete in N. America yet there is an important dist. in Colorado rich in reptilian remains, and portions of the system occur throughout India, S. Africa, S. America and Australia. In S. Britain the J. lies to the N. and N.W. of the Cretaceous deposits running in a

Lower (Batho)
Oolites

Lias

{ Bathonian
{ Bajocian
{ Tithonian
{ Iulian
{ Sinuorian

Other classifications give the Upper and Middle Oolites together under the name of Malm and the Lower Oolites as Dogger. In Germany the Lias is spoken of as Black Jura, the lower Oolites and part of the Middle as Brown Jura, and the remaining part of the Middle together with the Upper Oolites as the White Jura.

DIPLODOCUS (DIPTODOCUS) CARNIUM OF THE UPPER JURASSIC

An artist's impression based on the reconstruction of remains in the Upper Jurassic of Wyoming

curving E. from the N. of York (valuable limestone (Cleveland) through W. Lincolnshire, widening out near Northamptonshire to S. Gloucestershire and to Dorset with the useful Lias and Portland freestone. Only very small areas occur in the rest of the British Isles in Sutherland and the E. of Skye in Scotland and near Lough Lyle in Ireland.

Formations of the Jurassic System—The subdivision into formations has extended from the first separation into Oolites and Lias until the following classification has been made, partly based on the original British series, but applicable over much wider areas.

Upper (Ireland)	{ Purbeckian
Oolites	{ Portlandian
	{ Kimmeridgian
Middle (Oxford)	{ Cornalian
Oolites	{ Oxfordian
	{ Gallovian

Characters of the Strata—The rocks of the Jurassic are those of the Lower Cretaceous system (pt.) may be regarded as having been deposited during the first shallow water phase of the third marine period, but this phase was marked by very varied marine changes resulting in very diverse strata. The Lias is essentially a clay formation with occasional bands of limestone and nonstone of varying thicknesses. In the lower Oolites the bands of clay are only subordinate to the highly developed lime tones, but the Middle and Upper Oolites form an argillaceous series again, the limestone being discontinuous and sometimes entirely absent. Viewed broadly, the Jurassic rocks are of three great clay deposits, viz. Lias, Oxford, and Kimmeridgian clays alternating with the other deposits of varied lithological character. This argillaceous character of the system is frequently overlooked on

account of the greater variety of fossil remains in the non-argillaceous deposits.

Life of the Jurassic Period.—The rate of change in the organic world and the differentiation of species appear to have become much more rapid in Jurassic times, so that separate descriptions are required for quite small sets of strata. Broudy, it was an age of reptiles, e.g. Dinosauria, Pterosauria (commonly known as Pterodactyls), Ichthyopterygia, and Saurpterygia, which survived to Cretaceous times. Dinosauria were land animals from 20 to 40 ft. long, and doubtless resembled the modern kangaroo in method of walking. Pterosauria were capable of flight, while the other two orders were adapted for life in the sea. True birds appear, though none have hitherto been discovered in the Brit. Jurassic rocks. The two specimens from the Solenhofen slate of Bavaria, Archaeopteryx maximsi, have been placed in a special order, Faucibus, of their own. Marsupials appear for the first time. The period is noted for a great abundance and variety of Ammonites, while Belemnites appear in the Lias and reach a maximum development in Jurassic times. Sea species of the genus Lamelibranchia were abundant, as were also the true Echinids. Corals abound in most of the limestones. The flora is of such a nature that botanists have termed the Jurassic period the age of cycads. Ferns continued common, and conifers were represented by genera allied to the modern Araucaria cypress and yew. The general resemblance of the flora and fauna of Jurassic times to modern Australian flora and fauna lends support to Wallace's theory that Australia was severed in Mesozoic times, and its isolation has furnished a local survival of a once widespread series of organisms. The actual existence of genus *Trigonia* (characteristic of Mesozoic strata in Britain) in the Australian seas is of special interest.

Jurat, one of a body of magistrates in the Channel Is. J., are chosen for life and, together with the Bailiff, constitute the Royal Court of Justice. The office of J. dates from 1537.

Jurien de la Gravière, Jean Pierre Edmond (1812-92), Fr. admiral, b. at Brest. He entered the navy in 1828, and was in command of the Fr. Mediterranean fleet during the Franco-Ger. war of 1870, becoming director of charts in 1871; but he is chiefly famous as a writer on naval hist., and among his works are: *Guerres maritimes sous la République et l'Empire* (1864), *La Marine d'Autriche* (1865), *La Marine d'Aujourd'hui* (1872), and *Les Origines de la Marine et la Tactique navale* (1891).

Jurieu, Pierre (1637-1713), Fr. Protestant theologian, b. at Mer in J.-et-Cher. He studied in England under his uncle Pierre du Moulin, and in 1671 was made prof. of Heb. at Sedan; but when that Univ. was taken from the Protestants he settled at Rotterdam. He defended the doctrines of Protestantism with great ability, and in his *Accomplissement des Prophéties* (1686), foretold the overthrow of the Papal Church in 1689. Besides

this he wrote: *La Politique du Clergé* (1680), *Histoire du Calvinisme et du Papiame mis en Parallèle* (1683), *Histoire des Dogmes et des Cultes* (1701), and *Lettres Pastorales Adressées aux Fidèles de France* (1686).

Jurisdiction means the authority by which the law courts are entitled to decide matters litigated, or questions tried before them. The High Court has plenary J. all over England and Wales; but the J. of inferior courts (q.v.) is limited by being confined to certain limits of space and to certain kinds of causes or matters in dispute. Where the civil courts of inferior J. purport to act in a matter in excess of their J. the aggrieved party may get the cause removed to the High Court by writ of *prohibere*; and where a party is convicted in a criminal court that has no J. in the matter the proceedings may be moved into the King's Bench Div. by writ of *certiorari* (q.v.). Brit. subjects who commit murders or manslaughter on land in foreign countries are triable in the Brit. courts. As to eccles. J. see under ECCLESIASTICAL COURTS. In Rom. theological writings eccles. J. denotes the power which is connected with the worship of God and the salvation of souls, conferred by pontifical commission. States belonging to the family of nations (see under INTERNATIONAL LAW) claim exclusive J. on the sea to a distance of one marine league from the shore, though the U.S.A. claim a greater extent of J. than this. In 1922, the U.S.A. Gov., in order to have a freer hand in dealing with liquor smuggling, which, in consequence of prohibition, soon became extensive, proposed a treaty with Great Britain giving the U.S.A. Gov. a right of search to a limit of 12 m. Great Britain would not assent but a compromise was reached by treaty which left intact the principle that three marine m. extending from the coast line outwards and measured from low-water mark constitute the proper limits of territorial waters. By the Territorial Waters J. Act, 1878, 'territorial waters' of His Majesty's dominions means any part of the open sea within one marine league of the coast measured from low-water mark. The J. of the Admiralty Div. in the case of Brit. ships and all those on board extends not only over the high seas, but also in foreign rivers, 'as far as great ships go'; but not to any cinque port, haven, or pier, nor to any creek, riv., or port within the body of a country.

Jurisprudence, literally signifies a 'knowledge of law,' and persons skilled in the law were by the Romans, called *jurisprudentes*, or sometimes *jurisconsulti*. J. generally or general J. is the science which is concerned with the exposition of the principles common to all legal systems, or, as Austin has it, the matured systems of positive law. Ulpian defined it as the 'knowledge of things divine and human, the science of the just and the unjust,' a definition adopted in the opening words of the *Institutes* of Justinian. The Rom. conception of J. was eminently consistent with a legal system which, however practical in

application and concise in principle, was, in its literature, curiously intermingled with philosophical aphorisms and theories borrowed from the Gks. and, especially from the Stoic learning. And this wide difference between the Rom. and Eng. definitions of J., like that of Austin, has its counterpart in definitions of modern continental juristic writers, who, with their love of *Naturrecht*, either never really mark a clear distinction between law as it is and law as it ought to be, or else subordinate positive law to what Bentham called deontology. According to the Eng. school it is the function of general J. to explain such common notions, as property, possession, things which can be the objects of property, contracts, testaments, intestacy, and actions de wrongs, and to reduce all those comprehensive notions to some general form with which other particular legal systems may be compared (comparative J.). The Eng. deviation from the current idea of the scope of J. as evidenced by continental schools marks a peculiar development of Eng. thought, and indeed the philosophy of the formal abstract conception of *de facto* legal relations inspired by Hobbes, expounded by Austin, and elaborated by Bentham, is virtually indigenous to England. There is no clue in Eng. J., notwithstanding Austin's remarkable excursions into the Utilitarian philosophy, whereas the German conception of J. was that of an art having for its lofty aim nothing less than the pursuit of truth; and indeed these floated always before the eyes of the later Rom. jurists a vision of a *jus naturale*, a set of rules of inherently universal application upon which they built up their *jus gentium* (q.v.), and it is this very broad ethical conception that links the Rom. juristical writings with the treatises of continental writers. Ger. jurists so far have not regarded the Eng. method as worthy of much attention, an indifference which Sir Frederick Pollock attributes to the fact that whereas in England the positive law of the land has for centuries been "single, strong, and conspicuous in all public life," and therefore presented itself as an adequate object for distinct scientific study, in Germany there co-existed a large number of small independent states, which, although autonomous, yet looked beyond their own positive system to a common stock of Romanised Ger. tradition, and this ultimate source of principle became immeasurably the more attractive subject for scientific study.

By a kind of common consent, due perhaps to the very wide ramifications of Hobbes, Bentham, Bodin, Beccaria, and others, J. has been limited to the inquiry into the ultimate principles of either positive law of *Naturrecht*, or a compound of both, without encroaching on the domain of political science. Theories of sovereignty and legislation, therefore, are conventionally irrelevant, though all jurists analyse the conception of the state as a condition precedent to expounding legal principles; while some touch on the sciences of legislation and political ethics, though purely with a view to the ex-

planation of the exact place of positive law among allied sciences. See Austin's *Jurisprudence*; T. E. Holland, *Elements of Jurisprudence*, 13th ed., 1921; John W. Salmond, *Jurisprudence, or the Theory of Law*, 7th ed., 1921; Maine's *Ancient Law*, 1930; Benjamin N. Cardozo, *Paradoxes of Legal Sciences* (New York), 1928; Sir Paul Vinogradoff, *Outlines of Historical Jurisprudence*, 1920 ff.; F. Pollock, *First Book of Jurisprudence*, 1929; G. W. Keeton, *Elementary Principles of Jurisprudence*, 1930; E. Jenks, *New Jurisprudence*, 1933; H. Slessor, *The Law*, 1936; and W. Friedmann, *Legal Theory*, 1911.

Jurisprudence, Medical. See MEDICAL. **Jury.** Trial by J. signifies the determination of facts in the administration of civil or criminal justice by twelve men sworn (*Lat. jurati*) to decide facts truly according to the evidence produced before them. The institution is one of the most cherished guarantees of Brit. liberties, and historians in their enthusiasm have often seen its origin in the general statement of the liberty of the subject expressed in Clause 39 of Magna Carta, which declares that no freeman shall be imprisoned or outlawed except by the lawful judgment of his equals (*suorum parium judicium*). But this clause referred to the trial *per pares* or *per seculares* in the old co. or hire courts, an institution which has long been generally admitted to have been of a totally different character. Simple, indeed, as the definition of a modern petty J. may appear, the evolution of that body has been a subject of keen controversy, though, according to the most widely accepted opinion, its genesis may with some confidence be sought in the Norman custom of inquest by sworn recognitors, the principle of which was adopted as an alternative mode of trial in criminal cases when the Lateran Council of 1215 abolished the ordeal in England as a means of ascertaining the truth of a criminal accusation. The vital fact in the evolution of the petty J. (as opposed to the grand J.) is that, from being originally witnesses or persons presumed to know the facts of the case and able to come to a decision independently of other evidence, they ultimately became mere judges of fact.

In the form in which it existed for several centuries after the Conquest, the traces of trial by J. are more distinctly discernible in the ancient Norman customs than in such fragments of A.-S. laws as have come down to us. The canonical institution of trial by twelve compurgators, who merely gave general evidence as to a man's character, resembled the trial by J. in no other respect than the number of persons sworn, and that that institution was no progenitor of the J. is conclusively established by the fact that it continued, under the name of 'Wager of law,' side by side with the J. down to 1833. A number of notable writers, including Forsyth (*History of Trial by Jury*), see in trial by J. a purely indigenous growth. Yet others ascribe its origin to the twelve senior thegns of Ethelred's time, who were sworn to accuse none falsely; but that institution

is far more probably the ancestor of the modern Grand J.

But whatever view the antiquarian may take of the genesis, the development through the existing machinery of the *shire-moot* by Henry II. of the Anglo-Norman system of inquest of inquiry on behalf of the crown into facts by sworn recognitors, was not only the undoubted forerunner of our J., but an exclusively Eng. development. Under Henry II., trial by recognitors was mainly used at first as an alternative to trial by battle in disputes concerning the title to land. The actual practice was to select twelve knights from the neighbourhood who were obliged to declare on oath which of the parties had the better right, and if not unanimous, the original body was 'afforced,' i.e. others were added until twelve were of one mind. As soon as the twelve became stereotyped into arbiters ignorant of the facts as distinct from witnesses, we have the true civil J., and probably the same steps are discernible in the evolution of the criminal petty J., whose primary function was to test the truth of a criminal presentment by an accusatory J. (*jurata delictoria*) or, as we call it, a Grand J.

The early hist. of the Eng. criminal J. is uncertain, but it is clear from Bracton and Fleta that at the end of the thirteenth century it had become the normal mode of trial, having gained ground with advancing civilisation, and superseded the more ancient and barbarous customs of battle, ordeal, and wager of law. The J. now in use in England in the ordinary courts of justice are grand, special, petty, or common J. (Grand J., however, were abolished by the Administration of Justice Act, 1933, except in the case of indictments for offences under certain Acts of Parliament (six only) before grand J. of London and Middlesex. There is no qualification by estate for grand jurors, but those of the borough sessions must be burgesses (q.v.).

All natural-born subjects of the king and aliens domiciled for ten years or more, being men or women between twenty-one and sixty years of age, are liable to serve as jurors. The sex disqualification was removed in 1919, and women are now liable to serve, but a judge may order that the jury shall be composed of men only, or of women only, or he may, on an application by a woman called on to serve, grant her exemption in respect of any case by reason of the nature of the evidence to be given or of the issues for trial. All jurors are liable to serve on petty or common juries, but special jurors must have certain special qualifications. The following persons—save where exempted or disqualified—are compellable to serve on a petty or common J. at the High Court, at the Assizes, and on both the grand and petty J. at the co. sessions: a co. or bor. resident who owns £10 a year in real estate or rent charge, or £20 in households; a co. or bor. householder assessed to poor rate at not less than £30 a year in Middlesex and the Co. of London, or £20 in other cos.; and an occupier of a

house with not fewer than fifteen windows. Special jurors are selected from persons of higher degree, such as bankers or merchants, or having larger property qualifications, e.g. the occupier of a dwelling-house, in a large tn., rated at not less than £100, or, in a small tn. (less than 20,000 inhabs.) at not less than £50. Special J. are for the most part summoned for civil cases, but they may be summoned for certain criminal cases, viz. in misdemeanours, by permission of the Court of King's Bench (as to the criminal jurisdiction of this court see under KING'S BENCH) on motion of either the prosecutor or the defendant. Jurors for the City of London must be either householders or occupiers of premises, and in addition, possess property of some description to the value of £100. Persons above sixty are exempt from J. service. The following are also exempt: Peers, judges, Rom. Catholic priests, members of parliament, dissenting ministers following no other secular occupation than that of schoolmaster, barristers, solicitors (if practising), registered medical practitioners, and pharmaceutical chemists actually in practice, clerks in holy orders, solicitors' managing clerks, officers of the law courts, and officials connected with prisons and public lunatic asylums, officers in the Navy, Army, Air and Territorial forces on full pay, members and licentiates of the Royal College of Physicians of London or the Royal College of Surgeons (London, Edinburgh, and Dublin), masters, wardens, and brethren of Trinity House, masters of vessels in the buoy and light service, licensed pilots, post office employees, customs and inland revenue officials, metropolitan and country police officials, special constables, councilors of municipal corporations, tn. clerks, bor. treasurers (as to their own cos.), justices of the peace, metropolitan police magistrates and their officials, sheriffs' officers and household servants of the sovereign.

Lists of J. are prepared in accordance with the J. Act, 1922, the names of persons apparently qualified as J. being so marked on the Electors Lists, posted up in church porches and elsewhere. Persons who deem themselves to be entitled to exemption should communicate with the registration officer. A juror is entitled to six days' notice of the time at which he is required to attend, and if he is prevented by illness from attendance he must send a medical certificate to that effect to the associate of the court to which he is summoned. Failure to appear in the High Court or at assizes when duly summoned may involve a fine of £10 (at a Co. Court, £5). A special juror is customarily allowed a fee of one guinea in respect of each action which he is sworn to try. Counsel who succeeds in the action invariably asks the judge to 'certify' for the special J., where there is one and his client has summoned it, and the judge includes the fees in the costs if he thinks the case a proper one to be tried before a special J.; if he thinks otherwise the party summoning such special J. bears the expense. Common

jurors in civil actions are allowed no more than 1s. (on Curren, 8d.) a case; in criminal actions, nothing is paid. The Juries Bill (which had its second reading in Feb. 1919) provides, first, that jurors should receive some limited compensation for the loss of earnings and the expenses in which their services might involve them. The second object of the Bill is the abolition of the special jury in all criminal and civil cases (with the exception of commercial cases tried by a special jury of the City of London)—the assumption of the gov., which sponsored the Bill, being that the special jury had become a complete anachronism, and inimical to that appearance of equal and impartial justice which ought to be fundamental to the Eng. legal system.

Co. court J., formerly composed of five, now consist of eight members. They are not often resorted to, and it is well known that co. court judges as a body are strongly opposed to having time wasted and their faculties implicitly condemned by summoning such J. to assist them. Jurors may be objected to or 'challenged,' as it is termed, and either party may exercise this right, which is of two kinds: (1) Challenge to the array, or an objection to the whole number of jurors on the panel on account of some reason alleged against the sheriff who summoned them; (2) challenge to the poll, i.e. to some particular jurymen or jurymen on one or more of the following grounds: (a) That the juror is a peer, or is (b) not properly qualified, or (c) is likely to be biased, or (d) has been convicted of some crime or misdemeanour. A juror is not accountable for, nor will any action be against him, in respect of anything he says or does in the discharge of his duty.

The Second World War had an adverse effect on the Brit. J. system, and, in the criminal courts, although J. reduced in number remained, in the civil courts the system all but vanished. Trial by J. was now by favour and not of right. Under the Administration of Justice (Emergency Provisions) Act, 1939, no question arising in any civil proceedings could be tried with a jury unless the judge was of opinion that it ought to be so tried. The reason for the change was economy of man-power, but the emergency legislation only continued to its logical conclusion a tendency long present in the administration of justice. In the Co. Court trial by J., which had never been customary, had for many years been practically extinct. In the High Court under the Act of 1933, the Court had been given an absolute discretion as to whether trial should be by J. or not, except in cases of fraud, libel, slander, malicious prosecution, false imprisonment, and breach of promise of marriage. It is difficult to see the logical justification for this odd assortment of exceptions, though the nexus would seem to be that the cases affect the honour or feelings of the parties rather than their pockets. For the hist. of J., see T. Taswell-Langmead, *English Constitutional History*, 1875; W. Forsyth, *History of Trial by Jury*, 1852; H. Brunner, *Die*

Haskins, *Institutions* (Harvard) 1918; R. M. Jackson, *The Machinery of Justice in England*, 1910; M. S. Ames, *British Justice*, 1912.

Jus Civile, see ROMAN LAW.

Jus Devolutum, in old Scots law, the right of the bishop of a diocese to appoint an incumbent (q.v.) to a vacant living if the owner of the right of presentation does not exercise his right within a prescribed time.

Jus Emphyteuticarium, see EMPHYTEUTIS.

Jus Gentium, i.e. law of nations, was the body of laws administered in auct. Rome by the praetors and which, evolved as it was by a process of selection of such rules as by their inherent force and reasonableness commended themselves as principles of natural justice, was applied to outlying nations under Rom. dominion. The Eng. merchant law (q.v.) owes many of its essential principles to those of the J. G. Classical jurists give, as equivalent for *jus gentium*, 'the common law of all men,' 'the law which all nations use'—expressions which are designed to emphasise that *jus* is a word which includes the principles of legal right as well as the rules of law. There is no exact equivalent for *jus* in the Eng. language, and though J. G. is often trans. by 'the law of nations,' as if it were synonymous or co-extensive with what we call 'International Law,' the trans. is not justified. For the Rom. jurists included more in their J. G. than the law prevailing between states; and again, with modern jurists, 'the law of nations' is a law which rests on the consent of nations or states as such, whereas the Rom. jurists regarded the J. G. as resting on the consent of mankind. With the Romans, the underlying principles were the same for private as for public law, being in both the universally recognised principles of legal right.

In 'public law,' e.g., ambas. were sacred by the J. G.; but no special dept. of law in force between nations was appealed to, nor was the consent of any nation as such implied; ambas. were, in fact, sacred because in matters concerning nations, as well as in those concerning private persons, principles which commended themselves to the conscience of all men were necessarily to be observed. Thus the meaning of J. G. was the same in private and public law. Gaius (q.v.) uses *jus naturale* as equivalent to J. G. and declares that J. G. is 'what natural reason establishes among all men,' a declaration which Justinian (see JUSTINIAN) adopts from him. Ayala (q.v.) in writing on the laws of war, also adopts the current view of his time, that of a natural law to which the J. G. was added by common consent. But the J. G. of Grotius (q.v.) comprises only questions prevailing between states; but he divides it into that which is truly law and that which produces only a certain

effect like that of the primitive law; the former being identical with the law of nature, the latter resting on the will of the society of states and including laws good and bad, such as the bad customary laws of war against which he inveighed. See *The Collected Papers of John Westlake on International Law*, 1911, where all the opinions are collated.

Jus Mariti, in Scots law, the unlimited right of a husband, prior to the Married Women's Property Act, 1881, to manage and dispose of the movable estate of his wife, whether belonging to her at the date of marriage or acquired subsequently. The J. M. was lost only by express renunciation, or by exclusion by an antenuptial marriage contract. The Act of 1881 abolished the J. M. except as to cases where the marriage was contracted and the wife acquired property before July 18, 1881.

Jus Primæ Noctis, literally denotes the right of cohabitation on the first wedding night. According to some historians, the medieval feudal law gave the lord the J. P. N. with his tenant's wives on their first wedding nights. Blackstone repudiates the assumption that so barbarous a custom ever existed in England or Scotland, though it has occasionally been adduced as a plausible explanation of the custom of Borough-Eng. (q.v.), and of the origin of the fine paid by the tenant to the lord on the marriage of the tenant's daughter. But there is strong evidence of its former existence in Scotland, according to Skene, in the ordinance of King Evelyn to the effect that the lord of the ground should have the right by way of casualty (q.v.). Malcolm III. repealed the ordinance and decreed that the bridegroom should pay a sum of money (called *marag*) as compensation. Hence the Scottish term *merchet*, or *merchetu mulierum*, to denote the old form of the marriage tax in the charters of Robert I. According to certain Fr. writers, the J. P. N. was synonymous with the *droit du seigneur*, but others consider that the latter term merely connoted the insistence of the claren on continence in brides. The term, according to Schmidt, Veuillot, and others, but a quasi-religious significance, as exemplified in parts of China, where priests were said to deflower virgins at the express request of the girls' parents, and in W. India, where J. P. N. was extended to men of assumed divine caste. See Sir W. Blackstone, *Commentary on the Laws of England*, 1765; W. Bell, *Dictionary and Digest of the Law of Scotland*, 1838; L. Veuillot, *Droit du Seigneur*, 1854; K. J. L. Schmidt, *Jus Prima Noctis*, 1881; J. von Gierke, *Humor im Recht*, 1886, 1925.

Jus Relictæ, in Scots law, the right of a wife after the death of her husband to one-third of his movable estate if he dies leaving children, and to one-half if he leaves none. The husband, by the Married Women's Property (Scotland) Act, 1881, has a corresponding right, called the *jus relictæ*, in the wife's property. The widow is not disentitled by reason of having been previously provided for by

her husband, unless, in accepting such provision, she expressly renounced her right, and such renunciation is only effectual to bar her J. R. if it be shown that she was fully aware of the extent of her legal right. The husband cannot affect the J. R. by any testamentary or other deed.

Jusserand, Jean Adrien Antoine Jules (1855-1932), Fr. politician and writer, b. at Lyons. In 1887 he began his career as a diplomat, during which he fulfilled sev. important missions. Ambas. in the U.S.A., 1902-25. Among his writings may be mentioned: *Le Théâtre en Angleterre depuis la Conquête jusqu'aux pré décesseurs immédiats de Shakespeare* (1878), *Les Anglais au moyen âge* (1884), *Le Roman anglais* (1886), *Le Roman au temps de Shakespeare* (1888), *Histoire littéraire du peuple anglais des origines à la Renaissance* (1894), *The School for Ambassadors, and other essays* (1921), *Le Maréchal d'Isadès et ses Critiques* (1928), *The Writing of History* (in collaboration, trans., 1926), *What Me Defelt* (1933).

Jussieu, De, name of a Fr. family of botanists. Among its chief members may be mentioned:

Antoine (1686-1758), b. at Lyons, and was made prof. of botany in Paris, as the successor of Tournefort. He pub. *Tournefort's Institutiones rei herbarie* (1719), ed. by him.

Bernard (1699-1777), also b. at Lyons, was the superintendent of the gardens at the Petit-Trianon, and to him is due the beginning of the arrangement of the plants according to a natural system, a method completed by his nephew. He ed. *Tournefort's Histoire des Plantes qui naissent dans les Environs de Paris* (1725).

Antoine Laurent (1748-1836), nephew of Bernard, was in 1770 made prof. of botany at the Jardin des Plantes, Paris. His *Genera Plantarum* (1789) is the foundation for the modern method of botanical classification. He also pub. articles in *Annales du Muséum* (1804-20), and in *Dictionnaire des Sciences Naturelles*.

Adrien (1797-1853) is remembered for his pub. on Rutaceæ, Meliaceæ, and Malpighiaceæ, as well as that on Euphorbiaceæ.

Laurent Pierre (1792-1866), nephew of Antoine Laurent, and a Fr. writer on education. His chief work is *Simon de Nanhua* (1818), trans. into sev. languages.

Justice, Court of International, see INTERNATIONAL JUSTICE, COURT OF.

Justice, Royal Courts of. Up to the time of the passing of the Judicature Act in 1873 the R. C. of J. were situated at Westminster Hall, the place where the *Aula regis* of the Norman and Plantagenet periods sat. The constituent courts in 1873 were the Queen's Bench (see KING'S BENCH), the Common Pleas (q.v.) and the Exchequer (q.v.), which were styled the Superior Courts of Common Law, in contradistinction to the High Court of Chancery, with its vice-chancellor's courts, which were generally referred to as the *Courts of Equity* (see EQUITY). In addition there were the High Court of Admiralty, usually called the *Instance Court*

when exercising its jurisdiction in respect of maritime injuries, and the *Prize Court* when constituted for the decision of questions concerning booty of war; the Probate Court (*q.v.*), the Divorce Court (*q.v.*), the Palace Court (*q.v.*), and a Court of Chivalry. All the jurisdiction exercised by the superior courts of law and equity, the High Court of Admiralty, the Courts of Probate and Divorce, and the Courts of Assize, was by the Judicature Act, 1873, transferred to the High Court of Justice, situate in the Strand, which comprises: (1) The two Courts of Appeal (*see* APPEAL), (2) the Court of Criminal Appeal (*see* CRIMINAL APPEAL), (3) the King's Bench Div., (4) the Chancery Div., (5) the Probate, Divorce, and Admiralty Div., and (6) the Railway and Canal Commission Court. The bankruptcy work of the court is done by one judge from the King's Bench side. *See also* JUDICATURE ACTS.

Justices, Lords, the L. J., who are eight in number, form, together with the Lord High Chancellor, the Lord Chief Justice of England, the Master of the Rolls, and the President of the Probate, Divorce, and Admiralty Div. as *ex-officio* members, the penultimate Court of Appeal for England and Wales. In practice, the Master of the Rolls alone of the *ex-officio* judges sits as a regular member of the Court of Appeal. Ordinarily there are two courts of appeal of co-ordinate jurisdiction, one consisting of three L. Js., and the other of two L. Js. and the Master of the Rolls. An *ex-ord* chancellor is also entitled to sit in the Court of Appeal, and provision is also made for calling in a judge of the High Court to reinforce the Court of Appeal when necessary. (At the beginning of 1913 a third court was constituted temporarily, for the purpose of disposing of arrears of pending appeals.) This Court of Appeal was estab. by the Judicature Act, 1873, as a superior court of record, and it was intended that there should be no appeal from its decisions either to the House of Lords or the Privy Council: but that provision of the Act of 1873 was finally repealed, after being suspended by the Appellate Jurisdiction Act, 1876. To the Court of Appeal was transferred all the jurisdiction and powers of: (1) The Lord Chancellor (as titular head of the Chancery Court, and of the old Court of Appeal in Chancery, in his and its appellate jurisdiction, and of the same court of appeal in bankruptcy). (2) The Court of Appeal in Chancery of the Co. Palatine of Lancaster, and of the appellate powers of the Chancellor of that duchy. (3) The Court of the Lord Warden of the Stanmires and his assessors. (4) The Court of Exchequer Chamber (*q.v.*). (5) The judicial committee of the Privy Council, or the King in Council, as to any appellate jurisdiction from a judgment of the Admiralty Court, or from any order in lunacy. Subject to certain exceptions, an appeal lies from the High Court to the Court of Appeal from every judgment or order of the High Court, but no appeal lies to it in criminal matters, and in the case of any inferior court (*q.v.*)

only by leave. The procedure on appeal is by motion either for a new trial or to set aside a verdict, finding, or judgment. The notice of motion must state the grounds of the application, and whether all or part only of the finding is complained of, and the court may order the appellant to give security for the costs of the appeal. A new trial may be granted on any one or more of the following grounds: (1) Misdirection by the judge; (2) misreception of evidence or erroneous rejection of evidence by the judge; (3) misbehaviour of the jury; (4) excessive or inadequate damages; (5) discovery of fresh evidence; (6) total absence of evidence for the jury; (7) verdict against the weight of evidence; (8) surprise—term used to denote all cases where the appellant, through no fault of his own, was prevented from getting a fair trial, *e.g.* by his opponent keeping a material witness away, or misleading him as to the time of the trial. It is a rule of the Supreme Court that there is no appeal from an order of a High Court judge as to costs, such matter being entirely within the discretion of the judge making the order. In most cases a party has a right of appeal without leave, although the judge whose order or judgment is being appealed against may, on notice of appeal being given, refuse a stay of execution or impose certain terms as to paying money into court as a condition of appeal. From the Court of Appeal there is a right of appeal to the House of Lords, but it is an extremely expensive process.

Justices of the Peace. These are inferior and unpaid magistrates appointed by the lord chancellor on the recommendation of the lord-lieutenant of a co., to keep the peace within the co. bor., riding, liberty, or other div. in which they are appointed. The title of J. of the P. dates from 1360, when Edward III. vested a criminal jurisdiction in the old Conservators of the Peace. The term of these latter is traced by Bishop Stubbs (*Sicet Charters*) in the appointment by Archbishop Hubert as chief justice in 1195 of knights to receive the oaths for the maintenance of the peace (*see the Edictum Regium*). In 1253, and in other years, knights were assigned to keep the peace, and in Edward I.'s reign *custodes pacis* were sometimes elected by the co. freeholders. One of their prin. functions was the enforcement of the Statute of Winchester, 1285, which, *inter alia*, regulated the watch and ward in tns., and made distr., in which felonies had been committed, liable to produce the bodies of the culprits. Edward III. gave them the general power of trying practically all felonies, and in course of time they gradually usurped all the powers previously exercised by the Shire Moot. An Act of Henry VII. empowered J. of the P. to try all offences except charges of treason, murder, and felony, but from that date their powers as a body of criminal judges declined. But for long they exercised multifarious duties of local gov., and among the earliest of such duties were those of collecting benevolences, main-

taining bridges, highways (*q.v.*), and public buildings, granting licences, appointing local officials and controlling local finance. The bulk of these administrative duties has long been transferred to the co. councils (*q.v.*) by the Local Gov. Act, 1888. But by means of a joint committee, the J. of the P., and the co. councils jointly superintend the co. police. The Act of 1888 did not interfere with the judicial work of J. of the P., and the decline in their criminal jurisdiction was rather a consequence of the practice of remitting the more serious felonies to the assizes—a practice now hardened in a statutory provision to the effect that the criminal jurisdiction of the Quarter Sessions (*see* COURTS SESSIONS) is now confined to the trial of certain minor felonies and misdemeanours.

The post of co. justice, formerly remunerated by a scale of wages regulated by a statute of 1889, is now purely honorary, and since 1907 the old property qualification of £100 a year, or the necessity for any property qualification, has been abolished. The lord chancellor, the lord president of the Privy Council, the lord privy seal the judges of the High Court, the att.-gen., general and solicitor-general are J. of the P. *virtute officii*. Co. court judges, bor. recorders, metropolitan police court magistrates, and others who, by reason of holding certain minor judicial offices, acquire the rank of J. of the P. Other classes of J. of the P. are mayors of municipal or metropolitan bor., ex-mayors of municipal bor. (for one year following their year of office), chairmen of co. and dist. councils and the mayor and aldermen of the City of London. Bor. justices are now appointed under the Municipal Corporations Act, 1882, but a bor. can petition the crown for the appointment of a stipendiary magistrate to be appointed by the Home Secretary. Women are competent to be appointed as J. of the P. (*Sex Disqualification (Removal) Act, 1919*). Petty sessions are sittings held by two or more J. of the P. for the disposal of minor charges, admitting to bail persons accused of felony, the hearing of informations and complaints, and certain other purposes. The lord mayor or any of the aldermen of the City of London, or any police or stipendiary magistrate sitting in a court-house, where he has the usual power of two justices, constitutes a petty sessional court-house. A single magistrate sitting alone has very circumscribed powers. He can hear a charge prior to committing for trial, release a prisoner on bail (*q.v.*), take his recognisance to appear, and dismiss a case when the evidence is not strong enough to justify committal.

There have been considerable accessions in recent years to the judicial powers of J. of the P. They are empowered to grant judicial separations between husband and wife, and make maintenance orders against a husband in favour of his wife up to £2 per week; they can make bastardy orders, licence places for the sale of intoxicating liquors, and exercise limited powers in ejectment (*q.v.*), gener-

ally speaking, restricted to cases where the rent does not exceed £20. J. of the P. have wide ministerial duties and powers, *e.g.* under the Elementary Education Acts, in default of the co. councils; the imposition of highway (*q.v.*) rates; granting exemptions under the Truck Acts; and licensing drivers of motor cars. Stone's *Justices' Manual*; *The Justice of the Peace and his Functions*; L. Page, *Justice of the Peace, 1936*.

Justicia, large genus of *acanthaceous* plants found in all tropical parts of the world, but preferring damp woods. Only a few species are cultivated as ornamental plants.

Justiciar, in Eng. hist. the chief political and judicial officer under the Norman and Plantagenet kings. The J. first appeared in Eng. hist. in the time of Wm. I., as the regent of the kingdom in the sovereign's absence, *e.g.* Wm. Fitz-Osbern, earl of Hereford, acted in that capacity for Wm. I. during his absence in Normandy in 1047. The importance of the office was much increased by Ranulf Flambard under Wm. Rufus and the J. became (next to the king) supreme in justice and finance. When the *Curia Regis* split up into the Courts of Common Law, in the time of Henry III., the power of the J. began to decline, as he could not preside over all the three courts. The office ceased to exist in the reign of Edward I. and the J.'s powers passed to the Lord High Chancellor.

Justiciary, High Court of, supreme court for criminal causes in Scotland. There is no Court of Criminal Appeal for Scotland other than this court itself, and no appeal from the decisions of the H. C. of J. to the House of Lords. Its decisions are therefore final. The court sits permanently at Edinburgh, and various of its judges go on circuit six times a year to Glasgow, four times to Aberdeen, Dundee, and Perth, and twice a year to Ayr, Dumfries, Inveraray, Inverness, Jedburgh, and Stirling; but special sessions may be held at any convenient tn. Its membership comprises the Lord Justice-General, the Lord Justice-Clerk, and eleven Lords Commissioners of Justiciary, *i.e.* the whole of the Lords of Council and Session and Senators of the College of Justice. A single judge usually sits, except in cases of special importance or when the court is sitting as a Court of Appeal, in which latter case three judges form a quorum. Its jurisdiction extends to any crime against public law committed by a Brit. subject or a foreigner, in Scotland, or partly in Scotland and partly abroad, or committed at sea at the time the ship was within three m. of the coast of Scotland. Formerly certain crimes were triable only in the H. C. of J., such as robbery, rape, murder, and wilful fire-raising. But since 1887 the Sheriff Court has had jurisdiction in all crimes except treason, murder, and rape.

Justifiable Homicide. Homicide by the Eng. criminal law is justified in the execution of a criminal; in the prevention of a 'forcible and atrocious crime' (*e.g.* rape); and in the case of an officer of justice

killing a person who prevents him from carrying out his duty. It is distinguished from excusable homicide, though the effect (acquittal) of the latter is the same. Homicide is excusable in self-defence, or when it occurs by accident.

Justinian, the historian, *J.*, it seems, in the reign of Antoninus Pius, but his personal hist. is a blank. His forty-four *Historiarum Philippicarum libri*, however, are extant, though the compendious work of Trogus Pompeius, who lived in the days of Augustus, has unfortunately perished. Justin's *History* was merely a popular epitome of Trogus's. It must be confessed that Justin's redaction is somewhat free and careless, yet it gives many details and anecdotes about the Assyrians, Medians, Persians, Gks., Macedonians, Carthaginians, and Parthians, etc., which are not recorded elsewhere, and is written, moreover, in a readable style. Gronovius pub. a good ed. in 1719, and since then many others have been issued.

Justinianus, Flavius Anicius (A.D. 482 or 483-565), ruled over the E. Rom. empire as Justinian I. He was born in Illyricum of obscure barbarian parentage. Justinus, the emperor, however, was his uncle, and

JUSTINIAN I

From the Ravenna Mosaic

as in the helplessness of his age and ignorance he had learned to trust the energies and capacities of his nephew, who had profited by a liberal education in Constantinople, he wisely appointed him his successor. Thus Justinian came to the throne in 527. The outstanding features of his reign are his conquests and his laws, but a word must first be said of his personality and eccles. policy. He is described as vain and somewhat fickle of purpose, but, on the other hand, he was a model of industry, and a man of wide interests and large public spirit. Thus he built and re-

paired many cities, bridges, walls, and public buildings, encouraged commerce, and introduced into Europe the cultivation of silk-worms. Further, he was virtuous in private life, indifferent to ease and luxury, always courteous to friends, and easy of access to strangers.

The church received his constant and earnest attention. By edict he denounced the heresies of Theodore, a Nestorian, hoping thereby to put an end to the miserable schisms, and later he summoned a general council of the church. But the chief fruit of this was the tedious 'Three Chapters' controversy, and, as Justinian himself was at least suspected of Monophysitism and a more recent heresy, it is not surprising that his desire for peace was unfulfilled; indeed his rigorous persecution of pagans and heretics, and especially of the Phrygian Montanists and the Samaritans of Palestine, encouraged fanaticism and religious strife.

The warlike Belisarius and the skilful Armenian eunuch, Narses, won his battles. Thus Africa was wrested from the Vandals (535) and Italy from the Goths (552); along the Danube there were successful skirmishes with the Bulgarians, Gepids, and Langobards, whilst in 562 a truce was made after a twenty years' struggle with Chosroes I. of Persia, whose encroachments on the E. frontier were thus momentarily stayed. Yet Justinian has with some justice been accused of squandering the enfeebled resources of the empire in recovering exhausted Gr. instead of strengthening the barriers against the Slavs and Huns and the Iranians.

Tribonian was the animating spirit of his legal reforms. A body of ten scholars under Tribonian brought out the *Code* in 529, and a second ed. followed in 531. Seventeen lawyers, again with Tribonian at their head, issued the *Pandects*, or *Digest*, in 533, having 'extracted the spirit of jurisprudence from the decisions and conjectures, the questions and disputes, of the Rom. civilians' in the remarkably short period of three years. The *Institutes*, which was intended as a student's manual in the academies of Rome, Constantinople, and Berytus, preceded the *Digest*. Finally, sixteen edicts and a number of 'novels' (*Novellæ*) completed his compilation, a compilation destined for centuries to be the basis of European codes. Though Justinian founded his work on the 'sages and legislators' of past ages, he paid little heed to any lawgivers before the days of Hadrian, and thus abetted time in fast consigning the jurisprudence of the Rom. republic to what to-day is regarded as a regrettable oblivion. Without belittling the services rendered by Justinian's constructive simplification of Rom. law, it must be acknowledged that Gibbon's description of his code as a 'treasselled pavement of antique and costly but too often incoherent fragments' is a true one. Mommsen's ed. of the *Digest* (1864-70) and Krüger's ed. of the *Code* (1873-77) are the best. See monograph by E. Grube, 1923, and W. Schubart, *Justinian and Theodora*, 1913.

Justinianus II. (A.D. 685-695 and 704-711), Byzantine emperor, succeeded his father, Constantine IV. He made war on the Arabs and Bulgarians, and so roused the hatred of his subjects by his rapacities and persecutions that they rose in rebellion under Leontius. The rebellion succeeded, and Leontius cut off the emperor's nose and drove him out of the cap. J. had his revenge in 704, when he surprised Constantinople and put Leontius to death. He also slew Tiberius, his successor, and harked back to his former tyrannies.

Justinus, called **Justin Martyr** (c. A.D. 100 c. 165), early apologist of the Christian Church. He was b. at Flavia Neapolis, now Nablus, in Samaria, of heathen parents, and was brought up in the philosophy of the Stoics and Platonists. In his *Dialogue with Trypho the Jew* he ascribes his conversion to Christianity to a chance conversation with an aged stranger, a Jew, at Ephesus, who directed him to study the O.T. prophets. After his conversion he continued to wear his philosopher's cloak, disputing and lecturing at Ephesus, Rome, and other cities. The date of his martyrdom cannot be exactly determined; acc. *Apoc.* to the *Acta SS.* *Justin et Sociorum*, it took place under the prefect Rusticus (A.D. 163-167), but some authorities quote the earlier date of 148. The two undoubtedly genuine works of J. are *Apologies for the Christians*, in two books, and the already mentioned *Dialogue*. The former is addressed to a cultured pagan audience, and to the modern student is of great value as a hist. of the early Christian Church. To a certain extent J. reconciles Christianity with ant. Gk. culture. The latter is a defence of primitive Christian theology as opposed to Judaism, and is an account of a two days' theological discussion at Ephesus. Other works ascribed to him are a speech and an address to the Gks., and an *Epistle to Zenas and Serenus*, but their authenticity is very doubtful. The best ed. is that of J. C. P. von Otto, *Justin philosophi et Martyris opera quae servantur omnia* (3 vols., 3rd ed.), 1876-81. For Eng. trans., see the Oxford Library of Fathers (1861) and C. Cox, *Ante-Nicene Fathers* (vol. II., 1868). See Sir J. Donaldson, *History of Christian Literature and Doctrine*, 1866; monographs by Kave, 1889, and Feder, 1906; also A. von Harnack, *Judentum und Judenthum in Justinus Dialog mit Trypho*, 1913; F. R. Goodenough, *The Theology of Justin Martyr*, 1923; K. Thiem, *Kirche und Synagoge*, 1945.

Justinus I. (A.D. 518-527), Byzantine emperor, was a peasant boy of Dacia, who enlisted in the guards of the Emperor Leo I. He soon rose to general and, on the death of the Emperor Anastasius, was chosen emperor. At the instance of his nephew, Justinian, he healed the breach between the Gk. and Rom. Churches.

Justinus II. (A.D. 565-574), Byzantine emperor, succeeded his uncle, J. I. At the request of the Rom. he deposed Narses, the Goth, and made Longinus exarch of Ravenna in his stead. It was the invita-

tion, it appears, of the turbulent and humiliated Narses which brought the Langobards under Alboin like a torrent over the Alps and thus lost the whole of N. Italy to the empire of Constantine. J., now impotent from disease, could offer no resistance and abdicated four years before his death.

Justus, (1) The surname of Joseph Barsabas (see under JOSEPH). (2) a Jewish convert and fellow-worker of Paul (Col. iv. 10). (3) Corinthian convert, whose name is given variously as 'Titus Justus' and 'Titus J.' (Acts xviii. 7).

Jute, vegetable fibre grown chiefly in the prov. of E. Bengal, Pakistan. In that country it has been employed for centuries in manuf., but its introduction as a textile into Europe dates only from about 1825. The founder of the Bengal J. industry was an Englishman, George Acland, who began life as a midshipman in the navy, and served with the E. India Marine Service, and afterwards left to take up a commercial life, first in Ceylon, and then in Bengal. He got into touch with manufacturers of paper at Serampur who were experimenting with fibres in the hope of improving and cheapening their output, and this seems to have prompted the idea in Acland's mind of the manuf. of reha. He returned to England to find capital and visited Dundee. Then John Kerr suggested to him the importing of machinery into Bengal because the jute was to be found there and could therefore be economically spun. Out of this suggestion came the building of the first mill by Acland in 1855. J. is obtained from two species of *Corchorus*, namely, '*capsularis*' and '*C. olitorius*', the products of which are both so similar that economically no difference is recognised. *Corchorus* belongs to the lime-tree family (Tiliaceae). The two varieties mentioned are ann. plant., with round stems as thick as a man's finger, and with hardly any branches except at the top. They reach to a height of from 5 ft. to 10 ft., and are readily distinguished by their seed pods: the capsule of '*C. olitorius*' is a slender cylinder some 2 in. long, whilst that of '*C. capsularis*' is almost globular and rough to touch.

Cultivation.—J. grows best in a hot moist atmosphere where there is considerable rainfall. It flourishes in Bengal, especially in the highland dists., and attempts to introduce it into Egypt and other parts of Africa, etc., have so far resulted in the yield of an inferior variety. The seed is sown broadcast at any time from the middle of March to the middle of June. Sometimes, however, it is first planted in nurseries and transferred outside in the seedling stage. The appearance of the flower is the signal for harvesting, which usually takes place about three months after the sowing. The stalks, which are either cut down with the sickle or pulled up by hand, are gathered into bundles and immersed in stagnant pools or streams to undergo the process known as 'rotting.' This may last from three to thirty days, the object being to loosen the fibres and separate them from the stem.

After being cleansed from vegetable impurities, the fibre is made up into bundles, sorted according to quality, and passed through a powerful hydraulic press which reduces it to the familiar bales of commerce. Each bale weighs 400 lb., and an average crop yields 2.6 bales per ac. The area under J. in India averages 2½ to 3 million ac., the ann. yield being from 7 to 9 million tons. The raw J. exports from India were valued at 14,71,30,000 rs. in 1937; and at 10,41,72,856 rs. in 1942; manufactured J. exports at 29,07,75,000 rs. in 1937, and at 53,89,58,380 in 1942 (variations in the price will be found set out in the *Indian Year Book*). Of the quantity produced nearly half is supplied to Indian mills and used for home consumption, whilst five-sixths of the remainder is exported to Europe and one-sixth to America. About one-third of what goes to Europe is shipped to the Brit. Isles, Dundee being the centre of the J. industry, and the J. products of Dundee range from the coarsest sacking to fine carpets. The industry in Dundee has multiplied over 1000 times since its beginning at the Chapelshade works in 1832. But a long slow decline of Dundee's staple trade has been going on as India has developed her own J. industry. Before the First World War, the Dundee industry employed 10,000 people; between 1924-37 the proportion of Dundee workers employed in J. dropped from 50 to 40 per cent and it is still dropping. The number of workers to-day is about 14,000. J. mills were first estab. in Calcutta in 1854. There were over 100 mills in Bengal in 1939. The Indian J. Mills Association is probably the most important of the bodies affiliated to the Bengal Chamber of Commerce. This body began operations in 1886. Subsequently an Association called the Calcutta J. Dealers Association was, within recent years started in Calcutta to promote and guard the common interests of its members as dealers in J. for local consumption.

Uses and characteristics of Jute.—The Hindus have from very early times made cordage, paper, and cloth out of this fibre. The chief cloth made to-day is 'gunny' cloth, which is woven of different textures, according to the purpose for which it is intended. Thus gunny bags are used for carrying poppy seed, pulses, and rice, and package covers, sails, sheets, and even wearing apparel are also made of this material. Other articles made of J. are string, cord, and rope; floor-cloths, painters' brushes; net-bags to carry hay or to muzzle cattle; and lengths of stuff for tying bales of cotton. Hessian, tarpaulin, sacking, and bagging are some of the materials turned out from the Dundee factories, whilst from J. also are manufactured Wilton, Brussels, and other carpets and all kinds of rugs and matting. The waste products resulting from these manu. can be used up in paper mills. The best J. is inferior in durability and strength to hemp and flax, and even single strands are rarely of the same tenacity throughout. The finest qualities, such as Serajgunge and Naraajgunge, are lustrous,

soft, and smooth, long, uniform in fibre, and of a yellowish-white colour. Inferior qualities, as, for instance, Dalsee and Dowrah, are of a brownish hue, and unfit only to be dyed darker shades. Good fibres may be dyed delicate and also bright tints, but they rarely bleach a pure white. Balers have an elaborate system of marking the four main classes of the fibre and of subdividing these again according to tone and quality.

Manufacture.—In the early decades of last century manufacturers were confronted with many difficulties, arising either out of the use of unsuitable machinery or out of the failure to realise that J. is far more woody and brittle than other fibres. These difficulties, however, were overcome, so that J. is not only employed to make the commodities detailed above, but is also freely mixed with other animal and vegetable fibres to make horsecloths, tapestries, paddings, household cloths, etc. In a modern factory the first process is 'batching,' by which the J. is classified according to the quality adapted to the yarn desired. In the softening machine the 'streaks' or 'heads' are thoroughly wetted between fluted rollers with water and oil, as they have been hardened in the course of baling by hydraulic pressure. The 'drawing-frames' and 'roving-frames,' in which each sliver is drawn out to many times its own length, complete the process of preparation. A length of 11,100 yds. of J. yarn is called a 'spynole,' which in fine qualities weighs only 2½ lb. But a 'spynole' of coarse yarn may weigh as much as 10 lb. J. spinning is very similar to flax-spinning.

For statistics see *Indian Year Book*. See also the various works of T. Woodhouse alone or in conjunction with other writers; notably T. Woodhouse and T. Milne, *Jute and Linen Weaving Mechanism* 1914; T. Woodhouse, *Yarn Counts and Calculations*, 1921; T. Woodhouse and J. Ireland, *An Introduction to Jute Weaving* (Dundee), 1922; also Sir G. Watts, *Dictionary of the Economic Products of India*, 1889 93.

Jüterbog, tn. in Brandenburg, Germany, 39 m. S.S.W. of Berlin. In 1643 the Swedes here defeated the Imperialists. Near by is Dennewitz, where Bulow defeated the Fr. (1813). Pop. 8000.

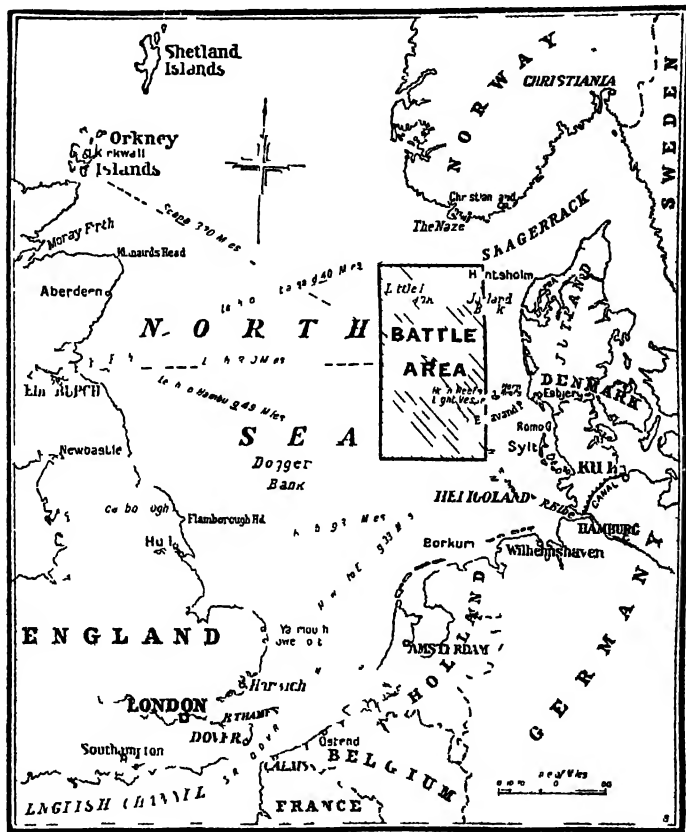

Jutes, Teutonic nation who seem to be the ancestors of the present inhabs. of Jutland, though this is a matter of much speculation. Invaded England with the Angles and Saxons in the fifth century and settled chiefly in Kent.

Juticalpa, tn. in Honduras, cap. of Juticalpa dept., 120 m. N.E. of Tegucigalpa. The tn. deals in agric. produce and cattle and near by are gold mines. Pop. 3800.

Jutland (Dan. Jylland), N. and Dan. portion of the peninsula which extends northward to the Skaw headland (Skagerrak) from a line drawn from Lubeck to the mouth of the Elbe. Separated from Sweden by the Categat and from Norway by the Skagerrack, it is almost cut in two by the Limfjord (100 m. long). The Little Belt, the strait, that is between J.

and Flöken, connects the Baltic and N Seas. J and Lüneburg are linked by the Little Belt bridge. Irrigation, tree plantations, and cultivation of the fens, etc., are fast transforming the heath and sand of the interior into arable land. J has an area of 11,400 sq m, and a pop. of

was planning an offensive against the long coast with the aim of drawing the Brit fleet over a prepared ambush of submarines. The elimination of the High Seas Fleet at this time would have been an important easement to Great Brit, but it would not have had a decisive

Jutland, Battle of. Fought between the Brit and Ger fleets on May 31, 1916, off the W coast of Jutland. During the last week in May there had been indications that the cautious and timid tactics previously imposed on the Ger Navy were now to be abandoned, that Adm. Scheer

effect on the war. On the other hand, ruin would have overwhelmed the allied cause had the Brit fleet been destroyed. It was, therefore, not surprising that the subsequent tactics of Adm. Jellicoe (in the words of Mr. Churchill he 'was the only man on either side who could lose the war in an afternoon') should have been governed by a measure of caution.

On the evening of May 30, both fleets put to sea, the Ger. consisting of twenty-

two battleships, five battlecruisers, and numerous cruisers and destroyers. By dawn on the 31st Jellicoe had concentrated twenty-four battleships, three battlecruisers, with cruiser squadrons and destroyer flotillas in the Long Forties, 65 m. ahead was Adm. Beatty with six battlecruisers, four battleships (Fifth Battle Squadron), light cruisers and destroyers. All were steaming towards the Heligoland Bight and, if nothing was sighted by 2.0 P.M., it had been decided that the fleet should retire. The hour to turn arrived and Beatty had actually altered course to the N. when the cruiser *Galatea*, reconnoitring to the E., suddenly reported: 'Enemy in sight.' About 8 m. away she had sighted a steamer being molested by two strange vessels which turned out to be the leading torpedo boat destroyers of the Second Ger. Scouting Group. Fire was opened. Beatty turned his squadron at once to the S.E., but by the time the Fifth Battle Squadron had turned they were 10 m. astern. At 3.20, five Ger. battlecruisers under the command of Adm. Hipper were sighted. They immediately turned about in order to draw Beatty towards the High Seas Fleet of whose existence he was not aware. Both sides deliberately converged and fire was opened at 3.45. At 4.0 P.M. the *Indefatigable*, after 12 min. action with the *Von der Tann* blew up and sank almost without survivors. 26 min. later the *Queen Mary*, smitten amidships by a salvo from the *Derfflinger*, burst into flames, capsized and exploded. With the *Lion* (Beatty's flag-ship) in flames, a salvo struck the *Princess Royal* and Beatty remarked to his Flag Capt.: 'Chatfield, there seems something wrong with our bloody ships to-day. Turn two points to port' (i.e., towards the enemy). The crisis was past. As Brit. shells took effect, the Ger. fire became ragged and the Fifth Battle Squadron was now in action with Hipper's rear. At 4.33 the cruiser *Southampton*, scouting ahead, suddenly sighted the Ger. High Seas Fleet hastening to Hipper's support, and Beatty instantly turned to steam back towards Jellicoe. With support at hand, Hipper turned also and now began the 'Run to the North.'

Meanwhile, the Grand Fleet with Jellicoe flying his flag in the *Iron Duke* was steaming S.E. at 20 knots through mist curtains which were beginning to hang over the sea. Jellicoe, himself, was in a haze of uncertainty due to conflicting reports about the enemy's position. He was prepared to accept battle on his own terms; he was not prepared to face one at a serious hazard and, in the poor visibility, numerical superiority was not necessarily an advantage. So, uppermost in his mind was the question: 'Where is the enemy battlefleet?' No one could tell him. Thus, at about 5.30 the forces at Jellicoe's disposal were in the form of a huge crescent. Its S.W. horn consisted of Beatty's detached squadron engaged with Hipper and retiring on the Grand Fleet; its N.E. horn composed of Adm. Hood in the *Invincible* with the Third Battlecruiser Squadron curving round to

the S. Flung out ahead of the Grand Fleet were cruisers. Into the centre of this crescent Hipper's battlecruisers and the Second Ger. Scouting Group (commanded by Boedicker) were plunging. Further astern was the High Seas Fleet.

At 5.20 the cruiser *Chester*, reconnoitring for Adm. Hood was suddenly overwhelmed by the Ger. Second Scouting Group as it emerged from the mist, but, shortly afterwards, Hood with his three battlecruisers bore down on the enemy and severely crippled three Ger. light cruisers. Boedicker and Hipper, realising that they were being surrounded by superior forces, turned about and fell back on the High Seas Fleet and, during this movement the cruiser *Defence* suddenly found herself facing Ger. battlecruisers. Struck by a succession of shells she blew up. At this moment the *Lion*, much to Jellicoe's surprise as he had imagined Beatty to be much further to the E., came in sight of the *Iron Duke*. It transpired that the cumulative error in their relative positions amounted to 11 m. Instantly Jellicoe flashed the message: 'Where is the enemy battlefleet?' But no one knew. Finally, at 6.10 the *Barham*, leading the Fifth Battle Squadron, passed the vital information. But her report placed the leading Ger. battleship 3 m. nearer the Grand Fleet than was, in actual fact, the case.

Deployment was now imperative and, at 6.10 the much criticised order to deploy on the port wing column was carried out. Beatty, tearing across the front to take station in the van, obscured the already hazy atmosphere with smoke, while Hood wheeled into line ahead of Beatty. The Grand Fleet had now deployed into a single line between the enemy and his base. At 6.31 a salvo from the *Derfflinger* smote the *Invincible* which blew up and sank with only six survivors. Scheer, now under heavy fire and considering himself about to be enveloped turned his fleet four min. later, each ship turning simultaneously, and made off westward. At the same time he launched a destroyer flotilla to cover his retirement with smoke and a torpedo attack. Jellicoe turned away and the fleets fell rapidly apart. Twenty min. later, Scheer again turned to the E. hoping to cross astern of the Brit. line. Instead, he ran into the centre. As the Ger. ships emerged from the mist all the Brit. battleships opened a terrific fire on them. The *Seppeltitz* burst into flames, the *Lutzow* reeled out of line and Scheer again executed his manoeuvre, all ships turning together towards the W. at 7.17. By luck, a Ger. massed torpedo attack synchronised with this second turn away and forced Jellicoe to alter course in the opposite direction—to the E. The fleets separated and Scheer vanished into the mist. Abortive efforts were made by the Brit. battlecruisers to keep contact, but the mist was thickening, darkness was falling and the Brit. fleet, at that time, had never considered night action, or trained for it. Meanwhile, Scheer brought his fleet round to a S.E. course. His plan was simple: to go home as fast as he could by the shortest route, i.e., via the Horns

Reef. Jellicoe imagined he would go for the Enns and sought a favourable position to renew the fight at daybreak. Destroyers were ordered to take station 5 m. astern of his line.

At 10.30 the Fourth Ger. Scouting Group had a brush with the Second Light Cruiser Squadron on the starboard quarter of the Grand Fleet during which the Ger. cruiser *Frauenlob* was sunk. An hour later the High Seas Fleet crashed into the Fourth Destroyer Flotilla. *Tipperary* and *Broke* were disabled; the *Spitfire* collided with the battleship *Nassau* and the *Sparrowhawk* collided with the injured *Broke*. The Ger. cruiser *Elbing*

whereas no such disasters had befallen the Germans, and, while Brit. gunnery was fully equal, if not superior to, the Ger., the quality of Ger. shell was undoubtedly superior. These defects in shell were only made good two years later.

The casualties were: Brit. killed, 9049; wounded, 510; Ger. killed, 2545; wounded 481. In addition to the ships listed in the table below, the *Ostfriesland* was struck by a mine but reached harbour; *Seydlitz* received about 21 hits (heavy shell) and was also hit by a torpedo fired by *Petard*. *Derfflinger* received some 17 hits. According to Ger. accounts *Seydlitz* was almost sinking and had to be

was rammed and disabled by a consort and the *Rostock* was torpedoed. Shortly after midnight the heavy cruiser, *Black Prince*, suddenly found herself within 1600 yards of the Ger. battle squadron and was instantly blown to pieces. There were no survivors. At 1.45 the head of the Ger. line, now on the port quarter of the Grand Fleet cut into 3 Brit. destroyer flotillas. The last contact was at 2.10 when the Twelfth Flotilla destroyed the cruiser *Pommern* and sank a Ger. destroyer. That was the end of the fighting and, when dawn broke, there was no enemy in sight.

Incredible though it may appear, Jellicoe was totally unaware of the events taking place during the night which indicated the movements of the enemy. No ship made a single report to him. The Brit. navy felt that only bad luck had robbed them of complete victory. Though full of faith in its fighting prowess there was, however, a loss of confidence in materiel. Three capital ships had blown up with practically no previous damage,

beached. *König* was struck by about a dozen heavy shells, and the *Grosser Kurfürst* by eight.

See Ger. Official Hist. (Nordsee, Vol. v.); Sir J. Corbett, *Naval Operations* (Official Hist.), Vol. III, 1923; *Official Narrative of Jutland* (H.M. Stationery Office), 1921; also Sir J. R. Jellicoe, *The Grand Fleet*, 1919; R. Scheer, *Germany's High Sea Fleet in the World War* (trans.), 1920.

Juvenal, or Decius Junius Juvenalis (c. A.D. 60-c. 140), Rom. satirist, was the son of a well-to-do freedman of Aquinum. His personal hist. is almost a blank, but the following are likely conjectures. After receiving a liberal education he devoted some time to the study of eloquence. Late in life he developed his genius for satire and incurred the displeasure of the Emperor Domitian by his contemptuous reference in the seventh satire to Paris, the pantomime dancer and court minion. There are also substantial grounds for believing that he once commanded a Dalmatian cohort, that he sojourned in

Egypt, perhaps as an exile, and that he lived on to the reign of Antoninus Pius (A.D. 138-161). His *Satires*, sixteen of which are extant were pub. under Trajan and Hadrian. J. had learnt a lesson from Paris, and wisely husbanded his scathing portrait of the odious Domitian till after that emperor's death. It is a brutal, often disgusting vivid picture that the poet draws of the vicious Rom. society of his day. The third satire, which is an Hogarthian painting of the metropolis, appeals the reader with the glare and variety of its colours, whilst the sixth, which may well be called the 'Legend of Bad Women,' displays to the full the grimness of the writer's humour, the remorselessness of his crude realism, and the sincerity of his spiritual revolt against the immoralities of the age, so that the truth of his own statement, 'Facit indignatio vorum,' is obvious. Like Swift, J. often descends to filth and indecency, and it must be confessed he was far too prone to verbal luxuriance and gaudy rhetoric. Yet at his best he writes with a style as vigorous and trenchant as Tacitus, and his verses are replete no less with the learning of a patient scholar than the worldly knowledge and wisdom of an anet. Machiavelli. The first nine satires are at the same time the finest and most virulent. His other poems reveal greater forbearance, loftier sentiment, but also a falling-off in power. Among the best known annotated eds. are the Fr. ed. by N. L. Achaintre (1810), K. F. Heinrich (1839) and A. J. Maclean's (*Juvenal and Persius*), 1857.

Juvenile Offenders. The policy of the modern criminal law of England is to remove J. O. as far as possible from the contaminating influence of adult criminals and the atmosphere of the police or other ordinary criminal courts. With this object the Children and Young Persons Act, 1932, re-enacting and amending the Children Act, 1908, provides for 'juvenile courts' to hear charges against J. O. (persons under seventeen years of age). A juvenile court must sit in a different building or room from an ordinary court, or, if in the same place, then on different days. A court of summary jurisdiction (*q.v.*), before whom a child is charged with an indictable offence, other than homicide, may deal with the case summarily, by fine up to forty shillings and, in the case of a male, private whipping with six strokes of the birch rod administered in the presence of a police officer and, if he wishes, of his

parent. Any Court which convicts a J. O. of an offence punishable, if committed by an adult, with imprisonment, may order him to be sent to an 'approved school,' or committed to the care of any fit person or under the supervision of a probation officer. These various alternatives are also open to a juvenile court in the case of a J. O. who is proved by a constable or local authority to be beyond control; but where the constable or local authority acts, the court may order the parent to enter into a recognisance to exercise proper care. Any court may remit a J. O. to a juvenile court and there is no appeal from the remission. Sentence of death may neither be pronounced nor recorded against any person under eighteen years of age. It is a conclusive legal presumption that no child under the age of eight is guilty of any offence.

In no country in the world has the question of J. O. caused more study and discussion than in the U.S.A. This has been due in part to the attention centred on it by the persistent efforts of Judge Ben Lindsey of Denver (*q.v.*), and in part to the psychiatric clinics. The conviction has steadily grown in the U.S.A. that juvenile criminals are more the result of evil environment and upbringing than of heredity. For this reason special juvenile courts have been set up in most of the big cities, and the offenders are sent to reform schools and institutions. While under a certain measure of restraint, the inmates, mostly under sixteen years of age, are taught self-help and the straight path, and are mainly released after two or three years at the most. An attempt is made to teach them some trade by which they can earn an honest living, and often they are compelled for a time to report to an officer of the juvenile court. See also CRIMINAL LAW—Criminal Justice Act, 1948.

Juvena, see HIBERNIA.

Juxon, William (1582-1663), archbishop of Canterbury, was educated at Oxford. In 1609 he became vicar of St. Giles, Oxford, and about 1614 rector of Somerton. Among the other appointments that he held were those of president of St. John's College (1621), vice-chancellor (1626), dean of Worcester, bishop of London, and Lord High Treasurer. He was a staunch adherent of Charles I., after whose death he was deposed from office. On the accession of Charles II., however, he was made archbishop of Canterbury.

K

K, the eleventh letter of our alphabet, is a back voiceless stop or guttural tenuis, produced by a closure between the back surface of the tongue and the velum. The original N. Semitic *kaph* was written \aleph or \aleph . The Gk. *kappa* was originally written \aleph , > \aleph (like the Semitic alphabets, the earliest Gk. alphabet was written from right to left). The Gks. had two signs for the *k*-sound, the \aleph and the \aleph . The Etruscans, who took over the Gk. alphabet, did not know the distinction between *g* and *k*, employed the Gk. *gamma* (which they wrote \aleph , i.e. the reversed \aleph ; also they wrote from right to left), both for *g* and *k*; they had, therefore, three signs for the sound \aleph , i.e. \aleph (= \aleph), used only before *e* and *i*, \aleph , used before *a*, and \aleph , employed before *u* (they had no *u*). The Lat. alphabet, derived from the Etruscan, adopted all the three letters (\aleph , \aleph , \aleph), with their phonetic values, but in time it dropped the \aleph (it was retained, however, in a few well-known or official words, such as *calendar*), and retained the sign \aleph for the *k*-sound followed by *u*. In late Lat. MSS. *k* was sometimes employed to represent the hard sound of *c* before palatal vowels, *e*, *i*, *y*. *k* does not occur in O.E., but in early Middle Eng. MSS. it is used as a variant of *c*.

In Middle Eng. *c* had the hard sound of *k* before *e*, *i*, where these were originally guttural vowels. After the Norman Conquest words of Fr. origin came in use in which *c* had the soft sound of *s* before *e*, *i*. For the sake of clearness the words of native origin were written with a *k*; cf. O.E. *cynn*, *cynig*, Mod.E. *kin*, *king*, and Fr. *cit*, Mod.E. *city*. In O.E. *c* had the hard guttural sound initially before consonants. In Middle Eng. *c* was written as *k* before *n* and became silent, e.g. O.E. *cniht*, Mod.E. *knicht*. In Mod.E. there are many words of Scandinavian origin with initial *k*, e.g. *key*, *kilt*, *kirk*, and many foreign words have been introduced, e.g. *koran*, *kangaroo*.

Kaaba, or **Ka'aba** (Arabic, 'chamber'), sacred shrine in the Great Mosque at Mecca. It stands at the centre of the court, is 38 ft. high, 40 ft. long, and 30 ft. wide. Its peculiar sanctity is due to the Black Stone, which is fixed in the N.E. angle. This stone, which is oval in shape, and from 6 to 7 in. in diameter, was venerated in Arabia even before the time of Mohammed, and it is kissed by every Muslim making the pilgrimage. The present *K.*, built in 1026, reproduces the primitive idol temple venerated in Mohammed's day. Mohammed declared that the angel Gabriel gave the stone to Abraham. The *K.* is covered with a cloth of black brocade, replaced annually.

Kaspland, see CAPE OF GOOD HOPE PROVINCE.

Kaarta, dist. of Fr. W. Africa, on the r. b. of the R. Senegal, with rice, maize, and ground-nut cultivation. Cap. Niore. Pop. about 400,000.

Kabardin, autonomous republic of the R.S.F.S.R. in the N. Caucasus. Cap. Nalchik.

Kabba, former prov. of N. Nigeria, now part of the prov. of Ilorin. It lies on the r. b. of the Niger, and covers an area of 7800 sq. m. It is fertile and well cultivated, and good crops of tobacco, indigo, wheat, and cotton are obtained. Other products are rubber, shea, and palm oil. The chief tns. are Lokoja (ceded to the Brit. in 1841), and Kabbu, a Brit. military station.

Kabbala, see CABALA.

Kabinda, see CARINDA.

Kabul, city, cap. of Afghanistan, on the K. R., 80 m. N.N.E. of Ghuzni, at the foot of the Takht-i-Shah Hills, and also the name of a major prov. of Afghanistan. It is of great antiquity, and was formerly walled. It is an anc., largely mud-built city, but is progressing. The K. Univ. was estab. in 1932; but only a medical faculty exists. It is memorable in modern hist. for the massacres of the Brit. and its capture by Gen. Roberts. It is well situated, has a splendid water supply, and is noted for its fruit. The high court of K. is the supreme judicial authority of Afghanistan. Situated at the junction of sev. central Asiatic trade routes, its commerce is extensive, especially in carpets, camel's hair, cloths, and all kinds of skins. There are gov. factories and workshops designed partly for public in (reduction in mechanical appliances. Pop. (estimated) 1,000,000. See Rosita Forbes *Forbidden Road - Kabul to Samarkand*, 1937; and Maud Dyer, *Kabul to Kandahar*, 1935.

Kabul River, rises in the Hindu-Kush, flows E. through Kabul and Jalalabad, and joins the Indus at Attock. It is 270 m. long.

Kabushan, see KUCHAN.

Kabylos, name given to a collection of tribes of N. Africa, chiefly in Algeria, and whose members are of the Berber race. The men frequently serve as Fr. soldiers, the famous Zouave regiments taking their name from the most common dialect of the K. See also BERNI.

Kach, see CUTCHI.

Kadesh, name of sev. places in Palestine, and signifies consecrated. *K.* or *K. Barnea* was the resting-place of the Israelites before entering the Holy Land, and was the scene of the people's demand for water, whence it derived its new name, Meribah *K.* It is named in the story of Abraham (Gen. xiv. 7; *En Meshpat*, 'spring of judgment,' id. xvi. 14). Here Korah (q.v.) headed the revolt against

Moses; Miriam d. here; and the water which had failed was miraculously restored (Num. xvi. xx.). Ain Qadis, about 50 m. S. of Beersheba, seems to meet all the requirements of the narrative and must always have been a centre of meeting for the tribes wandering over the wide wilderness. Some have identified it with Petra, the ruins of which lie in a great hollow among the cliffs of Edom at the base of Jebel Harun, about 50 m. S. of the Dead Sea. Mention is also made of two places called K. in I Chron. vi. 72, 76. One was the K. 'out of the tribe of Issachar,'

RAMSES II. IN HIS CHARIOT AT THE BATTLE OF KADISH

whilst the other was the K. 'in Galleilee, out of the tribe of Naphtali.' K. (or Qadesh) is also the name of an anc. city on the Orontes in Syria, scene of the battle between the Kheta (or Khita) and Ramses II. of Egypt. See further under HITTITES.

Kadi, see CADT.

Kadijah, wealthy widow and wife of the prophet, Mohammed, who had been her steward and *fat* totum, and was twenty-five years of age when he married her, she being forty. She is said to have been the first person to express her belief in his prophetic mission.

Kadikou, see CHALCEDON.

Kadina, tn. of S. Australia, on the Yorke Peninsula, 91 m. from Adelaide. The discovery of copper in the dist. gave birth to the tn. but the mines were closed in 1923. It is the centre of a rich wheat-growing dist. It has a high school and technical school. There are also a race-course and a trotting track. Pop. 5000.

Kadur, dist. of Mysore State, S. India. Area 2700 sq. m. Pop. 350,000.

Kadzand, see CADZAND.

Kaempfer, Engelbrecht, see KÄMPFER, ENGELBRECHT.

Kaffa, trib. state in the Galla country, forming part of Abyssinia. It consists of a large plateau, and is partly drained by the R. Omo. It is regarded as the native home of the coffee plant, which grows there abundantly.

Kaffirs. The K. and cognate tribes are a bold, warlike people spread over a considerable part of S. Africa between Delagoa Bay and Cape of Good Hope, but more especially the E. part of the prov. The Arabic word *kāfir* signifies unbeliever, and the name was applied to them by the Muslims, because they would not be converted to Islam. Ethnically the K. proper are a Bantu tribe quite distinct from the negroid type, being a race of a much higher order of intelligence; but they have, especially farther N., become much intermingled with the Negroes. Historically the K., before the occupation of their territory by the Brit. administration, were by no means a race of untutored savages, of no political pretensions, but could boast innumerable distinct national dynasties which have given them names, to the various tribes reputed to have descended from the real or eponymous ancestry of Zulu, at or about the end of the fifteenth century. The K. formerly did not evince any particular fondness for either pastoral or agr. pursuits, but have now for years been notable for their large herds of cattle. The Bechuana breed of cattle are commercially valuable, and are remarkable for horns of a tremendous span, which made them formidable animals for purposes of war. The ter. occupied by the K. is officially designated the Transkeian ter. The Transkei is bounded on the N.W. by the Drakenberg and Stormberg Mts., on the E. by the Umzimkulu R. and Basutoland, on the N.E. by Natal, and on the S. by Cape of Good Hope; and since 1894, when Pondoland was incorporated, has been divided for administrative purposes into Griqualand E., Tembuland, Transkei, and Pondoland.

Both the Eng. and the Dutch colonists in S. Africa have cause to know the warlike qualities of the K. In the process of colonisation the Europeans and natives necessarily came into frequent collision. Towards the end of the eighteenth century it was agreed between the K. and the colonists that the Great Fish R. should form the boundary between their respective territories; but for over forty years the K. were constantly breaking over the border and surprising the colonists. Col. (afterwards Sir Harry) Smith gained a decisive victory after reaching Grahamstown in 1835; but the vacillating policy of the home gov. towards the K. opened the way to fresh outbreaks, and in 1852 Sir Harry Smith again brought success to the Brit. arms, storming the Amatola Mts. with but scanty forces. Peace reigned for a quarter of a century, when the hereditary enmity between the different Kaffir tribes themselves necessitated further repressive

measures. The last Kaffir war broke out in 1877. It is only within recent years that the extensive ter. comprising the Zulus, Bantus, Hottentots, Swazis, and Pondos can be said to have enjoyed a measure of peace of any permanent promise. Most of the 'Kaffirs' (and Zulus) were ultimately assigned land in reserves and locations, where to some extent they retained their tribal organisation, but this has not solved the problem created by their entry as wage-earners into European agriculture and industry. The differential legislation which regulates the position of the native in his relations with the European community covers nearly every aspect of social and economic life. The

KAFFIR

Representation of Natives Act, 1936, disfranchised all natives of the Union of S. Africa, and provided for their direct representation in the Senate and for the estab. of a Natives' Representative Council. See also KAFFRARIA. See F. Fleming, *Kaffraria and its Inhabitants*, 1853; G. McCall Theal, *History of South Africa*, 1887-91; S. J. du Toit, *Rhodesia Past and Present*, 1897; W. H. Brown, *On the South African Frontier*, 1899; H. Rogers, *Native Administration in the Union of South Africa*, 1933; E. H. Brookes, *The Colour Problem of South Africa*, 1934, and *History of Native Policy in South Africa*, 1927; Lord Hailey, *An African Survey*, 1938; and S. W. Silver, *Handbook of South Africa*, 1875.

Kaffraria is a term loosely applied to the whole of the regions occupied by the various K. tribes, but it is better to confine it to Brit. K. and K. proper, though even these latter names are fast becoming obsolete. Brit. K., which is now known as the Ciskei, and K. proper extend, the former from the Keiskama R. to the Great Kei R., the latter from the Great Kei to Natal. Embracing an area of some 22,000 sq. m., they comprise an extremely

fertile region, lying near the coast, abundant in forests, rivs., and mts. Grain and cattle are produced. Native pop. about 817,000. Brit. K. became a separate prov. in 1847, after the Kaffir war; in 1865 it was incorporated into Cape Colony. In 1873 the Scottish Episcopal Church founded in K. the diocese of the Independent (K.) St. John's. K. proper is composed of the native ters. of Transkei, Tembuland, Pondoland, and Griqualand E. See also KAFFIRS.

Kafka, Franz (1883-1924), Austrian novelist, b. in Prague on July 3 of Jewish parents. His youth and indeed his whole life were overshadowed by the dominant personality of his father. The conflict with authority, and at the same time the urge to placate authority and receive its recognition, found expression in his work as a novelist. His best novels, *Der Prozess* (1925, Eng. trans. *The Trial*, 1937); *Das Schloss* (1926, Eng. trans. *The Castle*, 1930); and *Amerika* (1927, Eng. trans. *America*, 1938), are spiritual autobiographies, portraying in allegory borrowed from dream, and bordering on nightmare, the isolation of the human soul in its attempt to come to terms with a world regulated by laws he cannot understand. These three novels were unfinished at the time of his death. Comparatively little was pub. during his lifetime. It may be suggested that K., a student of psycho-analysis deliberately constructed his novels upon the framework of psycho-analytical theory, consciously employing the symbols and imitating the processes of the unconscious as brought to light by Freud. After taking his doctorate in jurisprudence at the Ger. univ. of Prague in 1906, he became a gov. clerk in the Workers' Accident Insurance Institute. Writing he regarded as a sacred vocation, a 'form of prayer.' His first pub. work (1913) was a collection of short stories, *Betrachtung* ('Observation'). *Der Heizer* ('The Stoker'), afterwards the first chapter of *Amerika*, and *Das Urteil* ('The Sentence') appeared in periodicals the same year, and were pub. in Leipzig in 1916. The following year tuberculosis developed, but it was not until the last year of his life, in 1924, that he went into the sanatorium at Kierling, where he d. *Die Verwandlung* (Eng. trans. *The Metamorphosis*, 1937) was pub. before his death, and also 2 vols. of short stories. A posthumous collection of stories, *Ein Hauch der chinesischen Mauer* (Eng. trans. *The Great Wall of China and other Pieces*, 1933) was pub. in 1931. His reputation was also increased by the miscellaneous writings, letters, and journals, collected and pub. by his friend, Max Brod, in 6 vols., *Gesammelte Schriften* (1935-37). K.'s work showed throughout the influence of Jewish folklore and theological writing. In his later years he entered into the life and work of the Berlin Jewish People's Home. To this period (1923) belongs his close friendship with Dora Diamant, the daughter of a Polish Jewish family, who was studying Heb. in Berlin. She remained with him during the last year of his life. K.'s *Diaries* have been ed. by Max Brod, and trans. into

Eng. (vol. i., 1918, vol. ii., 1949). See also life by Brod (trans. 1937); H. Tauber, *Franz Kafka, an Interpretation of his Works* (trans. 1948); and C. Neider, *Kafka: His Mind and Art*. 1949.

Kagoshima: 1. Prov. of Japan in Kiusiu Is.; pop. 1,591,400. 2. Cap. of K. prov., on a bay in S. of Kiusiu Is., 90 m. S.S.E. of Nagasaki. It has a harbour and lighthouse, manufactures pottery in imitation of 'old Satsuma' ware, cottons, silk, glass, arms, and cigarettes. It was bombarded by the Brit. in 1863, and headed the Satsuma rebellion in 1877. Pop. 181,700.

Kaleleur, or Kaiteur, Falls, cataract of Potaro R., a trib. of Essequibo R. in Brit. Guiana. The riv. falls nearly 500 ft. See further under ESSEQUIBO.

Kaifeng, K'aifeng, Kaifung, or Khai-fong (formerly Pienliang), cap. of Honan prov., central China, 10 m. from the Yellow R. It was the cap. of the Sung dynasty (A.D. 960-1279), and of the empire (1280-1405) as 'Tung-king.' It has possessed a Jewish colony since 1183. Chuchonchen, near by, is one of the chief Chinese marts. Pop. 450,000.

Kailas, spur of the Himalayas, W. Tibet (22,000 ft. high), the sacred 'Paradise' or 'Olympus' of the Hindus. It is between the N. chain of the Himalayas and the Gangri Mts., N.W. of Lake Manasarovar. The Indus, Sutlej, and Brahmaputra rvs. rise from it.

Kailin, see CAILIN.

Kails, see SKITTLES.

Kailyard School, name given to the Scottish writers of sentimental stories of humble, and particularly peasant life, told largely in dialect. The name was originally applied by J. H. Miller in reference to the song *'There grows a bonny briar bush in our kailyard'*. In this category are generally included J. M. Barrie—for his *Auld Licht Idylls* (1888)—and (especially) the novels of 'Ian Maclaren' (John Watson) and S. R. Crockett. The K. S. was short-lived, and it is generally agreed that this somewhat mawkish school of fiction received its death-blow from George Douglas Brown's *The House with the Green Shutters* (1901). For this book, if it set no fashion, certainly had a great influence among younger writers, and even in America, the home of sentimentality. When Andrew Lang asked Brown why he did not show the better side of Scottish peasant life the answer was 'The other fellow did that'—the 'other fellow' being Ian Maclaren, author of *The Bonnie Briar Bush*. It was not, however, to correct Maclaren's picture of Scotland that Brown wrote his novel; it was to complete it; for Brown held that Maclaren's picture of peasant life was partial and untrue to life in that it gave no hint of the malignancy, the hard drinking, and the coarse language that were as much in evidence in Scotland at the time as the undoubted piety and nobility of character there.

Kain, or Qain: 1. Sub-prov. in E. Persia (Iran), in the prov. of Khorasan, an agric. dist. The chief products are carpets, skins, almonds, spices, silk, and opium. Cap. Birjand. Pop. about 200,000. 2.

Tn. in above prov., 60 m. N. of Birjand, was formerly important as a fortified stronghold. Pop. 5000.

Kainite, deliquescent crystalline substance whose formula is $KCl \cdot MgSO_4 \cdot 3H_2O$. It is found in the deposits at Stassfurt (Germany) together with many other salts which owe their origin to the drying up of an inland sea, or salt-water lake. Another locality is Kalusz on the E. Carpathians. K. is used as a fertiliser, and as a source for the preparation of magnesium and potassium compounds, though it is of less importance than carnallite. $KCl \cdot MgCl_2 \cdot 6H_2O$, also found in the Stassfurt deposits.

Kainsk, tn. in the Novosibirsk region of the R.S.F.S.R., on the Trans-Siberian Railway, N.W. of Omsk. Centre of a cattle-rearing and agric. area.

Kaira, or Kheda, tn. 20 m. S.W. of Ahmedabad, in Bombay, India. It is at least as old as the fifth century A.D. Pop. 7400. Rice, cotton, and millet grow in plenty in the fertile dist. of K., which is watered by the Mahi in the S., and the Sabarmati in the W. Area 1600 sq. m. Pop. 691,700.

Kairoan, or Kairwan (Qairwan), city of Tunis, 30 m. S.W. of Sfax, is an ancient holy place frequented by Moslem pilgrims. It has a citadel and numerous mosques. It was taken by the Fr. in 1881. The caravan trade is considerable; the chief articles of commerce are carpets, Morocco-leather goods, and copper wares. Pop. 22,900 (chiefly Arabs). See G. Margais, *Coup d'oeil et plans de la grande mosquée de Kairoan*, 1925.

Kaisarieh, or Kayseri: 1. Tn. in the vilayet of the same name in Asiatic Turkey, situated 160 m. S.E. of Ankara. Pop. about 40,000. 2. Palestine (Kai-ari-eh), see C. SAMARIA.

Kaisar-i-Hind, 'Cesar of India': title applied to Queen Victoria, and subsequent Brit. monarchs as emperors of India.

Kaiser (Lat. Caesar), name given to the emperors of the old Holy Rom. Empire, and of the rulers of the Ger. and Austro-Hungarian empires before the First World War (1911).

Kaiser, Georg (1878-1945), Ger. dramatist, b. at Magdeburg, and educated at the gymnasium there. Began to earn his living at Buenos Aires in an electrical undertaking, but ill health compelled his return to Germany. His earliest dramatic pieces were farces, but he soon found his true bent lay in serious plays turning on social problems. He is recognised as a disciple of the Expressionist school, dealing with types and making much use of allegory. His work shows the influence of Wedekind. Plays: *Rektor Kleist* (1905); *Die jüdische Willur* (1911); *König Hahnrei* (1913); *Von Morgen bis Mitternacht* (1916, an expressionistic drama on the theme of *The Race's Progress* or an old morality play, Eng. trans. 1920); *Die Sorina* (1917); *Die Versuchung* (1917); *Gas* (2 parts, 1918, 1920), one of the best known expressionist plays, illustrating the domination of man by machines of his own devising, a subject also treated in Capek's *R.U.R.* (Eng. trans. 1924); *Der Brand im Opernhaus* (1918); *Hölle, Weg, Erde* (1919);

Europa (1919); *Die Flucht nach Venedig* (1923); *Kolportage* (1924); *Nebe Konstantin Strobel* (1925); *Papiermühle* (1926); *Zweimal Oliver* (1927); *Die Lederkopfe* (1928); *Oktoberfest* (1928); *Hellscherer* (1929); *Es ist gnuq* (1932); *Der Soldat Tanaka* (1940); and *Zweimal Amphitryon* (1943). See study by B. Diebold, 1924.

Kaiser, Henry John (b. 1882), Amer. shipbuilder and general contractor, b. at Sprout Brook, New York; son of a Ger. immigrant. At thirteen he walked the streets of Utica seeking work. At sixteen he was cash boy in a dept. store; then a shipping clerk and, later, clerk in a hardware company; then a gravel and cement dealer. By 1914 he had his own company with a large contract for road paving in Brit. Columbia. Two years later the company had million-dollar contracts in Washington and California. He was sponsor to the building of the Boulder and Bonnaville dams, and also to the Grand Coulee dam, the Vancouver drydock, Long Beach and Los Angeles breakwater, and Grays Harbor jetties, Washington. Also created industrial operations all his own, of which the most important is the Permanente Cement Company, San Francisco. But his outstanding achievement was in shipbuilding during the Second World War at his yards in Richmond. During the war the peak of employment there was 91,000 men. He built mostly Liberties and Victories, to an aggregate tonnage of 7,000,000, or 20 per cent of the entire Amer. production of merchant shipping. Also turned out combat ships, including small aircraft carriers. After the war he added to his enterprises the manuf. of motor cars.

Kaiserslautern, tn. of the Bavarian Palatinate, now included in *Land Rhineland-Palatinate*, Germany. It is noted as an important centre for the production of cotton yarn, sewing machines, boilers, and shoes. The tn. also possesses railway shops and iron works. Its castle, which was built during the twelfth century by Frederick Barbarossa, was destroyed during the eighteenth century. Pop. 62,600.

Kaiser Wilhelm Canal, Schleswig-Holstein, extends from the Elbe above Brunswick to the Baltic at Hohenau above Kiel. It is 61 m. long, and 29 ft. deep. The construction was first begun in 1887, and the canal was first opened for traffic in June 1895. Its construction was only completed in July 1914. In the First World War the naval mutiny at Kiel was the precursor of Germany's downfall. After the war the canal was internationalised. The merchant vessels passing through the canal have aggregated over 21,600,000 net tonnage. See also **KIEL**.

Kaiser Wilhelms Land, former Ger. protectorate in the N. of New Guinea. It was occupied by the Australians in Sept. 1914, and in 1920 was assigned to Australia by mandate of the League of Nations. It is known now as N.E. New Guinea (q.v.).

Kaithal, or **Kythal**, tn. 46 m. S.W. of Ambala, in the Karnal dist. of the E. Punjab, India. Cattle, corn, and blankets are

the chief articles of commerce, but salt-petre and cotton are also manufactured. There are sev. thirteenth-century Muslim tombs. Pop. 12,900.

Kaka, Maori name for a New Zealand parrot, the *Nestor meridionalis*. It is light-brown, variegated with grey on the crown and dark red beneath. The name, like cockatoo, is imitative. The kakapo, also a New Zealand parrot (*Strigops habroptilus*), has green plumage mixed with yellow and brown, and a disk of feathers round its eyes, whence its popular name, owl parrot. It cannot fly, its wings being used only for balance.

Kakaterro Tree, see under **DACRYDIUM**.

Kalafat, see **CALAFATU**.

Kalahari, tract of country in S. Africa, between the Zambezi and Orange R.s., is often called the K. desert, although true desert conditions do not prevail, for many parts are at times covered with grass and scrub, which provide cover for game. It consists of sandy plateaux, containing 'salt pans,' probably remnants of inland lakes now dried up. There is a very slight rainfall, and all the rvs. are periodic, excepting the Okavango, flowing into Lake Ngami. It is believed that good water could be obtained by well-sinking in many parts, and that K. would then provide 20,000 sq. m. of fine ranching country. Prof. E. H. L. Schwartz in 1918 formulated a scheme for restoring the lakes of the K., and so ending the country's drought problem. He claimed (and he claimed, too, that Livingstone was of his opinion) that these lakes had been drained away by the Zambesi, but that by an expenditure (variously estimated up to £5,000,000) the water could be diverted into them again, and not only would the danger of an encroaching desert on S. Africa be avoided, but the very existence of the lakes would cause such a rainfall as to relieve the union of its periodic danger of drought. But in 1945 Mr. Conroy, minister of lands and irrigation, and a party of members of Parliament representing all parties, toured the K. area, and subsequently issued a report to the effect that neither was the Schwartz scheme practicable nor would it produce the results envisaged by its author. Livingstone, Charles John Andersson, Chapman, and Balme were the prin. explorers of the K. a century ago. The Inhab., Bushmen and Bakalahari, live chiefly by hunting and number about 50,000. See G. A. Farini, *Through the Kalahari Desert*, 1886; S. Passarge, *Die Kalahari*, 1907; W. J. Makin, *Across the Kalahari Desert*, 1929; and P. T. Etherton, *Across the Great Deserts*, 1948.

Kalamata, or **Kalamæ**, cap. of the *nomos* of Messenia, in Greece, has been on more than one occasion the scene of political disturbances. It was sacked by Ibrahim Pasha in 1825. The dist. is very fertile. Pop. 28,900.

Kalamazoo, city in the co. of K., Michigan, U.S.A., 144 m. W. of Detroit, on the K. R. and four railroads. Celery and peppermint are grown in the neighbourhood, and paper is manufactured. Pop. 54,100.

Kalat, Khelat, or Kelat, state of Baluchistan, formerly a semi-independent state under the suzerainty of Kabul and now in a tribal confederation of partially independent chiefs, of whom the khan (or wali) of K is the head. Includes also Makran and Kharan. K has an area of 54,230 sq m and a pop (1911) of 233,000 (mostly Moslem). The chief tn is Quetta (q.v.) which has a pop of 64,000. The cap is Kalat, situated on the summit of a hill 6800 ft in altitude. It is a walled and fortified tn, and the residence of the khan. Pop 15,000.

Kale, see BOISSEAU.

Kaleštin, Paul (1861-1918) hetman of the Don Cossacks, and a famous general in the First World War. Less resourceful than Kornilov, he was not in agreement with the latter or with the other delegates to the extraordinary National Congress, Aug 1917, on the vital questions of the reform of the army and the restoration of discipline. Later in the disintegration of the empire into small republics, he became first president and Prime Minister of the anti-Bolshevik republic of the Don Cossacks. The Bolsheviks, however, soon triumphed in this region, and after his defeat at Novocherkassk he lost all faith in his Cossacks and shot himself (Feb 1918).

Kaleidoscope (Gk *kalos*, beautiful, *skopein* form, *skopeo* to see) optical instrument invented by Sir David Brewster in 1817. It consists of a tube about a foot long, along the whole length of which extend two mirrors or reflecting glass plates placed at an angle of 60°. One end of the tube is closed with a metal plate having a small hole or eye glass, whilst the other end is closed with two glasses separated by a number of small fragments of coloured glass. On turning the tube round its axis various gay pictures appear successively before the vision.

Kale-i-Sultaneh, or Chanak-Kale, fortified seaport of Asiatic Turkey on the Dardanelles 20 m S.W. of Gallipoli. It is noted for the manu. of pottery. In the Dardanelles campaign of 1915 it was unsuccessfully attacked by the Allies. Pop 15,000.

Kalendar, see CALENDAR.

Kalelds, see CALEDS.

Kalevala, or Kalewala, national epic of the primitive Finnish race, which was probably composed at different times by various bards. The scattered songs were first collected into a written form by Dr. Topelius in 1823, which ed. was followed by the more complete and systematic one of Dr. E. Lönnrot in 1835. The poem relates the story of Väinämöinen, Ilmarinen, and Lemminkäinen the three sons of Kalewa (Finland), and deals entirely with the ancient mythology and folklore of the early Finns. Longfellow borrowed its metre as some of its characters and incidents for his *Song of Hiawatha*. See Eng. trans. by W. B. Kirby (Everyman's Library).

Kalgan, or Changkaiaku, tn in the prov. of Chahar, Inner Mongolia, China. It is situated near the Great Wall, and lies about 120 m. N.W. of Peiping. It occupies an important position commercially,

as it lies at the foot of a pass on the route from Peiping to Siberia, and is the centre of the tea trade between the two. Pop (estimated) 30,000.

Kalgoorlie, tn and dist of W. Australia formerly Hannans. Gold was first mined there in 1893, and it is now the greatest gold-producing dist. of the continent. Production in 1946 (exceeding £1,000,000 in value). It has an arid climate but the tn has modern amenities and has a water supply pumped 400 m from the coast. K is a junction for the transcontinental line to S. Australia. Pop (tn) 12,000.

Kalguev, see KOIGUEV.

KALI, SIVA'S CONSORT
(fierce manifestation)

Kālī (black) in Hindu mythology, the goddess of death and destruction and the wife of Siva. She is represented as black, with four arms and blood-stained face, breast and palms.

Kalidasa, celebrated dramatist and poet of India. A date of birth places him in the first century B.C., but it is more probable that he lived in the third century A.D. He wrote three plays: *Sakuntala* (The Lost Ring trans. by Sir Win. Jones 1789), *Vikramorjaya*, and *Malavikāgnimitra*, while the two epics *Raghuvamśa* and *Kumārāsambhava* have also been ascribed to him as well as some lyrical pieces. It is probable that there were really three poets. See A. A. Macdonell *History of Sanskrit Literature*, 1900, and A. Hillebrandt, *Kalidasa, ein Versuch zu seiner literarischen Würdigung*, 1921.

Kalings, one of the nine ancient kingdoms of S. India, extending according to tradition, along the E. coast of Madras from 13° 30' to 18° 40' N.

Kalinin, Mikhail Ivanovich (1875-1946), Soviet Russian statesman, b. in a vil.

near Tver (now Kalinin), worked in St. Petersburg at the large Putilovka metal works, a hotbed of revolution. Here he joined Lenin's 'Union of Struggle for Freedom,' the precursor of the Social Democratic party, was frequently arrested for revolutionary activities, and eventually collaborated with Stalin and Gorky. K. belonged to the moderate wing of the party, and in 1917 he was often in conflict with Lenin who realised that there could be no compromise with Leninism. When the party was converted to a proletarian dictatorship K. followed his leader, though still a moderate at heart. Russia's first president, Sverdlov, who in 1919 had been president and first secretary of the party but, when these two functions were separated, Stalin succeeded Sverdlov in the party and K. took Sverdlov's place in the State. The choice was Lenin's, who realised that the head of the State should be known for his tolerance and contact with the people, especially with the peasantry. K. was the ideal man, for he was of peasant origin himself and was always accessible to peasants from whatever part of Russia they came to visit his chancellery. During the period of intra-party strife when Trotsky and Rakovsky led the extremists, K. sided with the moderates, led by Bukharin, Tomsky, and Rykov. Stalin adopted the middle course. But when in 1929 Stalin attacked the kulaks and collectivised the farms, K., though aware from these methods, again followed his party leader. He became president of the Soviet Union in 1923 and held office until March 19, 1946, when he retired for health reasons. His official title was 'President of the Presidium of the Supreme Council of the U.S.S.R.' for the authors of the revolution disliked titles and distinctions. Until 1940 Stalin was only first secretary of the central committee of the All Union Communist party, and the president was still by name only chairman of a committee for the principle of power dispersed in the anonymous people still permeates the constitution of the world's most centralised regime.

Kalinin (formerly Tver), region of the R.S.F.S.R. in the Moscow area. It lies on the S. slope of the Valdai Hills, and is watered by the Upper Volga and the W. Dvina. Also the name of the cap. of the region, situated at the junction of the Volga with the Tver. It has textile and leather factories. The whole dist. was the scene of desperate fighting in Nov. Dec. 1941 and Jan. 1942 during the last German drive on Moscow and in the great Russian counter-offensive. Pop. of in, 216,000.

Kaliningrad (formerly Königsberg) city and former fortress, cap. of Prussia on the Prugel, 6 mi. from the Frisches Haff, and 25 mi. from Pillau on the Baltic. It is now in the R.S.F.S.R. It consists of three main parts: the Altstadt (which grew up round the castle of the Teutonic knights, 1255), the Kneiphof, and Löbenicht. From 1525 to 1618 it was the residence of the duke of Prussia. Its river communication with Pregel, the Kurische Haff and Memel makes it very important, and the

tonnage of ships entered (1938) was above 1,200,000 (cleared 500,000). Among its chief buildings are the Gothic cathedral (founded 1333) with the 'Stoa Kantiana' adjoining, the univ. (1544), famous since the time of Immanuel Kant, who was born and lived there (1724-1804), and the Schlosskirche where both Frederick I. and William I. were crowned, and a great part of the city, including some of the above-mentioned buildings were either destroyed or very heavily damaged in the Second World War. Hemp, flax, tow, flour, corn, sugar, and timber were among the pre-war exports, coal, iron, and herrings among the imports. There were also manufactures of machinery, ironware, bricks, lime, yarns, woven textiles, wood pulp, chemicals and leather. Much of the remaining factory plant was subsequently taken into Russia by way of reparations. The marchpane (marzipan) of K. was well known.

The struggle for K. in the Second World War involved some of the most bitter and protracted fighting on the E. front. It may be said to have begun on Jan. 27, 1945, when the Russians, having encircled Poznan, broke through the German Lake defences S.E. of K. But the outburst of defence was especially strong, and it was not until Feb. 23 that the Russians succeeded in taking Poznan, and advancing in the K. area. The Gers. however, made a powerful counter-attack from K. itself, and the city was not captured by the Russians until April 9. Pop. (1939) 18,000. See further under EASTERN FRONT or RUSSO-GERMAN CAMPAIGN IN SECOND WORLD WAR. See W. Schultz, *Königsberg und Ostpreussen zu Anfang 1913*, 1901, and K. Bluhm, *Königsberg in Preussen*, 1930.

Kalinjar, isolated hill fortress and shrine in India, on a spur of the Vindhya Mts. overlooking the plains of Bundelkhand in the United Provs. K. is of extreme antiquity, and is mentioned in the *Mahābhārata*. On all sides of the hill are ruins of ancient status and temples, the latter including the celebrated *Shri Kaulia Mahadeo*.

Kalisz, 1 former prov. of Poland, covering an area of 43,750 sq. m. It is divided into eight dists. The surface is flat and the soil fertile. The Prozna and the Warta are the chief rivers. The inhab. is almost entirely occupied in agriculture, a few manufactures—cotton, sugar, and paper being carried on before the Second World War. It is now included in the prov. of Lodz. 2 chief town in the prov. of Lodz, Poland, on the Prozna, 130 m. W. S.W. of Warsaw. It is the ancient *Polonia* of Ptolemy, and contains remains of great antiquity. In 1706 the Swedes were defeated here by Augustus of Poland, and in 1813 the treaty of alliance was signed between Prussia and Russia. The chief industries are distilling, weaving, tanning, and tobacco. It was taken by the Russians from the Poles in the second half of Jan. 1915, in the course of their final offensive through the Polish plain. Pop. 63,300.

Kalkstickstoff, or Nitrolime, mixture of

calcium cyanamide, CaCN_2 , and carbon, made by heating calcium carbide in nitrogen to a temp. of about 1000°C . It is largely used as an artificial manure, and the nitrogen required for its manuf. is obtained from the atmosphere by the fractional distillation of liquid air.

Kallio, *Kyoosi* (1873-1940), Finnish statesman and patriot. Member of the Finnish Diet, 1901-37; Speaker during fifteen sessions from 1920; leader of the Agrarian party; minister of agriculture, 1917-22. Minister of communications, 1925. Prime Minister, 1922-24, 1925-26, 1929-30, and from Oct. 1936 to Feb. 1937. President of Finland, 1937-40. Resisted the Russian demands in 1939, but his gov. was compelled to yield in 1940 as the result of Mannerheim's defeat in the war with Russia, and K. resigned (Nov. 1940) on account of ill health through his anxieties, dying a few days later. See also **FINLAND**, *Finnish-Russian War, 1939-1940*.

Kalmar, fortified seaport tn. of Sweden, 47 m. N.E. of Karlskrona, is the cap. of K. prov. (area 1456 sq. m.). It is built mostly of wood on the is. of Quarholm in K. Sound, and connected with the mainland by a bridge of boats. The chief manufs. are matches and paper. It has a good harbour, and does a considerable coasting trade. There is a fine seventeenth-century cathedral and a castle dating from the twelfth century. In 1397, by the K. Union, the crowns of Denmark, Norway, and Sweden were united under the sovereignty of Queen Margaret. Pop. (tn.) 228,400; (prov.) 232,000.

Kalmthout, Belgian tn., 12 m. N. of Antwerp, in the heart of the picturesque Kempen (Campine) heath. It is a favourite country resort of the Antwerp citizens. There are extensive tree nurseries. Pop. 8500.

Kalmucks, *Kalmuks*, or *Calmucks*, div. of the Mongol race, living in parts of Asia and Russia, chiefly in Zungaria, Koko-nor, and parts of N. Tibet, along the steppes of the Volga, and in the region of Astrakhan. They are a nomadic race, dwelling chiefly in tents. In 1771 a large body of these people left Russia owing to their discontent at the Russian rule, journeyed to China, and settled there. At the present time they are divided, some being in Russian, and some in Chinese ter. The K. are of Mongolian origin, and made the last Asiatic irruption into the E. European plain. They were defeated by the Russians in the seventeenth century, and most of them withdrew into Asia. To-day only small groups remain near the Volga. Ust-Koksu is a Kalmuck trading centre in the Khakas Autonomous Region, and contains about 100,000 inhab. The Kalmuck Autonomous Republic (dissolved in 1946, and divided between the Stalingrad, Rostov, Stavropol, and Astrakhan regions of the R.S.F.S.R.) had a pop. of no more than 221,000, despite its great area.

Kalocsa, tn. and Rom. Catholic archiepiscopal see, Hungary, a few miles from the E. b. of the Danube, 86 m. S. of Budapest. Here is a beautiful old cathedral, an archiepiscopal palace, and an observatory.

Trade in wine, fruit, flax, and cereals. Pop. 15,000.

Kalomo, tn. of N. Rhodesia, Africa, 90 m. N.E. of the Victoria Falls. It was once the centre of administration now transferred to Livingstone. Pop. 5000.

Kalong, Great, see under **FRUIT-BAT**.

Kalpa-sūtra, or **Kalpa-soutra**, name of certain Sanskrit writings dealing with the ceremonial connected with a Vedic sacrifice. It is also the name of the most sacred book in Jain literature. See Jacobi, *The Kalpa-sūtra of Bhadrabahu*, 1879, and A. Weber, *Sacred Literature of the Jains* (trans.), 1893.

Kalpi, or **Calpee**, tn. in Jalaun dist., United Provs., India, on the r. b. of Jumna, 15 m. S.W. of Cawnpore. Chief trade, cotton. Pop. 10,600.

Kaluga: 1. Region of the R.S.F.S.R. The surface is an elevated plain, and the soil is infertile and incapable of producing crops sufficient for the inhab., but contains coal and iron, marble and potter's clay. The chief riv. is the Oka. Pop. 1,387,000. 2. Tn., cap. of above region, on the Oka, 95 m. S.W. of Moscow. It manufs. leather, tallow, glass, mats, and paper, and has iron foundries, cotton mills, sugar refineries, and tanneries. Its capture by the Gers. in 1941 during their invasion of Russia increased the menace to Moscow, but, in their counter-offensive towards the end of the year the Russians recaptured it (Dec. 30). Pop. 89,400.

Kāma, or **Kāmadeva**, in Hindu mythology, the god of love, the son of Brahmā of Dharmā, and the husband of Ratī (voluptuousness). He was destroyed by Siva, whom he attempted to seduce, but was afterwards reborn as the child Pradyumna (Cupid).

Kamakura, Jap. coastal tn., S.W. of Yokohama, on the bay of Sagami. There are numerous shrines visited by tourists, and a statue of Buddha (Daibutsu) 50 ft. high. From 1192 to 1333 K. was the cap. of the Shogunate, and had 750,000 inhab. Pop. 40,000.

Kambuiya, see **САМУЙС**.

Kamohaka, peninsula, about 750 m. long, in the N.E. of Asia, between Bering Sea and the sea of Okhotsk, forming 40 per cent of the Khabarovsk region of the U.S.S.R., and formerly included in Siberia. Its area is 1,038,996 sq. km. (401,052 sq. m.). Cape Lopatka forms the S. extremity. Two parallel ridges of mts. occupy a great portion of the interior, running S.W. to N.E. From N. to S. is a range of volcanic mts., most of them extinct. The highest peak is Klutchevskaya, 15,750 ft.; its latest eruption occurred in 1854. Above 5850 ft. all the mts. are snow-crowned even in summer. There are hot springs near the volcanoes. The climate is more severe than that of similar lats. in European Russia. Along both the W. and E. coasts there is snow, rain, or fog on most days of the year. On the S.E. are the bays of Kamchatka, Kronotski, and Petropavlovsk. The chief riv. is the K., 300 m. long. Most of the N. part of K. is covered with vegetation of the tundra type. Excepting on the highest slopes of the mts., the remainder is

forested. There are splendid forests of spruce in the S., where the aspect of the country resembles parts of Sweden. The larch and pine are also common. Fishing and hunting are the chief occupations; salmon and other food fish are plentiful, and bear, fox, sable, seals, and squirrels supply furs, which are largely exported. Salmon is the very basis of life in K., and the river teem with this fish. There are flocks of hundreds of wild sheep. Farming has been introduced under state supervision. Agriculture, however, is limited to the S. of the peninsula, and even there it is almost impossible to grow wheat. Copper, iron, mica, and sulphur are found, and in the milder climate of the interior rye, barley, and vegetables are cultivated. The mts. and upper slopes of the valleys around the central depression are inhabited by Koryaks and Lamuts. The Koryaks are, in the main, nomads, engaged in reindeer-breeding, and dwelling in tent-wise constructions of reindeer-skins stretched over wooden frames (*yurtas*). The Lamuts, who dwell in the valleys, are also engaged in breeding reindeer, but are engaged in hunting in addition. In the S. half of K. there are a great many small settlements, strung out along the valley in the central depression, and along the valleys of the W. coast. Large mechanised canneries have been established in connection with the salmon fisheries. The administrative centre and chief port of the whole region is Petropavlovsk, situated on the N. shore of Avatcha Bay, surrounded by mts., forests, and bay, surrounded by mts., forests, and good meadow land. It is an air and naval base, and has shipbuilding yards, and a large fish-canning factory. Some 15,000 colonists came into the K. region between 1930 and 1933, evidently reflecting some considerable economic development. Pop. (1939) about 60,000.

Kamel, Hussein (1853-1917), first sultan of Egypt. He succeeded Abbas Hilmi in Dec. 1914, the Brit. Gov. deposing the latter in the fourth month of the First World War because it was manifest that he was making every preparation to side with the Turks and Germans. Two desperate attempts were made on his life within a year of his accession, but he never relaxed in his unswerving loyalty to Great Britain. His broad outlook on his country's welfare and his intimate and liberal acquaintance with the fellahin made him the trusted adviser, both when he was prince and later when he had become sovereign, of all the Brit. administrators of modern Egypt. On his death in 1917 he was succeeded by his brother, Prince Ahmed Fuad.

Kamel, see HAMI.

Kamenets-Podolsk, tn. In Russia, in the Ukrainian S.S.R., cap. of the K.-P. region, is on the Smotritsch, a trib. of the Dniester, 240 m. N.W. of Odessa. It was annexed to Russia in 1795. In the Russian offensive of 1944 the tn. was taken by Marshal Zhukov on March 27. Pop. 51,000.

Kamenev, Lev Borisovich (real surname Rosenfeld) (1883-1936) Russian revolutionary official, b. at Moscow, son of a Jewish engineer. Joined the Social Demo-

crats 1901. Banished from St. Petersburg 1908; returned to Russia 1914. Exiled permanently to Siberia, 1915. Back in Petrograd 1917. One of Russia's representatives at Brest-Litovsk, March 1918. Presided over Moscow Soviet. Commissar of trade; and, on death of Lenin, chairman of council of labour and defence. In 1926, when K. joined Trotsky in opposition, he was deprived of office. In 1927 expelled the party; readmitted 1928. Executed as a Trotskyite 1936.

Kamenskaya, tn. on the Donetz R. in the Ukraine. Connected by rail with Kostov. Pop. 120,000.

Kamensk Uralsky, tn. in the Chelyabinsk area of the R.S.F.S.R. Pop. 59,800.

Kamenz, tn. in Saxony, Germany, on the Schwarze Elster, 30 m. N.E. of Dresden. It is the bp. of Lessing, the Ger. dramatist. The chief manufactures are glass, pottery, and tobacco. Pop. 12,100.

Kamerlingh Onnes, Heike, see ONNES.

Kamerun, see CAMEROON.

Kames, Henry Home, Lord (1696-1782), Scottish lawyer and philosopher, b. in Berwickshire. He was raised to the bench in 1752, and in 1763 was made one of the lords of judiciary. Lord K. was greatly interested in agr. enterprise. See life by A. F. Tytler, Lord Woodhouselee, 1807.

Kames, vil. of Argyllshire, Scotland, in the Kyles of Bute, 2 m. S. of Tighnabruich.

Kamesburgh, see PORT BANNATYNE.

Kamet, Himalayan peak, 25,413 ft., the highest summit yet climbed by man. The first and second ascents were both made in 1931 by a Brit. party and native guides and porters led by F. S. Smythe.

Kamienna Gora, see LANDSHUTT.

Kaministiquia, or Kaministiquia, tn. of W. Ontario on the K. R. (g.r.), 21 m. W. of Fort William, on the Canadian Pacific Railway. There is zinc and silver mining in the dist. Pop. 3,000.

Kaministiquia River, rises in W. Ontario, Canada, S.W. of Lake Nipigon, and flows into Thunder Bay, Lake Superior, passing over the Kakabeka Falls (130 ft. high).

Kamloops, city of Brit. Columbia, Canada, on the Thompson trib. of the Fraser R. It is the distributing centre of a mining and ranching dist., and a junction on the Canadian Pacific Railway. Pop. 6,000.

Kampala, largest township in the Uganda Protectorate, and the commercial centre of Uganda. It is connected by rail with Mombasa (879 m.) and the main line of the Kenya and Uganda railway extends to K. via Nakuru, Eldoret, and Jinja. There is also a railway from K. to Port Bell (74 m.). K. is a well-planned and growing tn. with broad streets lending itself to attractive development. Its pop. comprises about 700 Europeans, 3,000 Indians, and 500 Goms working in and around K., but it is difficult to estimate the native African pop. as most are workers from outlying vils. There are many excellent shops, offering practically every class of goods, and catering primarily for Europeans. The developed area, of which K. is the nucleus, comprises a number of hills,

each tending to be appropriated to some special purposes. Within the municipal area are the hill of Nakasero, the gov. residential area with the commercial quarter and gov. offices at its foot; 'Old' K.—the original and true K., and the gov. headquarters until their transfer in 1905 to Nakasero; and Kilolo Hill, occupied by the wireless and meteorological station. On the summit of Nakasero are the remains of the old gov. fort and a small museum, while its slopes are now largely an Asiatic residential suburb. At Mengo, beyond the township limits, are the kabaka's (native king's) palace, and headquarters of native gov. Also beyond the township limits are the hill of Namirombe, on which are the Protestant cathedral (All Saints Anglican church) and the C.M.S. Mengo Hospital; Rubaga Hill, with the Roman Catholic cathedral and headquarters of the Mill Hill fathers; Makerere hill, on which are Makerere College, the leading educational institution in Brit. E. Africa, and other gov. educational estab.; and Mulago Hill, where is the gov. central native hospital. K. is the hub from which radiate many of the more important arterial roads—westwards to Fort Portal, S.-westward to Masaka and Kigezi, northward to Masindi, and across the Victoria Nile to Gulu and Lira, and eastward over the Nile bridge to Jinja. K.'s golf course is one of the most attractive courses in E. Africa. Indian and Goan communities maintain a number of social and sports clubs in K. The Brit. flag was hoisted at K. Fort on April 1, 1893, when a provisional Brit. protectorate was proclaimed, thus ending the reign of the chartered company.

Kampen, old fortified seaport tn., on the Yssel, in the prov. of Overijssel, Holland, is 9 m. N.N.W. of Zwolle. It was one of the Hanseatic tns., and had a thriving trade which declined owing to the silting up of the harbour. Jetties have been constructed, and it is again flourishing. The chief manufs. are blankets, machinery, cigars, and bricks. Pop. 22,800.

Kamperduin, coastal vil. of the Netherlands in the prov. of N. Holland, off which was fought the battle of Camperdown (q.v.).

Kämpfer, Engelbert (1651-1716), Ger. doctor and explorer, b. at Lemgo, Lippe. He travelled in S. Russia, Persia, Arabia, India, Siam, Java, and Japan, and wrote *Geschichte und Beschreibung des Japanischen Reichs*, ed. by C. von Dohn (1777-8).

Kamrup, dist. of Assam, Pakistan, in the Brahmaputra valley, has an area of 3800 sq. m. The cap. is Gauhati. The chief products are rice, mustard, and tea; the manufs. are silk, brass ware, and filigree work. Pop. 668,000.

Kamtohatka, see KAMCHATKA.

Kanakas, term used by the Polynesians to describe th. mselves, *kanaka*, or *tanaka*, signifying man. The word is used indiscriminately by white races to describe all S. Sea Islanders. The Islanders were formerly forced into labour and exported to the Queensland sugar plantations of Australia. The traffic was prohibited in 1906.

Kanara: 1. North, dist. in the S. of Bombay prov., India, has for its W. boundary the Arabian Sea. It contains extensive forests, yielding teak and bamboos and abounding in tigers, leopards, and bears. The chief industries are sandal-wood carving and salt-working. The chief tn. is Karwar. Area 3910 sq. m. Pop. 480,000. 2. South, dist. on the Malabar coast of Madras, India, has an area of 4000 sq. m. It exports coffee, copra, rice, spices, tiles, and wood. The chief tn. is Mangalore. Pop. about 2,000,000.

Kanaris, or **Canaris**, Constantine (1790-1877), (ik. patriot, b. in the is. of Psara. In the cause of Gk. independence he blew up the Capitan Pasha's flagship with 2000 Turks (1822), repeated his feat at Tonodos in the same year, and wrought further damage to the Turkish fleet in 1824-25. He became minister of marine (1854-55) and, after the revolution of 1832, became premier to the new king.

Kanauj, anct. city in Farrukhabad dist., India, 50 m. N.N.W. of Cawnpore, is on the Kali Nadi R., trib. of the Ganges. It was formerly one of the most important cities of India, and is surrounded by ruins of its decayed greatness. It manufs. otto of roses, paper, and cotton goods. Pop. 21,900.

Kanawha, Great River, see GIKKAU KANAWHA.

Kanazawa, tn. on the W. coast of Honshu Is., Japan. Pop. 163,700.

Kanchipuram, see CONJEVERAM.

Kandahar, or **Candahar**, cap. of the prov. of K., in S.E. Afghanistan. It is situated about 280 m. S.W. of Kabul, and at a height of about 3500 ft. above sea level. The city itself, which is well watered, is a place of great importance as a trade centre, amongst its chief products being silk, felt, and fruit. According to tradition it was founded by Alexander the Great, and for about thirteen centuries practically nothing is known of its hist. In 1839 it was occupied by the Brit., and in 1842 Gen. Nott successfully defended it. In 1879 the Brit. again took possession of it, and in 1880, when besieged by Ayub Khan, it was relieved by Maj.-Gen. (later F.-M. Earl) Sir F. S. Roberts. Pop. with suburbs, 60,000.

Kandalaksha, White Sea port in the Murmansk region of the R.S.F.S.R., and the head of the gulf of the same name. On the Leningrad Murmansk railway, electrified from K. to Murmansk, and also on a line into Finland. Developed under the five-year plans, there are manufs. of paper and aluminium, and a fish-canning industry.

Kandavu, or **Kandabu**, Island, one of the Fiji group. Mountainous and very fruitful. Area 209 sq. m. Pop. 15,000.

Kandersteg, Swiss tourist resort, on the Bernese Oberland. Lies at a height of 7000 ft.

Kandy, tn. in Ceylon, 85 m. N.N.E. of Colombo, was formerly the cap. of the is. It is splendidly situated 1700 ft. above sea level, on the shore of an artificial lake. The Buddhist temple, Dalada Maligawa, is visited by pilgrims for the supposed tooth of Buddha it contains, and also its

anct. MSS. Near by are the botanical gardens of Peradeniya. Has the ruins of the palace of the old native kings. Their throne, long kept in England by the Brit. royal family, was formally presented to Ceylon in 1934 on the occasion of the duke of Gloucester's visit. Pop. 62,000.

John H. Stone

HANOI: ENTRANCE TO THE TEMPLE OF THE MOON

Kane, Elisha Kent (1820-57), Amer. explorer, b. at Philadelphia. He took his medical degree in Pennsylvania Univ. and became a surgeon in the navy, and visited India, China, Africa, and Mexico. Twice he went on Arctic expeditions to discover traces of Franklin, and received a gold medal from the Royal Geographical Society. He pub. *The U. S. Grinnell Expedition in Search of Sir John Franklin* (1853) and *Arctic Expeditions: the Second Grinnell Expedition* (2 vols., 1856).

Kane, tn. and summer resort in McKean co., Pennsylvania, U.S.A., 75 m. E.S.E. of Erie. There are railway works, lumber mills, and glass works. It is an oil and gas dist. Pop. 6,100.

Kanem, state of Fr. Equatorial Africa, N.E. of Lake Chad. It is now only a dist. of the colony of Chad. Muo is the chief tn.

Kangaroo, or *Macropus*, genus of marsupial quadrupeds almost entirely confined to Australia and the neighbouring is., though a few species are found in New Guinea. Modern classification regards the K. family as comprising twenty-one genera, two belonging to New Guinea and five being fossil; but *Macropus* remains the chief genus. Ks. form one of the most prominent and characteristic features of the fauna of these lands. Ks. vary considerably in size; the great K. attains a length of 8 ft., including the tail, whereas the wallabies (brush-Ks.) and rat-Ks., both of the same genus, are comparatively

small. They are distinguished primarily by the possession of a pouch (*marsupium*), in which they carry their young at birth and to which the latter go for shelter after they are able to run and jump. They possess six teeth in the upper jaw, and two in the lower, the canines being absent or rudimentary. The head is small compared with the rest of the body, and tapers forward. The shoulders and fore limbs are feebly developed, but the hind limbs are greatly elongated, and by means of these and the powerful tail the K. is able to take long leaps and make swift progress. The fore feet have five toes, each furnished with a strong, hooked claw. The hind feet are extremely long and narrow, and possess only four toes, the centre one, corresponding to the fourth of the human foot, being greatly developed, and terminating in an elongated nail, resembling a hoof. Ks. are formidable consumers of pasture, and browse on grass and various kinds of herbage and are hunted by colonists as much on account of the damage they do in eating grass required for cattle and sheep as for sport. They are by nature timid and nocturnal, except when brought to bay, when they will defend themselves with their sharp claws and powerful hind legs. The fur is soft and woolly and lighter in tint below than above, the skin being of value for both shoe and glove leather. The flesh is said to be nutritious and savoury, resembling mutton, the tail especially being considered a delicacy. In the Zoological Gardens of London the Ks. and wallabies breed freely.

Kangaroo Island, in St. Vincent Gulf, S. Australia, is cut off from Yorke's Peninsula by Investigator Strait. It was discovered by Capt. Flinders in 1802. It has salt deposits. Its area is 1719 sq. m. Pop. 600.

Kangaroo-rat, see *POUCHED MOUSE*.

Kangavar, or Kengavar, small dist. of Persia (Iran) between Hamadan and Kermanshah, once forming a separate gov., being held in fief by the family of a deceased count official, but since 1902 included in Kermanshah. The dist. is fertile and contains thirty vns., of which the largest, K., has 2500 inhab.

Kangchenjunga, Himalayan peak on the Sikkim frontier, N. of Darjeeling (29,225 ft.). Its position at the S. of the Himalayan range favours the formation of ice rather than snow. It is a strikingly beautiful mt., but its ice-field, combined with its generally steep angle, makes it excessively difficult of ascent.sev. unsuccessful attempts have been made, the party led by Dyhrenfurth (including the Eng. climber Smythe) reaching a height of 21,400 ft. Another Ger. party, led by Paul Bauer, visited the mt. in 1936. See F. S. Smythe, *The Kangchenjunga Adventure*, 1930.

Kangra, or Nagarkot, tn. and former cap. of a dist. of the same name in the Jullunder v. of the E. Punjab, India, 80 m. E.N.E. of Amritsar. The famous temple of Devi Rajreshri was destroyed by the earthquake of April 4, 1905. Pop. 5000. The dist. of K. lies between the

Jullundur dist. and the S. Himalayas. Dharmasala is the cap. There are wide tea plantations, and rice, wheat, and maize are grown. Area 9978 sq. m. Pop. 900,000.

Kanjur, *see under* DARDISTAN.

Kanjut, *see* HUNZA.

Kankakee, city in Illinois, co. seat of K. co. on the K. R., U.S.A., 56 m. S.W. of Chicago. It has limestone quarries and paper-mills, and manufs. bricks, furniture, agric. machinery, and cigars. It contains the Illinois State Hospital for the Insane, and many fine public buildings. Pop. 22,200.

Kano, prov. and tn. of N. Nigeria. The K. prov. in its present form comprises 30,000 sq. m., and it is one of the chief centres of the Hausa Moslems. It adjoins Bornu on the E., Bauchi and Zama to the S., Sokoto on the W., while the international Anglo-Fr. boundary forms its N. limit for more than 200 m. This prov. has fewer and less marked features of geographical or picturesque interest than any other Nigerian prov. On the whole it presents a uniformly 'park-like' appearance. Over thousands of square miles almost every acre is or has been cultivated, and the hedged or fenced roads and fields give an impression of civilisation and ordered industry which is unexampled in tropical Africa. Generally speaking K. prov. consists entirely of flat or gently undulating plains; its rvs.—as a rule dry for seven or eight months of the year—flow in almost imperceptible valleys in sandy channels. The scenery is more diversified by hills to the W., S., and S.E. borders, while N. of the lat. of K. and E. of its meridian scarcely a single stone or rock of any sort can be found. By far the greater part of the prov. drains into Lake Chad. The watershed between the Chad and the Niger systems is a line drawn through the centre of the prov. S. by W. from a point between Katsina and Kazaure. The prin. rvs. are the Chalawa or Hadejia R., rising in the extreme S. of Katsina, running N., then E. by N., flowing 12 m. from K. and past Hadejia, beyond which it joins in a network of swamps; the Katagum R., which joins another stream to form the Yo R.; and the Kogin Kano, Duduru, and Izi. The prov. of K. contains nine separate units of native administration, the supervision of which is distributed among four administrative divs., each in charge of a political officer, while the resident supervises the whole. These divs. are K., comprising the emirate of K. alone (12,987 sq. m.; pop. 2,000,000); Katsina, comprising the emirates of Katsina, Daura, and Kazaure (area 9495 sq. m.; pop. 570,900); Katagum, comprising the emirates of Katagum, Messau, and Jomaari (area 4374 sq. m.; pop. 279,952); Hadejia, comprising the emirates of Hadejia and Gumel (area 3870 sq. m.; pop. 138,705). The K. emirate is the most important of the native administrations of Nigeria. The emir presides over an executive council of four of his chief officials, and the council has regular meetings with the resident of K. The revenue of the K. emirate in 1936-37

was £206,720, and no other native authority approaches its exceptional position, the nearest being Sokoto, with an estimated revenue (in 1936-37) of £95,000. The larger tns. of K. are usually protected by circular walls of sun-dried bricks plastered over with mud and surrounded by a moat. The wall of K. city is 30 ft. high, 20 ft. broad at the base, and has a circumference of 12 m. It has turrets all round, with slits through which arrows or other missiles could be discharged. The duty of repairing the walls devolved on the various vils. of the parent tn. The introduction of walled tns. is traditionally ascribed to the founders of the Hausa states. The vils. of the pagan tribes of K. are located on the tops of hills or in forest clearings. These sites are generally unhealthy, and the hill sites are uneconomic, for much labour is required for the transport of water and supplies. The vils. are protected, not only by walls of stone, but also by cactus hedges, which also serve as boundary marks for compounds and farms. Among the Shiwa the houses are built in a circle round an open space, which generally contains a large zarba or cattle kraal. The occupations of K. are hunting, fishing, pastoral and agric. pursuits, bee-keeping, manuf. of silver wire and glass, dyeing and embroidery, pottery, spinning and weaving, and the preparation of salt. Doubt has been expressed as to whether the careful and industrious system of agriculture practised around K. can survive for much longer if destruction of vegetation continues at the present rate.

The township of K. has grown up outside the walls of the native city, and contains a considerable number of Europeans, as well as non-Europeans, the majority of whom approximate more closely to European ways of life than the local natives. It thus became obvious at an early stage in the application of the principle of 'indirect rule' (i.e. through native institutions) that the emir of K., though a long-established, powerful native authority, would experience difficulties in dealing with the complex elements of the township and the changed economic and administrative conditions introduced by such developments. At the present time the township area at K. has its own administration under a Brit. magistrate, though an arrangement has been made by which the Sabon Gari, the part of the township inhabited mainly by stranger natives, has been given an African ward-head approved by the emir, and assisted in judicial functions by representatives of the more important tribal groups. The native administration has installed a water supply and electric light in K. city; it has a large and well-equipped hospital, a middle and ten elementary schools, a survey estab., and is responsible for the construction and maintenance of all communications in its area. It has railway connection with S. Nigeria. It maintains a large central prison, and its own police force. Pop. of native city and township 89,800.

According to oral tradition, the earliest inhab. of K., were a race now referred to

as Abagayawa. A few families in K., the men of which are generally blacksmiths, still call themselves by this tribal name. Their legend is that one of their ancestors, a smith called K., came from Gulu (near K.) in search of ironstone and settled near Dulla Hill, when the present site of the town was uninhabited. The first ruler of K. was Bagoda; son of Bauwo, grandson of Bayajjiba, a legendary hero, who became sarki of K. in A.D. 999. For long K. paid tribute to Abu rulers, though its own rulers, and the people seem to have enjoyed almost complete local autonomy in respect to their internal affairs and organisation. They elaborated a comprehensive system of taxation and a hierarchy of officials, whose titles still exist and are in use throughout the Hausa States. Before the advent of Islam the heathen rites in vogue included some form of tree and serpent worship, and the sacrifice of black animals. Legend has it that the grove of trees which formerly existed round the pool of Jakara was especially sacred. The first advent of the Fulani into K. is nowhere recorded, but they were numerous in the fifteenth century. For long the Fulani could not subdue the city of K. itself, its formidable walls and the amount of cultivated land within rendering it impregnable. Eventually a new leader, Suleiman, entered the city unopposed. After Suleiman's death in 1819 the rule devolved on the family of Mallam Jemo, and this has been the ruling family ever since. It was in the latter part of 1902 that news reached K. of the probability that the Brit. would advance and occupy it. No effective resistance was offered and K. city was occupied in 1903.

Nixon, *Nigeria*, 1946; and *Annual Report on the Northern Provinces of Nigeria for the Year 1949*.

Kansas, N. central state of U.S.A., bounded on the N. by Nebraska, E. by Missouri, S. by Oklahoma, and W. by Colorado, covers an area of 82,138 sq. m. There are no mts., the surface rising gradually from 750 ft. in the E. to nearly 1000 in the W. The Missouri forms its boundary on the N.E., and its trib. the K., and the Arkansas and many smaller streams water the state. The E. part of the state is covered by carboniferous formations, the W. by Pliocene deposits, and the remainder by Cretaceous and Tertiary deposits. Bituminous coal, lead, zinc, gypsum, limestone, sandstone, and salt are found, and petroleum wells furnish a valuable supply of oil, the average per annum being over 90,000,000 barrels. There are also supplies of natural gas, and Portland cement is produced. The surface is undulating prairie covered with rich loam of the highest agric. value, requiring, as yet, no artificial fertilising. The rainfall is sufficient, except in the W., and comes at the best period, i.e. early summer.

The chief crops are wheat (K. normally produces one-fourth of all the wheat in the U.S.A.), Indian corn, oats, barley, rye, hay, fruit, potatoes, sorghum, flax, and tobacco. The state is not naturally well wooded; the trees are usually small and found in riv. bottoms; red cedar is the only native evergreen. The luxuriant growth of wild sunflowers has given K. the name of the Sunflower State. In areas where crops do not thrive are excellent grasslands on which horses, cattle, sheep, and pigs are reared. Agriculture and cattle-raising employ most of the people, and many of the manufacturing industries are connected with them, as slaughtering, beef and pork packing, flour-mills, and the manuf. of agric. implements. K. is one of the four greatest cattle-producing states in the union. There are also beet-sugar and glass works, and aircraft and metalwork manufs. K. is divided into 105 cos.; the prin. tns. are K. City, 121,400; Wichita, 114,900; Topeka (the cap.), 67,800; Hutchinson, 30,000; Salina, 21,000; and Pittsburg, 17,500. There are forty-three institutions of higher education, nineteen colleges and univs., one professional school, two teachers' colleges, and twenty-one junior colleges. There are many navigable rivers, and over 8950 m. of stream and 445 m. of electric railway. The greater part of K. was acquired by the Louisiana Purchase, 1803, and completed in 1850, when the Mexican ter. was taken over. It suffered much during the civil war. According to the Constitution of 1861, when it was admitted to the union, the legislature consists of a Senate and a House of Representatives elected for four and two years respectively. Eight members of the latter and two senators represent the state in Congress. The governor and executive officers are elected for two years. Pop. 1,800,000 (a decrease of 80,000 over that of 1930). See W. E. Connelley, *History of Kansas* (5 vols.), 1918; Federal Writers Project, *Kansas: a Guide to the Sunflower State*, 1939; and F. B. Streeter, *The Kaw: the Heart of a Nation*, 1941.

Kansas City: 1. City and co. of Jackson co., Missouri, U.S.A., on the Missouri R. It is an important railway and trading centre, and situated at the junction of sev. railway systems. The chief industry is meat packing and there are many others, including flour milling, soap-making, and oil refineries. There is a large trade in livestock and grain. The public buildings are imposing, and large sums of money have been spent in grading the site, which was very uneven. Pop. 399,100. 2. largest city of K. state and co. seat of Wyandotte co., at the junction of the K. and Missouri Rs. separated from K. C. (Missouri) only by the state line. It has immense meat-packing houses, second only to Chicago, and an important grain and flour trade. There are oil-refining plants, and its manufs. include soap, machinery, and railway locomotives. It is the seat of univs., both for white and coloured students. Pop. 121,400.

Kansas-Nebraska Bill, The, Act passed by Congress in 1854, regulating the ters. of Kansas and Nebraska, allowing local

option in slavery, and thus abrogating the Missouri compromise. It helped to start the Civil war, and caused the rise of the Republican party.

Kansu, N.W. prov. of China, is bounded N. by Inner Mongolia, S. by Szechwan, E. by Shensi, and W. by Chinghai. It covers an area of 146 000 sq. m. It is mountainous; on the S.W. the great Nan-shan Mts. form in part the boundary of the prov. with Chinghai. The Hwang-ho is the prin. riv. flowing from W. to N.E. Minerals are abundant, especially coal. The valleys are fertile, and good crops of millet, beans and tobacco are obtained. The climate is very dry. The products are mainly furs, silk, tobacco, mercury, wool, and cattle. The cap. is Lanchow. The main trade route from Peking to Kashgar passes through the prov. In 1920 the S.E. part of the prov., between Lanchow and the Weiho R., suffered a disastrous earthquake. Pop. (1923) 6,798,000.

Kant, Immanuel (1724-1804), one of the most important of modern philosophers, and perhaps the greatest of all metaphysicians, b. of Scottish descent at Königsberg (E. Prussia), then a centre of humane pietism, where his father was a master saddler. K. later in life greatly extolled his parents, both of whom seem to have met the vicissitudes of life with a resignation and gentleness born of their pietistic religion. It was his mother, however, who particularly influenced K.'s mind, notably in educating him to an appreciation of the beauty and glory of nature. K. appears to have encountered the gloomy side of pietism, or its formalism and intellectual constraint, especially at school, where the fixed hours for prayer and the compulsory morality engendered much affectation and downright hypocrisy. K. was educated at the Collegium Fredericianum, and subsequently at the univ., whither he proceeded in 1740 to study mathematics, theology, and philosophy, the latter chiefly of the Wolffian school, which at that time held sway in Germany. His teacher in philosophy and physics at the univ. was Martin Knutzen, one of the most independent of Wolffians. He had entered the univ. as a theological student, but he attended very few theological lectures. Towards the end of the six years he spent there he was sorely pressed for money, on account of his father's death; and from 1746 to 1755 earned a scanty living as private tutor. In 1755, obtaining his degree of doctor of philosophy, he became a *dozent*, i.e. a private lecturer under the control of the univ., and eleven years later he was appointed a sub-librarian, a position carrying a salary of about £11 per annum. His years as a tutor in distinguished families gave him that insight into the world which otherwise his secluded existence would have denied him. Also during that period he laid the basis of the wealth of thought and knowledge which he revealed on his earliest appearance as a univ. teacher and as a writer.

Prior to returning, in 1755, to Königsberg, his only pub. work was a short essay on physics. His lectures on physical geo-

graphy and empirical psychology were designed on popular lines, though some were strictly philosophical in form and not intended for so wide a circle. Among his hearers in 1762 was Herder, who enthusiastically describes K.'s powers as a teacher of moral philosophy, in *Briefe zur Beförderung der Humanität*. Characteristic of this, his earlier period, is his independent criticism of his teachers Wolff and Newton. It was not until 1770 that he succeeded to the coveted professorial chair, and in the new appointment he lectured not only on metaphysics and logic, but also on natural science, geography, anthropology, physics and mathematics. Meanwhile he had not been idle in the literary field, his first book, *Thoughts on the True Estimate of Living Forces*, was pub. in 1747, and *Theory of the Heavens* in 1755. In this last named he criticises Newton's assertion that the present order of the solar system cannot be explained by the mechanical laws of nature and propounds his celebrated hypothesis that the present system of the heavenly bodies has been evolved out of a gaseous atmosphere, endowed with primary rotation, and, in the firm interconnection of all the elements of the universe, he sees conclusive evidence of the assumption that the whole universe has its ultimate ground in an absolute and all-comprehending being, so that, in this work, he unites his scientific with his religious views, although rejecting the ordinary proofs of the existence of God. *Traume eines Geistesuchers* (*Dreams of a Visionary*), his first really significant work appeared in 1766, probably inspired by his reading at that time of Swedenborg. This work has sometimes been regarded as the introduction to his ambitious system of critiques which came later, but perhaps it would be more correct to assign that place to his last treatise, *Inseratio de mundi sensibilis etc.* (1770). It was only during his occupation of the chair of philosophy at Königsberg Univ. (1770-97) that he was recognised at all widely as a profound and original thinker. As a lecturer he was successful in spite of his weak voice, deformity, and slight physique.

His ultimate fame rests on the writings of the later part of this period, of which the *Kritik der reinen Vernunft* (*Critique of Pure Reason* 1781), his best known work, and the basis of all his subsequent writings came first. As an introduction to this he pub. the *Prolegomena* (1783), a year or so later an explanatory popular version was issued by one of his students; the *Die Metaphysik der Ethik* (*Metaphysics of Ethics*, 1785), and *Metaphysics of Nature* (1786) appeared, and the critique passed into its second ed. in 1787. Meanwhile, Königsberg had become the centre of philosophical activity, and K.'s method had been adopted by nearly all the Ger. univs., not only for philosophy, but also in some instances for combination with Christian ethics. The remaining critiques, *Der praktische Vernunft* (*Of Practical Reason*, 1783), and *Der Urteilskraft* (*Of Judgment*, 1790), complete the list of his most important works. In 1792 his teaching was censored by the Prussian Gov. on

account of the anti Lutheran ideas in his rationalistic thesis, *Die Religion innerhalb der Grenzen der blossen Vernunft* (*On Religion within the Limits of Reason alone*, 1792-93) of which the first part had appeared in the *Berlin Journal* to which he was a regular contributor. Gradually, as time passed K. showed signs of impaired health and mental vigour, and in 1797 he resigned his chair.

His philosophical development, as it appears in his works and pub. writings up to 1770 may be summarised thus. His first work is an attempt to reconcile Descartes and Leibnitz in his fatalistic thesis on the Principles of Metaphysical Knowledge, and also an attempt to reconcile Wolff and Crusius, while his *General Natural History and Theory of the Heavens* attempts to reconcile Newton and Leibnitz or the mechanical and teleological standpoints. K. seems indeed, to have been attracted to mechanism in nature and therefore to Lucretius but at this period of his intellectual development (1755-63) he was at one and the same time discussing a number of questions in which our interest had first been awakened in the Middle Ages, producing his *On the False Subtlety of the Syllogistic Figures* (1755), *Attempt to Introduce the Notion of Negative Quantity into Philosophy* (1763), *Only Possible Proof of the Existence of God* (1793) and *On Evidence* (his last named being an essay for the Academy prize won by Moses Mendelssohn (1764). Generally speaking K. at this period was an enlightener of the school of Wolff and indeed was giving lectures on the comendia of Baumgarten, Baumgarten and Meier all adherents of Wolff. But already he was beginning to modify his standpoint and in his pub. works, anticipating something newer and higher, as may be seen from his *Dreams of a Visionary* and *On the Ground of distinguishing Particular Divisions in Space* (1768). His alienated general attitude appears however much more definitely in the work with which he entered on his office as ordinary prof. This, however being written in Lat. by way of academic exemplar and given only a very limited circulation received but little attention. This work *De mundi sensibilis et intelligibilis forma et principiis* (1770) is the border line between the two periods in K.'s life which are styled by Rosenkranz the 'theoretical' and the 'speculative' (1846) and shows us K. as he was at the time he had waked him out of his dogmatic slumber. (1846)

K.'s philosophy was aimed at the scepticism of the Empiricists (e.g. Hume) and at the clerical triviality and dogmatic prejudice of the existing (or schools). It is customary to divide his work into three periods: (1) influenced by Leibnitz and Wolff, (2) a reaction against (1) under the influence of the Empiricist philosophers and (3) his critical period during which his own philosophy found mature expression. It is necessary to explain before considering the main points of his teaching that by pure he meant that which is isolated from actual experience

and by 'empirical' that which results from actual experience. The chief divisions which he made in his own system were (a) transcendental and (b) metaphysical, the former he developed more fully and it has had more influence on subsequent thought—he has been called the creator of the transcendentalism of cognition. He divides the mind into (a) Intellect subdivided into sensibility (passive) and thought (active), (b) Sensation or Feeling, the lowest cognitive faculty and (c) Volition. The old rationalism he rejects for its psychology he substitutes his examination of the subject for its cosmology, his examination of the object and for its theology his examination of the relation

IMMANUEL KANT

between subject and object. Identifying the conception of God with 'the more general law of ethical necessity' he places responsibility on the reason as opposed to the emotions. That it should be possible for a man to accept this responsibility, it is necessary that he should be free from the control of the physical laws of natural causality. This spiritual emancipation, the elevation of subject over object, of noumenon over phenomenon, is attained as his critical conclusion that phenomena do not exist in themselves but only in relation to the mind with which they are therefore conformative. He denied the existence of any law supreme, absolute, and external truth such as the rationalists had affirmed. He claimed to establish that only by a process of schematisation does an object offer itself as a cognisable unit to the abundant divisions of the mind, (a) the sensuous intuitions of time and space, and (b) the pure notions of understanding or 'categories'—the twelve categories being grouped under the four 'forms' as follows (1) Quantity (Unity,

Multitude, Totality); (2) Quality (Reality, Negation, Limitation); (3) Relation, between substance and accident, cause and effect, action and reaction; and (4) Modality (Possibility, Existence, Necessity). His *Critique of Pure Reason* is an examination of experience and of the laws of practical reason which he ultimately announced as its controlling force; practical reason becomes one with morality, and the supreme cause is a moral cause, i.e. the subordination of the empirical, or sensuous, to the pure, or intellectual. His final dicta on the relation of noumenon and phenomenon, i.e. experience, are to be found in his *Critique of Judgment*, in which he traces the ultimate value of life to ethical teleology. From his system of critical or transcendental idealism developed the 'subjective' idealism of Fichte, the 'objective' of Schelling, and the 'absolute' of Hegel; and his works also influenced Jacobi, Schleiermacher, and Schopenhauer.

His 'religion within the limits of mere reason' impelled him to avoid religious subjects in his lectures, and immediately subsequent writings. This marks what is called the 'practical' period of his career. To this last period belong *On Everlasting Peace* (1795); *Die Metaphysik der Ethik* (The Metaphysic of Morals, 1797), which as a general title was prefixed to the *Metaphysical Foundations of the Theory of Right*, 1796; *The Metaphysical Foundations of the Theory of Virtue*, and a number of short essays in the *Berliner Monats-schrift*. With a new monarch on the throne the need for restraint had gone, and he pub. *Der Streit der Fakultäten* (The Conflict of the Faculties, 1798) and *Anthropology from a Pragmatical Point of View* (1798).

During his own lifetime the courses of his lectures were printed singly and his minor writings were collected by Tieftrunk and others. But a complete ed. of his works was long in coming. The first was the 10-vol. ed. of G. Hartenstein (Leipzig), 1838-39, and the next, that of K. Rosenkranz and F. W. Schubert in 12 vols. (Leipzig) came in 1838-40 (this latter contains a biography as well as a hist. of the Kantian philosophy by Rosenkranz); and the most exhaustive, issued by the Prussian Academy of Science in 22 vols., 1900-1942.

Whitney and B. F. Bowers, 1940 (covers the whole range of Kantian philosophy—his philosophy of

knowledge, of science, of conduct, of law, of art, and of religion); A. H. Smith, *Kantian Studies*, 1947; and J. Bonds, *Kant*, 1949. See also NEO-KANTIANISM.

Kantemir, Demetrius, see CANTEMIR.

Kanting, or Kangting, formerly Tatsienlu, cap. of Sikan prov., China, on the Tong riv. It has been much used as a departure-point for travellers to Tibet. There is a Fr. mission, and it is a centre for Tibetan trade with China. A wireless station has been erected.

Kaolin, or China Clay, is a fine, almost impalpable powder of pure white colour, very soft and slightly greasy to the touch (h. 1; sp. gr. 2.2), consisting of hydrated aluminium silicate. It absorbs moisture readily, and when wet is easily moulded, being largely used in the manuf. of porcelain (of which it is the chief ingredient) and of pottery, the absence of iron in the clay resulting in a pure white article after firing.

K. is also used in the preparation of sizes for smooth-faced papers, and for loading cheap cotton goods, and is a constituent of many water-colours, paints, pigments, and powders. K. is a product of the decomposition of the felspar of a granite rock. The name is derived from the Chinese *Kao-ling*, 'high ridge', the name of hills in Ch'ianghsi, a chief seat of the porcelain manuf. in China. China clay is also found in large quantities in Cornwall, and in Saxony, France, the U.S.A., and elsewhere. The pure clay is prepared by stirring up the crude material with water and allowing it to settle. It is then dug out and dried over hot flues.

Kapellen, tn. in Belgium, 9 m. N. of Antwerp, engaged in agriculture, cattle-breeding, brick works, and distilleries. Pop. 9600.

KAPOK

A, ripe seed opening.

Kapok (Malay kapog). A fine silky cotton substance arising from the surface of the seed coats of sev. trees, but obtained chiefly from the K.-tree (*Eriodendron fructuosum*, family Malvaceae of Java, and from the silk-cotton tree, or Sumahuma (*Ceiba pentandra*, var. *indica*, family Bombacae, with 19 genera). Other trees of

the *Bombax* family, which has about 30 species (*B. munguba* of Brazil, *B. malabaricum* of India, *B. mexicanum* of Mexico) as well as *Ochroma lagopus*, yield an inferior K. The stuff-like substance is produced in great quantities and, being impervious to water, the material is useful for stuffing life-saving apparatus. It is also used to stuff mattresses and cushions. From the seeds is expressed K. oil, used for soap-making and as an edible oil. K. was first introduced into Europe in 1851 and is also obtained from tropical Africa. A yellowish-brown kind, of a brilliant and silky texture, comes from Indo-China.

Kapp, Gisbert (1852-1922), Austrian electrical inventor; b. at Mauer near Vienna; son of a native of Trieste and his Scottish wife. Studied at Zürich. Came to England 1875. Travelling, returned to England in 1882. Made improvements in electrical measuring instruments and in dynamos. In 1885 began dynamo-making on his own account, but his dynamo has now been superseded by a more modern type. London editor of *Industries*, 1886-1890. In Germany, about 1894-1901, secretary to Ger. Association of Electrical Engineers. Returned to become prof. of electrical engineering at Birmingham Univ. till 1918. He designed power stations and transformers, and applied mathematics to problems of electrical engineering. He was awarded the Telford medal. Wrote *Electric Transmission into Energy* (1891); *Dynamos, Alternators and Transformers* (1893); and *Principles of Electric Engineering* (1916).

Kapp, Wolfgang (1868-1922), Ger. counter-revolutionary, b. in New York; son of a democrat who had emigrated to U.S.A. after participation in risings of 1848. Educated at Königsberg, and became general director of E. Prussia. On March 13, 1920, he tried a *coup d'état* or *putsch* with assistance of Gen. von Luttwitz and troops. Republican authorities fled from Berlin; but the retiring advice of President Ebert to the inhab. to fight the *putsch* by a general strike was so successful that, four days afterwards, 'Chancellor' K. fled to Sweden. Arrested on return to Germany; d. while awaiting trial at Leipzig.

Kappel, see CAPPEL.

Kapunda, tn. in Co. Light, S. Australia, 45 m. N.N.E. of Adelaide. It is the centre of a thriving wheat and wool producing area, other products being dairy produce, olives, canary seed, mustard seed, oats, and barley. Average rainfall 19½ in. Its manufs. include weighbridges up to 100 tons capacity, hydraulic hoists and garage equipment, flour and chalk mills. The tn. is served by rail express passenger service on the R. Murray route. There are bituminous roads from Adelaide through K. to N. tns. A feature is the fortnightly sheep and cattle market, and ann. horse sales which attract buyers from all over the commonwealth, India, and the Middle E. Pop. in tn. and dist. 3000.

Kapurthala: 1. State in the E. Punjab, India, between the Rs. Beas and Sutlej, has an area of 630 sq. m. The soil of the dist. is fertile; the chief crops are sugar,

cotton, wheat, grain, and maize. Pop. 378,300. 2. Tn., cap. of above state, 65 m. E. of Lahore, contains the maharajah's palace and Randhir College. Pop. 18,600.

Karachev, tn. in the Bryansk Region of the R.S.F.S.R., with oil works, hemp factories, and a trade in grain, etc. Pop. 40,000.

Karachi, or Kurrachee, seaport of Sind, and cap. of Pakistan. It is the chief port for the Punjab and takes most of the traffic of the Indus. The wharves of the extensive harbour are on the is. of Kiamari, which is connected with the tn. by the Napier mole, 3 m. long. Large sums of money have been spent on improving the harbour, and making the docks and breakwater. It is the terminus of the air mail from London via Cairo and Bagdad. It is a railway terminus, and busy trading centre, having extensive inland trade with Afghanistan and Turkestan. The chief industries are carpets and metal ware. K. was acquired by the Brit. Gov. in 1872, and passed to Pakistan in 1947. A shipbuilding yard, to construct ocean-going vessels of 10,000 to 15,000 tons, is to be estab. here. The cost of the new yard is estimated at 5 crores (£3,750,000). Technical aid is to be given by the great Clydebank firm of John Brown & Co. Pop. 359,400.

Kara Dengis, see BLACK SEA.

Karaganda, tn. of the Kazakh S.S.R., Russian Central Asia, in the region of the same name. It was estab. as an important industrial city as a result of the exploitation of its coal-fields under the five year plans. Pop. 166,000.

Karageorge, see CZERNY DJORDJE.

Kara-Hissar, see AFICUM KARA HISSAR.

Kara-kalpaks (Black Caps), Mongolo-Tartar people who inhabit the S. and E. coast of the Aral Sea, thus forming a geographical transition between the N. Kirghiz and S. Turkomans. Emigrants have settled in Astrakhan, Kuban, and Siberia. Their chief occupation is agriculture and horse-breeding. The land they inhabit is now known as Kara-Kalpak., and is an autonomous republic of Soviet Russian Central Asia, included in the Uzbek S.S.R. Turkeki is the cap. Pop. 305,000.

Karakol, see PRIZHEVALSK.

Karakoram Mountains, or Mustagh, range in central Asia, separating Sinkiang and India, and forming a continuation of the Himalayas to the Hindu-Kush. It extends N.W. as far as the Pamir. This range contains some of the highest mts. in the world, among them being Godwin-Austen or K2 (28,278 ft.), and sev. others over 25,000 ft. high. It is also crossed by sev. passes, such as the Karakoram, over 18,000 ft. high, and the Mustagh. Extending to the W. there are numerous glaciers and ice-fields, one of the largest being the Baltoro. Gilgit, the remotest spot in the high K. mts. to the N. of Kashmir, formerly reached only after twelve days' trekking from Peshawar or Srinagar, has now been linked with the outside world by air. Every day transport aircraft operating for the Pakistani Gov. make hazardous 250-m. flights from Peshawar

up the Indus riv. gorges to Gilgit, covering the distance in two hrs. and bringing much-needed supplies to the 100,000 people inhabiting the Gilgit agency. In addition Pakistani military engineers have widened the existing 350-in. caravan route from Peshawar to Gilgit via Chilas State over Babusar Pass (13,700 ft. high) so that jeeps can traverse the whole distance within four days. Gilgit remains the centre of an age-old caravan traffic from Sinkiang or Chinese Turkestan and even to-day are met, on the narrow mt. path running southward from the frontier post of Misgar through the rugged but splendid Junza valley, scores of traders and pilgrims from Kashgar, with ponies and donkeys laden with silk and cotton cloths, sheepskin coats and other merchandise.

Karakorum, name of two old Mongolian caps.: 1. The Uighur cap., the ruins of which remain on the l. b. of the Orkhon, a trib. of the Selenga R., in the Talai-Khaindala steppe. It flourished between the seventh and ninth centuries, and was deserted on the fall of the Uighur kingdom. 2. The Mongolian cap., about 25 m. S.E. of the above. It was founded by Jenghiz Khan, and its walls were built in 1234-35. The city was visited by Marco Polo in 1275, and was subsequently destroyed by Kublai Khan, the fourth king of the Mongolian dynasty, for rebelling against his authority. See *Works of the Orkhon Expedition*, 1892; F. and W. Workman, *Ice-bound Heights of the Mustang*, 1908, and *Two Summers in the Ice-wilds of East Karakorum*, 1917.

Kara-kul: 1. Two lakes, distinguished as 'Great' and 'Little' K., in Russian Central Asia, in the Gorno-Badakhshan autonomous region of the Tajik S.S.R. The former has an area of 140 sq. m., and lies at an altitude of 13,200 ft.; the latter lies N.W. of the Mustagh-ata peak, at an altitude of 12,700 ft. 2. Tn. of Central Asia, formerly in Turkestan and now in Kirghiz S.S.R. It stands on the Zeravshan, 38 m. S.W. of Bokhara. Pop. 13,000.

Kara-Kum (Black Sands): 1. Or Transcaspiian, or Great desert in Russian Central Asia, extending between the Usturt plateau on the N. and W., the Ainu-Darya on the N.E., and the Turkmen oases on the S., with an area of about 110,000 sq. m., and about 200,000 inhab., chiefly Uzbek and Turkmen. 2. Or Arab, or Little, desert in Kirghizia, S. of Khiza, also known as the desert of Khiva.

Karamania, see **CARAMANIA**.

Karamzin, Nikolai Mikhailovich (1765-1826), Russian historian, b. at Mikhailovka (Simbirsk), in Orenburg. He studied at Moscow and St. Petersburg, and, after travelling through Europe and in England he pub. his *Letters of a Russian Traveller* (1797-1801), and estab. the *Moscow Journal*. His great achievement was a *History of Russia* (11 vols., 1810-29), which he brought down to the accession of Michael Romanov (1813).

Karanja, tn. of India, situated in Berar, and about 36 m. S.S.W. of Amraoti. Pop. 16,500.

Kara Sea, part of the Arctic Ocean in the N.E. of Russia, between Novaya

Zemlya and the Yalmal Peninsula, Siberia. On the W. it is entered by Matochkin Strait, and on the S.W. by the straits of Kara and Yugor. The chief inlets are Kara Bay and the gulf of Obi. It is only open for two months in the year; at other times it is blocked by ice.

Karat, see **CARAT**.

Karateghin, dist. of Central Asia, in the Garm Region of the Tajik or Tajikistan autonomous S.S.R., with an area of 4300 sq. m. It is very mountainous, and is watered by the Surkh-ab or Kizil-su. The chief occupations are agriculture and cattle-raising. The cap. is Garm or Harm. Pop. (composed of Tajiks and Kirghiz) 100,000.

Karatepe, anct. city of the Hittites in Asia Minor, which appears to have flourished for sev. centuries from c. 1900 B.C. In 1948 an expedition under the auspices of the Turkish Historical Society excavated a site there on four successive levels. The prin. discoveries include 1200 inscribed clay tablets, which may throw light on the hist. of the early Hittite Empire, some graves, and a number of fine pottery vessels some of which suggest the use of glaze.

Karauli: 1. State in Rajputana, India, with an area of 1210 sq. m. The soil is hilly and building stone is quarried. The chief manufs. are pewter and brass ware and cloth. Pop. 152,100. 2. Tn. and cap. of above state, fortified and surrounded by a wall of red sandstone. It contains sev. beautiful temples and a fine palace. Pop. 20,100.

Karel, Rudolph (b. 1881) notable modern Czech musical composer, b. at Prague. Studied at Prague Univ. and later devoted himself exclusively to music, being Dvorák's last pupil in composition. His composition is remarkable for soundness and a certain exuberance and for its broadly elaborate themes. When he did succeed in subordinating this exuberance to formal and intellectual control, as in his violin sonata *The Demon*, he reveals himself as an important influence in modern Czech music. Pub. also *Ilsa Heart*, an opera; *In the Glow of the Hellenic Sun*, a song-cycle; and various symphonies.

Karelia, Karelo-Finnish S.S.R. Annexed by Peter the Great in 1721. In 1940, following the Russo-Finnish war, a portion of Finnish K. was joined to the ter. of the autonomous S.S.R. of K., and admitted into the union as the Karelo-Finnish S.S.R.). The Karelians are a distinct branch of the Finnish race, inhabiting E. Finland, and numbering about 300,000. Most of the people are engaged either in fishing for herring, salmon, etc., or in hunting foxes and squirrels for their skins. The forests and marshes formerly rendered communications difficult, but the building in 1917 of a railway through K. from Murmansk to Leningrad greatly promoted the economic development of the country. The cap. is Petrozavodsk, on the W. shore of Lake Onega. Smaller ports are Soroka and Kem.

Both in the Russo-Finnish war and

during the Ger. invasion of Russia in the Second World War K. was the scene of much fighting between the Finns and Gers. on the one side and the Russians on the other—particularly in the region of the great lakes. Onega and Ladoga are on the isthmus of K. Pop. 900,000.

Karenni, dist. of Lower Burma, situated between lat. 18° 50' and 19° 55' N., and long. 97° 10' and 97° 50' E. The surface is principally high tableland of 3000 to 4000 ft., and is inhabited by the Red Karens. The dist., formerly a collection of small states, is now divided into E. and W. K., having a total area of about 3150 sq. m.

Karens, native race of Siam and Burma, dwelling among the hilly dists. They number about 727,000, and are supposed to have descended from certain Chinese tribes. Many of them have been Christianised. In 1947 they were represented in the Burmese Constituent Assembly by six members, but in 1948 began to manifest a wish to break away from Burma, and rebelled.

Karikal, Fr. colony, on the Coromandel coast, Madras, India. Its area is about 52 sq. m. The tn. lies about 150 m. S. of Madras, and exports large quantities of rice. Pop. (dist.) 58,228; (tn.) 17,000.

Karl August, Archduke (of Saxe-Weimar), see CHARLES AUGUSTUS.

Karl Eitel, Prince, see CHARLES I. (of Rumania).

Karl, Eugen, Duke of Wurttemberg, see CHARLES EUGENE.

Karl Franz Josef, Emperor of Austria-Hungary, see CHARLES I.

Karlfield, Erik Axel (1864-1931), Swedish poet, b. in Dalarna, a prov. of Sweden possessing a traditional peasant culture. He studied at Upsala Univ., and in 1904 was elected a member of the Swedish Academy, of which he was the permanent secretary from 1912. In 1907 he became a member of the Nobel committee. He refused the Nobel prize for literature during his lifetime, but it was awarded posthumously in 1931. His first vol. of poems, *Vildmarks och kärleksvisor* (*Ballads of the Wilderness and Love*) appeared in 1895. It did not create a great stir at the time, but he later came to be regarded as the leading Swedish poet after the death of Fröding. He developed an individual style, which owed little to his predecessors, and his poetry with its feeling for nature reflects the peasant life of his native prov. His best-known collections of lyrics are *Fridolins visor* (*Ballads of Fridolin*) (1896), and *Fridolins lustgård* (*Fridolin's Garden*) (1901). *Hösthorn* (*Cornucopia*) appeared in 1927. A selection of his poems trans. into Eng. was pub. in the U.S.A. in 1938 with the title *Arcadia Borralis*.

Karli, cave temple in Poona dist., Bombay, India, is 34 m. N.W. of Poona. It is the largest known Chaitya cave in India, and bears an inscription dated 78 B.C.

Karlins, see CARLOWINGIANS.

Karlova, or Karlowitz, tn. in Yugoslavia, on the Danube, near Ujvidek (Newatz). It contains a cathedral and is the seat of a Gk. archbishop. Famous red wine is made in the dist. Pop. 5700.

Karlovy Vary (formerly Wary or Vary; then Kaiser Karlsbad; then Karlsbad or Carlsbad). In 1918 it reverted to its Czech name. Tn. and watering-place of Bohemia, Czechoslovakia, situated on the Tepl near its junction with the Eger, about 70 m. N.W. of Prague. It lies in a narrow valley at an elevation of over 1000 ft. above sea level, and contains sev. famous springs, the water being alkaline. One of the best known is the Sprudel Spring, with a temp. of 165° F. The waters were known on account of their healing properties during the fourteenth century. The tn. before the Second World War also manufactured porcelain, kaolin being found in the neighbourhood. Amer. troops in the first week of May (1945) advanced to the line Karlovy-Vary-Budjovice-Plzeň, but were there halted while the Red Army cleared the E. and W. banks of the Moldau R. and occupied Prague. Pop. 25,000.

Karlskrona, fortified seaport tn., and chief naval station of Sweden, on the is. of Gotland, and four smaller ones, in the Baltic, is the cap. of the gov. of Blekinge. It was named after its founder, Charles XI. The is. is connected with each other and the mainland by fourteen bridges. The harbour, which can accommodate the largest ships, has arsenals, shipyards, and docks built from granite rocks; and is defended by strong fortifications. The chief trade is in matches, tobacco, and cloth. Pop. 32,300.

Karlsruhe, tn. of Germany in Wurttemberg-Baden, formerly cap. of the former grand duchy of Baden, situated nearly 400 ft. above sea level on a plain of the Hardwald, about 39 m. W.N.W. of Stuttgart. Once a prosperous commercial and communications centre, K. was partly destroyed in the Second World War. The city is laid out in the shape of an expanded fan, the streets all radiating from the palace as the centre. Its chief buildings are the palace (built in 1751), the court theatre, Zähringen museum, the hall of art, and the technical high school, but these have suffered damage. The ornamental fountains and palace gardens, used as a public promenade, were a feature. It is noted for the manu. of railway engines and cars, plated goods, gloves, brewing, machinery, furniture, carpets, cement, and stone-ware. Karlsruhe, i.e. 'Karl's Rest', was laid out in 1715 by Karl Wilhelm, margrave of Baden, who, owing to disputes with the people of Durlach, made his hunting-seat on the site, around which the tn. was subsequently built. Schwanthaler's statue of the Grand Duke Karl Friedrich stood in the centre of the Schosseplatz. Being on the trunk line stretching behind the middle Rhine from Frankfurt through Mannheim to the Swiss frontier K. was a vital communications centre in the Second World War and, consequently, was heavily bombed by allied aircraft before the launching of the offensive on the W. front. On May 27 (1944) heavy bombers, concentrating on the railway centres along the middle Rhine, delivered a damaging attack on the city. In the allied offensive K. was in

the Fr. Army sector. Resistance in the Rhine valley was initially stiff, but soon weakened, and K. fell to the Fr. on April 4, 1945. Pop. 189,800.

Karlstad, cap. of the co. of Värmland, Sweden. It stands at the N. end of Lake Vänern, on the is. of Thingvalla, and is connected with the mainland by bridges. It manufs. machinery, matches, and tobacco. It is an episcopal see. Pop. 31,300.

Karma, or **Karman**, Sanskrit noun denoting a deed or action. As applied to the action of a living human being, it is the doctrine that every action, good or evil, receives its reward or punishment. Hence it is concerned with the theory of transmigration, apparently unmerited reward or punishment having been caused by the K. of a previous life. The doctrine is found in the Buddhist and Jain religions. See also under **TRANSMIGRATION**.

Kármán, József (1769-95), Hungarian author, son of a Calvinist pastor. Practised law in Budapest. Wrote a novel, *Kanni Hagymóniai*, one of the best romances in Hungarian literature.

Karmathians, **Carmathians**, or **Qarmathians**, were a Moslem sect named after Hamdan Qarnad, a follower of Husam al-Ahwazi, who was a missionary of Ahmed, son of the Persian Abdallah Ibn Ma'mun, towards the close of the ninth century. The latter's object had been to undermine Islam and the Arabian power by a secret society with various grades, offering inducements to all classes and creeds. This society led its members on from an interpretation of Islam to a total negation thereof, and submission to the head of the society. There were seven, or later nine, stages of the society. In the first stage the initiate was taught that the mystery of the Koran needed explanation; he took an oath of submission, and paid a sum of money. He was then led on until in the fifth stage he was taught the uselessness of tradition and the temporary nature of Mohammed's precepts, and in the sixth stage was induced to give up prayer, fasting, etc. He was now no longer a Moslem; and in the other stages more freedom of thought was allowed. The Carmathians are last mentioned in 1050, but there is no doubt that at one time they were a powerful sect, for in 900 Abu Sa'id al Jannabi, the head of a Carmathian state in Bahrain, routed an army sent against him by Motadid. In Persia and Syria the Carmathians were succeeded by the Assassins (*q. v.*), but it is said that the sect still exists in parts of Syria, Persia, Arabia, and India. For their relation to the Fatimids see **FATIMIDS**.

Karnak, or **Carnac**, vil. of Upper Egypt, in the prov. of Kench, built on the ruins of the anct. city of Thebes. See further under **EGYPT**, *Exploration and History*.

Karnal, tn., cap. of K. dist., E. Punjab, India, 50 m. S.E. of Ambala, is of anct. origin. It is on the old bank of the Jumna, which has changed its course and is now 7 m. away. Wheat, millet, and grain are grown. The chief manufs. are textiles and shoes. Pop. 37,400.

Karnatik, see **CARNATIC**.

Kärnten, see **CARINTHIA**.

Karnul, or **Kurnool**, tn., cap. of K. dist., Madras, India. 110 m. S.W. of Hyderabad, situated at the junction of the Hindri and Tungabhadra Rrs. It contains an old fort, now completely dismantled, has many cotton and other mills, and is an important trade centre. Pop. 26,000.

Karolsfeld, or **Carolsfeld**, **Sohnorr von**, see **SCHNORR**.

Károlyi, Michael Adam Georg Nikolaus, Count, Hungarian statesman, b. 1875 at Budapest; grandson of Georg, third count K. of Nagy-Karoly. Before the First World War he was a democratic leader, and, during it, opposed the Ger. hegemony.

Lipault Press

COUNT KAROLYI

He formed a ministry upon the defeat of the dual monarchy in 1918, and in 1919 was provisional president of the new republic of Hungary. From 1931 to 1932 he was Prime Minister, but went into exile when Adm. Horthy virtually estab. a dictatorship. During the Second World War he led the Free Hungarian movement and returned to Hungary in 1946.

Karr, Jean Baptiste Alphonse (1808-90), Fr. novelist, critic, and journalist, b. in Paris. His first work was *Sous les tilleuls*, pub. in 1832, of which the originality and charming humour and sentiment brought him fame. In 1839 he became editor of *Le Figaro*, and in the same year he started *Les Gaietés*, a monthly pub. in a keenly satirical tone; in 1848 he founded *Le Journal*. His other works include *Vendredi soir* (1835); *Le Chemin le plus court* (1836, a continuation of his autobiography); *Geneviève* (1838); *Un Voyage autour de mon jardin* (1845, one of his most popular works); *Feu Bressier* (1848); *Font en Thème* (1853, a book which had some influence in promoting educational reform); and his reminiscences, pub. in 1879-80, under the title of *Livre de bord*.

Karrer, Paul (b. 1889), chemist, was b. in Moscow of Swiss parents, and was

educated at Zürich Univ., where he was assistant to Alfred Werner, 1911-12. From 1912 to 1918 he collaborated with Paul Ehrlich at Frankfurt-am-Main. Since 1919 he has been director of the chemical institute of Zürich Univ. He has worked on vitamins, carbohydrates, carotenoids, etc., and was awarded the Nobel prize for chem. in 1937.

Karri, native name of an Australian tree, *Eucalyptus diversicolor*. It is one of the 'blue gums,' and from it is derived a hard red timber useful in making wood-paving.

Karoo (from Hottentot *karusa*, hard), name given to the high plateau in the Cape of Good Hope, S. Africa, lying between the coast mts. and the Orange R. basin. The area is divided into the Little K. and the Great K.; the latter is between the Nieuwveld Berge and the Zwarte Berge, and is crossed by the railway. During the dry season it is a sandy waste, but after the rains the soil is covered with luxuriant vegetation, which makes rich pasturage for sheep, goats, ostriches, and cattle. Area 100,000 sq. m.

Kars: 1. Vilayet in Asiatic Turkey, with an area of 7300 sq. m. It is watered by the Aras, Kur, and Arpachai Rs. The surface is mountainous and the climate changeable; cattle-raising is the chief occupation. Salt is found in the S. Pop. 383,200. 2. Tn., cap. of above prov., 115 m. S.W. of Tiflis, and connected with it by rail. In the sixteenth century it came into the possession of the Turks, and was fortified by Sultan Amurath III. In 1828 it was taken by Russia and restored to Turkey. Sev. times it was besieged, and finally stormed in 1877. It was ceded to Russia by the Berlin Congress in 1878, but after the First World War became again, with the prov., a possession of Turkey. A treaty between the Soviet Gov. and Turkey was signed here in 1921. It contains an eleventh-century cathedral and sev. mosques, and manufs. carpets and coarse textiles. Pop. 24,000.

Karshi, tn. in the Bokhara Region, of the Uzbek S.S.R., Russian Central Asia, 80 m. S.E. of Bokhara city. It manufs. cutlery, woollen goods, and carpets. Pop. 25,000.

Karst, name of a region of Yugoslavia, composed of high ridges of limestone which join the E. Alps to the Dinaric Alps, E. of Istria. A series of parallel fractures borders the N.E. Adriatic and continues inland; the N. Adriatic is a sunken hollow which has descended along these fractures. The limestone is porous and the water percolates and forms sinks, cañons, and caverns. Similar structure of land will produce the same result, and such a landscape is called a K. landscape; it is characterised by a barren aridity, in addition to the caves above mentioned. Examples may be seen in Derbyshire and parts of Yorkshire. See C. Droner, *Bau und Bild des Karsts*, 1903; and O. Lehmann, *Die Hydrographie des Karsts*, 1932.

Karun, the only navigable riv. of Persia, rises in the Bakhtiari Mts., and, flowing through Khuzistan, joins the Shatt-el-Arab at Mohammerrah. Small steamers

ascend to Ahwaz. It was used during the First World War by Brit. troops temporarily occupying the surrounding oil-bearing region.

Karvir, see KOLHAPUR.

Kaschau, or **Kassa**, see KOSICE.

Kas-Dagh, see INDIA.

Kashan, tn. in the prov. of K., Persia, 95 m. N.W. of Ispahan. It is on the direct route to Ispahan, and has a thriving trade in brass and copper ware, carpets, silk, and brocades. Pop. 45,000.

Kashgar, important tn. of Chinese central Asia, in Sinkiang. It is divided into two parts, called Kuhnä Shahr, or Old City, and Yangi Shahr, or New City. These are 5 m. distant from each other, and separated by the Kizil-su. Kuhnä Shahr is a clay-walled fortress built on an affluent of the Kizil-su after the destruction of the old K. in the early sixteenth century. The ruins of the old city Aski Shahr are still extant. K. is popular as a political, religious, and commercial centre; it is the seat of Mohammedan culture, and owns the famous shrine of Hazret Afak. The new city was built in 1833. The surrounding dist. (pop. 300,000) is very fertile and well irrigated. Silk and cotton, boots, shoes, and saddlery form the chief manufs. Pop. 80,000.

Kashgar, River, called in some parts the Kizil-su, rises in the Tian-Shan Mts., and flows 500 m. E. to join the Yarkand.

Kashgaria, name sometimes given to the dist. generally known as Chinese, or E. Turkestan, also called Sinkiang.

Kashka Darya, region of the Uzbek S.S.R., Russian Central Asia.

Kashmir (or **Cashmere**), properly Jammu and Kashmir, native state of India, bounded on the N. by the Karakoram Mts., on the E. by Tibet, and on the S. and W. by the Punjab and the N.W. Provs. In the time of the Brit. suzerainty of India K. was politically an important state, guarding the N.W. approach to India and, in fact, the State was itself created by Brit. military and political power. K. is divided physically into two parts, very unequal in area, climate, and pop., by the great Himalayan mt. system, which runs from the N. boundary of Chamba State to where Nanga Parbat Mt. towers 26,656 ft. above the Indus. The fertile vale of K. (the world-famous 'Happy Valley' of K.) and the Jammu-K. Plain, which is 120 m. long and 76 m. wide, the well-watered valleys and forested hills surrounding them, are drained by the Jhelum, the Chenab, and Ravi, the westerly three of the five rivs. of the Punjab. The mts. to the E. of the K. valley drain into the Jhelum R., which flows N.W. through the middle of the valley; the Indus being the only other riv. of importance. The chief passes to the N. from the valley are those of Kamri (14,000 ft. high), and Burzil (13,500 ft.), which is the pass from Srinagar to Gilgit. The valley is sheltered from the S.W. monsoon, and has a good climate, with an irregular rainfall. This area supports all but a twelfth of the state's pop. of 4,000,000. Beyond the Himalayan barrier, which allows only the scantiest rainfall, sturdy mountaineers of many

rares find a simple livelihood in the Indus regions, amid the glaciers and gorges of Gilgit, the Karakoram Mts. of Baltistan, and the arid uplands and plateaux of Ladakh. The smaller but more densely populated part of the state, Jammu and K. Provs., divides itself naturally into three geographical, ethnic, economic, and linguistic regions: K. the W. non-Kashmiri dists., and E. Jammu Prov., the first two drained by the Jhelum, the third by the Chenab and the Ravi (Kathua dist.). There are three similar trans-Himalayan frontier regions: the Gilgit area, Baltistan and Kargil (W. Ladakh), and Buddhist Ladakh. These six main parts of the state intermingle and overlap in some respects, but are broadly distinct and homogeneous. There are no particular geographical distinctions between the W. and E. parts of Jammu Prov. or Ladakh. Only the valley of K. and the Gilgit region are clearly defined by high mt. barriers. In addition to agriculture the chief industry is sericulture, which dates back to the fifteenth century. Forests cover about one-eighth of the total area. The chief crops are rice, wheat, oats, and barley, and various vegetables and fruits. Shawl-weaving and the manu. of carpets are the chief industries, and gold and silver ornaments, copper ware, and silk embroideries are manufactured; Srinagar (the cap.) is noted for papier-mâché work.

In early times the inhab. were snake worshippers (Nagas), but in the time of King Asoka, in 245 B.C., Buddhist missionaries visited the country. As Buddhism decayed, Hinduism took its place until, at the time of the Mongol invasion, Mohammedanism was introduced. K. became incorporated in the Moghul empire in 1586, having previously been under Hindu rulers and Mohammedan sultans. Then followed a period of Afghan rule from 1756 until the early nineteenth century, when it was invaded by the Sikhs. After the battle of Sobraon (see SIKHS) (1846), by the treaty of Amritsar, Lord Hardinge sold to Rajah Gulab Singh (the feudatory of Ranjit Singh) two provs. of the Sikh kingdom of the Punjab, K. and Hazara, besides confirming him in the possession of the surrounding hill states which his Jammu Dogras had conquered from local kings and chiefs in the previous quarter century or more of Sikh rule in K. Gulab Singh could not control the turbulent Moslem tribesmen of Hazara, and in 1847 gave it back to the Sikhs in exchange for the strip of Punjab plain S.E. of Jammu. K. he occupied only with the support of Brit. troops. Brit. supremacy was recognised from this time. In 1941 the total pop. was 4,021,600, the bulk of the pop. being Muslims, though the ruling family is Hindu. The next most numerous elements are Hindus and Sikhs. There are art. colleges at Srinagar and Jammu. The state is divided up into the provs. of Jammu, K., Ladakh, Baltistan, and Gilgit, with an area of 84,250 sq. m. K. is linked with the railway system of India by two motor roads, the Jhelum valley road, 132 m. of which run through the state ter., and the Banihal cart road

(200 m. long), which connects Srinagar, the summer cap., with Jammu, the winter cap.

After the partition of India (Aug. 1947) K. became a *casus belli* between the sister dominions of India and Pakistan, each of which claimed that K. State should come within its sphere of influence. Towards the end of 1947 K. became the scene of strife and misery, which developed out of the conflict between a section of the Moslem pop. (forming 73 per cent of the 4,000,000 Kashmiris), and the Hindu (Dogra) regime, headed by the maharajah. The misery of the people was accentuated by the devastation of large parts of the countryside, and the crowding of Hindu and Sikh refugees into the three main cities of Srinagar, Jammu, and Poonch, which was being held by the regime with the aid of Indian troops sent in Oct. in response to the maharajah's appeal for aid against the Moslem rebels and raiders from neighbouring ter., coupled with his accession to the Indian Union. But even before this conflict of 1947 K. showed remarkable contrasts of extreme poverty and great wealth, of scenic splendour and human squalor—contrasts due in large measure to the inefficiency of the existing regime. These evils were now aggravated by the undeclared war between India and Pakistan, and the rival claims of the two dominions came before the Security Council of the United Nations in Jan. 1948. The Indian Gov. asked the council to request Pakistan to refrain from taking part in the invasion; to withdraw its nationals from the invading forces, and to deny those forces the use of its ter. and its supply facilities in their operations. If these things were done the Indian Gov. would arrange for the people of K. to decide by plebiscite whether they wished to join India or Pakistan. The representatives of Pakistan retorted that the origin of the existing situation lay in an insurrection of the Moslem pop. against the tyranny of the Dogra ruling house. The insurgents set up a 'free government,' and when Sikh immigrants from the W. Punjab began to oppress the Muslims of Jammu, the 'free government,' having secured control of Poonch prov., was reinforced by partisans from tribal ter. Pakistan claimed that the Maharajah declared his accession to the Indian Union only when he despaired of making headway against this popular movement, and that the Indian Gov. had no right to accept an accession proffered on such conditions or to support the declining Dogra fortunes by sending reinforcements to attack the 'free government.' The Pakistan Gov., however, denied that it had recognised the free government in any way, but declared that it could not prevent recruits from tribal ter., or Islamic zealots from going to the aid of a Moslem movement for independence and self-determination. The maharajah's role in these events was somewhat ignominious. Originally he is said to have been resigned to K.'s accession to Pakistan because of geographical contiguity, economic dependence, and religious ties, but later

changed his mind when pressure was brought to bear on him through the influence on his entourage of certain Indian politicians. When the rebellion in Poonch, aided by Pathans from the N.W. frontier, assumed serious proportions, the Kashmiri State Army collapsed, and its Moslem elements joined the rebels. When the raiders entered the valley of K., and threatened the cap., Srinagar, the maharajah fled by night in a convoy of cars carrying his wives and treasures to the winter cap. of Jammu. It is noteworthy that within three months of the sudden withdrawal of Brit. military and political power—which had created the composite state of K., expanded it, and sev. times saved it from dangerous internal stresses—the state disintegrated into its component parts. It seems (1949) improbable that India, with all her planes and mon., will ever be able to put it together again. In Aug. 1948, however, a United Nations K. Commission arrived in India to inquire into the possibilities of a plebiscite. The elimination of two-thirds of the Muslims by extermination in the autumn of 1947 entirely changed the composition of E. Jammu prov. Partition of the K. state could only be made in this E. half of Jammu prov. There can be no doubt which dominion the whole state would join ultimately if pop., geography, and economy were the governing factors. On natural geographic and economic considerations alone, India could scarcely claim more than Kathua dist. up to the Ravi-Chenab watershed. Pop. 4,020,000. See Sir F. E. Younghusband, *The Heart of a Continent*, 1896; C. F. Tynedale Biscoe, *Kashmir in Light and Shade*, 1922; R. C. Kak, *Ancient Monuments of Kashmir*, 1933; S. Sinha, *Kashmir: the Playground of Asia. A Handbook for Visitors* (Allahabad), 1947; also *A Handbook of Jammu and Kashmir State* (Jammu), 1946.

Kashmiri Red Deer, see RED DEER.

Kasimierz, kings of Poland, see CASIMIR.

Kasimov, or **Kassimov**, formerly **Gorodets**, tn. in the Moscow Region of the R.S.F.S.R. It is a manufacturing tn. Pop. 20,000.

Kasr-el-Kebir, see AL-AZAR-KEBIR.

Kassala, tn. of the Anglo-Egyptian Sudan, situated on a trib. of the Atbara, about 280 m. S. of Suakin. The railway to Sennar passes through K. Before the Mahdi's rising it held an important commercial position; it was taken by Italy in 1894, and given back to Egypt three years later. It is a trade centre for lintrea; Amer. cotton is successfully grown here. The scene of an It. defeat by Brit. forces in the campaign which ended in the conquest of It. E. Africa, in 1941. Pop. about 25,000.

Kassassin, canal lock, Egypt, between Ismailia and Zagazig, just over 20 m. W. of Ismailia. Scene of the defeat of Arabi Pasha in 1883.

Kassel, or **Cassel**, tn. of Hesse, Germany, formerly cap. of the Prussian prov. of Hesse-Nassau, is situated on the Fulda, about 30 m. S.W. of Gottingen. The tn. itself consists of the Altstadt, the Oberneustadt, and Hohenzollern, the new quarter.

In the Oberneustadt are situated the old electoral palace and the Königsplatz, square noted for its echo. The tn. contains also a municipal library and a new picture gallery. It was here that Napoleon III. was kept a prisoner after the battle of Sedan. The tn. is noted for the manuf. of machinery engines, cars, mathematical and surgical instruments, musical instruments, and iron ware. From 1807–1813 K. was the cap. of Westphalia.

In the Second World War K. was an important objective in the allied plan for crossing the Rhine and establishing a strong force on the far bank. The plan was to launch a main attack N. of the Ruhr, supported by a strong secondary thrust from bridgeheads in the Frankfurt area, directed initially on K. to complete the envelopment of the Ruhr. Following the capture of Marburg the armoured advance on K. was under way by March 29 (1945). The crossing of the Rhine barrier was accomplished at fantastically small cost to the Allies. Gen. Eisenhower's (g.v.) next step was to envelop the Ruhr by converging thrusts from bridgeheads at Frankfurt and Wesel. In the course of the operations the Twenty-first Army Group and the Twelfth Army Group joined forces in the K.-Paderborn area, and the first allied airborne army were prepared to carry out an air drop in the K. area in order to seize the airfields there, and the Fler K. dam; but the rapidity with which the ground forces progressed rendered this airborne operation unnecessary. The encirclement of the Ruhr was completed by April 1, after which Gen. Omar Bradley (g.v.) was instructed to launch an offensive with the central group of armies from the K. area, towards Leipzig. K. itself was cleared on April 4, and the main allied advances to the E. began within the following week. Pop. 195,600. See WESTERN FRONT IN SECOND WORLD WAR.

Kāstamuni: 1. Vilayet of Asiatic Turkey, having on its N. the Black Sea. Area 19,570 sq. m. Pop. 384,000. 2. Also called **Kastambul**, cap. of the vilayet of the same name. It manufs. copper ware, there being copper mines near by. Pop. 20,000.

Kästner, Erich (b. 1899). Ger. writer, b. in Dresden. After contemplating teaching and banking as professions, he finally studied literature, living first by journalism; he was able to turn to writing by the income from his verse (*Hiers auf Taille* 1923; *Larm in Spiegel*, 1929; *Ein Taille, gibt Auskunft*, 1930). His most famous book, *Emil und die Detektive* appeared in 1929 (Eng. trans. *Emil and the Detectives*, 1930), dramatised, and later filmed in the U.S.A. Later works include *Drei Männer im Schnee* (1931; Eng. trans. *Three Men in the Snow*, 1935), also filmed, and *Die Verschwindende Miniatur* (1936; Eng. trans. *The Missing Miniature*, 1936). The humour and charm of his writings is remarkable amongst the bitterness of the post-war years.

Kastoria, tn. of Greece in Macedonia, situated to the S. of Monastir on the small lake of K. Pop. 8000.

Kastri, Argolis and Corinthia, *see* HERMIONE.

Kastri, Phocis, *see* DELPHI.

Kastro, *see* MYTILINI.

Kasur, tn. and important commercial centre in W. Punjab, Pakistan, 32 m. S.W. of Lahore. Pop. 53,000.

Katabolism, name for the processes which result in the oxidation or other decomposition of protoplasm within the living organism as opposed to anabolism, which is the name for the building-up of protoplasm, etc., from less complex substances. The two processes considered together are known as metabolism.

Katanduanes, *see* CATANDUANES.

Katanga, prov. of Belgian Congo, S.E. part of the colony, having an area of 180,000 sq. m. It is one of the most important mining districts in the world, with copper, gold, iron, tin, and uranium mines, and supplies 90 per cent of the world's radium; it is very fertile, and cattle thrive on its uplands because there is no tse-tse fly. Elisabethville is the cap. Pop. 980,000, of which 1000 are Europeans.

Kater, Henry (1777-1835), Eng. physicist, b. at Bristol; he entered the army in 1794, went to India with his regiment in 1799, and was of much assistance in the trigonometrical survey of India. In 1814 he retired on half-pay and devoted himself to scientific pursuits. His first important contribution to science was his proof of the superiority of the Cassagrainian to the Gregorian telescope; he carried on experiments for determining the length of a second's pendulum, and invented the floating collimator. In 1814 he was decorated with the order of St. Anne by Russia for his services in verifying the Russian standards of length, and in the same year was made a F.R.S.

Kater's Pendulum, *see under* PENDULUM.

Katha, dist. of Upper Burma, having an area of 6994 sq. m. Its chief riv. is the Irawadi, and its cap. is Katha. Gold, copper, iron, and lead are found, and rice, tea, scamum, and tobacco are produced. Pop. 290,000.

Katharine the Great, *see* CATHERINE II.

Kathiawar, peninsula of India, situated on the W. coast between the gulfs of Cambay and Cutch. It consists of 280 states and estates, which, in 1924, with those of Cutch and Palanpur, were, as the W. Indian State Agency, placed directly under the gov. of India. In 1948, following the achievement of Indian Independence, joined the first of the new unions—Saurashtra (*see also* INDIA (POLITICAL DIVISIONS AND EFFECT OF INDIAN INDEPENDENCE ON THE INDIAN STATES)). Area 37,894 sq. m. Pop. 4,900,000.

Kathode, *see under* ANODE and ELECTROLYSIS.

Katmai, volcano of the Alaska peninsula, 7500 ft. high; erupted June 6, 1912, creating the Valley of Ten Thousand Smokes.

Katmandu, *see* KATHMANDU.

Katō, Takasaki, Viscount (1860-1926), Jap. statesman. He was educated at the univ. of Tokyo, and in 1888 became private secretary to the minister for foreign affairs. He was director of the

banking bureau and of the taxation bureau, Finance Dept., 1891-94. From this date till 1899 he was envoy extraordinary and minister plenipotentiary at the court of St. James; minister for foreign affairs, 1900-1, and again in 1906. Baron 1911. Foreign minister 1914-15. Viscount 1916. In 1924 he became Prime Minister, and carried through manhood suffrage.

Katowice (Ger. Kattowitz), tn. in Upper Silesia, Poland. Transferred to Poland after the First World War. K. was captured in the Second World War by the Gers. in 1939, and lost by them in 1945. There are rich local coal and iron deposits, and the tn. has important manufs., including chemicals, building materials, and mechanical engineering. Pop. 133,000.

W. F. Munsell

ANGELICA KAUFFMANN
Self-portrait.

Katrine, Loch, lake of Scotland, situated in Stirlingshire and Perthshire, about 3 m. to the E. of Loch Lomond and 94 m. W. of Callander. It is about 8 m. long, less than 1 m. wide, and discharges its water through Lochs Achray and Vennachar to R. Forth. It also supplies the city of Glasgow with water. It is situated among some of the most beautiful scenery in Scotland, in the heart of the Trossachs, with Ben Venue and Ben A'an on its bank. The prin. scene of Scott's *Lady of the Lake* is laid on Ellen's Isle in this loch.

Katsura, Tarō, Prince (1847-1913), Jap. soldier and statesman. Military attaché at the Berlin embassy 1875-78. He became vice-minister of war in 1884; and served with distinction in the campaign of 1894-95, receiving the title of viscount. After being minister of war, 1898-1901, he was Premier for four years. For his services he was raised to the rank of count in 1902, and marquis in 1905, when King Edward made him a K.C.M.G. Prince, 1911.

Kattegat, see CATTEGAT.

Kattowitz, see KATOWICE.

Kaub, see CAUB.

Kaufbeuren, manufacturing tn. of Bavaria, Germany, 33 m. S.W. of Augsburg. Pop. 9500.

Kaufmann, Angelica (1741-1807), Swiss artist, and royal academician, b. at Chur in the Grisons. At the early age of eleven was painting portraits of its notabilities. She visited Milan, Rome, Bologna, and Venice, and appeared in London in 1766, one of her first works being a portrait of Garrick. She was befriended by Sir Joshua Reynolds and soon became famous as a painter of classic and mythological pictures and portraits. She is also known by her engravings from designs by Bartolozzi and others. See lives by Giovanni de Rossi, 1810; F. A. Gerard, 1893; and Lady Victoria Manners and G. C. Williamson, 1924.

Kauffmann, Nicholas, see MERCATOR, NICHOLAS.

Kaufmann, Constantine Petrovich (1818-82), Russian general, b. near Ivanogorod. He distinguished himself at Kars in 1855, and was appointed military governor of Turkestan in 1867, occupying Samarkand the following year. In 1873 he commanded the expedition against Khiva, and two years later conquered Khokand.

Kaulbach, Wilhelm von (1805-74), Ger. painter, b. at Arolsen in Waldeck. He was a pupil of Cornelius at the Düsseldorf academy, followed his master to Munich in 1825, and succeeded him as director of the academy there in 1849, an office which he continued to hold till his death. K. mastered the practice of mural or monumental decoration, and his realistic tendencies appeared in his book illustrations of Shakespeare, Schiller, Goethe's *Faust*, and *Reineke Fuchs*. He also showed creative imagination in the 'Destruction of Jerusalem,' and the 'Battle of the Huns.' His ultimate work was a vast canvas, over 30 ft. long, entitled the 'Sea-Fight at Salamis,' painted at Munich. See lives by H. Müller, 1892, and F. von Ostini, 1906; also J. Durck-Kaulbach, *Erinnerungen an W. von Kaulbach und sein Haus* (3d ed., 1922).

His nephew, Friedrich August von K. (1850-1920), b. at Munich, was a painter of historical scenes and portraits, and director of the Munich Academy.

Kaunas, see KOVNO.

Kaunitz, Wenzel Anton, Count, from 1761 Prince of Kaunitz-Rietberg (1711-1794), Austrian statesman and diplomatist, b. in Vienna. From 1742 to 1744 he was minister at Turin, and ambas. at the Fr. court from 1750 to 1752, forming an alliance between France and Austria. From 1753 to 1792 he was state-chancellor and chief minister, and in 1756 formed the coalition against Frederick the Great. See lives by Beer, 1872, and C. Kuntzel, 1923.

Kauri, or **Cowrie Pine**, *Agathis australis*, family Pinaceae, a tall conifer of New Zealand and the New Hebrides. Besides being the source of K. gum it produces a valuable timber, probably the best softwood in the world. The waste portions

(chips, sawdust, etc.) of the K. pine are utilized for making paper-pulp and the extraction of rosin.

Kavalla, see under NEAPOLIS.

Kavalla, cap. of the dept. of K., Macedonia, Greece, on Lake K. Tobacco-trade centre. Taken by the Turks in the First World War, but retaken by the Gks. in 1918. In the Second World War occupied by the Gers. in 1941 until their evacuation of E. Thrace in 1944. Pop. 50,000.

Kaveri, River, see CAVERY.

Kavirondo, dist. and native reserve of Kenya, N.E. of Lake Victoria, Nyanza. Two distinct races dwell there—Bantu and Negro tribes, but the K. are a non-Bantu-speaking tribe. The dist. is mostly fertile and well-watered, but a considerable amount of sheet and gully erosion has occurred in parts of the reserve, where the average under export crops such as cotton and sisal is increasing. The density of the pop. is increasing, and the area of virgin soil is growing less, so that the number of natives who have new land to administer is naturally dwindling. The N. K. tribes send some 38 per cent of their men yearly to work for various periods on farms and plantations. The Brit. Miocene expedition in recent years has exploited rich fossiliferous sites in K. Gulf and has found limb bones of a large ape of the early Miocene; this discovery was of particular interest, since knowledge of the extinct apes has been almost confined to jaws and teeth. The slender shafts of the longer bones appeared to indicate that the apes were light-built creatures, not yet specialised for an arboreal existence, and were able to run and leap with considerable agility, in contrast with the lumbering gait of modern anthropoid apes. See G. Wagner, *The Bantu of the Kavirondo*, 1949.

Kawardha, state and tn. of Central Provs., India, Bilaspur dist. Area 600 sq. m. Pop. 77,700.

Kawartha Lakes, Ontario, Canada: extend from Lakethird to Cobouok, a distance of 70 m., and include Katchawanookna, Clear, Buckhorn, Chemung, Stoney, Lovedick, Pigeon, Cameron, Sturgeon, and Balsam lakes. The system is connected with the Trent Canal, running from Georgian Bay via the Severn R. to Lake Simcoe and thence to Trenton, a total distance of 240 m. The K. L.—the name means bright waters—are full of romantic charm, and are much favoured by anglers, campers, and holiday folk.

Kawlun, see KOWLOON.

Kay (or **Ke**, **Kel**, **Queux**, etc.). Sir, in Arthurian legend, the foster-brother of Arthur, who made him his seneschal. Surnamed 'The Rude' and 'The Boastful,' he is represented as treacherous, malicious, and bitter and sarcastic in speech. He figures in the *Brut*, *Perceval li Gallois*, *Gilgamesh and Gawane* (pamphlet printed in 1508 by Chepman and Myllar), and *Gawain and Kay* (in the Dutch *Lancelot*). See T. Malory, *Morte d'Arthur*, 1485, and novel by E. P. Frankland, *The Bear of Britain*, 1944.

Kay, John, or **Kay of Bury** (fl. 1733-64), Eng. inventor, by 1730 a reed-maker for looms. In 1733 he took out a patent for

his fly-shuttle, by which arrangement only one hand was required to throw the shuttle backwards and forwards. He also invented the extended lathe and a card-making engine. See G. Guest, *History of the Cotton Manufacture*, 1823; A. Barlow, *The History and Principles of Weaving by Hand*, 1878.

Kay, John (1742-1826), Scottish caricaturist, a member of the Society of Surgeon-Barbers (1771). In 1785 he opened a print-shop in Parliament Close, Edinburgh, and produced miniatures and sketches of local celebrities. These are chiefly of antiquarian interest, as a record

Humperdinck and Schönberg. His writings include *Orpheus* (1927); *Vom Klang der Welt* (1937); and *Die Form der Geige aus dem Gesetz der Löwe konstruiert* (1946).

Kaysers, see KAYSERIEH.

Kay-Shuttleworth, Sir James Phillips (1804-77), Eng. politician and educationist, b. at Rochdale, Lancashire. In 1824 he became a medical student at Edinburgh Univ., and then gained experience by working among the poor in the Lancashire factory dists., which led to his appointment in 1835 as poor-law commissioner in Norfolk and Suffolk, and later in the Lancashire factory dists. In 1839

KATAKS

G. Kristensen

of the social life of his times. See collection of his portraits by Paton, 1838, 1842, 1877; W. Anderson, *Scottish Nation*, 1875; and S. Redgrave, *Dictionary of Artists*, 1878.

Kayak, or Kajac, Eskimo term for a fishing-boat, common to all dists. from Greenland to Alaska, strictly only for that used by one man. It is a long, narrow-decked canoe, the light wood framework being covered with sealskin, and weighs about 60 lb. An *umiak* (q.v.) is a larger type, capable of carrying heavy loads.

Kaye, Dr. John, see CAIUS, DR. JOHN.

Kaye-Smith, Sheila (Mrs. J. P. Fry) (b. 1889), Eng. novelist. Her novels deal mainly with Sussex rural life and include *The Tramping Methodist* (1908); *Sussex Gorse* (1916); *Green Apple Harvest* (1920); *Shepherds in Sackcloth* (1930); *Susan Spray* (1931); *The Ploughman's Progress* (1933); *Superstition Corner* (1934); *Rose Deeprose* (1936); *The Valiant Woman* (1938); *Ember Lane* (1940); *The Hidden Son* (1942); *Tambourine, Trumpet, and Drum* (1943); *Kitchen Fugue* (1945); *The Laidners and Laurelwoods* (1948).

Kaysers, Hans (b. 1891), Ger. musicologist, b. at Buchau, Württemberg, a pupil of

he was nominated first secretary to the committee of the Privy Council on Education, and was instrumental in establishing a system of gov. school inspection. He founded the first training college for school teachers at Battersea (1839-40) in conjunction with E. Carleton Tufnell. He was created a baronet in 1849, on his retirement from public life. He wrote numerous papers on education, and his *Physiology, Pathology, and Treatment of Asphyxia* became a standard textbook.

Kazakhstan, autonomous Kazakh Socialist Soviet Republic, was created in 1920, to include that part of S. Siberia inhabited by the Kazakhs (Kirghiz). K., comprising the govts. of Uralsk, Turgai, Akmo-linsk, and Semipalatinsk, was made a state member of the U.S.S.R. in 1936. To this republic were also added the parts of the old governorship of Turkestan inhabited mostly by Kirghiz. It consists of the regions N., S., E., and W. K., Akinolinsk, Aktyubinsk, Alma-Ata, Gur-yer, Jambul, Karaganda, Kyzyl-Ordia, Kokchetav, Kustanal, Pavlodar, Semi-palatinsk, and Taldy-Kurgan. The area of the K. S.S.R. is 1,056,000 sq. m., and

the pop. is 6,146,000. Situated far from the oceans, K. has a dry extreme continental climate. There are frequent dust storms, and in summer rainfall is slight. Near the Irtysh and other rvs. the grass vegetation is abundant; to the S. the characteristic brown soil zone supports a sparse steppe vegetation, water being scarce. On the banks of the salt lakes and streams are thickets of rushes, which serve to break the monotony of the landscape. The valleys, however, contain freshwater springs, and these are the spots chosen by the Kazakh herdsmen as their winter quarters. The steppe on each side of the Sary Su, which flows from the Kazakh Upland to the Syr-Darya, but is now overgrown, is the habitat of wolves, badgers, and foxes, which are hunted by the Kazakhs. For centuries the steppe and dry steppe lands of K. have been the home of nomadic herdsmen, but agriculture is the chief industry, state farms for increasing the grain supply occupying nearly 5,000,000 ac. before the Second World War, but to-day covering at least 10,000,000 ac. Centuries ago settled life had developed near the rvs. along the borders of the m.- in the S.E., and irrigation works were constructed. The new Kyzyl-Orda dam in the Syr-Darya is intended for water conservation for 100,000 ac. of rice plantations and, in time, to increase the irrigated area in the Kyzyl-Orda region to 375,000 ac. Across the country were caravan trade routes from China, India, and Mesopotamia. The tsarist settlers appropriated the more fertile lands, so that the majority of Kazakhs were forced to seek a precarious living as herdsmen. But in the last few decades great changes have taken place: modern farming technique has been adopted, and there are tractors and combine harvesters on the farms. Minerals include coal, iron ore, zinc, lead, oil, silver (undeveloped), and copper, a valuable deposit of which was found in 1928 near Lake Balkhash. The industrial development is in the direction of using the resources of oil, coal, and non-ferrous metals on the one hand, and of using the products of agriculture, especially cotton, on the other. The Karaganda coal basin is the third largest in Russia; copper refining and chemicals are amongst other industries.

This industrial development is reflected in the expansion of the railway communications. Before the First World War there was only one railway for the whole region from Orenburg to Tashkent. When, however, it was decided that the industries of the Asiatic Russian republics were to be planned in relation to those of W. Siberia and the Urals, it was essential to create new means of transport and altogether over 4000 m. of new railroad have been constructed. A railway crosses the republic from N.W. to S.E., and another in the E. connects with it and the Trans-Siberian line. Thus Novosibirsk is linked with Tashkent and Alma-Ata, and Petropavlovsk, by branch line, with Karaganda, and Dzhezkazgan, by another branch line, with Semipalatinsk. The chief tns. are Alma-Ata, the cap. (formerly Verny),

which has a univ., pop. 230,000; Semipalatinsk (110,000); Karaganda (a new tn., 168,000); Prebalkhash, a new tn., which has sprung up around the copper refineries on the N. shore of Lake Balkhash (50,000); Aktymbinsk (which has a chemical plant); Kounrad; Hilder; Karsak Pae; and Gur'yev (has a fish cannery). The republic has a total pop. of 6,146,000. See also KIRGHIZ.

Kazalinsk, tn. in the Russian region of Syr-darya, in the Kazakh S.S.R., on the Syr-Darya R., which floods the tn. in spring. It is situated at the junction of the prin. trade routes of central Asia, and carries on an active trade with the surrounding dist. Pop. 20,000.

Kazan: 1. Prov. of the Tatar autonomous S.S.R., R.S.F.S.R., and having an area of about 24,600 sq. m. The prin. rvs. are the Volga and the Kama, a large amount of the surface being covered by forests. Oil has been found. This gov. was annexed to Russia in 1552. Pop. 2,711,000. 2. Cap. of the Tatar autonomous S.S.R., lying about 200 m. E. of (or by Nijni-Novgorod) on the Volga R. The Kremlin, or citadel, contains a cathedral in which is an image of the Virgin famous throughout Russia. The univ. was founded in 1801. The chief industries are leather tanning, and the manuf. of soap, iron, steel, and cloth. There are also shipbuilding yards in the vicinity. The Tatar republic possesses a powerful electric power station here. There are chemical, wagon-building, and engineering works, and a large factory for the manuf. of typewriters. K. itself is an important trading centre between parts of Asia and Europe. Pop. 401,700.

Kazbek, or Casbeck, peak of the Caucasus, Georgia U.S.S.R., third highest in the range (16,546 ft.). The Deydorak glacier gives rise to huge avalanches, which sometimes stay the course of the Terek.

Kazembe, see CAZEMBE.

Kazinczy, Ferencz (1750-1831), Hungarian man of letters, b. at Kr-Semlyen. He started the first Magyar literary magazine in 1788. Imprisoned from 1794 to 1801 for his part in a conspiracy of the abbot Martinovics. His influence on the revival of Hungarian literature was great.

Kea, green New Zealand species of the Loridae, or Bush-tongued Parrots, the Maori name, K. being imitative of the bird's cry. Formerly living on fruit and insect grubs, during a time of scarcity it took to haunting the sheep stations and feeding on the offal of sheep killed for consumption. It soon showed a preference for the fat surrounding the kidneys and later developed into a bird of prey, attacking living sheep on the runs, and tearing off the wool and flesh of the loins to reach the kidneys.

Kea, see CANG.

Keady, linen-manufacturing vil. in Co. Armagh, Ulster, Ireland.

Kealakekua, bay in Hawaii, one of the Sandwich Is. It was here that their discoverer, Capt. Cook, was murdered in 1779.

Kean, Charles John (1811-68), actor the second son of Edmund K. (q.v.),

appeared at the age of sixteen as Young Norval in Home's *Douglas* at Drury Lane. The favourable impression he made secured him an engagement at the Haymarket, where he was successful as Hamlet. Among his other triumphs were Richard III., Sir Giles Overreach, and Louis XI. Many of the parts he created were, however, subsequently better played by Sir Henry Irving. He went more than once to the U.S.A., where he was heartily welcomed, and where he made much money. He married, in 1812, Ellen Tree. See life by J. W. Cole, 1859.

Kean, Edmund (1789-1833), actor, went on the stage as a child, at the age of twelve playing Prince Arthur in *King John*, with Kemble and Mrs. Siddons. In 1814 he won his spurs at Drury Lane with a magnificent performance of Shylock, and the reputation he then acquired was vastly increased by his Richard III. and Hamlet. He had his failures, but in the annals of the Eng. stage he was unrivalled in tragic roles. Owing to drunkenness and personal extravagance he fell on evil days in his last years. There are biographies by Barry Cornwall, 1835, and F. W. Hawkins, 1869.

Keane, Augustus Henry (1833-1912), ethnologist and writer on geography, was a student in Jersey, Italy, Dublin, and Hannover. His life, apart from travels in Europe and N. America, was spent in literary labour, which were recognised by the vice-presidency of the Anthropological Institute, and more substantially by a small civil list pension in 1897. He was the author of *Stanford's Asia, Africa, and Central and South America* (1832), whilst *Ethnology* (1896) and *Man, Past and Present* (1899) are two of his studies in anthropology.

Keane, John, first Baron Keane (1781-1844), Eng. general, entered the army at the age of twelve. In 1799 he became captain, serving sev. years in the Mediterranean, and also in Spain under Wellington, being made colonel in 1812, major-general in 1814, and general in 1815. From 1823 to 1830 he was commander of the forces in Jamaica. In 1839 he performed his most famous exploit, the capture of Ghazni, for which he was raised to the peerage. He was not so much a great as a fortunate soldier.

Kearley, Sir Hudson Ewbanke, see DEVONPORT, VISCOUNT.

Kearney, manufacturing tn. and the cap. of Buffalo co., in Nebraska, U.S.A. Pop. 9600.

Kearny, manufacturing tn. in Hudson co., New Jersey, U.S.A. Bridges spanning the Passaic connect it with Newark. Pop. 39,400.

Kearsley, or Kersley, tn. with coal-mines and cotton mills, 3 m. S.E. of Bolton in Lancashire, England. Pop. 10,200.

Kearton, Cherry (1871-1940), Eng. photographer and traveller, b. at Thwaite, Yorkshire. Pioneer of animal photography, and films of big game. A collected vol., *Travels*, appeared in 1942.

Kearton, Richard (1862-1928), Brit. field naturalist and author, b. at Thwaite-in-Swaledale, son of a yeoman farmer and himself a yeoman farmer. He was for a

time a sub-manager of the publicity dept. of Cassell & Company, but retired in 1898. He wrote numerous books on birds, many of them illustrated. Among the best known are *British Birds' Nests: How, where, and when to find and identify them* (1895); *Birds' Nests, Eggs, and Egg-collecting* (1896); *With Nature and a Camera: being the Adventures and Observations of a Field Naturalist and an Animal Photographer* (1897); *Wild Life at Home: How to Study and Photograph it* (1899); *At Home with Wild Nature* (1899); *Our Rarer British Breeding Birds* (1900); *Our Bird Friends* (1900); *Wild Nature's Ways* (1903); *Nature's Carol Singers* (1906); *Kearton's Nature Pictures* (1910); *Wonders of Wild Nature* (1915); *Wild Bird Adventures* (1923); and *A Naturalist's Pilgrimage* (1926).

Keats, John (1795-1821), Eng. poet; was intended to be a surgeon, and in 1816 was a dresser at Guy's Hospital, but soon he abandoned any intention of pursuing this profession. He made the acquaintance of Leigh Hunt, and began to publish verse in the latter's paper, *The Examiner*. Shelley, who greatly admired him, assisted him to bring out in 1817 a vol. of *Poems*, which attracted no attention among the general public. Undismayed by failure, K. began to write *Endymion*, which appeared in 1818, but did not at once win that chorus of praise with which it has since been rewarded. Indeed K. was bitterly attacked by Lockhard in *Blackwood's*, and Croker in the *Quarterly*, but after the first shock his confidence returned, and he was able to say: 'I think I shall be among the English poets after my death,' than which no self-criticism was ever more true. For K., poetry was the one and only calling, and, indeed, the clue to his whole artistic career is to be found in his words (written from Carisbrooke on April 18, 1817, before his fatal illness declared itself): 'I and I cannot exist without poetry—without eternal poetry—half the day will not do. . . . It was this devotion of his that helped him to triumph over gross circumstance and discouragement. An unfortunate passion for a young woman named Fanny Brawne (which was not reciprocated), whom he first met in 1818, conducted by its intensity to the undermining of his health, which was already broken. Consumption declared itself in Feb. 1820; he was ordered to a warmer climate; left for Italy in Sept. 1820 but d. in Rome on Feb. 23, 1821. The traditional view of K. as a moral weakling, who was killed by critical abuse of *Endymion*, is utterly ill-founded. The real K. was no decadent; rather was he courageous and even pugnaclous. His letters to Fanny Brawne, with their hectic bursts of passion, may in some measure be held to justify the legendary conception of him; but they were written at a time of great anxiety and fast-ebbing health; and indeed other letters of the same period to his brother in America and to various friends meanwhile give evidence of plenty of grit in his character.

His other works include *Hyperion* (1818-19); *The Eve of St. Agnes* (1819); *La*

Belle Dame sans Merci (1819); and *Lamia* (1820). In *Endymion* K. was trying his prentice hand; it is full of crudities and delights both of idea and style. In *Hyperion* he has mastered his instrument, and in its best passages his music and thought ring true and reveal the self-discipline which, in the interim, he had so rapidly acquired. In *Endymion*, there is every trick of egotistic fancy and the 'ornamental art of rhyme is employed in its extravagance along with the real and imaginative faculty of the mind'; *Hyperion*, on the other hand, contains some of the greatest poetry in the language.

JOHN KEATS

N P G

The painting by William Hilton, after a miniature by Joseph Severn.

The Eve of St. Mark, which he left unfinished at his death, is very different yet is equally authentic in mode as *Hyperion*. It revealed the pictorial element which is perhaps the most characteristic in all his shorter poems, particularly in *Lamia*, and has been well described as 'pro-Itaphaelism in a nut-shell.' In 1817 K. took up the study of Shakespeare's *Sonnets* and made a study of Shakespeare on the stage; but he was not the type of man to make a mere formal and exemplary critic and reviewer, and one is impelled in reading his reviews to speculate rather about his future as a dramatic poet himself had he lived. He acted on one or two occasions as dramatic critic to *The Champion*, but only to betray a most unaccustomed vein in a reviewer. K. had as much philosophy in him as perhaps even Shelley, but he was too fine an artist to let his philosophy dominate his muse. In a word, the poetry of K. is great in intellect as well as fantasy and his early death was one of the irremediable calamities of literature. His odes

are not excelled by those of any writer; his odes *On a Grecian Urn*, *To a Nightingale*, *To Autumn*, and *On Melancholy* being among the classic gems of Eng. literature.

From Dec. 1818 to 1820 K. lived in Wentworth Place, Hampstead. Wentworth Place in K.'s day comprised two houses, one shared by K. and Charles Armitage Brown, the other occupied by Charles Wentworth Dilke. Structural alterations were carried out and the building was opened in 1931 by Lord Crewe as K. House, comprising a K. Museum and a branch lending library by way of memorial to the poet.

Collected eds. of K.'s poetical works have been ed. by H. B. Forman (1883, 1889, 1900 1); E. de Selincourt, 1903, 1926; Sir S. Colvin (1915, 1920, 1924); J. Middleton Murry (1930); and H. W. Garrod (1939, the definitive ed.). Eds. of letters: R. M. Milnes (Baron Houghton), with life (1848; reprint by R. Lynd in Everyman's Library, 1928); Sir S. Colvin (1891); and M. B. Forman (1931, the definitive ed.). See lives by E. Dowden, 1886; Sir S. Colvin, 1887; R. Bridges, 1926; H. W. Garrod, 1926; D. Hewlett (1909), 1937, 1945; E. V. Weller (ed.) (1909), 1937, 1945; B. I. Evans, 1934; and B. Askwith, 1941. Also D. L. Baldwin and others, *A Concordance to the Poems of John Keats*, 1917; H. P. A. Fausset, *Keats: a Study in Development*, 1922; J. Middleton Murry, *Keats and Shakespeare*, 1923; M. R. Ridley, *Keats's Craftsmanship: a Study in Poetic Development*, 1934; Lord Gorell, *John Keats, the Principle of Beauty*, 1948.

Keble, John (1792-1866), Eng. divine, won a first-class honour, when, in 1811, he graduated from Corpus Christi College, Oxford; fellow and tutor of Oriel from 1811 to 1823; he was prof. of poetry in Oxford from 1831 to 1841; and finally in 1836 settled down in the country vicarage of Hursley, Hampshire, where he stayed till his death. In disposition K. was shy and unassuming, and, considering his talents, strangely unambitious. His friends have left generous tributes to his winning personality, his unsparing, devotion to his duties as par. priest, and his unselfish care of a sick father. A Tory and cavalier in politics, he was, according to Newman, the 'true and primary author' of the Oxford movement in the Eng. Church. It grew out of his famous sermon on 'National Apostasy', 1833, the High Church sympathies of which reappear in his contributions to the celebrated *Tracts for the Times*, in his standard ed. of Hooker's works (1836), and in all his sermons and poems. He is popularly known for his book of poems, *The Christian Year* (1827). See lives by J. C. Shairp, 1866; Sir J. T. Coleridge, 1869; W. Lock, 1892, with bibliography; and E. F. L. Wood (Lord Halifax), 1909.

Keble College, Oxford, founded in 1870, to the memory of John Keble (q.v.), and a striking, if unpleasant, example of the architecture of Wm. Butterfield.

Ke-cho, see HANOI.

Kecskemet, tn. of Hungary, 65 m. S.S.E. of Budapest, with soap, tobacco, leather

manufs., and trade in fruit, wines, and agric. produce. Pop. 83,700.

Ked, Sheep, see SHEEP LOUSE.

Kedah, state of Brit. Malaya, and, prior to the formation of the Malayan Union, classed as an Unfederated Malay State in treaty relations with Great Britain. It is bordered by the Siamese states of Songkhla and Patani, and by Perak (q.v.), and extends along the sea coast from the R. Sanglang, its boundary with Perlis (q.v.), to the Muda R., its boundary with Prov. Wellesley. The state includes the is. of Langkawi, and a number of adjoining is., of which Pulau Dayang Bunting is the largest. Its area, including is., is 3660 sq. m. The highest peaks, of the mainland, are Gunung Bintang (6100 ft.), K. Peak (or Gunung Jerai) (3940 ft.), and Bukit Perak (2823 ft.). The S. and central area consists mainly of undulating land broken up by ranges of high hills; this area is principally occupied by large rubber plantations. The N. and coastal belt contains the best rice-growing area in Brit. Malaya. The E. part along the Patani border is still largely undeveloped; its ranges of hills consist of granite, quartzite, and shales. The cap. of K. is Alor Star. Characteristic of the climate, as elsewhere in the Malay peninsula, are uniform temp., high humidity, and copious rainfall, except that in K. there is a well-defined dry season from mid Dec. to mid March. Little is known of the hist. of K. before the fifteenth century, though there are references to a country which is identified with K., in the works of Arab voyagers of the ninth century A.D., and in the Chinese chronicles of the Tang dynasty. It was, however, always known to abound in tin, and it was also known that its people were Buddhist. At the end of the fifteenth century the ruler of K. was converted to Islam. The Portuguese Barbosa, in a MS. of 1516, described K. as a place in the kingdom of Siam, to which many ships resort for trade in all sorts of merchandise; but Siamese influence did not save K. from Portuguese attacks in 1611, and in 1619 the Achinese carried its ruler into captivity. There is ample evidence of seventeenth-century Eng. trade with K., by both private merchants, as well as the E. India Company, but later, in 1683, the Dutch, who had obtained a concession in 1641, forced the Eng. company to concentrate on India. In the eighteenth century K. came under the influence of the Bugis, who were then dominant in Selangor (q.v.), and it was to secure assistance against them that the sultan of K., in 1771, approached Francis Light who, in 1786, concluded an agreement 'with the King of Quedah for the cession of Prince of Wales Island.' Penang was occupied by Capt. Light, and the Brit. flag hoisted there on Aug. 12, 1786, but a few years later the agreement was replaced by a treaty (1791) by which the K. Gov. was to receive an ann. subsidy from the E. India Company. In 1821 the Siamese invaded K., and divided it into four parts. Perlis, Setul, Kubang Pasu, and K. putting each under a separate ruler. In 1843 the sultan of K.,

who had lived in retreat in Malacca, was allowed to return to Alor Star and resume the rulership of K. Setul, Perlis, and Kubang Pasu, however, remained under their separate rulers, who were made independent of K. Later, Siam allowed Kubang Pasu, which is a thinly populated dist. on the N. border of K., again to become a part of K. Setul is now a part of Siam. Perlis is independent of the sultan of K. In 1909 under a treaty with Siam the suzerainty of K. was transferred from Siam to Great Britain. In 1923, by a treaty between K. and Great Britain, the K. Gov. agreed to continue to be under Brit. protection, and also to accept a Brit. adviser. Padi and rubber are the chief agric. products of K., and the areas under these crops in 1938 were 257,890 ac. (about 100 sq. m.) and 302,600 ac. (about 473 sq. m.) respectively. Other crops of commercial importance are coco-nuts, arecanuts, tapioca, bananas, and fruit trees of various kinds. Tobacco, coffee, chillies, ground-nuts, sago, sweet potatoes, and kapok are fairly widely, though sporadically, planted, and are of some economic importance locally. The railway connecting Brit. Malaya with Siam passes through K. In the Second World War the Jap., early on the morning of Dec. 12, 1941, attacked the Brit. positions on the Siamese border in K., with two divs., while another two divs. were operating in the Kota Bharu area of Kelantan. The Jap. used tommy-guns and armoured vehicles, and the day went against the Brit. forces. The Jap. then pressed down the coastal plain of K., and within three days had captured Penang. Pop. (1938) 481,242 (Malays and other Malaysians 323,327; Chinese 80,443; Tamils and other Indians 57,060; Europeans 700). See also MALAYA, BRITISH, JAPANESE INVASION OF (1941-42). See R. L. German, *Handbook of British Malaya*, 1935; R. Emerson, *Malaysia*, 1937.

Kedgerree, Indian dish of rice, boiled with onions, eggs, pulse, and butter. In European cookery it is a breakfast dish of cold fish, boiled rice, and eggs.

Kedleston, Marquess Curzon of, see CURZON.

Kedron, valley lying E. of Jerusalem; formerly crossed by a brook flowing towards the Dead Sea; near it was the N.T. Garden of Gethsemane. It was visited by Christ on his way to Gethsemane and by David in his flight.

Kedron Brook, see KIDRON.

Keel (botany), see CARINA.

Keeler, James Edward (1857-1900), Amer. astronomer, b. at La Salle, Illinois. In 1890, when he was working in the Lick Observatory, he showed by means of photography that a large percentage of the small nebulae of the heavens are spiral. Five years later, when he was director of the Alleghany Observatory, he verified by spectroscopic investigations the theory already advanced that Saturn's rings consisted of 'discrete particles of unknown minuteness.'

Keeley, Mary Ann, nee Goward (1806-1899) Eng. actress; left a lasting impression on all who saw her spirited

impersonation of Jack Sheppard in a play founded on Alnsworth's novel of that name. The hero, however, was a criminal, and the performance of the piece was accordingly forbidden. In 1829 she married the comedian Robert K. (1793-1869), and appeared with him at the Olympic with Charles Mathews, at Drury Lane with Macready, and with Kean at the Haymarket. Two of her finest roles were Nydia in *The Last Days of Pompeii*, and Smike in *Nicholas Nickleby*.

Keeling, or **Cocos**, Islands, group of twenty-three small coral is. in the Indian Ocean, 12° 5' S. and 96° 53' E. Discovered by Capt. Keeling in 1609, they came under Brit. protection in 1856, and since 1886 have been annexed to the Straits Settlements. Formerly owned by one Alexander Hare, who lived with some 200 slaves given to him by the rajah of Bander. Hare left in 1825, the next possessor being John Curries-Ross, whose family has ruled the is. since that time. They abound in coco-nut palms, and enjoy an equable, invigorating climate. Ferocious land-crabs are numerous. In the First World War the Ger. raider *Emden* destroyed the wireless station of the is., and it was off tl. coast of the is. that the *Emden* was destroyed. The is. were a Brit. bomber base in the Second World War. Pop. 1100.

Keene, Charles Samuel (1823-91), artist, at the age of nineteen was apprenticed to a firm of wood-engravers. He soon began to indulge his artistic tastes, and illustrated *Robinson Crusoe* and other works. After contributing to the *Illustrated London News* his drawings began to appear in *Punch*, the staff of which he presently joined. As a humorist he was delightful, and as a black-and-white artist he had no rival for technical skill in his day. There are biographies by G. S. Layard (1892) and D. Hudson (1917).

Keene, city on the Ashuelot R., 44 m. S.W. of Concord, and the co. seat of Cheshire co., New Hampshire, U.S.A. K., which is situated on a level expanse guarded by high hills, manufs. boots and shoes, chairs, pottery, etc., and has railway workshops. Pop. 13,800.

Keeper of the Great Seal, officer of state who holds the great seal, i.e. the lord high chancellor (q.v.), formerly called the lord keeper. The delivery of the great seal into the hands of the chancellor confers the chancellorship upon him. Since the union with Scotland (1707) there has been only one great seal for the United Kingdom. The great seal is used for sealing public documents of great importance, e.g. treaties, writs to summon a Parliament, the clerk of the Crown in chancery being the official who actually passes the documents under it. The use of the great seal has been largely superseded by that of wafer great seals made on wax or embossed paper. But treaties with foreign powers are still ratified by letters patent under the great seal. On a demise of the Crown, when a new great seal must be made, the old seal belongs to the chancellor, though it is first theoretically broken or 'damasked' by a light blow with

a hammer. See Lord Campbell, *Lives of the Chancellors*, 1845-47.

Keeper of the Rolls, see **CUSTOS ROTULORUM**.

Keeshond, or **Dutch Barge Dog**, medium-sized, sturdily built, with erect ears and curled tail. It has a long top coat and short, very thick under-coat, grey in colour, with darker shading forming 'spectacles' round the eyes. Handsome, intelligent, and quiet, the breed is becoming increasingly popular; though generally regarded as a new arrival in Britain. It is in fact identical with the Wolf Spitz or large Pomeranian, known in this country for over 150 years.

Keewatin (N. wind), former dist. of N.W. Canada, now absorbed in the provs. of Manitoba, Ontario, and the N.W. Terrs.

Kehl, tn. in Baden, Germany, situated on the Rhine opposite Strassburg. As a vil., in the closing years of the eighteenth century, it was immortalised by Desaix (see *DESAIX DE VEGORX*) and Gouvion de Saint-Cyr (q.v.). The little streams, the roads, and the is. in the Rhine being made famous by the valour of those great generals (see Stendhal, *Memoirs of Marshal Saint-Cyr*). Before the First World War it had developed into a manufacturing city, with a pop. in 1939 of 12,100. In the Second World War it was taken by the Allies on April 15, 1945, the capture clearing the way for bridging to be started at Strassburg.

Kel, or **Ke**, Islands, group in the Dutch E. Indies. They lie between 5° to 6° 6' S. and 131° 50' to 133° 15' E., S. of the W. end of New Guinea and W. of the Aru Is. They comprise Great K. and Little K. (which is volcanic), and smaller is. On Great K., also called Nuhu Yut, are mts. over 3000 ft. in height. Coco-nuts abound, and sugo, maize, tobacco, etc., are profitably cultivated. Polynesians, Papuans, and Malays make a pop. of 25,000.

Keighley, tn. in the W. Riding of Yorkshire, England, near the confluence of the Rs. Worth and Aire, 81 m. N.W. of Bradford. Produces woollen and worsted goods, textile machinery, and sewing-machines. Pop. 56,800.

Keijo, see **SEKOU**.

Keir, David Lindsay (b. 1845), Scottish constitutional historian. Educated at Glasgow Univ. and New College, Oxford, he became a fellow of Univ. College. In 1921, was univ. lecturer in Eng. constitutional hist. from 1931 until his appointment in 1939 as president and vice-chancellor of Queen's Univ., Belfast. In 1949 he became master of Balliol, Oxford. Pubs.: *Cases in Constitutional Law* (1928, with F. H. Lawson), and *Constitutional History of Modern Britain* (1938).

Keir Hardie, James, see **HARDIE**.

Keiser, Reinhard (1673-1739), composer of church music and the chief figure in the early development of opera in Germany. He left over 100 operas, of which the chief were *Adonis* (1697); *Cæsar* (1703); and *Cæsus* (1710); most of them being produced at Hamburg, where he passed the greater part of his life. In some ways K. is the precursor of Handel. See A. Schering, *Geschichte des Oratoriums*, 1911.

Keith, Sir Arthur (b. 1866), Scottish physiologist and anthropologist; b. at Old Machar, Aberdeen; son of John K. Educated univ. of Aberdeen and Leipzig; Univ. College, London. President Royal Anthropological Institute, 1912-14. Fullerton prof. of physiology, Royal Institution, 1917-23. Secretary, Royal Institution, 1922-26. President, Brit. Association, 1927. Pubs.: *Introduction to the Study of Anthropoid Apes* (1896); *Embryology and Morphology* (1901); *Ancient Types of Man* (1911); *The Human Body* (1912); *Antiquity of Man* (1915); *Menders of the Maimed* (1919); *Engines of the Human Body* (1919); *Nationality and Race* (1920); *Religion of a Darwinist* (1925); *Concerning Man's Origin* (1927). Ed. *Hughes's Practical Anatomy* (1902); and helped to edit *Troves's Surgical and Applied Anatomy*.

In 1925 K. pub. the second ed. of his *Antiquity of Man*, since which year there has been an intensive search for the remains of fossil man. In 1931 he pub. *New Discoveries relating to the Antiquity of Man*, a work which examined the discoveries of the past five years. It contains a very full discussion of the anthropological significance of the Taung skull found in 1924 near the Vaal R. Some assume that this skull typified the basal ancestry of the human stock and named it *Australopithecus*. K. sees in this skull an anthropoid ape, sharing many features with the two surviving African anthropoids, the gorilla and the chimpanzee. Other works include *Darwinism and its Critics* (1935); *Stone-Age of Mount Carmel Human Fossil Remains* (with T. D. McCoun, 1939), and *A New Theory of Human Evolution* (1948).

Keith, Arthur Berriedale (1879-1944), Brit. philologist and constitutional lawyer and historian; b. at Dunbar; educated at Royal High School, Edinburgh; Edinburgh Univ., and Balliol College, Oxford. Awarded Boden Sanskrit scholarship. Entered Colonial Office in 1901, but was later attracted to his chosen fields of research, and became regius prof. of Sanskrit and comparative philology at Edinburgh, which chair he held for thirty years. He was able to combine with it academic appointments in constitutional law and hist. He was a writer of great industry and erudition in two widely different fields of study: In the subjects of his professorship he produced two massive vols., *The Religion and Philosophy of the Veda and Upanishads*, and a popular sketch of *Classical Sanskrit Literature*; while his monograph on *Buddhist Philosophy in India and Ceylon* goes far to correct the nineteenth-century conception of E. thought as an inchoate anticipation of the most modern schools of the W. In constitutional law his voluminous treatises kept him abreast of a constitutional system that seemed to be moving somewhat too fast for him, and he lacked the genius of A. V. Dicey—whose *Conflict of Laws* he ed.—for focusing attention on unchanging principle in the midst of change, and at times he seems to mingle his own prejudices and opinions on ephe-

meral issues of party politics with his constitutional exposition. His most competent works in this field are *The Sovereignty of the British Dominions* (1929); *The Governments of the British Empire* (1935); *A Constitutional History of India, 1600-1936* (1936); *The King and the Imperial Crown* (1938); and *The Constitution of England from Queen Victoria to George VI.* (1939). A diligent and gifted scholar, his literary output was prodigious, but his work requires sifting before its permanent value can be assessed.

Keith, Francis Edward James, known as **Marshal Keith** (1696-1758), Scottish soldier, b. near Peterhead, son of an old Scottish family. Took part in the Jacobite rebellion, and then did military service in Spain and Russia. Afterwards entered the service of Frederick the Great, and rose to field-marshal's rank. Killed at Hochkirch.

Keith, George Elphinstone Keith, Viscount (1746-1823), Eng. admiral, distinguished himself as commander of the *Perseus* under Lord Howe in the siege of Charleston (1780), and again under Lord Hood during the siege of Toulon (1793). In 1796 he wrested from the Dutch their settlement in the Cape of Good Hope, and obliged a detachment of their fleet to surrender in Saldanha Bay. The following year he assisted in the suppression of the mutiny at Sheerness, and in 1799, as commander in Sp. waters, effected a skillful landing at Aboukir.

Keith, mrkt. tn. of Banffshire, Scotland. It is situated 45 m. N.W. of Aberdeen by rail. It is an agric. centre and manufs. tweeds. Pop. 4200.

Kekulé von Stradonitz, Friedrich August (1829-96), Ger. chemist; was persuaded by Liebig to take up chem., and after studying in Gießen and conversing with leading chemists in Paris and England, accepted a professorship of his science at Ghent (1858), and later at Bonn Univ. (1865). Besides editing *Annalen der Chemie* he pub. *Lehrbuch der organischen Chemie* (1861-87). His 'closed-chain' theory of benzene (q.v.) gave a remarkable stimulus to the preparation of aniline dyes, whilst his doctrine of valency played an important part in the development of chemical theory. See F. R. Japp, 'Kekulé Memorial Lecture,' in the *Journal of the Chemical Society*, 1898; and R. Anschütz, *Kekulé*, 1929.

Kelantan, a state of Brit. Malaya and, prior to the formation after the Second World War of the Malayan Union, classed as an Unfederated Malay State in treaty relations with Great Britain. It was formerly a state of Siam, S. of the Patani States. The area is 5750 sq. m. Behind a low sandy coast line 60 m. long lies a fertile plain 1000 sq. m. in area, densely populated and closely cultivated with rice, coco-nut and fruit trees. S. of this plain, the country is hilly and broken, the highest (6000 ft.) hills forming the boundary with Perak, and those on the Pahang border also rising to 6000 ft. This part of K., though thinly populated, contains the bulk of the Brit.-owned rubber estates and also the whole of the aboriginal pop. The

climate is characterised by high humidity and copious rainfall, the State being in the equatorial zone of constant precipitation. Little is known of the early hist. of K. folklore derives the name from *glam hulan* (*Melaleuca leucadendron*) a swamp tree of the coast but actually 'Kedah' is one of those *krama* or alternative forms like the Malay *kuala* and *kuantan* 'estuary'. *Pah* and *Pantan* river due to the splitting of Javanese Malay, and Sundanese into separate languages. Mahmud the last sultan of Malacca who ruled from 1488 to 1511 conquered K. A Pahang raja Ali Jalla Idris Shah who was sultan of Johore 1580-1597 had a son Raja Hussin who became ruler of K.

severe fighting in the Kota Bharu area after the Jap had landed on the beaches S. of the tn. but the Jap being much better armed soon overcame resistance and continued their advance down the peninsula. See MALAYA BRITISH JAP. ANTI INVASION OF (1941-1942).

Kelât, see KALAT

Kelisman, see CIZOMFEN

Kellaways Rock, geological name for alternate layers of highly fossilised sands and clays among which irregular calcareous sandstones are freely interspersed. The name is derived from a Wiltshire vil.

Keller, Gottfried (1819-90) Ger. poet and writer of fiction was the son of a master printer of Zurich. For two years

A VILLAGE ON THE KELANTAN

The state cap Kota Bharu which is situated 6 m. from the mouth of the K. R. appears on Portuguese and Dutch maps of the sixteenth century and then disappears till 1811 in the eighteenth century. A treaty was made in 1811 between Great Britain and the ruler of Kedah providing that the sultan of K. should receive a Brit. adviser. The chief products of K. are rice, coconuts (10,000), oil palm, pepper, tapioca etc. Mineral resources are said to comprise gold and manganese besides tin. Sawing and boat building are carried on. Copra, rubber and betel nuts are exported. Kota Bharu the cap lies 110 m. N.E. of Penang and has a pop. of 15,000. Other tns are Kuala Krai in the S. and Pasir Puteh in the N. and K. which has a considerable trade in the native products. Total pop. (1938) 391,200 (370,500 Malays, 29,300 Chinese and 11,400 Indians) connected with Bangkok and also with Penang through Kedah and through Pahang with Singapore. One of the first objectives of the Jap. in their invasion of the Malay Peninsula in Dec. 1941 was the aerodrome of Kota Bharu. There was

he studied art in Munich but early discovered that literature was his vocation. He lived in Berlin (1850-55) and from 1861 to 1876 acted as secretary to his native canton. His vol. of poetry *Die Lichte* (1846) emphasises his high creative faculty whilst the writing of *Der grüne Heer* is his finest novel (1853) imbued with imaginative temperament realising a love to beauty and the nobler emotion. K. was peculiarly felicitous in his handling of the short story and his sketches of Swiss provincial life entitled *Die Leute in Seldwyla* (1856) a second series of which appeared in 1874 have become classic (Eng. trans. by J. Hottelinger). In this vol. are *Die drei gerechten Kammern* and *Romeo und Julia auf dem Dorfe* the first of which shows the richness of his humorous vein whilst the impression left by the tragic intensity of the latter does not soon pass away. See H. Kriest, *Gottfried Keller als Politiker* 1915 and F. Buri *Gottfried Kellers Glaube* 1941 also lives by Ricardo Huch 1904 and I. Ackermann, 1939. Keller Helen (b. 1880) Amer. writer, has been deaf and blind since the age of

nineteen months as the result of illness. Was educated by Mrs. John Lacy and at Radcliffe College. Has lectured throughout U.S.A. and Canada, and in Great Britain, Yugoslavia, and Japan. Writings include *The Story of my Life* (1902); *Optimism* (1903); *Out of the Dark* (1913); *Helen Keller's Journal* (1938); and *Let Us Have Faith* (1940).

Kellermann, François Christophe de (1735-1820), duke of Valmy and marshal of France, b. in Alsace, son of a peasant; entered the army at seventeen; served in the Seven Years war. He was a Republican throughout the Great Revolution. His brilliant victory over the duke of Brunswick at Valmy (1792) delivered the infant republic from the dread of Prussian domination, and, in the words of Goethe, 'opened a new era in the world's history.' Under Napoleon he was given the command of the reserves on the Rhine. In 1804 he became a marshal, and in 1809 duke of Valmy. His support of the Bourbons after 1814 was rewarded with a seat in the Chamber of Peers.

Kelley, Edward (1555-85), Eng. alchemist, b. at Worcester, bred as an apothecary and early acquired some skill in chem. John Dee (q.v.) cast his horoscope and later figured prominently in his life. K. is supposed to have been educated at Gloucester Hall, Oxford, but apparently under the assumed name of Talbot. In the ensuing years he figures as a fraudulent scrivener and attorney in London. He was pilloried at Lancaster (1580) for forging auct. title-deeds. He declared himself an adept in the occult sciences. Acting on 'supernatural' advice Dee decided to co-operate with K. in researches in that science, and K. thenceforth became Dee's 'skryer' or speculator, interpreting the wishes of the spirits to his master by means of magic crystals—Dee thus becoming the dupe of his own assistant. Went to Bohemia, where he practised crystallo-mancy at the court of Rudolf II. (1583-89), was imprisoned in Prague and lost his life in trying to escape. Though a charlatan, K. was a man of considerable abilities and imagination, and is credited with two poems and other writings, including a treatise in Lat. on the philosopher's stone, issued in 1676. He figures in Butler's *Hendrickus* (canto iii.).

Kellgren, Johan Henricus (1751-95), Swedish poet, studied at the univ. of Åbo, was joint-editor and editor of the *Stockholms posten*, and served Gustavus III. as librarian and secretary. His controversial writings, against Thorild and others reveal his mastery over satire and his deficiency in humour. But these will be forgotten, when his collected songs in *Nya Skapelse* (1789) and the many lyrics scattered up and down his four librettos are still remembered.

Kellner Cell, type of electrolytic cell used in the manuf. of caustic soda by the electrolysis of brine. It is named after its inventor.

Kellogg, Frank Billings (1856-1937), Amer. lawyer and politician, b. Potsdam, New York. Came into national notice in the U.S.A. when he was named special

counsel for the gov. in its prosecution of the Standard Oil Company and its action to dissolve the merger of the Union Pacific and S. Pacific railways systems. Elected to the U.S.A. Senate for the term 1917-1923. In 1921 appointed Amer. ambas. to the Court of St. James's, resigning in 1925 to become secretary of state in President Coolidge's Cabinet, which position he held until 1929. Under his regime, America intervened in Nicaragua, thus beginning what the Lat. Amers. call the country's dollar diplomacy or dollar imperialism. For his part in the Kellogg Pact (q.v.) he was awarded the Nobel peace prize for 1930. Judge of the permanent court of International Justice, 1930-35.

Kellogg Pact. The K. P., officially called the Paris Pact of 1928, was initiated by Frank B. K. (q.v.) U.S.A. secretary for state, in association with M. Briand of France. It is a remarkably brief document, and consists of only three paragraphs of which the most important is a declaration condemning recourse to war for the solution of international controversies and renouncing war as an instrument of national policy in the relations of the signatories with one another. The pact was concluded on Aug. 27, 1928, and before the year was concluded fifty-nine nations out of sixty-seven comprising the world of independent states had signed it. See D. H. Miller, *The Peace Pact of Paris*, 1928; H. Wilson Harris, *Arms or Arbitration*, 1928; and M. Fanshawe, *World Disarmament*, 1931.

Kells, mkt. tn. of Co. Meath, Eire, 38 m. N.W. of Dublin, connected by rail with Dublin and Drogheda. Its interest is antiquarian. In the churchyard stands an auct. round tower (80 ft.) and in the market-place a carved stone cross. The stone-roofed cell of St. Columba, who dwelt here in the sixth century, is still shown. Pop. 10,800.

Kells, Book of, finest extant early Irish illuminated MS. of the Gospels written in Lat., one containing also local records, dating from the eighth century. It is now preserved in Trinity College, Dublin. As an example of its remarkable ornamentation it may be noted that in one space of about $\frac{1}{4}$ inch square may be counted, with a magnifying glass, no fewer than 158 interlacements of a slender ribbon pattern, formed of white lines, edged with black ones, upon a black ground. Hence the tradition that these unerring lines should have been traced by angels—'tam delicatas et subtilis . . . tam nodosus et vinculatus colligatus . . . notare poterit intricaturas, ut vere hæc omnia angelica potius quam humana diligentiâ jam asseveraveris esse composita' (Giraldus Cambrensis).

Kelly, Hugh (1739-77), playwright, b. in Killarney, Ireland. He came to London and lived for a time in great privation, but ultimately procured a remunerative position in an attorney's office. From about 1762 he wrote essays, poetry, criticisms, and on politics. His poem *Thespia, or a Critical Examination into the Merits of all the Principal Performers belonging to Drury Lane Theatre*,

attracted Garrick, and *False Delicacy*, a comedy, was produced under his auspices. A *Word to the Wise* was a failure—in Boswell's words, 'fell a sacrifice to popular fury, and, in playhouse phrase, was damned'—owing to a demonstration by John Wilkes and his supporters. Johnson wrote a prologue for a benefit performance of the play in 1777. K. pub. besides *Imenidia* (1771, a tragedy); *The School for Wives* (1773); *The Romance of an Hour* (1774); and *The Man of Reason* (1776). See M. Schorer, *Hugh Kelly: his Place in the Sentimental School*, 1933.

Kelly, James Fitzmaurice, see FITZMAURICE-KELLY.

Kelly, Michael (c. 1764–1826), actor and musician. He appeared as a child actor in Dublin, and studied music under Michael Arne and others, also singing under various It. masters. In 1779 he went to Italy for further studies; engaged at the Vienna Court Opera for four years; became friendly with Mozart and sang in the first performance of *Figaro*. He went to London in 1787. He was manager of the King's Theatre, London, from 1793, and wrote the musical settings for many plays, including *Sherrin*, *Pizarro*. He was the author of many songs, the best known of which are *Flora MacDonald* and *The Woodpecker*. His *Reminiscences*, composed from his own materials and written by Theodore Hook (1826), are very interesting.

Kelmis, see MORLSNET.

Kelmscott Press, see MORRIS, WILLIAM.
Kelp, the product of the combustion of seaweeds. It appears as hard dark-greyish masses, and that of most value is obtained from driftweed, such as *Fucus vesiculosus*, *F. serratus*, *Laminaria digitata*, and *L. senophylla*. These are dried in the sun and burnt in shallow pits, one ton of K. being obtained from about twenty tons of seaweed. The product consists chiefly of potassium sulphate, 14 per cent; potassium chloride, 17 per cent; sodium chloride, 14 per cent; sodium carbonate, 4 per cent; and smaller quantities of potassium and sodium iodides and other salts. The value of the K. lies in its iodine content. The K. is mixed with manganese dioxide and concentrated sulphuric acid and distilled, when iodine vapour comes off and is condensed in flat receivers called *uclcs*. See IODINE.

Kelpie, ('tangle' or 'shelly-coat'), in Scottish mythology, a kind of water-sprite or riv. genius, usually with the appearance of a shaggy horse (sometimes of a man) supposed to appear as a warning to those destined shortly to be drowned near the spot where it appears.

Kelso, mkt.-tn. in Roxburghshire, Scotland, 42 m. S.E. of Edinburgh. The Tweed here joins the Teviot, crossed by a handsome five-arch bridge 165 yds. long. Its manu. are chiefly manures, oil cake, iron founding, and implements. Sir Walter Scott was a pupil at the old grammar school in 1783. There are the ruins of an abbey founded 1120. Pop. 4,100.

Kelt, see SALMON.

Kelts, see CELTS.

Kelty, vil. of Scotland in Fifehire and

Kinross-shire, 6 m. N.E. of Dunfermline, with coal mines. Pop. 7800.

Kelvin, William Thomson, first Baron Kelvin of Largs (1824–1907), Brit. scientist, educated at Glasgow, Cambridge, and Paris. After a distinguished college career he became prof. of natural philosophy at Glasgow Univ. (1846–99). He ed. various mathematical journals, contributing to them the results of his researches in physical phenomena, electricity, heat, magnetism, elasticity, vortex motion, etc. He was knighted (1866) for his discoveries in the transmission of electrical currents, and was electrical engineer for various ocean telegraphs, beginning with the Atlantic cable (1857), and ending with the Mackay-Bennett cable (1879). Lord K. made great improvements in signalling apparatus, and invented a new form of mariner's compass (1873–78), and a deep-sea sounding machine. He did most valuable work also in thermodynamics. He was president of the Brit. Association in 1871, of the Royal Society from 1890 to 1895, and was given the title of Lord K. in 1892. His various papers have appeared in book form as *Electrostatics and Magnetism* (1884); *Mathematical and Physical Papers* (1882–84); *Popular Lectures and Addresses*; *Baltimore Lectures*, etc. (1904). With P. G. Tait he wrote *A Treatise on Natural Philosophy* (1879–83). See C. Bright, *Story of the Atlantic Cable*, 1903; also lives by O. Munro, 1902; A. Grev, 1908; S. P. Thompson, 1910; A. King, 1925; and H. N. Cotton, 1930.

Kelvin's Absolute Scale of Temperature, see under THERMODYNAMICS.

Kelvin's Law, see ELECTRICITY AND MAGNETISM, Thermo-electricity.

Kemal, see ATATÜRK.

Kemble, Charles (1775–1854), actor, made his first appearance at Drury Lane in 1791, and quickly rose to an important position in his profession. He played leading parts in London for many years, and in 1822 became manager of Covent Garden. His farewell performance in 1836 was as Benedick at the Haymarket. Although he played the prin. tragic roles his successes were made in comedy.

Kemble, Frances Anne, afterwards Mrs. Butler (1809–93), actress, was the daughter of Charles K. At the age of twenty she appeared as Juliet at Drury Lane under her father's management, and at once achieved a great success. Nor was her subsequent career on the stage less satisfactory, and both in England and America she became very popular, and remained so until her final retirement in 1849. Actually she retired on her marriage in 1834 but returned in 1847. She came back to England in 1877. She wrote sev. plays and poems, and *Notes on some of Shakespeare's Plays* (1882); and pub. the very interesting autobiographical *Record of a Girlhood* (1878); *Records of Later Life* (1882); and *Further Records* (1891). She was a very charming person, and very much beloved by men of letters, who corresponded with her regularly. Especially was she a favourite of Edward Fitzgerald, whose letters to her have been

ed. by W. A. Wright, 1893. See H. Gibbs, *Affectionately Yours, Fanny*, 1947; also lives by D. Bobbe, 1931, and M. Armstrong, 1938.

Kemble, John Mitchell (1807-57), historian, was educated at Cambridge, where he was one of the set known as 'The Apostles.' He studied philology in Germany under Grimm, and on his return was recognised as an authority on A.-S. He was a many-sided man. In 1833 he produced an ed. of *Beowulf*; from 1835 to 1844 presided over the destinies of the *British and Foreign Review*, and was examiner of plays from 1840. His prin. works were *Codes Diplomatics .Eri Saxonici* (1839-1845), and *The Saxons in England* (1849).

Kemble, John Philip (1757-1823), Eng. actor, b. at Prescott, Lancashire. He was sent to a Rom. Catholic school to be trained for a priest, but he felt no call to take holy orders, and in 1776 abandoned all idea of so doing. In that year he played Theodosius in Leo's tragedy of that name at Wolverhampton, and he remained in the provs. until the autumn of 1783, when he appeared at Drury Lane as Hamlet—a performance that aroused much controversy. For nineteen years he remained at Drury Lane, and during that period played most of the great Shakespearean roles. There is a biography by H. Baker, 1912.

Kemble, Maria Theresa (1774-1838), actress, came to England from Vienna about 1786, and acted at Drury Lane under her maiden name of De Camp. She made a popular success six years later as Macheath in *The Beggar's Opera*, and thereafter played leading parts, including Portia and Desdemona. After her marriage to Charles K. in 1806 she continued to act until her retirement in 1819. In 1808 she played in her own comedy, *The Day after the Wedding*, at Covent Garden on the occasion of her husband's benefit.

Kemerovo, tn. in the Novosibirsk Region of the R.S.F.S.R., on the R. Tem, S.E. of Tomsk. Developed under the five-year plans, it is a centre for coal-mining and coke-manufacturing, and zinc, lead, chemicals, and fertilisers are produced. Pop. 132,909.

Kemmel Hill, important position on the W. Front in the First World War, acting as an essential observation post during the long and weary sojourn of the Brit. troops below the Messines Ridge. It was the scene of very bitter fighting during April 24 to 27, 1918, in the Lys battle, the Gers., by sheer weight of men and metal, forcing the Brit. and Fr. to give way; but they were unable to exploit these successes. In the final allied advance to victory the Gers. relinquished the position without striking a blow.

Kempe, Anna Eliza, see BRAY.

Kempen: 1. In the Rhineland, Germany, manufacturing textile fabrics. Noted as the bp. of Thomas a Kempis (q.v.). Pop. 9000. 2. Or Campine, region of N.E. Belgium stretching between the Scheldt and the Meuse to the N. of the Dyle and the Demer. The dist. is chiefly in the provs. of Antwerp, but it extends also into Belgian Limbourg and Dutch

Brabant. Two important canals pass through the K., of which the latest, the Albert Canal, has been planned to assist the wide industrialisation of the region because the sandy heath land covers an important coal basin whose exploitation commenced only in 1918. Heerenthals and Turnhout are the chief tns.

Kempfenhof, Richard (1718-82), Eng. rear-admiral, served with distinction in the W. Indies and under Pocock in India (1758-59). When Lord Howe was commander of the fleet (1782) K. served under him. He went down with the *Royal George* at Spithead. Howe improved and adopted his system of signalling. He wrote religious poetry, including the lyric *Burst ye Emerald Gates*.

Kempis, Thomas a (c. 1379-1471), Augustinian canon and religious writer, called after his bp. Kempen, near Dusseldorf. His surname was Ilamurken, and he came of a peasant family. At ten he was sent to a school at Deventer, where the influence was strongly religious, and, having been convicted of sin in a vision, he decided to enter a holy order. In 1399 he was admitted into the Augustinian convent of Mt. St. Agnes at Zwolle, and took the vows in 1406. He lived a peaceful and secluded life in this convent, devoting his time to copying MSS. and to writing his own books. These latter included sermons, some hymns, and a great number of pious tracts. He wrote biographies of Gerhard Groot, the founder of the school at Deventer; Florentius Radewyn, a former master of his; and of Groot's early disciples. His tracts, which deal with the monastic and Christian life, include *The Discipline of Monks*; *The Life of the Good Monk*; *The Solitary Life*; *The Valley of Lilies*; *The Soul's Soliloquy*; *The Garden of Roses*; and *The Faithful Dispenser*. By far the most celebrated of his treatises is the famous *Imitation of Christ*, which has been trans. into more languages than any other book except the Bible. Within ten years of a K.'s death there had been pub. eighty eds. of this book. Two MS. copies, dated 1429, exist, but a more perfect copy is in the Bourgogne Library at Brussels. The earliest Eng. trans., now in Magdalen College, Oxford, is that of Pynson, which is dated 1433. An interesting literary controversy has raged around the authorship of the *Imitation*, the other claimants put forward being Jean Gerson, chancellor of the univ. of Paris, and the abbot of Vercelli, but the learned, as well as the popular, verdict is in favour of the traditional authorship of a K. The *Imitation* breathes out the quiet and peace of the cloister, and with its combination of simple faith and mysticism appeals to all manner of men and women. Apart from the doctrine of transubstantiation which is upheld in the fourth book, its teaching is accepted by Christians of all creeds. The work has, too, great literary beauty, and, as pointed out by Dr. Hirsch, in its original form has most harmonious cadences and a rhythmical flow. The 'rhythmic sentences' are preserved in Canon Iddon's trans. (1889). There are also trans. by H. Goodwin (1860) and C.

Blgg (1898); F. Kern's ed., *Die Nachfolge Christi* (1947), with a critical commentary, seeks to ascribe the authorship to Gerhard Groot.

The *editio princeps* is that of Somma-lus, *Thomas Malleoli à Kempis opera omnia*, 1607; a modern ed. of the complete works has been ed. by M. J. Pohl (1902-1922), and there is a bibliography in C. Wolffgruber's *Giuranni Gersen*, 1880. See M. de Grégoire, *Mémoire sur le véritable auteur de l'Imitation*, 1830; C. Hirscho, *Prolegomena zu der Imitatio* (1873-74, Eng. trans. by Bishop Goodwin, 1886, and C. Bigr, 1898); S. Kettlewell, *Authorship of the De Imitatione*, 1877, and *Thomas à Kempis and the Brothers of the Common Life* (1882, from the Rom. Catholic standpoint), F. R. Cruise, *Outline of the Life of Thomas à Kempis*, 1904; and J. de Montmorency, *Thomas à Kempis: his Age and Book*, 1906; also lives by J. Brewer, 1676; F. R. Guise, 1887; J. C. Montmorency, 1906; J. Williams, 1910; and A. Klockner, 1921.

Kempston, vil. of Bedfordshire, England, 2 m. S.W. of Bedford. The chief industry is the making of pillow lace. It has a large military barracks. Pop. 8200.

Kempten (anc. *Ca..podunum*), tn. of Bavaria, in Swabia, on R. Iller, 48 m. S.E. of Ulm. There are manuf. of cotton, textiles, hosiery, paper, and machinery. The monastery was founded by disciples of St. Gall (c. 773). It was the scene of a fr. victory over the Austrians (1796). Pop. 24,000.

Kempston Park, in the co. of Middlesex, England, near the Thames at Sunbury. It is now used as a racetrack, the prin. event being the Great Jubilee stakes in the spring.

Kemsley, of Farnham Royal, James Gomer Berrv, first Viscount (b. 1843), journalist and newspaper proprietor, b. at Merthyr Tydfil, and educated privately. He is the younger brother of Lord Camrose (q.v.), with whom he was for many years closely associated in many important newspaper enterprises. By 1925 they were the foremost newspaper proprietors in Great Britain, obtaining control of Amalgamated Press in 1926. In 1937 Camrose and K. separated their interests. K. took over his brother's interests in Allied Newspapers Ltd., which in 1913 changed its name to K. Newspapers Ltd. In 1947 this company's twenty-three newspapers, including the London *Sunday Times*, *Daily Graphic*, and *Sunday Graphic*, had a sale of over 9,000,000. K. was created a baronet in 1928, a baron in 1936, and became a viscount in 1945.

Ken, Thomas (1637-1711), celebrated Eng. prelate and one of the fathers of hymnology, b. at Little Berkhamstead, Hertfordshire. Educated at Winchester and Hart Hall, Oxford, graduating in 1664. At the age of twenty-five he took orders and held successively the country livings of Little Easton (Essex), Brightstone (Isle of Wight), and E. Woodhay (Hampshire). In 1674 he visited Rome with young Isaac Walton, his step-sister's son, which resulted in confirming his regard for the

Anglican Church. In 1679 Charles II. made him chaplain to Mary, wife of William of Orange, and in 1685 nominated him bishop of Bath and Wells. The chief public event of his bishopric was his trial and acquittal as one of the 'seven bishops' who, in 1688, refused to read the Declaration of Indulgence. In 1691 he was superseded by Dr. Kidder, dean of Peterborough, for refusing to take the oath of allegiance to William of Orange. Amongst the many beautiful hymns written by K. are *Awake my Soul and with the Sun, and Glory to Thee, my God, this Night*. See lives by W. L. Bowles, 1830; J. Lawicount Anderton, 1834; and S. H. Plumtre, 1888, 1890.

Ken, riv. of Bundelkhand, central India. It is 250 m. long, and flows N.E. to the Jumna.

Kenath, in Bible times a city of Manasseh. It is generally accepted that Kanatha was a later name, and that the two places are identical. Probably identical with Karawat, 16 m. N. of Hozrah.

Kendal, Countess Ehrengarde Melusina von der Schulerburg, Duchess of (1667-1743), in 1692 entered the service of the Electress Sophia. She attracted the attention of the son of the electress, George Louis, and became his mistress. When he came to England as George I. she followed him, and in 1716 was created duchess of Kendal, and granted valuable pensions.

Kendal, mrkt. tn. and parl. bor. in the co. of Westmorland, England, 22 m. N. of Lancaster. Woollens, hosiery, boots and shoes, paper, and agric. implements are manufactured. Pop. 17,700.

Kendall, Henry Clarence (c. 1841-82), Australian poet, known as 'the national poet,' or 'poet of the bush.' While clerk in the colonial secretary's office (New S. Wales) he found time for poetry and journalistic work, at length becoming inspector of forests (1873). A new period began for Australian poetry with Gordon and K. His works include *Songs and Poems* (1862); *Leaves from an Australian Forest* (1869); and *Songs from the Mountains* (1880). See F. C. Kendall's ed. of his *Poems*, 1903, with a memoir.

Kenealy, Edward Vaughan Fyde (1819-1880), Irish barrister and author, called to the Eng. bar in 1847. In 1873 he became leading counsel for Orton, the Tichborne claimant, and his unprofessional and violent conduct throughout the case was censured by the jurv. Founding the *Englishman* (1874), K. still upheld Orton's claim, and after libellous attacks on Cockburn and others was disbarred by Gray's Inn. He wrote *Brallaghan or the Delphicosophists* (1845); *Gothie, a New Pantomime* (1850); *Poems* 1864 (collected 1875-79); *Proceedings of the Tichborne Case* (1875).

Kengavar, see KANGAVAR.

Kenia, Mount, extinct volcano of Brit. E. Africa, situated between 10° and 12° S. of the equator. Called by the Kikuyu, Kilinyaga, and by the Masai, Dooenyo. Egere ('grey' or 'spotted mountain'). It is a huge truncated pyramid, about 30 m. in diameter at the base, supporting a precipitous rocky pinnacle, divided from its

summit by a deep cleft, thus making, in effect, two peaks, 17,200 ft and 17,160 ft. high, and covered with perpetual snow.

Kenilworth, 1 Urb dist and mkt tn. of Warwickshire, England, 5 mi N of Warwick. The castle, now in ruins, dates from the time of Henry I. It sustained sev sieges and was finally taken by Cromwell and destroyed. There are also remains of an Augustinian priory (c 1122). The tanning industry is extensively carried on. Pop 9400. See Sir W Scott *Kenilworth*, 1821, J Beck, *Kenilworth Castle*, 1845, I. H Knowles, *Kenilworth Castle*, 1872. 2 Suburb of Cape Town, S Africa.

works include contributions to *Sabrina* (1850); *Public School Latin Grammar* (1871), ed. of Virgil (1876-81), eds of Aristophanes' *Birds* (1874), *Aeschylus Agamemnon* (1878); Sophocles' *Oedipus Tyrannus* (1882), *Between Whiles*, or *Wayside Amusements of a Working Life* (1877, Gk, Lat, and Eng verse), *My Old Playground Revisited* (1882). See F D How, *Six Great Schoolmasters*, 1901.

Kennedy, James (c 1106-86), bishop of St Andrews and previously bishop of Dunkeld in which capacity he attended the council of Florence. He took a prominent part in the politics of Scotland

KENILWORTH CASTLE

Vaughan & Sons Ltd, Dundee

It has a racecourse. 3. Model vil of Kimberley, Cape Prov., for the workmen of the De Beers Company.

Kenites, tribe of people who inhabited the S of Palestine, frequently mentioned in the Bible. They seem to have been included in the term Midianites.

Kenmare, tn in co. Kerry. Line 14 m S.W. of Kilmaree, visited chiefly for its bathing. Pop 880.

Kennebec, riv. of Maine, U.S.A., rising in Moosehead Lake and flowing S into the Atlantic Ocean. It is about 150 m long, and during its course it drops 1000 ft. It is navigable for 75 m to Augusta.

Kennedy, Benjamin Hall (1804-89), Eng. schoolmaster, noted for his extensive and thorough scholarship, fellow and classical lecturer of St. John's, Cambridge (1828). He was assistant-master at Harrow (1830-36), and headmaster of Shrewsbury (1836-66). In 1867 he became regius prof. of Gk at Cambridge and canon of Ely. K helped to establish Girton and Newnham colleges. His

during the minority of James II., and afterwards acted as regent during the minority of James III. He was the founder of St. Salvator's College (1150).

Kennedy, John Pendleton (1795-1870), Amer. statesman and novelist, b at Baltimore. Member of Congress and sometime secretary of Navy. He was a friend of Thackeray whom he helped in writing *The Virginians*. Among his works are *Horseshoe Robinson* (1835), *Life of William Hurt* (1849), and *Mr. Ambrose's Letters on the Rebellion* (1865).

Kennedy, Margaret (Mrs. David Davies) (b 1896), Eng. novelist, elder daughter of Charles Moore K., barrister. Educated at Cheltenham and Somerville College, Oxford. *The Constant Nymph* (1924), dramatised with Basil Dean (1926), which brought her fame, is a story of the Tyrol—the love story of a girl who dies at sixteen. Other novels include *Red Sky at Morning* (1927), *Escape Me Never* (1933), *Together and Apart* (1936); and *The Midas Touch* (1938). Her works

display excellent insight into feminine psychology.

Kennet, riv. of England, rising in the Wiltshire Downs. It at first pursues a southerly course and then flows E., past Marlborough and Hungerford, to Newbury, eventually joining the Thames at Reading. Its length is 41 m.

Kenneth I., called *MacAlpin* (d. c. 860), Scottish king of the ninth century, son of Alpin of Dalriada (d. c. 833). He drove out the Danes (811) and conquered the Picts (c. 846), becoming Ard-Righ, or ruler of the united monarchy. Scone became the cap. and Dunkeld the eccles. centre of his kingdom. He invaded Northumbria many times.

Kenneth II. (d. c. 995), son of Malcolm I., succeeded to the throne in 971. He warred against the Strathclyde Britons, and subdued the Lothians and Northumbria as far as the Tees. He was slain about 995. See W. F. Skene (ed.), *Chronicle of the Picts and Scots*, 1867, and *Celtic Scotland*, 1876.

Kennett, Basil (1674-1715), Eng. miscellaneous writer, brother of John K. (q.v.). Educated at St. Edmund's Hall, Oxford, scholar, Cong. Christ., Oxford, 1690. Pub. antiquarian and eccles. works, of which the most important are *Rome Antiquæ Notitia*, or *The Antiquities of Rome* (1696), including essays on Rom. learning and education; and a *Brief Exposition of the Apostles' Creed* (1705). Other works include a poem to Queen Anne and *Lives of the Latin Poets*. It has been suggested, on the authority of James Tyrell, that the third vol. of the *Complete History* (see below) was really the work of Basil K.

Kennett, White (1660-1728), Eng. prelate and author, b. at Dover and educated at Westminster School and at St. Edmund's Hall, Oxford. While still an undergraduate he was employed by Anthony Wood. Disliking James II.'s eccles. policy, he joined the Low Church party and openly supported the Revolution. He became prebendary of Salisbury in 1701, and dean of Peterborough in 1707, and was bishop there from 1718 to 1724. A co-founder of the Society for the Propagation of the Gospel. He acquired a reputation as historian, antiquarian, topographer, and philologist. Among his works are *Parochial Antiquities* (1697; new ed. 1818); *A Register and Chronicle, Ecclesiastical and Civil* (1728), dealing with the Restoration in more detail than his less valuable vol. iii. of a *Complete History of England* (1706, from Charles I. to Anne). This latter work has been attributed to his brother Basil. See life by W. Newton, 1730.

Kenney, James (1780-1849), Eng. dramatic writer, b. in Ireland. He first attained popularity by his farce *Raising the Wind* (1803), produced at Covent Garden. He wrote more than forty dramas and operas, including *False Alarms* (1807); *The World* (1808); *Love, Law, and Physic* (1812); *The Sicilian Vespers* (1840), a tragedy; and the most popular, *Sweethearts and Wives*, produced at the Haymarket in 1823, and revived

sev. times. A friend of Rogers and Lamb. See P. W. Claydon, *Rogers and his Contemporaries*, 1889.

Kennicott, Benjamin (1718-83), Eng. divine and eminent Heb. scholar, b. at Totnes and educated at Wadham College, Oxford. His dissertations *On the Truth of Life in Paradise* and *On the Oblations of Cain and Abel* early won for him his B.A. degree and election as fellow of Exeter College, Oxford (c. 1747). He pub. *The State of the Hebrew Text of the Old Testament Considered* in 1753, unfolding his intention of labouring to improve the Heb. text by the collation of Heb. MSS. K. met with opposition from Warburton, Hume, and others, but gained the support of most of the clergy. Aided by many learned Eng. and continental scholars, he produced the *Octavo Testamentum Hebraicum cum Variis Lectionibus* (1763) for which over 600 Heb. MSS. and sixteen MSS. of the Samaritan Pentateuch were consulted. These latter he valued highly, while showing a disregard of the Masoretic tradition. He Ros.-d continued his work in *Varia Lectiones Veteris Testamenti* (1784-85), and John pro. an excellent abridgment (1806). K. was appointed a B. Col. Librarian (1767) and canon of Christ Church, Oxford (1770).

Kennington, dist. of the London bor. of Lambeth, England, 14 m. S.W. of London Bridge. It is represented in the House of Commons by one member. Here is the celebrated K. Oval, the en. ground of the Surrey Cricket Club. Pop. 70,000.

Kenora, the co. tn. of K. and Patricia dists., Ontario, Canada, situated on the Lake of Woods. On the main line of the Canadian Pacific Railway and also on the Tran.-Canada highway, 300 m. W. of Fort William. Being on the beautiful Lake of Woods it is the centre of a very popular, unsoph. summer resort, with good hunting and fishing. The tn. has two cathedrals, sev. churches, two good hospitals, a public library, and primary schools and also two Indian residential schools. All public utilities are owned by the municipality. Industries include flour mills, lumber mill, pulp and paper, boat factory, and aerated waters. There is an important Ontario Gov. fish hatchery, and sev. wholesale fisheries. The vicinity supplies spruce, red and white pine, poplar, gold, silver, copper and mica. The tn. or settlement was discovered over two centuries ago by the famous Fr. explorer, Pierre de la Verendrye, and became known as Rat Portage. Pop. 8,000.

Kenosha, co. seat of K. co., Wisconsin, U.S.A., situated on Lake Michigan. The city is engaged in the manuf. of motor cars, typewriters, brass and leather goods. Pop. 63,500.

Kensal Green, dist. of N.W. London, England, 5½ m. W.N.W. of Charing Cross. Notable for its cemetery opened in 1833.

Kensington, parl. and metropolitan bor. London, 4 m. W.S.W. of St. Paul's. Here are the beautiful K. Gardens, in which is K. Palace, b.n. of Queen Victoria. The dist. also contains sev. learned institutions, including the Victoria and Albert Museum.

the Royal College of Art, and the Royal College of Music. Two members are returned to Parliament. Area 2291 ac. Pop. 115,600. See Leigh Hunt, *The Old Court Suburb*, 1835; Lady Ritchie, *Old Kensington*, 1873; and E. and Barbara Whelpton, *The Intimate Charm of Kensington*, 1948.

Kensington Palace, part of the Royal Household. K. P. was built in 1689-95 as state apartments for William III. by Wren in place of a house built c. 1605. Part of this older house, however, remained until George I. instructed Benson, Wren's successor, to rebuild it. This latter portion includes the remarkable Cupola Room, decorated in 1722-24, by Wm. Kent. The decoration of the room also includes a series of busts of Lat. poets from Charles I.'s collection, and a number of gilt statues of classical deities which belonged to William III. The marble relief over the fireplace is by Ryssbeck. Notable, too, are the finely-panelled queen's staircase; the king's staircase with walls and ceilings painted by Kent; the queen's gallery with elegant gilded mirrors by Grinling Gibbons (q.v.) and the king's gallery with a ceiling by Kent; and the presence chamber which contains what is regarded as Kneller's masterpiece, the full-length portrait of a Chinese convert, a magnificent overmantel carved by Gibbons and another ceiling by Kent. Wren, Gibbons, and Kent are in fact the three artists whose work is most in evidence in the building and decoration. Besides this, K. P. contains an interesting collection of pictures. There is a large gallery of topographical paintings of London; one or two small rooms of Dutch pictures such as William III. is known to have had here; and a collection of the paintings of Benjamin West (q.v.), including the famous 'Death of General Wolfe'. West's historical and classical pictures are probably better represented here than anywhere else. The state apartments were closed from Aug. 1911, when they were seriously damaged by a flying bomb, but reopened to the public on June 1, 1949.

Kensingtons, The, popular name of the thirty-ninth Co. of London (London's Kensington) battalion of the London Regiment.

Kent, Edward Augustus, Duke of (1767-1820), Eng. prince and soldier, fourth son of George III. and father of Queen Victoria (1837-1901). He served under Grey against the Fr. in the W. Indies (1794), became lieutenant-general (1796), duke of L. and Strathearn and earl of Dublin (1799), and commander-in-chief in N. America. Fort Edward in Martinique and Prince Edward Is. were named after him. He was governor of Gibraltar (1802), but a mutiny followed his severe reforms. See life by E. Neale, 1850.

Kent, George Alexander Edmund, Duke of (1902-42), fourth son of George V. of Great Britain, b. at Sandringham. Entered Navy, 1916; midshipman, 1921; lieutenant, 1926. Appointed to H.M.S. *Nelson*, 1927 and to *Durban*, 1928. Retired from navy for health reasons. Toured Canada, S. America, S. Africa,

and Australia. Married Princess Marina, daughter of Prince Nicholas of Greece and Denmark, in 1934, and received title duke of K. Chancellor, univ. of Wales, from 1937. He was killed in an aeroplane crash in Scotland, whilst on a flight to Iceland to inspect Brit. forces. Issue: Prince Edward George, b. 1935, succeeded to the title in 1942; Prince Michael, b. 1912; and Princess Alexandra Helen, b. 1936.

Kent, James (1763-1847), Amer. jurist, graduated at Yale in 1781. He lectured on law at Columbia College (1791-96) 1823-47), became judge of the supreme court of New York (1798), chief justice (1801), and chancellor (1814-23). His great work is *Commentaries on American Law* (1826-30). He also wrote *Dissertations* (1795), and *A Course of English Reading* (1831). See Johnson's *Chancery Reports*, 7 vols., 1816-24, which contain his judgments as chancellor; J. Story, *On the Conflict of Laws*, 1834; J. Duer, *Discourse on the Life, Character, and Public Services of James Kent*, 1838; W. Kent, *Memoirs and Letters of Chancellor Kent*, 1845, and the *National Portrait Gallery of Distinguished Americans*, vol. II.

Kent, William (1681-1748), b. in York-shire. Eng. landscape gardener, palatine, sculptor, and architect. He built Dorsetshire House, Piccadilly, and the Horse Guards and Treasury buildings, London, and Holkham Hall in Norfolk; and laid out Kew Gardens and Kensington Gardens. His imposing designs for new Houses of Parliament were never carried into effect. K.'s work is more notable in interiors than exteriors, and his decoration is usually much superior to his planning. See Margaret Jourdain, *The Work of William Kent*, 1915.

Kent, William Charles Mark (1823-1902), Eng. poet, biographer, and miscellaneous writer. He edited the *Sun* (1841-1870) and the *Weekly Register* (1871-1881). He wrote under the pseudonym Mark Rochester, among his works being *Aletheia* (1830); *Paeon* (1870); *Mythological Dictionary* (1870); *Corona Catholica* (1880); *Seven Modern Wonders of the World* (1890). K. also issued critiques, edns., or memoirs of Burns (1874), Latham (1875, 1893), Father Prout (1881), Lytton (1875, 1881, 1898) Dickens (1872, 1881) and others.

Kent, maritime co. in the S.E., often referred to as 'the garden of England'. It includes the is. of Thanet and Sheppey, and sends twelve representatives to Parliament from the co., and six from the bors. K. is mostly in the diocese of Canterbury, whose archbishop is the Primate of All England. Maidstone is the cap., and other important tns. are Chatham, Hythe, Rochester, Gravesend, Dover, Deal, Folkestone, Ramsgate, Margate. Woolwich and Sheppey contain arsenals and dockyards. Tunbridge Wells is a noted health resort, while Greenwich is famous for its Royal Observatory (1675), and other gov. buildings. Four of the Cinque Ports—Dover, Romney, Sandwich, and Hythe—belong to K. Faversham is the centre of the fruit trade,

Kentucky River, U.S.A., formed by three streams, rising in the Cumberland Mts., and entering the Ohio, after a north-westerly course of about 250 m. Steamboats ascend it to Frankfort. Part of its course is through a deep chasm in the limestone.

Kentville, tn. of Nova Scotia, Canada, in King's co., 55 m. N.W. by N. of Halifax. Pop. 3,900.

Ken Wood. Between Hanipstead and Highgate, London, formerly the estate of the earl of Mansfield, 74 ac. of land, the house, its furniture and a fine collection of eighteenth-century pictures were bequeathed to the nation in 1918 by Lord Iveagh, together with an endowment fund of £50,000. The collection includes works by Reynolds, Romney, and Gainsborough.

Kenwyn, par. of S.W. Cornwall, England, 1 m. N.W. of Truro. Tin is mined, and there are smelting works. Pop. 800.

Kenya Colony and Protectorate, formerly known as the E. African Protectorate (*see* BRITISH EAST AFRICA). (Prior to being taken over by the Crown in 1895 Brit. E. Africa was known as Iken, the initials of the Imperial Brit. E. Africa Company.) It includes the coast line from the Umba R. to Dick's Head, together with vast tracts in the interior bounded in part by international convention lines. Like Uganda, K. was practically unknown up to the beginning of the present century; Uganda, however, had been visited and described by Stanley, Burton, and Speke, but the ter. which is to-day the colony of K. was shut off from easy communication with the coast by a waterless desert, and the greater part was overrun by the warlike tribesmen, the Masai. K. is bounded on the N. by Abyssinia; on the E. by Jubaland (as to the agreement with Italy *see* BRITISH EAST AFRICA); on the W. by Uganda; on the S. by Tanganyika. It includes the Witu Protectorate, a small tract at the mouth of the Tana R., the administration of which was taken over from the Imperial Brit. E. Africa Company in 1895; and administratively, it is now part of Tangaland. The K. Protectorate consists of the mainland dominions of the sultan of Zanzibar, extending 10 m. inland along the coast from Tanganyika to Kipini. For these tracts K. has hitherto paid the sultan a rent of £10,000 a year. By the K. Annexation Order in Council, 1920, the tracts outside the mainland dominions of the sultan of Zanzibar were recognised as a colony, but are now styled the 'Protectorate of K.'; whilst the remaining ter. is known as the colony of K. Area of protectorate and colony, 221,000 sq. m. A scheme of administration providing for the separate control of the native and settled areas came into operation in 1921.

Divisions and Physical Features.—The prov. divs. of K. C. and P. are Nyanza Prov., comprising the dists. of N., S., and Central Kavirondo, Nandi, Kericho, Kisumu and Lumbwa; Kerio Prov., comprising the dists. of Ravine, Baringo, Turkana, W. Suk, and Elgeyo; Kikuyu Prov., comprising the dists. of

Kiambu Fort Hall, N. and S. Nyeri, Embu and Meru; Ukamba Prov., comprising the dists. of Mwachkos, Kitui, Taita, and Nairobi; the Coast Prov., comprising the dists. of Malindi, Tana R. and Lamu; N. Frontier Prov.; and the Extra-Prov. Dist. of Laikipia, Naivasha, Trans-Nzola, Nakuru and Uasin-Gishu. The dists. most suitable for settlement by Europeans are Kiambu, Laikipia, Kericho, Nakuru, Naivasha, N. Nyeri, Uasin-Gishu, and Trans-Nzola. The country is watered by the Upper Nile, Bahr-el-Ghazal, and Tana rvs., and forms a high plateau. The Tana R. offers possibilities for irrigation and examination has shown that a canal on the Upper Tana would be technically feasible, though it would involve a capital outlay of £2,000,000. Much of the vast region consists of pasture lands on which very large herds are grazed, or of barren wastes. There are also, however, dists. of great actual and potential fertility both in the interior and on the coast. The coastal regions have a tropical climate with cool nights, except during the hottest months (Dec. to April). The climate in the highlands is invigorating, with cool breezes. The mean maximum shade temp. at Nairobi is about 80° and the mean minimum 51°. The rainfall is under 20 in. in the N. Desert area; from 40 to 80 in. on the coast and in the Nyanza and Kikuyu Provs.; and from 20 to 40 in. in the remainder of the country. Big game is abundant, the colony being a veritable 'hunter's paradise.' The largest pair of elephant's tusks on record were taken from K., and more lions have been shot annually for the past twenty years in K. than anywhere else and yet are as numerous in certain outlying parts as ever. The record buffalo also was shot in the colony, and herds are so large that no fewer than six bulls are permitted under the Game laws. Other game are hippopotamus, eland, oryx, wildebeeste, and giraffe. Leopard, hyena, wild dog, and jackal, all common, are regarded as vermin. Ant-bear, arndwolf, manthog, and various cats such as lynx and carcel, are plentiful. The bird life is remarkably varied and prolific, including numerous kinds of duck and geese, snipe, bustard, quail, guinea fowl, francolin, sand grouse, pigeon, whistling teal, diving duck, garganey, pintail, and pochard; and, in addition to game-birds, there are ostrich, crane, heron secretary bird, hornbill, widdah (whidah), the sunbird of gorgeous plumage, bee-eater, hawk, and starling. The best shooting grounds are either in the N., in the direction of Abyssinia, on lakes Baringo, Hamington and Rudolph, and on the Rts. Tana and N. Uaso Nyiro; or S., towards Tanganyika. There is plentiful fishing, either for deep-sea fish like tarpon, Nile perch in the lakes, or brown trout in the mt. streams. Entomologists, too, have ample scope for their activities, the insect life including butterflies of astonishing size colour and shape, chameleon flies, and mantis, beetles and other remarkable mimetic insects. Nairobi is the best starting point for the sportsman, and all

kinds of outfit, provisions, etc., can be bought there, including any kind of firearm. It is intended by the K. Gov. to establish a national park covering 7000 sq. m. This, the Isavo National Park, will be one of the greatest game sanctuaries in the world, only second in size to Kruger Park S. Africa. It will contain thousands of elephants, lions, buffaloes, and rhinoceroses. Mun. railways and a road from Mombasa to Nairobi run through it.

White Settlement—K. is essentially the land of the 'younger sons' and owes much of its development to the activities of these white settlers of the highlands districts. It has been described as an unhappy country, a state of things due largely to the conflict between the Gov., both local and imperial, on the one hand, and the white settlers on the other. The Gov. is committed in principle at least to the doctrine of the 'primacy of the native' and this has necessarily meant some restriction of the enterprise of the white community. Thus when gold was discovered in the K. & M. region within recent years, mining was denied to European settlers, and the result was the sending out of a commission to inquire into the addition of what in consequence have to be made to the native reserves. The Kenya White Paper 1922 in its declaration of the 'primacy of African interests' was a genuine attempt to indicate a liberal policy, but subsequent efforts to elucidate its meaning have led to acrimonious controversies, not only in K. but in political circles in London for the test of Brit. intentions in K. lay in the handling of the land question and the apportionment of expenditure between objects affecting Europeans and Africans. The white community exerts an influence out of proportion to its numbers. The actual number of its land occupiers is approximately 1800 to 1900 of the total European pop. of 19,000 and its concern is primarily to safeguard European ownership in the highlands area, in which its capital is invested, and to maintain an economy that will serve the standards of life of the class which it represents. The encouragement of European settlement in K. was largely due to the desire to establish in the vicinity of the railway line a pop. that would provide sufficient railway traffic to repay the heavy outlay in its construction. By the end of 1931 some 6,768,000 ac. had been allocated to Europeans for development (but, since 1912, no freeholds). No details are available regarding actual development, but probably not more than 600,000 ac., or about 11 per cent. of the whole have been developed. Alienation of land in the highlands is restricted to Europeans by administrative action and by the Crown Lands Ordinance, 1915, which requires Gov. approval for transfers of land between members of different races. There are some 3,000,000 Africans in K., and in the Kikuyu reserve the density is 281 per sq. m., and in the Kavirondo, 145, whereas areas unaffected by reserve policy, such as the N. frontier prov., have an average density of less than 1 per sq. m. As the

result of the findings of the commission on closer union in Africa, 1929, the J. Africa Commission of 1924, and the Morris Carter Commission, 1934, the native has some degree of security from the declaration that the reserves are 'set aside for the benefit of the native tribes for ever,' and the fact that they are placed under the Native Lands Trust Board. The Morris Carter Commission was appointed as the result of the Closer Union Commission's recommendation that an authoritative inquiry should be made not only into the adequacy of the security offered by the Lands Trust Ordinance of 1930, but also into the natives' present and prospective needs in the matter of land. In spite of these various safeguards, the land

MASAI WOMAN OF KENYA

problem remains, and it is aggravated by the fact that the uncertain agricultural methods of the natives—though much has been done by the Agric. Dept. to teach better methods, coupled with the depasturing of very large herds of cattle, have resulted in serious soil erosion (see Elspeth Huxley, *Tord Dlamine and the Making of Kenya* 1931; and Loti Huxley, *An African Survey*, 1935).

Values—The pre-liminary native tribes are the Kikuyu and Masai. The Kikuyu have no centralised political organisation. The chiefs of the clans exercise some authority over the members of their own group, but recognise no common allegiance to a single chief. Initiation ceremonies take place for admission to adult membership of the tribe. The Masai are a nomadic Il-mutite tribe. They are warlike and of somewhat striking appearance. It was their predatory raids on cattle which kept much of the highlands free from occupation by sedentary tribes. When European occupation first presented itself the Masai no longer constituted the same danger, while great cattle

epidemics in 1883 and 1889 and internal feuds in 1890 reduced them to a condition which seemed to remove the obstacles to colonisation which their neighbourhood had once threatened. The Nandi and Suk tribes, also Hamitic, now live in settled villages and practise agriculture. The Akamba are also a large cattle-owning Niantu tribe. The practice of magic for both beneficial and harmful purposes is common to African tribes. It is generally believed that the ritual treatment of certain substances by persons possessed of special powers can affect human beings, animals, or crops in a manner which is recognised to be outside the ordinary course of nature; thus made to produce courage in war may include portions of a lion among its ingredients, and in many tribes the fertility of the soil is held to be directly influenced by the sexual life of the chief. Only harmful magic can approximately be called sorcery, and this is universally regarded by Africans themselves as a heinous crime. The witch doctors derive their power from the belief that by divination and other means they are able to indicate sorcerers and protect the tribe and individuals against the practice of harmful magic. See A. C. Hollis, *The Masai: their Language and Folklore*, 1905, and *The Nandi: their Language and Folklore*, 1909; C. W. Hobley, *Ethnology of the Kikuyu, and other East African Tribes*, 1910, and *East African Tribes and Magic*, 1922 (refers also to the Kikuyu); W. M. H. Beech, *The Suk*, 1911; G. Lindblom, *The Akamba in British East Africa*, 1920; G. St. J. Orde Browne, *The Vanishing Tribes of Kenya*, 1925 (deals with the minor tribes of the Kikuyu district); and J. A. Massam, *The Cliff Dwellers of Kenya*, 1927 (refers to the Elgeyo tribe).

Agriculture and Other Products.—The agricultural products are the most important; those of the lowlands are coconuts, cotton, maize, sisal, sugar cane, and various native grains; wheat, barley, vegetables, and fruit are also grown. The forests produce ebony, scrub-mahogany, and pencil cedar. Sisal is extensively planted. There are extensive pastures, and they cause a good deal of soil erosion. The mineral wealth is not yet fully ascertained, but abundant iron ore is known to exist; and among other minerals are mica (Suk district), graphite, limestone, pearls (Rift valley), carbonate of soda (Ukamba), gypsum, and gold (S. of Kisumu). Mining until recently, made little advance, and is even to-day, despite the development of the Kakamega reef and alluvial deposits, of small importance as compared even with Tanganyika. In 1946, for example, the export of gold was only equal to about 7 per cent of current exports of local produce. Coffee is by far the most important product, accounting for 25 per cent of exports, while sisal ranks next, with 18 per cent. The exports (of both K. and Uganda), before the Second World War, were maize (£199,600); coffee (£1,153,000); sugar (£187,400); tea (£474,600); tin ore (£276,000); sisal fibre and tow (£692,000); sesame seed (£28,600); hides and skins (£417,500); wattle bark and extract

(£121,000); ivory (£39,000); wool (£53,600) gold bullion (£540,700); cotton seed (£300,000). Other exports include wheat, tanning bark, and sodium carbonate. Imports consist mainly of cotton goods, rice, salt, tobacco, textiles, and motor cars and accessories.

Trade and revenue.—Under the Congo Basin treaties equality of treatment in respect of imported goods irrespective of origin is ensured, and the grant of imperial preference is therefore inadmissible. For purposes of customs K. and Uganda form a single unit, and by agreement with the Tanganyika Gov. a common tariff has been accepted by the three dependencies, thereby securing free movement within these territories of both imported goods and local products. For K. and Uganda the value of trade imports and exports and net customs receipts and tonnage entered at K. ports for the years 1939-46 were:

	Trade Imports	Trade Exports
	£	£
1939	7,661,020	10,750,666
1942	12,995,961	11,035,410
1944	13,916,486	16,086,335
1945	13,029,714	15,731,730
1946	20,326,171	16,751,820

	Customs Receipts	Tonnage entered
	£	£
1939	1,310,580	2,116,510
1942	1,397,611	2,891,593
1944	2,288,174	2,359,407
1945	2,241,159	3,772,027
1946	3,090,005	4,778,589

In 1946 the main imports into K. and Uganda were grain and flour, beer, wines and spirits, cigarettes and tobacco, coal, cement, iron sheets, tools and implements, electrical goods, machinery, cotton piece goods and manuf., woolen yarns and manuf., silk and artificial silk tissues and manuf., jute bales and sacks, haberdashery and wearing apparel, drugs and chemicals, dyes, paints, lubricating oils and greases, motor spirit, mineral oil, stationery, motor cars and accessories, lorries, tyres and tubes. The United Kingdom sent 38.5 per cent of these imports, India 15.7 per cent, S. Africa 9.7 per cent, other Brit. commonwealth countries 11.2 per cent; U.S.A. 12.3 per cent; other foreign countries 7.1 per cent. The chief domestic exports of K. and Uganda in 1946 were coffee, sugar, tea, cigarettes, tin ore (Uganda), cotton and seed (mainly Uganda), sisal, fibre and tow, hides and skins, wattle bark, ivory, pyrethrum, wool, and gold bullion.

Revenue and expenditure for 1939, 1942, and 1944-46 were as follows:

Year	Revenue	Expenditure
	£	£
1939	3,811,778	3,808,070
1942	5,595,025	5,341,551
1944	7,734,333	7,829,088
1945	8,034,190	7,815,929
1946	8,057,390	8,795,237

Public debt is £17,580,600.

Administration — The administration is in the hands of a governor assisted by an Executive Council and a Legislative Council. Under the existing constitution adopted in March, 1944 the Executive Council consists of twelve members, in addition to the governor while the Legislative Council consists of eleven elected European members, five elected Indian members, one elected Arab member, two nominated unofficial members to represent the interests of the African community, one nominated unofficial member to represent Arab interests, eleven ex-officio official members, and nominated official members of a ceiling number of 11, with the governor as president. Ex-officio members include the ex-officio members of

development after the war. In place of the canalisation of work along traditional lines to the chief secretary, decentralisation began by the institution of a system of organising departments in groups under members of the Executive Council. By gov. notice of Aug. 1, 1945 an authority for development and reconstruction was established with the chief secretary as chairman and the general manager of the K. and U. g. railways as a member to oversee the execution of work and projects of construction and development in accordance with officially approved plans under the Colonial Development and Welfare Acts. A part of this department of activities, a member for health and local gov. was appointed to fill the place of the

SCENE ON THE RAILWAY KENYA PROVINCE

the Executive Council, with the general manager of the K. and U. g. railways and harbour, the director of public works and the commissioner of customs. The constituencies for Europeans, Indians and Arabs are separated from one another (i.e. communal franchise). The franchise for Indian members is adult suffrage (over twenty-one) and for Arab adult suffrage (over twenty-one) subject to ability to write in Arabic characters. It may be said that in the railway between S. Africa and the countries with a developed system of indirect rule (such as Nigeria) regard to the use made of native authorities in administration. But K. unlike the latter, does not seek support for its administrative measures in the use of traditional institutions. It purports to stimulate progressive changes in the condition of native life by encouraging any indigenous system of local self government that may exist.

Early in 1945 plans for the reorganisation of the gov. were made in order to cope with the problems of reconstruction and

medical and local gov. departments and to represent those departments on the Executive and Legislative Councils. The labour department was reorganised in 1946, and is responsible for the inspection of the conditions of labour and the administration of the labour laws of the colony. Another change is that the attorney general has become the minister of law and order and is responsible for all that that title implies.

Communication — The railway system is well developed on the K. and U. g. railways and harbours are state-owned. In 1946 the Imperial gov. began the construction of a railway to Uganda and it was with the completion to Lake Victoria in 1952 of what was formerly called the Uganda Railway that the highland area of K. became known and the development of the great natural resources of both K. and Uganda began. Previously communication was by porter caravan, and the journey to Uganda took many weeks. From the original trunk line of the Uganda Railway which ran from Mombasa to Lake Victoria, the railway system of the K. and

Uganda railways and harbours administration has grown in all directions, and now gives access to most of the settled areas of the highlands of K., and has been pushed through the cotton-growing areas of Uganda. The main line from Mombasa Is. to Juba (Lake Victoria) via the Great Rift Valley, the Mau Escarpment, the Mashin-Gishu Plateau, and N. Kavirondo, with branch to Lake Kioga, is nearly 900 m. in length; other lines are those connecting Nakuru and Kisumu (131 m.), the Voi-Kahe branch, 92 m., between Kahe junction and Moshi; the Magadi (soda deposits) branch, 91 m.; the Thika-Nyeri-Nanyuki line, 115 m.; the Solai branch, 48 m.; and the Kisumu-Butebo branch, 45 m. The steamer services on Lake Victoria, Kioga, and Albert give through transport to Tanganyika, the Congo, and the Sudan. Mombasa is the chief port, having two fine harbours, one at Mombasa itself and the other at Kilindini, which latter is the finest landlocked and sheltered harbour on the E. coast of Africa.

Pop. (estimated Jan. 31, 1947): Europeans, 23,284; Indians, 78,588; Gnomus, 5,993, Arabs, 21,020; other non-natives, 2,575. Total non-natives, 130,460; Africans, 4,055,000. Grand total, 4,185,460.

Arabs and Swahilis predominate on the coast; inland are races speaking Bantu, and also non-Bantu-speaking tribes such as Nilotic, Kavirondo, Nandi, Lumbwa, Suk, Masai, Turkana, and Galla. (On the question of closer union see *BRITISH EAST AFRICA—A Matter of Policy and Closer Union*.)

K. recruited 5000 Europeans and 2200 Indians for the Second World War. K., like Tanganyika, had also a naval volunteer force and K. ships, including schooners and dhows, were engaged in coastal defence, especially at the port of Mombasa, and took part in the advance against It. Somaliland. K. also organised a scheme for training pilots for the R.A.F. Some 300 African artisans completed their training every three months at the Native Artificers' Training Depot at Kabeti and were enrolled in the E. Africa Service Corps (see also *KING'S AFRICAN RIFLES*.)

M. Wiseman, *Kenya—Then and Now*, 1948.

Kenyon, Sir Frederic George (b. 1863). Director and prin. librarian of Brit. Museum; noted antiquarian, and skilled

in study of papyri and numismatics. Was elected president of the Brit. Academy, 1917, and in 1918 prof. of anc. hist. at the Royal Academy. Among his numerous publs. are *Classical Texts from Papyri in the British Museum* (1841); *Facsimiles of Biblical MSS. in the British Museum* (1900); *Handbook to the Textual Criticism of the New Testament* (1901, new ed. 1912); *The Buildings of the British Museum* (1914); *Ancient Books and Modern Discoveries* (1928); *Libraries and Museums* (1936); *The Bible and Archaeology* (1940); *The Chester Beatty Biblical Papyri* (8 parts, 1933-41); and *The Reading of the Bible* (1944).

Kenyon, Lloyd, Lord (1732-1802), Brit. lawyer, lord chief justice of England (1788-1802). He won fame by his defence of Lord George Gordon, on trial for treason over the outbreak opposing toleration of Rom. Catholics (1779). K. became attorney-general in 1782, and received the title Lord K., Baron Greddington (1788). See Lord J. C. Campbell, *Lives of the Chief Justices*, 1819-57, and *Lives of the Lord Chancellors*, 1845-69; also life by G. T. Kenyon, 1973.

Kenyon, tn. of Ontario, Canada, in Glengarry co., 55 m. S.W. of Montreal. Pop. 5100.

Keokuk, city of Lee co., Iowa, U.S.A., on the junction of the Des Moines and Mississippi, about 20 m. above St. Louis. Has an elevation of 180 ft. It is the site of a dam and hydro-electric plant constructed in 1913, to harness the Des Moines rapids. Manufact. motor cars, furniture, electrical supplies, tobacco, soap, etc. Pop. 15,000.

Keonjhar, see KLEUNJAR.

Keonthal, see KEUNTHAL.

Kephallenia, see CEPHALONIA.

Keppler, or Keppeler, Johannes (1571-1630), Ger. astronomer, b. at Weil der Stadt. His parents, though of noble descent, were in reduced circumstances, and while K. was a child his father became innkeeper at Elmendingen. In 1586 K. was admitted into the monastic school at Maulbronn, where the cost of his education was defrayed by the duke of Württemberg, and from there he passed to Tübingen Univ. He had originally intended to prepare for the ministry of the Evangelical Lutheran Church, but c. 1591 he accepted the astronomical lectureship in the Univ. of Graz (now Graz). His own modest assurances that at that period he had given no particular attention to astronomy are misleading; in his mathematical studies he had been well grounded in the subject, had learned Copernican principles from Moestlin, his famous tutor at Tübingen, and had been praised by Moestlin for his essay on primary motion. In 1598 his *Prodromus dissertationum cosmographiarum seu mysterium cosmographicum* was pub. and won him the friendship of Tycho Brahe and Galileo. He married in 1597, and in 1600 he became assistant to Tycho Brahe (q.v.). On the latter's death in the following year he succeeded him as prin. imperial mathematician to Rudolph II., and was given the task of completing the *Rudolphine Tables* (1622),

left unfinished by Brahe. He was now able to devote much of his time to astronomical research. Rudolph had a far greater interest in astrology than in astronomy, and K., like Brahe, was of great value to him and to his successor, Matthias, because of his knowledge of the casting of nativities. K. himself attested his faith in the subject, and one of his pubs, which brought him fame during his lifetime was an astrological one, *De fundamentis astrologiae* (1602). After Rudolph's death K. remained in favour and continued his astronomical research. His wife *d.* in 1611, and he remarried in 1614. In 1619 he pub. *De harmonia mundi*, dedicated to James I. of England, on which Newton later began his studies for the *Principia*. James invited him to England, but, though in constant poverty at a court which rarely paid him his salary, K. refused the invitation. About 1629 he became astrologer to Wallenstein. At his death he had pub. thirty-three works; he left twenty-two vols. in MS. and a voluminous correspondence. K.'s prin. claim to immortality lies in his discovery of the three celebrated laws of planetary motion which bear his name. These laws, though not proved in Newton's *Principia* appeared, revolutionised astronomical calculations, and entitle K. to rank as one of the four great men who laid the foundations of modern astronomy. For an account of K.'s laws see ASTRONOMY and GRAVITATION. There are eds. of his collected works by G. Frisch (1858-72) and W. von Dyk and M. Caspar (1937 ff.). See also lives by Sir D. Brewster, 1811; C. G. Reuschle, 1871; H. W. Bryant, 1921; and a study by K. Zinner, 1931; H. Macpherson, *Makers of Astronomy*, 1933; M. Caspar, *Johann Keplers wissenschaftliche und philosophische Stellung*, 1935, and *Bibliographica Kepleriana*, 1936; and K. Hildebrandt, *Kopernikus und Kepler*, 1944.

Keppel, Augustus Viscount (1725-86), Eng. admiral, son of the second earl of Albemarle. After having entered the navy he was successful in many expeditions, among them the capture of Havana in 1762. In 1778, owing to Sir Hugh Palliser, who was in command with K., the Fr. fleet were allowed to escape off Ushant. At the court martial, however, K. was acquitted. In 1782 he was made First Lord of the Admiralty, and created a viscount, see life by T. Keppel, 1812.

Keppel, Sir Henry (1809-1901), Eng. admiral and writer, son of the fourth earl of Albemarle. After service in other places he was instrumental in putting down piracy off the shores of China and in the Pacific about the middle of the nineteenth century. He was in command of the naval brigade at Sebastopol, and in 1857 was successful against the Chinese in Fatsan Bay. In 1869 he was made a full admiral; G.C.B. in 1871, and in 1877 admiral of the fleet. His writings include *Vint to the Indian Archipelago* (1833); *A Sailor's Life under Four Sovereigns* (1899). See Sir A. West, *Memoir of Keppel*, 1905.

Ker, Family of, surname of two noble families of Anglo-Norman extraction,

said to have been living in Scotland at the end of the twelfth century. They settled in Roxburghshire, and derived their descent from the families of Fernihirst and Cessford. In 1357 John K. of Altonburn gave origin in his three sons to the families of Linton, Cessford, and Gate-hay, and in a grandson to that of Fernihirst—the marquess of Lothian being the present chief male representative of this family. Sir Walter K., son of Sir Andrew K. of Cessford, was created earl of Roxburgh in 1616. The grandson of the second earl of Roxburgh, viz. the fifth earl, was created duke in 1707, and the present duke of Roxburgh is the chief male representative of the family of Cessford.

Ker, William Paton (1855-1923), Scottish scholar and literary critic, *b.* in Glasgow. Educated at Glasgow and Oxford Univs. From 1883 to 1887 he was prof. of Eng. literature and hist. at Cardiff Univ. College, and from 1889 to 1922 occupied the queen's chair of Eng. literature at Univ. College, London. In 1920 he was elected to the vacant chair of poetry at Oxford. An unconventional type of prof., a critic of remarkable vitality, and a man of vast learning. His writings include *Epic and Romance* (1897, 1908); *The Dark Ages* (1901); *Essays on Medieval Literature* (1905); *Storia della Letteratura* (1907); *The Art of Poetry* (1923); and *Form and Style in Poetry*, (1928, a collection of lectures and notes ed. by R. W. Chambers).

Kerason, Kerasund, or Kerasunt, seaport of Asiatic Turkey, 70 m. W. of Trebizond on the Black Sea, exporting timber and hides. Here the wild cherry (*L. cerasus*) grows in profusion and it was from K., then called Cerasus, that it was taken into Italy by Lucullus. Pop. 12,000.

Kerbela, sacred tn. of Iraq, about 60 m. S.W. of Baghdad, connected with the Euphrates by a canal. Here is the tomb of Hussein, son of Ali, and the goal of numbers of pilgrims. The people are engaged in making sacred bricks, and the chief exports are cereals and dates. Pop. (1911) 140,000. (tn.) 72,000.

Kereh, or Kerch (anc. Panticapæum), fortified seaport of the Crimea situated in the Crimean Region of the R.S.F.S.R., 60 m. E.N.E. of Feodosia, on the K. or Yenikale Strait, connecting the sea of Azov with the Black Sea. The tn. is of interest from an archaeological point of view. The products include leather, tobacco, cement, lime, beer, and soap; there are saw and flour mills and in 1895 a rich vein of iron ore was discovered. During the Crimean war (1855) K. was levelled to the ground by the allies. Under Soviet rule the harbour has been greatly improved. Captured by the Gers. in the campaign of the latter part of 1941, and recaptured by Soviet troops a few weeks later. Pop. 110,000.

Keren, plateau and tn. in Eritrea, E. Africa, of strategic value since it covers Asmara, and the railway from Sudan to the coast. In the Second World War, it, positions therein were captured after heavy fighting between March 21 and 27, 1941.

Keren Hayesod, central financial institution for the activities of the Zionist organisation in Palestine; incorporated in 1921. It was founded on the principle of a fixed and ann. self-imposed tax on every Jew for the upbuilding of the National Home for Jews in Palestine. (See BALFOUR DECLARATION; PALESTINE.) Its primary objects are to do everything necessary or expedient for the purpose of carrying out the Balfour Declaration (an object which has now been more than achieved), and to obtain subscriptions, loans, gifts, legacies, etc., for the furthering of the objects or powers of the institution. See A. Giltzer, *Two Decades of Keren Hayesod* (Jerusalem), 1940.

Kerensky, Alexander Feodorovich (b. 1881), sometime premier of revolutionary Russia; b. at Simbirsk, son of a high-school headmaster, descendant of a family of orthodox priests. Educated at Simbirsk, Tashkent, and Petersburg Univ., where he graduated in law. Practised at Saratov. He achieved popularity by eloquent defence of the politically accused. Elected to fourth Duma, 1912. On the overthrow of tsardom, March 1917, he became minister of justice under the new Premier, Prince Georg Lvov, and on May 5 war minister. On July 20 Lvov gave place to K., who formed a Coalition Gov. Aug. 7. Chief of Provisional Gov. of Five, Sept.-Nov., 1917. His policy involved continuation of the war; but Kornilov, whom he appointed commander-in-chief exceeded instructions and brought to a head the war-weariness of the army. The Bolsheviks or majority socialists seized the cap., Nov. 7. K. fled and raised a small army, which the Bolshevik Army defeated outside Petrograd. He escaped to Paris. Leader of Russian Socialist Revolutionary party and manager of Russian paper, *Dni*, in Paris. Since 1940 he has lived in U.S.A. Publ. *The Crucifixion of Liberty* (1935), and *The Road to Tragedy* (1935).

Kerguelen Land, or Desolation Island, is. in the Indian Ocean; Cape Chaleenger, its S. extremity, is in 49° 46' S. lat., and 70° 5' E. long. It is very irregular in shape, and has a long coast-line; its length is 85 mi. The is. is volcanic in character, mountainous, and with many glaciers. Fur, seals, sea leopards, and sea elephants, together with skuas, gulls, albatrosses, terns, cormorants, Cape pigeons, and a variety of insects are found. A characteristic feature of the vegetation is the Kerguelen cabbage (*Pringlea anti-corbatica*), a member of the order Cereifera and a preventive of scurvy. The is. was discovered by Yves Joseph de Kerguelen-Trémarec (1741-97) in 1772, and annexed by France in 1893. It is uninhabited. Area 1480 sq. mi.

Keriyu, or Kiria, tn. in Sinkiang, China, situated 95 m. E. by S. of Khotan, and standing at a height of 4500 ft. Jade is found. Pop. 13,000.

Kerkrade, com. of Holland, in the prov. of Limburg, 13 m. N.E. of Maastricht, near the Ger. border, with coal mines. Pop. 40,300.

Kerkuk, see KIRKUK.

Kermadec Islands, group of uninhabited volcanic is. of the Pacific Ocean, lat. 30° S., and long. 178° 30' W., one of the chief being Sunday or Raoul Is. (20 m. in circuit). They belong to New Zealand. Area 15 sq. mi.

Kerman, or Kirman: 1. Prov. in the S.E. of Persia, joining Baluchistan, and having an area of about 60,000 sq. m. Most of the surface is extremely barren, the N. and N.E. being occupied by the desert of K. The inhab. are chiefly engaged in carpet-making. Pop. about 800,000. 2. Cap. of the prov. of the same name, stands at an elevation of over 5000 ft. A centre of the Persian carpet industry. Exports include carpets, silk, and dates. It has a gov. wireless station. Pop. 50,100.

Kermanshah, or Kirmanshahah, cap. of the prov. of the same name, Persia, 275 m. W.S.W. of Teheran, and standing at the junction of the caravan routes from Bagdad, Teheran, and Ispahan. It is a military area, and has a gov. wireless station. There is a large oil-refinery. It has a trade in grain, wines, opium, and carpets. Pop. 89,000.

Kermos, see CHIRMES.

Kern, Jerome David (1885-1940), Amer. composer, b. at New York. He studied under Paolo Gallico and Alexander Lambert, and turned to the composition of musical comedy and other light music. His works include *Sunny* (1920); *Show Boat* (1927); *Muscle in the Air* (1933); and others. He also wrote music for the films.

Kernahan, Coulson (1858-1943), Eng. author, b. at Ilfracombe, and educated privately by his father, Dr. J. Kernahan, F.R.S., and at St. Albans. He collaborated with P. Locker-Lampson in editing the anti-cloy *Lupa Elegantiarum*, and was until 1900 literary adviser to Ward, Lock & Company. His works include *A Dead Man's Diary* (1890); *God and the Ark* (1891); *Captain Shannon* (1901); *Secondhand and Company* (1901); *In Good Company* (1917); *Spiritualism* (1919); *Black Opus* (1920); *The Leading Girl* (1925); *For More Famous Poets* (1928); *A Dog and his Master* (1932); and *Chatter about Dogs* (1936).

Kerner, Justinus Andreas Christian (1786-1862), Ger. poet and medical writer, b. at Ludwigsburg in Württemberg, and educated at the classical schools of Ludwigsburg and Altdorff and the Univ. of Tübingen. He took his doctor's degree in 1808, and practised in Wildbad. In 1815 he was made medical officer of Gaildorf, and in 1818 of Weinsberg, where he spent the rest of his life. His works include *Die Reiseschätze von dem Schattenspieler Luchs* (1811); *Deutscher Dichterwald* (1813); *Die Scherlin von Trerort* (1820); *Der letzte Blütenstrauss* (1852); *Winterblüten* (1859). See F. Heinemann, *Justinus Kerner als Romantiker*, 1908; H. Straumann, *Justinus Kerner und der Okkultismus*, 1928.

Kerosene (Gk. κηρός, wax), colourless mixture of liquid hydrocarbons distilled (between 150° and 300° very approximately) from petroleum, and used for

lighting and fuel purposes. The specific gravity varies from .780 to .825, the boiling point is about 140°-285° C., the flash point varying accordingly. In England it is known simply as paraffin or paraffin oil. It is a colourless liquid, with a characteristic smell and a blue fluorescence. Chemically it usually consists of a mixture of the saturated aliphatic hydrocarbons from decane to hexacontane.

Kéroualle, Louise Renée de, see PORTSMOUTH and AUBIGNY, DECHES OF.

Kerr, Philip Henry, see LOCHAN, MARQUESS OF.

Kerry, maritime co., in Munster, S.W. IRE. The coast-line is deeply indented with bays and harbours, such as Tralee, Dingle, Kenmare, and Bantry. The surface is very mountainous, containing the Macgillivuddy Reeks (highest range in Ireland) with Carrigrohilly (3410 ft.), Brandon and Mangrove, Slieve Mish and Caha Mts. The famous Killarney lakes are in this co. The rivers are short and of little importance. Among the 14, on the coast are the Skelligs, Blaskets, and Valentia, where slates and flintstones are quarried. The chief trees are Trilix (oak), Killarney, Kenmare, and Dingle. Cattle and hatter are exported, and a few fishing and fisheries are extensive. Rebellions in Elizabeth's reign destroyed much of the co.'s former prosperity. Area 1,161,608 ac. Pop. 140,000.

Kerry Blue Terrier. Compact and sturdy dog, with a soft, fall coat of dark bluish tone; ears carried close to the head; tall thin and held erect. Strong, inclined to be pugnacious, it makes a good water-dog. It is popular in England, as well as in Ireland, its country of origin.

Kerry Hill Breed, see SUIPER.

Kersoy, kind of woollen cloth which is twilled, and has a smooth face, soft nap, and diagonally ribbed appearance. It probably derives its name from K. in Suffolk, England.

Kersley, see KRAMLEY.

Kertch, see KERCH.

Keshub Chunder Sen, or Keshava Chandra Sena (1838-81), Indian religious reformer, b. in Calcutta of a merchant family, and educated at one of the colleges there. In 1857 he joined the Brahma Samaj, a movement for religious reform, of which he shortly became the leader. In 1870 he visited England and was warmly welcomed, especially by the Unitarians. For an account of his doctrine and work see BRAHMA SAMAJ and ARYA SAMAJ.

Kessel-Loe, tn. In the prov. of Brabant, Belgium, 18 m. E. of Brussels. Pop. 14,000.

Kesselsring, Albert (b. 1885), Ger. soldier, b. near Baireuth, of a good Bavarian middle-class family; entered the army in 1904, and served in the artillery. After two years on the W. front he joined the general staff, 1916. In 1926 he was transferred to the high command, under von Seeckt. He became a specialist in land-air co-operation, and one of the first advocates of the dive-bomber. In 1935 he was transferred to the Luftwaffe as the delegate of the Reichswehr, and became chief

of the air staff, so as to restore full liaison with the army. Having learned to fly he took command, in 1939, of the first Ger. operational air-fleet, and in the war co-operated with von Bock's army group in Poland, in Flanders, and in the advance towards Moscow. In 1910 he became field-marshal. It fell to his lot to command the Ger. army in three of the most crucial battles of the war against Britain: the battle of Britain (together with F.-M. Sperrle), the battle of Malta, and the battle of the Salerno beaches. He began all three with greatly superior forces, and with the odds all in his favour; and he lost them all. His defeats were not those of a blundering Nazi intruder; they were the defeats of the military caste itself. Nevertheless in April 1942 he was made commander-in-chief of the S. while Rommel (G.F.) remained only an army commander. But he ruled again, his most resounding defeat being the conquest by the allies of the Gothic line. Later, after von Rundstedt's defeat in the Ardennes battle, K. was put in command on the W. front. He was tried in 1947 in force a Brit. military court, at Nuremberg, for war crimes: for the massacre of 4,500 Poles at the Ardennes caves in March 1941, and for holding his forces to ruthless acts against partisans. The trial began on Feb. 10, and closed on May 6, K. being found guilty and sentenced to death by shooting, this being later commuted to life imprisonment.

Kessels, Matthew (1784-1836), Dutch sculptor, b. at Maastricht, and studied in Paris, under Girodet, and at Rome, where he reproduced the two famous medallions of 'Dawn' and 'Night,' and won a prize in open competition with his statue 'St. Sebastian pierced by Arrows.' His masterpiece was the mausoleum for the Comtesse de Siles at Rome.

Kessingland, par. and vil. of Suffolk, England, 14 m. S.W. of Lowestoft. Pop. 2,000.

Kesteven, Parts of, div. of the co. of Lincolnshire, in the S.W. of the co. Area 509,142 ac. Pop. 113,300.

Kestrel, popular name of *Falco tinnunculus*, a species of birds belonging to the Falconiformes; it is perhaps so called because of its clear plaintive note, the alternative name, windhover, being sometimes given, owing to its habit of suspending itself in mid air while searching for its prey. The K. feeds on small mammals, insects, frogs, worms, etc., and is welcomed by landowners as a destroyer of vermin. The male bird attains a length of 12½ in., and has plumage of a reddish tinge, with head and neck of ashy grey; the female has dark spots or streaks with indistinct bars on the tail. It rarely builds its own nest, but uses those of crows, magpies, etc., or scrapes a hole on some cliff-ledge. It is found all over Europe and N. Asia, and migrates in the winter to China, India, and N.E. Africa. *F. crechris*, the lesser K., is an inhabitant of S. and S.E. Europe.

Keswick, tn. in Cumberland, England, 24 m. S.W. of Carlisle. Owing to its position on Lake Derwentwater and at the foot of Skiddaw, it is a favourite place for

visitors, while among its interesting features is the par church of (rosthwalte K was the home of Southey. Its prin industry is the manuf of lead pencils Top 4730

Ketch, Jack (d 1686) was appointed public executioner about 1663 and for two centuries his name was used as a nickname for the holder of his office. This was probably due to his bungling execution of Lord Russell in 1683, for which he put an apologetic or defence allegation, that the prisoner did not 'dispose himself as was most suitable' and that he was interrupted while taking aim.

Ketch (fr a Dutch *gaai* i.e. at of Dutch *kat* and *Te* *cat* he i.e. cat from *catch* to take care) (Wald) small strongly built two masted vessel 100 to 150 tons burden. The peculiarity of the net formerly a latched sample space and they were used as bomb vessels. The masts are the main and the mizzen and the sails are mostly fore and aft. They were formerly much used as yachts.

Ketene (CII) CO is an unstable reactive gas made by passing acetone (*q.v.*) through strongly heated metallic calcium. It is used in the cellulose acetate artificial silk industry.

Keti, seaport on the delta of the Indus in the dist of Karachi Sind Pakistan Top about 2000

Ketones, class of organic compounds allied to the alcohols. By continuing two alkyl groups unit to the carbonyl (CO) group. The simplest ketone is acetone or dimethyl ketone (CII) CO (CII) i.e. enyl methyl ketone or acetophenone (used as a soporific under the name of hyponic) is C₆H₅ CO (CII) and so on. They are prepared by oxidising secondary alcohols or by heating the calcium salt of a fatty acid. They are stable substances which form crystalline addition products with sodium bisulphite and condensation products with phenylhydrazine and hydroxylamine. On reduction they yield secondary alcohols and on oxidation a mixture of acids. See ACETONE.

Kett, Robert (c 1500-41) Eng agitator and rebel was a tanner at Wymondham near Norwich Norfolk. Led an agitation against the enclosure of common lands. With his brother, Wm, he marched with a body of rebels to Norwich and encamped on Mousehold Heath (July 1549). There, under a tree he held 'courts' to hear complaints from the people around. Later, the rebels took possession of Norwich, but on Aug 26 their forces were destroyed by troops under the Earl of Warwick. The Kett brothers were captured and hanged, Robert being put to death in Norwich, Dec 7 (1549) after a trial in London.

Kettering market town of Northamptonshire, England 72 m N N W of London. Boots and shoes form its prin trade. There are also iron quarries in the dist. The Wicksted Park of 100 ac which lies S of the town was the gift of Sir Charles Wicksted. Pop 39,100

Kettle-drum, see DRUM

Keulen, Van, see VAN CUIJCK

Keunhar, or Keonjhar, small native state of Orissa India. Its cap K is the rajah's seat, about 85 m N of Cuttack. Pop of state 365,000

Keunthal, or Keonthal, hill state of the Punjab Area about 120 sq m Top about 25,000

THE CHINESE PAGODA AT KEW

Keuper (from a local miners' term), German name for the third or upper division of the Triassic geological system. In the German region K is divided into three groups: the Rhenish or upper (II) Keuper or Gyps (Keuper) the middle and the lower (Kalk) Keuper or Löss (Kalk). The first is mainly composed of sandy dark grey shales and marls, the second, the thickest bed of a mainly series of grey and green marls, gypsum dolomite and sand shales below the third of grey dolomite with a bed of Lösskohle or impure coal at the base. In Great Britain the beds are usually divided into Rhenish or Upper K. marl and Lower K. sandstone. K is not rich in fossils.

Kew 1 Par of Surrey, England in the bor of Richmond on the R Thames, 7 m S W of London, of which it is a suburb. A bridge connects K with Brentford. The church on the green, dating from 1711, contains the mausoleum of the first duke and duchess of Cambridge and Gains-

borough's grave. In the eighteenth century, Frederick, Prince of Wales, lived at K. House. George III. purchased the property later, and Queen Charlotte d. there (1818). The magnificent royal botanical gardens, containing the most famous collection of plants in Europe, were founded in 1759 by George III.'s mother, and have since increased in extent from 11 to about 290 ac., now forming the chief feature of interest at K. They were presented to the nation by Queen Victoria (1840), and have since been kept up at national expense, and are open daily to the public. Sir W. J. Hooker (q.v.) (1785-1865), and his son, Sir J. D. Hooker (q.v.) (b. 1817), who were both in turn directors of the botanical gardens (1841-85), contributed largely to their excellence. The temperate house (finished 1899) is one of the largest plant-houses in the world. There are numerous fine conservatories, palm-houses, ornamental temples, an arboretum, three museums, the Jodrell laboratory, and N. gallery. The Chinese pagoda (erected 1761) is about 163 ft. high. Chronometers and scientific instruments are tested at the K. observatory or meteorological station. See also BOTANIC GARDENS. See H.M.S.O., *Kew Gardens—Illustrated Guide*, 1935. 2. Tn. of Bourke co., Victoria, Australia, residential suburb, 4 m. from Melbourne.

Kewanee, city of Henry co., Illinois, U.S.A., situated 130 m. W.S.W. of Chicago. Pop. 16,900.

Keweenaw, co., Michigan, U.S.A., consisting of the northerly portion of K. peninsula. It is very rich in copper and iron. Pop. 5,000.

Key, Sir Astley Cooper (1821-88), Eng. admiral, b. in London and entered the navy in 1833. He distinguished himself at the time of the Crimean war. Between 1869 and 1872 he was superintendent of Portsmouth and of Malta dockyards. In the latter year he was made president of the Royal Naval College of Greenwich, was made admiral in 1878, and First Naval Lord of the Admiralty from 1879 to 1885. See P. H. Colomb, *Memoirs of Sir A. C. Key*, 1898.

Key, Ellen (1849-1926), Swedish authoress, came of a good Swedish family. Became a qualified teacher. Influenced by Ibsen, and interested in social reform, she began to write on marriage, the child, and the raising of the standard of living. Her *Das Jahrhundert des Kindes* (1900) was a plea for the welfare of children. Her other works include *Tänkebilder* (1898 trans. as *Ideas*); *Lifslinjer* (1906 *Lines of Life*). See J. Landquist, *Ellen Key*, 1904.

Key, Francis Scott (1779-1813), Amer. lawyer, b. in Maryland. Wrote the national anthem of the Amers., *The Star-Spangled Banner*. He is buried at Frederick, Maryland, where there is a monument erected to him at the entrance to the cemetery. The poem which has preserved his name was written in intensely dramatic circumstances during the Anglo-Amer. war of 1812.

Key, Thomas Hewitt (1799-1875), Eng. classical scholar, educated at St. John's and Trinity Colleges, Cambridge. From

1825 to 1827 he was prof. of mathematics at the univ. of Virginia, and in 1828 prof. at the univ. of London. In 1832 he was made joint headmaster of the school in connection with the univ., and in 1842 sole headmaster. He introduced the ernde form system used by Sanskrit grammarians into the study of the classics. Writings include *Philological Essays* (1863) and *Language: its Origin and Development* (1874). His *Latin-English Dictionary*, printed from an unfinished MS., was pub. in 1888.

Key, see LOCKS AND KEYS.

Key, see SAMARA.

Key, in music, the term applied to a succession of tones in a scale considered with reference to their harmonic relations to one another, and to the chords which can be formed by them. The lowest tone in each scale is the tonic or keynote, and gives its name to the K., which may be either major or minor, according to the intervals. The term key is also applied to the levers by which the sounds of a musical instrument are produced.

Key-dwellers, name formerly given by archeologists to a now extinct race. They lived in the numerous is. reefs or 'keys' (Sp. *cayo*, *shoal*, *reef*) off the W. Indies and Sp. America, especially in the low islets or sandbanks off the S.W. coast of Florida, the chief being Cayo Largo and Cayo Hueso (Thompson's Is. or Key West) about 55 m. from Cape Sable. Wrecks are frequent near this group of coral is. See F. H. Cushing, *Report of the Pepper-Hearst Expedition* (Philadelphia), 1897.

Keyes, of Zebrugge and Dover, Sir Roger John Brownlow, first Baron (1872-1955), Eng. admiral, son of Gen. Sir Charles K. Entered navy as a cadet in 1885 and in 1890 served in Adm. Fremantle's navy brigade in the punitive expedition against the sultan of Vitu. In the Boxer rebellion of 1900 he was in command of a destroyer, and with a handful of bluejackets he achieved the formidable task of capturing the Taku forts, and was promoted commander. In the same year he won the bronze medal of the Royal Humane Society for diving into the Peiho R. and rescuing a midshipman. Between 1906 and 1910 he was naval attaché at Vienna and Rome successively. In 1912 he was advanced to the post of commodore in charge of the submarine service, which he held until Feb. 1915. In this capacity he was responsible for all submarine operations in home waters in the first six months of the war, the boats under his command forming part of the naval screen which covered the completely successful passage of the B.E.F. to France. It was K. who, in Aug. 1914, submitted to the Admiralty a scheme for attacking the Ger. patrols in the Heligoland Bight, out of which developed the brilliant action of Aug. 28, K. being present on the *Lurcher*. K. also took part in the abortive operations for catching the Ger. cruisers which, in 1914, shelled Scarborough and Hartlepool. As chief of staff to Adm. de Robeck in 1915 K. supervised the naval movements in the Dardanelles from the first big naval attack to the final evacuation of Gallipoli. He had previously obtained

leave to return to London to lay a plan before the Admiralty for rushing a squadron through the straits. Mr. Churchill in his *World Crisis* (1912) suggested that the audacious plans of K. did not receive the attention they deserved. Following his promotion to rear-admiral in April 1917, he went to the Admiralty as director of the plans div., war staff. In Jan. 1918 he succeeded Adm. Bacon in command of the Dover Patrol (g.r.). On St. George's Day, 1918, the raids on Zeebrugge and Ostend were carried out under his direction, with his flag in H.M.S. *Warwick* (see WAR, FIRST WORLD, *British Naval Raids on Zeebrugge and Ostend*). After the war he was employed in command of the battle cruiser squadron of the Atlantic fleet; as deputy chief of the naval staff at the Admiralty, 1921-25; and, in succession, as commander-in-chief, Mediterranean station, and commander-in-chief, Portsmouth station, until 1931. In 1935 he passed automatically to the retired list. In the previous year he was elected Unionist M.P. for Portsmouth N., and represented that constituency till he was raised to the peerage in 1943. In Parliament his outstanding contribution was his forthright condemnation of the Norwegian campaign in the early summer of 1940. In 1940 he was restored to the active list, not, as he had hoped, to lead a desperate naval expedition against Tromsø, but to serve as naval attaché for special liaison with the Belgian king. After Leopold's surrender K. urged that judgment on the king should be suspended until all the facts became known; a year later a pub. attack on Leopold and himself led K. to sue for libel, the case being settled in K.'s favour. During the trial a full account of the surrender and its antecedent events was publicly given. Later, he was appointed director of combined operations, but he chafed at what he regarded as the unadventurous and timid uses of the new weapon. As director of combined operations he was in charge of the organisation and training of the commandos and of the naval and air contingents that were then organised to work with them. But in Oct. 1941 his appointment was terminated on the advice of the chief of staff's committee. Subsequently K. attacked the gov. for failing to use the new weapon he had taken part in forging. His charge was not only vague, but accompanied by the obvious exaggeration that under his plan the commandos could have taken Pantelleria in 1940, and so, possibly, 'altered the whole course of the war.' Ho d. in England as the result of a strained heart caused by flying too high without oxygen after having been gassed by a toxic smoke-screen at the battle of Leyte in the Philippines campaign of 1941. Impetuous he may have been at times in his opinions; but he was a sailor of combative instincts and intuitive dash, noted for his combination of coolness with remarkable daring; and in him and in his conduct of the famous raids on Zeebrugge and Ostend, the old offensive spirit of the navy was personified. His son, Lt.-Col. Geoffrey K., was killed in leading a commando

raid on Rommel's headquarters in Libya, and was posthumously awarded the V.C. His honours included G.C.B., K.C.V.O., D.S.O., many foreign orders and honorary degrees of universities. His books include *Naval Memoirs* (2 vols., 1931, 1935); *Adventures Ashore and Afloat* (1939); *The Fight for Gallipoli* (1941—largely reprinted from his *Memoirs*); and *Amphibious Warfare and Combined Operations* (1913).

Keyes, Sidney Arthur Kenilworth (1922-1913), Eng. poet, b. at Dartford, Kent, on May 27, 1922; educated at Dartford Grammar School, Tonbridge School, and Queen's College, Oxford. He entered the army in 1912, and was commissioned in the Royal W. Kent regiment with which he served in the Tunisian campaign in the Second World War. In April 1943 he was either killed or d. while a prisoner of war in Tunisia. His two pub. vols. of poetry, *The Iron Laurel* (1942) and *The Cruel Solstice* (1941), have a shylline quality revealing a maturity remarkable in so young a man, a preoccupation with the themes of love and death, and a reliance on symbolism, at times obscure. His imagery is romantic, moving, and often beautiful, and springs from a mind well stocked both from literature and legend, and from an original and exact observation of nature. K. is believed to have written a number of poems in Africa, now lost. His essay, *The Artist in Society*, was contributed to a symposium entitled *The Future of Faith* (1912). His poems with a memoir by Michael Meyer were collected in an ed. pub. in 1915.

Keyham, situated on K. Lake, is a part of Devonport, England, and has a large dockyard.

Key Islands, see KILISLANDS.

Keymer, par. and vil. of Sussex, England, 5 m. N. of Brighton. Pop. 1500.

Keyne, St., virgin said who lived about 485, first in Wales and afterwards in Cornwall. She is supposed to have imparted certain power to the water in a spring there, that the first of a newly married pair drinking it shall be the ruler. The name still survives in a Cornish parish near Liskeard.

Keynes of Tilton, Sir John Maynard Keynes, first Baron (1883-1946), Eng. economist, b. at Cambridge, eldest son of Dr. John Neville K., registrar of Cambridge Univ. and lecturer in moral science, was educated at Eton and King's College, Cambridge, being twelfth wrangler in the mathematical tripos, 1905. President of the Cambridge Union, 1905, he won the members' Eng. essay prize for an essay on the political opinions of Burke. K. studied deeply in philosophy and economics, being influenced by Sidgwick, Marshall, Wicksell, and W. E. Johnson. In 1906 he passed into the first div. of the civil service, and chose the India Office, being attracted by the Indian currency issue. He gained a fellowship at King's College, Cambridge, and delivered a series of lectures on money. From 1912 he ed. the *Economic Journal*, and from 1921 to 1938 was chairman of the National Mutual Assurance Society; he also conducted an investment company (it

is significant of his skill that he left over £400,000 at his death. A member of the royal commission on Indian currency and finance (1913-14) he worked in the Treasury (1915-17) going with Lord Reading's mission to India. He was prime secretary representative of the Paris peace conference deputing for the chancellor of the exchequer on the Supreme Economic Council (1919) and member of the Macmillan commission on international industry (1929-31). In 1931 he was appointed a member of the chancellor of the exchequer's committee and was made a director of the Bank of England. From 1931 he played a leading

Press Portrait Bureau

LORD KEYNES

part in the negotiations with America to effect a transition from war to peace on the basis of trade and finance and set up international bodies which would avoid the damaging fluctuations and restrictions which so grievously prejudiced world prosperity between the two world wars. In 1941 he headed the Brit. delegation to the Monetary Conference of the United Nations at Bretton Woods (q.v.) and he was the chief figure in the Brit. delegation which in 1944 discussed the terms of the Amer. Loan Agreement. Shortly before his death he was appointed governor of the International Monetary Fund and the International Bank for Reconstruction and Development.

K. was raised to peerage in 1952, and was chairman of the Arts Council (1945). In 1925 he married the famous Russian dancer Lydia Lopokova, and pub. of

Short View of Russia. The posthumous *Two Memoirs* appeared in 1949.

His genius was manifested in his weighty contributions to the principles of economic science, in his power of securing public interest in the practical application of economic science on little occasions; and not least in his attractive prose style—as exemplified particularly in his *Economic Consequences of the Peace* (1919), and in his *Lectures in Biography* (1933). Few thinkers have ever achieved equal influence and recognition in their own lifetime and to fill in a moment of comparable influence one would have to go back to Adam Smith. In his special field of political economy he became the teacher of a whole generation. The pub. of his *General Theory* has been described as the opening of a new era—the 'Keynesian era', and the influence he exercised over his contemporaries was the greater because he was so much more than an economist. The traditional theories made no appeal either to his temperament or to his reason. With the available resources and technique, he believed the W. world, at last was capable of relieving the economic problem, which now absorbs our moral and material energies, to a position of secondary importance. It was his faith and conviction that the day was not far distant when that problem would face a 'back seat' where it belonged and that the arena of the heart and head would be occupied by our real problems—those of life and human relations of creation and behaviour and religion. When once it had become evident to him that the classical theory could not explain or prescribe remedies for the outstanding economic malady of mass unemployment, his intellectual integrity impelled him to challenge orthodox views with ever increasing severity and without regard to what he himself had believed and taught in the past.

His pub. his important *India, Currency and Finance* in 1912. His *Lectures on Probability* (1921) is a notable achievement, in it he uses mathematical symbols, yet rather than seeking to supplement the mathematical theory of probability it examines the philosophical bases of that theory and with a wealth of learning in the history of the subject. His *The Economic Consequences of the Peace*, pub. in 1919 after his resignation from the Brit. delegation to the Paris peace conference, made him world famous. Opinions differ on the merits of the Versailles Treaty, but there was common agreement, as to requirements, on his view that the settlement was ill conceived and likely to prejudice world economy.

It must be noted that more recently there has been increasing doubt on the validity of K.'s thesis, in *The Economic Consequences of the Peace* and whether this brilliant book did more good than harm. In any event it contributed greatly to the belief, both in Great Britain and America, that not only was the repatriation policy impracticable, but that the treaty of Versailles was in general vindictive and evil.

This in turn was a factor in increasing the isolationist forces in America and helping the nationalist movement in Germany. Etienne Mantoux maintains in his posthumously pub. work that K. greatly understated the potential capacity of Germany to pay substantial reparations, under appropriate conditions, without disastrous consequences.

His subsequent attack on the gold standard did not prevent a return to the standard in 1925, but certainly condemned that system afterwards. In the same year his pamphlet, *How to Pay for the War*, put forward the idea of deferred credits.

At the Treasury he carried his new ideas on to the plane of practical affairs, and the changed official outlook is an indication of his profound influence. His most searching contribution in this field was in what was therefore called the theory of money, but which through his interpretation had an enlarged scope. For K. departed from the purely monetary aspect of the subject, and analysed all the factors determining the level of aggregate demand for goods and services. In explaining 'effective demand' he emphasised the distinction between consumption expenditure and expenditure on investment. He showed that where the amount which the community wishes to save at the full employment level of income exceeds the amount which is wanted for investment purposes in the same circumstances, an equilibrium level of saving and investment might be brought about by a reduction in income, and therefore in saving, rather than by any factor in the situation tending automatically to raise investment demands to the level of full employment saving. K. aimed at what, mathematically, was a complete explanation of the phenomena studied, and did not concentrate on one particular phase of the trade cycle. He also linked together the factors responsible for short-period changes with those operating to determine the average levels of the variables over longer periods, and proved that these levels are also dependent on the quantitative responses of the system (see J. R. N. Stone, 'Lord Keynes: the New Theory of Money,' *Nature*, Nov. 9, 1946, Vol. 158, No. 4019).

In the interval between the wars K. lectured at Cambridge, ed. the *Economic Journal*, and took a leading part in determining the economic and financial policy of the Liberal party. He was, unfortunately, unable to persuade the Conservative Gov. of 1925 not to reestablish the pound at its old parity, an error which was largely responsible for the general strike of 1926, and for an economic depression which occurred in Great Britain at a time when the rest of the world was recovering.

K. was right in his advice and accurate in his prediction of the consequences. In 1930 he pub. his *Treatise on Money*, which proved to be a stepping-stone to a still greater work with an extended scope. This was *The General Theory of Employment, Interest, and Money* (1936),

which transformed the economic thinking of Great Britain and the whole of the W. world, and estab. K. beyond argument as the world's leading economist both in his reputation and in his undeniable influence on policy. For long K. taught the Ricardian economics, which reflected progress under conditions in which the *laissez-faire* system seemed preferable to any practical alternative. But under changed modern conditions of industrial organisation and social laws, the limitations of that system have become increasingly obvious and serious in their consequences, of which the most evil has been the spectre of mass unemployment. K. revolted against the fatalism of orthodox economics in face of mass unemployment, arguing for the control of all forms of investment, so as to combine collective direction with individual initiative, and for the proper timing of public expenditure; and he developed a new economic theory compatible with such a policy. *The General Theory* was comparable in its influence to Adam Smith's *Wealth of Nations*. In this book K. refuted the orthodox theory that all savings made by the individual flowed through the banks to the business community, to create new productive plant, etc. K. proved this to be a fallacy, and that there is no automatic mechanism in the *laissez-faire* capitalist system to ensure an equation between the total demand and the supply of productive labour. 'Whether the theoretical basis of his argument be accepted or not, enough of his doctrine to support most of his practical conclusions may now be said to be accepted as orthodox, and in any case these conclusions have been in fact embodied in policy both in Great Britain and in other countries. In the United States the "New Deal" under Roosevelt, and the new "full employment" policies in Great Britain, owe more to Keynes than can ever be precisely assessed' (see Sir Arthur Salter in *Personality in Politics*, 1947). 'Full employment,' moreover, is written into the Havana Charter (see under *Economic*).

Keynsham, in. in the co. of Somerset, England, 5 in. S.W. of Bristol. It has brass and dove works, and possesses the ruins of an abbey of the twelfth century. Pop. 7300.

Keys, see FLORIDA KEYS.

Keyserling, Count Hermann (1880-1946). Ger. essayist, b. in Livonia, Russia; acquired Ger. nationality. Descended from a well-known family of Baltic barons; educated in the high school of Pernau and at Dorpat Univ. His first philosophical work was *Das Gefüge der Welt*, pub. in 1906; this was followed by *Immortality* (1908) and *Prolegomena to Natural Philosophy* (1910). Deprived of his estate by the Russian revolution of 1905, he travelled round the world and, out of those experiences, wrote his *Reisetagebuch eines Philosophen* (1918), pub. in Eng. as *The Travel Diary of a Philosopher* (1925), which made him famous, not only in Germany, but in other countries. This book was his chief title to fame, but, like his other works, it shows him to be a facile

essayist on philosophical, psychological, and sociological subjects rather than an original philosopher. In *Das Spektrum Europas* (pub. in Eng. as *Europe*, 1928), *America Set Free* (1929), and *South American Meditations*, pub. 1926-32, he purports to interpret the countries and races of the civilised world with reference to their natural environment, biological characteristics, and social hist. Became a vigorous opponent of the Nazis, who forbade him to lecture or to publish books, but were apprehensive of making him a martyr.

Keys, House of, third estate in the Isle of Man. It consists of twenty-four members, elected by the adult inhab. men and women.

Keys, The (W. Indian Is.), see CAICOA.

Keystone State, see PENNSYLVANIA.

Key West, port of entry, health resort, and co. seat of Monroe co., Florida, U.S.A., on K. W. Is., the most westerly of the group of Florida Keys. Its harbour, which is an exceedingly fine one, is defended by Fort Taylor. The people are engaged principally in the manuf. of cigars and in sponge fishing, but turtles, fish, fruit, and vegetables are also among the exports. The U.S.A. Gov. has a naval station here. Pop. 19,900.

Khabarovsk, m. and cap. of the K. Ter., R.S.F.S.R., in E. Siberia, at the junction of the Amur and Ussuri. It is connected by railway with Vladivostok, 470 m. S.W., and with W. Russia. It has a newly developed iron and steel industry, aided by the proximity of coal from the Bureya valley. K. stands on the Trans-Siberian Railway at its junction with the new Amur Railway, connecting K. with Nikolayevsk. It is thus linked with sources of coal, iron, and petroleum, as well as with the Russian Pacific ports. In addition to agric. engineering works K. has large new oil and petroleum refineries. It is now the petroleum supply centre for the entire Russian Far E. and supplies are also transported westward to S. Siberia. Apart from these industries there are chemical, machine-building, flour-milling, meat-packing, and other industries. The growth of the pop. reflect this great industrial development: (1926-44,000; (1939) 200,000.

Khaifa, Cephren, called by some writers **Saophis**, a king of Egypt, and the builder of the second largest of the three pyramids.

Khaibar Pass, see KHYBER.

Khalifa, see HAIFA.

Khalr-ed din, see BARBAROSSA.

Khalipur: 1. Native state in W. Punjab, Pakistan. Area 6050 sq. m. Pop. 228,000. 2. Cap. of the above state, situated near the Indus. Pop. about 15,000.

Khakas: Autonomous Region of the R.S.F.S.R., lying to the N.W. of Outer Mongolia, on the Upper Yenisei. Abakan is the chief tn.

Khaled, or Calad (582-642), one of Mohammed's greatest generals, b. at Emessa. He was known among the Arabs as 'The Sword of God,' and hesitated at no cruelty in order to advance the religion of his master. K. slaughtered the garrison of Damascus after granting them their liberty.

Khalifa, Haji, or (in full) **Mustâfa ibn 'Abdallâh Kâtib Chelebi Hajji Khalifa** (c. 1599-1658), Arabic and Turkish author. He was with the army in Bagdad (1625), and present at the siege of Erzerum, returning to Constantinople in 1628; he made a pilgrimage from Aleppo to Mecca in 1633. His chief work is *Bibliographica Encyclopaedia in Arabic* (pub. by G. Flügel, 1835-58), on Arabian, Turkish, and Persian books and authors. For other historical works see C. Brockelmann, *Geschichte der arabischen Literatur*, ii., 1902.

Khalid ibn Yazid, emir of the Umayyad family, d. A.D. 701. He is remembered as the first Moslem alchemist, and is said to have learned the art from a Christian monk named Morienus. Some of his alchemical verse is still extant.

Kham, prov. situated in the S.E. of Tibet, Chamdo is its chief tn. The upper courses of the Mekong, Salween, and Brahmaputra traverse K.

Khamgaon, tn. in the Buldana dist., Berar, India, 28 m. W. of Akola. It has an important cotton and opium market. Pop. 22,000.

Khamil, see HAMI.

Khammuraši, see HAMMURABI.

Khammuragas, see HAMMURABI.

Khamis (Arabic, fifty), hot, oppressive, southerly wind of Egypt, blowing at intervals during March, April, and May for about fifty days. Lasting generally for three days or so. It fills the air with sand, and during its prevalence diseases native to the country are very virulent. In Mediterranean regions it is known as the sirocco.

Khan, Mongolian title of respect used in Moslem countries. It has the meaning of sovereign or emperor among the Mongol tribes.

Khan, Liaquat Ali, see LIAQUAT ALI KHAN.

Khanagiri, tn. in Iraq, 30 m. to the S. is a large oil field, worked by a subsidiary of the Anglo-Iranian Oil Company. A pipe-line runs to a refinery at K.

Khandesh, two dists. (E. and W.) in Decan, Bombay, India. K. is intersected by the Tapi R. A great part of K. consists of a fertile plain, but in the extreme E. there is a small, very unhealthy tract. Northwards the land rises towards the Satpura range of hills. Wild animals are abundant. The Bhils, an aboriginal tribe, were formerly very lawless. There are cotton ginneries. The chief tn. is Dhulia. Pop. 1,160,500.

Khandwa, tn. in the Nimar dist., Central Provs., India. It contains some anct. temples, and is the seat of the cotton trade. Pop. 20,000.

Khania, see CANEA.

Khan-Tengri, snow-capped peak of the Tianshan Range, Central Asia, on the borders of the Kirgiz S.S.R. and Sinkiang, China, 85 m. S.E. of the E. shore of Lake Issik-kul. Height 24,000 ft.

Kharbin, see HARBIN.

Kharezm, see KHIVA.

Kharga, called the **Great Oasis of Egypt**, lies in the Libyan desert, and belongs to the Mudiria of Assiut. It is 100 m. long and 12 to 50 m. broad, having an area of

about 1200 sq m. There is little or no rain, but many wells, some of great antiquity. The chief trees found in the date palm, tamarisk and acacia and rice and wheat are grown. The inhabitants who are of Bohemian stock, are chiefly engaged in basket work. A railway joins the town with the Nile valley. Pop 7800. See H. J. Chadwick *An Egyptian Oasis* 1909.

Kharkov, El see KHLKHAROV.

Kharkov, Region of the Ukrainian S. R. Area 21,041 sq m. It occupies a large tableland rising from 300 to 400 ft and is watered by tributaries of the Dnieper and Don. The district is fertile yielding cereals in large quantities and cattle breeding forms one of the chief occupations. Pop. 2,000,000. The capital of the region is the archiepiscopal see of the Orthodox Church. It has an important university, fairs and has a very large plant for the manufacture of tractors. The latest tractor plant built as part of the five year plan is located 5 m. from the city on a well modern asphalt road stretching out into the broad steppes of the Ukraine. It had an annual capacity before the Second World War of 7,000 tractors employing 12,000 men. In 1937 it was converted for production of caterpillar tractors really for the purpose of making tanks for the army. The plant was designed in consultation with the best engineers of America, Britain, France and Germany. This tractor plant was the last word in factory equipment and the different processes were so arranged that there was a constant flow from raw material to finished product and the conveyor and belt system was in wide use. Kharkov does not possess the same historical traditions as Kiev. Founded three centuries ago on the frontiers of the early Russian State as a settlement of immigrant Crimean Tartars on the banks of the Kharkov, it occupied a central position in the Ukraine, and between the Ukraine and Moscow, and by the middle of the seventeenth century its importance had increased to such an extent that it became the administrative centre of the 'Slobodskaya Ukraine' a part of S. Russia where immigrants from Poland and the Baltic States were allowed to settle. It then soon became the outlet of the S. iron mines and coal mining district of the Donetz Basin, and these great advantages of geographical position avail it to the present day. Kharkov was the capital of the Ukrainian S. R. under the Soviet administration until 1934 besides being a leading industrial and cultural centre. But though Kharkov succeeded it as the Ukrainian capital it is a greater industrial centre, becoming one of the most important engineering centres of Russia and a vital railway junction of lines from Moscow, Kiev, Rostov, Dnepropetrovsk, Kherson, Stalingrad etc. and the express main line for coal transport between the Donbas and Moscow passes through Kharkov. Pop. 83,400.

The Battles for Kharkov in 1941—K. fell to the Gers. towards the end of Oct. 1941—a serious loss for the Russians because K. was a strategic position covering the E. Ukraine and with its aircraft and tractor factories, electrical equipment,

machine tools and locomotives a key position in the Soviet supply system. But though the Russians fought stubbornly, resisting from house to house the tremendous Gers. artillery barrage and air attack proved to be much for the defence. After the Gers. rebuilt from Moscow and Voronezh the Russians gradually returned to the offensive and K. was the main line of battle from Jan. to Feb. (1943) the Gers. line running through Orsk, Kursk and K. This was in effect the second great battle for the Ukraine or Donetz industrial basin. In early Feb. (1943) the Gers. line was rolled up by the Russians.

KHARKOV MONUMENT TO TANK BROTHERS AND THE UKRAINIAN POET

and after the Gers. had lost Orsk, Kursk and Poltava, K. remained the last and greatest stronghold of the British. The Russian commander Vatutin (G.) pressing W. and S.W. across the Donetz captured the important junction of Ilovaya (Feb. 11) and two days later Russian tanks had driven into K. and cut its rail connections with Leningrad, besides depriving their dangerous opponent below the city. On Feb. 15 the Russians broke the Gers. lines N. of the city and the next day launched a frontal attack which drove the Gers. garrison into it towards the W. and S.W. But the Russian triumph was short-lived. With heavy reinforcements which increased their strength in the Donetz region from eight tank and five infantry divisions to twelve armoured and thirteen infantry divisions the Gers. now encircled the city from S. and E., but though this threatened pincer movement was defeated the Russians were compelled to yield their

gains W. of the city in order to buttress their line along the Donetz, and forces the Gers. to make a costly direct attack on K. without hope of cutting off any large part of the Russian forces W. and S. of K. By the end of Feb. (1943) the Gers. had closed in on K. and on March 14 they drove the Russians out after some days of street fighting. The city was now largely in ruins, but was still a vital communications centre. In July K. was again the centre of desperate fighting following the second great defeat of the Gers. in the Kursk-Orel region. Once again the Gers. were forced to abandon the key position of Belgorod, and with this loss were forced to give up K. again, though its recapture was only an incidental objective in this great Russian offensive in the Ukraine. In mid-Aug. the Gers. launched desperate counter attacks at K., but on Aug. 23 the Russians had retaken the city for good. See also EASTERN FRONT or RUSSO-GERMAN CAMPAIGNS IN SECOND WORLD WAR.

Kharput, see MAHUT-EL-AZIZ.

Kharsivan, another name for salvasan (q.v.) or dihydroxydianthracene oxide.

Khartoum, or Khartum, prov. and chief tn. of Anglo-Egyptian Sudan. Africa, on the Blue Nile (Ghazal-Azrek), near its junction with the White Nile (Bahr-el-Abiad). It was founded about 1820 by Mohammed Ali, and is strengthened by walls and forts. Among the chief buildings are the governor-general's palace on the banks of the Nile; the central gov. offices; the Gordon memorial college; and the Kitchener school of medicine. K. has fine quays, mosques, a cathedral, barracks, and a street railway. There are railway connections with Lower Egypt and with Upper Egypt and Port Sudan on the Red Sea. Ivory, ostrich feathers, gum, and fruit are exported; grain and textiles are among the imports. A bridge connects the tn. with its suburb, K. N. or Halfaya. The development of air transport in the Anglo-Egyptian Sudan is encouraged by K.'s position at the intersection of the main air routes from S. Africa to Egypt and from W. Africa to Asia. The Gordon memorial college was opened by Lord Kitchener himself in 1902. In 1941 his hopes were realised by the raising of the college to post-secondary level and the concentration in it of the existing higher schools. These latter consist of the two basic courses of arts and science, from which students go on to complete their studies in law, education, and administration, or in engineering, agriculture, veterinary science, and medicine. The Kitchener school of medicine was opened in 1924, with its final examinations under the supervision of visitors from the Eng. royal colleges. Secondary education is also available at two new non-gov. schools, and the Sudanese are admitted to the Comboni College and to the Ooptic College in K. There are also an engineer's school, a school of marine engineering at K. N. dockyard, and an electrical engineering school. K. was formerly a depot for slaves sent from the Sudan and Abyssinia into Egypt. It fell into the hands of the Mahdi in 1885, and Gordon,

after his gallant defence, was murdered in the subsequent massacres. The Derwishes under the Khalifa (the Mahdi's successor) next ruined the city, and made Omdurman their headquarters. Not until 1898 were they defeated and K. recaptured by Anglo-Egyptian troops under Kitchener. Much of its former trade and prosperity was subsequently restored. Pop. 11,900, including K. N. and rural dist. 136,400. See P. Crabtree, *The Winning of the Sudan*, 1931; K. D. Henderson, *Survey of the Anglo-Egyptian Sudan, 1898-1914*, 1916; and W. J. Arkell, *Early Khartoum*, 1918.

Khasi, Indo-Chinese race, numbering about 193,000, inhabiting the K. hills, Assam, India. Their language is monosyllabic and they are a primitive race. See P. E. T. Gurdon, *The Khasis*, 1907.

Khasi Hills, The, form, with the Jaintia Hills, a dist. of Assam, India. They extend E. to W., for about 200 m. and attain an altitude of nearly 10,000 ft., forming a barrier, some 60 m. wide, between the great valleys of the Brahmaputra and the Surma. They are of limestone formation, and are frequently visited by earthquakes. Shillong, Assam's administrative cap., lies in their midst at an altitude of 4,800 ft.

Khaskovo, or Haskovo, cap. of the dept. of that name in Rumelia, Bulgaria, 45 m. from Plovdiv. In 1913 it became an administrative dist. Pop. 26,500.

Khatanga, riv. of E. Siberia, flowing from a lake in the Krasnoyarsk Region of the R.S.F.S.R., into the bay of K. Arctic Ocean. Length (estimated) 700 m.

Khatmandu, or Káimánu, cap. of Nepal, India, near the confluence of the Bagmati and Vishnumati Rs., and 75 m. from the Indian frontier. Pop. 110,000.

Khayyam, Omar, see OMAR KHAYYAM.

Khazakstan, see KAZAKHSTAN.

Khazars, The, were an ant. people of S.E. Europe, supposed to be descended from Theogamah, grandson of Japhet. They inhabited the spurs of the Caucasus and the shores along the Caspian Sea. It was their chief city, and formed the centre of trade with Persia, Byzantium, Russia, and other countries.

Khada, see KARA.

Khe live, or Knidiv, Persian title (prince or sovereign), granted by the Turkish sultan to his viceroy in Egypt in 1867, in stead of the former title 'vali' (viceroy). It was thenceforward adopted as the official title of the pashas of Egypt, and sometimes used by independent prov. governors in Persia. Religious supremacy only was acknowledged in the sultans and shahs. After the settling of the Brit. in Egypt, the K.'s power decreased, and in 1914 the title was replaced by that of sultan, and in 1922 by king. See F.R.D.

Kheiat, Kelát, or Kalát, see KALAT.

Kherson: 1. Region of the Ukrainian S.S.R., bordering on the N. coast of the Black Sea. It is watered by the Dniester (its W. boundary), the Dnieper (its E.), the Bug, and the Ingul. By the shore stretch shallow salt lagoons. The chief industries are agriculture and cattle-rearing. There are large crops of wheat, barley, etc., and tobacco, hemp, flax, and maize are also

grown. Fishing is an important occupation of the inhab., and there are manufs. of leather, wool, carriages, chemicals, sugar, etc. Area 27,337 sq. m. Pop. 3,500,000. 2. Cap. of the above, on the r. b. of the Dniester, was founded in 1773 by Catherine II. as a seaport and naval station. There is an active riv. traffic, and the chief industries are brandy-distilling, wool-cleaning, soap-boiling, and the manuf. of tobacco. A new harbour has been constructed. The port is closed from mid Dec. to early March; wheat and timber are the chief exports. In the cathedral is buried the courtier Potemkin. K. was captured by the Bolshevik troops in 1920, and by the Gers. in 1941. Early in March 1911 Mallinovsky's forces broke through the Ger. lines of the Ingulets R., and cut the railway running N. from Nikolaev, thus leaving the Gers. precariously situated above K. On March 11 the Russians forced the lower Dniester in the region of Berislavl, and K. itself fell to them on March 13. Pop. 97,100. See further under EASTERN FRONT in SECOND WORLD WAR. 3. Ruins of a city of this name remain near the S. extremity of the Crimea, Russia. It was founded by the Gks. in the sixth century, captured by the Russians in 988, and devastated by the Lithuanians in 1368.

Khidiv, see **KHEDIVE**.

Khingán, two ranges of volcanic mts., Great and Little K., on the E. of the desert of Gobi, separating Mongolia from Manchuria. Between them lies the Zeya-Bureya Plateau, along the S. edge of which is the Amur valley. Their greatest altitude is 6500 ft. Also called the Bureya Mts.

Khiva, **Khivarez**, or **Khorezm**: 1. Former khanate of Russian Central Asia, and now a region of the Uzbek S.S.R., occupying part of the delta of the R. Amu Darya, and extending from 41° to 13° 40' N. lat., and from 58° to 61° 50' E. long. The dist. around K. is watered by numerous irrigating canals from the R. Amu, and forms an oasis with an area of 5210 sq. m. Here are grown millet, rice, wheat, barley, oats, peas, flax, hemp, and a great variety of fruits, including the vine and large quantities of melons. Sheep, cattle, horses, and camels are reared, and pottery, textiles, and silk produced. Once a mighty kingdom holding great possessions, in 1873 it became a vassal state to Russia. The khan was deposed in 1920, and in 1921 K. joined the Socialist republics, part of it being included in Turkmenistan, part in Uzbekistan. Chief tns., Khiva, Urgench, Hazarasp, and Kungurad. Pop. 910,000. 2. Cap. of the above. It is situated 240 m. W.N.W. of Bokhara, having twenty mosques and four large madrasas (Moslem colleges). The manufs. include carpets, silks, and cotton. It is a station on an air line. Pop. 21,600.

Khiva, Desert of, see **KARA-KUM**.

Khmer Language, see **LINGUISTIC FAMILIES, Austro-Asiatic Linguistic Family**.

Knopff, **Fernand Edmond Jean Marie** (1858-1921), Belgian painter, b. at Greinbergen, Termonde. He studied under X. Mellery, and was much influenced by the Eng. pre-Raphaelite school, notably by

Rossetti and Burne-Jones. His work is distinguished by a certain curious mystic note, as found in the enigmatic 'Silence' (1890), and 'Shyl' (1894). It is individualistic, and the colouring is fresh and delicate. His best-known works are 'The Small Sphinx' (1884), 'Memories' (1889), and 'I Lock My Door upon Myself' (1891). See the studies by Pol de Mont, 1901, and Dumont-Wilden, 1907.

Khoi, tn. in the prov. of Azerbaijan, Persia, 75 m. N.W. of Tabriz. Here the Persians were defeated by the Turks under Sellim I. in 1511. The chief industry is agriculture; fruit, grain, and cotton are especially cultivated. It was occupied during the First World War by both Russians and Turks. Pop. 30,000.

Khoi-Khoi, see **NAMAGUA**.

Khojend, or **Khojent**, walled tn. in the Surkhland-Darya Region of the Uzbek S.S.R., 75 m. S.W. of Khokand. The tn. belonged alternately to the emirs of Khokand and Bokhara, and was besieged by the Russians in 1866. There are manufs. of silk, cotton, and china ware. The inhab., who are mostly Tajiks, number 37,000.

Kholm, see **CHOLM**.

Khonds, or **Kus**, Dravidian people who inhabit the Central Provs. of India. They used formerly to offer human beings as sacrifices. They must not be confused with the Gond-. Their number is estimated at 700,000.

Khonsar, or **Khunsar**, tn. in the prov. of Irak-Ajeul, Persia, 83 m. W.N.W. of Isfahan. Pop. 12,000.

Khorasan, or **Khorasan** (land of the sun), north-easterly prov. of Persia, to the W. of Afghanistan, with an area about 200,000 sq. m. It is traversed by spurs of the Elburz Mts. The chief products of the soil are tobacco, opium, cotton, and fruits, and it is famous for its wool. Shawls, carpets, swords, and silk are manufactured, and there are turquoise mines at Nishapur. From 1918 to 1920 a Brit. force occupied Meshed, the cap., and some of the frontier dists., to prevent Bolshevik penetration. The pop., made up chiefly of Iranians, Tajiks, Turmen, and Kurds, is estimated at 1,000,000. See C. E. Yate, *Khorasan and Sistan*, 1900.

Khorramshahr, see **MOHAMMERA**.

Khorsabad, vil. of Iraq, 13 m. N.E. of Mosul. The first discovery of the antiquities of Nineveh was made here by Paul Botta in 1842.

Khosru I., II., see **CHOSROES I.**, II.

Khotan (locally **Heh**), name of a tn. and oasis of Sinkiang, China. The oasis lies between the N. extremity of the Kunlun and the edge of the Takla-makan Desert; there are two small tns. therein, Kara Kash and Yurt Kash, and 300 vils. Cereals, rice, flax, hemp, tobacco, opium, and cotton are produced, and a trade is carried on with India and China. The tn. of K., formerly of great importance, lies about 180 m. S.E. of Yarkand, and is composed of narrow, dirty, winding streets, with open squares at intervals. Sven Hedin discovered the ruins of unct. cities in the K. dist., and, 1913-16, Stein discovered many priceless Buddhist frescoes,

etc. Jade or nephrite for fancy articles, etc., has long been a famous production, and other minerals, including gold and precious stones, abound; in addition carpets, silk, felt, silk goods, and hides are manufactured. Area of desert 400 sq. m. Pop. (onsls) 40,000.

Khotanese Language, see under INDO-EUROPEAN LANGUAGES.

Khotin, or **Hotin**, tn. of the Ukraine S.S.R., on the Dniester, near the Galician frontier. The Turks were defeated here by John Sobieski (1673). Pop. 17,000.

Khulna, tn. of E. Bengal, Pakistan, 80 m. E.N.E. of Calcutta, cap. of a dist. of the same name. Pop. 18,000.

Khunsar, see KHONSAH.

Khurasan, see KHORASAN.

Khurja, tn. in the Bulandshahr dist., United Provs., India, 50 m. S.E. of Delhi. It is a centre of the cotton trade. Pop. 31,000.

Khusab, tn. in the dist. of Shahpur, W. Punjab, Pakistan, on the Jhelum, 105 m. S.W. of Rawal Pindi. Trades in cotton prints and coarse cloth. Pop. 12,000.

Khuzistan, or **Arabistan** (anc. Susiana), prov. of Persia, bordering on the N. shores of the Persian Gulf. The N. and E. dists. are hilly and fertile. Large tracts are used as pasture land, and rice, cotton, sugar-cane, dates, tobacco, and opium are grown. The S. portion is flat and infertile, and during the rainy season is often swamped. It contains large oil deposits. Shushtar and Dizful are the chief tns. Area 2,700 sq. m. Pop. about 1,500,000. See also ILAM.

Khyber, or **Khalbar**, Pass, narrow pass connecting Pakistan and Afghanistan. Its length is about 33 m., and its width varies from 450 ft. in its widest part to about 50 ft. in its narrowest part. It is the great N. military route from India (Pakistan) into Afghanistan, and all the great invasions of India have come through the pass. Commencing near Jaurud to the W. of Peshawar, it twists N.W. through the mts. at the junction of the Sulaiman Koh with the Sulaiman range for about 33 m., and debouches near Laipura, on the Kabul R. It is flanked on both sides by mts. which rise sheer above it to a height of 3000 ft. in some places, its summit being at Landi Kotul, which is 1700 ft. higher than Jaurud. During the Afghan wars of 1839-42 and 1878-80 the Brit. were successful in crossing it in spite of great resistance. The K. P. may be said to have been almost the symbol of the tribesmen's resistance to the Brit. raj. Beyond it is the lawless ter. where the king's writ has never run, except in the hours of daylight on the narrow road leading from the 'settled territory' of India. It was Lord Curzon who decided that the only tenable frontier of India was the line where the hills meet the plain, and that the caravan routes between that and Afghanistan and Persia should be protected, not by regular troops, but by militia recruited from among the tribesmen themselves—such as Mohmands, Wazirs, and Pathans. This was the so-called 'backward policy', and it was no more successful than the long series of

sieges and punitive expeditions that are commemorated by N.W. Frontier names on the battle honours of so many line regiments of the Brit. Army. That policy was reversed after the First World War by the construction of the great Razmak cantonment. But that policy too reaped no reward. Forces in Razmak and its attendant forts were always as though besieged in enemy ter. The cost in men and money was immense. Beyond giving employment to a few tribesmen in the repair of the road and in the supply of meat and vegetables, Razmak had but little effect on the grim life of Waziristan. Its vast elaboration of men and horses and machinery represented the high-water mark of W. impact on the N.W. Frontier. In 1918 the tide, so impressive and yet so ineffective, began to recede very rapidly. The army, now the army of Pakistan, though retaining a sprinkling of Brit. officers, had no choice but to withdraw from tribal ter. It extricated itself with all the precautions of a force fighting a rearward battle. Razmak was abandoned for ever—a prey to rebel rival tribes of savages (Douglas Brown, *The Listener*, Jan. 27, 1919).

See L. Thomas, *Beyond the Khyber Pass*, 1926.

Klachta, or **Kiakhta** (now called Troitskosavsk), tn. in Siberia, in the Buriat-Mongolian autonomous S.S.R. of the R.S.F.S.R., close to the Mongolian frontier. A treaty was signed here in 1915 between China, Russia, and Outer Mongolia for settlement of boundaries. Pop. 5000.

Kamil Pasha (1832-1915), Turkish politician, b. at Lenkash. He was grand vizier in 1895. His action in regard to the Armenian unrest in 1890 led to his dismissal. As an advanced Liberal he was again made grand vizier in Aug. 1908, after the Young Turk revolution. He was forced to resign in Feb. 1909, and was succeeded by Hilmi Pasha. He was grand vizier for a third term during the Balkan war 1912-13, and was succeeded by Mahmud Shevket Pasha at the coup d'état of Jan. 23, 1913.

Kiangsi, E. prov. of China, with an area of 66,000 sq. m. The Nanshan Mts. lie across the prov. in a south-westerly and north-easterly direction. In the N.E. region is the immense Poyang Lake (1200 sq. m.), which receives the waters of the Kankiang and the Changkiang. Black tea was for long the most important product, but, with the general decline of the China tea trade, K.'s teas are now chiefly green teas, intended for export to Russia. Other products are coal and copper, rice, cotton, silk, grass-cloth, and paper. China ware is manufactured at Kingtechen. The cap. is Nanchang, on the Kankiang. The beginning of July 1912 saw the Jap. invaders in control of the major air bases of K. and Chekiang, and extending their hold over the railways which still remained in Chinese hands; but this was the zenith of the Jap. advance in K. Pop. of prov. 12,725,000.

Kiangsu, maritime prov. of China, bordering on the Yellow Sea to the E. Area

41,800 sq. m. It is a great plain, with no hills, and is watered by the Grand Canal running to N. and by the Yangtze River. The cap is Chingkiang (the former cap was Nanking) and the chief port is Shanghai. Some coal and iron ore is extracted near Nanking; sugar, tea, and cotton are grown and beautiful silks are manufactured. The Jap invaders early in 1943 undertook a large operation against the lake country between the Yellow R. and its estuary, but their military operations were now largely stopped and localised. Pop. 30,022,000. See further under CHINA.

Kiaochow, see TSINGTAO

Kiatingfu, see CHIANGKI

Kiayukwan, see CHIANGKI

Kibo, see under KILIMA NJARO

Kicking Horse Pass, in the Rocky Mts. of B. C. between Canada and the Canadian Pacific Railway. It is an altitude of 5,500 ft. and is traversed by the K. H. or Wapiti R.

Kidd, Benjamin (18-8-1916-1922) socialist. Had but small attainments of education and social position. At one time he entered civil service as a clerk in the Indian Revenue, where, after seven years of obscurity, he won his *Social Evolution* (1894), which was so successful that he resigned from the service and devoted himself to travel and writing. The dominant idea of his book is that man is the creature of his environment, that moral progress consists in improving individual conditions to subordinate itself to the common good, and that reason gives man no assistance. He had no literary style, and a power of summing his ideas into a coherent system of philosophy, though he had the gift of a popular philosopher. Also wrote *True copies of Best in Civilization* (1902).

Kidd, William (Captain Kidd) (1645-1701), pirate of Scottish extraction. In 1691 he was arrested at London, charged of New York for his cruises in plundering against the French. He was put in command of a ship in 1696 with orders to seize the pirates that had stolen the ship. He reached Madagascar in 1697. In 1699 it was reported in England that he was plundering trading vessels and had associated himself with the pirates. He was arrested and having been formally charged with the murder of one of his crew and for piracy, was found guilty and hanged at Execution Dock, London. See G. Brooks (ed.), *The Trial of Captain Kidd*, 1930.

Kidderminster, municipal borough in England, in the county of Worcestershire, situated on the Stour 11 m. N. of Worcester. The church of All Saints is a fine example of Early English architecture, with Decorated and Perpendicular additions. Kidderminster has long been the principal centre of the British carpet trade, and 52 per cent of the industry is concentrated there. Wilton, Axminster, Brussels and chenille carpets are the chief varieties made, but 'Kidderminster,' or ingrain carpets are no longer woven locally. Cloth has been woven in the town since 1235, at least, and the charter of incorporation granted by

Charles I., in 1636, describes it as 'an ancient borough of great commerce for the making and manufacture of cloth.' Carpet making was introduced in 1755. Other industries represented are worsted spinning, optical lens making, chemical industry, tin plating and light engineering. There is also a large sugar beet factory. Sir Rowland Hill, originator of penny postage, Sir Josiah Mason, philanthropist and in 1770 of the steel pen, and Frederick Laskope Martin, the composer, were born here. Richard Baxter (1615-91) non-conformist divine and creator of popular Christian literature was vicar of fourteen years. The Staffordshire and Worcester Shire Canal passes through the town. Area 1,011 a. Pop. (1951) 28,300, (1911) 36,000.

Kidnapping is defined by Blackstone as the forcible abduction or stealing away of a man, woman or child from their own country and carrying them to another. It is now, however, usually confined to the offence of child-stealing, or the crime of leaving a child, or carrying away a child under sixteen, with intent either to deprive the parent of the person or having lawful possession of the person, of the child or to steal any article upon the child. The offence is felony under the Offences against the Person Act 1861 punishable with penal servitude to the extent of seven years. Offences in this nature are misdemeanours if the child is taken, unaccompanied and not out of the parents' or lawful custodian's possession. Such abduction is punishable by imprisonment not exceeding ten years. Blackstone under the title of *Forcible Detainer* has also included a felony of kidnapping, which offence now is, as the crime under 17 and 18 Vict. c. 60 and now included within imprisonment not exceeding six years or summarily with six months imprisonment or a penalty not exceeding £10.

Kidney Bean, or BEAN

Kidneys. There are two kidneys in man, somewhat larger than the bean, placed by the lumbar region of the abdominal cavity, one on each side of the spine to which the convex side is joined. Through this convexity the renal arteries and veins connect the kidneys with the aorta and vena cava and thus with the blood vessels from the heart to the bladder. A cross section shows two outer renal masses, a dark coloured outer or lighter medulla, and a number of pyramids with their apices pointing into the pelvic cavity. These pyramids are formed by fine tubules arranged in parallel and terminating at the apices in small outlets. At the base of each pyramid they subdivide and radiate coil, and interlace in the medulla and each finally terminates in a capsule. These Malpighian capsules are entered by the arterial capillaries, which form bunches, glomeruli, mainly filling the capsules. The blood leaves by a network of capillaries which surround and enfold the tubules. Here and in other portions the lining of secretory cells obtain from the blood the products which it is the function of

the K. to excrete, and the urine thus formed passes out of the tubules into the ureter and thence into the bladder. A normal man excretes some 50 oz., or 2½ pints, per day consisting of urea (about 2 per cent) uric acid, urates, phosphates, oxalates, chlorides, etc., sodium chloride forms the chief salt and about 1 per cent of the urine, the other 1½ being potassium, calcium and magnesium. The urea itself represents nearly all the nitrogen of the proteins introduced into the body, and the K. are thus looked upon as the excretory organs of nitrogenous waste.

becoming filled with pus, internal abscess or perinephritic abscess, or even possibly cancer.

Kidney Stones, or uric acid masses of ferric oxide, usually red or brown, neither so hard nor so dense as crystalline haematite, usually occur in association with clay, as in the S. of England. This deposit is the red ochre of commerce.

Kidney-vetch, or *Lady's Fingers*, popular name of *Anthyllus vulneraria*, a leguminous plant which flourishes in Britain. The plant is a herb with glaucous leaves, the capitulate inflorescence is composed

Fig. 1. Structure of the urinary system. A, kidney; B, ureter; C, bladder; D, urethra.

Disease. Complicated by these are the under the heads of abnormal position, number, growth, or cystic disease, and growth. *Hydronephrosis* is due to obstruction of the ureter, leading to the retention of urine in the pelvis of the K. It is usually of importance, but may be a trouble by blocking of the vessels of the hilum of the kidney on other abdominal organs. The main trouble affecting the K. are tubercle, adenoma and sarcoma, they are recognised partly by haematuria (blood in the urine) and general debilitation, and are extremely dangerous, but the K. are not prone to malignant disease. Dieting and rest are essential, medical treatment being of little use and surgical resorted to only in very minor cases. For Bright's disease see NEPHRITIS. Calculi (consisting of uric acid, sometimes of oxalates, and occasionally of phosphates) are frequently found in the pelvic cavity, commencing as minute grains, they become larger by accretion and give rise to renal colic, or such conditions as hydronephrosis, when the passage of urine may be prevented; pyonephritis, the pelvis

of yellow flowers, the stem is a white umbel, the leaves are pinnate, and the floral mechanism is like that of the *Lotus* and the foot of the leaf.

Kidron, or the *Ken*, a brook which for miles flowed through the valley in the valley of the Kidron, the name of Jerusalem in Palestine.

Kidsgrove, in Staffordshire, England, in N. or N.W. side under Lyme. It has coal mines and blast furnaces, and engages in silk processing and the production of a minimum hollow wire. Pop. 15,000.

Kidston, George Pearson Glen (1897-1941), Brit. millionaire, naval lieutenant-commander and an adm. Had an adventurous life, twice during the First World War he was on vessels which were torpedoed. Made the first non-stop flight in Africa, covering 1000 m. from Cairo to Malakal. In Feb. 1931 he broke the England-to-Cape record, landing at Cape Town in 64 days. Killed in a plane crash in Natal.

Kidwelly, or *Cydwell*, bor. and seaport of Carmarthenshire, Wales, on the Owen-draeth, near Carmarthen Bay. It has

tin-smelting and brick works, iron works, and coal-mines. Here are the ruins of an eleventh-century castle. Pop. 3200.

Kieff, *see* KIEV.

Kiel, tn. of the Ger. prov. of Schleswig-Holstein, situated 27 m. S.E. by S. of Schleswig, and, before the two world wars, the chief naval port of Germany in the Baltic. Largely destroyed in the Second World War. Before 1910 there were a royal palace, a univ. (founded in 1665), with some 2400 matriculated students, St. Nicholas's church, of the thirteenth century, and a castle with a sculpture gallery. The harbour has an average depth of 10 ft., a length of 11 m., and a breadth varying from $\frac{1}{2}$ m. at the S. end to 14 m. at the mouth. There were five docks. The forts were destroyed after the first World War, but before the Second World War the Gers. again strongly fortified the base, and there were strongly fortified pens for submarines. Before the Second World War K. had a trade in coal, timber, cereals, fish, butter, and cheese, and manufs. of iron goods, soap, machinery, tobacco, starch, and fish curing; there were also oil works, breweries, and printing works. The Kaiser-Wilhelm (q.v.) or K. Canal has its E. entrance at Wik, $1\frac{1}{2}$ m. to the N. of K. Pop. (1939) 213,900. Traffic in the K. Canal before the war was (1938) vessels, 53,330; net tonnage 22,580,000. Pop. 272,300.

K. was frequently attacked from the air in the Second World War. One of the earliest of the heavier raids was in March 1912. The *Gneisenau* came under heavy air attack in its floating dock at K. in Feb. 1942, and was moved to Gdynia for extensive repairs. There were frequent daylight raids on K. during Nov.-Dec. 1943, the targets including aircraft factories. There were further attacks in 1912, 1913, and 1914. In July the allied assault on communications involved massive attacks on K. and Bremen and other great ports, the attacks being integrated with both the offensive on the W. front and with the Russian advance. K. in that month and Aug. was repeatedly the target for attacks in which fire bombs were used in a vast and ever-increasing quantity. K. was one of the objectives of the Twenty-first Army group of F.-M. Montgomery in the closing stages of the war after the Allies had reached the Elbe. Montgomery's task was first to secure Hamburg, and then advance with the utmost speed on the general area of Kiel-Lubeck and liberate Denmark, using, if necessary, an airborne assault to force the K. Canal, and allied naval and air forces were to assist in the operations. The Brit. Second Army encountered persistent opposition in its attacks towards Bremen and Hamburg, but following the fall of Bremen (April 28) the situation changed; Hamburg having surrendered on May 3, the Gers. were sealed off in Denmark, and, with the junction of the allied fronts, all resistance in N. Germany ceased.

Kielce, or Kielazy. 1. Prov. of Poland, separated from Galicia by the Vistula. Area 3897 sq. m. It has valuable deposits of minerals, including coal, iron, copper,

lead, zinc, sulphur, etc. The inhab. are chiefly engaged in agriculture; and potatoes, vegetables, and grain are exported. There are flour mills, tanneries, and potteries; and machinery, paper, glass, leather goods, and metal objects are manufactured. Pop. 2,900,000. 2. The cap. of the above gov., 85 m. N.E. of Cracow. Its chief industries in 1939 were manufs. of rope, bricks, and dyes. Taken by the Gers. in the 1939 invasion of Poland. Captured by Marshal Konev in 1944. Pop. 58,200. *See* EASTERN FRONT or RUSSO-GERMAN CAMPAIGN IN SECOND WORLD WAR.

Kiepert, Johann Samuel Heinrich (1818-1899). Ger. geographer, b. in Berlin, and educated at the univ. there. His first work, in conjunction with Karl Ritter, *Atlas von Hellas und den hellenischen Kolonien* (1840-46), estab. his reputation as a cartographer of ant. hist. From 1845 to 1852 he acted as director of the geographical institute at Weimar, and in 1854 was appointed prof. of geography at Berlin. He travelled in the E. Mediterranean and the E. His works include *Historisch-geographischer Atlas der alten Welt* (1818); the famous *Atlas antiquus* (1854); *Lehrbuch der alten Geographie* (1857-78); and *Leitfaden der alten Geographie* (1879; Eng. trans. 1881). *See* P. de Chikachyev. *Reisen in Kleinasien und Armenien*, 1847-1863. His son Richard Kiepert (1846-1915), educated at Jena Univ., was also a noted cartographer, his chief individual work being his Special Map of Asia Minor. From 1871 for some years he was occupied in completing Baron von Richtofen's atlas of China (*see* RICHTOFEN, FERDINAND, BARON VON). He also prepared maps from the information given by Heinrich Barth, Mollendorff, and other Ger. travellers. From 1875 to 1887 he was editor of the geographical magazine, *Globus*.

Kierkegaard, Søren Aaby (1813-55). Dan. philosopher, b. at Copenhagen. He graduated in 1840 at the univ. of his native tn., and then travelled for two years in Germany. His first pub., *Papers of a Still Living Man* (1838), on Hans Andersen, received little notice, but his *Either-Or* (Elther—Or), pub. in 1843, made his reputation as a great thinker. He also wrote *Stadier paa Livets Vej* (Stadia on Life's Way) in 1845, and many other works. In these he examined the fundamental principles of Christianity and discussed aesthetic ideas for the rules of life. In later life he vigorously attacked the practices of the Dan. National Church. K. is numbered among the Christian existentialists, but, unlike Gabriel Marcel (q.v.), does not aspire to a systematic unity of thought. He tells us that from his earliest years he was initiated into a sombre and bitter version of Christianity and that, in view of the pastoral career he at first meant to embark on, he deeply examined the doctrine of the Protestant religion. As a student of theology he was hardly conscientious, leading the easy life of a privileged person, intent on counteracting the wretched, confined years of his childhood and therefore frequenting the theatres and cafés, drinking and incurring debt and

realising at the end of it that he 'wanted to shoot himself' (*The Journal*). But he left this 'way of perdition' on May 19, 1838, a conversion which brought him moments of joy as extreme as his moments of mental anguish, whose excess tended to disturb his mental balance. It is not easy to deduce any system from his vrolliche wriflings, even existentialism. God, he concludes, is above moral categories; and this he finds to be true of exceptional individuals, for whom the general rules of morality are no longer valid. These opinions would seem to ally his thought to an essential thesis of the existentialism of Sartre, as also his opinion that subjectivity is truth not only in the sense in which 'I do not know truth except when it becomes life in me, but in a genuinely relativist sense.' In other words, 'consciousness creates out of itself what is true'—essentially part of the existentialist philosophy (see Paul Foulquie, *Existentialism*, 1917). A collected ed. of his works was pub. in 1901. See F. J. Brecht, *Die Kierkegaardforschung im letzten Jahrzehnt*, 1931; E. L. Allen, *Kierkegaard: his Life and Thought*, 1935; W. Lourie, *A Short Life of Kierkegaard*, 1913; T. Haeccker, *Kierkegaard the Cripple*, 1948 (trans. by C. van O. Brugh); T. H. Croxall, *Kierkegaard Studies*, 1918; and D. Patrick, *Pascal and Kierkegaard*, 1948; also lives by G. Brandes, 1877; H. Hødding, 1896; C. P. Mourad, 1909; A. Glig, 1926; and F. A. Voigt, 1924; and his own autobiographical sketch, *Sompunkt for min Forfattererikshand* (1859, Standpoint of my Literary Work).

Kieselguhr (Diatomaceous Earth, Tripolite, Guhr). Naturally occurring deposit composed largely of the siliceous remains of small plants known as diatoms. Usually contains 70-80 per cent of SiO_2 , together with some organic matter, water, and oxides of metals like iron and aluminium in small quantities. K. is a bad conductor of heat, has a low density, and above all is capable of absorbing liquid such as nitroglycerin (see DYNAMITE), petroleum, and acids. For the manufacture of dynamite, K. is now replaced in the U.S.A. by sawdust.

Kiev, or Kieff: 1. Formerly a gov. of S.W. Russia, now a Region of the Ukrainian S.S.R., with an area of 19,676 sq. m. The country to the W. is in the form of a plateau, reaching to over 1000 ft., while in the E. lies the valley of the Dnieper. Much of the land is 'black earth,' and is cultivated, the chief products of the soil being beetroot, wheat, oats, barley, tobacco, flax, vegetables, etc. The minerals include labradorites, iron, lignite, granite, gabbro, marble, and gneiss. There were (1938) many large factories, the chief being distilleries, machinery shops, tanneries, petroleum refineries, papermills, brick works and tobacco factories. There are a large number of Jews and Rom. Catholics. Pop. 1,600,000. 2. Russian city, third largest and most important of the country, cap. of the above region, and of the Ukraine, situated on the r. b. of the Dnieper, 628 m. S.W. of Moscow. It is a beautiful fn., the old quarter being built

on a range of hills overlooking the low country across the riv. It is advantageously situated, for an ls. in the Dnieper provides a crossing that centuries ago caused a number of routes from E. and W. to converge on the city. A further advantage is that the wide flood plain due to the low E. bank and stretching 7 m. across immediately N. and S. of the city, narrows to a mile just opposite K. When the railways were built across the steppe in the nineteenth century, another ls. in midstream just below the city, together with a break in the formidable W. bank cliff, created by a small local stream, the Lioc, offered the obvious opening westwards for the main line from Poltava. The K. railway crossing is a vital bottleneck, for on the E. bank of the Dnieper the three lines from Poltava, Nezhin and Chernigov converge and then, after passing through the Libet valley, in which the city's main and suburban stations are all situated, the line forks again on reaching the open country. K.'s natural beauty deceives to-day, for even the ruins left by the Second World War seem to compose themselves on the folds and cliffs above the broad riv., and the city's parks and avenues of chestnut and poplar mitigate much of the devastation. K.'s prin. architectural monuments, with the exception of the Puspenski church in the Lavra, have survived, but one-third of K. was rendered uninhabitable by the bombardments and 'scorched earth' tactics. The entire centre of the city was destroyed in 1941-43 as ruthlessly as were parts of Warsaw. The city's largest factory lost nine-tenths of its buildings. The cathedral of St. Sophia, the oldest in Russia, is renowned for its golden cupola. The church of St. Andrew the Apostle records the traditional spot where the apostle stood when he prophesied the existence and future prosperity of this city. The Kiev-Pecherskaya monastery, said to date from the ninth century, was formerly visited by 250,000 pilgrims annually. The Podol ls. the city's industrial quarter. Its univ. monasteries, and other anc. buildg., have been mostly converted into soviet public buildings. There is an ann. fair held since 1717. Although K. has expanded into a great modern manufacturing city concerned mainly with light industries—food and clothing—it is still possible to identify the three original settlements from which it has grown. The first was the defensive site of the grand dukes on the top of the 300-ft. cliff flanked by steep-sided ravines cut into the high ground by W. bank tribs. and protected on the W. by the marshy valley of the Lioc. Here was built the ducal palace, and the settlement that grew up around it was walled with granite boulders gathered further upstream. This has for long been known as the Old Town. Underneath the cliff at this point a patch of low-lying ground offered a suitable site for the merchants' quarter, for there was a disused channel here which made a good anchorage opposite the confluence of the Desna with the Dnieper—the Desna, a l.-b. trib. of the Dnieper, is an important

local highway, passing from K. to the N.E. through a pleasant and fruitful countryside. This second settlement is the Podol of to-day. The third settlement was of a very different character and developed some miles downstream. Here, on the cliff top, a cave was occupied by a monk named St. Anthony. The surrounding land was eventually conveyed to the Church by the grand duke of K. and here arose the great Lavra monastery, which, as noted above, was annually visited by 250,000 (Gk. Orthodox pilgrims (before 1914). The monastery is still rather remote from the city itself, but Peter the Great fortified the locality and settled a great Russian pop. there. The name Petchersk, by which this locality is known means 'cave.' A Christian city under Vladimir the Great (A.D. 980-1015). K. was the cap. of Russia from 865 to 1216. K. has never, previously to 1911, played a part as a fortress since the earliest days of Russian hi-., when the spacious Dnieper, with its towering W. bank, opposed a strong barrier to the invading nomads from Asia. The Lithuanian conquest of K. was so easy that hardly any record of it remains. Lithuania later passed by a marriage settlement to Poland. K. was restored to Russia in 1667.

During the First World War the city was successively occupied by Gers., Bolsheviks, Royalists, and Poles. After that war, a number of handsome new administrative buildings were erected, marking K. as the cap. of the Ukrainian republic. In the Ger. invasion of the Ukraine in 1941 the battle of K. was brought to an end, after some seven weeks' fighting, about Sept. 21 when the Russians evacuated the city. In 1913, however, exactly two years later, the Russians had begun to recover the Ukraine and their spearheads had soon driven beyond K. and Poltava. The Gers. were overwhelmed on Sept. 15 when they tried to make a stand at Nezhin and thus lost a key bastion protecting K. On Sept. 18 the Russians, by taking Pryatin, Lubny, and Chernikov, opened the way to the Dnieper between K. and Gomel. Kremenchug fell, and on Sept. 29, after a fierce three-day battle, Russian forces were sweeping down on the Dnieper at K. They then captured a fortified is. in the riv. immediately before the city, and next day their pressure on the bridge-head, which the Gers. still held on the E. bank, carried them into the riv. suburbs of K. itself. The Russians then massed their forces for a direct attack on the great city. There was yet, however, a long struggle before them. In Oct. the Russians broke the Dnieper line and swept beyond K. For weeks a most tense situation continued in the area round the city after the Russians had shifted their main efforts from the Dnieper bend to K. itself. A sudden and powerful blow was delivered by Vatutin (a.g.), commander of the First Ukrainian Army, who timed his blow at the moment when stiffening Ger. resistance at Krivoy Rog and Nikopol had brought the Russian advance within the

Dnieper bend to a temporary halt, and it seems evident that the Gers. did not expect a serious Russian attack at this stage, especially as their garrison in K. consisted of at least twelve infantry and two tank divisions. Vatutin launched his offensive on Nov. 4 and sent a strong column down to the W. of the city to threaten it from the rear and to cut the railway leading to Korosten; while at the same time he sent an armoured spearhead across the highway to Zhitomir so as to block a major escape route from K. Thus threatened with encirclement the Gers. at K. hastily withdrew to avoid the trap and the Russians entered the city on Nov. 6 (1913). Pop. 846,293 (1939). See Minkolov, *Geographie du gouvernement de Kiev*, 1883; De Bave, *Kiev, la mère des villes russes*, 1896; W. E. D. Allen, *The Ukraine: a History*, 1940; and G. Vernadsky, *Kievan Russia*, 1948.

Kikuyu: 1. Dist. of the central Prov., Kenya Colony. Cap. Nyeri. It contains the int. of *keuva* (q.v.). Also the name of a tn. on the Kenya-Uganda railway, about 20 m. W. of Nairobi, in the K. prov., standing at an altitude of 7000 ft. on the main N. road. There is a Presbyterian mission station. The surroundings are much cultivated, sweet potatoes, maize, millet, beans, and wattle predominating. There is a fine view of Nairobi in the far distance, 2000 ft. below. A mile away is the Alliance High School for natives erected in memory of Africans who lost their lives in E. Africa in the First World War. 2. Name of an important Bantu people of Kenya. They have no centralised political organisation, but the elders of the clans exercise some authority over the members of their own group, while acknowledging no common allegiance to a single head. As in many other Bantu tribes initiation ceremonies take place for admission to adult membership, male or female, of the tribe, the men's age-grade being used formerly as the basis of military organisation or of political authority, though to-day of importance only for the latter purpose. They are an agric. people as well as pastoral, cultivating mainly cash crops like groundnuts, and tea, and also maize for food and wattle bark for huts. Many work as tenant labourers or squatters for European farmers in the highland area. In some of the Kenya reserves of natives the density of pop. and the progress made in growing cash crops has produced marked effects on the traditional land tenure system, notably by the introduction of the unaccustomed practice of selling holdings and pledging and mortgaging land to obtain cattle and sheep for the payment of bride price, or rans for sacrificial purposes, or cash to pay fines or taxes. In this way the small holding is becoming the unit of tenure in place of the *githaka* system (by which families acquired rights, by possession, in land over which control was not exercised by the clan authority, the usufruct being divisible subject to the supervision of the *muramati* or warden of the group of families). The excessive growing pop. of goats, which are harmful to vegetation

and, in such areas as the rich K. reserve, of negligible economic value, is a problem which still awaits solution as also the problem of soil erosion through ill-advised husbandry and cattle grazing. Magic and witchcraft still play a part in the social organisation of the K. Primary and secondary education are given in the gov. K. school, Central Prov. Housing by the K. shows a rising standard, especially in the Klamhu dist., where the traditional thatched bee-hive hut of mud and wattle is being widely replaced by improved structures of local material and sometimes of local stone. See W. S. and K. Routledge, *With a Prehistoric People*, 1910; C. W. Hobley, *Bantu Beliefs and Magic*, 1922; G. St. J. Orde Browne, *The Vanishing Tribes of Kenya*, 1925 (deals with the minor tribes of the K. dist.); *Report of the Kenya Land Commission*, Cmd. 4536, 1931; Lord Hailey, *An African Survey*, 1933; and C. K. Meek, *Land Law and Custom in the Colonies*, 1946.

Kilauea, Mt., see under HAWAIIAN ISLANDS.

Kilbarchan, tn. in Renfrewshire, Scotland, 5½ m. W. of Paisley. It has calico-printing and paper-making industries, and is noted for its hand-woven tartans. Pop. 7500.

Kilbirnie, or Kilburnie, tn. in Ayrshire, Scotland, 17 m. W.S.W. of Glasgow. Its chief industries are chemical, iron and steel works, cotton and linen manufs. and mining. Pop. 5200.

Kilbowie, see CLYDEBANK.

Kilbride, 1. East, vii. and par. of Lanarkshire, Scotland, 6 m. S. of Glasgow. It has coal-mines. Pop. 5300. 2. West, vii. and par. of Ayrshire, Scotland, 4 m. N.N.W. of Ardrossan. Pop. 5000.

Kilburn, suburb of London in the bor. of Hampstead, 3 m. N.W. of St. Paul's Cathedral. Pop. 101,000.

Kilchumia, see FORG ARDUSSES.

Kildare, 1. Co. in Eire, situated in the prov. of Leinster. It is bounded on the E. by Dublin and Wicklow. It contains an extensive plain, part of which forms the Allen Bog. Its prin. rvs. are the Boyne, Liffey, Barrow, and Lesser Barrow. The dist. of Curragh in the centre of the co. is most fertile and affords excellent pasturage. Potatoes, oats, and barley are very extensively cultivated. Area 654 sq. m. Pop. 61,500. 2. Chief city and mkt. tn. of K.: possesses many objects of historic interest, such as the anc. cross, small chapel, and round tower. Pop. 2100.

Kilia, or Kilanova, tn. in the Moldavia S.S.R. It is 100 m. S.W. of Odessa, on the N. or Kilian mouth of the Danube. Pop. 12,000.

Kilian, or Chilian, St. (fl. A.D. 700). Irish missionary bishop and apoc. of Franconia, who preached to the heathen of Wurzburg, and was put to death by Duke Gozbert. His festival falls on July 8. See J. O'Hanlon, *Lives of Irish Saints*, 1876-1904 (vol. vii.).

Kilid Bahr, fortress on the W. shore of the Dardanelles, razed after the First World War. With Chanak fort on the E. shore, it commanded the channel, and constituted the cardinal defences of the

Dardanelles. Equipped with Ger. 14-in. Krupp guns, it proved an insuperable obstacle to the allied fleet, especially as the fort was supposed to have been dismantled. See further under DARDANELLES.

Kilimane, see QUILMANE.

Kilima-Njaro, mt. mass in the N. of Tanganyika Ter., situated between Lake Victoria and the coast. The highest mt. in Africa, it culminates in two peaks, Kibo (19,321 ft.) and Mawenzi (16,892 ft.), which are both craters of extinct volcanoes. The crater of the former is 6500 ft. in diameter, and 650 ft. deep. The mt. was first climbed in 1839 by Dr. Meyer; the ascent was first made by Englishmen when Mason and Gillman climbed Kibo in 1921. Mrs. Lathoin followed in 1925. Moshi, to the S.E., is the nearest settlement, and the first part of the ascent from there is easy, through bush and some cultivated land—coffee is grown on the S.W. slopes. From 6000 to 10,000 ft. is the forest belt, some 5 to 7 m. wide; grasslands extend about 3000 ft. above that, and then there are glaciers and snow, descending, owing to warm air-currents, much lower on the S.W. than on the N. There is a native irrigation system on Mt. K. and although it is primitive the distribution is regulated by long-estab. law and custom. The Chaga tribe have important coffee plantations on Mount K. In which the terracing system, to counteract soil erosion, is practised. Tanganyika is remarkable for the Native Co-operative Union, which unites the primary societies of the Chaga tribe on Mt. K., supplies them with requirements for their coffee plantations, and markets their crops. In 1922 a K. Native Planters' Association was founded, but this association had to be reorganised in 1931 and registered as the Native Co-operative Union, which was more successful. There are also some European maize plantations on the slopes of Mt. K. See Sir H. Johnston, *An Expedition to Kilimanjaro*, 1893; and C. D. Las, *Kilimanjaro and its People*, 1924.

Kilivaga, see KENTA, MOUNT.

Kilkenny, 1. Co. in Leinster, Eire, is bounded N. by Lax. co., E. by Carlow co. and Wexford co.; S. by Waterford co., and W. by Tipperary. Its chief rvs. are the Suir, Barrow, and Nore, which rise in the Slieve Bloom Mts., and flow into Waterford Harbour. Anthracite coal is obtained from the Castlerea basin. The climate is agreeable and mild. Cattle trading is carried on, and potatoes and turnips are largely cultivated. Area 796 sq. m. Pop. 66,681. 2. The cap., on the R. Nore, is divided into two dists., Eng. tn. and Irish tn. The cathedral of St. Canice dates back to 1255, and is built partly in Early Eng. style. The ruins of a Dominican and of a Franciscan monastery still exist, also the Protestant College of St. John, where Swift and Bishop Berkeley received part of their education. Pop. 10,300. See C. P. Moehan, *Confederation of Kilkenny*, 1905.

Killala, small tn. in co. Mayo, Eire, which dates back to the fifth century.

Killaloe, tn. in co. Clare, Eire, on the R. Shannon, 17 in. from Limerick. It was the cap. of the kings of Munster. Pop. 900.

Killarney, mrkt. tn. and favourite resort for tourists, situated in the co. of Kerry, Eire. The lakes of K are 14 m. from the tn. and are shut in by wood-crowned mts. The lower lake, called Lough Leane, is dotted about with wooded is., the most important one being named Ross Is.; another isle contains the beautiful ruins of the abbey founded by St. Finian the leper. Muckross Abbey, which was built by the Franciscans about 1440, divides the lower lake from the middle or Torc lake. The upper lake connects the middle and lower lakes

including some of his own compositions. His works were collected and pub. in 1664. See A. Harbage, *Thomas Killigrew, Cavalier Dramatist*, 1930.

Killigrew, Sir William (1607-95), Eng. playwright, the eldest son of Sir Robert K. He was gentleman-usher to Charles I. and had command of a troop which guarded the king's person during the Civil war. He pub. *Three Plays*, viz. *Selindia*, *Pandora*, *Ormusdes* (1663), and various pamphlets concerned with the unsuccessful attempts to drain the Lincolnshire fens (1647-61).

Killingly, tn. in Windham co. Connecticut, U.S.A., 36 m. from New London. Pop. 9000.

Killingworth, tn. in Northumberland,

UPPER LAKE, KILLARNEY

Irish Railways

by means of the Long Range, a channel 2½ m. long. Places of especial beauty and historic interest are the Macgillivuddy Reeks, the Torc and Purple Mts., and the famous gap of Dunloe. The Innisfallen ruins, Muckross Castle, and Aghado church are other noteworthy features. Pop. 5900. See M. Gorges, *Killarney*, 1912, and J. C. Coleman, *The Mountains of Killarney*, 1918.

Killiecrankie, Pass of, in Perthshire, Scotland, in the valley of the Garry, extends from K. station 1½ m. to Garry Bridge. On the plain at the top of the pass Viscount Dundee, defeated the troops of William III., under Mackay, in 1689, and received his death wound.

Killigrew, Thomas (1612-83), Eng. dramatist, the son of Sir Robert K., vice-chamberlain to Queen Henrietta Maria, was pavo to Charles I. in 1633. His play, *The Parson's Wedding*, was popular before the Civil war, after the outbreak of which he resided abroad with the Eng. court. At the Restoration he returned and was appointed by Charles II. groom of the bedchamber. He built a theatre where Drury Lane Theatre now stands, and there produced many plays,

6 m. N.N.E. of Newcastle. Has coal mines. Pop. 12,000.

Killiz, Kulis, or Kills, tn. of Syria on the Turkish frontier, 34 m. from Aleppo. It is noted for its olive groves, which produce very fine oil. Pop. 20,000.

Killyleagh, seaport on Strangford Lough, co. Down, N. Ireland. There is an export of agric. produce, and the prin. industry is the manuf. of linen. K. Castle is in the vicinity. Pop. 1600.

Kilmarnock, W. suburb of Dublin, Eire. It contains the co. jail in which Parnell, O'Brien, and other political prisoners were held, and a military hospital. Pop. 11,000.

Kilmarnock, municipal burgh in Ayrshire, Scotland, is situated on Kilmarnock Water, a trib. of the Irvine, and lies 24 m. S.W. of Glasgow. The Burns Memorial, a museum in Kay Park, contains sev. MSS. of the poet. K. is noted for its woollen manuf., and also for the manuf. of lace, carpets, boots and shoes, china and earthenware. There are important engineering and machinery works, and the Brit. Railways have workshops here. Pop. 41,000.

Killoat, see KILWA KISIWANI.

Kilogram, metric measure of weight, equal to 1000 grammes or approximately 2·2046 lb. 1000 Ks. equal 1 metric ton, or 2204·6 lb. See METRIC SYSTEM.

Kilometre, see METRIC SYSTEM.

Kilowatt, measure of electrical power equal to 1000 watts. The unit of electric power is the watt, or 1 joule (see JOULE, JAMES PRESCOTT) (107 ergs) per second. The relationship between the volt, the ampère, and the watt is as follows: volts \times ampères = watts. A K.-hour is the amount of energy used in 1 hr., at the rate of 1 K.; it is the ordinary unit of electrical power companies.

Kilpatrick, New or East, see BEARDSDEN.

Kilpatrick, Old or West, tn. in Scotland on the R. Clyde, 10½ m. N.W. of Glasgow. It is supposed to have been the bp. of St. Patrick, and is also interesting for its Roman remains (the wall of Antonine).

Kilrush, seaport on the estuary of the R. Shannon, co. Clare, Eire. It is noted for its fisheries and limestone quarries, and there is also considerable trade in grain and timber, as well as an export of peat kelp, hay, and stone. There is a good harbour. Pop. 3300.

Kilsyth, tn. of Stirlingshire in Scotland, 13 m. distant from Glasgow. Coal mining and iron works are the chief industries. Wm. Chalmers Burns inaugurated a remarkable religious revival here in 1839. Scene of a battle between Montrose and the Covenanters in Aug. 1645; the former's victory gained him temporary domination of Scotland. Pop. 9000.

Kilt, see HIGHLAND DRESS.

Kilwa, or **Kilwa Kivinye**, tn. of Tanganyika, lying near the Malindi R. It has an emergency landing-place for aeroplanes. The valley supplies the natural approach to the highlands lying behind the port. Vessels must anchor 2½ m. off shore. Cotton, maize, millet, and sisim are grown in the vicinity. Roads connect the port with Liwale (139 m.) and Utefe (97 m. N.W. of the Rufiji R.). To the S. runs a road to Lindi (97 m.) (200 m.) and to Mikindini (260 m.). Pop. 3000.

Kilwa Kisiwani, is. and tn. of Tanganyika; formerly known to the Portuguese as Quiloa and to the Arabs as Kilout, it was a very important Arab trading station, with a fine harbour from which a well-defined track leads to Manda on Lake Nyasa. The old tn. was founded by Prince Shiraz, a Persian, in 987, and many ruins show the importance of the settlement. Ibn Batuta, writing in 1331, called it 'the most nobly built city on earth'. The is. and tn. of K. K. were captured by Portuguese in 1505 and subsequently changed hands sev. times. The native pop. on the mainland is fairly dense in the coastal dists., cultivating rice, mealies, sorghum, arca, sugar, and tobacco.

Kilwinning, municipal burgh of Ayrshire in Scotland, situated on the E. b. of the Garnock, and about 25 m. S.W. of Glasgow. The tn. derives its name from St. Winnin, who lived there in the eighth century. A famous abbey was raised to his memory by Hugh de Morville in 1140. Pop. 5500.

Kimawenzi; see under KILIMA-NJARO.

Kimberley, John Wodehouse, first Earl of (1826-1902), Eng. statesman was b. at Wymondham, Norfolk. Adopting the Whig politics, he held office in Lord Palmerston's first and second govts., and was Brit. minister at St. Petersburg, 1856, and under-secretary for India, 1864, becoming lord-lieutenant of Ireland the same year, and in consequence of the work of pacification which he accomplished while holding that office was created earl of K. In 1868 he was lord privy seal in Gladstone's first administration, and in 1870 succeeded Granville at the Colonial Office. It was during his tenure of this post that the grant of complete self-government was given to the Boers, after the defeat and death of Sir George Colley at Majuba Hill, 1881. In 1882 he was transferred to the India Office, and in 1891 was leader of the Liberal party in the House of Lords.

Kimberley: 1. Cap. and chief commercial centre for the Northern Cape, S. Africa, the most important diamond mining centre of that country. The tn. (situated 4012 ft. above sea level) is built round about the mining camps, which are scattered. K. is the chief diamond centre of the world; the industry has been placed on a sound basis and at present (1919) three mines are in production. It is also the centre of the largest cattle-ranching area in the country. Diamonds were first discovered by diggers on the farms of Du Toit's Pim and Bultfontein in 1870 (see also HOPETOWN). Further discoveries of diamonds were made in 1871 at de Beers and Colesberg Kopje. Ultimately the mines were placed under Brit. control, when the whole diamond market became vested in one company, the de Beers Consolidated Mines Limited. The diamond industry was badly hit by the First World War and even more by the slump that followed, the mines at one period being actually closed down. The K. (Diamond) Mine, as it was once named, has now for sixty years been empty of men, and all the machinery taken away; it is known to-day as 'the Big Hole', and lies just off one of the main streets. Afterwards miners sank workings underneath the hole to a depth of 3600 ft. Diamonds have been found in all sort of places in K. - in old mine dumps, in back yards, and even in the streets at times; but the finest are those which de Beers are able to show the visitor to the city, a collection worth £1,000,000. But the K. of to-day is not the K. of yesterday, for between the wars the city experienced such fluctuations of fortune that many forsook diamonds for the gold of the Rand. Other notable features of K., besides diamonds, are the fine, park-like gardens of Alexanderfontein; the MacGregor museum, where there are some fine models of famous diamonds; some memorial carns and crosses recalling the Anglo-Boer war; the Honoured Dead memorial to those who fell in the defence of K. during the siege in the S. African war; and the Duggan-Cronin-Bantu gallery, housing a collection of photographs of all the native tribes of S. Africa.

K. holds an important position owing to its situation. Railway communication has

long been opened up with K. between Cape Town and Johannesburg, the tn. is the point of departure for travellers making their way into the interior. The climate is salubrious and the soil is fertile, the tn. being provided with a good water supply from the R. Vaal. The mining of base metals and minerals in the area is becoming an increasingly important factor in the economic structure of S. Africa. Manganese, iron ore, blue asbestos, gypsum and salt are some of the minerals being produced on an increasing scale. The construction of very large irrigation schemes in the region in recent years has made this one of the chief food production areas in the country. Large quantities of beef mutton wheat maize ground nuts butter cheese fruit and vegetables are produced.

The (city council) has embarked on an extensive town planning scheme. The older parts of the city, reflecting its modelled and construction has commenced on the new civic centre which includes a new technical college, art gallery, new law courts and government offices and a new city hall. Provision has been made for facilities for secondary industry. Established industries include textile clothing and furniture factories, joinery and engineering works, cheese mineral water yeast, cement and botanical factories. The tn. underwent a siege during the Boer war 1899-1900 which was relieved by Gen. Sir John French. Pop. (whites) 19,000. See G. F. Williams *The Diamond Mines of South Africa*. A. E. Williams *Son's Dreams come True*. G. Set *The Grand Old Days of the Diamond Fields*. A. Chivers *Story of de Beers*. 2. Gold field in the K. dist., Australia, 100 m S.E. of Perth.

Kimbri, see **CIMBRI**

Kimshi, David (c. 1160-1200), Jewish commentator b. at Narbonne in France, where he spent his life. His great work was his *Sefer Mikhal* which consists of two parts, the *Mikhal*, or grammar, and the *Sefer Haashorashim* or lexicon. He also wrote commentaries on portions of the Scriptures of which his commentary on the prophets is the best though that on the Psalms is interesting. In his time rests upon his grammar and lexicon which have been the basis of all subsequent Hebrew grammars and lexicons. See J. Linkelstein *The Commentary of David Kimshi on Isaiah* 11.

Kimmeridge Clav, in geology the lower series of the Upper Oolites. The upper part of the formation consists of dark blue bituminous shales, and the lower part of clays and shales in which calcareous concretions are found. The clay takes its name from the vil. of Kimmeridge in Dorsetshire; it is to be seen continued from the Dorset coast into Wiltshire, and thence along the Jurassic outcrop into Yorkshire. The economic products of the formation include the Kimmeridge coal, really a highly bituminous shale, alum, and clay for the making of bricks, tiles, etc. Fossils are abundant in both series of the formation, including remains of dinosaurs, plesiosaurs, and ichthyosaurs.

Kimpolung, or Campo Lung, tn. of Bukovina, Rumania, on the Moldavia situated about 75 m S.W. of Czernowitz (Cernauti). It is a health resort. Pop. 7500.

Kin, Next of, or nearest of consanguinity in the same degree of relationship are those among whom is distributed the personal property of a person who dies wholly or partially intestate as to that property. As a general rule the right to take out administration to the personal effects of an intestate follows the beneficial right to the property. Since the Administration of Estates Act 1925, the devolution of real property is governed in that of personalty. (For the order in which the representatives take effect see **SUCCESSION**.) If a husband has the exclusive right to take out letters of administration to his wife's estate and if he dies without doing so, the wife's next of kin may take out administration, but they will hold the beneficial interest in the property for the husband's personal representatives. Where none of the kin can take out administration a creditor is entitled to do so. A gift whether in a deed or will to the 'next of kin' whether *simplex* or *in reference* to the Statutes of Distribution or to intestacy does not in itself vest in or husband. If a phrase 'next of kin' in a deed or kin according to the rules is frequently used in wills under deeds and wills are to be distinguished. The former is strictly confined to the literal meaning of the word but the latter includes those who are a substantial next of kin representative of a testator. See on this **GOODWILL** **Joint Property**. See also **INTESTACY**.

Kincardine, or Pannatane, tn. of Bruce Co., Ontario (Canada) situated on Lake Huron. It has iron foundries and salt works. Pop. 1,000.

Kincardineshire, or The Mearns, maritime co. in the E. of Scotland lying between the Merith N. and the N. Esk in the S. with an area of 518 sq. m. The surface is in a loam, the highest pt. being Mt. Bannockburn, 1,111 ft. in the N. the coast is low, the valleys are fertile and in the north the Mearns which is a continuation of Scotland. The main river is the Ugie which is occupied by a trout stream. But the valleys of the Dever and the Mearns and the coast which is the most fertile part are devoted to low-lying crops principally oats and dry turnips and potatoes. Cattle rearing is also carried on and fishing, especially salmon fishing is actively prosecuted. There is, too, some shipping at Stonehaven. Pop. 29,000.

Kinchau, tn. of Manchuria on the rail way from Mukden to Peking, near the Gulf of Liaotung. It is a transport centre. Pop. 81,000.

Kindergarten comes from the German meaning children's garden, and was the name chosen by Friedrich Froebel for his children's school, where he evolved the best methods, in his opinion for the all-round development of children, whom he thought of as being like young plants need-

ing constant loving care and attention to help them to grow. Inspired by the ideals of Pestalozzi and building on his own experience, Froebel elaborated a system of organized occupations by means of 'gifts' calculated to satisfy the child's inborn love of play and fellowship and at the same time to exercise and develop its sensibilities and healthy activities, and to teach it all unconsciously something of its duties towards God, Nature, and Man. Froebel's 'gifts' as they are called—which were used in this system of education, have long fallen into disuse in this country, as also have most of the occupations which accompanied them, but the underlying principles of Froebel's educational philosophy are still the basic principles in the progressive Ks of to-day. Like the ancients, Froebel was fully alive to the value of rhythm in speech and music. Training in speech and music to gather with movement forms an important part of any child's education in a K to-day, where a child is regarded as a growing person to be respected and studied and where self-activity is the key note of its education. Learning as far as possible is attained through doing wholeheartedly the play and work that is appropriate to the age of the child. This includes the acquisition of techniques and essential skills when the time is ripe for them and after careful previous preparation through a number of varying experiences and different media. The aim of the discipline imposed is the attainment of self-discipline. The acquisition of this is necessarily slow and the child requires not only sympathetic help for its growth, but the right environment where it can exercise its responsibility suitable to its stage of development where it learns to recognize the value of social service, and where co-operation between the home and school is of the first importance. Froebel did not recognize two responsibilities of the teacher who attempted to carry out his ideas, and for this purpose advocated the careful training of these teachers of children. One direct result of this is that to-day in the primary training colleges and in the teachers' colleges. A teacher's diploma and handbook diploma awarded by the National Council for Education. The Ministry of Education recognizes this certificate after three years' training at one of the recognized colleges. A list of all the 110 of these colleges can be obtained from the National Froebel Foundation, 2 Manchester Square, London, W.1. The principles of Ks met with no very wholehearted appreciation in his country, but Germany does not stand alone in rejecting her own products. Flourish best in America. The National Ks Association was founded in 1909 in New York in order to bring the advantages of Ks education to all the nation's children, and in twenty years' time it had secured the estab. of nearly 1400 Ks. See also CHILD STUDY, EDUCATION, FROEBEL, FRIEDRICH, WILHELM AUGUST, MACMILLAN, RACHEL; MONTESORI, MARIA, NURSERY SCHOOLS.

Kinderscout, mt. in Derbyshire, Eng-

land, and the highest point in the Peak dist. Altitude 2084 ft.

Kinderscout Grit, geology, a variety of the millstone grit overlying the carboniferous limestone. It takes its name from Kinder Scout (*q.v.*), a summit of the Peak dist. The formation consists of shales, grits and sandstones, and is coarser and harder than the millstone grits in general. Though not yielding such good building stone as the other sandstones of Derbyshire, it is quarried for such purposes as roadmetalling, etc., where its disadvantages as regards dressing need not be apparent.

Kinematics, branch of the science of mechanics in which the phenomena of motion are considered without reference to any force or mass. It is usually treated as a study preliminary to that of dynamics, and involves only the conceptions of space and time. By making a few simple assumptions it is possible to formulate certain relationships which can afterwards be examined in the light of dynamical knowledge.

The velocity of a point is defined as the rate of change of its displacement. The velocity is said to be uniform if the point traverses equal distances (in the same direction) in equal intervals of time, however small those intervals may be. In such a case the velocity of the point is

given by the equation $v = \frac{s}{t}$ where s is the distance traversed in the time t . In the case of non-uniform velocity we define the velocity at a point as the average velocity over a very short distance enclosing the point, i.e. $v = \frac{ds}{dt}$. Velocity is a vector

quantity, i.e. it has direction as well as magnitude. Speed, a scalar quantity, is defined by magnitude alone. Acceleration is the rate of change of velocity. If a body has an initial velocity of u ft. per sec. and that velocity is increased by a ft. per sec. every second, its velocity at the end of successive seconds will be $u + a$, $u + 2a$, $u + 3a$, etc. The final velocity at the end of any period may be denoted by the relation $v = u + at$ where V = initial velocity in ft. per sec., a = acceleration in ft. per sec. per sec. = $\frac{ft.}{sec.^2}$, the number of velocity units added in per sec., and t = number of seconds. The average velocity during the period, if the acceleration be uniform, may be taken as the velocity at the middle of the period, that is, it will be the mean of the initial and final velocities. Average velocity therefore = $\frac{u+v}{2}$, that is $\frac{V+V+at}{2}$, or, $V + \frac{1}{2}at$.

Now, the length traversed by a body moving with uniformly accelerated velocity would be the same as if it moved uniformly with the average velocity throughout the period. Therefore, we have, in this case, $s = (V + \frac{1}{2}at) \times t$ or $s = Vt + \frac{1}{2}at^2$. Eliminating t between the equations $v = V + at$ and $s = Vt + \frac{1}{2}at^2$, we get a third equation, $v^2 - 2as = V^2$. We now have certain relationships of space and time expressed concisely by formulae, which may be recapitulated thus: for uniform velocity $s = vt$; for uniformly accelerated

velocity, $v = V + ft$, $s = Vt + \frac{1}{2}ft^2$, $v^2 = V^2 + 2fs$. The acceleration of a freely falling body is an example of uniformly accelerated motion, f being 32.2 ft. per sec. per sec. In the case of non-uniformly accelerated motion, the acceleration at a

point is defined as $\frac{\delta v}{\delta t}$, where δv is the increase in velocity in a short interval δt , in the vicinity of the point in question. As in the case of velocity, acceleration is a vector quantity; it is completely specified only when its direction and magnitude are known.

K. also deals with the direction in which motion takes place, and the determination of the resultant of sev. velocities possessed by a particle. All motion, of course, is relative; and it may be the purpose of a problem to determine the motion of a body with reference to a certain body or surface, as, for instance, the surface of the earth.

Kinematograph see CINEMA TOGRAPH.

Kineshma (Kinechma), tn. In the Ivanovo Region in the R.S.F.S.R., on the r. b. of the Volga, 55 m. S.E. of Kostroma. It is a trade centre for the salt, sugar, and grain trades, and is connected by rail with Ivanovo. Pop. 75,300.

Kinetics, branch of the science of mechanics which treats of the action of forces in producing or changing the motion of a body. If the body remains in a position of rest or equilibrium, the consideration of the conditions is a part of *statics*, or the science of equilibrium of forces. This div. of the study of forces into two parts according as they produce motion or equilibrium is an arbitrary one. The laws of statics are merely special cases of the laws of dynamics in which the acceleration and the velocity of the body are zero. It is convenient, however, to treat of certain particular deductions from Newton's laws of motion under the heading of K.

Kinematics (q.v.) treated of motion without regard either to the body moving or to the cause of change of motion. K. introduces the considerations of mass and force. Newton's first law, which may be concisely stated as that change of motion is caused by forces acting upon the body, gives us, therefore, a definition of force. The law may be otherwise stated as 'a material body possesses inertia.' The second law states that the change of motion is proportional to the impressed force and takes place in the direction of that force. By motion is meant momentum, which is measured by the product of the body's mass and its velocity. Force is measured, therefore, by consideration of the mass of the body and the acceleration or change of velocity induced by the force. This gives us the fundamental relationship of K., which may be concisely stated thus: $P = mf$; that is, force = mass \times acceleration. The unit of force is called the *poundal*, and is defined as that force which, acting on a mass of 1 lb. for one second, gives it an additional velocity of 1 ft. per second. Newton's third law of motion states that action

and reaction are equal and opposite, i.e. if a body A exerts a force on a body B, then B simultaneously exerts an equal and opposite force on A. A force may not cause actual motion, but in any case it tends to do so. If the point of application of the force moves in the direction in which the force acts, the force is said to do *work*. Work is measured by the distance through which the point of application moves in the direction in which the force acts, multiplied by the measure of the force. The unit of work is that amount of work done by a force of one poundal by moving its point of application one foot; it is called a foot-poundal. A body may have the capacity of doing work by virtue of the momentum it possesses, or through its position or configuration; it is then said to possess *energy*. Energy possessed by virtue of motion is called *kinetic energy*; that possessed by virtue of the position of a body, as in a weight supported above the ground, or through the position of its parts, as in a coiled watch spring, is called *potential energy*. The work done in bringing a moving particle to rest can be shown to be $\frac{1}{2}mv^2$; this is therefore defined as the kinetic energy of a particle of mass m , moving with a velocity v . If a body whose weight is W is raised through a vertical height h , the work done against the mutual attraction of the earth and the body is Wh . This is the measure of the increase of the potential energy of the body in its new position.

Kinetic Theory, in chem. and physics, assumes that the molecules or ultimate physical particles of a gas are in constant and rapid motion, and that they behave as perfectly elastic objects. On this theory, the laws that describe the behaviour of gases under variations of temp. and pressure, etc., find a satisfactory theoretical explanation. The K. T. in its present form is due to many scientists, notably Joule, Clausius, and Clerk-Maxwell (about the middle of the nineteenth century).

Kinotoscope, see CINEMA TOGRAPH.

King, Charles (1687-1748), Eng. composer of church music, b. at Bury St. Edmunds, was for the most of his life connected with the choir of St. Paul's. His music is of no remarkable interest, but his services in F and C, and a few of his anthems, are still occasionally performed.

King, Edward (1829-1910), Bishop of Lincoln, educated at a private school, whence he passed to Oriel College, Oxford. He was ordained deacon in 1851, priest in 1855, and in 1863 became principal of Cuddesdon Theological College, where he exercised an enormous influence over the ordinands studying under him. In 1873 he became prof. of pastoral theology at Oxford, and in 1885 passed to the bishopric of Lincoln. Here he speedily became as great a force as he had been elsewhere, and his work continued tranquilly, except for the stir caused by a fruitless attempt by the Church Association to secure his condemnation for the use of certain ceremonial. See B. W. Randolph and

J. W. Townroe, *The Mind and Work of Bishop King*, 1918.

King, Henry (1591-1669), bishop of Chichester, and poet, educated at Westminster School and Christ Church, Oxford. In the year that he was made bishop of Chichester (1612) he was taken prisoner by the parl. army, but was later released. He was a personal friend of Charles I. He pub. a metrical trans. of the Psalter (1651) and some poetry. In one of his poems he makes a reference to *Eikon Basilike* as the work of the king. He was restored to his benefice at the Restoration, and he d. at Chichester. He was one of the executors of John Donne.

King, Peter, first Baron (1669-1734), Eng. lawyer and Whig politician, a relative of J. Locke (q.v.). He became recorder of London, and was knighted (1708), Baron King of Ockham, and Lord Chancellor (1725-33). He wrote two theological works, *An Enquiry into the Constitution of the Primitive Church* (1691), and *History of the Apostles' Creed with Observations* (1702). See J. C. Campbell, *Selections from Speeches of Lord King*, 1842; W. N. Wellsby, *Lives of Eminent English Judges*, 1846; and E. Foss, *The Judges of England*, 1848-64.

King, Sir Richard (1730-1806), Eng. admiral, b. at Gosport. He entered the navy in 1736, and having served in the Mediterranean and E. Indies, was promoted to be lieutenant in 1746. In 1756 he was in command of the landing party at the capture of Calcutta and Hugh, and distinguished himself in 1762 in the action off Sadras, after which he was knighted. In 1747 he was promoted to be rear-admiral, in 1792 was created a baronet and appointed governor and commander-in-chief at Newfoundland, and in 1795 was made admiral.

King, William (1663-1712), learned Eng. satirical and miscellaneous writer and poet, supporter of the Tory and High Church party. From 1701 to 1708 he held various offices in Ireland. His works include *Animadversions upon the Pretended Account of Denmark* (1694, in answer to R. Molesworth's pamphlet), *Dialogues of the Dead, Relating to the Present Controversy concerning the Epistles of Phalaris* (1699, satirising Bentley); *A Journey to London in the Year 1698* (1699); *The Transactioneer, with some of his Philosophical Fancies, in Two Dialogues* (1700, a satire on the Royal Society); and *Vindication of Dr. Sacheverell* (1711). See J. Brown (editor), *Remains of the Late Learned and Ingenious Doctor William King*, 1732; J. Nichols (editor), *The Original Works of William King*, 1776, and S. Johnson, *Lives of the Poets*, 1781.

King, William Lyon Mackenzie (b. 1874), Canadian Liberal statesman, b. at Berlin (now Kitchener), Ontario, eldest son of John K., Q.C., and grandson of Wm. Lyon Mackenzie, the famous political reformer and rebel. Graduated at Univ. of Toronto 1895, fellow in political economy, Chicago Univ., 1896-97; Harvard, 1897-1900. Became deputy minister of labour for Canada and editor of *Labour Gazette*, 1900; chairman of sev. royal commissions

on labour and immigration problems. Represented Canada in negotiations with Great Britain regarding immigration, 1906 and 1908. In latter year entered Dominion Parliament as member for N. Waterloo, Ontario. Beaten in Liberal overthrow of 1911, did not re-enter Parliament for eight years. Elected for Prince, Prince Edward Is. 1919; in Aug. of that year, chosen to succeed Laurier as Liberal leader. In 1921, when he was elected for New York, Ontario, he became Premier in succession to A. Meighen. In 1925 general

Nations from boards Canada

WILLIAM LYON MACKENZIE KING

election he lost his seat. When he returned to Parliament as member for Prince Albert-Saskatchewan, his advice to the governor-general to dissolve was rejected, and he resigned. Mr. Meighen tendered the same advice, which was then accepted, and the Liberals won the election, 1926. He remained Premier four years longer. He attended the Imperial conferences of 1923 and 1926, represented Canada at signing of renunciation of war (Paris, 1928), and also as member of Council and vice-president of Assembly of League of Nations 1928. In July 1930 the elections went against him, and he was succeeded by R. B. Bennett. In 1935 his party won the most sweeping victory in the hist. of Canadian politics—winning 174 seats out of 250. He thus became Prime Minister for the third time in his career. In the same year he concluded a commercial treaty with the U.S.A. He attended the coronation of King George VI. and Queen Elizabeth, 1937. When Britain declared war on Germany in 1939, K., by postponing

Canada's declaration for a week, in effect affirmed Canada's complete independence in foreign affairs. When his Conservative opponents criticised Canada's war effort as inadequate, he sought re-election and gained it decisively—the real issue being conscription, which he consistently opposed. In Aug., 1940, he negotiated with President Roosevelt the setting up of a permanent Joint Defence Committee for the defence of the W. hemisphere. Between Dec. 29, 1921 and Nov. 15, 1948, he was in office for over twenty years and no contemporary statesman has held office for so long a time. The period which included his administrations raised Canada to its modern position in world affairs; and in the inter-world-war period the changes which occurred profoundly altered the country's imperial and international relationships. K. played an important part in bringing about these changes, in fulfilment of a dual policy founded on national autonomy and imperial and international co-operation. He brought to fruition Canadian ideals that had been gradually maturing since confederation was estab., and had been fostered in their time by other Canadian Premiers, notably by the Liberal Sir Wilfrid Laurier and the Conservative Sir Robert Borden. K. never favoured proposals for executive centralisation of the Empire countries, believing that such an arrangement would not make for unity among them. When the statute of Westminster (q.v.) was promulgated it was seen that the theories he preferred and enunciated at the Imperial Conference of 1926 had been given practical expression. From the first time he entered public affairs K. realised the need for Canada being united within herself, co-operative within the Commonwealth, and influential within the wider family of nations. All three purposes have been largely fulfilled since he first became Premier, and largely through his efforts. His belief that the Fr. and Eng. peoples in Canada can make a great contribution both to Canadian life and to world affairs has greatly influenced his policies as Premier; but how far he had succeeded in achieving national unity was only fully realised when the Second World War broke out in 1939. He brought a united Canada into the war, and it may be doubted if any other Canadian political leader could have done so. The Canadian achievements in the war under K.'s leadership were impressive; while more food was produced than ever before, the output of munitions and supplies increased also until it was the fourth largest among the Allies; Canadian economic and defence plans were integrated with those of the U.S.A., to the benefit of the allied cause; for the first time a complete Canadian Army served overseas, taking part with the Canadian Navy and Air Force in important engagements; at home the country's economy was revolutionised under a policy that correlated taxation, loans, restrictions on wages, and price-controls, and enabled the gov. to meet the huge war costs without more than a moderate rise in the

cost of living. K. has devoted his whole life to the study of public affairs. During and after his student days he was drawn to the study of political economy, especially in the sphere of labour relations. These studies led him to become editor of the Gov.'s *Labour Gazette*, and subsequently deputy minister of the newly formed dept. of Labour. From these experiences have come most of the labour and social enactments made in the dominion under his direction and elaborated into a comprehensive scheme of social security. He resigned in 1948, being succeeded in the premiership of Canada by Mr. Louis St. Laurent. He retired from politics in 1949. See *Canada and the Fight for Freedom* (speeches—Sept. 1941–June 1944); and E. Ludwig, *Mackenzie King: a Portrait Sketch*, 1944.

King, William Rufus (1786–1853), vice-president of the U.S.A. He was admitted to the Bar in 1806 and entered Congress in 1810. He represented Alabama in the Senate from 1820 to 1841, and was minister to France in 1844, and showed himself an active advocate for the annexation of Texas. In 1848 he was again a senator, ultimately becoming president of the Senate, and in 1852 vice-president of the U.S.A.

King (A.-S. *cyning*, man of the tribe, or chief), the man who (actually or nominally) holds supreme power in a state. A reigning queen has equal power, but not a queen consort. See GOVERNMENT; PARLIAMENT; SOVEREIGNTY.

King: 1. Is. off Australia, lying to the N.W. of Tasmania, in Bass Strait. 2. Co. in Washington, U.S.A., bounded on the W. by Puget Sound and Admiralty Inlet. Co. seat, Seattle. Pop. 260,900.

King and Kingship, see SOVEREIGNTY.

King Charles Spaniel, dog characterised by a large head, nose almost touching the skull between the eyes; it has very long ears, dark and lustrous eyes. The coat is long and silky, the colour determining the sub-varieties of this breed: black-and-tan, ruby, tri-coloured, or Blenheim (white marked with red). Popularised by King Charles II., the breed has been largely ousted by the introduction of the Pekingese.

King Charles's South Land, largest is. of Tierra del Fuego, S. America. It is generally level except in the W., where the highest point, Mt. Sarmiento, reaches a height of nearly 7000 ft.

King Crab, name given to any species of the class Xiphosura. There are five species forming a single family, Xiphosuridae. Formerly these were all included in a single genus *Limulus*. This genus has been discarded in favour of three genera, *Xiphosura*, *Carriniscorpius*, and *Tachyplesus*. The K. C. now belongs to a separate class of the phylum Arthropoda. It is a marine arthropod whose body, apart from its spike-like tail, is almost covered by a large shell or carapace. Unable to swim, the K. C. is found in comparatively shallow water. Sometimes they bury themselves in the mud or sand, using their tails to change their position.

Their eggs are laid in the sand at high-tide mark. Their food consists of bivalves and annelids.

KING CRAB

King Edward's Hospital Fund, see HOSPITAL FUND.

King Edward's School, Birmingham. Dating from 1552, the foundation includes seven schools for boys and girls, to a total of about 3000. There are a number of closed scholarships to Oxford and Cambridge.

King Edward VI. School, Southampton. public school founded under letters patent of King Edward VI. in 1553, by the will of the Rev. Wm. Capen, D.D., master of Jesus College, Cambridge, the main part of the existing buildings being erected in 1896. There are closed scholarships to Queen's College, Oxford.

King Edward VII. Land, region in the Antarctic, lying to the E. of Victoria Land, about lat. 76° S. and long. 152° 30' W.

Kingfishers are members of the Alcedinidae, a family of coraciiform birds remarkable for their peculiar shape and brilliant colouring. The head is exceptionally large, and the long angular beak is hooked; the tail and wings are relatively short, and the metatarsus only slightly developed. The Alcedinidae are sometimes divided into the sub-families Daceloninae, or wood K., and Alcedininae, or water K. The common European K., *Alcedo tephida*, belongs to the latter group; it has greenish-blue plumage, with bright blue head and tail, and white patches at the side of the neck; the bill is black with orange-tinted base. It is generally found by shady forest streams, sitting on a branch overhanging the water, or hovering with vibrating wings in search of the fish which form its prin. diet; having sighted the prey it dives perpendicularly, with folded pinions, and returning with the morsel dashes it on a stone or tree-branch before swallowing. K. feed also on insects, and on small crustaceans, in search of which they occasionally visit the seashore. Their eggs are usually deposited on a bed of fish-bones, concealed in holes in riv. banks, in tree stumps, or in old walls.

Kingfisher, Great, see LAUGHING JACKASS.

King George Sound, inlet of W. Australia, containing Princess Royal and Oyster harbours, and having on its shore the tn. of Albany.

King George V. Name of two Brit. battleships. The first, after service throughout the First World War, including Jutland, was scrapped in 1926. With ten 13.5 in. guns and a displacement of 23,600 tons, her speed was 21 knots. The second was completed in 1940, served in the convoys to Russia, in the *Bismarck* action, and at the landings in Italy, and took part in Pacific operations, including the bombardment of the Jap. mainland. She has a displacement of 44,650 tons, a length of 710 ft., a beam of 103 ft., and a weight of armour of 10,000 tons. Her armament consists of ten 14 in., sixteen 5.25 in., eight 40 mm., thirty-eight 20 mm., and eighty-eight two-pounder guns. Aircraft were originally fitted, but were removed in 1943. Other ships of the same class are the *Amson* (q.v.), *Duke of York*, *Howe*, and *Prince of Wales*, the last sunk by the Jap. in 1941.

King George's Fields Foundation, trust responsible for the playing fields side of the national memorial to King George V. When the national appeal was made in 1936 for funds for a statue in London and playing fields throughout the country, it was the intention that any tin, or vit. that needed playing fields and desired to commemorate King George V. in that way should have an opportunity of taking part in the national scheme. The appeal closed in 1937, and up to 1939 the amount remitted to the foundation by the National Memorial Fund Committee was £471,000. Surveys made at the time showed that few tin. had sufficient playing fields for their pops., and that on the average not one rural par. in tin possessed a public field. The problem, therefore facing the administrative council at the beginning was how best, when millions of pounds would be required, to make use of its limited funds, and it was decided to make grants towards the capita. cost of schemes promoted and maintained by local authorities or local bodies of trustees. This policy has been operated in collaboration with the National Playing Fields Association. Up to the end of 1946 the total number of schemes approved was 494, of which 361 are in England, 83 in Scotland, 31 in Wales, 7 in N. Ireland, and 1 in the Channel Is. Memorial fields in the colonies of Adm. Barbados, Falkland Is., Malta, and Nigeria have also been recognised by the foundation as coming within the scheme and accorded the heraldic panels which distinguish every field within the national memorial.

Kinghorn, royal burgh in the co. of Fifeshire, Scotland, on the frith of Forth, about 3 m. S.S.W. of Kirkcaldy. The inhab. are engaged in shipbuilding and in the manuf. of glue. It is also a watering-place, and has golf links. Pop. 2700.

Kinglake, Alexander William (1809-91). Eng. historian, was called to the Bar in 1837. Two years earlier he had travelled

in the E., and in 1841 he pub. his experiences in *Eolthen, or Traces of Travel brought Home from the East*. His interest in military hist., to the study of which he had devoted much time, took him, in 1845, to Algiers, where he accompanied the flying column of Saint-Arnaud, and, later, to the Crimea at the beginning of the war. The first vols. of his *Invasion of the Crimea* appeared in 1863, and the eighth in 1887.

Kinglet, see **GOLDEN-CRESTED WREN**.

'Kingmaker, The,' see **WARWICK, EARL OF**.

King-of-Arms, or King-at-Arms, officer whose business it is to direct the heralds, preside at their chapters, and have the jurisdiction of armoury. See **HERALD**.

King of the World, see **SHAH-JEHAN**.

King Paradise Bird, see **BIRD OF PARADISE**.

Kings, The Books of, so named as they contain a hist. of the kings of Israel and Judah, from the time of David to the captivity. Though styled the First and Second Books of Kings, they are but one book and were indeed anciently counted as one, forming the fourth in the series of the earlier prophets. They are subdivided in the Septuagint, Vulgate, and modern Heb. Bibles, being known in the Vulgate as the Third and Fourth Books of Kings (see subtitles in the A.V.). The div. is not a very necessary one, and it is difficult to make any clear separation between Sam. and Kings. The div. emphasises the fact that Solomon's reign inaugurated a new epoch, a period at first of great glory and then of decadence, while the previous period is that in which the kingdom was built up. Sam. and Kings were compiled from the same sources, and probably underwent successive redactions by the same hands. The books are drawn from a variety of sources. The principal of these are: (1) The various chronicles, such as the Book of the Acts of Solomon, mentioned in 1 Kings xl. 41, and the Book of the Chronicles of the Kings of Judah. These are frequently referred to, but their exact nature is not known. (2) The Book of Jashar and other popular and vivid collections of tales. (3) Certain official records of the temple, which furnish details about the dedication of the temple and its later hist. The main interest of the last redactor lay in this religious development, and his standpoint is definitely deuteronomistic, all the early kings being judged according to the standard of this time. See W. O. E. Oesterley, *An Introduction to the Books of the Old Testament*, 1934; and J. H. Bewer, *The Literature of the Old Testament in its Historical Development*, 1947.

King's African Rifles, regiment of six battalions of askaris, locally enlisted African tribesmen (Abyssinian, Kavirondo, Nandi, Masai, Somali, Galla, Yao, Mkamba, etc.) and the Somaliland Camel Corps, commanded and trained by regular Brit. officers, with a few specially selected Brit. warrant and non-commissioned officers for training and administrative duties at headquarters. The units are raised as far as possible locally, and are

allotted as distinct garrisons to the various Brit. E. African dependencies. The present 3rd K. A. R. were formerly the E. African Rifles, the 4th were the Uganda Rifles, while the 1st and 2nd battalions are re-formed Nyasaland units of the old E. African Rifles and Uganda Rifles. The K. A. R. has been on more or less continuous active service from 1893—the beginning of the 'scramble for Africa'—until the end of the First World War, and again throughout the Second World War. For years the K. A. R. has been a vital factor in upholding Brit. authority in E. Africa. After 1894, when Sir Gerald Portal declared a Brit. protectorate over Uganda, the so-called scramble for Africa began in earnest. This abrupt transition from tribal independence to tutelage under European powers was not effected without serious fighting, the brunt of which was borne by African troops. Designated by various titles, as shown above, these forces of askaris were eventually co-ordinated and reorganised as the K. A. R. Before the Second World War a garrison of only 5000 riflemen was found sufficient to guarantee the internal security, and guard the frontiers of the five Brit. dependencies, Kenya, Uganda, Tanganyika, Nyasaland, and Brit. Somaliland, with an aggregate area of 800,000 sq. m., and a total pop. of 12,000,000. But although each dependency has its own separate garrison of K. A. R., the various units are liable to be used to reinforce the troops in any particular dependency in which operations on an extended scale may have been undertaken. Owing to the variations of character and the difference in the temperaments of the different tribesmen in the K. A. R., the transfer of units to countries beyond their own has always to be effected with discretion. Thus, Somalis, though tireless in the arid wastes of their own country, are especially prone to malaria and would therefore be of little use for operations in the vicinity of the Uganda lakes or in the swamps of Tanganyika. Again, in view of the great differences in religion, character, and even in colour of the personnel of the K. A. R., it is essential for the officers to study the histories and customs of all the tribes from which the askaris are recruited. The K. A. R. played a prominent part in the operations against the Mad Mullah between 1899 and 1903, but in the latter year one detachment was wiped out at Gumburu. They also fought bravely in the First World War in their own terrain; but, except in the world war periods, the numbers of troops engaged has generally been small, though the distances to be traversed are vast, and the tribal enemy frequently merely elusive unclad warriors, often armed only with spears and bows and arrows. The services of the K. A. R. in the First World War afforded sufficient argument for their existence as trained cadres in peace by means of which, if necessary, large bodies of trained troops can be raised and placed in the field at short notice. In that war the K. A. R. took an important part in the operations in E. Africa from the beginning and particularly after 1916 in Gen. Smuts's

advance which swept the Gers. out of Brit. ter., and led to the occupation of Dar-es-Salaam and the pursuit of the fleeing enemy by Gen. van Deventer. Various columns consisting for the most part of battalions of the reorganised K. A. R. pursued the enemy forces till news of the armistice brought about the surrender of von Lettow and his force. In the Second World War the K. A. R. were reinforced by part-time volunteers of the E. African Defence Force. For many months after Italy's entry into the war in 1940, the K.A.R. bore the brunt of the fighting in the desert country of E. Africa. With the N. Rhodesian contingent and the Somaliland Camel Corps they offered stubborn resistance to the It. invasion of Brit. Somaliland, and later, when the Brit. passed to the offensive, they took a prominent part in the recovery of that ter. It was the speed of the advance of the K. A. R. to Afmahu which made the Its. evacuate Kismayu. In Feb. 1941, in the assault across the Juba R., the K. A. R. rendered notable service in the trackless bush. One mobile detachment with tanks and armoured cars took Modun and 1000 prisoners. Other companies of the regiment won victories at Todenang and Namaraputh, and at Merca they released 200 Brit. sailors victims of a German raider who had been lodged in an It. prisoners-of-war camp. In Abyssinia the K. A. R. were responsible for the brilliant capture of Mt. Pike, which was instrumental in dealing a mortal blow to It. hopes of counter attack. The K. A. R. were also in the advances which led to the assault on Gondar and in the attack which ended the Ethiopian campaign. Volunteers of the K. A. R. in Burma played a major part in the capture of the reputedly impregnable Mt. Kennedy in Nov. 1941, and stormed Kalamaya, guarding the approaches to Kalowa on the Chindwin R., their speed and stamina completely baffling the Jap. See E. V. Jenkins, *History of the 4th K. A. R.: an Account of the Origin and Activities of the King's African Rifles*, 1926.

King's Bench Division, one of the three divs. of the High Court of Justice, the other two being the Chancery Div. (see CHANCERY), and the Probate, Divorce, and Admiralty Div. Theoretically all the divs. have jurisdiction in all matters both of common law (*q.v.*) and of equity (*q.v.*); but in practice the K. B. D. deals principally with common law actions of debt (*q.v.*) and damages, actions for recovery of land (see EJECTMENT) or goods (see also DETINUE), applications for writs of *certiorari* (*q.v.*) and *mandamus* (*q.v.*), election petitions, appeals from co. courts and quarter sessions, criminal appeals (see CRIMINAL APPEAL, COURT OF), revenue cases, and cases relating to the registration of electors. Certain business of the K. B. D. is transacted by masters, and actions involving complicated questions of account are usually referred to an official referee (see also COMMERCIAL COURT). The court of king's bench, as it was once called, dates from about 1178 as a distinct tribunal from the *Curia Regis*, Henry II.

reducing the legal staff of the king's council to five judges, who were to sit in *banco* (bench) and nominally *coram rege*. Formerly the court followed the king, but from the time of Richard II. it became fixed at Westminster Hall, and in recent times at the Strand, the king having from the early Tudor period ceased to preside in person even in those 'difficult cases' which were supposed to be reserved for royal hearing. James I., however, insisted sometimes on presiding over his courts, but the Stuart violations of law or constitutional convention were unique. The old king's bench court always had a Crown side and a plea side. In the former it dealt with criminal and quasi-criminal matters, generally obtaining cognisance of purely civil suits through writs which alleged trespass *vi et armis* (by force and arms), whether force had been actually used or not (see also FICTITIOUS). Its wide jurisdiction in applications for writs of *certiorari*, *mandamus*, and other *Crown Paper* cases is derived from this criminal jurisdiction (see also CROWN CASES RESERVED, COURT OF). Its present revenue jurisdiction is a legacy from the defunct exchequer court (*q.v.*). The Lord Chief Justice of England is the head of the K. B. D., and there are seventeen puisne king's bench judges.

Kingsbridge, seaport and mkt. tn. in the co. of Devonshire, England, 32 m. S.S.W. of Exeter. Pop. 3300.

Kingsburgh, Sir John Hay Athole Macdonald, Lord (1836-1919), lord justice-clerk of Scotland from 1888, b. in Edinburgh. He became an advocate in 1859, and Q.C. in 1880. Solicitor-general for Scotland 1876-80, and lord advocate 1885-86 and 1886-88. He invented a holophote course indicator for preventing collisions at sea, a military field telegraph, a barothermometer, and other electrical appliances; and it was through his exertions with the postmaster-general and the gov. that postcards were introduced into Great Britain. His publs. include *Common Sense on Parade*; *A New Form of Infantry Attack*; *A Practical Treatise on the Criminal Law of Scotland* (1867); *Prisoners on Oath: The Volunteers in 1905*; *Fifty Years of It* (1909); and *Life Jottings of an Old Edinburgh Citizen* (1915).

Kingsclere, par. and tn. of Hampshire, England, situated on a small trib. of the Emborne, 64 m. S.E. of Newbury. The name indicates that there was a royal residence here in A.S. times. Houses are trained in the neighbourhood, and brewing and malting are carried on. Pop. 2200.

King's College, Cambridge, was founded and endowed in 1441 by King Henry VI. for a provost and seventy scholars, and under the founder's statutes every vacancy had to be at once filled by the admission of a scholar from the sister foundation of King Henry at Eton. But in 1861 open scholarships were started, and undergraduates not on the foundation were admitted to the college. All students, with a few exceptions, read for an honours degree. Its society at present consists of a provost, forty-six fellows, and forty-eight scholars. The splendid roof

was provided by Henry VII. Henry VIII. gave the windows, incomparable work of Eng. glaziers, inspired by Flemish artists, and, later still, the woodwork made by its, who had worked in France, and dated by Anne Boleyn's monogram. The organ is believed to have been placed above the screen in James I.'s time. Milton had it in mind when he wrote of 'storied windows' and of the organ pealing 'to the full-voiced choir below.' This college had some unusual privileges; it was exempt from the jurisdiction of the archbishop of Canterbury, the bishop of Ely, and even of the univ., in matters scholastic, and until 1857 members of K. C. could take a degree without passing the univ. examinations. The college chapel is very fine, and contains some of the best glass and wood-carving examples.

King's College, London, a college of London Univ., which was founded in 1828, its constitution being amended by an Act of Parliament in 1882, and again in 1908, when the college was reorganised under a scheme of incorporation. K. C. as it was originally founded, and as it developed since its foundation, was divided into seven different institutions: (1) Univ. of London, King's College; (2) King's College theological dept.; (3) Univ. of London, King's College for Women. The home science dept. was moved in 1915 to Campden Hill, and in 1925 became a separate institution under the title of King's College of Household and Social Science. (4) King's College hospital and medical school. The corporation of the hospital is now entirely separate from the college, and the authority of the council of K. C. is entirely taken away. The new hospital buildings are at Denmark Hill. (5) King's College School, Wimbledon Common. This school has been transferred by statute to a new corporation in which the property of the school is vested. (6) Strand School. The L.C.C. took over the management of the Strand School in 1913, and has built new buildings at Elm Park, Brixton. (7) Civil service dept., which, under the name of St. George's College, was transferred from the college in 1912. The staff for oriental languages was transferred to the new school of oriental studies (London Institution) estab. by royal charter in 1916. K. C. gives instruction in science, art, theology, engineering, etc., and has a fine library, consisting chiefly of scientific works. The college museum contains King George III.'s collection of philosophical instruments and mechanical models as well as Babbage's calculating machine. From its beginning K. C. was almost without endowment. It was started by men of great distinction, and a sum of at least £150,000 was spent on its buildings. The college commenced operations under a heavy debt, a considerable number of the first promoters having succeeded without paying their subscriptions owing to distrust of the policy of the duke of Wellington in supporting Catholic emancipation. But since that time it has received certain legacies and endowments together with large sums raised for improvements.

King's (or Queen's) Counsel, those bar-

risters of the Eng. Bar who wear silk gowns and sit 'within the Bar.' Hence colloquially called 'siks.' They take precedence of 'juniors,' i.e. all who wear stuff gowns and sit outside the Bar. Formerly, patents of precedence were granted to K. C. and Q. C. by the crown, but that custom has been in disuse for the last thirty years. K. C. rank next in precedence after the leaders of the Bar, the attorney-general and solicitor-general, and are called K. C. or Q. C. apparently for no other reason than the fact that their full style is 'His Majesty's counsel learned in the law.' They may not hold briefs in any cause against the Crown without special licence. It is the almost inviolable etiquette of the profession that K. C. should never appear with a brief in a civil action without a 'junior,' the only exception to this rule being when a 'leader,' or K. C., is retained for a plaintiff suing *in forma pauperis* (q.r.). Even in criminal cases it may be stated as a general rule that a leader cannot hold a brief without a junior. Chancery 'siks' attach themselves to one particular judge of the Chancery Div. and so gain a monopoly of the work there. Occasionally they become what is termed 'specials,' when they will undertake to go into any other court for a special fee of fifty guineas or more. The 'leader' has the conduct of the case, but the junior settles the pleadings, writes 'the advice on evidence,' and settles interrogatories or other documents in the interlocutory proceedings. In court the leader frequently invites the junior to examine the first witness. Very often it happens that the junior conducts the case almost throughout, the leader being engaged elsewhere.

King's Council, see CURIA REGIS.

King's County, Eire, see OFFALY.

King's (or Queen's) Evidence. Where one of sev. persons jointly charged with a crime gives evidence so as to secure the conviction of his accomplices, such evidence is called K. E. It is customary for the committing magistrate, where the evidence for the prosecution is weak, to hold out a hope of acquittal to any co-defendant who can and will give such evidence as will supply the want of sufficient evidence for the prosecution. At the trial, however, it is necessary to obtain the sanction of the judge to such a course. It is to be observed that counsel for the prosecution may, where necessary, obtain the consent of the judge at the trial to put one of the co-defendants in the box, and thus secure his acquittal, even without any suggestion of such a course from the committing magistrate. In any case, K. E. is to be looked at with suspicion. It is the practice though not legally necessary, to require the evidence of an accomplice to be corroborated in some material part by independent evidence, and such confirmatory evidence ought to go far enough to identify the prisoner so turning K. E. with those of his accomplices who remain in the dock. See HARRIS, *Principles of Criminal Law*; Russell, *On Crimes*; and Archbold, *Practice*.

King's Evil, old and popular name for

scrofula (q.v.). The origin of the term lies in the belief that a royal personage was endowed with healing power directed particularly to this form of tuberculosis. The power was claimed by the royal houses of England and France, and was attributed to the use of 'chrism,' or oil of peculiar sanctity, in the coronation ceremonial. From the time of Edward III. the custom of touching afflicted persons was maintained until the time of the Stuarts; under the Hanoverians the actual custom became obsolete, although the Stuart pretenders practised it in their exile and during their invasions of this country.

Kingsford, William (1819-98), Brit. engineer and historian, b. in London. At seventeen he enlisted and went to Canada with his regiment, but obtained his discharge there in 1841. He qualified as an engineer at Montreal, and worked on the Grand Trunk and other railways, and in 1872 was appointed Dominion engineer in charge of the harbours of the great lakes and the St. Lawrence, a post he held until 1879. After this he devoted himself to the compilation of his *magnum opus*, a *History of Canada* (10 vols., 1887-93).

Kingsford-Smith, Sir Charles Edward (1897-1935), Australian air commodore, b. at Hamilton, Brisbane. Crossed the Pacific in 1928 in the 'Southern Cross' flying boat; Australia to Britain, 1929; Ireland to America, 1930; Britain to Australia, 1933 (in seven days). The first airman to circumnavigate the world. In 1931 he made a 21,000-m. trans-Pacific flight in long stages, thereby being the first to fly twice over that ocean, once in each direction. In 1935 he left Liverpool, with two other airmen, and reached Baghdad on Nov. 7, having flown 18,000 m. in one day five-and-a-half hours. The same day he resumed the flight for Singapore but was never heard of again. He wrote *My Flying Life* (1936).

King's Letter, see **BIBLE**.

Kingsley, Charles (1819-75). Eng. clergyman and novelist, was educated at King's College, London, and Magdalene College, Cambridge. He entered the Church and in 1842 became curate, and two years later rector, of Eversley, Hampshire. In 1849 he was appointed one of the queen's chaplains in ordinary, and in 1873 was promoted to the canonry of Westminster. In his younger days he was allied with F. D. Maurice in the Christian Socialist movement, and it was his interest in the poor and the working classes that led him to write *Peast* (1848), and *Alton Locke* (1850), in which, with a virile pen, he dealt with various abuses. As the movement became more revolutionary in its character, his sympathies were alienated from it, and his later books had nothing to do with its propaganda. *Hyppatia* (1853) is a brilliant and forcible picture of life in the fifth century at Alexandria in the days when the Christian Church and the Rom. Empire were struggling for mastery. *Westward Ho!* (1855), his most popular work, is a stirring story of the Elizabethan heroes. *Two Years Ago* (1857) is a story of the Crimean war. His pub. the delightful *Water-babies* in 1863,

and, subsequently, other books. He also wrote poetry, and some of his verses have the true poetic ring, notably *The Three Fishers*, *The Tide Ware*, and the well-known *When all the world is young, lad*. K's power of characterisation was weak. His characters are either lay figures or unoriginal, and when original, they are usually exaggerated. His one outstanding creation is Miriam in *Hyppatia*. He had a great command of language, and his scene-painting is admirable. In few

A.P.G.

CHARLES KINGSLEY

Water colour by Carlo Pellegrini, drawn for *Vanity Fair*.

Eng. authors can there be found finer pictures than are contained in his books, whether of Eng. landscape, as in *Peast*, or of wretched hovels, as in *Alton Locke*, or of Alexandria and the desert, as in *Hyppatia*, or of the hills of Devonshire, and the solitude of the great St. Aust. forest which Amyas Leigh and his followers traverse, as in *Westward Ho!* or of the islands, as in *Hereward the Wake* (1866).

The blend in K. of jingoism, latitudinarianism and anti-popery coincided well with the tastes of Queen Victoria, and in 1859 all remembrance of his youthful radicalism was forgotten in an invitation to preach in Buckingham Palace. He soon became one of the queen's chaplains in ordinary, and almost at the same time Palmerston offered him the Cambridge professorship of modern hist. The only reason for supposing that he was qualified for the post was that he had written three historical novels, and he soon showed that he was not really suited to the chair. The queen then appointed him tutor to her heir, then studying at Cambridge. To prepare himself for this additional privilege, K. immersed himself in Ger. hist., only to learn with dismay that he was to instruct the prince in the period from

William III. to Waterloo. However, he continued to deserve and enjoy the queen's approval. He attacked popery, he championed Governor Eyre (*q.v.*), and he welcomed the Prussian victory at Sadowa. Yet year followed year, deaneries and bishoprics fell vacant, and K. remained rector of Eversley. When the queen suggested him in 1808 for a canonry at Worcester, even this small prize was withheld, for the reason that it would have been prejudicial to Disraeli. In the following year Gladstone, who shared few of K.'s opinions, made amends for K.'s earlier disappointments, and he was made a canon, first of Chester, then of Westminster. Had he not *d.* at fifty-five he might well have become a bishop. In a new reassessment of K., Dame Una Pope-Hennessy reveals K. as a greater man than most imagine. There was a rugged independence of mind, though not supported by intellect of an equal order. Christian Socialist, Imperialist, and Chartist sympathiser, his vigour of view was sometimes impulsive and not principled, and a desire to throw himself into a conflict with an added pleasure when he found himself on the unpopular side. Dame Una rightly insists upon K.'s passion for nature, and suggests that, if he had concentrated upon describing natural scenes, he would rank to-day above Richard Jefferies. However that may be, it was this passion that enabled K. to admire Darwin, whereas most other intellectuals, including Goethe and George Eliot, excited his contempt. There is a painting of him by L. C. Dickinson (1862) in the National Portrait Gallery.

See his *Life and Letters*, ed. and written by his widow, 1877; C. E. Raven, *Christian Socialism*, 1920; W. H. Brown, *Charles Kingsley: the Work and Influence of Parson Lot*, 1924; M. Hanawalt, *Charles Kingsley and Science*, 1937; G. Kendall, *Charles Kingsley and his Ideas*, 1947; and Una Pope-Hennessy, *Canon Charles Kingsley*, 1948.

Kingsley, Henry (1830-76), Eng. novelist, a brother of Charles K., went to the Australian goldfields in 1853. Returning in 1858, he began to write novels, the first of which, *Geoffrey Hamlyn*, appeared in 1859. From 1861 he edited the *Edinburgh Daily Review*, and acted as war correspondent for the paper during the conflict between France and Germany (1870-71). His masterpiece is *Ravenshoe* (1861). See life by S. M. Ellis, 1931.

Kingsley, Mary Henrietta (1862-1900), Eng. ethnologist, sociologist and traveller, remarkable for her researches into W. African ethnology. B. in Islington, daughter of George Henry K., brother of Charles K.; studied ethnology at Cambridge Univ. After the death of her parents she decided to go out to W. Africa and make a study of native religion, law, customs and folk-lore. Eventually she went also to the Fr. and Lower Congo. Made the ascent of Mt. Cameroon. She pub. an account of her exploration in *Travels in West Africa* (1897). Other works include *West African Studies* (1899), and *The Story of West Africa* (1899) (Story

of the Empire series). Her view that the Negro should be educated on African lines is essentially sound and would be accepted by many Brit. ethnologists to-day; but it is a development which the urbanisation of the W. African colonies renders far more difficult of accomplishment than in the E. African dependencies. (On this consult J. Huxley's *African View*, 1931, and D. Westerman's *The African To-day*, 1934.) Mary K.'s life was an unselfish one and she *d.* in S. Africa at an early age from enteric fever contracted in nursing fever cases during the Boer war. See life by S. Gwynn, 1932.

King's Lynn, Lynn Regis, or Lynn, municipal bor., mkt. tn. and seaport of Norfolk, England, situated at the mouth of the Great Ouse, 97 m. N.E. of London. The harbour is some 30 ac. in extent; there are two docks and good roadsteads between them and the Wash. The Alexandra Dock, opened in 1869, has a water area of nearly 7 ac. with a depth of 31 ft. In addition there are riverside quays. The mussel, cockle, and shrimp fishery is important. There are boat-building yards, manufs. of sails, artificial manures and fertilisers, engineering works, iron foundries, beet sugar factory, fruit and vegetable canning factories, corn mills, agric. implement manufs., and brewery. The streets are generally narrow and winding, and many of the houses and buildings are renowned for their architectural and historic interest. In the centre of a public promenade in the Walks is an octagonal chapel called the Red Mt. (1485), which was formerly the resort of pilgrims. The par. church of St. Margaret (1100) is a fine Gothic structure, with two towers at the W. end. St. Nicholas's chapel (1150) has many interesting memorials. All Saints' church is a beautiful and ant. cruciform building. Among other notable buildings are the Trinity Guildhall (tn. hall adjoining) with Renaissance porch, and W. Lynn church, the E. wall and window of which have been rebuilt. Clifton House, with a five-storied brick watch-tower, is one of the most interesting of the merchants' houses, dating from the sixteenth or early seventeenth century. This property has recently been purchased by the corporation for preservation. St. George's Hall, in King Street, the old hall of the guild of St. George, is another medieval monument comparable only with such buildings as the guildhalls of London, York, Norwich, and, of course, the Trinity Guildhall at Lynn itself. It had a long association with drama, extending from Shakespeare's day to the nineteenth century. The roof of this fine hall is undergoing repair, and when the whole of the building has been renovated, it is proposed to use it as an art centre.

On its landward side the tn. was formerly defended by a fosse, and there may still be seen remains of the old wall, including a handsome Gothic structure, known as the S. Gates. At the grammar school, the foundation of which dates back to Henry VIII., Eugene Aram was at one time usher. Fanny Burney and

Capt. George Vancouver were b. at Lynn. Pop. 25,500.

King's Medal for Service in the Cause of Freedom, silver medal instituted in 1945 to recognise services by civilians of foreign nationality, in furtherance of the interests of the Brit. Commonwealth in the allied cause during the Second World War. The obverse bears the king's crowned effigy. The reverse, designed and modelled by Mr. T. H. Paget, shows a knight in armour, fresh from the heat of combat, and with his lance broken, receiving refreshment from an allegorical female figure. A similar medal, for 'courage in the course of freedom' is awarded for deeds of gallantry, generally to members of resistance movements who helped Brit. servicemen to escape from the enemy.

King's Messenger, messenger or courier appointed by the Foreign Office to carry dispatches to its representatives in foreign caps. His badge is a silver greyhound.

Kingsmill Islands, see GILBERT ISLANDS.

King's Mountain: 1. Banking tn. of Cleveland co., N. Carolina, U.S.A., about 33 m. from Charlotte. It has cotton mills and is the seat of the Lincoln Academy. Pop. 6500. 2. Mt. ridge between N. and S. Carolina, where the Eng. and Loyalists under Ferguson were defeated by the Amer. backwoodsmen led by Campbell, Shelby, and others (1780). See L. C. Draper, *King's Mountain and its Heroes*, 1881; and E. McCrady, *South Carolina in the Revolution, 1775-80*, 1901.

King's Norton, S.W. suburb of Birmingham, England. There are manufs. of small arms, paper, screws, chocolate, cocoa, etc., and metal rolling mills. Bournville, the model vil., lies within the par. Pop. 70,000.

King's Own, see YORKSHIRE LIGHT INFANTRY.

King's Own Scottish Borderers, old 25th Foot, raised in Edinburg in 1689 by the third earl of Leven. As the 25th Foot it fought against the Highlanders of Claverhouse at Killiecrankie with such distinction that it was accorded the privilege of 'beating up at all times in the city without asking permission of the Lord Provost.' Named K. O. B. in 1805. The word Scottish was added afterwards. Prior to the First World War their chief battles and sieges were Namur, Minden, Chitral, Tirah and Paardeberg. In the First World War the 2nd battalion fought at Le Cateau and at Hill 60 (q.v.), while other battalions were in the fighting for Krithia and Achi Baba, in Gallipoli; at Romani, the passage of the Auja, and Gaza in Egypt; at Delville Wood (q.v.) and in the Lys battle (q.v.)—where one of the units was almost destroyed; at Kemmel Hill (q.v.), Cambrai (q.v.), St. Quentin, and Bapaume. In the Second World War the K. O. S. B. fought on the W. front, and in Burma. The regiment was also one of those which took part in the heroic battle of Arnhem (Sept. 1944). See H. Gunning, *Borderers in Battle: the War Story of the King's Own Scottish Borderers*, 1949.

Kingport, tn. in Tennessee, U.S.A., on the Holston R., in the S. Appalachian Mts.

Industrial products include cellulose acetate, iron, glass, and rayon, and there is a large book-printing works. Pop. 14,400.

King's Printers are those who are entitled to the special privilege of being allowed to print any, or even all, of the books in which the Crown enjoys copyright. They also print copies of private acts, proclamations, orders in council, etc. They were originally appointed by patent for the three kingdoms, England, Scotland, and Ireland, the custom dating back to the sixteenth century, the first king's printer probably having been Grafton in 1547. Another famous one was Eyre in 1767, the founder of the firm of Eyre & Spottiswoode, His Majesty's printers, which has sev. times received the patent. The same privilege is enjoyed by the Oxford Univ. Press and the Cambridge Univ. Press. There are also 'King's Printers and Controllers of Stationery' in Canada and gov. printers in all the other dominions and colonies of the empire.

King's Prize, see BISLEY.

King's Proctor represents the Crown (q.v.) in admiralty and matrimonial causes. The Treasury solicitor holds the office at the present day, and that functionary is generally a barrister. He intervenes to stop decrees nisi in divorce being made absolute on the ground that all the material facts have not been before the court, or where he detects collusion, or at any stage of divorce proceedings where it would be against morality to dissolve the marriage tie. He has the right to see letters, briefs, and all other documents in divorce cases, whether privileged or not (see CONFIDENTIALITY). The judge has power in any petition for dissolution or nullity suit to order all necessary papers to be sent to the K. P., that the latter may, under the direction of the attorney-general, instruct counsel to argue any point in the case which the judge thinks ought to be fully argued. The court may order the parties or any of them to pay the costs of intervention.

King's Regiment (Liverpool). Formerly the old 8th Foot, this regiment was raised in 1685 at the time of the duke of Monmouth's rebellion. It fought under William III. in Ireland and Flanders, under Marlborough at Blenheim, Ramillies, Oudenarde, and Malplaquet, and under George II. at Dettingen (1743). It served with distinction during the Indian mutiny, in the Afghan war (1878-79), and in Burma (1885-87). During the S. African war, 1899-1902, it was in the defence of Ladysmith. During the First World War it raised no fewer than forty-five battalions, which served in France, Flanders, Macedonia, N.W. Frontier of India, and Archangel. It also participated in the third Afghan war (1919). In the Second World War the K. R. took part in the fighting on the Caen Canal and Orne R. in the battle of Normandy, 1944. They also fought in Italy and in the Far E., as part of the Chindits. Formed part of the garrison of Leros (1943).

King's Regulations, the official regulations for the organisation of the army.

They comprise some 1850 articles or paragraphs dealing with the organisation or composition of the army; duties of commanders; duties of the general staff; appointment and promotion of officers; service, promotion, employment and discharge of soldiers; discipline and courts martial; training and education; ceremonial; uniforms and equipment; movement of troops, etc. They are arranged from time to time by army orders.

King's Remembrancer, see REMEMBRANCER.

King's Royal Rifle Corps, old 60th Foot, with which are allied the 60th Rifles of Canada and the 63rd Regiment 'Halifax Rifles' of Nova Scotia. The K. R. R. C. was raised in 1755 in N. America as the 60th Royal Amer. for service in the Seven Years war. It received its modern title in 1830. No Brit. regiment has a larger number of battle honours, a fact which is, however, partly due to the fact that until shortly after the First World War it was a four-battalion regiment. The K. R. R. C. fought at Quebec (1759), Martinique (1762), in all the battles of the Peninsular campaign, at Moodtan and Gujerat, in S. Africa (1851-53), Delhi (1857), at the storming of the Taku forts, in S. Africa again in 1879, at Ahmad Khel, Kandahar (1880), at Tel-el-Kebir, Chitral, the defence of Ladysmith and the relief of Ladysmith in the S. African war. In the First World War the regiment was expanded to nearly thirty battalions. The 1st and 2nd (Regular) battalions were part of the original B.E.F. (q.v.), and fought in all the great battles of 1914, the first battalion losing, at Ypres, among its officers, Prince Maurice of Battenberg. Other battles in which the K. R. R. C. took part were Festubert (1915), Hill 60 (q.v.), Loos (q.v.), the Somme (1916), Lombardzyde (1917), where one of its battalions won special recognition, Caporetto (q.v.) in Italy, the Somme and Lys battles of 1918, and the fighting around Cambrai and St. Quentin. The king is colonel-in-chief of the regiment. In the Second World War the K. R. R. C. took part in most of the great battles on the W. front and in Italy. One battalion was part of the heroic garrison of Calais in 1940.

King's School. Name of sev. Eng. public schools. Canterbury, originating in Augustine's foundation of the seventh century, it was refounded by Henry VIII. in 1541. Norman, fifteenth- and sixteenth-century buildings, still exist. Linacre and Harvey were pupils here, and here are closed scholarships to Oxford and Cambridge. See Woodruff and Cape. *Schola Regia Cantuariensis*, 1908. There are also schools with the same name at Macclesfield (founded 1502); Bruton (1519); Chester (1541); Worcester (1541); Ely (1543); and Rochester (1650).

Kingston, William Henry Giles (1814-1880), Eng. writer, b. in London, son of a merchant who lived in Oporto. Here he wrote articles for the Portuguese newspapers, which were instrumental in the conclusion of a commercial treaty between England and Portugal. His first success came with his story for boys, *Peter*

the Whaler (1851). He was encouraged by this success to retire from business and devote himself to tales of adventure. He soon became one of the most popular authors of adventure stories, and within thirty years wrote some 130 tales of adventure for boys. Among them were *From Powder Monkey to Admiral*, which ran as a serial in the *Boy's Own Paper*. Others were *The Three Midshipmen* (1862); *The Three Lieutenants* (1871); *The Three Commanders* (1875); and *The Three Admirals* (1877). He also conducted sev. papers, including *The Colonist*, and *Colonial Magazine*, and *East India Review*. He was also interested in emigration, volunteering, and various philanthropic schemes. For his services in negotiating the treaty mentioned above, he received a Portuguese knighthood, and for his literary labours a gov. pension.

Kingston: 1. Seaport and the cap. of Jamaica, W. Indies, situated in the S.E. of the is. It has one of the finest natural harbours in the world; the area of the harbour is 16 sq. m., of which about 7 sq. m. have a depth of from seven to ten fathoms. It is beautifully situated on regularly sloping ground on the N. shores of the harbour, and is one of the is.'s tourist resorts. The streets were laid out by compass, those at right angles to the shore running N. and S., those parallel to the shore-line running E. and W., but flood waters have worn the N. and S. streets below the general level. At the intersection of King and Queen Streets there was formerly a parade ground and mkt. place, but this has been converted into a garden—Victoria Park, from the statue of Queen Victoria in the public square to the S. K. was not the first place chosen for the commercial cap. Port Royal flourished as such until it was destroyed by an earthquake in 1692, when a law was passed declaring K. to be the 'chief seat of trade and head port of entry.' From that time the prosperity of K. was assured. It was swept by a great fire in 1780, but soon recovered. A disastrous earthquake occurred in Jan. 1907, when nearly 2000 lives were lost. Poverty and unemployment led to serious riots in May-June 1935, and damage was done to corporation and other property. The Jamaican Gov. railway links it with Montego Bay and Spanish Town. Pop. 80,000. 2. City of Ontario, Canada; cap. of Frontenac co., on the N.E. of Lake Ontario at the mouth of the Cataraqui R., and 160 m. E. of Toronto. Called the Limestone City from many public and private buildings of that material. It was incorporated as a city in 1838 and, in 1841, became for a time the cap. of Canada. In the same year was founded Queen's Univ.—the third largest in all Canada. Besides the univ., it has the Royal Military College of Canada, a fine collegiate institute and vocational school, and good public or primary schools. Has, also, an excellent public library and good hospitals. There are two cathedrals and many churches. Its industries include locomotives, textiles, shipbuilding, biscuits, and chemicals. It is on the Canadian National (main line)

and Canadian Pacific railways. Has a good harbour, and is an important port of call for Great Lakes freight and passenger services. K. was founded in 1673 by Count Frontenac, governor of New France. Captured by the Brit. in 1758 and, in 1783, settled by United Empire Loyalists. Pop. 25,000. J. City of New York, U.S.A., and co. seat of Ulster co., situated on the Hudson R. Its chief industry is the manu. of tobacco and cigars; boat-building, cement works, brickyards, are other industries, and stone is quarried in the neighbourhood. It has trade in coal, lumber, and grain. Pop. 28,600. 4. Tn. of Pennsylvania, U.S.A., in Luzerne co., situated on the r. b. of the Susquehanna R. The manu. are silk goods and hosiery, and there are railway works and machine factories. Coal is extensively mined in the neighbourhood. It is the seat of the Wyoming Seminary. Pop. 20,700.

Kingston-upon-Hull, see **HULL**.

Kingston-upon-Thames, royal and municipal bor. and mkt. tn. of Surrey, England, 11 m. S.W. of Charing Cross. It is a residential suburb, possessing fine promenades and public gardens on the riv. bank. There are large mts. of gardens, and in the tn. flour mills, breweries, oil works, and brickyards. K. is historically interesting, sev. Saxon kings were crowned here, and the coronation stone, which is supposed to have been used for the throne, now stands in the market place. The Saturday market was granted by James I., and the Wednesday market by Charles II. A fair, held in Nov., was granted by Henry III. King George VI., with the queen, in Oct. 1948, opened the new power station at K., the first of twenty-five planned by the Brit. electricity authority for the whole country. Pop. 39,000.

Kingstown: 1. Formerly **Dunlary**, and now officially **Dun Laoghaire**, a tn. and seaport of Dublin, Eire situated on Dublin Bay, 6 m. from the city. It is the mail-packet station for communication with Holyhead, and has a royal harbour, which may be entered by vessels drawing 24 ft. at any state of the tide. K. is a popular holiday resort, possessing three yacht clubs; it is a fishing centre, and has an export trade in cattle. Pop. 21,000. 2. Seaport and cap. of St. Vincent, W. Indies, situated on the S.W. coast. It has considerable export trade in spices, sugar, cocoa, spirits etc. Pop. 6000.

Kingsway, thoroughfare in London, England, which connects Holborn with the Strand. It was so called in compliment to the late King Edward VII. who opened it on Oct. 18, 1905. It runs from High Holborn, opposite Southampton Row to Aldwych, and is 1800 ft. long and about 110 ft. wide. A tunnel for tramways runs below K., connecting Theobalds Road with the Thames embankment.

Kingswinford, par. and vil. of Staffordshire, England, 3 m. W. of Dudley with coal mines and manu. of nails, bricks, laths, etc. Pop. 23,000.

Kingswood, par. and vil. of Gloucester, England, 3 m. from Bristol, with manu. of boots, elastic, pins, etc.,

also woollen and silk industries. There are interesting abbey ruins in the vicinity. Pop. 18,000.

Kingswood School, Bath, Eng. school founded by John Wesley (q.v.) in 1748, originally for the sons of Methodist ministers. Wesley preached his first open-air sermon at the vil. of Kingswood (q.v.).

King's Yellow, yellow pigment made from the mineral orpiment or arsenic trisulphide, As₂S₃.

Kingtehoen, tn. of China in the prov. of Kiangsi. It stands on the R. Chang, near Fulaughien. Once famed for its porcelain, which was made here before A.D. 1000 but the industry has recently declined. The Kauling Hills in the dist. have given the name to kaolin (q.v.) or china clay, used in the porcelain manu. Pop. 600,000.

Kington, tn. of Hereford, England, situated on the Arrow. It has laneyards and malt-houses, iron foundries, and nail factories. Pop. 2000.

Kingussie, tn. of Inverness-shire, Scotland, 55 m. N.N.W. of Perth. It is a favourite summer resort. Pop. 2300.

King William's Town, locally called **Kings**, a tn. in Cape Prov., S. Africa, situated on the Buffalo R. in the midst of an agric. dist.; forests of valuable timber are found near by. It is a busy trade centre and there are manu. of wagons, furniture, jams, sweets, leather, candles, soap, etc. Pop. 7000.

Kinlochleven, tn. at the head of Loch Leven, Argyll, Scotland, is of recent growth and owes its existence to the development of the water-power of the dist., and the estab. of the works of the Brit. Aluminium Company. See **LIVEN**.

Kinloss, vil. of Ontario, Canada, situated in Bruce co., close to Kincardine.

Kinmont Willie see **ARMSTRONG, WILLIAM**.

Kinnear, Norman Boyd (b. 1882), Brit. ornithologist, was the son of an Edinburgh architect, and was educated at Edinburgh Academy and Trinity College, Glenalmond. From 1905 to 1907 he was an assistant at the Royal Scottish Museum, and for the next twelve years curator of the Bombay Natural Hist. Museum, as well as assistant editor of the Bombay Natural Hist. Society jour. In 1920 he entered the natural hist. dept. of the Brit. Museum, in 1927 becoming deputy keeper in charge of birds. He became keeper of zoology in 1945, and two years later director of the natural hist. dept. He has pub. a number of papers on ornithology.

Kinneir, Sir John Macdonald (1782-1830), Scottish traveller and diplomatist, b. at Carnden, Linlithgow. In 1804 he was appointed ensign in the Madras Infantry, and became captain in 1815. He made numerous journeys in Persia, and also travelled through Armenia and Kurdistan, publishing his results in a *Narrative of Travels in Asia Minor, Armenia, and Kurdistan in 1813-14* (1818). He was envoy to Persia (1824-30), and took part in the hostilities with Russia.

Kinning Park, dist. of Lanarkshire

Scotland, in the par. of Govan, situated on the Clyde. It was a country resort for the Glasgow citizens until 1860, when the extension of Glasgow harbour and docks caused it to become a residential part.

Kino, astringent drug obtained from certain trees on the W. coast of Africa, in India, and in Ceylon. The substance recognised as K. at the present day is the product of the tree *Pterocarpus Marsupium*. The properties of the drug are due to the presence of kino-tannic acid and pyrocatechin. It is a useful astringent, and was formerly used as a gargle.

Kinross of Glaselune, John Blair Balfour, first Baron (1837-1905), lord president of the court of session in Scotland, b. at Clackmannan. He was called to the Scottish Bar in 1861, and rose to be the foremost advocate in Scotland. He was appointed solicitor-general for Scotland in 1880, and in 1881 became lord advocate, again holding the office in 1886 and from 1892 to 1895, and during the last period he took an active part in carrying through the House of Commons the Local Government Act for Scotland, 1894. In 1899 he succeeded James P. Bannerman as lord president of the court of session, and in 1902 was raised to the peerage.

Kinross: 1. Inland co. of Scotland, with an area of 87 sq. m. It is bounded on the N. and W. by Perthshire, on the S. and E. by Fifehire. Its surface is well cultivated—barley and oats are grown, and cattle and sheep are reared. In the S.E. is Loch Leven, which is drained by the R. Leven; the loch is noted for its many historical associations, especially with Mary Queen of Scots. In the N. and W. are the Ochil Hills, and eastward are the Lomond heights. The manufs. of the co. are linen, plaids, and tartans; brewing is also carried on. Cap. K. Pop. 8100. 2. Cap. of Kinross-shire, Scotland, situated 8½ m. from Dunfermline. There are sev. woollen mills, and the manuf. of linen is carried on. The tn. is ant., and has interesting ruins; it was the prin. residence of Alexander III. Pop. 2600.

Kinsale, seaport tn. of co. Cork, Eire, situated on K. harbour, 14 m. S.W. of Cork. It is built partly on the slopes of Compass Hill, and the streets are narrow and steep. It is frequented by summer visitors, and is the headquarters of the S. of Ireland Fishing Company. Pop. 2100.

Kinsale Harbour, estuary of the R. Bandon in co. Cork, Ireland. It has an average width of half a mile, and extends 2 m. from the tn. of Kinsale. Off the Old Head of Kinsale, W. of the harbour, the *Lusitania* was sunk, 1915.

Kinsen, see CHIEMULPO.

Kinshaking, see CHUNGSHA.

Kinston, tn. of N. Carolina, U.S.A., and the co. seat of Lenoir co. It is situated on the Nense R., about 26 m. S.E. of Goldsboro by rail.

Kintyre, or **Cantire**, peninsular dist. of Argyllshire, Scotland, situated between the firth of Clyde and the Atlantic, and joined to the Argyll mainland by the isthmus of Tarbert. It is 43 m. long, with an average width of 8½ m.; the prin. tn. is Campbeltown. The inhabs. are engaged

in the fisheries, agriculture, and stone quarrying. The Mull of Kintyre is a headland at the S. extremity; a lighthouse is placed here with a fixed light visible 24 m. distant. See A. McKerral, *Kintyre in the Seventeenth Century*, 1945.

Kinver Edge, Staffordshire, 5 m. W. of Stourbridge and 5 m. N. of Kidderminster. 198 ac. of high heath and woodland with fine views, including an early Iron Age camp and the Holy Austin and Nanny's Rocks. There are some interesting rock dwellings on the property. Presented in 1917 as a memorial to Mr. Grosvenor Lee by his children.

Kioga, see CHOGA.

Kios, see CHIOS.

Kioto, see KYOTO.

Kiowas, tribe of N. Amer. Indians which, when the white men first visited the Great Plains, inhabited the region round the head of the Platte R. By the Medicine Lodge Treaty in 1867 they agreed to be assigned to their present reservation in Oklahoma. They number about 1000.

Kipling, John Lockwood (1837-1911), Eng. author and artist, and father of the celebrated novelist, Rudyard K., b. at Pickering. He was educated at Woodhouse Grove, and entered the Indian Civil Service in 1867. He was architectural sculptor at the Bombay school of art, 1865-75; principal of the Mayo school of art and curator of the central museum at Lahore 1875-93. He pub. *Beast and Man in India* (1901), a collection of Hindu and Mohammedan folk-tales, and also executed illustrations for some of his son's books, viz. *Kim*, the *Jungle Book*, and the *Second Jungle Book*.

Kipling, Joseph Rudyard (1865-1936), Eng. novelist and poet, b. in Bombay, son of J. L. K. and Alice Macdonald (d. 1910). He was educated at the United Services College, Westward Ho!, N. Devonshire. A somewhat highly coloured picture of his life there is presented in *Stalky and Co.* (1899). At the age of seventeen he returned to India and became sub-editor of the *Lahore Civil and Military Gazette*. In 1886 appeared his *Departmental Ditties*, a vol. of light satirical verse; in the following year, *Plain Tales from the Hills* (1887), and during the next two years *Soldiers Three*, *The Story of the Gadsbys*, *In Black and White*, *Under the Deodars*, *The Phantom Ruckshaw*, and *Wee Willie Winkie*. These tales quickly became famous in India, and it was recognised that a new force had come into the literary world. During the years 1887 to 1889 K. travelled through India, China, Japan, and America, and thence to England, where he arrived to find himself famous. His travels also took him to Africa during the Boer war, and to Australasia. His travel sketches were pub. in 1899 under the title of *From Sea to Sea*. In 1892 K. married Miss C. S. Balestier, the sister of W. Balestier, in conjunction with whom he wrote *The Naulahku* (1891). *Life's Handicap* was pub. in 1890, and in 1891 his first novel appeared, *The Light that Failed*, which was afterwards dramatised in 1905. *Barack Room Ballads*, verse, was pub. in 1896

and also in the same year *Many Inventions*. In 1894 a new vein was opened up by his *Jungle Book*, followed in 1895 by the *Second Jungle Book*. These masterly stories of animal life are considered by many K.'s best work. *The Seven Seas*, verse, was pub. in 1896, and *Captain's Courageous* in 1897, followed by *The Day's Work* (1898); *A Fleet in Being* (1898); *Stalky and Co.* (1899); *Kim* (1901); and *Just So Stories for Little Children* (1902). Another book of verse, *The Five Nations*, appeared in 1903, and two collections of stories, *Tales and Discoveries* in 1904, and *Actions and Reactions* in 1909. *Puck of Pook's Hill*, stories which vitalise the

I. N. A.

RUDYARD KIPLING

hist. of England, came out in 1906, and was followed by a sequel, *Rewards and Fairies*, in 1910. In 1911 K. pub. a *History of England*, written in collaboration with C. L. L. Fletcher. *Songs from Books* was pub. in 1913, and in that year also a play, *The Harbour Watch*. During the First World War K. wrote *The New Armies in Framing* (1914); *Pringles of the Fleet* (1915); *Sea Warfare* (1916); *A Diversity of Creatures* (1917), containing only two war stories, and poems, *The Years Between* (1918). K.'s son, who served with the Irish Guards, was killed at Loos, and the achievements of that regiment were commemorated by K. in *The Irish Guards in the Great War* (1923), a compilation from diaries and regimental papers. His collected verse, *Inclusive Verse*, was pub. in 1919, and after that time he pub. *Letters of Travel* (1920); *Land and Sea Tales for Guides and Scouts* (1923); *Debts and Credits* (1926); *A Book of Words* (1928); *Thy Servant, a Dog* (1930); *Limits and Renewals* (fourteen stories with introductory and supplementary sum-

maries in verse, 1932); *Souvenirs of France* (1933); *The King and the Sea* (1935); and *Something of Myself, for my Friends, known and unknown* (1936).

K.'s best work is in his short stories, and his early collection, *Life's Handicap*, is perhaps his best book. His sphere of interest was the Brit. Empire in all its manifestations, from the big drums to the humble outposts of empire in out-of-the-way places. It is the man of action that K. loved, be he engine-driver, empire-builder, or polo-player. His sphere of preference for action over the introspections of the individual, so often the subject of the modern novel, that distinguished him from his contemporaries. Some critics argue that K. portrayed only types, and not characters, but if this is true his type is always embodied in an individual; for K. was no lover of crowds, believing man to be a solitary who must work out his own salvation. K. was a romantic writer, but his romanticism is everywhere rooted in realism. In his best stories there is nothing vague or uncertain, although occasionally he gives way to a didacticism. That K. has a permanent place in Eng. literature seems certain, especially for his earlier prose and verse. But his verse is the more difficult to estimate because apart from the changing standards of poetry, K.'s own standards changed from the more youthful, confident, clarion note to at least two stages of maturity, in which latter an element of mysticism is evident. One deep source of his great popularity was a mastery of the native rhythms of Eng., which appealed to the humble ear by its directness, and both his poetry and prose stories are characterised by a remarkably vivid imagination, revealing a skill in narrative and description which are well matched by a rare power of intensifying character. The prophetic sense is a quality in much of K.'s poetry. It probably accounts for much of his influence. Impregnated as he was with the spirit of the national consciousness and the racial temperament, K. was obsessed with the conviction of Britain's noble destiny, a destiny in which the inspiring motives were, not power or domination, but moral obligations and service. In his mind's eye was a compelling vision of external forces with puny man living dangerously and valiantly amidst such forces. K. disregarded intellectual subtleties, not because he was incapable of them, but rather from an intuitive dislike based on a good understanding of their values. Mr. T. S. Eliot makes the distinction that K.'s verse ranks as 'great verse,' and not as 'great poetry,' but he does not define the latter, nor does he show how K. did not achieve it. It has been frequently objected that K.'s poetry is careless, even deficient, of beauty, and subordinates this element to the clamour of 'politics.' But the special colour-beauty of a poem of Keats is not the ally kind of poetic beauty, and to speak only of the clamour of politics is to misconceive politics generally, besides ignoring the intense sensations with which K. contemplated the role of England in the scheme of things. There is a mystic

poetry in his stories and it harmonises with the mystic realism of his verse and really what his 'politics' amounts to is a preference for ancestral instincts to the mechanical spirit which tends to sap the race of vitality.

In recognition of his work K received many honours. In 1907 he was awarded the Nobel prize and in 1926 the gold medal of the Royal Society of Literature. He was also awarded honorary degrees at the univs of Oxford Cambridge Durham, Edinburgh Paris Strasbourg and Athens. He was also a doctor of philosophy at Athens and from 1922 to 1925 he was rector of the univ of St Andrews. Elected in 1933 a foreign associate member of the Académie des Sciences et Politiques an honour then shared only by King Albert of Belgium and Cardinal Mercier. K died in the Middlesex Hospital on Jan 18 1936 after an operation.

Martinell, *A Bibliography of the Works of Rudyard Kipling* 1923, E. Shank, *Rudyard Kipling a Study in Literature and Political Ideas*, 1940, T. S. Lilot, *A Choice of Kipling's Verse*, 1942, and R. Croft Cooke, *Rudyard Kipling* 1918.

Kippis, Andrew (1725-96). Nonconformist minister b at Nottingham was educated for the ministry at Northampton and in 1753 he became minister of a church in Westminster. He wrote for sev magazines, founded the *Annual Register* wrote sev biographies among them that of Dr Doddridge under whom he had studied and the *Biographia Britannica* 2nd ed, but had completed only 3 vols before he d.

Kipp's Apparatus, ingenious and very useful device for obtaining intermittent supplies of various gases in chemical laboratories. The apparatus consists of three parts (see diagram) a large central bulb, A, which is connected with a receptacle, B, and a kind of large thistle funnel, C, which passes through A into B. The joint between A and B is made airtight by vaseline and the opening between A and B is narrow so that when C is inserted there is only a little space between the two. Sticks of ferrous sulphide are placed in A, sticks being used so that the substance will not fall through the narrow opening into B. Sufficient hydrochloric acid is poured in at C to fill the vessel B and overflow into A so that it just covers the sulphide. Hydrogen sulphide is immediately evolved $\text{FeS} + 2\text{HCl} = \text{FeCl}_2 + \text{H}_2\text{S}$. The gas is led out when required at the tap. When sufficient gas has been used, the tap is closed, but the acid is still covering the ferrous sulphide so that hydrogen sulphide is still being evolved. Since the gas cannot escape the pressure in A increases and in time is sufficiently great to force all the acid out of A into the top part of C. When the tap is opened again the gas rushes out, the pressure inside A becomes atmospheric, so that the acid falls from C into B, and hence into A. Thus, so long as the tap is open the acid

covers the ferrous sulphide, and the gas is generated. The apparatus is named after its inventor P. J. Kipp a Dutch chemist 1808-64.

KIPP'S APPARATUS

Kipu, see QUIU
Kiran, see PIRAN

Kircher, Athanasius. (c. 1601-80). German scholar was prof at six Jesuit colleges in his native country and from 1635 to 1643 lectured on mathematics at the Collegio Romano in Rome. His *Œdipus Ægyptiacus* (1652) promoted the study of Egyptian hieroglyphics and his *Prodromus Coptus* (1636) of the Coptic tongue. A wide knowledge of ancient and modern Italy is revealed by his *Itanium* (1661), whilst those hasty judgments and inaccuracies of which he was often guilty are patent in his *China Illustrata* (1667).

Kirchheim 1. Town in Württemberg-Baden, Germany, 16 m S of Stuttgart. It manufactures textile fabrics. Pop. 8000.
2. Vil of Baden, Germany, close to Heidelberg. Pop. 1000.

Kirchhoff, Gustav Robert (1824-87). German physicist graduated in 1846 from the univ of his native Königsberg. In 1847 he held the chair of physics successively at Breslau (appointed in 1850), Heidelberg (1854) and Berlin (1875). In collaboration with von Bunsen he evolved the theory and practice of spectrum analysis, and indicated how the prism may be used to establish the chemical composition of celestial bodies. His *Vorlesungen über mathematische Physik* (1876) contains an original treatment of dynamics.

Kirchhoff's Laws, see ELECTRICITY AND MAGNETISM

Kirchhörde, vil in Westphalia, Germany, about 4 m S of Dortmund. Coal-mining and the manu of tin are carried on. Pop. 15,000.

Kirghizia, or Kirghizstan, republic in

the E. of Russian central Asia, situated on the frontier between the U.S.S.R. and Sinkiang. The Kirghiz are a once nomadic people belonging to the Mongolian-Tartar family and divided into Kara-Kirghiz and Kirghiz Kazaks. The former recognised Russian suzerainty in 1864 and the latter in 1819. K. became an autonomous republic in 1926, and was elevated to the status of a union republic in 1936.

The inhab. are Kirghiz (who constitute about two-thirds of the pop.), Russians, Ukrainians, Uzbeks, Uigurs, and Dzungars, the last being of Chinese-Muslim origin.

The Kara-Kirghiz dwell in the highlands between the R. Issik-Kul and the Kuen-Lun, and from the E. borders of Ferghana across to the Muzart Mts. They number in all about 400,000, and are divided into two main sections, the Sol in the W. and the On in the E. The Kirghiz Kazaks inhabit the steppes between the Amu-Darya and the Syr-Darya. Both tribes are nominally Sunnites, but in reality they believe in an evil spirit, Shaitan, besides a good spirit. Physically, they resemble the Mongolians, but their speech is pure Turki. They breed fat-tailed sheep, hardy horses, camels, goats and oxen, and cultivate wheat and millet, sugar beet, fruit, and vines in the foothills and irrigated valleys. The region has large deposits of coal, oil, gold, lead, antimony, quicksilver, sulphur, and limestone. The country has been developed considerably since the First World War by the extension of land under cultivation, irrigation, and the estab. of good production and textile industries. There is fishing on Lake Issik-Kul. K. supplies coal to almost the whole of Central Asia. Frunze (formerly Pishpek), the cap., is a well-built city (pop. 93,000), with many fine buildings. Pop. 1,500,000.

Kiria, see KERIVA.

Kirin, or Kirin, prov. of Manchuria, to the N. of Korea, having an area of about 105,000 sq. m. The country itself is fertile even in the mountainous parts; millet, wheat, barley, potatoes, and opium being the chief products. Pop. 5,200,000.

Kirin, cap. of the prov. of the same name, situated on the Sungari, 215 m. N.E. of Mukden. A railway connects it with Changchun. Pop. 6,981,000.

Kirjathaim: 1. City of Reuben, taken from the Amorite king, Sihon (Num. xxxii.). The site is quite uncertain. 2. Undisputed Levite city in Naphtali, called Kartan in Joshua xxi.

Kirjath Arba, see IERBROV.

Kirjath-jearim, tn. in Palestine, situated in Judah, and identified by some with 'Erma,' and near to Bethshemesh. Here the ark rested until taken up to Jerusalem.

Kirjath-sopher, according to Judges i. 11, was the older name of the tn. which was named by the Hebs. Debir.

Kirk, Sir John (1832-1922), Brit. administrator and naturalist, b. in Scotland. He was educated for the medical profession and, after serving as a doctor in the Crimean war, went out as physician and naturalist with Livingstone's second exploring expedition (1868), and proved an unqualified success. His African ex-

periences led to his appointment as vice-consul at Zanzibar (1866), and in 1873 he became consul. It was in this capacity that he greatly distinguished himself by securing the extinction of the slave trade in the dominions of the sultan of Zanzibar. The suppression of the maritime slave trade, the first major step towards abolition, was, however, followed by the marching of slave gangs by land, and K. appealed to the sultan, Barghashi, who had previously, under threat of a naval blockade, signed a treaty prohibiting the shipment of slaves from all ports on the mainland. This time, so great was K.'s personal influence with the sultan that the latter needed no threat, and of his own volition issued proclamations prohibiting throughout his dominions both the rounding-up of slaves and their transit by land. During the twenty years of his work in Zanzibar K.'s life and the hist. of Zanzibar are almost synonymous. But in 1884 the notorious Carl Peters gained access to E. Africa in disguise, and under a false name obtained treaties from native rulers signing away their ter. to a Ger. colonisation society, and in 1885 a telegram to Zanzibar was the first indication to K. and the sultan that Germany was laying claim to any land in Zanzibar. It was in vain that K. and Barghashi resisted, for the Ger. Gov. sent a fleet to Zanzibar with a threat of bombardment, and the Brit. Gov. weakly advised the sultan to submit. This ended K.'s work in Zanzibar, for the sultan lost most of the mainland portion of his ter., and K. retired from the consular service in 1887, though he subsequently represented the Brit. Gov. at various African conferences. He was one of the first four white men to behold Lake Nyasa (Sept. 16, 1859), and his name is perpetuated in Nyasaland in the Kirk Range, W. of the Shire R. Received the gold medal of the Royal Geographical Society in 1882. His botanical collections laid the foundation of the *Flora of Tropical Africa*, which was pub. under gov. auspices, 1868-1917. See Sir R. Comland, *The Exploitation of East Africa, 1856-1890*, 1939, which is in effect a study of Kirk's career.

Kirk-Agatch (Izmir), tn. of Asiatic Turkey, 52 m. N.E. of Smyrna. It manufs. cotton goods. Pop. 20,000.

Kirkburton, tn. in the W. Riding of Yorkshire, England, about 6 m. S.E. of Huddersfield. It manufs. woollen goods, and coal mining is carried on. Pop. 18,700.

Kirkby-in-Ashfield, par. and vil. in the co. of Nottinghamshire, England, 12 m. N.E. of Nottingham. In the vicinity are coal mines. Pop. 18,500.

Kirkby Lonsdale, mrkt. tn. in the co. of Westmorland, England, on the R. Lune, 12 m. S.E. of Kenil. Pop. 1400.

Kirkby Moorside, mrkt. tn. in the N. Riding of Yorkshire, England, on the R. Dove, 6 m. W. of Pickering. It manufs. iron and brass ware and agric. implements. Pop. 5250.

Kirkby Stephen, mrkt. tn. in Westmorland, England, on the R. Eden, 10 m. S.E. of Appleby. Copper, lead, and iron

are found in the vicinity. Pop. about 4000.

Kirkcaldy, or **Kirkaldy**, of Grange, Sir William (c. 1520-73), Scottish soldier and politician, was early won over to the Protestant party, and having assisted in the murder of Cardinal Beaton (1546), took refuge in St. Andrews Castle, and, on its surrender to the Fr., became a prisoner of the enemy and was confined in Mont St. Michel, Normandy. Soon, however, he made good his escape, and after serving with distinction in the Fr. Army, returned to Scotland in 1557. At home he proved zealous in the cause of reformation, was implicated in the murder of Rizzio, and having joined the nobles against Bothwell, received the surrender of the queen at Carberry Hill (1567). Her defeat at Langside in the same year was largely the outcome of his able strategy; but henceforward, prevailed on, it seems, by the plausible arguments of the subtle Maitland of Lethington, he became Queen Mary's stalwart champion. As governor of Edinburgh Castle he proceeded to fortify it for the royalist faction. In 1572 he broke off negotiations with the Regent Morton, preferring to stand 'stiff upon his honesty' and not betray his friends. He surrendered on June 3, 1573, and was executed at the cross of Edinburgh.

Kirkcaldy, seaport tn. of Fifeshire, Scotland, situated on the Firth of Forth, 15 m. N. of Edinburgh. The tn. itself has been called the 'Lang Toun,' its main street being about 1/2 m. long. This tn. is the centre of jute-manuf., and is also engaged in bleaching, linen-manuf., engineering, iron-founding, and the manuf. of pottery. It was created a royal burgh about the year 1450, and, with Kinghorn, Burntisland, and Dysart, sends one member to Parliament. It was the bp. of Adam Smith. Pop. 46,600.

Kirkcudbright: 1. Maritime co. in the S. of Scotland. The coast is rocky and much indented, containing caves originally used by smugglers. The surface of the co. is mountainous, the chief height being Mt. Merrick (2764 ft.). The chief rivers are the Dee, Urr, and Fleet. Granite is quarried in the co., and the pasturage is good, the rearing of cattle—especially of the polled Galloway breed—forming one of the industries. K. is noted for its honey. The chief tns. are Castle Douglas, Dalbeattie, and Kirkcudbright. Area 899 sq. m. Pop. 33,900. 2. Co. tn. of Kirkcudbrightshire, Scotland, situated on the l. b. of the Dee. It has the best harbour in the S. of Scotland, and contains an old church and sev. other ant. structures. Pop. 2800.

Kirkdale Cave, cavern in a limestone rock in the N. Riding of Yorkshire, about 1 1/2 m. W.S.W. of Kirby-Moorside. This cave, which was discovered in 1821, contains the fossil remains of animals, among which are the hyæna, tiger, and hippopotamus.

Kirkenes, vil. in Finnmark, Norway, near the Finnish border, on the shore of Vasanget Fjord. It was the main Ger. base for submarine attacks on allied convoys to Murmansk in the Second World War. Captured by the Russians in Oct. 1944.

Kirkham, mrkt. tn. in the co. of Lancashire, England, 8 m. W.N.W. of Preston. It is engaged in the cotton and linen manuf. Pop. 4400.

Kirkintilloch, tn. in the co. of Dumbarton, Scotland, 7 m. N.E. of Glasgow. It has coal mines and iron foundries, and manufs. chemicals. Pop. 13,800.

Kirklarrell, formerly **Kirk-Killiss**, tn. of European Turkey, about 33 m. E. of Adrianople, in the vilayet of the same name. For a time after the First World War it passed into Gk. possession, but was restored to Turkey by the treaty of Lausanne, 1923. Near this tn. was fought the first battle between the Bulgarian and Turkish forces during the Balkan war of 1912-13 (q.v.). It is an agric. centre, and trades in coal, wines, flour, hides, and tobacco. Pop. (vilayet) 178,300; (tn.) 20,700.

Kirkless, vil. in the W. Riding of Yorkshire, England, 4 m. N.E. of Huddersfield. Here are situated the ruins of a Cistercian nunnery of the twelfth century.

Kirkley, vil. on the coast of Suffolk, England, forming a suburb of Lowestoft.

Kirkliston, vil. in the co. of W. Lothian and Midlothian, Scotland, on the lt. Almond, 10 m. W. of Edinburgh. It has distilleries, shale mines, and a malt extract factory.

Kirkmaiden, par. in Wigtownshire, Scotland, situated on Luce Bay and in the peninsula of Galloway. It is the most southerly point of Scotland, and is mentioned as **Maldenkirke** in the expression signifying from extreme S. to extreme N. of the country, i.e. 'from Maldenkirke to John o' Groat's.' Pop. 1550.

Kirk o' Shotts, see SHOTTS.

Kirkoswald, vil. in the co. of Ayrshire, Scotland, 4 m. S.W. of Maybole. This vil. contains the tombs of the ancestors of the poet Burns, who himself resided here for a year.

Kirk Session, see PRESBYTERIANISM.

Kirkstall, vil. in the W. Riding of the co. of Yorkshire, England, 3 m. N.W. of Leeds. Here are situated the ruins of Kirkstall Abbey, built in the twelfth century.

Kirkville, city in the co. of Adair, Missouri, U.S.A. It is situated on two railways, manufs. iron goods, and has a trade in agric. produce. Pop. 10,100.

Kirkton, see CREDDON.

Kirkuk, tn. of Iraq, in the vilayet of the same name, 115 m. N. of Bagdad. It has valuable oil wells, and a trade in naphtha and salt. Its mosque is said to contain Daniel's tomb. Pop. of tn. 92,000 (most of whom are of the Sunni religion); vilayet 262,200.

Kirkwall, seaport tn. and the cap. of Orkney, Scotland, situated on the N.E. coast of Pomona or Mainland. The chief buildings of interest are the cathedral of St. Magnus, dating from medieval times, the earl's castle, and bishop's palace. K. possesses an excellent harbour. Distilling and boat-building are engaged in, and the tn. is important for shipping and fisheries. Pop. 3500.

Kirkwood, Daniel (1814-95), Amer. astronomer, was prof. of mathematics at

Delaware College (1851), and in 1856 accepted a similar post in the univ. of Indiana. He asserted that the unequal distribution of asteroids was due to the attractive force of Jupiter. K. also pointed out that the magnitude of the interval between any two planets was incompatible with Laplace's nebular hypothesis. Between 1867 and 1888 he pub. *Comets and Meteors and Asteroids*.

Kirman, see KILIMAN.

Kirmanshah, see KERMANSHAH.

Kirn: 1. Tn. in the Rhineland, Germany, 40 m. S.W. of Koblenz, on the Nahe. It is engaged in the woollen manuf. Pop. 8,000. 2. Watering-place in the co. of Argyllshire, Scotland, on the frith of Clyde, adjacent to Dumoon. Pop. 3300.

Kirov (formerly Viatka), cap. of the K. Region of the R.S.F.S.R., on the Viatka, 200 m. N. of Kazan. It has a trade in leather and sheepskins. Pop. (tn.) 143,100; (region) 2,200,000.

Kirovabad, tn. in the Azerbaijan S.S.R. near the railway from Tiflis to the Caspian Sea. There are cotton mills. Pop. 98,700.

Kirovograd, formerly Elizavetgrad or Yelizavetgrad, and t.l. Zinoviesk, cap. of the K. Region of the Ukrainian S.S.R. on the R. Ingul, 135 m. N. of Kherson. It is on the Kharkov-Odessa railway, and is the centre of a textile dist. where fruit, especially melons and tobacco are grown. It has (1940) an important local trade in goods imported from Odessa. Many remains of antiquity are found in the neighbourhood. It was renamed after Zinoviev (q.v.) and then changed to its present name. Pop. (tn.) 100,300; (region) 600,000,000.

Kirriemuir, par. and mrkt. tn. of Angus, Scotland, stands on the Gowrie Burn, 5in. W.N.W. of Forfar. It manufs. brown linen, and is celebrated as being the 'Thrums' of Sir J. M. Parrie's novels and the author's bp. Pop. 1,000.

Kirsanov, dist. and tn. in the Tambov Region of the R.S.F.S.R., 60 m. E. of Tambov; it trades in grain, hides and cattle. Pop. 600,000.

Kir-shehr, or Kirshehr, 93 m. S.E. of Ankara, tn. of Asiatic Turkey, in the vilayet of the same name, 325 ft. above sea level. Noted for carpets. Pop. (tn.) 13,700; (vilayet) 137,700.

Kirsinlon, see KILBYRON.

Kirwan, Richard (1733-1812), Irish chemist, whose experiments on the specific gravities of saline substances promoted methods of analytical chem and won for him the Copley medal in 1782. Supported the phlogiston theory of combustion (q.v.), but later was won over to the views of Lavoisier (q.v.). Wrote *Elements of Mineralogy* (1784—long a standard work); *An Estimate of the Temperature of Different Latitudes* (1787); and *Geological Essays* (1799).

Kiryu, tn. in the prov. of Kotsuki, Japan, 60 m. W.N.W. of Tokyo; has manufs. of silk, gauze, and rapso. Pop. 53,000.

Kisauai, see FREE TOWN.

Kisfaludy, Károly (1788-1830), Hun-

garian poet and dramatist, b. at Tété. Served in the army (1804-9), writing poetry meanwhile. He then settled in Vienna, intending to follow painting, but the success of two of his plays caused him to turn to literature. He won the reputation of being the father of Hungarian drama and of modern Hungarian literature. With his brother he founded a literary periodical, *Aurora*, and subsequently an Aurora Society, which became a centre for young writers. After his death this society developed into the Kisfaludy Társaság, Hungary's leading literary society. His works include *Gyilkos* (1808); *Kübra Zách* (1812); *Tika* (1819); *A Jádorok magyarországi* (1819); *Irene* (1820); *Szibor rajda* (1820); *Szeresi Mária* (1820); *A Part ulok* (1820).

Kish (Kisch) (modern name El Oshelmir), ant. and buried city of Chaldea. Excavations at the site, Talal-Uhalmer (little red mound) (and at Ur (q.v.)), have, according to the eminent Assyriologist, F. Dornier, director of the Pr. Biblical and Archaeological School of St Stephen, Jerusalem proved the historical fact of the Babylonian deluge, which resulted in dividing civilisation into two distinct epochs. The Oxford (Weld) Field Museum (Chicago) expedition, which carried out the excavations, discovered vast remains of a temple stated to be tant of the earth goddess Aruru. This temple the walls of which, 16 ft. high and 12 ft. thick, took some nine years to excavate, was begun by the early Sumerian kings, some 4800 years ago, and it stood for 2300 years as a monument to the earliest civilisation in Iraq after the deluge. The recurrent floods of centuries only partly buried it in silt, and when Nabuchadnezzar came to build his Birsagkalama temple, he merely levelled the walls of the temple of Aruru and built his structure upon them. The remains of Aruru's temple reveal two massive stage towers, hitherto only imagined by artists, round the exterior of which wound spiral platforms. In the larger were found brick tombs of nobles and princes, chariots with the animals that drew them, the copper rein-reins and other metal parts of the harness all lying beside the skeletons of the dead. In another clearing near the great N.W. gate of the temple were found inscribed tablets dated in the period of the Sargon dynasty of Agade (2332-2549 B.C.), large numbers of cylindrical seals, some of lapis-lazuli, of all periods from 3000 to 700 B.C., and sculptures of the age of Hammurabi. See S. Langdon, *Excavations at Kish*, 1924.

Kishangarh, tn in India, the cap. of the native state of the same name, which in 1947 joined the union of Rajasthan. Pop. 14,100.

Kishinev (Rumanian, Chisinau), tn. in Bessarabia, Russia, cap. of the Moldavian S.S.R. which was formed in 1940 from ter. in Moldavia and Bessarabia formerly part of the Russian Empire, and retroceded by Rumania to Russia in June 1940. It stands on a trib. of the Dniester, 120 m. N.W. of Odessa. The chief exports are grain, hides, tallow, and tobacco. K. was

the scene of serious anti Semitic riots in 1903. In the Second World War the Russians outflanked it in April 1944 but the garrison held out for some months. On Aug. 20 the Russians launched a great new offensive towards the pivotal points of Jassy and K. K. was completely outflanked by Marshal Tolbukhin who then joined up with the left wing of Malinovsky's army and K. was captured in a joint advance on Aug. 24 (1944) a victory which precipitated a political crisis in Rumania and soon caused the country to turn against the Axis (q.v.).

* See a Weekly

KISHINEV: THE LOCAL HISTORY MUSEUM,
BUILT IN 1895

Kishm (Qishm), or **Tavilah**, barren is in the strait of Ormuz, Persia. It is about 70 m long and 4 m broad, and produces sulphur and salt. K. (au t. *Ourata*), the chief tn., is the residence of a sheikh. Pop. 15,000 tn. 4000.

Kishoregunge, or **Kishorigani** tn. of E. Bengal, Pakistan, in the Maimansingh dist. Pop. 15,000.

Kis Körös, tn. in Hungary 28 m SW from Kiskemet, is celebrated as the bp of Petőfi. Pop. 12,000.

Kiskunfelegyháza, see **FFLEGYHAZA**.

Kiskunhalas, see **HALAS**.

Kiskunmajsa, see **MAJSA**.

Kiskunság, see **CVANIA**.

Kislovodak, largest of sev. large health resorts of the so-called mineral water group of spas in the N. Caucasus, Russia. Stands 2878 ft above sea level with a mean Jan. temp. of 24°K and mean Aug. temp. of 66.5°. It produces bubbly mineral water called *narzan* known all over Russia and renowned in fable and song many centuries ago to bathe in it is supposed to be excellent for persons who have bad

hearts or are too obese. K. is indeed a great health factory, designed to cater for the well being of valued executives, engineers, or workers in need of rest or treatment. Pop. 51,200.

Kismayu, port in It. Somaliland, stands near the mouth of the Juba R. in a district inhabited by Somali tribes. It has an excellent harbour. It was ceded to Italy by Britain in 1915. Captured by the Brit. forces in their campaign in 1941 against It. E. Africa. Pop. 3000.

Kismet (Turkish from Arabic *qismet* fate from *qismah* to apportion) meaning 'fate' a word made use of by Mohammed when he preached in the Koran the duty of submission to all that God has ordained. He believed that a man's every action was predestined yet he never suggested the folly of not struggling against an adverse doom. The doctrine of K. has prompted Mohammedans to the utmost heroism and fortitude in the cause of their religion.

Kiss, form of salutation or an expression of reverence or love which consists in pressing or touching with the lips the lips, cheek, hand or feet of another. Newly appointed earl in his kiss the sandal on the pope's right foot as a symbol of veneration and the K. of peace (*scilicet pacis*) is still a part of the ritual of the mass in the E. and Rom. Church. See **C. Beadnell** *The Origin of the Kiss* 1942.

Kissavos, see **OSZA**.

Kissingen, Bad, popular watering place of Bavaria, Germany, stands on the Saale 29 m N by R. of Würzburg. Its famous saline chalybeate springs were known in the ninth century; the waters are used in cases of dyspepsia, gout, etc., and large quantities are exported annually. Salt is mined near by. Pop. 3500.

Kistna, or **Krishna**, 1. Dist. of Madras, India, which contains the delta of the R. K., the chief tn. is Masulipatam. Pop. 2,000,000. 2. Riv. of S. India rises in the W. Ghats 40 m from the Arabian Sea at its source is an ancient temple to which large numbers of pilgrims resort. From here the riv. flows through the Bombay Presidency and drops steeply from the tableland of the Deccan receiving its two chief tribs., the Bhina and the Tungabhadra. It formed the boundary between Hyderabad and the Madras Presidency, and enters the bay of Bengal by two mouths an immense delta. Its total length is 800 m., but its course is too rocky and rapid for navigation.

Kistrin, see **KUSTRIN**.

Kisujzallas, tn., with magistracy in Hungary 4 m SW of Debrecen.

Kisumu, formerly known as Port Florence, a port of Kenya (colony) (q.v.) E. Africa (up of the prov. of Nyanza), stands on Lake Victoria of which it is the chief port. It is the terminus of a railway to Nairobi and Mombasa. The tn. is the centre of the Kavirondo (see also **KENYA**) people and much labour is recruited here. Once a malarious centre but a great improvement has been effected. There is a great acrotrone on the opposite shore of Kavirondo Gulf. Pop. (white) 150, (Asiatics) 1400.

Kit term used for a soldier's outfit. A recruit on joining the army is provided gratis with underclothing razor brushes towels mess tin knife and fork and cleaning materials and these things constitute his kit. It is his duty to keep them in good order and to obtain new articles as occasion arises. In popular language his uniform and other outward accoutrements are often erroneously included in his kit.

Kita, tn of Ir W Africa (Er Sudan) in Senecambia, NW of the Niger. It is a fortified military station. Pop 2700.

Kit Cat Club, founded in 1703, ostensibly to encourage literature and art and named after Christopher Cat (or Katt) at whose tavern it met. It ultimately became a Whig society to promote the Hanoverian succession. Among its original thirty-nine members were Marlborough Walpole Addison Steele and Congreve. The number was later increased to forty-eight. Kneller was one of them and painted the portraits of forty-four members under the direction of Jacob Tonson who was secretary and general manager of the club. In 1743 the National Art Collections Fund purchased 11 portraits for the National Portrait Gallery. In a poem of 1708 on the club and its founder we read:

All the first members for their Place were fit.

The 'not of Little Men of Sense and Wit.

But eventually one half of the forty-four were men of title including nine dukes. The three most notable of the five lords of the Whig Junto Wharton and Somers and Montagu Earl of Halifax were Kit Cats. See 'Kit Cat Club Portraits' by G. M. Trevelyan *The Times* March 10, 1945.

Kitchen, see under COOKERY, HOUSEWIFERY.

Kitchener, Horatio Herbert Viscount of Khartoum and Aspell in Suffolk (1800-1916) b at Bully Ingford, Ireland the eldest son of Lieut Col H H K. After studying at Woolwich he entered the Royal Engineers in 1821. He was engaged on the Lake time Survey (1874-78) and then on that of Cyprus (1878-82) after which he entered the Egyptian Cavalry and took part in the Sudan campaign of 1883-84 for the relief of Gen Gordon attaining the rank of lieutenant colonel. He became governor of Suakin in 1896 and Sirdar of the Egyptian Army in 1900. In that capacity he recovered Dongola in 1896 for which he was made major general and KCB and two years later came his crowning success in Egypt in the expedition which he organised against the power of the Khalifa. In April 1898 he defeated the dervishes at the Atbara and in the following Sept he won the decisive victory of Omdurman, capturing Khartoum, and completely overthrowing the power of the Khalifa. For these services he was raised to the peerage and Parliament voted him the sum of £30,000. He was presented with the freedom of the city of London and a sword of honour, and he received the degree of DCL from Oxford.

Univ. During his brief stay in England at this time he raised by subscription the sum of £100,000 to found a college for natives in Khartoum in memory of Gen Gordon. The victory of Omdurman was followed by immediate pacification and by the most skilful handling of the situation at Fashoda (qv).

When the S. African war broke out K went (Dec 1899) to S. Africa as chief of staff to Lord Roberts and had a large share in organising the victorious campaign that followed. When Lord Roberts returned home in Nov 1900 K assumed supreme command with the rank of lieutenant general and brought the war to a successful conclusion by means of a system of block houses and extensive 'drives.'

LORD KITCHENER

introduced to combat the guerrilla tactics of the Boers. Assisted by Lord Milner he arranged with the Boers the terms of the peace which was signed on May 31, 1902. He was promoted to the rank of viscount in the 1902 New Year Honours. He was voted him a sum of £10,000 and thanked him for his services. In Nov of the same year (1902) he went to India to take over the chief command of the forces there where he remained till 1903. It was due to his reforms in higher administration pay and furlough that the Indian Army was eventually able to play so effective a part in the First World War in nearly all theatres of operations. After leaving India K became commander in chief in the Mediterranean and was raised to the rank of field marshal. He also about this time went to Australia and planned the reconstitution of the Commonwealth forces. In 1911 after commanding the troops in London on the occasion of the coronation of King George V he was made a knight of St. Patrick. At this stage in his career his appointment as ambas to Constantinople was mooted, in which capacity he might have been highly

effective in thwarting the Ger. plans which ultimately brought Turkey into the First World War against the Allies; but certain influences which had kept him out of the office of Indian viceroy also prevailed against him in this instance. He was then appointed to take over the work of agent and consul-general at Cairo, where he had an opportunity of displaying his fine qualities as an administrator. In July 1913 the khediv, on his advice, granted a parl. constitution on a more democratic basis.

It was when he was at home from Cairo on leave that the First World War broke out, and it was with the universal approbation of the Brit. people the world over that he was appointed to be war minister at Whitehall. His long contact with the E., coupled with the strangely romantic circumstances of his career, had unquestionably a strong influence on his habits and general bent of mind; and the fact that he had always worked alone and with but slender financial resources from Lord Cromer's budgets, had thrown him on his own initiative to a remarkable degree, and made him at the same time intolerant and even contemptuous of criticism. All unconsciously he had become a westerner with an E. mind—a mind delighting in E. modes of thought and methods of work. Neither the politicians at home nor the departmental chiefs at the War Office understood him; and it was averred by those who had known him of old that minds at home were poisoned against him. If devoid of ambition himself, others around him were not; and furthermore, his habitual practice of doing everything himself and of ignoring press and departmental criticism was incompatible with the thought of a democratic country, especially at a time when the country was endeavouring to adapt itself to the requirements of a national war. His acquaintance with the diplomatic interchanges immediately preceding the outbreak of the war was slender in the extreme, though he contrived to acquire some kind of knowledge *ad hoc* of European military thought, organisation, and strategy.

It was in these circumstances that he set about the performance of his great achievement—the creation, amidst the anxieties of war, of those great new armies which stemmed the tide of the enemy's successes until such time as conscription was to restore the balance. His instructions to Gen. French after the battle of Mons, to remain in the line and to abandon his expressed intention to retire behind the Sene so as to protect Paris, were amply justified by subsequent military events, though it is to be said for Gen. French that his intention was in accord with Cabinet orders to save his army from isolation by overwhelming numbers, as at Mons. Less justified were K.'s later instructions to Gen. French to abandon the Fr. Channel ports rather than lose contact with the Fr. Armies, because, even if theoretically sound, the Brit. forces were never actually in that dilemma, or at all events the choice was not so open then as it was

to prove in 1918, when the Gers. were at the gates of Amiens. The raising of the Kitchener or new or service battalions was K.'s great contribution to winning the war, and it seems probable that he was the only man in England whose name and fame stood sufficiently high in the opinion of his fellow countrymen to ensure an adequate response to his call for volunteers. Voluntary recruiting, urged by the magic of K.'s name, added no fewer than 1,700,000 men to the ranks by May 1915. Up to this point K. was omnipotent at the War Office and in the war committee, particularly as all the best Brit. military brains were then in France. The necessities of the situation demanded, however, that one man, however eminent his talents, should not attempt to combine the role of war secretary and chief of staff, the functions of administrator and strategist being entirely distinct, and the blunders in the Dardanelles were referable to this confusion of roles and to the lack of first-class strategic direction on the general staff.

After the failure at the Dardanelles a reaction, fomented by a section of the press in conjunction with politicians, set in against K. The Cabinet grew hostile towards him. He went to the Mediterranean late in 1915, and, when there, was invited to take control in Egypt—a hint to resign the seals of office. This he did, after sending Gen. Horne to take command in Egypt in his stead. Mr. Asquith, as ever the most honourable of ministers, refused the resignation, and K. remained in office, though Sir Wm. Robertson returned from France to become chief of staff. It is generally agreed that both K. and Asquith—the former in his ministerial capacity—unduly delayed the transition from voluntary recruiting to conscription, but the question was essentially a political one, and it is to the credit of K. that he had at all events created vast new armies to meet the nation's needs, no fewer than 3,000,000 men voluntarily enlisting in his 'service' battalions. When his tragic loss on June 5, 1916, in the *Hampshire* became known, the sorrow of the people was the most striking tribute to his memory possible.

See R. B. Esher, *The Tragedy of Lord Kitchener*, 1921; V. Gervais, *The Truth about Kitchener*, 1925; E. Carl, *One against England: the Death of Lord Kitchener and the Plot against the British Fleet*, 1935; also lives by Sir G. Arthur, 1920, and G. Hodges, 1936. For the plans for his national army see *The Times*, Aug. 15, 1915.

Kitchener, co. tn. of Waterloo co., Ontario, Canada, 60 m. W. of Toronto and 90 m. N.W. of Niagara Falls. It is on the Canadian National Railways, with electric railway to Canadian Pacific Railway at Galt, 10 m. S.E. It lies at an altitude of 1100 ft. in the fertile valley of the Grand R., in a rich agric. dist., and is the market centre for the tns. of Elmhurst and Waterloo, and the vils. of New Hamburg, Baden, Erbsville, and others. K. was first known as the Sand Hills in a community called Ebytown. The name Berlin was adopted in 1826. Berlin was

incorporated as a tn. in 1871 and as a city in 1912. In 1916 the name was changed to K. in commemoration of Lord K. of Khartoum. Its city hall is in the centre of a large public square, in which the war memorial has been erected. A 'living memorial' to the men and women who gave their lives in the two world wars will be the auditorium. A new armoury will complement the auditorium as the second major building in the city's proposed community centre. The federal building is an imposing structure and one of the newer co. buildings is the registry office. K. has thirty-eight churches, the K.-Waterloo collegiate and vocational school, which is now being extended at a cost of \$1,000,000, a Rom. Catholic college, St. Mary's business college, many primary schools, a public library, two large hospitals (improvements costing \$2,100,000 to the K.-Waterloo hospital are in course of construction), a Little Theatre, philharmonic choir, and symphony orchestra. The giant Shand dam holds back the Grand It's springtime torrents and creates the seven-mile Lake Bolwood. There are sev. parks and the rockery is one of the outstanding local beauty spots. The outdoor swimming pool is one of the largest in the dominion. A modern community airport is being built. There are two radio stations. K. is a most highly industrialised city and ranks ninth in the dominion from the standpoint of industrial production. It has about 170 manufacturing establs., the leading plants including rubber tyres and footwear, gloves, tanning, and leather shoes. The heavy metal industries produce fans and ventilator equipment, car seat springs, trucks and trailers, wood-working and shoe machinery. Other products are veneer, fine furniture, radios, twines and ropes, textiles and shirts. There are also large meat-packing establs. Waterloo adjoins K. It was the b.p. of Wm. Lyon Mackenzie King. Pop. 40,800. Kitchen Gardening, see GARDENING.

Kitchen Middens, Kitchen Mounds, Shell Heaps, or Shell Mounds (*Afjokkenmoddingen*), names given to what were, in reality, the refuse heaps of various prehistoric peoples. Until 1860 they were believed to be raised beaches, or glacial deposits, and little notice was taken of them. Prof. Steensrup, a Dan. archaeologist, found that though the mounds he examined were largely composed of shells, yet they also contained fragments of animal and bird bones, rough pieces of pottery, and implements of stone and wood. In some cases a considerable amount of burnt earth was also found, as well as stones showing the marks of fire, suggesting the stones put under the cooking-pot by gypsies to this day. Among the shells he found those of the oyster, mussel, periwinkle, and cockle—molluscs which have never been known to live together under the same conditions. Two other facts—that the shells all belonged to well-grown animals, and the entire absence of gravel in any heap—proved that the natural theory was wrong, and the conclusion came to by him and two other Dan. profs.,

Worsaae and Forchhammer, and since then by many eminent archaeologists, was that these heaps had been formed by early man and woman as they throw away those parts of their meals which they found it impossible to eat. In Europe they have been discovered on the coast of the Brit. Isles, in Cornwall and Devonshire and Scotland, in France, Sardinia, and Portugal. They are also found on many parts of the coast of N. and S. America, Australia, and Japan. Some of the largest middens measure as much as 1000 ft. in length, 200 ft. in breadth, and 10 ft. in depth; but most are much smaller. In Florida some of the middens examined have measured as much as 10 ft. in height.

Kite, name popularly given to *Milvus icetus*, a species of Falconidae. It is now distributed through Europe, Palestine, Asia Minor, and N. Africa, and will breed occasionally in certain parts of N. and W. Britain. Three or four centuries ago these birds were found in great numbers in the streets of London, where they acted as scavengers. *M. icetus* is generally distinguished as the red K., its general colour being reddish-brown, with tail-feathers of a light red, barred with brown; the bill is black and strongly curved; the deeply forked tail is capable of great expansion, and ensures the rapid, graceful flight which is such a marked feature of this bird. The habits of the K. are gregarious and sluggish, and its food consists of offal, small birds, fishes, insects, etc. Its nest, which is formed largely of rags and other rubbish, is generally placed in the cleft of a tree. *M. ater*, the black K., is very common in some parts of Europe. *M. govinia* is the parish K. of India; *M. agilis* is an Australian species; and *M. melanotis* is confined to E. Asia.

Kites (so called from resemblance to the bird, cf. Ger. *Drache* (dragon), kite), light frames of varying shape, on which some material, such as paper, silk, etc., is stretched. A cord is attached and the K. is flown in the air, the cord being let out as it ascends. When made of the common diamond shape, or triangular with a semicircular top, K. have a 'tail' attached for balancing purposes. The invention of K. is ascribed by tradition to Archytas of Tarentum, in the fourth century B.C., but there is no doubt that long before this time K. had been known to the Asiatic nations and to some savage tribes. The origin of the practice of kite-flying is obscure; it is perhaps religious, and certainly still partakes of such a nature among the Maoris. The pastime has always been the national one of the Korean, Chinese, Jap., Tongkinese, Annamese, Malay, and E. Indian nations. K. was used for scientific purposes in 1749 and in 1752, when Benjamin Franklin's famous electrical experiment was carried out, but their widespread use for meteorological and military purposes may be said to date from the later years of the nineteenth century. At the present time many observatories in the United Kingdom and America make constant use of K. to record not only the temp., but also the humidity of the atmosphere and the velocity of the wind at

various altitudes. The K. used are mostly box or Hargrave K., so called after their inventor. They are in shape like a box, with the two ends and the middle of each of the sides removed. The sail-area of the K. used varies from 30 to 80 sq. ft. Steel piano-wire is generally used, as it combines thinness with strength. The method of sending up K. is as follows: The first K. is launched with the self-recording barometers, anemometers, etc., either inside or just below it, and the wire is paid out at about 3 m. an hr. until the K. is as high as is safe, considering its sail-area, etc. Another K. is then fastened to the end of the first wire, and so on, according to the height it is desired to reach. The length of $\frac{3}{4}$ -in. wire that one K. will raise may be taken, on the average, as 1000 ft. for every 10 ft. of lifting surface. From a military standpoint K. are useful for signalling purposes, for carrying up lamps, flags, etc., for photographic purposes, and in the place of a captive balloon. When used for photography the shutter of the camera which they carry may be operated by a clockwork apparatus or an electric wire, etc.

Kits Coity House, see under DOLMEN.

Kittatiny, see under BLUE MOUNTAINS.

Kittel, Rudolf (1853-1929). Ger. Protestant theologian, b. at Enningen, Württemberg, prof. of O.T. studies at Leipzig Univ. (1898-1921), and editor of the actual Heb. ed. of the O.T., and of numerous commentaries. Works include *Geschichte der Hebräer* (1892-92, pub. as *Geschichte des Volkes Israel*, 1923-29); *Biblia Hebraica* (1905 ff., 1929 ff.); *Die Religionswissenschaft der Gegenwart in Selbstdarstellung* (vol. 1, 1925); and *Die Völker des vorderen Orients*, 1931.

Kittery, seaport tn. of York co., Maine, U.S.A. It is situated at the mouth of the R. Piscataqua, opposite Portsmouth, about 46 m. S.S.W. of Portland. There is a busy coasting trade and fishery. Pop. 5400.

Kittiwake, bird of the gull family, genus *Rissa*. The chief character which distinguishes the Ks. from the rest of the gulls is the rudimentary condition or absence of the hind toe. The chief species are the familiar Brit. species *R. tridactyla*, with dark brown feet and white under wing-coverts, and *R. brevirostris*, from the N. Pacific, with vermilion-coloured feet and grey under wing-coverts. A third form, *R. pollicaris*, with a slightly more developed hind toe than in normal *R. tridactyla*, is recognised by some Amer. naturalists and is mostly found in the N. Pacific. The K. is about the same size as the black-headed gull and breeds in vast numbers in Greenland and Spitzbergen. It is a good swimmer and feeds chiefly on fish. The young K. is called a tarroch.

Kitzingen, tn. of Bavaria, Germany, in the prov. of Lower Franconia, on the R. Main, 10 m. E.S.E. of Würzburg. Pop. 11,000.

Kiukiang, treaty port in the prov. of Kiangsi, China. It is situated on the r. b. of the Yangtze-kiang, 130 m. S.E. of Hankow. Tea, tobacco, fibre, paper

porcelain, and cotton are exported. This city has also a foreign settlement. Pop. 60,000.

Kiungchow, tn. of China, on the is. of Hainan, belonging to the prov. of Kwangtung. Its port is Hoihow, situated about 3 m. away, which was opened to foreign trade in 1876. Pop. 47,000.

Kiushiu, **Kiusiu**, **Kimo**, or **Kyushu**, the most southerly of the three prin. is. of Japan, in the Pacific Ocean, separated from Korea by the strait of Korea, and from Honshiu (Hondo) is. by the strait of Shikoku. It has an area (including small adjacent is.) of 16,201 sq. m., and is mountainous, though not remarkable for lofty peaks. Aso-take, an active volcano, has the largest crater in the world. The is. is subject to earthquakes on the Pacific coast, and has a varied climate, the summers are hot and winters very cold, the months of July and Aug. being especially marked by the oppressive heat at sea level. The occurrence of the rice famine in 1869 in K., when the people perished from hunger on account of the lack of transport facilities, was largely responsible for the introduction of a railway system into Japan. A line now runs from Muji in the N. to Kagoshima in the S., a distance of 233 m., and another from Muji to Nagasaki, 164 m. A tunnel, 7 m. long, under the Muji-Shimonoseki Straits, to connect K. by railway with Honshiu, was begun in 1920. Coal is found in the is., copper also is mined, and rice, wheat, beans, tea, and tobacco are grown. Pop. 9,552,000. See also JAPAN; PACIFIC CAMPAIGNS, OR FAR EASTERN FRONT IN SECOND WORLD WAR.

Kiustendil, see KUSTENDIL.

Kiutsingtu, see CH'UNGCHING.

Kivi, **Aleois** (real name **Aleois Stenwall**) (1831-1872), one of the best writers of modern Finland, and one of the founders of its real native style, b. 1831, at Nurmijärvi, of true peasant stock. K. will live because of his great novel *The Seven Brothers* (1870). It is the story of seven peasants who go into the Finnish wilderness and carve out for themselves a demesne. All Finnish peasant life is there—the recklessness, the strong drink, the accessions of remorse and religious feeling, the love of nature and the chaso, the riotous humour. A Finnish literary society had the book printed, and, after being withdrawn from sale, it was acclaimed after K.'s death as the greatest modern production of Finnish literature. See life by V. Tarkonen (3rd ed.), 1916.

Kivu, lake of the Belgian Congo, S. of Lake Edward and N. of Lake Tanganyika, into which it discharges by the R. Rusizi. It lies, at an elevation of 5000 ft., among very lofty mts., some still actively volcanic, and is said to be the most beautiful and picturesque of African lakes. The tn. of Goma stands on its N. shore. K. gives its name to an administrative dist. The highlands around it, being free of tsetse fly, are good grazing ground for cattle.

Kiwi, see APTERYX.

Kizil-Kum, sandy desert in Kazakh S.S.R. and Kara-Kalpak S.S.R. between the Amu-Darya and Syr-Darya riva. It

extends in a south-easterly direction from the sea of Aral.

Kizil-Uzen, riv. of N.W. Persia. It rises in Ardelan, flows N. through Azerbaijan, then S.E., and finally N.E. through Gilan into the Caspian Sea, E. of Resht. Length 450 m.

Kizlyar, tn. of Russia, in the Daghestan autonomous S.S.R., on the R. Terek, 50 m. up from the Caspian Sea. The vine and fruit are cultivated here. Pop. 8000.

Kjellin Furnace, see under IRON AND STEEL.

Kjerulf, Halfdan (1815-68), Norwegian composer, b. in Oslo (then Christiania), son of a high gov. official. Educated for a legal career and graduated at Christiania Univ. On the death of his father he was able to devote himself to music. Actually he began his career as a teacher of music and composer of songs without ever having seriously studied music at all and he did not win recognition for nearly ten years. Then, however, like Grieg, he received a gov. grant to enable him to study abroad. His fame rests mostly on his mainly national part-songs and solos, but he also composed some charming piano-forte music.

Kjöbenhavn, see COPENHAGEN.

Kjolen Mountains ('*ky*'), i.e., the keel), name given to the main mt. system of the Scandinavian peninsula, which consists of a vast plateau grooved by deep valleys. These mts. run N. and S. and form the backbone range which divides the two kingdoms of Norway and Sweden.

Kladno, tn. of Czechoslovakia, about 15 m. N.W. of Prague. It possesses iron- and coal-mines. Pop. 40,600.

Klagenfurt, cap. of Carinthia, Austria, on the Glan R., 40 m. N.W. of Ljubljana. The city was founded in 1279, and it possesses an anct. cathedral (1579), the Rudolphine museum, and a statue of Maria Theresa. Its proximity to the Worthersee and the Karawanken range make it a popular tourist centre. In the suburbs (Anabichel and St. Nikolaus) there are manufact. of leather, machines, chemicals, cloth, and tobacco. It was occupied by the Yugoslavs in 1941, but by a plebiscite in 1920 it was included in Austria. Pop. 61,900.

Klaipeda, see MEMEL.

Klamath, riv. of California, U.S.A., rising in the S. part of Oregon and flowing through Klamath Lake. It assumes a south-westerly direction, and empties itself into the Pacific Ocean. Its course, which lies in a mountainous country, is through narrow cañons, and has a length of about 275 m., but is navigable for 40 m. only.

Klang, tn. in Selangor, Brit. Malaya, situated near the K. R. It is the chief seaport of Selangor. At the mouth of the riv. is K. Is.

Klapka, György (1820-92), Hungarian general, b. at Temesvár, joined the Hungarian revolution of 1848, when he won sev. victories and greatly distinguished himself in the siege of Komorn, where he continued the defence long after the main Hungarian army had capitulated. He wrote *Memoirs of the War of Independence*

in Hungary (1850); *The War of the East* (1855); and other military works.

Klaproth, Heinrich Julius (1783-1833), Ger. orientalist; b. in Berlin; son of Martin Heinrich K., chemist. Studied Chinese at the age of fourteen. Adjunct in oriental languages, St. Petersburg, 1804. In China with Count Golovkin, 1805-7. Travelled, Caucasus region, 1807-8. In Berlin, 1811-14. From 1815, in Paris where he was appointed prof. of oriental languages by the king of Prussia. He pub. three works on the Caucasus and Georgia, (1812-14); *Asia Polyglotta*, (1823); other works on Asia and Egypt; also *Aperçu général des trois royaumes* (1833, about Japan).

Klaproth, Martin Heinrich (1743-1817), Ger. chemist, b. at Wernigerode. He was appointed lecturer in chem. to the Royal Artillery in 1787, and prof. at the univ. of Berlin in 1810. He was the leading Ger. chemist of his time, and discovered uranium, titanium, zirconium, and melleic acid; he also made experiments on copal and completed the discovery of tellurium. His writings include *Beiträge zur chemischen Kenntnis der Mineralkörper* (1793-1815); and *Chemische Abhandlungen gemischten Inhalts* (1815).

Klattovy (Ger. Klattau), tn. of Czechoslovakia, 28 m. S.S.W. of Pilsen. It has an old church and tn.-hall, and manufs. cloth, machinery, dairy, and matches. Pop. 11,100.

Klausenburger, see CLUJ.

Klausthal, see GLADSTAD-ZELLERFELD.

Kleber, Jean Baptiste (1753-1800), Fr. general; b. at Strasbourg. Studied at military academy, Munich; served in Austrian Army. From 1783 practised in France as architect. In National Guard, after defending Mainz, brigadier-general. Fought successfully with Fr. and foreign foes of the Republic. Won the battle of Altenkirch against the Austrians in 1796. Accompanied Bonaparte to Egypt; was left in command when Bonaparte returned. In 1800 re-took Cairo. Assassinated by a Turk during treaty negotiations, June 11.

Klee, Paul (1879-1910), Swiss painter, b. near Bern. He studied at Munich, to which tn. he returned after travels to Italy, Paris, and Berlin. On the advent of Hitler to power K. abandoned his teaching at Düsseldorf and returned to Switzerland. His work was first exhibited in London in 1938, but it was not until the full-scale exhibition of 1946 that K.'s merits were fully recognised in England. In his early years he was associated with the Expressionist, Kandinsky, and influenced by Cézanne, Franz Marc, and Blake, amongst others. His own theories were expressed in his *Über die Moderne Kunst* (Eng. trans. 1948); the artist, he says, 'does nothing other than gather and pass on what comes to him from the depths'; he uses the metaphor of the process by which soil is converted to the foliage of a tree to describe the transformation of life itself by the artist, through his medium, into a finished work. In 1912 K. joined in the foundation of the 'Blanc Reiter' school, and

from 1920 his work became more purely imaginative and surrealist. He combined a feeling for craftsmanship with an original sense of colour to reproduce the varied processes of his own subconscious, often in highly abstract designs. There is a great sensitivity about most of his work, and in many examples a gay and witty charm. K. wrote *Über die moderne Kunst* (1945; trans. by H. Read, 1948). See J. T. Soby, *The Prints of Paul Klee*, 1948; also studies by W. Hausenstein, 1921, and W. Grohmann, 1929; and a short essay by H. Pictou, 1945.

Kleist, Bernd Heinrich Wilhelm von (1777-1811), Ger. writer, b. at Frankfurt-on-Oder. He served in the Rhine campaign of 1796, but left the service in 1799, and devoted himself to the study of law and philosophy, finally taking up literature. His first drama, *Die Familie Schroffenstein*, a gloomy tragedy, appeared in 1803; this was followed by *Penhesilea* (1808), taken from a Gk. source, and a romantic play, *Das Käthchen von Heilbrunn, oder Die Feuerprobe*, the same year. Other dramas of his are *Die Hermannsschlacht* (1809), and *Prinz Friedrich von Homburg* (pub. 1821), generally considered his best work. He also wrote comedies, e.g. *Der zerbrochene Krug* (1811), and patriotic lyrics, and his *Michael Kohlhaas* (1808) is one of the best Ger. stories of its time. See E. Cassirer, *Heinrich von Kleist und die Kantische Philosophie*, 1919; S. Zweig, *Der Kampf mit dem Dämon*, 1928; and T. Kaiser, *Vergleich der verschiedenen Fassungen von Kleists Dramen*, 1914; also studies by H. Meyer-Henfey, 1911; F. Gundolf, 1922; and C. Braig, 1925.

Kleist, Paul Ludwig von (b. 1881), Ger. soldier, b. at Braunfels, Prussia. Served as a cavalry officer and regimental commander in the First World War. After the war he was a cavalry instructor, but on Hitler's advent to power, he was raised to the command of an Army Corps. Took part in the invasion of Poland in 1939. He was in command against France in 1940, in Yugoslavia in 1941 and took Belgrade, and on the S. Russian front in Aug., 1941. Early in the invasion of Russia his armoured forces led the assault on Kiev, and the advance through the Ukraine. His tank forces captured Dnepropetrovsk in Aug. 1941 but his victory was nullified by the Russian destruction of the great dam at that place. On 22nd Nov. (1941) he took Rostov-on-Don, but was outmanoeuvred by Marshal Timoshenko, who re-took the town a week later. This set-back, though limited in its immediate scope, marked the turning-point of the campaign. In the Ger. offensive of mid 1942 he commanded the first Ger. armoured force and advanced to the foothills of the Caucasus up to Moxdok but was then turned back by the Russian winter offensive of 1942-43. Reached the rank of colonel-general. See also EASTERN FRONT OF RUSSO-GERMAN CAMPAIGN IN SECOND WORLD WAR.

Klepts, bands of Gks. who in the fifteenth century waged guerrilla warfare against the Turks, ultimately becoming brigands. They played a considerable

part in the war of Independence at the beginning of the nineteenth century.

Kleptomania, symptom of insanity which takes the form of an irresistible desire to steal. It cannot be considered a specific disease, but is associated with many forms of mental aberration. Some cases demonstrate a desire to steal any sort of property that may be available; in other cases the patients seem to be obsessed by the desire for particular objects which they will acquire in a legitimate manner if that is possible, although they apparently feel no inhibitory force if stealing suggests itself to them as an alternative.

Klerksdorp, tn. in the Potchefstroom dist., Transvaal, S. Africa, 117 m. S.W. of Johannesburg. There is a goldfield in the vicinity and diamonds have been found. Pop. 16,000.

Kleve, see CLWV.

Klingenthal, tn. of Saxony, Germany, 26 m. S. of Zwickau. It has manufs. of musical instruments. Pop. 7,000.

Klinger, Friedrich Maximilian von (1752-1831), Ger. playwright, and poet, b. like Goethe, at Frankfurt-on-Main, became an ardent disciple of the latter. His drama, *Sturm und Drang* (1776), gave its name to that movement in Ger. literature, characterised by exuberance of action and want of form. Another drama of his, the tragedy, *Die Zwillinge* (1775), is also celebrated. From 1780 to 1830 he was employed in Russia, chiefly as head of the corps of pages. See M. Riegen, *Klinger in der Sturm und Drangperiode*, 1880; M. Lanz, *Klinger und Shakespeare*, 1904; H. Steinberg, *Studien zu Schicksal und Ethos bei Friedrich Maximilian Klinger*, 1941.

Klinger, Max (1857-1920), Ger. painter, etcher, and sculptor; b. at Leipzig; son of a merchant. He commenced his studies at Karlsruhe in 1874. In 1878 his paintings and his etchings—including a series called 'Fantasies upon the Finding of a Glove'—attracted hostile criticism and suspicions of insanity; but they were later bought for the National Gallery, Berlin. He treated biblical and mythological subjects in a somewhat gruesome manner. Supplied mural paintings for Leipzig Museum and Univ. Statue (polychromatic) of Beethoven, 1902. See study by F. Avenarius, 1917.

Klinz, or Klinzy, tn. in the Bryansk Region of the R.S.F.S.R., 100 m. N.N.E. of Chernikov. It manufs. cloth and woollen goods, and is also engaged in tanning. Pop. 40,000.

Klip-das, see under HYRAS.

Klip River, dist. in the N.W. of Natal, S. Africa, situated to the N. of the R. Tugela. It is watered by the K. R., which rises in the N. of Natal, and the cap. is Ladysmith.

Klodzko, see GLATZ.

Klondike, small riv. situated in Yukon Ter., Canada, about 120 m. long. The region of the goldfield includes part of the basin of the riv., and also of the Indian R., the existence of the mineral in this dist. being first discovered in 1896.

Klopstock, Friedrich Gottlieb (1724-1803), Ger. poet, b. at Quedlinburg.

Studied theology at Jena and Leipzig. Early in life he felt called upon to write a great religious epic, and finally chose the Messiah as his theme. The first three cantos appeared in 1748. They were received with great enthusiasm, and K. was hailed as the deliverer of Ger. literature from the formalism of Gottsched and mere imitation of Fr. works. *Der Messias* was not completed until 1773. Written in hexameters, it is a very uneven poem, some parts of it being imbued with deep feeling and fervour, while others are flat and trivial. In 1750 K. spent some time with Bodmer in Zurich, but his conduct was too frivolous for his serious-minded host. In 1751 he received a pension from the king of Denmark, and remained at Copenhagen till 1771. K. also wrote dramas, principally upon old Ger. hist., *Hermann's Tod* (1757), *Die Hermannsschlacht* (1769), and *Hermann und die Fürsten* (1781), but their worth is small. His odes (1771) however, are considerably better, and many of them are imperishable. See also F. Muncker's ed. of his works (1887, a selection) and his *Klopstock* (1900). See life by Muncker, 1889; also H. Wohlert, *Das Weltbild in Klopstocks Messias*, 1915, and J. Weger, *Bewegung als formendes Gesetz in Klopstocks Oden*, 1939.

Kloster-Heilsbronn, see HEILSBRONN.

Klosternansfeld, tn. of Saxony, Germany, 5 m. N.W. by N. of Eisleben. Pop. 5000.

Klosterneuburg, tn. in Lower Austria, situated on the r.h. of the Danube, 5 m. N.W. of Vienna of which it is a suburb. Here is situated the oldest Augustinian monastery in Austria, and the wines produced are famous. Pop. 15,000.

Klosterzeven, Convention of, concluded in Sept., 1757, by the duke of Cumberland, with the Fr. commander, duc de Richelieu, by which the former, who had been defeated at Hastenbeck and was without means of retreat, agreed to disband his army and leave Hanover to the Fr. The Eng. Gov. refused to ratify the convention, and recalled Cumberland in disgrace, although he appears to have been carrying out George II.'s instructions.

Klotz, Louis Lucien (1808-1930), Fr. politician and advocate, b. in Paris. Soon forsook the Bar for politics, was finance minister. He was in no fewer than seven govts. Was chosen to be one of the Fr. delegates at the inter-allied peace conference in Paris, 1919. He wrote *De la guerre à la paix*, 1924. In Dec. 1928 he was arrested in Paris. He resigned from the Senate; and, after being medically examined and pronounced sane, he was convicted, July 12, 1929, of fraud and the uttering of worthless cheques and sentenced to two years' imprisonment. Released 'on conditions,' Sept. 15 same year.

Klotz, Otto (1852-1923), Canadian astronomer and seismologist, b. at Preston, Ontario. Educated at Toronto and Michigan Univs. In early days he explored the N.W. ters. of Canada, and later carried out exploratory survey of Hudson Bay. Took up astronomy in 1885.

Canadian delegate at seismological meetings in various European caps. Chairman of the National Committee of Canada, International Astronomical Union, 1920. President, Amer. Seismological Society, 1920-21. He wrote numerous papers on terrestrial magnetism and seismology.

Klusk, Heinrich Rudolf Alexander von (1846-1934), Ger. field-marshal; b. at Münster; son of Karl K., gov. architect. Entered 55th Infantry 1865; fought in wars of 1866 and 1870—twice wounded near Metz. General of Infantry 1906. K. commanded First Army in W. to the extreme left of the Allies' line in N. France, Aug. 1914. All the advancing line received orders to halt when K.'s force was already across the Marne; and he was obliged to execute a movement that brought him within 30 m. of Paris on Sept. 6. Then followed the first battle of the Marne, ending Sept. 9 with K.'s retreat to the Aisne. Wounded in trenches 1915, he was retired Oct. 1916 with field-marshal's rank. His account of his last campaign was pub. in Eng. in 1920 as *The March on Paris*.

Kluge, Gunther von (1882-1944), Ger. soldier. Served in the First World War. In command of the force which occupied the Polish corridor (q.v.) in 1939. Served on the W. front in 1940; in N.W. Russia in 1941; commander on the central Russian front in 1942, and made commander-in-chief in W. Europe in July 1944. D. in Aug. 1944. The retirement of von Rundstedt, and his replacement by von K. three weeks after the beginning of the Anglo-Amer. offensive of June 1944, while officially attributed to ill health, was an expression of discontent at the Ger. failure to achieve the paramount aim of repelling the allied landing. But it brought no essential change in tactics, and no effective steps to restore a situation which was steadily deteriorating as far as defence was concerned. Von K. was himself removed after the disaster of the Falaise Gap, and was reported to have d. shortly afterwards, his place being taken by von Model, recalled from the Russian front to handle the Ger. retreat to the Rhine. See further under WESTERN FRONT in SECOND WORLD WAR.

Kivuchevsky, V. O. (1841-1911), Russian historian, b. at Voskressenskaya, held the chair of hist. in Moscow Univ., and was the most famous of all Russian historians. In 1882 he pub. his inspiring book on the Russian Duma or Privy Council of the emperors. His monographs on both the pre-Muscovite and Muscovite periods are Russian classics. His *Course of History* (1904), written in good literary style, is a convincing attempt to reconstruct the past untroubled by philosophical irrelevancies or party prejudices. His *Aid to Lectures on Russian History* appeared in 1899.

Knacker (Icelandic *knakkr*, saddle), dealer who traffics in old or disabled horses. By Brit. law, a K must slaughter the horse delivered to him within two days. He must not work any horse sent to him, nor sell it alive. Moreover, he must keep a full record of his transactions.

He must not slaughter any animal within sight of another waiting to be slaughtered, nor must he cut off any of its hair before it is killed. To-day, however, there are persistent reports of cruelty in the traffic of exporting horses for human consumption. It is averred by some that of every ten horses slaughtered six are sold on the black market for human consumption at prices threefold or more of the legal maximum. Many local authorities have urged the gov. to set up a commission of inquiry.

Knapweed, see under CENTAUREA.

Knatchbull-Hugessen, Sir Hughe Montgomery (b. 1876), Brit. diplomat. Educated at Eton and Balliol College, Oxford. Entered the Foreign Office 1908. Attached to the Brit. delegation at the Paris peace conference of 1919. Counsellor, Brit. Embassy, Brussels, 1926-30. Brit. minister to the Baltic States 1930-34; at Teheran 1934-36; ambas., China 1936-38; Turkey 1939-44; Brussels, and minister to Luxembourg 1944-47. Particularly distinguished for his work in Istanbul during the Second World War, where he thwarted the designs of von Papen, the Ger. ambas. He wrote an autobiography, *Diplomat in Peace and War* (1949).

Knaresborough, tn. in the W. Riding of Yorkshire, England, 17 m. N.N.W. of York. There are remains of an old castle, and a grammar school. There is also a 'dropping well' and St. Robert's Cave. The tn. manufs. linens and rugs. Pop. 7700.

SECTION OF KNEE

A, femur; B, tibia; C, patella;
D, D, synovial sac; E, E, bursa.

Knee, joint between the lower and upper leg, involving articular surfaces on the femur, tibia, and patella, or knee-cap. The articular surface of the femur comprises the greater part of the surface of the condyles, which are separated by a deep notch, while faint transverse grooves show

the limit of their articulation with the patella. The patella is a heart-shaped bone; the wide upper part is concave and smooth, and is divided into two articular portions by a rounded ridge; the lower part is rough and non-articular. The joint is nearly surrounded by a series of ligaments of complex structure and movement. The ligaments are lined by the synovial membrane, which is the largest in the body. The movement of the K. is in general that of a hinge-joint, though a certain amount of rotatory movement is possible when the joint is moderately flexed. The mechanism of the joint is particularly adapted to maintaining the erect attitude, which involves extension of the joint. Notwithstanding the important and strenuous nature of its function, the K.-joint is comparatively free from injury, owing to the massiveness of the articulating members. The patella is liable to fracture by direct or indirect violence, and is still more liable to dislocation, which, however, is often reduced without much trouble. Persons of tuberculous constitution are liable to serious disease following upon any injury to the joint, and such injuries should be followed by careful treatment for a protracted period. A strain is often followed by inflammation of the synovial membrane, and this is apt to recur if the joint is subjected to violent treatment before perfect recovery. Hence the need for protracted rest in cases of 'water on the knee.'

Kneeling seems to have been the primitive Christian attitude for non-liturgical prayer, and also for penitents at the Liturgy, during the greater part of which the faithful stood. At other services K. seems to have been the custom in prayer except on Sundays and during Eastertide, i.e. until the octave of Pentecost. K. was then more like prostration, and the terms are frequently used synonymously. 'The practice of standing at the Liturgy is now only retained in the E. Church. In the Rom. and Anglican churches, the people almost invariably kneel for prayer. While the celebrant receives the sacrament standing, the people do so kneeling.'

Kneller, Sir Godfrey (1646-1723), Ger. born portrait painter, who provided the link between Stuart portraiture, which had been dominated by foreigners, e.g. Sir Anthony Van Dyke, Sir Peter Lely; and the national school that was founded early in the eighteenth century. B. at Lübeck, he avoided becoming a soldier, and studied art in Holland, instead. Here he took lessons under Ferdinand Bol (q.v.), and came under the influence of Rembrandt. He travelled to Italy, staying in Rome and Naples, and setting up a studio in Venice. In 1674 he came to England intending to return to Venice, but as he quickly became extremely popular and successful, he decided to settle in England, and soon set up a vast practice. He replaced Lely as chief court painter to Charles II. in 1680. He married the daughter of the archdeacon of Lincoln, Susannah Crane, and in 1723 he d. He was probably buried in his garden at Twickenham, but his monument is in Westminster Abbey.

K has been named the most prolific portrait painter of any country. His works number nearly 6000, among which there are almost 800 unfinished. He worked at an extreme speed. Walpole said of him: 'Where he offered one picture to fame he sacrificed twenty to lucre.' He was also more wanting in conscience than any other painter of his rank, and was inclined to be bored by his sitters—which is reflected in some of his works. He employed several assistants who completed and made copies of many of his works. Probably his best portrait is that of Wm. Wycherley, the dramatist, and among some of his better known are those of Thomas Burnet, William III. the duke of Portland, Charles II., James II. and several other people of note. K had considerable influence upon his successors. This is shown in two ways: by his paintings and by his teaching. His studio was the immediate forerunner of the first real drawing school in London at which attended

portance in the development of races. As distinct from the dagger, which is always two edged, the prime importance of the K is its use as a tool, its use as a weapon can easily be seen to be secondary, as only its ready accessibility favours its adoption in preference to more specialised weapons. Bronze Ks have been found amongst relics of the Bronze Age and the use of iron was common long before hardened steel became the established material for the making of Ks.

From a remote period in English history the manufacture of Ks has been associated with the town of Sheffield in Yorkshire. The earliest form of stool K, a blade of steel fastened rigidly to a wooden or horn handle, was followed by the jack K, which closed into a groove in the handle, in the sixteenth century. In the seventeenth century the pocket K, with spring back, was introduced and has developed with increase in the number of blades and improvement in workmanship ever since. Ks are made

IRON KNIFE FROM HALLSTADT

most of the notable English artists of the eighteenth century. K's influence was uncertain as his paintings varied from year to year and his technical development was rather haphazard. But the fine handling of his few notable portraits did not fail to impress his successors. See Lord Killmain, *Sir Godfrey Kneller and his Times 1646-1733* 1918.

Kneller Hall, once the property of Sir Godfrey Kneller, now in possession of the State, is situated in Middlesex half way between Hounslow and Twickenham. It is a very fine example of Queen Anne architecture and now serves as head quarters for the Royal Military School of Music.

Knesset, constituent and legislative assembly of the modern state of Israel (1949).

Knickerbocker Families, term applied to the people of New York who are descended from Dutch settlers. The name also from Washington in Irving's *History of New York* (1809) which purported to have been written by one Dietrich Knickerbocker.

Knife (A S. *cnif*, a cutting implement). Of the weapons and tools found as relics of the Stone Age, the term knife is applied to those sharpened flints which were designed to be held in the hand or mounted upon a short handle to give slightly more leverage for cutting. The manifold uses to which a K. can be put give it great im-

portance in the development of races. As distinct from the dagger, which is always two edged, the prime importance of the K is its use as a tool, its use as a weapon can easily be seen to be secondary, as only its ready accessibility favours its adoption in preference to more specialised weapons. Bronze Ks have been found amongst relics of the Bronze Age and the use of iron was common long before hardened steel became the established material for the making of Ks. From a remote period in English history the manufacture of Ks has been associated with the town of Sheffield in Yorkshire. The earliest form of stool K, a blade of steel fastened rigidly to a wooden or horn handle, was followed by the jack K, which closed into a groove in the handle, in the sixteenth century. In the seventeenth century the pocket K, with spring back, was introduced and has developed with increase in the number of blades and improvement in workmanship ever since. Ks are made

usually of shear steel the various processes being forging, hardening, tempering, grinding, polishing, and finishing. Some times the less essential parts of the K, such as the tang by which it is fastened to the handle, are made of malleable iron which is welded to the cutting portion. Among various forms of Ks may be mentioned pocket, table, carving, hunting, surgical, butchers', shoemakers', and running Ks. Many tribes of the Nile and Congo districts are very expert in throwing Ks as a method of attacking animals. Knight, Charles (1791-1873), English author and publisher son of a Windsor bookseller. In 1812 in conjunction with his father he edited the *Windsor and Eton Express* and also printed the *Almanac*. He commenced a busy career as publisher of good literature at low prices with the production of *The Plain Englishmen*, which he edited from 1820 to 1825 in conjunction with K. H. Lockhart of Greenwich Hospital. Settling in London in 1822 he founded *Knight's Quarterly Magazine*, to which Macaulay and other rising literary men contributed. In 1827 he became associated with the Society for the Diffusion of Useful Knowledge, and issued for the society the *Penny Magazine* (1832-15), the *Penny Cyclopaedia* (1833-44), and the *English Cyclopaedia* (1853-61). He edited a *Pictorial Shakespeare* (1838-41), and wrote a popular biography of Shakespeare (1843), His *Popular History of*

England was completed in 1862. In 1860 he was appointed publisher of the *London Gazette*. His active career as a publisher came to an end in 1864, but his work as an author continued to the close of his life. His other pubs. include *The Library of Entertaining Knowledge*; *The Pictorial Bible* (1836); *The Pictorial History of England* (1837-44), etc. See life by Alice A. Clowes, 1892.

Knight, Eric Mowbray (1897-1943), Amer. novelist, b. at Menston, Yorkshire, England. Migrated to the U.S.A. in 1912, and became naturalised thirty years later. Served in the ranks of the Canadian forces in the First World War. Served in the Amer. Army in the Second World War, having the rank of major. Killed in an aeroplane crash while on an official mission (1943). He will be remembered for his novels, among which the best were *Song on Four Bells* (1936); *The Flying Yorkshireman* (1937); *The Happy Land* (1940); and *This Above All* (1941).

Knight, Joseph Philip (1812-87), Eng. composer of songs, b. at Bradford-on-Avon. He produced his first songs at the age of twenty, and after this composed the music for a number of Haynes Bayly's songs, including *She wore a wreath of roses*. Of later songs the best was *Rocked in the cradle of the deep* (1839). He took holy orders after 1841, and was appointed to the charge of St. Agnes, Scilly Isles.

Knight, Dame Laura, Eng. painter; daughter of Charles Johnson. She was educated at Brimcliffe, Nottingham, and studied at Nottingham School of Art. She won the gold, silver, and bronze medals, S. Kensington, and the Princess of Wales scholarship. Married Harold K., 1903, the year she first exhibited at Royal Academy. Represented in art galleries all over Eng.-speaking world. She and her husband have lived at Staithes, Yorkshire, in Holland, and at Newlyn, Cornwall. D.B.E., 1929, A.R.A. 1927, and R.A., 1936. First woman to become a full member of the Academy since Angelica Kaufmann and Mary Moser. Pub. *Oil Paint and Grease Paint*, 1936.

Knight, Richard Payne (1750-1824), Eng. connoisseur, b. in Herefordshire. The journal which he kept when he visited Sicily with the Ger. painter, Philip Hackert, was trans. and pub. by Goethe in his biography of Hackert. His magnificent collection of coins, bronzes, pictures, etc., was bequeathed to the Brit. Museum. He was regarded as an authority on anc. art, and was vice-president of the Society of Antiquaries. His works include *An Analytical Essay on the Greek Alphabet* (1791); and *An Inquiry into the Symbolical Language of Ancient Art and Mythology* (1818).

Knight, Thomas Andrew (1759-1838), Eng. horticulturist, b. in Herefordshire. He was awarded the first Knightian medal, founded in his honour in 1838, and was president of the Horticult. Society, 1811-1838. He wrote *A Treatise on the Culture of the Apple and Pear* (1797); *Pomona Herefordensis* (1811), and over 100 papers, some of which were pub. in 1841.

Knighthood, word which in its origin was intimately bound up with the class of military tenants of the feudal system. It is purely a matter of antiquarian interest whether the term knight (O.E. *cniht*, a boy) ever superseded or was ever synonymous with the Lat. *miles* or the *gesith* or comes of Tacitus, or whether it applied solely to the military tenants of a baron or earl exclusive of those of the king himself. For it is at least certain that under the feudal system as introduced by the Conqueror and developed under Henry II. the military strength of the nation was measured by the number and efficiency of the knights whom the king was able to summon to the field, and a knight then meant no more than a person whose holding of land was on condition of performing military service for the sovereign (knight's fee or tenure in chivalry). Chivalry was practically a synonym for K., but was not used with the same utilitarian connotation, and is rather to be regarded as a semi-religious, semi-epic growth of the feudal system, which reached its flower of perfection during the crusades. The Church early threw its aegis of solemnity over the formal investiture of a youthful knight into the profession of arms and inculcated in him those virtues which we habitually associate with the word chivalry. The institution of the celebrated military orders of the Knights Templars and the Hospitallers, or Knights of St. John, was the direct result of the crusades. The members of these orders were pre-eminently and primarily soldiers of the Cross, whatever charges of misgotten wealth, worldly living, idleness, and heresy may with justification be hurled against their representatives of a later age. These knights have ever in the popular imagination existed as a far more heroic, nay, almost legendary class of men, than the mere tenants in chivalry of the feudal system. Nor is this remarkable, because their primary object being to repulse the infidel, their orders were essentially cosmopolitan and attracted the pick of knight-errantry, and the honour of K. was conferred upon their members by various European monarchs quite irrespective of any property qualifications, for the most part purely on account of military distinction. But side by side with these orders existed the knights of the feudal system, and indeed this territorial K., as it may be termed, and chivalry in its more appropriate sense declined together. In England even in the Middle Ages, K. was not by any means an unquestionably desirable honour, if, as contemporary chronicles show, the king was frequently obliged to resort to distraint to compel those who held the knight's fees (land of about £20 ann. value) to take the order of K., or prove that they were qualified to take the field as knights. This practice soon developed into a lever for inducing tenants to compound with the king by way of fine (*scutage*), and ultimately into a process for extorting money from those who would have been exempt at common law, which regulated the amount of a knight's fee by

the sufficiency of the land to support a knight, and not by its fluctuating normal value in a debased currency. This process of extortion by compulsory K. was revived in a truly anachronistic manner by Charles I as a means of raising money without resorting to Parliament, with the result that an Act was soon passed abolishing the prerogative of compulsory K.

At the present day the anct. military origin of K. is preserved in the continued existence of the accolade or symbolical ceremony of dubbing a man a knight by

Empire. Similar continental orders, equally avid of the hallowed claims of an exalted, if generally legendary, antiquity, are the order of the Holy Ghost founded by Henry III of France, and the order of the Golden Fleece of Spain. Probably the most distinguished of the Brit orders is that of the Garter. The pretensions of that of the Bath to an equal dignity of genesis are now generally agreed to be invalid, in spite of Selden and Camden. For details of the different orders of K., see ORDERS OF KNIGHTHOOD.

INSTALLATION OF KNIGHTS OF THE GARTER BY QUEEN ANNE AT KENSINGTON PALACE, AUG. 11, 1713

Painting by Peter Angelis.

touching his head with the tip of the royal sword. K. gives precedence over esquires and other untitled persons. 'Sir' is prefixed to the baptismal name of knights and baronets, and their wives have the legal designation of 'Dame,' which in modern parlance is converted into 'Lady.' The designation 'Dame' is now, however, applied to Dames Grand Cross of the Brit. Empire (see DAMES). Besides those who are simply knights there are others who are members of particular orders or classes which exist in most of the European states, and owe their foundation generally to some sovereign prince. Of this class of honorary associations are the Brit. orders of the Garter, the Thistle, St. Patrick, the Bath, the Star of India, St. Michael and St. George, and the Indian

Knightsbridge, name of a dist. of W. London, which extends into the city of Westminster, and also into the par. of St. George's, Hanover Square.

Knight-Service, system of land tenure in feudal days, which was introduced after the Norman Conquest. The king divided the land amongst his tenants-in-chief, who rendered him K. in return, i.e. they had to provide so many knights for service in the field according to the amount of land (knights' fees) held, and were also liable for certain fees. Tenure by K. was abolished in 1860.

Knights Hospitallers, see HOSPITALIERS, KNIGHTS.

Knights of Columbus, an organisation founded in the U.S.A. as a fraternal benefit association for Catholic men. It

was started in 1882 by Rev. M. J. McGivney and nine parishioners of St. Mary's Catholic church in New Haven, Connecticut, and has grown to such an extent that it has now more than 640,000 members in over 2500 subordinate councils. It operates in every state of the Amer. Union, in every prov. in Canada, and also in Mexico, Puerto Rico, Alaska, Panama, Cuba, and the Philippines. It has a charter which permits it to engage in public welfare, educational, relief, and boys' work. When the U.S.A. entered the First World War, the U.S.A. Gov. officially recognised it as a welfare organisation to work among the soldiers. In this capacity it not only laboured among the soldiers in the vast camps in the U.S.A., but also among the 2,000,000 Amer. troops ultimately brought to France. It collected and spent sev. million dollars in this work, all administrative expenses being borne by the K. of C. itself. In 1923 it began active work among boys, and sponsors at Notre Dame Univ. what is claimed to be the only post-graduate course in boys' work in the world. In 1930 it gave sums of money for relief work in the drought-ridden middle W. states, and also in Santo Domingo. It has assets of over \$30,000,000, and the insurance it has in force is close to \$280,000,000.

Knights of Labour, see TRADE UNIONS.

Knights of Rhodes and Malta, see HOSPITALIERS, KNIGHTS.

Knights of St. John of Jerusalem, see HOSPITALIERS, KNIGHTS.

Knights of the Golden Circle, Amer. anti-federal, pro-slavery secret society and political organisation which flourished 1855-64 and sympathised with the Secessionists.

Knights of the Round Table, see ROUND TABLE, THE.

Knights of the Sepulchre, see SEPULCHRE.

Knights Templars, see TEMPLARS.

Knistineaux, see CREES.

Knitting. The origins of K. are completely unknown. The records of the rocks and tombs throw no light on how man mastered the craft. We know that man was a weaver thousands of years before the birth of Christ and from studying the life of primitive man that he learnt the technique of producing woven fabrics by his observations of grasses plaiting in the wind and the interlacing of the boughs of trees in the primeval forests. There is one flint that suggests to us how man learnt the knitter's craft. 'Sprang,' a form of needle weaving, has much in common with the technique of both K. and crocheting, while the fragments of Peruvian needle K. dated the first century of the Christian era show the evolution from a 'sprang' to a K. technique.

The first knitters were the nomadic tribes who lived in the Arabian desert, and it is probable that the women spun the wool in their own homes and the men knitted while tending their flocks of sheep. K. was also practised in aet. times, as it is to-day, by fishermen and here again we can see clearly the evolution from netting on a single stick to K. on two needles.

The earliest known fragment of Arabic K., the property of Dr. Fritz Ikle, dated seventh to ninth century, was found at Fostat in Egypt, the city standing on the site where Cairo stands to-day. The fabric is extremely fine and worked at a tension of thirty-six stitches to the inch. There is a coloured geometric pattern in deep maroon on a gold ground, the colour not in use being stranded across the back of the work. The fabric itself is knitted throughout in cross stocking stitch. The interest in this specimen is that it shows a long development behind it, suggesting that K. must have been practised any time up to 1000 B.C. The Coptic Christians, the founders of the primitive church, learnt to knit from the Arabs and in their early missionary journeys took the craft with them to Spain and also to the Brit. Isles. There are sev. fine examples of Coptic K. in museums in various parts of the world. From Spain K. moved across Europe centring in Italy and France, both countries claiming to be the originators of knitted silk hose. In the Basque country the knitted and felted beret from which the Scottish knitted bonnet originated has been the traditional piece of headwear for well over a thousand years. In France hand-K. flourished and by the thirteenth century had become one of the staple industries of the country, the knitters' guild founded in Paris being the most highly organised guild of master knitters the world has ever known. We know that in the reign of Edward IV. the Fr. knitters were exporting hosiery to Britain. In Italy coloured brocade K. worked in gold and silver thread and bright-coloured silks added its mark to this phase of the craft's development. To-day brocade Florentine knitted waistcoats are prized by collectors, a perfect specimen of this craft being among the knitted garments at the Victoria and Albert Museum. The sixteenth century was the golden age of K. and one still looks with wonder at the knitted carpets designed and worked by the master craftsmen during this period. In England K. appears to have estab. itself during the reign of Queen Elizabeth as a pastime among the ladies of the court. It is recorded that a Mrs. Montague presented the queen with two pairs of silk stockings knitted by her own hand.

Colour K., that is, producing patterned fabrics in sev. shades of wool and silk, would have appeared to have centred largely in Spain and Italy and it has been suggested that sailors, who were saved from the wrecked Armada carried this phase of the craft to the W. of Ireland and to the Shetlands. While this theory is disputed there is ample evidence to support its truth, for Donegal K. to-day still preserves the simple geometric designs the Spaniards mastered from Arabic sources. Many of the original Fair Isle patterns are a direct link with the Catholic tradition of Spain where they originated. In S. Austria heavily embroidered K. has been in vogue for sev. centuries, the basic fabric being knitted in simple lace designs in heavy

wool, the embroidery being worked in gay colours on top of the knitted fabric. In N. Germany plaited and cable fabrics have always been dominant, while in Belgium and France knitted laces, some of them almost as fine as cobwebs, have added a new charm to this fascinating craft. K. reached Scandinavia during the seventeenth century, Dutch craftsmen being invited by the king of Denmark to establish themselves and their craft in that country. It is probable that in the N. of Scandinavia K. flourished at a much earlier date, as there is a long record of 'sprang' fabrics being produced there in the Bronze Age.

As London became the commercial centre of England K. moved further and further N. The first K. school was founded in York in the sixteenth century, while the frame K. hosiery trade established itself in Leicester and Nottingham about the same period. During the seventeenth and eighteenth centuries the Yorkshire dale became the centre for hand K. in England, various records proving that the K. of hosiery was a thriving industry during this period. The Victorian age, following the Industrial Revolution, slowly undermined the hand K. industry, and while fishermen of the Shetlands and the E. coast fishing ports still carried on the craft, it became mainly a drawing-room hobby practised by the genteel daughters of the rising middle class who were beginning to dominate the domestic life of the Brit. Isles. It is a notable fact that wars have always produced a revival of hand K. The Balachava helmet was the forerunner of knitted comforts for the troops that once again commanded our attention during the last two European wars. The spinning of hand-K. wools by reputable firms, the production of K. books and K. leaflets giving simple instructions how to produce knitted garments at home have contributed largely to the development of K. to-day. This again is a direct development from the K. patterns that can be found in many of the gentlomen's magazines of the Victorian era.

The knitter's craft itself is very simple, requiring only a set of K. needles, a ball of wool, cotton, silk or linen. A single loop is made on the end of the fibre that is being used and from this loop the stitches are cast on to the needles, the basic action of the craft consisting of transferring the loops from one needle to another; 'weaving' the new set of loops transferred on to the second needle from the first set of loops by passing the point of the second needle through the loop, wrapping the fibre over the point of the needle, and then passing the loop over the fibre wrapped round the needle. By working across the back of the loops a purl stitch is produced. K., and purling being the foundation stitches out of which the most simple and elaborate patterns are created. To-day we seem to be moving into another golden age of K. and many firms of K.-wool spinners throughout the world are doing much to preserve the ancient traditions of this simple and lovely craft. Knitting, Mechanical, see **HOSIERY**.

Knoblock (Knoblauch), Edward (1874-1945), dramatist, b. in New York city, descendant of a Ger. family, educated in Berlin and Harvard, where he studied drama. Came as a young man to London where he gained experience of the theatre by writing, adapting, and translating plays. In 1906 his adaptation, *The Shulamite*, was produced at the Savoy, and the next year he became reader of plays at the Kingsway Theatre. After visiting Tunis and Kairouan to study local colour, he wrote the play *Kismet* which was produced at the Garrick Theatre in 1911 with great success by Oscar Asche. In 1912 appeared *Milestones*, the comedy of three generations of one family, in which he collaborated with Arnold Bennett, and which became one of the most famous plays of the period. After collaborating with Tom Pellatt ('Wilfrid Coleby'), the schoolmaster, in the play *The Headmaster*, he produced *My Lady's Dress* (1914), which is considered by some to be his best play, though others think that his *Mari-Oddie* (1915), a study of the true innocence of women, surpassed it. During the First World War he became naturalised and changed the spelling of his name, devoting himself to the service of the Fr. in Britain. In 1931 he dramatised J. B. Priestley's *The Good Companions*. His book of reminiscences, *Round the Room* (1939), is an appealing revelation of character.

Knock, par. and vill. of co. Mayo, Ire, 5 m. N.N.E. of Clacmorris. The church has been visited by pilgrims since Aug. 21, 1879, when it was announced that the Blessed Virgin had appeared there in bodily form. Pop. 2500.

'Knocking', see **PINKING**.

Knock-knee, condition in which the knees are close together and the feet widely separated. In infants it is usually the result of rickets and may be avoided by taking measures to keep the child from standing on its feet. General attention to health and nutrition is also necessary to counteract the predisposing cause. In older persons it is caused by undue pressure on the joint, through having to perform work beyond their strength. The weight of the body is transmitted through the outer condyle of the femur; if heavy loads are carried by a young person the ligaments of the knee fail to maintain horizontally in the joint. The outer condyle gradually diminishes in size owing to the increased pressure, and the inner condyle grows to a corresponding extent, causing the condition to become permanent. When observed in time, massage and attention to the circumstances under which the undue pressure is sustained will tend to alleviate the condition.

Knockmealdown, mt. range of Ire, in

the S. of Tipperary and the N.W. of Waterford. Its length is 12 m., with an average width of 4½ m., and the summits reach about 2700 ft.

Knokke, tn. in Belgium, situated in W. Flanders, 10 m. N.N.E. of Bruges. Its extensions along the North Sea, called Albert-Strand (Albert-Plage) and Het Zoute (Le Zoute), range among the most modern seaside resorts of the Belgian coast. K. has a famous casino-kursaal and an aerodrome. Pop. 11,000.

Knole, one of the largest private houses in England, situated in K. Park, 1 m. from Sevenoaks, Kent. It was begun by Thomas Beaufort, archbishop of Canterbury, in 1456, but greatly extended, c. 1603, by Thomas Sackville, first earl of Dorset, to whom it was granted by Queen Elizabeth. The state rooms contain a large number of historic pictures, rare furniture (e.g. the K. settee) rugs, and tapestries dating from the early seventeenth to the late eighteenth century. It was given in 1946 by the fourth Lord Sackville to the National Trust, although the family retain a lease of part of the house. See L. Sackville-West, *Knole House*, 1908 and V. Sackville-West, *Knole and the Sackvilles*, 1934.

Knolles, Richard (c. 1545-1610), Eng. historian, educated at Oxford, and master of the grammar school at Sandwich, Kent, after 1571. His *Generall Historie of the Turkes*... was pub. by A. Islip (1603), and later ed. with additions by Sir P. Rycaut (1700). K. trans. Bodin's *De Republica* in 1606, dedicating it to his patron, Sir P. Manwood. See 3rd ed. of Wood's *Athenæ Oxonienses*, ed. by P. Bliss, 1813-1820; S. Johnson in the *Rambler*, No. 122; and *Athenæum*, Aug. 6, 1881.

Knollis, or **Knollys**, Sir Francis (c. 1514-1596), Eng. statesman, descendant of Sir T. Knollys (d. 1435). He entered Henry VIII.'s service before 1550, became M.P. for Horsham (1542), fought for Edward VI. in Scotland, and was knighted in 1547. His strong Puritan views caused him to leave England in Mary's reign, but he returned under Elizabeth, and was sent by her on a mission to Ireland (1566), and later to take charge of Mary Queen of Scots. See S. Haynes, *Burleigh Papers*, 1740 and Sir R. Naunton, *Queen Elizabeth's Favourites*, 1824.

Knossos, or **Knossus**, Crete, see CNOSSUS.

Knot (O.E. *cnotta* from a Teutonic stem *knutt*, cf. *kult*), in cordage, an interwoven loop of rope, cord, string, or any flexible material, used to fasten a rope to an object or to another rope. The various methods of fastening are known by the technical names of Ks., bends, hitches, seizings, and splices, all of which, save the last, would be termed varieties of Ks. by the layman. 'Bends' and 'hitches' are methods of fastening ropes together or round spars, etc.; 'seizings' (Fr. *sauoir*) are ways of fastening two spars to one another by a rope, or two ropes by a third; 'splices' (cf. split) are made by weaving the ends of two ropes together (see below). The principle on which all are constructed is that the strain they bear shall serve to draw them tighter. Among the various kinds

of Ks. used on board ship for different purposes may be mentioned: figure of eight, bowline, running bowline, half-hitch, clove hitch, Blackwall hitch, double Blackwall hitch, cat's paw, marlinspike hitch, fisherman's bend, timber hitch, Carrick's bend, sheet bend, single and double wall Ks., Matthew Walker, inside clinch, midshipman's hitch, Turk's head, Sp. windlass, shroud K., Flemish eye, racking seizing, diamond K., etc.

Splices are methods of fastening two ropes together in such a way that there is no great increase in size or decrease in efficiency and strength at the point of junction; there are three main kinds, the short splice, the eye splice, and the long splice. The short splice is formed by unlaying the strands of the rope for a short distance, 'marrying' them, and passing them over one strand and under the next, twice each way, with the aid of a marlin-spike. Before being turned in a second time the strands are halved, the upper half only of each strand being turned in; all the projecting strands are then cut off neatly. An eye splice is made by unlaying the strands of the rope and placing them upon the same rope, spread at such a distance as to give the right size of loop for the eye required. A splice is then made in a similar manner, and when projecting ends have been trimmed, the part disturbed is bound tightly round with a hawl line. In a long splice, not only are the ends unlaid for three times as long as in the short splice, but one of the strands of each rope is unlaid for a still further distance, thus making the splice firmer. In a scientific sense a K. is a physical line, i.e. a flexible inextensible line that cannot be cut, that cannot be deformed into a circle. J. B. Listing (1802-82) was undoubtedly the pioneer of the scientific study of Ks.; in his *Vorstudien zur Topologie* (1848) he gives in a few pages what is evidently only a précis of his observations on the subject. Prof. F. G. Tait treated of Ks. according to their 'knotiness,' 'be-knottnedness,' and 'knotfulness,' in his paper to the Royal Society of Edinburgh (see *Transactions Royal Society, Edinburgh*, xxviii. 145, 1876-77). He applies the name of 'amphichiral' (αμφι and χερσ) to Ks. which can be deformed into their own perversion, that is, their image in a plane mirror. It has been shown that any K. can be represented by three plane curves, none of which has double points and of which no two intersect, and C. F. Klein has proved (*Mathematische Annalen*, ix. 478) that Ks. could not exist in space of four dimensions. In addition to the works cited above, see T. Bowling, *Book of Knots*, 1866; J. T. Burgess, *Knots, Ties, and Splices*, 1884; and O. W. Ashley, *The Ashley Book of Knots*, 1947.

Knot, unit by which the speed of a ship is reckoned; e.g. 20 Ks. equal 20 nautical m.p.h. The term is derived from the Ks. in the log-line (see LOG). The nautical mile is supposed to be equal to one minute of lat., but since the earth is not a perfect sphere this varies a little, and no mean has been agreed upon. In Brit. usage the nautical mile is 6080 ft., whereas in that

TWELVE KNOTS

1, bowline (in stages); 2, Carrick's bend; 3, clove-hitch; 4, fireman's chain knot (in stages); 5, fisherman's bend; 6, half-hitch; 7, reef knot; 8, granny knot; 9, sheepshank (shortening knot); 10, sheet bend; 11, double sheet bend; 12, towler hitch.

of the U.S.A. it is 6082 ft. 8 in. Ten cables make one K. in charting, etc., although the usual length of a cable is 600 ft.

Knottingley, par. and urb. dist. of W. Riding, Yorkshire, England, on the R. Aire, 3 m. N.E. of Pontefract. The industries are glass bottle works, rope-walks, and limestone quarries. Pop. 9000.

Knout, whip used in Russia for the punishment of criminals, said to have been introduced under Ivan III.

Knowledge, or Epistemology, that part of philosophy which treats of the possibility, nature, and limits of human K. Before Plato it is possible to distinguish three main theories of K., set forth in the *Theaetetus*.

It appears that the sophists, following Heraclitus, taught that K. is no more than sense perception. Another view was that it was true belief, i.e. judgment founded on the impressions derived through sense. Finally the Cynic Antisthenes maintained that only compounds are knowable. Against the first of these theories Socrates affirmed that the truth of things is attained by general

notions reached through deduction and definition. Thus we consider a number of instances, e.g. twenty books, omit all that is peculiar to each, define what is common to each, and thereby arrive at a general notion of the essence, book. Plato (427-347 B.C.) accepted the Socratic view, rejected the other two current opinions, and constructed his theory of ideas which dominated the whole of W. thought for 2000 years, and still influences a large part of mankind. According to Plato it is necessary to distinguish between K. and belief, and to admit two classes of objects, the real and the phenomenal. The former he called ideas. They are permanent unchanging entities, existing in themselves and not as mere products of thoughts. These ideas in their totality make up intelligible reality. They are what we know, and all particular or phenomenal things, which are the objects of sense perception, somehow participate in them. They are the essence of particulars. These ideas are apprehended by the intellect (*νοῦς*), a pure and unmixed

act of the soul. Belief or opinion is the fruit of pure thought and perception combined. With Aristotle (384-322 B.C.) the ideas of Plato are not existing entities, but products of thought, universal concepts. The essences of particular things are in them according to reason as well as according to time. Aristotle taught that reality is an unbroken chain of being ranging from the purely indeterminate (first matter, *πρώτη ύλη*) to complete actuality (God). Every individual thing in nature is compounded of this matter and form (*μορφή*) which gives to it qualities, its intelligible essence. He also discusses the various forms of cognitive activity, the process by which K. is acquired, and distinguishes sense perception, memory, experience, active and passive intellect. The scholastic philosophers, notably St. Thomas Aquinas (1225-74) and Duns Scotus (1274-1308), accepted and developed the teaching of Aristotle. William of Ockham was the precursor of conceptualism according to which the only existent realities are individual things, universals being mere products of the mind. This led to nominalism which stated that universals are mere names since generalisation and indeed thought itself are impossible without words.

There are three prin. schools of modern epistemology: rationalist, empirical, and critical. Representative of the first school are Spinoza (1632-77) and Leibniz (1646-1716). Spinoza denies the existence of reality outside God of whose eternal and infinite essence he says man has an adequate K. Man is part of the world of phenomena, but can escape from its finiteness through 'salvation'. This theory is illogical inasmuch as it purports to reconcile reality and appearance while recognising the existence of the world of appearance. Leibniz does not regard the mind as a mere recipient of ideas. He takes into account the mind's reaction in K., and thus opposes the view of Locke (1632-1704), the first of the empirical school. Locke holds that all our K. comes from sense experience and from that alone. Berkeley (1685-1753) develops this view, asserting the non-existence of unthinking matter, a paradox which has had a considerable influence on epistemology and on philosophy in general. He postulates the falsity of all abstract ideas and argues that all possible ideas must be particular concrete facts of consciousness possessing characteristics or images which we can discover and describe. But he also allows that we have K. of other reality than that of our ideas, for we 'may be said to have some knowledge or notion of our own minds, of spirits and active beings, whereof, in a strict sense, we have no ideas.' This admission led him almost to go back on sensations, emphasising the intellectual apparatus of experience which enables us to rise to truth and to God. Hume (1711-76) further supplemented the empiricism of his predecessors in his analysis of K. which reduces every positive object of K. either to an impression or an idea. The former term comprises sensations and emotions, the latter

the faint images of these livelier perceptions in thinking and reasoning. Kant (1724-1804) stands at the head of the critical school. He taught that the intelligible world is explained by the unity of the self or of consciousness. This self is not merely an individual but is universal, and this consciousness has a rational validity and significance. We create the world, which is the product of our own understanding. Fichte goes further, regarding reality as wholly constructed by the ego. Since the death of Hegel (1831) modern epistemology has been represented by two schools. Spiritualists, theists, and idealists maintain that matter and spirit can be reconciled by rational insight. This is denied by positivists, agnostics, and Kantians. Modern epistemological research, however, is chiefly concerned with the nature of the act of cognition. The neo-scholastics accept in principle the doctrine of Aristotle as expounded by St. Thomas Aquinas. Others, though differing at many points, appear to accept four common propositions: (1) Perception is a complex act involving more than the apprehension of sense qualities; (2) there is a distinction between the act of thinking and the thought; (3) thoughts or sense qualities are not identical with the physical object nor, necessarily, with any of that object's qualities; (4) what is known through sense perception is based on the apprehension of sense qualities and the perception of the relations between those sense qualities. See GREEK: D. Peipers, *Die Erkenntnistheorie Platos*, 1874; W. D. Ross, *Aristotle*, 1923; A. E. Taylor, *Plato*, 1926. SCHOLASTIC: A. Stockl, *Geschichte der Philosophie des Mittelalters* (4 vols.), 1861-67; M. de Wulf, *Histoire de la philosophie médiévale*, 1905. MODERN: B. Russell, *A Critical Exposition of the Philosophy of Leibniz*, 1900; H. H. Joachim, *Study of the Ethics of Spinoza*, 1901; H. A. Pritchard, *Kant's Theory of Knowledge*, 1901; J. Gibson, *Locke's Theory of Knowledge*, 1907; C. D. Broad, *Perception, Physics, and Reality*, 1914, and *Mind in Nature*, 1925; A. N. Whitehead, *An Enquiry concerning the Principles of Natural Knowledge*, 1919; R. Metz, *George Berkeley*, 1925.

Knowles, James Sheridan (1784 1862), Eng. dramatist, the son of James K., the lexicographer, after failing in sev. callings, turned as a last resource to the writing of plays, in which occupation he achieved considerable success. His tragedy of *Caius Gracchus* was produced at Belfast in 1815, and won much praise. Five years later his *Virginia*, suggested to him by Keats, was performed at Drury Lane. For Macready at Covent Garden he wrote *William Tell* (1825); and three years later was produced *The Beggar's Daughter of Bethnal Green*. Among his other plays were *Alfred the Great* (1831); *The Hunchback* (1832); and *The Chase* (1837). In later life he became a Baptist preacher. There is a biography by his son, R. B. K. (1872). See also L. H. Meeks, *Sheridan Knowles and the Theatre of his Time*, 1934.

Knowles, Sir James Thomas (1831-1908), Eng. editor, began life as an architect. He was editor of the *Contemporary Review* from 1870 to 1877, and then founded the *Nineteenth Century*, which, with Gladstone, Tennyson, Huxley, Fitz-james Stephen, Manning, and other celebrities contributing, was from the first a great success. He was made K.C.V.O. in 1903.

Knowlesley, par. and tn. of S.W. Lancashire, England, 5 m. W. of St. Helens. The mansion of K. Hall has been, since the reign of Richard II., the seat of the Stanley family; it contains sev. art treasures, including Rembrandt's 'Belshazzar's Feast' and specimens of Rubens and Correggio. Pop. 3000.

Knox, John (c. 1513-72). Scottish reformer, *b.* in Giffordgate, Haddington. From statements of K. himself it would appear that his father was a feudal dependant of the earl of Bothwell. His mother's name was Sinclair. It was formerly believed that K. was *b.* in 1505, and that he was the John K. who entered Glasgow Univ. in 1522, but later opinions favour 1513 or 1514 as the date of his birth. Little is known of his early years, but it is known that he became a priest and during 1540-43 he acted as notary in Haddington, and in 1544 he became tutor to Francis and John, sons of Hugh Douglas of Longniddry and Alexander Cockburn of Ormiston. At the houses of Douglas and Cockburn and Crichton of Brunston he met George Wishart, whose zeal in the Lutheran cause made a deep impression upon him. In 1546 Wishart was burned at St. Andrews for heresy, and K., having been in association with him, was compelled to take refuge in the castle of St. Andrews in the following year in order to escape arrest. The castle was then held by the murderers of Cardinal Beaton. At this time he was formally called to the Protestant ministry, and preached in the castle and par. church of St. Andrews, making a profound impression. A few months later the castle was surrendered to the Fr. and, in violation of the terms of surrender, K. and others were condemned to the Fr. galleys. K. was a prisoner in France for eighteen months, and then, in Feb. 1549, he was released through the intervention of Edward VI. He went over to England, and preached at Berwick-on-Tweed, Newcastle, and in Buckinghamshire. In 1551 he was made one of the six royal chaplains, and in this capacity took part in the revision of the second Prayer Book of Edward VI. On the accession of Mary Tudor, K. crossed over to the Continent. From Dieppe he proceeded to Geneva, where he spent most of the next eighteen months, interrupted only by short visits to Zürich and Frankfurt-on-Main. At the latter place he ministered to the Eng. refugees, but left owing to objections to his teaching. At Geneva he met Calvin, but was not so much impressed by Bullinger, whom he met at Zürich. He returned to Scotland in Sept. 1555, and it was about this time that he married his first wife, Marjory Bowes. He found the nobles of Scotland

strongly inclined towards Protestantism, owing to the co-operation of the court with the policy of France. He proceeded to champion the cause of Protestantism with so much vigour and effect that his opponents compelled him to quit the country, but not before he had laid the foundations of ultimate success. He was summoned by the bishops to appear at the Blackfriars Kirk in Edinburgh on May 5, 1556, but he came with so strong a following that the prosecution was abandoned. He returned to Geneva in July 1556, and during his three years' residence there he sent over to Great Britain a series of propagandist pamphlets, including his well-known *First Blast of the Trumpet against the Monstrous Regiment of Women* (1558).

JOHN KNOX

He returned to Scotland in 1559, and never left it again for any length of time. He found the Protestant nobles now in open revolt against the queen regent, and he advanced their cause greatly by his powerful preaching at Perth, St. Andrews, and Edinburgh. He joined the qualities of a statesman with those of a divine, and he took no secondary part in the events that followed. It was mainly through his efforts that the aid of England was obtained in forcing the queen-regent to send the Fr. soldiers out of the country. The death of the queen regent occurred about this time, opportunely for her opponents, and Protestantism was estab. as the religion of the country. K.'s Confession of Faith being formally adopted on Aug. 17, 1560. This was the state of things when Mary Stuart, with her entirely Rom. Catholic leanings, came to Scotland in 1561. K., who had become minister of Edinburgh in the previous year, felt that he had a special duty towards her, and a sermon which he preached at St. Giles, Edinburgh, in 1561 led to the first of his famous interviews with the queen, which he has so vividly described. Many of the nobles seemed disinclined to go the full length of K.'s Calvinistic ideals, but the

misfortunes of the queen aided his aims considerably. K., nevertheless, remained in the background for a time, and after the murder of Rizzio he deemed it prudent to withdraw to Kyle in Ayrshire. After the murder of Darnley K. came to the front again, and denounced the queen and Bothwell, acting once more with Moray, from whom he had been estranged for a time. These events and the flight of the queen to England resulted in the final overthrow of Rom. Catholicism in Scotland. K.'s work was now almost done. His imprisonment in France in earlier years had greatly impaired his health, and that, combined with his many years of strenuous agitation, began to tell upon him, but he was still a force to be reckoned with. James Melville draws a striking picture of the reformer in his later days at St. Andrews, where he was so weak that he had to lean against the pulpit on his first entry, but before the sermon was ended he was 'like to ding that pulpit in blads (fragments), and fly out of it.' His last public appearance was on Nov. 9, 1572, at the induction of his successor, Lawson, to St. Giles, Edinburgh. This effort greatly exhausted him, and he gradually sank, and d. on the twenty-fourth of the same month. Two days later he was buried in the churchyard then attached to St. Giles, but now forming part of the courtyard of Parliament House. The spot where his remains lie is indicated by a plate bearing the initials I. K. K.'s first wife d. in 1560, and in 1561 he married Margaret Stewart, then a girl in her teens. He was survived by his second wife and by all his children.

To modern minds K. presents the character of a rugged, stern, fierce reformer, in fact, almost a fanatic; yet he had a great share in fashioning the destiny of his native country, and has left an abiding impression upon its religious life. In denunciation he was supreme—in fact, the word 'Protestant' finds one of its best examples in him. His eloquence and the virility of his utterances made him a valuable asset to the cause he championed, and his qualities of statesmanship made him more than a pulpit force. He was in no sense a pioneer in theology, but carried into practice the stern creed of Calvin. The regent, the earl of Morton, said at his graveside: 'There lies he who never feared the face of man, who hath been often threatened with dag and dagger, but yet hath ended his days in peace and honour; for he had God's providence watching over him in a special manner when his life was sought.'

See K.'s *Historie of the Reformation of Religion within the Realme of Scotland* (1584), which is his most abiding monument as a writer. The standard ed. of his works is that ed. by David Laing for the Wodrow Society, and pub. in 6 vols. in 1846-64. See also T. McCrie, *Life of Knox*, 1813; T. Carlyle, *Heroes and Hero Worship*, 1841; P. Lorimer, *John Knox and the Church of England*, 1874; P. Hume Brown, *John Knox*, 1895; A. Lang, *John Knox and the Reformation*, 1905; J. Glasse, *John Knox*, 1905; K. Hewat, *Makers of*

the Scottish Church, 1920; and E. Muir, *John Knox: Portrait of a Calvinist*, 1929. Knox, John (1720-90), Scottish philanthropist, for many years a bookseller in the Strand, London. He then retired to Scotland, devoting his energies to improving Scottish fisheries and manuf., and making sixteen tours through Scotland (1764-75). His works include *View of the British Empire*... (pub. anonymously) (1784); *Observations on the Northern Fisheries*... (1786); and *A Tour through the Highlands*... (1787).

Knox, Ronald Arbuthnot (b. 1888), Brit. writer, son of the Rev. K. A. K., Sanskrit scholar, and from 1903 to 1921 bishop of Manchester. Educated at Eton and Balliol College, Oxford. Became fellow and lecturer at Trinity College, Oxford, and, having, in 1917, entered the Rom. Catholic Church, became Rom. Catholic chaplain at Oxford Univ. (1926-39). Domestic prelate to the pope, 1936. He wrote a number of clever detective stories, besides more serious works. His stories include *The Viaduct Murder* (1925); *The Footsteps at the Lock* (1928); and *The Body in the Sile* (1933). Other works: *A Spiritual Enaid* (1918); *The Belief of Catholics* (1927); *Essays in Satire* (1928); *Barchester Pilgrimage* (1935); *Let Dons Delight* (1939); *God and the Atom* (1945). The lively exercises in humorous scholarship, by which he is most widely known, such as the *Studies in Sherlock Holmes*, were papers designed to enliven the stodgy fare of pious societies, and indeed his literary work, like that of the farm labourer of a monk, is part of his priestly calling, or may be so regarded, for it will always be found to be controversial in character. Thus *Caliban in Grub Street* (1930) was an examination of the slump-provoked interest in religion which was suddenly and absurdly exhibited by the press. In *Broadcast Minds* (1932) he engaged more weighty opponents in H. G. Wells, Lord Bertrand Russell, H. L. Mencken, Julian Huxley, and Gerald Heard as men who personified the jaunty materialistic opinions of the time. His *God and the Atom* is in many ways the postscript and epitome of all his controversial work. In it he addresses equally the Christian tempted to *Schadenfreude* and the heathen tempted to despair. To the practical warrior the atom bomb presented no moral or spiritual problem, but K. shows that the popular uneasiness over its use in Japan was based on the deepest philosophical grounds. (Evelyn Waugh.)

In 1946 he made a fresh trans. of the N.T. from the Vulgate. The trans. was made for Rom. Catholics for study alongside the standard Rheims version of 1582. In 1949 appeared his trans. of *The Old Testament*, vol. 1: *Genesis-Esther*.

His brother, Edmund George Valpy K. (b. 1881), educated at Rugby and Corpus Christi College, Oxford, joined the staff of *Punch*, and as 'Evee' became known for his humorous contributions. Editor of *Punch* 1933-49. His writings to *Punch* have appeared in book form as *Fancy Now* (1924); *It Occurs to Me* (1926);

Here's Misery (1928); *This Other Eden* (1929), etc.

Knox, William (1789-1825), Scottish poet. He became a farmer in Dumfriesshire from 1812 to 1817, and settled in Edinburgh in 1820, following a literary career. His works include *Visit to Dublin*; *Marianne, or the Widow's Daughter* (prose); *The Lonely Hearth* (1818); *The Songs of Israel* (1824); *The Harp of Zion* (1825). His *Collected Poems* appeared in 1847. See Sir W. Scott, *Journal*, i., 1891; J. G. Lockhart, *Life of Scott*, vi., 1837; Rogers, *Scottish Minstrelsy*, iii.

Knox, William Franklin (1874-1944), Amer. statesman and soldier, b. at Boston, and educated at Alma College, Michigan. Fought with the Rough Riders in the Cuban war, 1898. Manager of *Grand Rapids Herald* (Michigan), 1898-1900; publisher of various prov. newspapers, 1901-31; general manager of the Hearst group of newspapers, 1931; finally acquired a controlling interest in the *Chicago Daily News*, in which he strongly opposed the New Deal. He commanded an artillery regiment in France in the First World War, and was Rep. J.-eun nominee for the Amer. presidency in 1935. From the outbreak of the Second World War he consistently supported the Allies and opposed the isolationists. In June 1910 President Roosevelt appointed him as secretary of the navy.

Knoxville, city and the co. seat of Knox co., Tennessee, U.S.A., on the Tennessee R., 165 m. E. of Nashville. It has a beautiful situation in a fertile and healthy region, and is the centre of the marble trade of Tennessee. It also manufs. cotton and woollen goods, furniture, flour, iron goods, and other articles. Here is situated the univ. of Tennessee. Pop. 111,600.

Knutstorf, mkt. tn., co. of Cheshire, England. It lies 15 m. S.W. of Manchester. This tn., supposed to have derived its name from Knute's ford, is very old and picturesque, and is described in Mrs. Gaskell's *Cranford*. It manufs. cotton, leather goods, and worsted. Pop. 6700.

Knysna, name of a div. and tn. in Capo Province, S. Africa. The div. comprises a strip of land on the S. coast of the prov., and the tn., which is at the mouth of K. R., is 139 m. W. of Port Elizabeth. Timber is exported at its excellent harbour, and there are sawmills. Pop. (white) 3060; (others) 4300.

Koala (*Phascolarctus cinereus*), small marsupial related to the wombats and phalangiers of Australia, and known as the Australian bear. Greyish-white fur, tufted ears, and no tail. Is a vegetarian feeder, and is so delicate that, in spite of State preservation, it is becoming extinct.

Kobdo, tn. and trading centre of Outer Mongolia, China, situated on a plateau about 4000 ft. above sea level. Pop. 6000.

Kobe, tn. of Japan on the is. of Honshu on the bay of Osaka. In 1868 it was opened to foreign trade, and the city of Hyogo was opened at the same time, the former becoming the foreign residential quarter. Since 1892 the two tns. have

formed one. It possesses an excellent harbour. K. did not share the phenomenal growth of the other leading cities of Japan during the inter-war decades; but its pop., 967,000 (1911) shows what would, by other standards, be a striking increase—50 per cent in fifteen years. It has an imperial shipbuilding yard, and its industries include match-making, cotton goods, and camphor distilling. It was heavily damaged during the many Amer. air raids on Honshu in 1945, especially on June 4, 1945, when large areas of K. were devastated by 500 Super-Fortresses.

Kobeh, or **Kobi**, tn. of the Anglo-Egyptian Sudan, 35 m. W.N.W. of El-Fasher. It was at one time the cap. of Darfur.

Kobelyaki, tn. in the Poltava Region of the Ukrainian S.S.R., on the Vorshla, 100 m. N.N.W. of Dniepropetrovsk. Pop. 15,000.

Koblenz, or **Coblenz**, tn. of Germany, formerly cap. of the Rhine prov., situated at the junction of the Rhs. Rhine and Moselle, 57 m. S.E. of Cologne. Two of the chief features are the royal palace, finished in the latter half of the eighteenth century, and a statue of the Emperor William I. A large amount of wine is produced in the tn., and there are also piano, paper, and machine factories. In Dec. 1918 it was occupied by Amer. troops. Owing to the nature of the terrain the Allies in 1945 decided against crossing the Rhine between K. and Bonn, but by the Amer. Third Army's swift arrival on the Rhine and the Moselle, and its advance S.E., the Gers. were taken off balance, and their forces were brushed aside as the Allies swept up the Rhine. The offensive began on March 15, and K. was occupied in a few days, the riv. bank being cleared by March 19 from K. as far as the Bingen bend. Pop. 81,800. (See illustration, p. 180.)

Kobold, see GOBLIN.

Kobresia, genus of Cyperaceae, contains less than half a dozen species, flourishing in Europe and Asia. *K. carvina* occurs on Brit. moors.

Koburg, see COBURG.

Koch, Johannes, see COCCHEUS.

Koch, Ludwig (b. 1881), Ger. naturalist, educated at Frankfurt-on-Main, Paris, and Milan. Singer of *Lieder* and in oratorio, being a pupil of Jean de Reszke, 1903-14. Director of the culture dept., of Ger. Gramophone, Odeon, and Parlophone Company. First to record directly the songs of wild birds and the cries of other wild creatures, and is the originator of sound-books. Since 1936 he has lived in Britain as a naturalist and author of sound-books. Pub. *Songs of Wild Birds* (with E. M. Nicholson, 1936); *More Songs of Wild Birds* (with E. M. Nicholson, 1937); *Hunting by Ear* (with M. Berry and D. W. E. Broek, 1937); and *Animal Language* (with J. Huxley, 1938).

Koch, Robert (1815-1910), Ger. physician, founder of modern bacteriology, b. at Clausthal, and educated at Göttingen. He isolated the bacillus of anthrax (1876), later proposing a means of preventive inoculation against the disease. In 1882

he discovered the bacillus of tuberculosis, and led the cholera expedition to Egypt and India (1883), finding the cause of cholera in the comma bacillus. K. was prof. at Berlin Univ. (1885), and director of the Institute for Infectious Diseases (1891). He prepared tuberculin (1890-1891), a lymph of 'paratubercle' by which he hoped to effect a cure for phthisis, but it has failed to prove a remedy though valuable as a diagnostic agent. K. held that there was a distinction between tuberculosis in man and in cattle, and denied the possibility of transmission of the disease from one to the other. The Eng. Royal Commission Reports on Tuberculosis (1904, 1907, 1909-1911), strongly

bakterien (1884); *Investigation of Pathogenic Organisms* (1886); *Heilmittel gegen die Tuberkulose* (1891); *Über neue Tuberkulinpräparate* (1897); *Die Bekämpfung des Typhus* (1902). With Dr. K. Flügge he issued *Zeitschrift für Hygiene und Infektionskrankheiten* (a periodical issued from 1886 onwards). His collected works, ed. by J. Schwalbe, G. Gaffky, and E. Pfaff, were pub. in 1912. See study by J. Lobel, 1935.

Koch, Pall, or Rajbansi, race of India of aboriginal descent, which inhabit N.E. Bengal and Assam. They are probably of Mongolian stock. The wealthier members of the race pretend to be descended from Silva, and claim the title of Rajbansi

D. McLe

KOBLENZ AND THE RHINE FROM THE KAISER WILHELM I. MONUMENT

support the opposite view, i.e. that transmission is possible. In two visits to S. Africa (1896 and 1903) K. studied the 'underpest' (cattle plague), investigated malaria and its causes in Ger. E. Africa (1897), and the W. African 'sleeping-sickness' (1905-6). K.'s *postulates* state that a bacterium is proved to be the cause of a disease when (1) the bacterium can be isolated from individuals having the disease; (2) the bacterium can be cultured *in vitro*; (3) the symptoms are produced by injection of the culture. K., and his pupil Petri, were responsible for the introduction of solid culture media, containing gelatine or agar, whereby bacteria could be isolated and grown in pure culture; even Pasteur, who was no Germanophile, referred to this discovery as 'un grand progres'. His works include *Untersuchungen über die Ätiologie der Wundinfektionskrankheiten* (1878); *Über die Mitzbrandimpfung* . . . (1882); *Beitrag zur Ätiologie der Tuberkulose* (1882); *Über die Cholera-*

oder Soma von King. The name K. is preserved in the independent state of Kuch (or K. or Cooch) Behar. They number about 2,000,000.

Kochi, tn. of Japan, situated on the S.E. coast of Shikoku, 135 m. S.W. of Kobe. It is noted especially for coral. Pop. 73,000.

Kock, Charles Paul de (1794-1871), Fr. novelist, more popular abroad than in France itself. His novels deal mostly with Parisian middle-class and low life in a witty and realistic manner. Among the chief are *Georgette ou la mère du Tabellion* (1820); *Andre le Savoyard* (1825); *Le Barbier de Paris* (1826); *Mon Votain Raymond* (1837); and *Gustave* (1842). See his *Mémoires*, (1873); and life by T. Trimm, 1873.

Kodak, popular photographic hand camera using roll film, characterised by ease of manipulation and portability. Trade name, belonging to K. Ltd., makers of photographic apparatus and material,

of Kingsway, London, with branches elsewhere in London and provs. The controlling interest is held by the Eastman K. Company, Jersey City, U.S.A.

Kodály, Zoltán (b. 1882), Hungarian composer, folk-song collector, and musical critic; b. at Kecskemét. He studied composition under Koessler and, in 1905, began to devote his attention to Hungarian folk music, in which he was associated with Bartók. Later, he made a collection of some 4000 peasant tunes, some noted orally from peasants, others recorded by phonograph; and nearly all of them from dists. the most unaffected by urb. culture. His suite, *Hary János* (1923), from a comic opera, is well known, and he has also written chamber, piano, and vocal music, and some choral works, e.g. *Psalmus Hungaricus* (1923). In 1945 he became director of the Budapest High School of Music.

Kodas Eli, see ISMID.

Kodiak, see KADIAC.

Kodok, see PASHODA.

Kodungalur, or **Cranganore**, tn. in Cochin state, Madras, India, 17 m. N. of Cochin. It was supposed to be the place where St. Thomas first laboured, but there is no evidence in support of this statement. It originally belonged to the Portuguese, but was captured afterwards by the Dutch. Rice and coconuts grow in the neighbourhood. Pop. 33,200.

Koechlin, Charles (b. 1867). Fr. composer, b. in Paris, of Alsatian descent. He studied at the Conservatoire, Paris, under Massenet and Fauré. He is a composer of melodies, choral works, chamber works, symphonic poems, and ballads.

Koekelberg, Belgian tn. situated in Brabant, forming a manufacturing suburb of Brussels, 2 m. to the N.W. It is engaged in the manuf. of foodstuffs, furniture, chemicals, and has dye-works and breweries. Pop. 15,100.

Koeleria, genus of Gramineæ, contains fifteen species, all of which flourish in temperate lands. The sole representatives in Britain are *K. cristata* and *K. ralesiaca*.

Koffyfontein, tn. in the Orange Free State, S. Africa, situated 30 m. N.W. of Ficksburg. Rich diamond mines are worked in the neighbourhood. Some of the finest diamonds in the world have been found here, but the First World War and ensuing depression killed both this tn. and Jagersfontein. Pop. (white) 1200, (others) 1600.

Kohat, tn. in the K. dist. of the N.W. Frontier prov., Pakistan, 37 m. S. of Peshawar by a military road which was opened in 1901 along the K. Pass. It is the military base for the S. Afridi frontier. Salt is mined in the dist. Pop. 28,500.

Kohen, Johannes, see COCCIVUS.

Kohinoor, or **Koh-i-nûr**, one of the most famous diamonds in the world. When presented to Queen Victoria in 1850 it weighed 186½ carats, but by recutting it was reduced to 106½ carats. It is considered by some to be a portion of the Great Mogul diamond which was in the possession of Aurangzobe in 1665. The K. belonged in 1739 to Nadir Shah,

was in the possession of the rajah of Lahore in 1813, and was presented to Queen Victoria by the E. India Company. It is now in the crown of the queen of England.

Kohistan (land of mts.), name given to mountainous regions in Persia, Afghanistan, India, and Turkestan. In Persia it means the mts. in Khorasan, and in India those of the N.W.

Kohl, or **Kuhl**, finely divided black powder, generally antimony sulphide or lead sulphide, used in the E. and in theatrical circles for darkening the eyelids, eyelashes, and eyebrows. The word is derived from the Assyrian *qublu*, meaning eye-paint, and was applied by Paracelsus (1493-1541) to spirit of wine, whence our *alecohol*.

Koikoi, Maori weapon, see under MAORI.

Koizumi, Yakumo, see HIRAN, LAF-CADRO.

Kokand, or **Kokan**, tn. in the Forghana region of the Uzbek S.S.R., S. of the Syr-Darya, 350 m. E.N.E. of Bokhara. It has cotton-spinning factories and silk mills. Raw cotton, cloth, and fruit are sent from K. and other 'oasis tns.' to European Russia. Pop. 81,600.

Kokomo, city and the cap. of Howard co., Indiana, U.S.A., 60 m. N. of Indianapolis. It has glass and steel works, lumber mills and potteries, and manuf. iron and rubber goods. Pop. 33,800.

Koko-nor, or **Kuku-nor** (blue lake), lake in Chinghai prov., China. The lake lies between the Kuen-lun and the Nan-shan Mts. It is 60 m. in length, 40 m. in width, has an area of 2500 sq. m., and is at an altitude of 9976 ft. It has no outlet, its waters are salt and bitter, and frozen for three months of the year. The region of K., which lies between Tibet, China, and the Gobi desert, is sometimes taken to include Tsaidam and the plateau of Odontala.

Kokoschka, Oskar, Czechoslovak painter, b. 1886 at Pöchlarn, Austria (now Czechoslovakia). He studied at the Vienna School of Industrial Art, where he showed his first exhibition. He left there in 1907, and went to Berlin, thereafter travelling in Italy and Switzerland. During the First World War he was wounded, and in 1920 he became prof. at the Dresden Academy, where he remained until 1924. He spent the next few years travelling in Europe, N. Africa, and Asia Minor. His works were banned under the Nazi regime in Germany. K. made his home in England, and became a naturalised Brit. subject. His work is represented in a number of public galleries in Europe and the U.S.A. His painting of Polperro, Cornwall, was presented to the Tate Gallery by President Beneš. Major exhibitions have been held in London (1928), Paris (1931), Switzerland (1947), Venice (1918), and New York (1919). K. belongs to the expressionist school of painters, intent on conveying his own personal vision and understanding, employing vivid contrasts, arbitrary colour, and distortion if need be. His landscapes are notable in particular for the manipulation of space as well as for their power

and colouring. K. has also written plays, including *Der brennende Dornbusch* (1911); *Hiob* (1917); and *Orpheus und Eurydike* (1916), which was set to music by Krenke in 1923. On his painting see monographs by Edith Hoffman, 1948, and J. S. Plaut, 1949.

Kokra-wood and **Coco-wood** are terms applied to the wood of the *Inga vera*, a leguminous tree found in the W. Indies, and also to that of *Iporosa dioica*, a Bengalese and Burmese tree of the order Euphorbiaceae.

Kokura, seaport tn. in Kushiu, Japan, 100 m. N.E. by N. of Nagasaki. Pop. 110,300.

Kola, tn. of the Murmansk Region of the R.S.F.S.R., and on the peninsula of the same name. It is one of the most N. of Russian tns. Fishing is the main occupation. It is on the Murman Railway, and during the First World War became a depot of supplies from Britain and U.S.A. The Khibin Mts. of the K. peninsula rise to 3000 ft. Long ago the sea invaded the shores of the peninsula, changing its glacial valleys into floods, extensive marshes, and peat bogs. The mean temp. of Valda Gouba on the N. shore of the peninsula is -21.50°F . There is a new mining settlement at Kirovsk in the peninsula, which contains large nepheline and apatite deposits, as well as considerable quantities of molybdenum, rare earths, and sulphate of iron. Chemical fertilisers are manufactured from the apatite and other minerals. In the hills around Lake Imandra copper, iron, and nickel are mined. Pop. 600.

Kolapur, see KOLHAPUR.

Kolar: 1. Cap. of K. dist. in Mysore, India, 43 m. E. of Bangalore. Turkey rearing for export is carried on, and the manuf. of blankets. Pop. 20,000. The K. goldfields in the dist. of K. produce nearly all the gold output of India. They cover an area of 14 sq. m., and the city called the K. Gold Fields has a pop. (as given before the Second World War) of about 50,000. K. dist. has an area of 3165 sq. m. and a pop. of 837,000. 2. Large freshwater lake, situated midway between the deltas of the Kistna and Godavari Rs. in the Madras presidency. It drains into the bay of Bengal on the E. The area is 100 sq. m., but this is being reduced by embankments, etc. In the dry season traces of anct. vils. may be observed in its bed.

Kolarians, name given by Sir G. Campbell (1866) to various hill-tribes of Central and E. India (c. 2,000,000-3,000,000 in number), dwelling in the jungle and mt. dists. W. and S.W. of Calcutta in Bengal. They represent the most primitive element in the pop. of Hindustan, and were probably some of the earliest inhab. of the peninsula. There are about ten chief tribes and Kolarian languages, including the Munda-Kols of Chota Nagpur, the Larka-Kols or Jio of the Singbhum dist., the Bhumij of W. Bengal, the Santals, the Karis, and the Juang or Patun. These latter are the lowest type, mere hunters and fruit-gatherers with very little civilisation. Kol is the basis of the word

coolie, these people being very ready to hire themselves on the contract system. Some ethnologists class K. with Dravidians, but the former are far less cultured, and their language is radically different. See E. Dalton, *Descriptive Ethnology of Bengal*, 1872; R. Caldwell, *The Languages of India*, 1875; H. Cust, *Modern Languages of the E. Indies*, 1878; Nottrott, *Grammatik der Kolsprache*, 1882; H. Rowney, *Wild Tribes of India*, 1882; E. Galt and H. Hsley in *Census of India*, 1901, 1903.

Kolberg (Pomerania), see KOLOBRZEK.

Kolchak, Alexander Vasilievich (1874-1920), Russian admiral and soldier. Entered the naval service in 1891, and was promoted to officer's rank in 1894. In 1903 he organised an expedition for the relief of Baron Tol and his companions from the yacht *Zarya*, who had wintered on Bennett Is. In a small whaling boat with a crew of seven men, K. crossed the Arctic from the estuary of the Lena to the Is. and back. Tol having undoubtedly perished, K. brought away the explorer's collections and memoranda, and for his own services in exploring the ice of the Kara Sea and Arctic Ocean was awarded a prize by the Academy of Sciences. During the Russo-Jap. war he distinguished himself in the defence of Port Arthur, and received a series of military distinctions. From 1906 to 1912 he was on the naval general staff. In 1913 and 1914, before the First World War broke out, he was in command of the torpedo boats *tsuriets* and *Pogranichnik*. In 1916 he was promoted to rear-admiral, subsequently being appointed to independent command in the Baltic, and still later was promoted to vice-admiral and commander of the Black Sea Fleet. After the Bolshevik coup of 1917 the hopes of the Whites or anti-Bolshevik elements were largely centred on Adm. K., whose military successes at first were such that he rapidly attained the position of virtual ruler of Russia. The high-water mark of his success was reached in 1918, when his armies advancing from the Ural reached the line Cherepovets-Samara-Orenburg. But from 1919 he gradually lost ground, and after losing his guns and supplies at the end of the year he was forced to retire further eastward. The revolutionary outbreak in Vladivostok definitely threw the whole of Siberia open to Bolshevik influences, and K.'s hopes were finally dispelled. He was eventually shot at Irkutsk.

Kolding, tn. of Jutland, Denmark, situated in Vejle co., on the K. Fjord, 29 m. S.S.W. of Horsens; the depth of the harbour is 20 ft. The royal castle of Koldinghus, dating from 1248, was burnt down in 1808. Pop. 23,000.

Kolguel, or **Kalguel**, ls. in the Archangel Region of the R.S.F.S.R., extending from $66^{\circ} 42'$ to $69^{\circ} 30'$ N. lat., and from $48^{\circ} 15'$ to $49^{\circ} 55'$ E. long. It is visited by hunters for walrus, white bears, and various species of birds. Area 1350 sq. m.

Kolhapur, formerly an independent feudatory Deccan state in the Bombay presidency of Brit. India, and the largest of the Deccan states. After 1933 it formed an agency with Deccan, Janjira, and other

states previously in political relations with the gov. of Bombay. In 1949 it merged with Bombay Prov. A Mahratta principality, whose rulers were by tradition the heirs of Shivaji, the founder of the Mahratta empire 300 years ago, K. was the most prominent state (up to 1919) to submerge its identity with the prov. rather than join one of the new groups or unions of states (see on this INDIA, *Effect of Indian Independence on the Indian States*). In its independent days K. was well governed and prosperous. It extends from the midst of the W. Ghats into the plain of the Deccan; iron ore is found, and stone quarried. The surface is level in the E., and the sugar-cane, rice, cotton, tobacco, and vegetables are grown; there are manufs. of hardware and pottery. Its area is 2816 sq. m., and its pop. about 1,000,000. The cap. of the state, K. (pop. 80,000), is a picturesque tn. with sev. fine public buildings. It was formerly a Buddhist centre, and many Buddhist remains are to be seen in the tn. and vicinity.

Kolín, or **Neu-Kolín**, tn. of Bohemia, Czechoslovakia, on the Elbe, 40 m. E. of Prague. In the battle of K., 1757, Frederick the Great attacked the entrenched Austrians under Marshal Daun, and was defeated. Pop. 18,500.

Kolivan, tn. in the Novosibirsk Region of the R.S.F.S.R., on the R. Ob, 120 m. S.W. of Tomsk. Pop. 12,000.

Kolmar, see COGNAC.

Koln, see COLOGNE.

'Kölnische Zeitung', Ger. daily news paper, pub. at Cologne. It was of very long standing, having been pub. for more than two centuries, with the exception of a short break between 1809 and 1813, when it was suspended by Napoleon. Its most distinguished editor was Joseph Dumont, who accepted the post in 1847, and conducted the paper through the stormy period following on the revolution of 1848. It ceased pub. in 1945.

Kolobrzeg (Ger. **Kolberg**, or **Colberg**), Polish seaport, 2 m. from the Baltic, 76 m. N.E. of Stettin, formerly Ger. There are iron-foundries and saw-mills; the manufs. of woollens, spirits, and machinery is carried on, and there is salmon and lamprey fishing. K. was captured by the Swedes in 1631, attacked by the Russians in 1758, 1760, and 1762, and by the Fr. in 1806. In the Second World War it was reached by Russian forces on Feb. 4, but not captured until March 18 owing to the strength of the outer defensive ring round Königsberg. It is included in the ter. ceded to Poland after the war.

Kolomea (**Kolomyja**), tn. of Galicia, in the Chernovitsk Region of the Ukrainian S.S.R. It is situated on the R. Pruth, 45 m. W.N.W. of Chernovitsk (Chernowitz), at the foot of the S. slope of the Carpathians. Austro-Ger. troops occupied it in July 1918. It has petroleum refineries and potteries. The Gers. were driven out of K. by Zhukov's Russian troops in their final thrust to the Carpathians (March 29, 1944). Pop. 34,000.

Kolomna, tn. on the R. Moskva, 72 m. S.E. of Moscow, in the Moscow Region of the R.S.F.S.R. It is an industrial tn.,

E.E. 8

having starch works, cotton and silk mills, locomotive works, and tanneries. The marmalade *poshila* is made here. Pop. 75,100.

Kolonnes, Cape, see COLONNIES.

Kolonos Hippios, see COLONUS.

Kolozsvár, see CLUJ.

Kolpino, tn. of the Leningrad Region of the R.S.F.S.R., 17 m. S.E. of Leningrad, on the Izhora R. It has gov. iron works. Pop. 8500.

Koltsov, Alexei V. (1809-12), one of the true peasant poets of Russia. Son of a cattle-dealer. A chance encounter with an influential literary man opened to him in 1831 the columns of the *Literary Gazette*. In 1835 he pub. his first book of

ALEXEI V. KOLTSOV

poems. But he remained dependent upon his ignorant and tyrannic father, and, lacking the care necessary to a man of poor constitution, succumbed to tuberculosis. His poems are concerned mainly with the peasants he knew so well, and he preserved in his verses the freshness and simplicity of their language and thoughts.

Kolyma, riv. of E. Siberia, rising in the Stanovoi Mts., flowing into the Arctic Ocean in 69° 30' N. after a course of 1110 m. The K. depression contains areas of considerable altitude, such as the Yukaghir and Alazeya plateaux (700-1300 ft.). In recent years a rich auriferous dist. has been developed in the upper K. region. It is connected by a motor road with Magadan.

Kolyvan, see KOLIVAN.

Koin, see KUM.

Komarno, tn. of Galicia, in the Lvov region of the Ukrainian S.S.R., 20 m. S.W. of Lvov (Lemberg). In the Second World War K. was captured by the Russians on March 28 in their advance toward Vienna. Pop. 6000.

Komárno, or **Komorn**, tn. of Slovakia, Czechoslovakia, and cap. of the co. of Komárom, at the confluence of the Danube and the Váh, about 48 m. N.W. of Budapest. The fortress is situated quite near

* C

the tn., the fortifications having been constructed by Matthias Corvinus. It was successful against the Austrians in 1848-1849. Before the First World War it was Hungarian. Pop. 21,000.

Komati, riv. of S.E. Africa, which flows first E. through the Transvaal, then N. near the E. frontier of the Transvaal, discharging into Delagoa Bay.

Komatsu, tn. of Japan, situated near the N.W. coast of Honshu, 117 m. N.N.E. of Kyoto. There are manufs. of silk gauze, and most of the clay for the Teraï and Kanagawa potteries is obtained here. Pop. 15,000.

Komenski, John Amos, *see* COMENIUS.

Komi (Zyryan), autonomous Region of the R.S.F.S.R., situated in the Pechora Basin, between the Archangel Region and Siberia. The railway from Kotlas to the Kara Sea coast traverses the region. Its chief tn. is Syktyvkar. Reindeer breeding is of importance; furs, timber, tar, and pitch are produced.

Komorn, Czechoslovakia. *see* KOMARNO.

Komotau, *see* CHOMUTOV.

Komsanolsk, tn. in the Khabarovsk Ter. of the R.S.F.S.R., on the R. Amur, developed after 1926. It is a railway junction for Vladivostok and Nikolayevsk; there are shipyards, iron and steel works, machine-tool, wood, and leather industries, and oil-refineries. Pop. 70,700.

Komura, Marquis Jutaro (1855-1911), Jap. statesman and diplomatist. *b.* at Iiuga. He completed his education at Harvard Univ., graduating in 1877. He was appointed minister for foreign affairs in 1901, and continued the negotiations with Russia during the war of 1904-5. He was appointed by the mikado to meet the Russian plenipotentiaries at Portsmouth in Sept. 1905, when the Portsmouth treaty was signed; and in Nov. of the same year he met the Chinese representatives at Peking, when the treaty of Peking was signed. It was in great measure through his exertions that the second Anglo-Jap. alliance was concluded. Created K.C.B. by King Edward VII. In 1906 he resigned from his ministership, and, becoming a privy councillor, came as ambas. to London. In 1908 he returned to Tokyo, and was again minister for foreign affairs in the second Cabinet of Prince Katsura.

Konakry, or **Conakry**, cap. of Fr. W. Africa, situated on the is. of Tombo at the mouth of the Dubreka, in lat. 9° 30' N. and long. 13° 40' W. It is connected with the mainland by an iron bridge. Coffee is cultivated, and the tn. has many factories. It is connected by rail to the Niger, and is visited regularly by steamers; it has a wireless station. France occupied Kaloum and the île de Tombo in 1882, in order to strengthen her newly won protectorate of Fouta Djallon. It was from this occupation that K. arises to-day. Pop. 13,600.

Kondyles, George (1879-1936), Gk. general and parliamentarian. After experience as common soldier and guerrilla fighter against the Bulgarians, became colonel in the First World War. Rev. times left the army and reappeared - e.g. 1923 to crush anti-republican rising.

Entered Parliament 1923, and was minister of interior - resigned 1925. Banished by dictator Pangalos, he returned and carried out a coup (Aug. 22, 1926) overthrowing Pangalos. Assumed premiership to secure fair elections, then retired. Returned to political life in 1932 as war minister; crushed the Venizelist revolt of March 1933, and was hailed as the saviour of his country. Opposed to the republican constitution, he proclaimed himself regent, and brought about the restoration of the monarchy, George II. being put on the throne in Nov. 1935.

Konev, Ivan Stepanovitch (b. 1897), Russian soldier, son of a peasant; commanded armies in the Second World War which won many great battles, especially those leading to the liberation of Kharkov and Kirovograd. Associated with the Red Army (g.r.) almost from its inception. With his wife he organised guerrilla or partisan warfare in the Far E.; and, in the Russian civil war, fought against Adm. Kolchak's (g.v.) forces. Subsequently trained and commanded a force which fought against the Jap. In July 1917 he took part in the suppression by the Petrograd Soviet of the Kronstadt revolt led by Lenin and Trotsky (*see* WORLD WAR, FIRST, *Keensky becomes Prime Minister*). After the civil war he resumed his military training at the Frunze Academy. He was Russian commander in the W. when the Ger. invasion was launched in June 1941, and in that year led the first organised counter-attack against the invaders. He was then sent to organise the N.W. front force which took part in Zhukov's counter-offensive from Moscow (Dec. 1941). In mid 1942 he commanded the forces sent against the Gers. in the Rzhev area, thereby holding down large forces which would otherwise have gone to the relief of von Paulus at Stalingrad. Took Kharkov (Aug. 1943). Stormed Cherkassy, last great Ger. base on the Lower Dnieper R. (Dec. 1943). Took Kirovograd (Jan. 1944); Krivoi Rog (Feb. 1944). Opened the W. Ukrainian offensive (March 4, 1944), breaking through on a front of over 110 m., routing fourteen Ger. divs., and opening the way for a rapid sweep towards the Bug It. The advance of his second Ukrainian group through the Ukraine in an almost unchecked drive which took his forces into and across Bessarabia estab. his reputation as one of Russia's ablest commanders. In July (1944) he launched a great assault on a 125-m. front between Lutsk and Ternopol, shattering all Ger. calculations, and drove across the Bug, took Lvov (Lwow), and barred the way to the Carpathian passes. Having captured Przemyśl and Jaroslav he drove on to the Vistula, crossing that riv. S. of Warsaw, and breaking through the last Ger.-held base outside Germany. In 1945 his armies crossed the Oder and conquered Silesia (*see also* EASTERN FRONT OF RUSSO-GERMAN CAMPAIGNS IN SECOND WORLD WAR). Awarded the order of Suvarov (Suvorov) 1943. Marshal of the Soviet Union, 1944. Appointed commander-in-chief of the Soviet Army at the end of 1946. In 1947

awarded the order of Lenin—highest decoration of the U.S.S.R. Became Soviet representative on the Allied Control Commission in Vienna after the war.

Kong: 1. Tn. in the K. dist. of Ivory Coast Colony, Fr. W. Africa, situated in the N. of the colony to which the dist. was attached in 1893. K. surrendered to Lt. Binger in 1887. K. has a trade in cloth and gold. Pop. 13,000. 2. Name given to a range of mts. which were supposed to run parallel with the Guinea coast of W. Africa. The expedition of Capt. Binger, in 1888, discovered that such a range did not exist, but that the region is of a plateau nature with peaks reaching 6000 ft.

Kongju, tn. of Korea, situated 80 m. S. by E. of Seoul.

Kongmun, tn. of China, in the prov. of Kwangtung, situated near the Hsi Kiang, 47 m. S.S.W. of Canton. Pop. 75,000.

Kongsberg, tn. in the Norwegian prov. of Buskerud, 43 m. W.S.W. of Oslo, on the R. Laugen. It has gov. silver mines, discovered in 1623, iron mines, a royal mint, munuf., of arms and gunpowder, and a fine church. Pop. 6,000.

Königsgratz, see **HRADČ KRÁLOV**.

Königinhof, see **DIET KRÁLOV**.

Königlische Weinberge, see **WEINBERGE**. **Königsberg.** 1. Tn. and fortress, and formerly cap. of E. Prussia, now a Russian tn. called Kaliningrad (*q.v.*). 2. Tn. of N. Brandenburg, Germany, 35 m. S.W. of Stettin. Pop. 7,000.

'Königsberg.' Ger. raiding cruiser which, after destroying a dozen merchantmen off the E. African coast, was eventually trapped and destroyed in shoal waters up the Ruffi R., July 11, 1913, in Ger. E. Africa. See **AFRICA (GERMAN EAST CAMPAIGN IN FIRST WORLD WAR)**.

Königsfeld, tn. of Moravia, (Czechoslovakia, formerly Austria, 3 m. N.N.W. of Brno. Pop. 10,500.

Königshutte, see **KRÓLEWSKA HUTA**.

Königsmark, **Maria Aurora**, Countess of (1662-1728), sister of Count K., b. at Stade in N. Germany. She became the mistress of Augustus the Strong of Poland, and had a son by him, the famous Marshal de Saxe. In 1697 she was made abbess of Quedlinburg, but lived in Dresden, Berlin, and Hamburg. Her beauty was as remarkable as her intellectual qualities, and she was described by Voltaire as the most famous woman of two centuries.

Königsmark, **Philipp Christopher**, Count of (1662-94), Swedish officer of noble birth, and friend of Augustus of Saxony. He is chiefly remembered as the lover of Sophia Dorothea, wife of the electoral prince, George of Hanover, who afterwards became George I. of England. On the discovery of the intrigue K. was assassinated.

Königssee, lake in the extreme S.E. of Bavaria, Germany, surrounded by precipitous walls of rock, among which is the Watzmann Mt. (8800 ft.). In the midst of the waters is the castle of St. Bartholomew. The lake has a length of 5 m., a perimeter of 17 m., and a depth of over 700 ft., and drains ultimately into the Spitzach, a trib. of the Inn.

Königsstuhl, name of the summit of the chain of the Black Forest on the r. b. of the R. Neckar, having an altitude of 1900 ft. above sea-level. In ant. times it was here that the electors of Germany used to choose their emperor.

Königsstein, tn. in Saxony, Germany, situated close to the l. b. of the Elbe, 22 m. S.E. of Dresden. Its ant. fortress is built on a rock 1180 ft. above sea level and 750 ft. above the surrounding country, and was one of the few in Europe never taken. Paper-making is carried on in the tn. Pop. 1000.

Königswinter, tn. in the Rhineland, Germany, situated on the r. b. of the Rhine with the Diablenfels behind it. Pop. 4,500.

Konkan, or **Concan**, tract of country in the Bombay Prov., India, extending for 200 m. near the sea from Goa to Daman, and varying in width from 1 to 50 m. Rice-fields, and coco-nut plantations are cultivated, and the dist. is subject to violent monsoon rains. Area 3907 sq. m. Pop. 1,000,000.

Konkani Language, see under **INDO-EUROPEAN LANGUAGES**.

Konotop, tn. in the Ukrainian S.S.R., 83 m. E.S.E. of Chernigov. It was the chief Polish frontier fortress from 1635 to 1648. In their advance on Sept. 2, 1913 the Russians cut the railway from K. to Irlansk. Bitter fighting followed but on Sept. 6 K. was enveloped and carried by storm. See **EASTERN FRONT OF RUSSO-GERMAN CAMPAIGN IN SECOND WORLD WAR**.

Konrad von Würzburg, see **CONRAD VON WÜRZBURG**.

Konstantinovka: 1. Tn. of the Ukrainian S.S.R., on the Bug R. Munuf. chemicals and cotton fabrics. Pop. 81,000. 2. Tn. of the Khabarovsk Region of the R.S.F.S.R., on the R. Amur. Pop. 95,000.

Konstanz, see **CONSTANCE**.

Kontich, tn. in Belgium, 7 m. S. of Antwerp, engaged in agriculture, brickworks, and munuf. of machinery. It has also diamond-polishing factories. Pop. 9100.

Konya (ant. Iconium): 1. Vilayet of Asiatic Turkey with a pop. of 687,200. 2. Cap. of the vilayet of K.; a walled tn. situated at the S.W. extremity of the central plain, 143 m. S. of Ankara. K. is an archiepiscopal see of the Gk. Church, and has munuf. of woollen goods, leather, and carpets. There are good forest lands in the vilayet; mercury and chrome ore are found. There are many interesting ruins in the tn. From 1097, when Nicea was captured by the crusaders, K. was the cap. of the Seljuk sultans. The tn. was much visited by fugitives from Persia, etc. At the time of the Mongol invasion the Osmanli empire captured it in 1472. Of recent years the prosperity of K. has increased. Pop. 1000.

Koodoo, see **KUDU**.

Kookaburra, see **LAUGHING JACKASS**.

Koomassie, see **KUMASI**.

Kooringa, or **Burra**, tn. of Burra Co., Australia, on Burra Creek, 100 m. N.E. of Adelaide. The first copper mine

worked on a large scale, dating from 1845, is near and silver is also found. Pop. 2000.

Koosee, see **KUAI**.

Kootenay Lake, narrow expansion of the K. R. (q.v.), Brit. Columbia. It is 75 m. long and $1\frac{1}{2}$ to 3 m. wide.

Agent General for British Columbia

KOOTENAY LAKE AT GRAY CREEK

Kootenay River, riv. of Brit. Columbia which rising in the Rocky Mts. in a small lake at the foot of the Beaverfoot Range, flows S. and N.W. through the states of Montana and Idaho for 150 m., and enters the prov. again in a northerly direction. It empties into the S. end of K. lake, emerges from the W. arm at Nelson and flowing S.W. enters the Columbia R. at Castlegar. Total length 406 m. Canadian Pacific Steamships ply on the lake, but the riv. itself is too rapid for traffic. Almost all the terr. it drains is highly mineralised.

Kopais (anc. Topolias), see **COPAIS**.

Kopak, or **Copak**, name of a small Russian copper coin, the hundredth part of a rouble, its nominal value before the Second World War being three-eighths of a penny.

Köpenick, or **Cöpenick**, suburb of Berlin in the prov. Brandenburg, Germany, 8 m. S.E. of Berlin, in which it was included in 1920. It is situated on an is. in the Spree. It has manufs. of shoddy, chemicals, glass, linoleum, dyestuffs, carpets, and sugar. Notorious for the exploits of the 'captain of Köpenick,' a shoemaker (Wilhelm Voigt), who in 1906, masquerading as a military officer, induced the burgomaster of K. to part with the municipal funds, which were not returned.

Kopje, Cape Dutch word, from *kop*, head, meaning a small flattened hill. In the S. African war they acquired a sinister significance, being used as a cover for Boer marksmen.

Kopparberg, see **FALUN**.

Kopreinitz, see **KAPRONCZA**.

Köprili, or **Kuprili**, Albanian family, sev. of whose members became celebrated Turkish statesmen. The most famous are **Mohammed** (1585-1661), who became grand vizier at the age of seventy, and waged war with the Venetians, capturing from them Lesbos and Tenedos. He also subdued Transylvania and fortified the Dardanelles. His brother, **Husein** (c. 1620-1702), was appointed grand vizier in 1697. Finding that Turkey could no longer resist the forces of the Ger empire, he concluded the treaty of Carlowitz (1699). **Imred** (1630-76), son of Mohammed, became prominent at an early age, and was made grand vizier in 1656. He resolutely opposed the imperial forces and invaded Transylvania. Though he was unsuccessful in the field, sustaining defeat at St. Gotthard, he succeeded in obtaining the peace of Vasvár, by which the Turks retained the fortress of Grosswardin. **Mustafa** (c. 1640-91) brother of Ahmed, who saved the life of Solymán (Suleiman) III. during the rebellion against Sultan Mohammed IV. and was, on the former's accession, made grand vizier. He carried on a vigorous campaign against the imperial forces, driving them from Bosnia and Serbia, capturing Belgrade, and assisting Emirich Tokoly to become king of Hungary.

Koprili, **Koprulu**, or **Kuprili**, tn. in Macedonia, Greece, situated on the R. Vardar at an elevation of about 600 ft. It has a considerable trade in silk. Pop. 15,000.

Kopru-Su, see **ETRYMDON**.

Korah, Israelite, the story of whose rebellion against the sacerdotal pretensions of the Levites is told in Num. xvi. Here we read how, on account of their rebellion against Moses, Korah, Dathan, and Abiam were all destroyed at the word of Moses.

Koran, **The** (Arabic *qur'an*, recitation), the sacred book of Islam, consists of the 'revelations' received, according to its founder Mohammed, from God, and compiled after the prophet's death, by his secretary, Zaid ibn-Thabit, by order of the Caliph Abu-Bekr. The book is written in Arabic, and consists of 114 suras or chapters of varying length, which are arranged according to size, the longest first. They are not numbered, but bear distinctive headings, such as the Cow, the Star, Congealed Blood, etc., taken from the particular chapter. Every chapter but one begins with the formula, 'In the name of God, the Merciful, the Compassionate.' The chief doctrines contained in the book are that there is one God, one true religion, and a day of judgment, and that at certain times God sent prophets to bring men back to the truth, the greatest being Moses, Christ, and Mohammed. There are vivid pictures of rewards and punishments and stories taken from the Bible, the Apocrypha, and the Midrash.

Then there are special laws and directions, particularly as to complete resignation to God's will. The Jewish influence is very evident throughout, and Mohammed's ideal was to unite in one the three chief religions he found in his country, Judaism, Christianity, and Heathenism. The K. is held in the utmost reverence by all Muslims. See Eng. trans. of the K. by G. Sale, 1731; E. M. Wherry, 1881-86; J. M. Rodwell, 3rd ed. 1909; E. H. Palmer (World's Classics) 1929; R. Bell, 1939. See also Sir W. Muir, *The Koran, its Composition and Teaching*, 1878; W. St. C. Tisdale, *Sources of the Qur'an*, 1905; and J. Horowitz, *Koranische Untersuchungen*, 1926.

Korannas, Koranas, Koras, or Koras-quas, tribe belonging to the Hottentot family, though with an admixture of foreign elements, which dwells along the Orange R. and in Cape of Good Hope. They revolted in 1882 and were forcibly suppressed.

Korassan, see KHORASAN.

Korat, cap. of the prov. of Nakawn Raja, Sema, Siam. It lies 170 m. N.E. of Bangkok, with which it is connected by rail. It is situated in a silk-producing dist. Pop. 12,000.

Korula, see CORZOLA.

Korda, Sir Alexander, Brit. film producer, of Hungarian origin, b. 1893 in Turkey, Hungary. Educated at the Royal Univ., Budapest, he began life as a journalist. Entering the film industry in 1915 he produced and directed films in Budapest, Berlin, Paris, London, and Hollywood. Settling in England, he formed the London Films Company (1932), and during the next eight years did much to make Brit. films the equal of Hollywood productions. From 1940 to 1943 he was in Hollywood; then returning to London he linked his company with Metro-Goldwyn-Mayer to form M.G.M.-Brit. Productions. In 1945 he resigned and concerned himself solely with the work of London Films Productions Ltd., of which he became chairman. Among many notable films made by him were *The Private Life of Henry VIII.*, *The Scarlet Pimpernel*, *Sanders of the River*, *Rembrandt*, *The Four Feathers*, *The Lion has Wings*, and *Perfect Strangers*. In 1939 he married the film actress, Merle Oberon, the marriage being later dissolved. He was knighted in 1943.

Kordofan, prov. of Anglo-Egyptian Sudan, between Darfur and the White Nile. More than half the surface of 114,000 sq. m. is flat, but in the S.E. quarter some 50,000 sq. m. in extent is the Jebel Nuba, a tumbled series of rocky massifs rising from the plain, honey-combed with caves and thickly populated by black aboriginal Nuba pagans living in autonomous groups under the control of their *mekis* and rain-makers and observing the cult of the spirits of the dead. In N. K., as well as in part of Kasala, are the great grazing areas beloved of the nomadic Arabs whose wealth consists of camels and sheep. During the rainy season, which lasts from June to Sept., the vegetation is luxuriant, but in the dry

season the country is almost a desert. The development of the inland water supply by a well-boring programme was begun in 1924. The climate is fairly healthy. Rich gum forests are found, and groundnuts, cotton (Amer. cotton has proved successful), tobacco, and millet are grown, and ostrich feathers, gum arabic, hides, and ivory are exported. The most important tribes are the Nuba, Shilluk, and Dinka. The most important of the elements of non-Arab origin in the Anglo-Egyptian Sudan are those to be found in K. (and Darfur). The cap. is El Obeld. Area 114,000 sq. m. Pop. about 600,000. In 1883 the Mahdi, in spite of the gallant defence by Mohammed Pasha Saïd, took El Obeld by storm. The Egyptian Gov. then sent a mob of untrained fellahin from Cairo under Gen. Hicks without regard to the consequences. In the succeeding Nov. the unfortunate Hicks and his army were ambushed and annihilated at Shekan to the S. of El Obeld and large stores of arms fell into the hands of the dervishes. Following the Brit. re-occupation in 1898 K. was added to the number of provs. (1899) of the Sudan. Before the coming of the Turks it had been an appanage of Darfur. In 1925 K. Prov. was amalgamated with the prov. of the Nuba Mts., which had been a separate prov. since 1913. See Sir H. MacMichael, *The Anglo-Egyptian Sudan*, 1934; S. F. Nadel, *The Nuba: an Anthropological Study of the Hill Tribes in Kordofan*, 1947.

Korea, or **Corea** (Chosen, Daihan), peninsula of E. Asia, lying between the Yellow Sea and the sea of Japan. It is separated from Manchuria and, for some 10 m., Siberia on the N. by the Yalu and Tumen Rs., and from Japan on the S. by the K. Strait, 192 m. wide. Its area is 85,136 sq. m., and it is about 600 m. long by 195 m. wide. A cordillera traverses the peninsula throughout its length; the mts. slope precipitously and are very near the coast on the E. side, leaving only a narrow strip of land available for cultivation. On the W., however, the mts. have a gentler slope, and as this portion is well watered, it is exceedingly fertile. The highest point in the range of mts., Mt. Paektu-shan, reaches 8700 ft. The mts. have been almost entirely denuded of the forests that should naturally cover them; from 1905 the Jap. endeavoured to put this right by afforestation. Many bays and harbours are found round the W. coast, and many is., the greatest being Quelpart on the S.W. On the S. and E. coast harbours are not so numerous. The tides are strong and the waters shallow off the W. coast, deeper on the E., and almost tideless. The chief rivs., the Yalu, the Tai-dong, and the Han, are all navigable for some distance. The fauna includes stags, hares, foxes, wolves, sables, tigers, which are rapidly becoming extinct, and panthers. The climate is temperate and regular, and very healthy, and earthquakes, hurricanes, etc., are unknown.

The country is mainly agric., and the prin. crops are wheat, cotton, rice, millet, hemp, beans, and tobacco; fruit-growing

is a developing industry. The cultivation of cotton on a large scale was begun by the Jap. in 1901, and continued with success. Silk worms are being increasingly cultivated. Gun-cotton, silk, and tobacco are produced. Korean cattle are a good and well known breed and are generally used in agricultural work. The minerals of the country include coal, iron, copper, mica, graphite and most important, gold. The fishing industry was developed under Jap. influence. The peanuts are still in a

Mokpo, Kusan, Seishin, Heijo, Rashin, Yuki, Joshin, and Shingishu. Ping yang is an inland port on the Tai dong. The privilege of owning mines in K. was extended to foreigners by the Mining Regulations of 1906.

Koreans belong to the Mongol family but are distinct in features, dress, and customs from both the Chinese and Jap. The former language is much used for literary purposes though there is a Korean script called Hangeul. The spoken tongue is

A KOREAN LANDSCAPE
Illustrating traditional life

rather backward state. They include the making of hemp cloth, an excellent kind of paper and brassware. From the beginning of the twentieth century the trade of K. increased enormously. The chief import of the country are cotton, silk, and woolen goods, metal and firearms. The chief exports are gun-cotton, beans, rice, cotton, silk, cattle, hides, fish, grain, and gold and iron ores. The main rail ways are from Seoul to Kusan (a distance of 267 m.), from Kusan to Misanpo, from Seoul to the Yalu (300 m.), and from Chumulpo to Seoul (30 m.) besides several branch lines. The total mileage in 1940 was 2919 (gov. railways). There were also 1234 m. of private railways. The gov. railways were all the property and under the control of Japan. The principal open ports are Kijŏ (Seoul), Insan (Chumulpo), Kusan, Gensan, Chinnampo,

longs to the Turan group of languages and is poly syllabic having eleven vowels and four or five consonants. It is intermediate between Mongolian and Jap. with a large admixture of Chinese words. Hangeul is used for official correspondence. Since 1905 and during the Jap. occupation much was done to improve the educational system but up to the time of the 1930s some 90 per cent of the pop. were illiterate. In 1935 the system of separate schools for Jap. and Koreans was abolished but secondary and higher education were for financial reasons enjoyed chiefly by the Jap. The knowledge of Chinese classics, and of Confucian doctrine once held to be essential to an upper class education, yielded under Jap. influence to a more practical system of instruction. Shinto being the Jap. national religion shrines were being estab. through-

out K., and attendance at the shrines on stated occasions was obligatory on gov. officials and others.

The native annals date back to 57 B.C., but until the fourth century have little historical value. Although from the fourth century B.C. until the tenth century A.D. civil wars and foreign aggressions are prominent, nevertheless Hlaksi, which with Korai and Shinra then constituted K., was a centre of literary culture in the fourth century, through which the Chinese classics and the art of writing reached the other two kingdoms. Buddhism, a forceful civilising element, reached Hlaksi in A.D. 384, and from it the sutras and images of N. Buddhism were carried to Japan, as well as Chinese letters and ethics. Intercourse wars were ended about 913 by Wang the Founder, who unified the peninsula under the name of Korai, made Song-do (Keijo) its cap., and endowed Buddhism as the state religion. K. aided Kublai Khan as a vassal of China in his futile invasion of Japan in the thirteenth century. In 1392 was founded the dynasty which reigned until 1910, and the country was named Chosen. During the fourteenth century, Confucianism was estab. as the state religion instead of Buddhism. From 1592 to 1597 the Jap. occupied K., but were driven out by the Chinese. Christian missionary effort was begun at the end of the eighteenth century, but until relations had been opened with foreign countries the missionaries were severely persecuted. There are now many Christian converts, but ancestor-worship is still predominant. Treaties were made with Japan in 1876, with U.S.A. in 1882, and with Great Britain in 1883, and with most European countries subsequently. In 1894 the Jap. and Chinese invaded the country to put an end to the unsettled conditions that prevailed. The Chinese were soon crushed, and by the peace of Shimonoseki, 1895, K. was declared independent, the is. of Formosa was ceded to, and an indemnity of \$25,000,000 exacted by Japan. The king in 1897 changed the name of Korea to Daihan, and assumed the title of emperor. By the treaty of Portsmouth, K. was formally made a suzerainty of Japan (see RUSSO-JAPANESE WAR). By the treaty of Aug. 22, 1910, the emperor of K. made a complete and permanent cession to the emperor of Japan of all rights and sovereignty over the country, which was renamed Chosen; the Jap. resident-general was given the title of governor-general. Japan guaranteed to make no change in the existing tariff for ten years. An imperial rescript gave out in 1919 that K. was an integral part of Japan, and the Koreans were to be regarded as on exactly the same footing as the Jap. Pop. (1938) 22,400,000, of whom 630,000 were Jap., and 43,000 foreigners (mostly Chinese). The pop. of the chief ins. was as follows: Keijo (Seoul), the cap., 708,000; Hlajo (Pyong-Yang) 185,000; Talkyu 111,000; and Jinsen (Chemulpo) 103,000. At an allied conference at Cairo (Nov. 1943) between Mr. Churchill, President Roosevelt, and Marshal Chiang Kai-shek it was

agreed (*inter alia*) that K. was in due course to regain her independence. The country was occupied by Amer. and Soviet forces following the Russian attack on the Jap. towards the end of the Second World War. In Aug. 1948 a republic claiming legal authority over all K. was proclaimed in Seoul. Thus, in spite of the policy of Russia, which still isolates K. N. of the 38th parallel from the rest of the country, Britain, the U.S.A., and China have fulfilled as best they can the promise of independence given to the Korean people in the Cairo declaration of 1943. This new state was set up following elections held throughout S. K. in May (1948) under the supervision of the United Nations; but the Soviet authorities did not allow elections to be held in their N. zone, and did not allow the United Nations Commission to go there. Their next step was to create a People's Republic, in which all power was taken by the Communist party, supported by a conscript army trained and officered by Russians. See W. R. Charles, *Life in Korea*, 1948; Mrs. Bishop, *Korea and her Neighbours*, 1899; J. S. Gale, *Korean Sketches*, 1898; A. Hamilton, *Korea*, 1903; W. E. Griggs, *Korea*, 1905; H. Hueng-Wo Cynn, *The Birth of Korea*, 1920; H. B. Drake, *Korea of the Japanese*, 1931; Yungchill Kang, *The Grass Root* (in Eng.), 1931; S. Bergman, *In Korean Wilds and Villages*, 1938; A. J. Grajdanzov, *Modern Korea*, 1944; E. K. Robertson Scott, *Old Korea, the Land of Evening Calm*, 1946; W. B. Honey, *Korean Poetry*, 1948.

Korea, Strait of, channel between the S.E. extremity of the Korean peninsula and the Jap. is. of Kishin. It is 102 m. in width. Near the centre is the is. of Tshushima off which the Russian fleet was destroyed by the Jap., 1905.

Koriaks, or **Koryaks**, Mongoloid people of N.E. Siberia. They are divided into a settled fishing portion and a nomadic pastoral portion. Immense herds of reindeer are owned by the latter. Some of the K. have been Christianised, but the prevailing religion is Shamanism. They are near akin to the Chukchis (*q.v.*). They number about 5000.

Korigaum, see KORYGAUN.

Körner, Karl Theodor (1791-1813), Ger. poet, b. at Dresden. Owing to delicate health he was not sent to school, but was educated privately. At seventeen he was sent to the school of mines at Freiberg, completing his studies at Leipzig and Berlin. His health gave way again, and he was sent to Vienna, where he began writing poetry, and produced two plays, *The Bride* and *The Green Domino*. These being fairly successful, he followed with two tragedies, one of which had for its theme the Eng. story of 'Fair Rosamond.' In 1813 he became a member of Lützow's famous volunteer corps, formed to resist the Fr., but was severely wounded at Kitzingen and later killed near Schwerin. His fame rests on his war songs, entitled *Lure and Sword* (1814), composed in the intervals of battles, the two most popular being *Schwert-Lied* (Sword Song) and *Manner und Muth* (Men and Cowards). See O. F.

Koeneburg, tn of Lower Austria, on the l b of the Danube opposite Klosterneuburg 9 m N W of Vienna. It is a steamboat station and has a trade in salt and corn. Coarse textile goods are manufactured. Pop 8800

Korngold, Erich Wolfgang (b 1897)
Austrian composer, claimed to be partly
of Jewish descent b at Bruenn (now Brno),
son of Julius K. music critic. His work
attracted attention from its then "modern"
harmony. He has written sev operas in
particular *The Dead City* and concertos
for piano.

Kornilov, Lavr Georgievich (1870-1918)
Russian military leader around whom rallied in the Don for in 1917 the anti-revolutionary forces. He was born in Siberia his father being a Cossack officer. In Aug. Sept. 1917 the provisional gov. of Krensky, unable to continue in power sent Prince Lvov to ask K. either to form a new Cabinet or to proclaim himself Dictator or form a directory of three with Krensky and Savinkov. K. very naturally sent an 'ultimatum' to Krensky whom he adjudged to be a shallow lawyer demanding the transference to himself of the whole civil and military power. In the ensuing collapse of Krensky's gov. K. who had fomented a rebellion was thrown into prison in Bykhov whence with Demkin (q.v.) and others he escaped in Dec., and at once aided Alexeyev (q.v.) to form volunteer armies to fight the Soviet. The entire military organisation of this foreign cause was given to K. Alexeyev retaining the virtual, thoughless political and financial side. In spite of overwhelming difficulties K. collected an 'army' of about 100,000 infantry consisting almost exclusively of generals, colonels, lieutenants, cadets, and other boys, and in Feb. March 1918 led this army in prison in the hopeless march on Kuban in the course of which he himself was killed by a shell (see COSSACKS).

Korolenko, Vladimir (1893-1921). Russian novelist and story writer. b at Zhitomir, Little Russia. Of Cosak and Polish extraction. Educated at St. Petersburg Technological State Institute and the Moscow Academy of Agriculture. Worked in a St. Petersburg publishing house till exiled 1919 to Siberia for six years. He began his career as novelist 1918. His best novel is *The Blind Man* (1916). Later, he wrote short stories only. He represented 11 optimistic traditions. D at Poltava in the Ukraine. Collected ed. of his works was pub in Moscow in 1922. See him by F. Hrusler, 1930.

Engraving after a print (1829) by A. Plezozynski

Kościuszko, Tadeusz Andrzej Bona
wentura (1716-1817) Polish soldier and
patriot, b at Skichnowice in Lithuania.
A love affair drove him to the U.S.A.
(1777), when he fought on the side of the

colonists. Returning to Poland in 1786 he distinguished himself against the Russian invaders in 1792. When the revolution of 1794 broke out he put himself at the head of the national movement in Cracow, and was appointed dictator and commander-in-chief. At first victorious, he was hemmed in by Russians and Prussians at Warsaw, and, forced to take the field, he was defeated and taken prisoner at Maciejowice. Released two years later he made some further effort for the cause of Polish independence without much success, and then retired to follow agric. pursuits in France and Switzerland. He d. in Switzerland, and was buried in Cracow. See M. M. Gardner, *Kosciusko*, 1912.

Kosel, see COSEL.

Kösen, watering-place and summer resort of Saxony, Germany, on the R. Saale, 20 m. E.N.E. of Weimar. Pop. 4000.

Kosfeld, see COSEFIELD.

Kosher, or **Kasher**, Heb. word meaning fit, and therefore opposed to *pasul* (unfit). It is especially applied by Jews to meat which has been slaughtered according to Moslem law.

Kosi, tn. in the United Provs. in the dist. of Muttra, India. Pop. about 11,000.

Kosi, see KOSI.

Kosice, **Kaschau**, or **Kassa**, tn. of Czechoslovakia, on the Hernad, 130 m. N.E. of Budapest, formerly a royal free city of Hungary. It is the seat of a Rom. Catholic bishop, and has a fourteenth-century Gothic cathedral. Here the Austrians defeated the Hungarians in 1849. It has celebrated mineral springs. Manufs. paper, pottery, and tobacco. K. was occupied by Russian forces early in 1915. Pop. 70,000.

Koslin, or **Coslin** (Polish *Koszalin*), tn. of Pomerania, Poland (formerly Prussia), 21 m. E. of Kolberg (Kolobrzeg). The industries include iron founding, and the making of paper, bricks, and mineral waters. There is a cadet academy and a deaf and dumb asylum. Captured by Russian forces on March 4, 1915. Pop. 31,500.

Kosseir, see COSEIR.

Kosovo, or **Kosova**, prefecture of Yugoslavia, with an area of 12,700 sq. m. Formerly, K. was a part of Serbia, and its N. dists. are still known as Old Serbia. The scene of many battles during the Balkan war of 1912-13, and the last stand of the Serbian armies in 1915, from which the bulk reached Albania. Pop. 19,000. See also BLACKBIRDS, FIELD OF.

Kossuth, **Ferenoz Lajos** (Louis) **Akos** (1802-94), Hungarian patriot, b. of noble but poor family at Monok. He studied law at the Protestant college of Sárospatak, and practised for a time, but gave most of his life to the cause of Hungarian nationalism. After serving a sentence of four years for publishing reports of the debates of the National Assembly, he edited for three years (1841-44) the *Pesti Hirlap*, the organ of the National party, and came to be recognised as one of the leaders of the National movement. He was minister of finance in the Hungarian ministry of 1848, and shortly afterwards, when a dispute arose with Austria over

the revolt of the Croats, he declared the independence of Hungary, and practically took the government into his own hands. His triumph was short-lived, and in 1849, after Görgei's surrender of Világos, he was forced to flee to Turkey, where he was made a prisoner, but afterwards released. He then visited England and the U.S.A., living in England for sev. years in close connection with Mazzini. He made sev. further attempts against Austrian rule, but his activities in that direction ceased after the Austro-Hungarian reconciliation of 1867. He d. at Turin. See *Memories of my Exile*, 1880, 1894, autobiography, and O. Zanck, *Kossuth* (Eng. trans.), 1937.

Kostroma: 1. Region of the R.S.F.S.R. lying N.E. of Moscow. The greater part of the surface of the country is covered by forests. Cotton and woollen goods, also wooden articles, are manufactured. Area 33,621 sq. km. Pop. 340,000. 2. Cap. of the region of that name, situated near the confluence of the K. and Volga Rts., 200 m. N.E. of Moscow. It contains a medieval cathedral and carries on a trade in corn, linen, timber, leather, and the manuf. of iron goods and agric. machinery. A univ. was estab. here in 1919. Pop. 121,200.

Koszalin, see KOS-LIN.

Kozzeg, see COSS.

Kota Bharu, seaport and cap. of Kelantan, Malaya. In the Second World War the Jap. began their attack on Malaya and Singapore by a landing near K. Pop. 15,000.

Kotah, walled tn. on the r. b. of the Chambal, cap. of K. state, India, 120 m. S. of Jaipur. Now merged in the united state of Rajasthan. It contains an old and a new palace, many fine temples, besides schools, and the public library (the Crosthwaite Institute). It is very unhealthy. The chief manuf. is that of muslin; hides, oil-seeds, and cereals are exported from the state. Pop. 70,000.

Kotaiba (*Qoteiba*) (d. 716). Persian general, was one of the greatest of Islam's conquerors. Hadidjadj appointed him governor of Khurasan in 704. The following year he took possession of Transoxiana (mod. Bokhara). In 707 he defeated the Chinese, and he afterwards conquered Kashgar, and actually invaded China.

Kotakota, trade port in Nyasaland, on the W. shore of Lake Nyasa. It has a good harbour, and is the chief starting-place of the Arab caravans to the interior. There are only a few white inhab.

Kotayam, or **Kottayam**, tn. in Travancore, Madras, India, 32 m. S.E. of Cochin, noted as being the headquarters of the Syrian Christian Church (Thomas Christians).

Kotelnoi, see NEW SIBERIA ISLANDS.

Köthen, see CÖTHEN.

Kotka, seaport in the prov. of Vilpuri, Finland, on the Helsinki railway. It is a centre of the timber trade, and the chief port for the exports and imports of E. Finland. Pop. 21,700.

Kotokou (reigned A.D. 645-654). Emperor of Japan, added lustre to his name

by the many reforms he accomplished in the prov. administration. Also he appointed three ministers to advise and control a council of eight.

Kotonu, or **Kutanu**, tn. and port of Dahomey, W. Africa. 17 m. W.S.W. of Porto Novo. A railway connects it with Sabé, and another with Porto Novo. It was ceded to France in 1868. Pop. (white), 140.

Kotor, see **CATTARO**.

Kotow, see **KOWTOW**.

Kotri, tn. in the Karadir dist., Sind, Pakistan, on the r. b. of the Indus. Pop. 10,000.

Kotzbus, see **COTTHUS**.

Kotzebue, **August Friedrich Ferdinand von** (1761-1819). Ger. dramatist, b. at Weimar, held various public offices in the Russian service and spent a short time in banishment in Siberia (1800). He was a prolific writer of plays, satires, tales, and historical works. His best-known dramas are *Armuth und Edelsinn* (1795); *Menschenhass und Reue* (1790) Eng. trans., *The Stranger*, 1798; *Die Kreuzfahrer* (1803); *Die Hussiten vor Naumburg* (1803); *Der arme Poet* (1811). His plays are characterised by their sprightly dialogues and skilful delineation of character. K. was a great controversialist, and attacked Goethe as well as quarrelling bitterly with the Rom. school. In 1817 he came to Germany on behalf of the Russian Gov. and distinguished himself by his opposition to the current liberal tendencies. In particular he ridiculed the *Burschenschaft* movement, and was on that account assassinated by a Jena student named Sand at Mannheim. His complete works appeared in 44 vols. (1827-29). See C. Itabany, *Kotzebue, sa vie et son temps*, 1893; W. Sellier, *Kotzebue in England*, 1901; and L. F. Thompson, *August Kotzebue; a Survey of his Progress in France and England* (Paris), 1929; also life by H. Döring, 1830.

Kotzebue, **Otto von** (1787-1846). Ger. explorer, son of August Friedrich K., b. at Reval. He accompanied Krusenstern round the world (1803-6) and made two prolonged voyages to the Pacific, discovering in the former (1815-17) the Suvorov and Krusenstern is. and K. Sound, afterwards visiting in the latter (1823-26) the is. of the Sandwich, Philippine and Samoan groups. He wrote *Die Spanier in Peru* (1795, Eng. adaptation by Sheridan, *Pizarro*, 1799); *A Voyage of Discovery into the South Sea* (trans. 1821); and *A New Voyage round the World* (trans. 1821-23).

Kotzebue, **Paul**, Count (1801-81). Russian general, brother of Otto K. After he had seen service in the Caucasus and Poland, he was given the command of the Caucasian Army. During the Crimean war (1853) he was attached to Prince Gorchakov, and from 1874 to 1880 acted as governor-general of Poland.

Kouka, see **KUKA**.

Koumiss, or **Kumiss**, beverage made from mare's milk fermented and often served up with cooked grain. It is a common refreshment of the Arabs of Africa and some of the tribes of Asia, particularly the Tartars.

Kounrad, tn. of the Karaganda Region of the Kazakh S.S.R., 40 m. N. of Lake Balkhash. A creation of the five-year plans, K. has copper mines, with an ann. output of over 75,000 tons. Pop. 10,000.

Kouropatkin, see **KUROPATKIN**.

Koutouzov, **Mikhail Ilarionovich**, see **KUTUSOV**.

Kouyoumdjian, **Dikran**, see **ARLEN**, **MICHAEL**.

Kovalevsky, **Alexander** (1840-1901), Russian embryologist, b. near Vitebsk; became a prof. at Odessa and St. Petersburg. His research work includes the embryology of invertebrates; the hist. of a simple ascidian (1866 and 1871), and the development of the *Amphioxus* (1867 and 1877). *Balanoglossus* (1866), the worm *Sagitta*, and the brachiopods. He prepared the way for Haeckel's Gastraea theory.

Kovalevsky, **Sophie Vasilyevna**, better known as **Sonja Kovalevsky** (1830-91), Russian mathematician, b. at Moscow, married in 1868 and went to Germany with her husband. She studied mathematics at the univs. of Heidelberg and Berlin, receiving her degree from the univ. of Göttingen in 1874. In 1884 she was appointed prof. in Stockholm. Her greatest distinction was the winning of the Prix Bordin from the Academy of Paris (1888). See studies by Anna Leffler, 1892 and 1891.

Koven, **Henry Louis Reginald de**, see **DE KOVEN**.

Kovno, **Kaunas**, or **Kowna**: 1. Prov. of the Lithuanian S.S.R., with an area of 25,000 sq. m. The surface is mostly plateau, and it is well watered by the Niemen, the Courland Aa, and the Duna, all of which are navigable. There are many lakes and marshes, and forests cover about one-fifth of the area. The climate is mild. There are few industries, agriculture being the chief occupation of the people. Wheat, rye, oats, barley, potatoes, and linseed are exported. Pop. 1,857,000. 2. Cap. of Kovno prov., 56 m. W.N.W. of Vilna. Its factories produce nails and metal goods, mead, and bone-meal. It dates back to the eleventh century, and was a wealthy commercial city in medieval times, but was plundered and burnt by Tsar Alexis in 1655. Stormed by the Gers. on Aug. 7, 1915; the Russian general, who surrendered, being subsequently charged with criminal neglect of duty. Captured by the Gers. 28 June, 1941. It was reconquered by the Third White Russian Army in Aug. 1944. Pop. 153,000.

Kovrov, tn. in the Ivanovo Region of the R.S.F.S.R. on the Gorky line. It has railway works, cotton mills, and iron and copper foundries. Pop. 67,000.

Kowara, see **NIGER**.

Koweit, **Kuwait**, or **Kuwait**, semi-independent state of Arabia, situated along the N.W. shores of the Persian Gulf between Iraq and El Hasa. It has an area of about 20,000 sq. m., but the greater part of its pop. of 60,000 dwells in the city of Koweit, which has the best harbour on the Persian Gulf, and is of great importance, as a port of entry for

guns, rice, coffee, grain, oil, piece goods, etc. It exports horses, pearls, dates, wool, dried fish, specie, and ghee. It is the *entrepôt* for goods to the interior, to Jebel Shammar and Nejd, its export trade being chiefly with India, Persia, and the Arabian coast. The Bagdad railway, as originally planned in 1903 was to have here its terminus, but owing to the Brit. conquest of Mesopotamia during the First World War, it lost that valuable privilege to Basra. In 1914 the Brit. Gov. recognised the sheikdom of K. as an independent gov. under Brit. protection. The Iraqi Airways operate a frequent service between Basra and K. The K. Oil Company exploits the resources of K. and exports crude petroleum. Estimated pop. 100,000, to which an indeterminate number of Bedouin must be added. See H. R. P. Dickson, *The Arab of the Desert, a Glimpse into Bedouin Life in Kuwait and Saudi Arabia*, 1918.

Kowhai, shrub of New Zealand, which grows from 15 to 40 ft. high and has long scarlet or rich yellow pendulous racemes shaped like a curved parrot beak. It is regarded as the national flower of New Zealand.

Kowloon, or **Kaulun**, Brit. peninsula of China, situated opposite the Is. of Hong Kong. It was ceded to the Brit. in Jan. 1861, having been acquired by the Peking Convention of 1860. The tn. of K. stands at the landward end of the peninsula in the prov. of Kwangtung. A railway runs from here to Canton, and the tn. contains the villa residences of the colonists, and also a sanatorium for the troops. The K. European-type suburbs developed extensively during the period 1930-40, the houses being built not unlike those in an average London suburb with the addition of servants' quarters, and, in most cases, of the verandas which the semi-tropical climate requires. See further under HONG KONG.

Kowtow, or **Kotow**, Chinese word made up of *ko*, knock, and *tou*, head. The act of K., or prostration before the emperor consists in kneeling three, allowing the forehead each time to touch the ground. A Chinaman performs a K. as a mark of reverence or homage.

Kozle, see COSEL.

Kozlov, or **Michurinsk**, tn. in the Tarnopol Region of the Ukrainian S.S.R. on the R. Lyssnoi Voronezh. 45 m. W. by N. of Tambov city. Owing to its favourable position, it is an important trade centre. The exports are grain, cattle, meat, eggs, hides, tallow, etc. Pop. 66,000.

Kra, **Isthmus of**, situated about lat. 10° 20' N., connects the Malay Peninsula with the rest of Indo-China. A gap occurs here between the main mt. range and the mts. of the peninsula, and it has been proposed that this shall be the site of a new ship canal; this would shorten the route from Calcutta by nearly 700 m., and that from Burma to Bangkok by over 1000 m. The isthmus was crossed by Jap. invading forces in Dec. 1941, the entire Malayan Peninsula being conquered in two months.

Kragujevac, tn. of Yugoslavia, situated

on the Lepenica, 60 m. S.S.E. of Belgrade. There is an arsenal, cathedral, and college. Captured on Oct. 30, 1915, by Austro-Ger. forces. In the Second World War K. was captured by the Gers. in April 1941, and liberated by Russian troops and Yugoslav partisans on Oct. 21, 1944. Pop. 27,000.

Kraillsheim, see CRAILSHEIM.

Krait, species of Indian cobra (*q.v.*).

Krajova, see CRAIOVA.

Krakatoa, or **Krakatao**, small volcanic is. in Sunda Strait, between Java and Sumatra, in the Malay Archipelago. There was a phenomenal eruption here in Aug. 1883. The sound waves generated by the explosions travelled 3000 m. Stupendous waves, towering 50 ft. high, overwhelmed shores and settlements, caused over 35,000 deaths, and actually reached Cape Horn (7818 m. away). On the is. itself the highlands, which had risen over 1000 ft. above sea level, were replaced by an abyss diving down as many feet below.

Krakau, or **Krakow**, Poland, see CRACOW.

Kraken, fabulous sea-monster, measuring 1½ m. round, which, according to native legend, lurks round the shores of Norway.

Kraimeria, see RHATANY.

Kramotorsk, tn. of the R.S.F.S.R. Pop. 93,300.

Kranach, **Lucas**, see CRANACH, LUCAS.

Krasiński, **Ignacy** (1735-1801), Polish divine and poet. b. in Dubiecko, Galicia, who studied under the Jesuits and in Rome. He became bishop of Ermland or Warmia (1767), and archbishop of Gnesen (Gniezno) (1795). When Poland was divided between Russia and Germany (1772) K. went to Berlin, and in 1780 consecrated the first Rom. Catholic church in Berlin, which had been erected through his influence. His works include *Myśle*, or *Musiad*, a mock-heroic poem, in which mice take the chief parts (1778), and *Satires*, supposed to be unequalled in the Polish language (1778).

Krasni Luch, tn. of the R.S.F.S.R. Pop. 30,800.

Krasnoarmeisk, riv. port in the Stallinograd Region of the R.F.S.S.R. A new motor road runs from Stallingrad to K. The tn. specialises in shipbuilding, and in the manuf. of internal combustion engines and railway wagons. It was taken by the Gers. in their invasion of Russia in 1942, but on Feb. 12, 1943 was retaken by the Russians. Pop. 50,000.

Krasnodar (formerly **Ekaterrinodar**): 1. Cap. of the K. ter., R.S.F.S.R., on the Kuban R., with a large trade in flour and corn. It also produces hemp. Other industries include vegetable oil production, tanning, tobacco, distilling, starch, etc. Pop. 201,000. 2. Ter. of the R.S.F.S.R., near the Black Sea coast. Before the Second World War it formed part of the Crimean autonomous republic, now abolished. It is a sub-tropical area; hemp is produced, along with maize and tobacco. There are also rich oil-fields. Pop. 203,900.

Krasnovodsk, seaport and cap. of the Turkmen S.S.R., on the Transcaspiian Railway to Bokhara, opposite Baku, in

Balkan Bay, on the S. shores of the Caspian. Pop. 28,000.

Krasnoyarsk: 1. Ter. of the R.S.F.S.R., which extends from the Syansk Mts. to the shores of the Arctic Ocean. The chief centres of agriculture, industry, and pop. are situated in the 'oases' of fertile soil surrounded by mineral-bearing hills, in the vicinity of K. and Kansk. Kansk, a much smaller tn. than K., has chemical, glass, and leather factories and saw-mills. At Kansk and Minusinsk are state farms. Riv. steamers ply up the Yenisei as far as the tn. of K. Pop. 2,000,000. 2. Riv. port, and the starting-point of the Transcaspiian Railway, and now administrative centre of the K. ter. Originally a fortified trading post estab. after the Cossack penetration in the early seventeenth century, and a base in the struggle against the Buriats and Evenki, its importance increased with the expansion of industrial and agric. activity in the middle Yenisei basin to the N., and in the Minusinsk and Kuznetsk areas to the S.E. It has machine tool works and a paper-cellulose plant. It is a tn. of nearly 200,000 inhab. and its other activities are, as are those of Kansk, closely bound up with the utilisation of local iron and coal resources, gold, timber, and agric. products.

Krasny Selo, summer resort in the Leningrad Region of the R.S.F.S.R. on the Duderhof Hills, 15½ m. S.W. of Leningrad. Before the revolution it was a favourite summer resort of the Russian royal family, who had here a residence.

Krassin, Leonid Borisovich (1870-1926), Russian politician; b. in Kurgan, W. Siberia. He was expelled, 1891, from Petersburg technological institute, for political activity. After various wanderings he obtained an engineer's diploma, and in 1914 was made managing director of Petersburg branch of Siemens-Schuckert Company. After the 1917 revolution he became commissar for commerce and industry, and soon afterwards commissar for foreign trade. Arriving in London in 1920 he concluded a trade agreement with Lloyd George in the following year. From 1922 to 1925 he was ambas. successively to Berlin, Paris, and London.

Kraszewski, Jozef Ignacy (1812-87), Polish author, b. at Warsaw, educated at Wilna. A voluminous and versatile writer and author of numerous novels. His poems are also very popular, and include *Anafielas* (1840-43), an epic of the traditions of Lithuania, and *Satan and Women*. Among his works on travel and hist. are *Recollections of Odessa and History of Wilna*. He was editor of the *Athenaeum* at Wilna (1841-52), and in 1863 migrated to Dresden. Suffered imprisonment from 1884 to 1886 for high treason. See lives by S. Bohdanowicz, 1879, and A. Bar, 1923.

Kraus, Karl (1874-1936), Austrian poet and satirist. Founded the journal *Die Fackel* 1899. Pub. 7 vols. of essays, 6 of dramas, including *Die letzten Tage der Menschheit* (1918), 9 vols. of verse, 1 of epigrams, and 3 of aphorisms.

Kravinaki, Sergei Mikhailovich, see STEPNIAK.

Kreisler, Fritz (b. 1875), Austrian violinist, b. in Vienna. Studied music in Vienna under Joseph Hellmesberger, junior, and also in Paris under Delliibes and Massart. He has for many years given concerts in Europe and in the U.S.A.; has written an operetta, *Apfelbluten* (1919); and arranged numerous classical pieces for both violin and pianoforte. In 1935 he revealed the fact that most of the pieces which figured in the series 'Classical Manuscript' to which he attached the names of more or less unknown seventeenth-eighteenth-century composers were really of his own composition. He has also pub. a string

FRITZ KREISLER

F.N.A.

quartet and *Four Weeks in the Trenches: the War Story of a Violinist* (1918). Another operetta, *The Marriage Knot*, was performed in 1923, and a third operetta, *Sissy*, was performed in 1933.

Kremenchug, tn. in the Dnepropetrovsk Region of the Ukrainian S.S.R., on the l. b. of the Duleper. In the latter part of the eighteenth century it was the cap. of 'New Russia.' Its situation at the S. limit of navigation of the Duleper and on the road between Odessa and Moscow raised it early to wealth and influence. Its industries include the manuf. of agric. machinery, timber cutting, tobacco, etc. and it has a large trade in grain, salt, etc. Its industry was further developed by the construction of the great hydro-electric station between Dnepropetrovsk and K. The tn. suffered in the post-1918 disturbances, and again during the Second World War. It was the centre of great fighting in the Dnepropetrovsk-Melitopol drive of the Russian armies under Konev and Malinovsky in Oct. 1943, when Krivof Rog was the immediate objective. Pop. 89,500. See further under EASTERN FRONT

or RUSSO-GERMAN CAMPAIGNS IN THE SECOND WORLD WAR.

Kremer, Gerhard, *see* MERCHANT.

Kremlin, citadel within a Russian tn., especially that of Moscow, containing the old imperial palace and gov. buildings. The characteristic Russian K. was really a fortress, and was generally built on high ground dominating the surrounding neighbourhood, and comprising, as it did, cathedrals and churches crowned by golden cupolas, it was usually picturesque. The Moscow K. is probably the best preserved. Although rebuilt sev. times it still remains a true example of an auct. K. Despite its many lt. details, it is a typical illustration of the Russianising of foreign architectural forms. It once enclosed all there was of Moscow; it is now, however, a city within a city. From outside it has the appearance of a closely packed wonderland of cream-coloured palaces and golden-domed churches, all ranged above the castellated brick walls 20 to 30 yds. high. A broad avenue leads to the cathedral square, with fifteenth- and sixteenth-century churches on all sides. These constitute the story of Moscow—told in silver and gold, marble and malachite, crown jewels and gold-lace vestments—beginning with thirteenth-century icons and ending with the high gov. offices of to-day. In the Granovitaya Palace is a room with heavy gilt doorway and pictured ceiling, where Ivan the Terrible celebrated his victory at Kazan, and other smaller rooms where the early tsars fought to maintain their power against the wealthy boyars. Less ornate in style, but more spacious, is the Bolshoi Kremlevskii Dvoretz, the great Kremlin palace, built a hundred years ago for Nicholas I. One long high wall of pure white is dedicated to the order of St. George; another in pink and gold commemorates the order of Alexander Nevsky.

Křenek, Arnost (or Ernst) (b. 1800), Czech musical composer, b. in Vienna. Studied in Vienna and Berlin. Has composed symphonies, piano sonatas, etc., and achieved fame by a sensational little opera *Jonny spielt auf* ('Johnny strikes up'). His chamber-music compositions are unsystematic combinations of melodic parts resulting in atonality; but the above mentioned opera shows rhythmic and jazz influences. *Jonny spielt auf* was first performed in Leipzig in 1927, and was also performed in New York (1929). His other operas include *The Leap over the Shadow* (1925, symbolising man's efforts to overcome the difficulties of human existence); *The Life of Orestes* (1930); and *Charles V.* (1938). K. became director of the opera house at Kassel (1925). He has written numerous instrumental works, and many songs; also *Über neue Musik* (1937); *Musik Here and Now* (1939); and *Studies in Counterpoint* (1940).

Kreuger, Ivar (1880-1932), Swedish industrialist and financier, the 'Match King,' b. at Kalmar. After working in America and S. Africa, returned to Sweden to found the Swedish Match Trust, which obtained a virtual international monopoly of

match-making. His financial operations placed various European govts. under obligations to him; but he committed suicide after the disclosure of his intricate network of fraud and forgery, involving immense losses in America, France, and Sweden. *See* life by E. Sterner, 1930.

Kreutzer, Rodolphe (1766-1831), Ger.-Fr. virtuoso violinist and composer, b. at Versailles, to whom Beethoven dedicated his A major violin sonata (Opus 47), after a quarrel with Bridgetower, for whom it was originally written. This sonata, the most brilliant of the ten which Beethoven wrote for the violin, is always known as the K. sonata.

Kreuzer, small copper coin (100 K. = 1 gulden), formerly in use in Austria, so called from the cross (*Kreuz*) stamped upon it. It was first coined in the thirteenth century, when it was of silver. Ks. were also used in S. Germany before the founding of the empire (60 K. = 1 gulden).

Kreuznach, Kreuznach, or Kreutznach, tn. of Rhineland, Germany, on the H. Nahe, about 8 m. S. of Bingen. It is picturesquely situated in a fertile valley at the foot of a hill upon whose summit is a castle. The riv., which divides the tn. into two parts, is spanned by a fine stone bridge. There are noted mineral springs and salt works, also manufs. of woollen goods, snuff, and leather. Pop. 27,000.

Kriegspiel (war game) is a scientific game of Ger. origin, as its name denotes, in which the movements, etc., of war are imitated on a small scale. Marshal Keith in the eighteenth century invented a game which he called *Kriegs-schachspiel* (war chess), but the game in its modern form was invented in 1824 by the Prussian officer von Reisswitz. It was quickly adopted as a method of instruction in the Prussian Army, and thence spread to the armies of all countries. The materials for the game are blocks cut and moulded to scale to represent different units of an army, and coloured in two different colours, some pairs of dividers, and measures of the same scale, and maps. If a small number of troops is engaged large-scale maps are essential, more so than if large bodies are employed. Printed regulations are not of much service in K., and the decision of a competent umpire is more valuable. Three maps should be used, one for each of the contending armies, and one for the umpire. The umpire's map shows the position of both the opposing forces, but each of the other maps reveals only the troops of one side, and as many of the enemy as the umpire decides would be visible in actual warfare. A general idea of the military position is first given to each commander; this is followed by a 'special idea,' which gives details as to the disposition of troops, the character of the country, etc. Each player then frames his orders, to which he is held. The time for a move is two minutes, and the troops can only be moved for such a distance as would have been traversed in actual fact in such a time. Smaller units yield to larger ones when attacked by them, and when artillery is firing on infantry, the loss of the latter is

determined by a table of odds in conjunction with a throw of the dice. Repulsed troops cannot come into action for five moves (ten minutes), and defeated troops for ten moves, whilst totally defeated troops are removed from the map. See *The Tactical War Game* (1881), trans. by MacDonald.

Kriemhild, heroine of the second part of the *Nibelungenlied*, sister of Gunther, king of the Burgundians, is wooed by Siegfried, conqueror of Brunhild and possessor of the Nibelungen hoard. Brunhild's jealousy leads Hagen, Gunther's vassal, to murder Siegfried while hunting, and K. then changes from a gentle wife into a woman thirsting for vengeance. She marries Etzel, or Attila, the Hun, invites the Burgundian chiefs to visit her, and procures their destruction.

Krilenko, Nikolai (b. 1885), Russian revolutionary lawyer and soldier. b. at Bielov, in the Smolensk gov., and educated at the Lublin Lycée. He played an active part in the elections to the first and second Dumas, and was tried in 1906 for sedition, but acquitted. After this he returned to Lublin, studied law, and wrote a book called *The Research of Orthodoxy*. On the outbreak of the revolution he was made president of the committee of the Eleventh Army, and was subsequently delegate to the first congress of Soviets. The Bolshevik coup of Nov. 1917 forestalled his intended arrest, and in a few weeks he became generalissimo of the forces, having destroyed the morale of the old Russian army by issuing the famous 'fraternisation order.' Later became public prosecutor, in which capacity he was distinguished by his relentlessness. Appointed commissar of justice in 1931, he was superseded by Ovsyenko in 1937.

Krimmitschau, or Crimmitschau, tn. in Saxony, Germany, 8 m. from Zwickau. Manufs. vicuña wool, woollen yarn and cloth, buckskin, iron ware, and machinery. Pop. 27,900.

Kris, Creese, or Crease, Malay knife or dagger, often made with a wavy blade, though this may be straight and narrow. The hilt, of ivory or wood, and the scabbard, may be heavily ornamented.

Krishna, Hindu deity, the eighth incarnation of Vishnu. His worship has been much in vogue in modern times. He was the son of Vasudeva and Devaki, and his bp. is given as Mathura, between Delhi and Agra. He is represented as being brave and fearless, but crafty, while in the popular legends concerning him and in his worship as Vallabhacharya, one sees the most depraved side of modern Hinduism. He figures in the *Haricansa-pairan* and the *Bhagavata-puranas*, two additions to the great Indian epic, the *Mahabharata*. Early ideas of K. are mingled with myths of lightning and fire, heaven and the sun.

Krishna, riv. S. India, see KISTNA.

Krishnagar, tn. in Nadia dist., W. Bengal, India, on the R. Jalangi. Coloured clay figures are manufactured. It has a Church Missionary College, and is the seat of a Rom. Catholic bishop. Pop. 32,000.

Krishnamurti (b. 1897), Indian mystic,

b. at Madanapalle, Madras, son of Jidda Naraniah, was an employee in the revenue dept. of the Brit. Gov. and a Theosophist. He was called K. after a custom in S. India that the eighth child, if a boy, should be named in honour of Krishna, a divine incarnation, who was an eighth child. In 1909, K. was especially noticed by Dr. Annie Besant and her colleague, Mr. C. W. Leadbeater. They recognised in K. latent faculties which they believed would, when developed, make of him a great spiritual teacher. The two Theosophical leaders offered to give K. the education necessary for his mission, and his father, who was a poor man, gladly accepted the offer, and gave over to Dr. Annie Besant the care of K. In 1911 Dr. Besant took the boys with her to Europe, and announced publicly the nature of the spiritual greatness latent in K. Thousands of Theosophists all over the world accepted her proclamation, and banded themselves together into an organisation called 'The Order of the Star in the East,' to prepare the way for K. in the work which he was expected to do when he reached manhood. In 1925 Nityananda, younger brother of K., died. This was to K. a deep sorrow, yet it proved a turning-point in his spiritual life. He has written: 'When my brother died, the experience it brought me was great—not only the sorrow—sorrow is momentary and passes away, but the joy of experience remains. If you understand life rightly, then death becomes an experience out of which you can build your house of perfection, your house of delight.' From that moment K. came before the world of his own accord as a spiritual teacher, who desired to help all men to attain the supreme and lasting happiness which he had found within himself. Later he developed a deeply interesting and original philosophy of life, in close harmony with modern thought and with conditions in the twentieth century. K. held that an organisation for spiritual purposes inevitably becomes a barrier in the individual search for truth, and creates distinctions which lead to spiritual domination and exclusiveness. As a result of this view, he dissolved in 1929 his own order of the Star, which in the course of years had grown into an international movement. K. does not claim to be the world-teacher in the sense in which this term is used by the Theosophists, nor has he any wish to found a religion. He has repeatedly declared that he had no disciples, and desired none. In particular he repudiated all authority in spiritual matters and the division of spiritual teaching into esoteric grades reserved for the few. See L. Heber, *Krishnamurti, the Man and his Message*, 1931, and *Krishnamurti and the World Crisis*, 1935. **Kristiania**, see OSLO.

Kristiansand, seaport on the S. coast of Norway. Situated on a fjord of the Skagerrack, 175 m. S.W. of Oslo by sea, its scenery is still very picturesque, although the wooden houses have, since the fire of 1892, been replaced by brick. It is connected by the Setesdal Railway with Byglandsfjord (48 m. away),

and is served by all the steamers which run between Oslo and Hamburg, Hull, Grangemouth, and London. Its industrial importance rests on the salmon and mackerel fisheries rather than on the wood-pulp factories and sawmills. Pop. 21,000.

Kristianstad, the fortified cap. of the S. prov. of K., Sweden. It is situated near the Baltic (14 m. away), on the R. Helge, 265 m. S.W. of Stockholm. It is noted for its fine church, and manufs. linen and woollen goods besides gloves. Pop. 23,000; prov. 254,900.

Kristiansund, seaport tn. of Norway, 85 m. W.S.W. of Trondhjem, on four is. in the Atlantic, which enclose its fine natural harbour, which has in recent years been extended. It was founded in 1734 by Christian VI. of Denmark. It exports large quantities of dried cod and salt fish, also timber, tar, and wood pulp. Pop. 13,000.

Kristinehamn, see *CHRISTINEHAMN*.

Kritihia, Battles for, fought on April 28, May 6-8, June 4, 1915. See *GALLIPOLI CAMPAIGN*.

Krivoi Rog, tn. in the Dnepropetrovsk Region of the Ukrainian S.S.R., and 100 m. from Kherson, on the R. T. Zuletz. It is the chief iron-mining settlement of the Volhynia-Podolsk Upland across the Dnieper. The K. R. deposits contain about 1,000,000,000 tons of ore (said to be over 60 per cent metallic content). There are smelting and metallurgical works at K. R. The Gers. made K. R. one of a series of 'bolt positions' at key points in the great battles of the 'Dnieper Bend' (Oct. 1913-Feb. 1914) and clung tenaciously to their positions round K. R. and Nikolop, even when the Russians had advanced far westward of Kiev and thereby greatly lengthened the Ger. right flank. When the forces of Konev and Malinovsky joined hands it seemed that the centres of K. R. and Nikolop must fall, for the Russians were within 6 m. of K. R. (Oct. 25); but the strength of the Ger. defence around Melitopol prevented Tolbukhin from closing the left wing of the Russian pincers, and, by the time the Russians had pierced the Melitopol defences, a much reinforced barrier confronted them before Nikolop, while the Gers. had stabilised their position at K. R. But this stiffened Ger. resistance at K. R. and Nikolop only brought the Russian advance within the Dnieper Bend to a temporary halt and on Nov. 4 the Russians launched a new offensive against Kiev, and, having taken this city, they delivered a new major thrust above K. R. But though they made deep armoured penetrations their progress towards K. R. itself was slow and K. R. held out for some time. On Feb. 8 (1941) Nikolop was captured by the Russians and a deep salient driven beyond Apostolovo to outflank K. R. Slowly but surely the Russian 'pincers' now closed on the important base; by Feb. 21 they had broken into the suburbs and after a day's desperate street fighting the Ger. troops were driven out of the tn. (Feb. 22). (See further under *EASTERN FRONT*, or *RUSSO-*

GERMAN CAMPAIGNS, IN SECOND WORLD WAR). Pop. 197,600.

Krk, see *VEGLIA*.

Krnov (Ger. *Jägerndorf*), tn. of Austrian Silesia, near the frontier, 14 m. N.W. of Troppau, on the R. Oppa. It has a Minorite monastery, a church (Burgberg), and a castle of the Liechtenstein princes. It is noted for woollen industries, and also manufs. cloth, organs, and machinery. Pop. 21,129.

Krolevets, tn. in the Ukrainian S.S.R., 87 m. E. of Chernigov. It has a noted cattle fair. Pop. 12,000.

Królewska Huta (Ger. *Königshütte*), tn. in Polish Silesia, 6 m. S.E. of Bouthen. It has large iron, steel, and zinc works; glass and bricks are also produced. In the Second World War K. was captured by the Russians early in 1945. Ceded to Poland after the war. Pop. 115,000.

Krone, unit of the monetary systems of Norway, Denmark, and Sweden (in the last, *Krona*). At parity 18-159 Kroner equal the pound sterling, and 1 K. is equivalent to 26-80 cents.

Kronenberg, manufacturing tn. in the Rhineland of Germany, 6 m. from Elberfeld. Pop. 16,000.

Kronos, see *CRONOS*.

Kronstadt, Father John of (1829-1908), Russian priest, whose real name was Joann Sergeiev. He became priest of the Eng. cathedral church of K., after having studied at the theological academy of St. Petersburg, where he took his divinity degree in 1855. He soon obtained an extraordinary influence over people, and the enthusiasm aroused by his sermons led to miracles of healing being attributed to him. People of every class flocked to him with their bodily and spiritual troubles, and with the money thus acquired he founded numerous charitable institutions. He was violently opposed to the teaching of Tolstoy. His publs. include *Ma vie dans la Christ; Sermons sur le Dieu Crateur; Sermons et instructions; Quelques mots de réponse aux fausses doctrines du comte Tolstoi*, etc.

Kronstadt, or **Cronstadt**, tn. and naval fortress in the Leningrad Region of the U.S.S.R. on the Is. Kotlin, near the head of the gulf of Finland, and 18 m. W. of Leningrad. Since the maritime canal was constructed which unites K. and that city, the quays of the latter can be reached by large vessels. The harbour is ice-bound during the winter. The public buildings of K. include a cathedral, a marine hospital, schools, etc., in addition to the naval works, arsenals, cannon foundries, etc., which carry on the chief industry of the place. Founded by Peter I. in 1710, K. has always been the chief Russian naval arsenal in the Baltic. The tn. and fortress sustained damage during the Ger. siege of Leningrad in the Second World War; but the Russians clung tenaciously to an isolated strip of coast around Oranienbaum which covered the naval base of K., where the Russian Baltic fleet had, before the raising of the siege of Leningrad, been immobilised for more than two years. Pop. 70,000.

Kronstadt, Hungary, see *BRASSÓ*.

Kroonstad, dist. and tn. of Orange Free State S. Africa, 110 m S.W. of Johannesburg. The dist. is separated from the Transvaal by the Vaal R. It is a maize growing and dairy farming area, and diamonds are mined. The tn. is a railway junction and from March to May 1900, was the cap. of Orange Free State. It is the second largest tn. in the state. With the discovery of the high values in the Free State goldfields in 1946 K. being only 30 m from Odendaalsrust at once attracted national interest. Probably no tn. in S. Africa to day is more assured of a promising future than is K. Pop. 16,000 (Europeans 1000).

Kropotkin, Prince Peter Alexievich (1842-1921) Russian geographer, nihilist

PRINCE KROPOTKIN

and author; b. Dec. 9 at Moscow of a noble family. In 1857 he entered the corps of pages at St. Petersburg and in 1862 went with a Siberian Cossack regiment to Siberia where he carried out two geographical surveys. He returned to St. Petersburg in 1867, and studied at the univ. for four years whilst secretary to the Geographical Society. In 1871 he explored the glacial system of Finland and Sweden, and in 1871, by a map and paper which he pub., proved that the main structural line of Asia ran from S.W. to N.E. and not N. to S. or L. to W. as had been supposed. In 1872 he joined the International Working Men's Association at Geneva, he definitely adopted anarchism a little later. He was arrested in 1874 for spreading nihilistic doctrines on his return home; but escaped in 1876 and came to England. Later he went to Switzerland, but was expelled therefrom in 1881 and came to England for a year. In 1883 he was arrested at Lyons by the Fr. Gov. and sentenced to five years' imprisonment, but, as a result of repeated agitation in the Fr. Chamber, he was released in 1886—

when he returned to England and settled down. In June 1917 he returned to Russia and little was heard from him afterwards, but he is known to have condemned the dictatorship. Among his numerous works may be mentioned *Paroles d'un révolté* (1881), *L'anarchie sa philosophie, son idéal* (1896), *Memoirs of a Revolutionary* (1900), *Modern Science and Anarchism* (1903), *Geography of Asia* (1904), and *Russian Literature* (1905). See A. Lorulot, *Les thèses anarchistes* 1913 and R. N. Baldwin (editor) *Kropotkin's Revolutionary Pamphlets* 1927.

Krossen, or **Crossen**, tn. of Brandenburg (Germany) at the confluence of the Oder and Bober 32 m S.E. of Frankfurt on Oder. There is an old castle. It has manufactures of hosiery and woollen cloth. Pop. 7,000.

Kroton, Italy. See CROTONI.

Krug, Wilhelm Traugott (1770-1842) Ger. philosopher and writer; b. at Radis, Prussia, the originator of the system called transcendental synthesis which endeavours to combine Idealism and Realism. He studied at Wittenberg and was later appointed assistant prof. of philosophy in consequence of his *Lectures on the Perfectibility of Revealed Religion*. In 1801 he was extraordinary prof. of philosophy at Frankfurt on the Oder, ordinary prof. of logic and metaphysics at Königsberg (1804) and ordinary prof. of philosophy at Leipzig (1809). His prin. writings are *System der theoretischen Philosophie* (1806-10, Eng. trans. *A System of Theoretical Philosophy*), *Geschichte der Philosophie aller Zeit* (1815, Eng. trans. *History of the Philosophy of Ancient Times*), *System der praktischen Philosophie* (1817-19, Eng. trans. *System of Practical Philosophy*) and his autobiography *Meine Lebensweise* (2nd ed., 1810).

Kruger, Stephanus Johannes Paulus (182-1904) four times president of the Transvaal republic; was b. at Colshuis, in Cape of Good Hope. The founder of the family was Jacob K., who in 1713 was sent to Cape Colony by the Dutch India Company in the family on both sides. His uncles names are found accompanying his parents in the great trek from Cape Colony to the country N. of the Orange between 1835 and 1840. His education was primitive and almost his only book was the Bible. The Dutch Reformed Church of the Transvaal was divided into three sects and to the narrowest and most bigoted of these the Doppiet sect the Kruger family belonged. All through his life he considered himself to be under special divine guidance and protection and to this he owed much of his influence over his followers. At the age of seventeen he was an assistant field cornet, at twenty a field cornet, and at twenty seven took command of an expedition against Sechele the Bechuana chief. In 1852 the Transvaal was declared independent by the Sand River Convention, and from that time was in a very unsettled condition; K. entered freely into all the disputes of the factions. In 1856-57 he joined Pretorius in an abortive attempt

to compel a federation between the Transvaal and the Orange Free State. In 1864 Pretorius was made president of the Transvaal, and K. commander-general of the forces. In 1870 the public dissatisfaction over the Keate award in a boundary dispute caused the downfall of Pretorius's gov. K. acted with such bitterness and hostility to the new administration, under T. F. Burgers, that in 1877 the Transvaal was annexed by Great Britain. K. accepted office under the Brit. Gov., but was dismissed in 1878. In 1880 the Boer rebellion occurred, and K. with Gen. Joubert and Pretorius, negotiated the terms of peace. In 1883 he was elected president, and in the following year obtained the London Convention. In 1886 he secured re-election as president. During all his terms of power he was bitterly hostile to Uitlanders, and by his short-sighted policy undoubtedly brought about the Boer war. In 1893 he was very unpopular, and there is no reasonable doubt that he falsified the election figures which caused him to be re-elected by a majority of 700 over Gen. Joubert. In 1899 after a fruitless convention with Sir A. Milner, war was declared. K. for attempting in vain to influence the European powers on his behalf, fled to Europe and resided at Utrecht. He d. at Chaux, on the shore of Lake Geneva, whither he had gone for his health, and was buried at Pretoria. See J. F. van Oordt, *P. Kruger en de opkomsel der Zuid-Afrikaansche Republiek*, 1898; F. R. Statham, *Paul Kruger and his Times*, 1898; *The Memoirs of Paul Kruger*, by himself, 1902; and M. Juta, *The Peace of the O.*, 1939.

Krugersdorp, tn. of the Transvaal prov., S. Africa, 22 m. W.N.W. of Johannesburg, between the latter tn. and the Blaauwbank goldfields. Founded in 1847, and named after President Kruger, K. is the chief tn. of the W. Rand, owing its prosperity largely to the goldfields. Manganese deposits are found, in addition to the gold-mines in the municipal area, and there are tanning, engineering, and paint industries. There is an ann. national pilgrimage to the Paardekraal monument, dedicated to the victory of the Boers over Dingman in 1836. At Doornkop, 12 m. away, Dr. Jameson surrendered to Cronje in 1896, and in 1900 there was fighting there during Lord Roberts's advance to Johannesburg. At Sterkfontein, 8 m. away, are limestone caves. There is a public pleasure-ground at Coronation Park.

Kruishoutem, com. and vil. of Belgium, E. Flanders prov., arron. of Audenarde, 11 m. from Ghent. Pop. 4700.

Krumen, see *ČESKÝ KRUMLOV*.

Krummacker, Friedrich Wilhelm (1796-1868), Ger. preacher and writer on religious subjects, b. at Mörs on the Rhine, was the son of Friedrich Adolf K., the author of *Die Parabeln*. He was preacher in the Reformed Church at Frankfurt, Ruhrort, Barmen, Elberfeld, and Berlin, and in 1853 was made court chaplain at Potsdam. Among his works are *Salomo und Salomith* (trans. 1838); *Elisa der Tishbiter*

(trans. 1838); *Elisha* (1835); *Das Passionsbuch* (1870); *David* (1867). He also wrote an autobiography (1869, trans. 1871).

Krupg Krac, see *AYUTHIA*.

Krupp, Alfred (1812-87), founder of the celebrated iron and steel works at Essen in Germany, b. at that tn., and succeeded his father in possession of a small iron forge in 1848. His first efforts were in the direction of producing axles and tyres for railways. K. adopted the steam-hammer and the Bessemer process of manufacturing steel in 1857, and turned his attention to the production of large armaments. He had already in 1847 produced his first cannon, a three-pounder cast-steel muzzle-loader. Studying especially the production of cast-steel blocks of great weight, he at length (1880) succeeded in forging a breech-loading gun of 100 tons, the largest of its kind at that date. He was also a pioneer in producing specially hardened armour for warships. Though at first ignored by the Ger. Gov., he at last received due appreciation, and was frequently visited by the first Emperor William. With the growth of his business he was able to acquire large mines and collieries, and the K. works at Essen, Kiel, Annen, and Gussow were employing some 70,000 persons in 1913. He was succeeded by his only son, *Friedrich Alfred K.* (1854-1902), by whom was constructed an immense 135-ton gun for the defence of Kronstadt, and who was in turn succeeded by his daughter, *Frau Bertha*, married to Baron K. von Bohlen und Halbach. (See W. Berthow, *Friedrich Krupp*, 1915, and *Alfred Krupp*, 1926.)

At the outbreak of the Franco-Ger. war in 1870 the K. armament works at Essen covered 450 ac. of ground, and employed more than 8000 men. Around the factories were grouped 'K. colonies' of model vils, housing the workers, and complete with flour mills and bakeries, provision stores, and schools. The works were then producing 9-in. guns at the rate of one a day. K. armaments were then establishing the new Germany as the foremost military power in the world. By 1914 the K. works covered more than 2000 ac., and gave employment to 80,000 workers, while exporting artillery of all sizes to almost every gov. in Europe. During the First World War Ks. had practically the monopoly of armament manuf. in Germany, and so acquired considerable credit from the making of long-range guns for the artillery (see also *BERTHA*, *HUG*). At the close of the war the firm was employing well over 150,000 persons. Between the wars they turned their attention to the manuf. of agric. machinery, steam engines, etc., and extended their influence by acquiring the control of many Ger. iron and steel companies. After the advent of the Nazi regime and the rearmament of Germany Ks. reverted to armament production, and did so on a scale unsurpassed elsewhere in the world. Their employees in 1938 numbered 123,000. The K. works at Essen were subjected on March 13, 1945, to the heaviest air attack ever delivered up to that date, by the R.A.F. bomber

command. There had, however, been a very heavy raid on March 5, when nearly 1000 tons were dropped. See *further* under AIR RAIDS; ESSEN; RUHR, BATTLE OF THE; WESTERN FRONT IN SECOND WORLD WAR. See B. Menn. *Krupp, Deutschlands Kanonenkonige*, 1937.

Kruisevac, or **Krushavatz**, prov. and tn. of Serbia, Yugoslavia, 37 m. from Kruisevac. The cap. of the Serbian tsars till 1389, it was held by the Turks from 1128 to 1833. It suffered severely in the First World War. Pop. (prov.) 155,000; (tn.) 7000.

Krylov, see *NOVO-GORGIJEVSK*.

Krypton, symbol Kr; atomic number 36; atomic weight 83.7. A gas-chemical element found in the atmosphere. Isolated in 1898 by Ramsay and Travers from the residues left after distilling off the higher boiling-point constituents of liquid air. Together with xenon, neon, helium, and argon, it constitutes the rare gases. K. is present in air to the extent of about one part in 20,000,000. Its molecule consists of one atom only. K. can be detected spectroscopically. It can also be converted into a liquid and then into a solid, by cooling in liquid air. K. has a density of 3.71 gm. per litre, a boiling-point of $-151.7^{\circ}\text{C}.$ and a melting-point of $-169^{\circ}\text{C}.$

Kuala Lumpur, cap. of the Brit. unfederated Malay state of Selangor, nearly opposite Port Swettenham on the W. coast of the Malay Peninsula and the heart of the Malayan rubber and tin-mining industries. With a good water supply and lit by electricity, it was remarkable before the Second World War for its easy, opulent way of life, due to the prosperity of the rubber and tin companies. The native quarters are within the city: the residential areas, where Brit. officials and business men live, in the outskirts. In these areas are spacious houses, with marvellous gardens, where rannas and hibiscus shrubs bloom in profusion. When K. L. fell to the Jap. invaders in Jan. 1942, the city presented a tragic spectacle. Columns of black smoke rolled upwards as the stocks of rubber were destroyed by the Brit. authorities, and estates, which had involved years of labour and expenditure, were ruined. Occasional detonations marked the destruction of the machinery in the tin mines and the blowing up of numerous bridges round the city. Little, however, had been destroyed in the residency and administration buildings when the Brit. evacuated the city. Pop. 128,000 (mostly Chinese and Malays).

Kuala Selangor, seaport tn. at the mouth of the Selangor (strait of Malacca), on W. coast of the Malay Peninsula. It was once an important Dutch stronghold. Exports include timber, rubber, ivory, tin, rattans, and hides, and it has good fisheries. During the Second World War it was occupied by the Jap. from Jan. 1942 until their surrender in Sept. 1945. Pop. 40,000.

Kuango, see *CONGO*.

Kuanza, see *COANZA*.

Kuba, tn. of Transcaucasia, in the Azerbaijan S.S.R. It is noted for the

culture of silkworms, and the manuf. of silk goods and carpets. Pop. 20,000.

Kuban, name of both a dist. and a riv. of Russia in the Krasnodar Region of the R.S.F.S.R. The area includes the riv. basin, the N. slope of the Caucasus range as far to the E. as Elbruz, and the coast of the sea of Azov. The crops grown include wheat, tobacco, apples, pears, vines, and kendir (*Ipomoea renelumi*), a fibre-producing plant. Horses are reared by the inhab. of the plains. The minerals include coal, iron ore, salt, soda, and petroleum. The R. Kuban, the anct. Hypanis, or Vardan, rises at a height of 14,000 ft. in Mt. Elbruz in the Caucasus. Its main stream enters the Black Sea in K. Bay after a course of almost 500 m., whilst an arm enters the sea of Azov. Sandbanks encumber navigation, which is carried on in flat-bottomed boats.

Ger. troops early in Aug. 1942 reached the K. R. on a 62-m. front, and swept across the riv. to cut the main Rostov-Baku railway farther S. A few weeks later the Mafkop oil area was reached by swift thrusts from the K. bend and N. of the riv. a considerable advance was made in spite of protracted Russian resistance in the Kropotkin area. But this was the limit of the Ger. advance in the Caucasus. By Jan. 19, 1943, the Russians had turned and recrossed the K. R. while the Gers. were hastening to escape by the Rostov gateway on which sev. Russian columns were converging. On Jan. 22, 1943, the Russians took Salsk, and advancing down the K. valley captured Armavir. In Feb., despite a flooded countryside and mud-clogged roads, the Russians delivered determined attacks N. and S. of the K., and took the tns. of Slavyansk and Anzassk. In mid April they resumed their attacks, after the roads had dried, especially on the route between Novorossisk and Krymskaya, and along the N. bank of the K., meeting with fierce resistance. Fighting in the K. area ended in Oct. 1943, when the remnants of the Ger. forces left or were mopped up.

See also *Cossacks*; *EASTERN FRONT OF RUSSO-GERMAN CAMPAIGNS IN SECOND WORLD WAR*.

Kubango, or **Okavango**, see *CUBANGO*.

Kubelik, Jan. (1880-1940), Czech violinist, b. at Mielie, near Prague, the son of a Bohemian gardener, who was an enthusiastic musician. He changed his name to Polgar in 1912. He was sent to study under Prof. Ševčík in Prague in 1888, and in the ensuing fifteen years played all over the world, meeting everywhere with phenomenal success. Made his first appearance in England in 1900 at a Richter concert in St. James's Hall. Technically perfect, his playing, however, was not always above criticism as regards interpretation; he was particularly renowned for his performance of Bach's *Chaconne*, and of Paganini. He made a world's tour in 1914. His compositions included six violin concertos.

Kublai Khan, or **Kubla Khan** (1216-1291), grandson of Jenghiz Khan, was the founder of the Mongol dynasty of China. Whilst his brother Mangu was on the

throne, K. K. began the conquest of N. China. On the death of Mangi in 1259 he became the 'Great Khan,' and in the course of time added S. China to his empire, also Tartary, Tibet, Burma, and other countries. His empire was thus of great extent, but many of his foreign expeditions, particularly those against Japan, ended in failure. K. K. was a wise and just ruler; he encouraged trade and agriculture, and estab. Buddhism as the state religion. He delighted in pomp and display, as we see in Marco Polo's *Travels*. Chinghim, the son whom he had chosen to succeed him, predeceased him, dying in 1284, and Chinghim's son Timur was his successor.

Kuchaman, tn. and railway junction of Rajputana, India, 65 m. W.N.W. of Jaipur. Pop. 13,000.

Kuchan, or **Kabushan**, tn. of Khorasan, Persia, connected by road with Meshed. It was destroyed by earthquakes in 1893 and 1895. Pop. 12,000.

Kuch Behar, see COCH BEHAR.

Kuchean Language, see under INDO-EUROPEAN LANGUAGES.

Kuching, see SARAWAK.

Kudalur, see CHIDAMBARAM.

Kudrun, see GUDRUN.

Kudu, or **Koodoo**, *Streptoceros kudu*, one of the largest African antelopes; a handsome beast with reddish-brown coat marked with white stripes. The male has long spiral horns.

Kudur-Lagamar, see CHIDORLAMI R.

Kueishuacheng (Kweihsia), or **Kukuk-hoto**, tn. in Shansi, China, 250 m. N.E. of Peking. It consists of two parts, an important trading and commercial centre, and the military portion. Formerly the residence of the Living Buddha of Mongolia, it is still a centre of Lamaism. There are Protestant and Catholic missions.

Kuen-lun, see KUN LUN.

Kufa, Iraqi vil., 90 m. S. of Bagdad, and the place of residence of the caliphs before they settled in Bagdad. Also a script used in the earlier copies of the Koran.

Kufferath, **Maurice** (1852-1919), Belgian musicologist, b. at Brussels. Son of Hubert Ferdinand K., composer. Studied law after taking instruction in the cello

under François. Then became a journalist, and also wrote for the *Guide Musical*, and later managed it. After the First World War he resumed the management of the Théâtre de la Monnaie, which, under his direction, attained its zenith. Learned to a degree and a stylist *par excellence*, he made trans. of *Fidelio*, *The Magic Flute*, and other operas. He successfully inaugurated Wagnerian cycles. His name will always be associated with the Wagnerian movement, his exegetic works pub. under the general title, *Le Théâtre de H. W. de Tannhäuser à Parsifal* (6 vols., 1891-98), having considerable influence.

Kufra, or **Kufara**, oases in the centre of the Libyan Desert, N. Africa, the centre of the Senussi, a strong Muslim sect. It is connected by desert tracks with Jarabub, Khargah, and Siwa, and can be reached from Sidi Barrani. In the Second World War K. was captured from the It. by Gen. Leclerc's Free Fr. motorized forces from Chad ter., on March 1, 1941. See Rosita Forbes, *The Secret of the Sahara*; *Kufra*, 1921.

Kuhl, see KOHL.

Kuhn, **Franz Felix Adalbert** (1812-81), Ger. mythologist, b. at Königsberg, Brandenburg; from 1841 teacher, and from 1870 principal of the gymnasium of Cologne. He pub. many books on comparative mythology, and ranks as one of the founders of that branch of knowledge. His prin. works are *Markische Sagen und Marchen* (1842); *Zur ältesten Geschichte der indogermanischen Völker* (2nd ed. 1850); *Sagen, Gebräuche, und Marchen aus Westfalen* (1859); *Über Entwicklungstufen der Mythenbildung* (1874); and *Die Herabkunft des Feuers und des Göttertranks* (2nd ed. 1886).

Kuibushev, formerly **Samara**: 1. Region of the R.S.F.S.R., bounded on the W. by the Voronezh Region, E. by Chkalov Region, and S. by Saratov Region and the Kazakh S.S.R. It is bisected by the K. R., while the Volga flows along its W. frontier. Mountainous in the N.W., there are fertile valleys in the S., agriculture being the chief industry. Area 58,320 sq. m. Pop. 2,544,500. 2. Cap. of the K. Region, on the R. Volga, 95 m. S.S.E. of Simbirsk. It was a bishop's (Orthodox) see, with three cathedrals, until the church was disestablished in 1918 by the Soviet Gov. A univ. was estab. in 1919, and a new communist univ. in 1929. Lying, as it does, on the great bend of the Volga, at the junction with the K. R., it is an important point for the transshipment of grain from riv. to railway, and contains large grain elevators and flour mills. Food products, transport machinery, and building materials, especially cement—the production of which at K. is of national importance—and asphalt are among its chief industries. Others include iron-founding, tanning, brewing bricks, etc. The new hydro-electric stations with a capacity of 3,400,000 kilowatts will add to the importance of K. when they are completed. In the First World War Gen. Maude, advancing up the Tigris, took Samara on April 23, 1917, and thus gained control of the Bagdad-Samara railway. The

Russian Gov. took up its quarters here late in 1941, when the Ger. armies were threatening Moscow. Pop. (1930) 175,700; (1939) 390,000.

Kuiper, Abraham, see KUYPER.

Kuilenborg, or Culenborg, tn. of Holland in Guelderland, on the R. Lek. Its chief industry is the manuf. of ribbon. Pop. 9260.

Kutahia, see KUTAYIAH.

Kuka, Kouka, or Kukawa, tn. of Bornu, incorporated in the Brit. protectorate of Nigeria, probably so called from the monkey-bread tree or *kuka*, which is plentiful in its vicinity. It is now the headquarters of the Brit. administration in Bornu, but was formerly the residence of the native sovereign (*shehu*), who now holds his court at Mardugari (since 1908). The modern tn. was founded about 1805 and rebuilt in 1903. Pop. (est.) 60,000.

Ku-Klux-Klan. There were really two Amer. organisations of this name, one originating in the terrible reconstruction days in the S. after the Civil war, the other being started after the First World War and reaching the height of its power about 1928. The original K.-K.-K. was started in Tennessee in 1865 by a number of young men, who did it as much for amusement as anything else. They held secret meetings, had elaborate ceremonials, and wore white cloaks with hooded caps which hid all but their eyes. It was found that this uniform frightened the superstitious negroes, and the Southerners at once recognised that they had a weapon in their hands. The K.-K.-K. was organised all over the S. under the leadership of the Tennessee cavalryman, Gen. N. B. Forrest. The K.-K.-K. rode by night, striking terror into the ex-slaves and into the carpet-bagger politicians from the N. But the Federal Congress enacted laws against it and by 1871 it was practically non-existent. The second K.-K.-K. was founded by W. J. Simmons in 1915 at a meeting near Atlanta, Georgia. Simmons, who had been a preacher and also an organiser for fraternal orders, knew how to organise an extensive 'selling' campaign. His order was chartered in Georgia, and thence began to spread rapidly, first all over the S. and then in the N. states, particularly in Indiana. Like the old K.-K.-K. it opposed Negroes. Also like the old Know-nothings and A.P.A.s (Amer. Protective Association) it opposed naturalised citizens and Rom. Catholics, adding to this a bias against the Jews. It stood for white native Protestant domination in politics and business. It became a power in politics, particularly influencing the elections of 1922, 1924, and 1926. But some of its members soon began to commit lawless acts. The braver part of the Amer. press began a vigorous onslaught on the organisation. Internecine quarrels added to the troubles of the K.-K.-K. and in 1923-24 these led to the deposition of Simmons from the leadership, with a solatium of \$20,000, after which the K.-K.-K. soon became quiescent. Owing to a resurgence of terrorism against Negroes in 1949 the Alabama House of Representatives banned the wearing of masks.

Kukri, knife used in Nepal, particularly as a weapon by Gurkha troops. The blade is curved, sloping from the outer to the inner edge; it weighs about 4 lb. and is about 2 ft. in length.

Kukukhoto, see KUENHACHÉNG.

Kula, com. of Hungary in the co. of Bacs-Bodrok, 34 m. from Szabadka or Subotica (Maria Theresiopol). Pop. 9000.

Kulak, Russian word meaning a list. Before the Russian revolution it was used for stingy merchants or for peasants who gained a hold over their fellows and were, probably, vil. usurers. They also acquired power over others by hiring labour, or leasing out machinery or land. In the revolutionary period the word was widely used as a word of abuse for any one who used machinery or employed hired labour, or, in other words, for the filthy, who were the natural leaders of the vil. 'Actually,' says Maurice Hindus (g.v.), 'a kulak was a successful farmer as success is measured in Russia. He was one of the so-called well-to-do though by no stretch of the imagination would he have been called that in America, Germany, or England, or any other western land.' He became the enemy and victim of the Bolsheviks in the process of collectivising agriculture, which process he did not survive. State farms had been tried in the period of militant communism prior to 1928 but they had collapsed or reverted to those for whom they were not intended, namely the more prosperous peasants, and even state authorities in the vils. had themselves fallen under peasant influence. During the five-year period 1928-33 the gov. tried the experiment again but on a larger scale and by a more gradual process. The peasantry would have preferred to continue with their individual farms, while widely co-operating with each other in securing machinery and in marketing their produce. But the gov. preferred to drive them by force into collective farms through the agency of the fanatic *komsomols*. By the spring of 1930 these young revolutionary authorities reported that two-thirds of all the farms in the country were already collectivised. But though the peasants might have been driven into collectivism, the farm work was ruined and when the pressure was withdrawn, the new collective farms collapsed of themselves. Stalin then summed the process in a different way. He began by taxing individual farms almost out of existence or hedging them round with restrictions of sales to gov. monopolies. This was followed by an individual attack on all who were labelled Ks. by local rivals or enemies. The condemned man and his wife were robbed of house, implements, and everything else and carted away to concentration camps to work as slaves for the gov. In many places there was the most stubborn joint resistance, ending in pitched battles and interspersed with isolated assassinations. The gov. reckoned that there were as many as 1,000,000 families on the lists of the condemned, which in effect meant 5,000,000 persons. Not all of these were killed, sometimes

they were merely removed to other and inferior land, perhaps outside the neighbourhood, and later moved on further, as new collectivisation spread over the country; but as Ks. they were liquidated or, in other words, ceased to exist as such. The result was that the 'middle peasant', who wished, if possible, to become well-to-do in his turn, had a mortal fear of incurring the fate of the labelled Ks. and had no alternative but to enter the collective farm. In the first year of this period, sale confiscations of all that had belonged to the Ks. amounted to about 400,000,000 roubles. *See M. Hindus, Broken Earth*, 1926, and *Red Bread*, 1931; also Sir B. Pures, *Russia*, 1941.

Kulasekharapatnam, tn. of Madras, India, on the gulf of Manar in the dist. of Tinnevely. Pop. about 20,000.

Kulbarga, or **Gulbarga**, tn. in Hyderabad, cap. of the dist. of K. and a trade centre. It was originally a Hindu city, and was the cap. of the Bahmani kings (1347-1432), and still contains the ruins of the palaces and tombs of these kings. There is also the ruin of an old fort, containing a fine Pathan mosque. Pop. 30,000.

Kuldiga (Ger. *Goldingen*), dist. and tn. of the Latvian S.S.R. in Courland. It is situated on the Venta R., 10 m. from the Baltic. Pop. (tn.) about 7000.

Kulja, III, or **Ningyuan**, walled tn. of Central Asia, in Sinkiang, on the R. III. It is one of the chief cities of the region, an important trade centre and the seat of the Russian consul. The two chief buildings are the Taranchi and Dungan mosques. Paper and vermicelli are manufactured, and wheat, barley, poppies, and lucerne cultivated. From 1870 to 1881 it was in Russian hands. Pop. 10,000.

Kulm, or **Chelmno**, tn. on the R. Vistula, Poland. It has ant. wells and large oil works, saw-mills, and machinery works. Its trade is important. Pop. 29,200.

Kulmbach, walled tn. of Upper Franconia, Bavaria, Germany. 11 m. from Bayreuth. It is famous for its breweries, malting, and bottling works, especially for its black beer, which is largely exported. Pop. 12,000.

Kulmasz, tn. in the prov. of Pomorze, Poland, 14 m. N. of Torun. It was the see of the bishops of Kulm from 1243 to 1824. Pop. 10,600.

Kulp, tn. in the Kars vilayet of Asiatic Turkey, situated to the S.W. of Erivan, Armenia S.S.R. Enormous quantities of rock salt are found here. Pop. about 3000.

Kulu, valley of the Kangra dist. of E. Punjab, India, with rich undeveloped deposits of silver, copper, and lead. It also produces very fine fruits and vegetables.

Kulun Nor, *see* DALAI NOR.
Kulyab, region of the Tajik S.S.R. Russian Central Asia.

Kum, **Kom**, or **Qum**, tn. of Persia, on the Anarbar R., cap. of the prov. of the same name. It is connected by road with Teheran, and is also noted as a place of

pilgrimage, containing as it does the shrine of Fatima (d. 816), the sister of Riza, the eighth Imam. There is a manuf. of porous vases. Pop. 30,000.

Kumamoto, garrison city of Kyushu, Japan, about 50 m. E. of Nagasaki. It is the centre of the Higo rice trade, and is at the S. end of the Kyushu coal-field. Pop. 190,000.

Kumania, or **Cumania**, dist. of Europe at the time of the crusades, extending N. of the Danube and N.W. of the Black Sea, comprising the present Moldavia, Wallachia, and part of S. Russia, W. of the Dnieper R.

Kumarila Bhatta, known also as **Bhat-tacharya**, celebrated Brahmin teacher who lived about A.D. 600. He was an exponent of the Mimamsa system of Hindu philosophy, and strenuously opposed the Buddhists, whom he is said to have extirpated. He annotated the *Sutras*, and was noted for his interpretation of the Vedic texts.

Kumasi, or **Coomassie**, cap. of Ashanti in the Gold Coast ter. on the W. coast of Africa, and a city of some antiquity. Its port is Sekondi, on the gulf of Guinea. It was taken in 1874 by a Brit. expedition under Sir Garnet Wolseley. It was again taken by the Brit. in 1893-96 and 1900. It is situated in a clearing of the dense Ashanti forest. At one time 'blood-stained' K., it is now composed of clean, straight streets. Manchester cotton goods, enamelled basins, brass bowls, masses of beads and trinkets fill the shops. There is electric light, and a modern water supply. There are sev. churches, hospitals, schools, and a motor park. A gov. railway links K. with Sekondi (168 m.) via Tarkwa; and another line joins K. with Accra (192 m.). There is also a telephone exchange. In 1900 K. was a mere fortress in the bush, though it was the most recent of the Gold Coast castles, having been built in 1897. This castle was the stronghold of the governor, Sir Frederick Hodgson, and his wife when they were besieged by the Kumasis (1900). Hodgson's small garrison had almost reached starvation point, when they decided to cut their way out to the coast. Pop. 45,000. For the part played by K. in the Ashanti wars see GOLD COAST.—*History*: GOLDEN STOOL. *See* W. W. Cluridge, *History of the Gold Coast and Ashanti*, 1915; and W. M. Hall, *The Great Drama of Kumasi*, 1939.

Kumaun, or **Kumaon**, div. of the United Provs., India, with headquarters at Naini Tal, and consisting of the three dists. of Naini Tal, Almora, and Garhwal. It lies mainly on the S. slopes of the Himalayas, and includes many of the prin. summits. At the foot of the mts. lies an extensive forest, cleared in places for the dwellings of the hill tribes and for tea plantations. There are mines of iron, lead, and copper, but they are little worked. The country was seized by the Gurkhas at the end of the eighteenth century, but was annexed to Brit. India after the Gurkha war of 1815. Area 13,722 sq. m. Pop. 1,600,000.

Kumbhakanam, *see* COMBACONUM.
Kumbum, or **Gumbum**, important lacemaking in the prov. of Kansu, China.

130 m. W.N.W. of Lanchow. It is a Buddhist pilgrim resort.

Kumis, see KOTMISS.

Kummel, liqueur containing 33 per cent of alcohol, originally exported chiefly from Riga. It is flavoured with cumin and bruised caraway seeds.

Kun, Bela (1886-1939), revolutionary leader in Hungary; son of one Kohn, a Jewish notary at Szilagyócsch. K. graduated in jurisprudence at Kolozsvár. Captured by Russians early in the First World War, he adhered to Bolshevism, and was sent home as propagandist.

Topical Press

BELA KUN

Count Károlyi (q.v.) handed over the gov. of Hungary, March 1919, to Alex. Garbai, the mere tool of K., people's commissary for foreign affairs, who inaugurated wholesale communisation of property. The country pop. was recalcitrant; and K.'s army, successful against the Czechs, was defeated by the Rumanians, upon whose advance K. fled to Vienna. He escaped to Russia, but turned up in Vienna again in 1922 and was imprisoned. From 1921 he was a member of the International Communist executive and president of the Communist International, Moscow, Aug. 1928. He was reported shot in Aug. 1939 on Stalin's orders. See also HUNGARY. See L. Bigony, *Tage ungarischer Bolchewismus*, 1920, and life by C. Herczeg, 1928.

Kunar, riv. of Afghanistan which gives its name to a very beautiful valley. It rises in the Hindu Kush Mts., and is known by the various titles of Yarkhun, Chitral, Kashkar, and Kunar; joins the

Kabul a little below Jalalabad. The anct. tns. of Kunar and Pashat lie upon its banks.

Kunshinjinga, see KANGCHINJUNGA.

Kundt, August (1839-94), Ger. physicist, b. at Schwerin, Mecklenberg. He is best known by his researches in sound, and has given his name to the method of determining the velocity of sound vibrations by dust figures. He also determined the ratio of the two specific heats of a gas and did some valuable work in optics, dealing with the anomalous dispersion of light and the optical characteristics of metals.

Kunduz, state and tn. of Afghan Turkestan. The state is bounded on the N. by the Oxus R., and on the S. by the Hindu Kush Mts. The tn. is the trade centre of a large dist. Pop. 400,000.

Kunene, see CUNENE.

Kunersdorf, vil. of Brandenburg, Germany, 6 m. from Frankfurt-on-Oder. Here Frederick the Great at the head of the Prussian Army, was defeated by the combined armies of the Russians under Soltikoff and the Austrians under Loudon in 1759. Pop. 1000.

Kungur, tn. on Sylva R. in the Sverdlovsk Region of the R.S.F.S.R. on the Siberian highway. It has tanneries, leather factories, and iron foundries. Alabaster is quarried, and there are copper and iron mines. It has an important fair, and is famous for its alabaster caverns. Pop. 41,000.

Kunkel, or **Kunckel**, von Lowenstjern, Johann (1630-1703) Ger. chemist. He shares with Boyle (q.v.) the credit for discovering the process by which Brandt of Hamburg had succeeded in 1669 in preparing phosphorus. This was by distilling concentrated and putrefying urine with sand. He was also a skilful manufacturer of glass.

Kun Long, dist. in the Shan states, Burma, and also a ferry on the Salween. The Burmese formerly had a customs station here, until the depredations of the Wa, or hill-men, made the place dangerous for traders.

Kun Lun, **Kwen Lun**, or **Kuen Lun Mountains**, term used to designate generally the mt. ranges which run along the N. edge of the Tibetan plateau. In its widest sense the K. L. Mts. stretch in a waving line for nearly 2500 m. from E. to W. In the W. portion the ranges are 'squeezed' together more closely, having a breadth of 150-200 m. only, and the summits are correspondingly loftier. In the E. portion the breadth increases to 600 m. and the ranges are consequently less folded and flatter. The K. L. are the backbone of the tectonic structure of Asia. A peculiar feature of the Tibetan plateau is that the outermost border range is throughout double, as are the lake basins between the mts. The K. L. Mts. are much older than either the Himalaya or the Tianshan; the highest summits reach 21,500 to 22,000 ft., but there are no greatly outstanding peaks, as the general level is so high. The importance of the K. L. system was recognised from very early times, but K. Hittler was the first

to recognise their true character: Baron von Richtofen still further defined them and represented them as a complex arrangement of sev. parallel ranges running in a wavy line from 76° to 118° E. His classification was sound in its general outline, but the details have been very considerably revised by the labours of Russian, Eng., Fr., Hungarian, and Swedish explorers, amongst whom Sven Hedin stands out pre-eminently. The K. L. is now generally divided into three main parts, the W., extending from 76° to 89° E., the Middle to 104° E., and the E. K. K. to about 112° E.

Kunming, or Yunnanfu, cap. of Yunnan prov., S.W. China, a city of great importance as a trade centre between the far W., and central and S. China. During the Second World War many industries were transferred to K. from the E. provs., and the city was also the Chinese terminus of the Burma Road and a U.S.A. air base. Pop. 250,000.

Kunti, in Hindu mythology a heroine of the *Mahabharata*, daughter of the Yadava prince Shura. She was the mother of Karna by the sun, and afterwards became the chief wife of Pandu and bore three sons.

Kuntsevo, tn. in the R.S.F.S.R. Pop. 60,900.

Kuomintang, Chinese Nationalist party, formed originally by the followers of Sun Yat Sen (q.v.). Its executive committee promulgated, on Oct. 4, 1928, the 'Organic Law (or Law Governing the Organisation) of the Nationalist Government of the Republic of China,' though in Dec. of 1931 this law was considerably amended. The Chinese National Gov. at Nanking was appointed by the K., to the congress of which it was responsible. See further under CHINA, History. See Tang Leang-li, *The Inner History of the Chinese Revolution*, 1930; P. M. A. Lichbarger, *Government in Republican China*, 1938, and *The China of Chiang Kai-shek*, 1941.

Kuopio: 1. Prov. in the middle of Finland, including N. Karelia. The surface is hilly, and large lakes cover about 17 per cent of it. The soil is of moderate fertility but very little of it is cultivated. There are engineering and chemical works, tanneries, and saw-mills; carts and sledges are also made, and timber, iron, butter, furs, and game exported. Dairy farming and cattle breeding are extensively carried on and a large quantity of iron is mined. Area 14,600 sq. m. Pop. 398,500. 2. Tn. and cap. of the above, on Lake Kallavesi, is a trading centre of considerable importance, and has communication with middle Finland and the sea (via Salma Canal). Pop. 24,800.

Kupfernickel, mineral from which nickel is extracted. It is a compound of nickel and arsenic, NiAs.

Kuprili, see KÖPRÜLÜ.

Kuprin, Alexander Ivanovich (1870-1938), Russian novelist and short-story writer, noted for his realism. He was b. at Narovtchad, and, after education at Moscow, served in the army from 1890 to 1897. This experience is exploited in his most famous book, *The Duel* (1905). He

was a prolific and popular writer, but at the revolution he found it impossible to support the Bolsheviks and settled in France. He pub. his first book of stories in 1903; a collected ed. of his works, in 6 vols., in 1910; and subsequently a larger collection in 14 vols. Some of the best known of his works of which Eng. trans. exist, in addition to *The Duel*, are *The Shulamite* (1909); *The Bracelet of Garnets* (1912); *Sasha: The River of Life* (trans. 1915); *A Slav Soul* (trans. 1916); *The Swamp* (Everyman's Library, 1912); *Gambinus Sulamith* (1914); *Lama* (1915); and *Yunkera* (1933).

Kurdistan, mountainous region of W. Asia, once part of anct. Assyria. It is mostly in Asiatic Turkey, partly in Armenia, Persia, and Iraq. K. stretches S. from the R. Araxes (Aras) to the plains of Mesopotamia and mts. of Luristan, and E. from the upper Euphrates to the upper course of the Tigris and Urmiah in Persia. The chief vilayets are Diarbekr, Bitlis, Mamuret-ul-Aziz, Van, while Ardahan and Azerbaijan provs. are in Persia. Diarbekr, Bitlis, Urmiah, and Kerman-shah are the prin. tns., and it includes the great lakes of Urmiah and Van. Wool, butter, gun, skins, hides, and sheep are produced, Syria obtaining most of her mutton from K. S. K. is in Mesopotamia. The only part of that country to receive enough rain to make irrigation unnecessary, it is a fertile dist. producing good crops and excellent pasture. Oil has been found near Kukuk, the prin. tn. The Kurds, or Koords, are a wild, pastoral, partly nomadic people, speaking an Iranian dialect. Each tribe has its own chief, nominally subject to the Turkish republic and the shah of Persia. The Yazidis of the Sinjar range show traces of Zoroastrian influence, while the rest are mostly Mohammedans of the Sunni sect. N. of Mosul there is a large Christian pop., but the Kurds are very hostile to Christians, and their cruel massacres of the Armenians are well known. During the First World War the Turks raised bodies of irregular horse from among the Kurds, and the dist. was the scene of fighting between the Turks and Russians. By the treaty of Sévres, Turkish K. was to become an independent and autonomous state, but this decision was revoked by the treaty of Lausanne, the Kurds becoming the only important alien element in the pop. of the new Turkey. A very independent people, fanatically religious, almost entirely illiterate and uncultured, possessing a strong tribal sense, the Kurds during the First World War developed a vague feeling of nationality and a bitter dislike of the Turk. Deprived of their hoped-for independence, they yet remained quiet until the abolition of the caliphate aroused their religious fanaticism.

In Feb. 1925 they rose in rebellion, which, after three months—owing to lack of transport and the difficulty of moving troops over mts. in winter—was put down with great severity, the Dervish monasteries, considered the chief source of disaffection, being suppressed. Split up among three states—Persia, Turkey, and,

Iraq (and with a few enclaves in Syria and Soviet Armenia) - the Kurds have struggled in this century to maintain a cultural identity and a freedom of movement which, in the past, had been assured them by the inaccessibility of their mt. strongholds. The vague feeling they have in common is hardly homogeneous enough to be termed nationalism; for their isolation in separate mt. valleys has produced considerable differences in their spoken Kurdish tongue and much inter-tribal rivalry and suspicion. Yet their national feeling is undoubtedly deep-rooted and sufficiently so for the Iraqi Gov. to fear a Kurdish separatist movement. The Kurds have long been a problem to the Iraqi Gov. In the formative years of the Iraqi State the Kurds of Iraq, like other minorities in the E., thought that a new era had dawned for them, but as the years passed it seemed to them that they were neglected and their resentment was enhanced by the apparent repressiveness and corruption of the Iraqi Gov. The most intractable of the Iraqi Kurds, who number 500,000, have been those of the Barzani tribal confederacy, who dwell in the rugged tract S. of the Turkish border. They fomented a rising in 1915, which was only settled by a liberal expenditure of cash from the Iraqi ministry of the interior. Since then Iraqi K. has been quiet. Kurdish discontent in Iraq has never been as acute as in Persia or Turkey, and has usually been due less to the malice or repression of the central gov. than to its inefficiency. That a Kurdish problem exists admits of no real doubt; but it is one of economics and culture, to which political separatism and aims of 'national independence' can in the long run give no answer. It is the problem of transforming backward turbulent communities of primitive agriculturists, semi-nomads, and part-time brigands living under patriarchal tribal rule, into peaceful citizens of a modern state, without destroying local patriotism and cultural traditions which hold them together. Standard written Kurdish has not yet developed sufficiently to be used as a medium of higher education, although Kurdish intellectuals in Bagdad and in Persian K. have already pub. magazines and books in their own language. Area about 71,390 sq. m. Pop. about 2,500,000, 675,000 dwelling in Persia, a number of them being found in the extreme S.E. See J. Cravagh, *Armenians, Kurds, and Turks*, 1840; F. Mithingen, *Wild Life among the Kurds*, 1870; H. F. Lynch, *Armenia*, 1901; A. Jackson, *Persia, Past and Present*, 1906; W. R. Hay, *Two Years in Kurdistan*, 1921; A. Toynbee and K. Kirkwood, *Turkey*, 1926; A. M. Hamilton, *Road through Kurdistan*, 1943; and A. Safranlian, *Kurds and Kurdistan*, 1948; also the writings of Jaha (1860-79), Houssaye (1888), and Chantre (1889, 1896).

Kurgan, tn. on the Siberian Railway, in the Chelyabinsk Region of the R.S.F.S.R. In an agric. dist., it has a flourishing trade in cattle and foodstuffs. Prehistoric burial mounds have been found near by. Pop. 53,200.

Kurhessen, see HESSE-CARSEL.

Kurla Muria, group of rocky is. in the Arabian Sea, which have been in Brit. possession since 1854. They are five in number, and have a total area of 28 sq. m. They are chiefly used as a cable station, but guano is obtained.

Kuriles, or Kuril Islands, Jap. Chishima (Thousand Isles), a group of some thirty is. in the N. Pacific, lying between Kamchatka and Yezo. A continuation of the volcanic mts. of E. Asia, they formed, while in Jap. possession, a prov. of Hokkaido. Chikuratski, Blakiston, Milne, and other peaks abound in forests. The inhab. are Kamchadal and Ainu, and trade chiefly in furs and fish. The chief is. are Kunashiri, Shikotan, Etorofu (once known to Europeans as Staten Is.), Onnekotan, Paramoshiri, and Shumshu. Tomari is the port nearest Japan. The capture of Attu in the Aleutians in 1943 made it possible for Amer. aircraft to attack the Jap. base of Paramoshiri in the K. By the terms of the secret agreement made at Yalta (q.v.) between Russia, America, and Great Britain it was agreed (*inter alia*) that one of the conditions of Russia's entry into the war against Japan should be that the Kurile Is. should be handed over to the Soviet Union (pub. in Cmd. 6735, 1946). Area 6160 sq. m. Pop. 13,000. See H. J. Snow, *Notes on the Kuril Islands*, 1896; S. Bergmann, *Sport and Exploration in the Far East: a Naturalist's Experiences in and around the Kurile Islands*, 1933.

Kurische Haff, or Curisches Haff, bay or backwater of the Baltic Sea in E. Prussia. It extends along the coast S. of Memel for more than 50 m. and is separated from the open sea by the Kurische Nehrung, a narrow sandy ridge. At the N. it opens into the sea by a channel called Memel Deep.

Kurla, tn. of India, Salsette Is., on the E. coast, 8 m. N.E. of Bombay, with which it is connected by the Sion causeway. Its cotton mills, the first to be estab., were once famous. Pop. 15,000.

Kurland, or Courland, formerly a Baltic prov. of Russia, with the gulf of Riga on the N., and the Baltic on the W. The greater part is now included in the Latvian S.S.R., the rest in the Lithuanian S.S.R. (see Baltic Provinces). The surface is generally low, and the coastlands are flat and marshy. The climate is temperate. There are many rivs., but only three are navigable, the Dvina, the Ab, and the Windau. Agriculture is the chief occupation, but manufs. are developing, especially at Yelgava (Mitau) and Liepaja (Libau), where the prin. industries are leather tanning, brewing, and the making of machinery and iron goods, glass, and soap. The prin. crops are rye, barley, oats, wheat, flax, and potatoes, and there are excellent breeds of cattle and sheep. Forests cover nearly 20 per cent. of the ter. Iron and limestone are the chief minerals. There are no ports in the gulf of Riga, and only two good ones on the Baltic coast, Liepaja and Ventspils (Windau). The Ger. Army occupied the country in 1915, and did not evacuate it until the autumn

of 1919. Area about 10,435 sq. m. Pop. 812,300. For the campaigns in K. in the Second World War see *under* EASTERN FRONT OF RUSSO-GERMAN CAMPAIGNS IN SECOND WORLD WAR.

Kuroki, Tamemoto Tamasada, Count (1844-1923), Jap. general, b. in Satsuma. He figured prominently in the later stages of the Chino-Jap. war (1894-95), and was made baron for his services. In the Russo-Jap. war (1904-5) he commanded one of the armies in Manchuria, won the battle that isolated Port Arthur, and was present at Liao-Yang, Chahoe, and Mukden. He was created count for his services in this war.

Kuropatkin, Alexei Nikolaievich (1848-1925), Russian general, b. at Chemchurin, Pskov, entered the army in 1864, and distinguished himself in the Kashgar campaign. In the Russo-Turkish war of 1877-1878 he was chief-of-staff to the younger Skobelev and laid the foundation of his great reputation as a soldier. After the death of Skobelev in 1882 he reorganised the Russian Army. He was commander-in-chief in Caucasus in 1897, and minister of war in 1898. On the outbreak of the Russo-Jap. war (1904-5) he was appointed to the chief command in Manchuria, but met with a series of reverses culminating in the disastrous battle of Mukden. His failure may have been partly due to not having an entirely free hand. After Mukden, he resigned in favour of Gen. Linievich. He wrote a hist. of the war, in which he candidly admitted his own mistakes. He had previously pub. works on the Balkan and central Asian wars. In the First World War he was commander-in-chief on the N. front until his appointment as governor of Turkestan in 1916. After the revolution he sank into obscurity.

Kurrahee, see KARACHI.

Kursaal, see CASINO.

Kursk: 1. Region of the R.S.F.S.R., lying in the basins of the Dnieper and the Don. There are hills of limestone and sandstone in the E., and iron deposits are being worked, but the rest is chiefly flat plains of fertile arable land (black earth), watered by numerous small streams. Hides, bristles, grain, and hemp are produced, also some beetroot and tobacco. There are fine orchards, and the honey and cattle of K. are noted. The region first came under Russian rule about 884; it was part of Russian or Muscovite Ukraine from the fourteenth to the eighteenth century. Formerly a poor prov., with a high percentage of illiteracy, brought about by famines and internal upheaval. In the Second World War the Gers. launched a very strong offensive against the K. area (July 5, 1943); but the Russians repelled by capturing Orsk (Aug. 4), and eliminating the Kursk-Orsk bulge. (See *under* EASTERN FRONT or RUSSO-GERMAN CAMPAIGNS IN SECOND WORLD WAR.) Area about 17,937 sq. m. Pop. 3,196,900. 2. Cap. of above, on R. Kur and the Moscow-Sebastopol railway. There are manuf. of candles, soap, spirits, tobacco; flour mills, tanneries, and distilleries. The Korennaya fair is held here about Easter. There are two monasteries,

a cathedral, and an observatory. K. was pillaged by Tartars (1240), and suffered from riots subsequent to the Russo-Jap. war (1905). The scene of heavy fighting against the Gers. in 1941-42. A Ger. attack between Orsk and Kharkov, both then in Ger. hands, brought the Gers. to K. on Nov. 3, 1941. Ger. armoured divs. then broke through the Russian front between K. and Tula, and drove a wide bulge far to the E., despite strong Russian counter-attacks, and the severity of the Russian winter K. remained in Ger. hands for some time, and at the end of June 1942, they struck the first blow in a new major offensive from the direction of K. K. was eventually retaken a year later. Pop. 120,000.

Kuruman, missionary station in Bechuanaland, S. Africa, at the source of the K. R., 120 m. N.W. of Kimberley. Irrigation by boreholes is being carried out in the dist. Pop. about 5000.

Kurume, tn. of Kyushu, Japan, 50 m. N.E. of Nagasaki. Pop. 80,000.

Kurunegala, chief tn. in the W. prov. of Ceylon, was the seat of a royal residence in the fourteenth century; it is 59 m. from Colombo, and has crops of rice, tobacco, tea, coffee, cocoa, etc. Near by are some famous Buddhist monasteries. Pop. about 5500.

Kus, see RHODAS.

Kushiro, tn. on the S.E. coast of Yezo, Japan, cap. of K. prov. It is the nearest port to the sulphur mines of Yezo. Pop. 53,400.

Kusi, Kosi, or Koosoe, riv. of India, which rises in the Himalayas of Nepal, flows S., and finally enters the Ganges. It has a length of 325 m.

Kussnacht, com. of Switzerland, 7 m. E.N.E. of Lucerne, at the N. end of Lake Lucerne. Here it was that Wm. Tell escaped from Gessler. Pop. 3600.

Kustanal, tn. on the Tobol R. in the Karakh S.S.R., in the region of the same name. There are tanneries and potteries, and tallow is manufactured. It contains a cathedral. Pop. 35,200.

Küstendil, or Kiustendil, dist. and tn. of Bulgaria, and cap. of the prov. of K. on a trib. of the R. Struma, 43 m. S.W. of Sofia. It is the seat of a Uk. metropolitan, and is noted for its hot mineral springs and fruit production. Pop. (dist.) 243,000; (tn.) 10,200.

Kustendje, see TOMI.

Kustenil, see CONSTANTIA.

Küstenland (coast-land), former prov. of Austria-Hungary at the head of the Adriatic, which embraced Istria, Trieste, Gorz, and Gradiska. Area 3078 sq. m.; pop. 938,000. Is divided between Italy and Yugoslavia.

Küstrin, tn. and fortress at the confluence of the Oder and Warthe, about 51 m. N.E. of Berlin by rail. The old tn. was within the strong fortifications of the circle of Königsberg in der Neumark, in the dist. of Frankfurt, Prussia, while its suburbs were on the l. b. of the Oder and the r. b. of the Warthe. About 1250 a tn. was erected on the site of K., where a fishing vil. once stood. From 1535 till 1571 it was the residence of the margrave

of Brandenburg-Küstrin. K. was the prison of Frederick the Great, and the scene of the execution of his friend, Katte. K. has some minor manufs. and a riv. shipping trade. It was the scene of heavy fighting in the Second World War in the course of the advance of Marshal Zhukov's forces on Berlin. Pop. 30,000. *See further under EASTERN FRONT, or RUSSO-GERMAN CAMPAIGNS IN SECOND WORLD WAR.*

Kusura, anct. tn. of Turkey, near Afyan Karahisar, with remains of a cemetery, and a mound which was the site of the tn., lying in the lines of communication between the uplands around Ankara, and the Meander valley and fertile S.W. plain. K. was first occupied in the Chalcolithic Age about the close of the fourth millennium. There was a second period in the third millennium, the gradual introduction of wheel-made pottery marking the transition to a third period. The latter shows evidence of a connection with central Anatolia and the Hittite interior, and some suggestions that the tn. survived, though not for long, after the beginning of the Iron Age. The pottery of the second period strikingly resembles that found in S.W. Asia Minor.

Kutalah, Kutaya, or Kutahya, anct. Cotæum, tn. of Asiatic Turkey, in the vilayet of the same name. There are sev. Christian churches, and a large anct. fortress. Carpets and pottery are made, and meerschaum is found near by. Pop. 92,000; (vilayet) 384,300.

Kutais: 1. Area of the Georgian S.S.R., E. of the Black Sea. It has a very varied surface consisting of lowlands along the shore of the Black Sea, and mts. in the N. and S. It has a moist, warm climate, and the land is well cultivated. Indian corn and wheat are the chief crops, but vineyards cover a large area, and there are also cotton plantations. The bee and silkworm are cultivated, and the prov. contains some extensive forests, and exports timber. The chief mineral is manganese ore, which is largely exported, but copper, silver, coal, zinc, and naphtha are also found. Area 3502 sq. m. Pop. 300,000. 2. Tn. in the above area on the R. Rion. It is a very old tn., and is said to have existed in 1200 B.C. It contains the ruins of an eleventh-century cathedral, and has a good botanical garden. Near the tn. is an important power station which utilizes the waters of the R. Rion to produce electricity for the Poti-Thbilisi railway. Silk spinning and weaving is carried on at K. and its recently estab. chemical industry concentrates on nitrogeous fertilisers. Pop. 81,400.

Kut al Amara, tn. in the liwa or prov. of Kut in Iraq, situated on the Tigris, 32° N. lat., 47° E. long., some 200 m. below Bagdad. Pop. (tn.) 14,000; prov. 180,100. It was the scene of the only protracted siege (except that of Przemyśl) in the First World War. In this historic siege a Brit. force, reduced during the siege from 15,000 to less than 7,000, under the command of Maj.-Gen. Sir Charles Townshend, surrendered to the Turks on April 29, 1916, after holding out for 143 days. Townshend's troops formed part

of a small Brit. expeditionary force commanded by Gen. Sir John Nixon, which had rashly proceeded some 200 m. up-country in the hope of achieving some spectacular success to counteract the Gallipoli failure. K. was occupied by Brit. forces on Sept. 29, 1915, and Townshend was then ordered by Nixon to march on Bagdad. He attacked Ctesiphon (q.v.) on Nov. 22 but was heavily defeated with the loss of over 4,000 men of his div., and then fell back on Kut, which place the Turks at once surrounded and invested. Reinforcements were ordered from India, and Russian forces pressed along the Hamadan road through Persia to his relief. Gen. von der Goltz, in control of the besieging army, redoubled his exertions, while a Brit. relief force, which made great efforts to pierce the powerful Turkish line at Sanna-1-yat, 16 m. E. of K., was repulsed. By April 1916 Townshend's force was in dire straits, only scanty food supplies reaching him by aeroplane, while by now the full weight of the Turkish Gallipoli armies was being used against Mesopotamia and Armenia. The fall of K. enabled the Turks to concentrate practically their whole strength against the Russians in Armenia, besides involving repercussions throughout the Middle E., damaging to Brit. prestige. The sequel to the surrender forms a tragic *Odyssey* in Brit. military annals. Of 2680 Brit. non-commissioned officers and privates taken at K., 1306 d. and 149 were never traced, so that over 65 per cent of them perished. The fate of the Indian soldiers was no better, and all the prisoners were forced by the Turks to make their way as best they could across the Syrian desert, in the course of which the whole of them perished (consult Cmd. 9208). K. was again in Brit. possession in 1917 when it was captured by Sir Stanley Maude, together with 1730 prisoners, including four Ger. regimental commanders. The responsibility for the K. capitulation is not easy to assign, the popular press for long spoke of Townshend as the hero of K., but in official circles he was strongly criticised. His force, however, was quite inadequate to the task laid upon it by higher authority, being indeed less than one-fifth the size of that of Gen. Maude. *See C. W. S. Sanders, In Kut in Captivity, 1919; Sir C. Townshend, My Campaign in Mesopotamia, 1920; Sir A. Wilson, Loyalties: Mesopotamia, 1914-1917, 1931.*

Kutanu, *see* KOTANU.

Kutch, *see* CUTC H.

Kutenai Language, *see under* NORTH AMERICAN NATIVE LANGUAGES, *Pacific Area.*

Kutná Hora (Ger. **Kuttenberg**), mining tn. in Czechoslovakia, 40 m. E.S.E. of Prague. Tobacco, sugar, and cotton are produced; and the tn. contains a thirteenth-century royal castle. Pop. 13,900.

Kutno, manufacturing tn. of Poland, 83 m. W. of Warsaw. It has breweries and distilleries and beet sugar is made. Pop. 12,000.

Kuttenberg, *see* KUTNÁ HORA.

Kutusov, or Kutuzov, Mikhail Ilarionovich (1745-1813), Russian field-marshal, joined the army at the age of sixteen, fought against the Turks in 1770, again in the war of 1788-92, and gained especial distinction at Shumla, Ochakov, and Ismail. Tolstoy refers to him as 'the genius of Russia,' because during Napoleon's disastrous campaign of 1812 he proved so admirable a generalissimo of the native forces, offering a most stubborn resistance to the emperor at Borodino and inflicting a crushing defeat on Ney and Davout at Smolensk. His part in the downfall of Napoleon is dramatically portrayed in Hardy's *The Dynasts*, and he is pictured in Tolstoy's *War and Peace*.

Kuurne, tn. in W. Flanders, Belgium, situated on the R. Lys, 2 m. N. of Courtrai, engaged in agriculture, cultivation, and retting of flax and manuf. of lace. Pop. 8300.

Kuwait, or Kuweit, see **KOWHIT**.

Kuwana, tn. of Iwodo, Japan, 55 m. E. of Kyoto. Pop. 21,000.

Kuyper, or Kuiper, Abraham (1837-1920), Dutch theologian and politician. He violently opposed 'modernism' and defended Calvinism. He was elected to Parliament (1874-77). K. founded the Free Univ. of Amsterdam (1880) and Reformed Free Churches (1886). After bringing about the alliance between orthodox Protestants and the Rom. Catholic party, he became Prime Minister (1901-5). His works include the editing of the *Encyclopædia Sacra Theologia*, (1898-1901); and of *Joannis à Lasco Opera* (1898); *Lectures on Calvinism* (1898); *The Incarnation*; *Socialism and Christianity*; and *The South African Crisis*.

Kuznetsk, name of an important coal basin of W. Siberia lying between the two ranges which branch off from the highland mass in the N. Altai—the Kuznetsk Alai Tau and the Salayer range. The coal-field is to the S.E. of the large tn. of Novosibirsk and is served by two branches of the Trans-Siberian railway. The seams of these great coal deposits were almost untouched in tsarist Russia, but to-day they supply fuel to the great industrial centres of the Ural-Kuznetsk Combine. The ann. output of this combine is of the order of 20,000,000 tons. The tn. of K. was but a vil. in the eighteenth century, peopled by smiths, whence its name. Towards the latter part of the nineteenth century it had a pop. of 15,000 and was engaged in the manuf. of agric. implements and in the manuf. of leather. To-day it is a tn. of 170,000 inhab. and is the chief centre of the Siberian steel industry. It has been renamed Stalinsk. See further under **STALINSK** and **LENINSK-KUZNETSK**.

Kuala-Lumpur, see **KUALA LUMPUR**.

Kwangchowan, Fr. ter., coaling station and free port situated on a bay of great importance in the Luchow Peninsula, S. China. It was leased to France in 1898-1899. Fort Bayard is the cap. Area 190 sq. m. Pop. 206,300.

Kwangchowfu, Chinese name for Canton, the port and cap. See **CANTON**.

Kwang-hsu (1875-1908), emperor of

China, b. in 1871. Although he was nominally the ruler, the Empress Tze-hsi really had the power, and constituted herself regent, after having succeeded in putting him on the throne. In 1898, although she had retired from power, she compelled him to issue an edict again making her regent, and this influence she exercised until the end of his reign.

Kwangsi, inland prov. of China, bounded on the N. by Kweichow, and on the S. by Kwantung. It is almost entirely in the basin of the Sikiang, the main stream of which traverses the centre of the prov. from W. to E. The surface is mountainous, and valuable timber is obtained, and cinnamon of excellent quality. Silver is the only mineral worked with advantage, but gold, copper, lead, tin, and coal are all found, the latter especially in the country round Pao-se. The chief articles of commerce are timber, indigo, sugar, and tea. Nanning on the West R. is the present cap. (the old cap. was Kweilin). Area 85,400 sq. m. Pop. 11,603,000.

The prov. was invaded and occupied by the Jap. in 1939-40. On Jan. 31 (1940) the Jap. opened an offensive from Nanning to the N.E. and N.W. and took Pinyang, 25 m. N.E. of Nanning. A Chinese counter-offensive was launched on Feb. 12 and after hard fighting, with heavy casualties on both sides, the Jap. evacuated Nanning (March 18). See further under **CHINA, HISTORY**. (See illustration, p. 220.)

Kwangtung, maritime prov. of S.E. China, bounded S. and E. by the China Sea. It includes Hainan Is. The chief riv., Chukiang, or Pearl R., is formed of three branches, Sikiang (the largest), Pekiang, and Tungkiang. There are great facilities for internal navigation and coasting trade. Kwangchow is the cap. Its ports include Pakhoi and Samshui. Fruits, grains, vegetables, tea, copper, mercury, coal and other minerals, indigo, cassia, and betel are produced, and silk, embroidery, and lacquered wares manufactured. There are fishing and salt industries. Area, 85,120 sq. m.; pop. 27,826,000. K. was occupied together with much other Chinese ter. by the Jap. in 1937, but in 1945 the prov. reverted to China.

Kwang-yen, cap. of a prov. of the same name, Fr. Indo-China, on the Song-koi delta, 60 m. E. of Hanoi. It is accessible at all times to very large vessels, and lies in a rich coal area. Pop. 40,000.

Kwantung, ter. of S. Manchuria at the S. end of the Liaotung Peninsula, leased by China to Japan before the Second World War. It is generally described in statistical works on the Jap. empire as K. Prov. It has an area of 1438 sq. m. and a total pop. (i.e. including the S. Manchuria railway zone) of 656,700. There are valuable agric. and fishing industries, and salt is mined. The cap. is Dairen; Port Arthur is also important.

Kwanza, see **COANZA**.

Kwara, see **NIGER**.

Kweichow, interior prov. of China, bounded on the S. by Kwangsi and on the

N. by Szechuen. The surface is on the whole mountainous, and the chief riv. is the Yangtsékiang, with its trib. the Wu. The climate is unhealthy, stagnant waters and marshes being the cause of frequent outbreaks of fever. Wheat and maize are the prin. crops, with tea, opium, and tobacco, but the agric. products of the prov. are limited, its chief wealth lying in its minerals. Iron is extracted in the valley of the Wu, which is also rich in coal, and copper is obtained in the vicinity of Kanchui. There is also a considerable amount of mercury, which was formerly

as andalusite, that crystallises in thin, blue or white anorthic blades showing perfect cleavage. Lustre vitreous; birefringence strong; fracture rather fibrous. It is remarkable in exhibiting varying degrees of hardness in different directions—the lowest being $4\frac{1}{2}$ and the highest 7 on Mohs's scale. K. is insoluble in acids. When heated to a high temp., it is converted into a mass of sillimanite fibres. Perfect, well-coloured specimens are sometimes cut for use in jewellery. The mineral is a frequent product of the thermal metamorphism of arenaceous

E. N. A

THE KWEI RIVER, KWANGSI

A group of limestone peaks which lie between Kweihwa and Yangso.

a prin. article of commerce, and gold, silver, tin, and lead exist. The prov. is also noted for its horses. Kweiyangfu is the cap. Area 68,122 sq. m. Pop. 10,519,000, 75 per cent being aboriginal tribes.

Kweihwa, *see* KURIHWA CH'ENG.

Kweiyangfu, tn. of Chihua, cap. of the prov. Kweichow, lies near a coal dist., and from its position is of great importance commercially. Pop. 100,000.

Kwen Lun, *see* KUN LUN.

Kwidzyn (Ger. Marienwerder) tn. in Poland, near the Vistula, 45 m. S.S.E. of Danzig (Gdansk). It possesses an old cathedral. It was founded in 1233 by the Teutonic Order of Knights. It gave its name to the plebiscite ter. which reverted to Germany by vote, July 1920. Before the Second World War it had sugar refineries and manufs. *See* K. H. Glaser, *Marienburg und Marienwerder*, 1931.

Kyanite (Cyanite, or Disthene) (Al_2O_3 , SiO_2), mineral having the same formula

rocks. Notable localities: St. Gothard, Tyrol.

Kyaukpyu, seaport of Arakan, Lower Burma, is at the N. end of Ramri Is. It is the chief tn. of the dist. of the same name, and has a small trade with Calcutta and Rangoon. The harbour extends for many miles, but is rendered dangerous by numerous sunken rocks. Pop. 3300.

Kyaukse, the northernmost dist. of the Meiktila div., Upper Burma, is irrigated by numerous rivers and canals, and the chief produce is rice. K. tn. the headquarters of the dist., is on the r. b. of the Zawgyi R. Pop. of dist. 141,000; of tn. 5900.

Kyd, or Kid, Thomas (1558-94), Eng. Elizabethan dramatist, one of the most important before Shakespeare. Hawkins aroused interest in his name (c. 1773) in connection with *The Spanish Tragedy* (1584-89, printed 1594), dealing with the story of Hieronimo. This play and others

of his enjoyed popularity on into Stuart times. The *Ur Hamlet* (original draft of the tragedy of the prince of Denmark) was probably a lost play by K. (1587). He was friendly with Marlowe, and was arrested with him for 'blasphemies' and imprisoned until after Marlowe's death, when his patron forsook him and he d. in poverty. It may be said that *The Spanish Tragedy* was long the best-known play in Europe and was played as a stock piece in Holland and Germany until the eighteenth century. It estab. a type of play aptly described as 'the tragedy of blood,' to which *Titus Andronicus* belongs, while *Hamlet* itself was based upon an earlier horror-play of the same genre, said to have been written by K. See R. Greene, *Menaiphon*, 1589 (Nash's pref.); Sir A. Ward, *History of English Dramatic Literature*, II, 1881; G. Sarrazin in *Anglia*, Thomas Kyd and sein Kreis, 1892; J. Manly, (ed.) *Specimens of Pre-Shakespearean Drama*, II, 1897; E. S. Jones, *Collected Works and Life*, 1901; G. Sarrazin and R. Koepfel, *Englische Studien* (N.Y. pt. II, xvi, pt. III), 1901; R. S. Forsyth, *Notes on the Spanish Tragedy*, 1926; H. Baker, *Ghosts and Guides*, 1931. There is a bibliography by S. A. Tannenbaum, 1941.

Kyendwin, see CHINDWIN.

Kyffhauser, name of a double line of hills in Thuringia, to the S. of the E. extremity of the Golden Aue, between Keula, and Frankenhäusen. The N. portion lies in the valley of the Golden Aue. The S. crest is surmounted by the ruins of a castle, where Frederick Barbarossa was supposed to be asleep ready to reappear when the old Ger. empire was restored to its ant. glory. Here also was a residence of the Hohenstaufen imperial family, which was destroyed in the sixteenth century. An equestrian statue to the Emperor William I. was erected in 1896. See F. Brather, *Die Kyffhäuser und seine Umgebung*, 1925.

Kyle, middle dist. of Ayrshire, between the R. Irvine and the R. Doon. It was in this dist. that Robert Burns was b.

Kyles of Bute, straits between the Argyllshire coast and the is. of Bute, noted for their beautiful scenery. They are 16 m. long.

Kyōsai, Shō-fu (1831-89), Jap. artist became famous during the great revolution of 1867 for his political caricatures. On more than one occasion these brilliant drawings led to his imprisonment by the party whose susceptibilities he had offended. K. illustrated many books, including *Yehon Taka-kagami* (1870), and *Kyōsai Gudōn* (1887).

Kyoto, or Kioto, important city of Japan, 329 m. from Tokyo. It was founded in 793, and was from that time until the revolution of 1868 the cap. of the Jap. empire. Consequently it contains many interesting buildings, among which are the mikado's palace, a large mass of buildings covering an area of 26 ac.; the Dōshisha, a Christian univ. under the auspices of the Amer. Board Mission; the imperial univ., founded in 1897; the Kitano Tenjin, a temple dedicated to Tenjin Sama, which contains the thirty-six guild of poetry (the usual adornment of Shinto temples); and the San-in-san-zen-do, the temple of the 33,333 images of Kwanon, the goddess of mercy, founded in 1132, the grounds of which contain the Daihatsu, or Great Buddha, and a fine art museum. Bleaching and dyeing are successfully carried on, for K. abounds in clear water, and the city is noted for its manufs. of silk, brocades, embroidery, velvet, porcelain, bronze, and other artistic products. The city was heavily bombed in 1915. See further under PACIFIC CAMPAIGNS. IN SECOND WORLD WAR. Pop. 1,089,700.

Kyrie eleison, form in which the Gk. words *kyrie eleison* usually occur in the Lat. service-books of the W. The occurrence is frequent in the Lat. books, notably in the Ordinary of the Mass, but much more frequent in the E. Church services. The trans., 'Lord have mercy upon us,' occurs in the Eng. Prayer Book at matins and evensong. It also occurs in an expanded form after each of the commandments at the beginning of the communion service.

Kyrie, John (1637-1721), eulogised as 'the Man of Ross' by Pope in his third *Moral Epistle*; received this cognomen from the tn. in Herefordshire in which he passed most of his days. Here he devoted himself to the improvement of the tn. and its social conditions. He also attempted to bring about a moral improvement by diffusing a spirit of charity everywhere. The K. Society was formed in memory of his work in 1877.

Kyshtym, tn. in the Sverdlovsk Region of the R.S.F.S.R., on the Siberian railway, 55 m. N.N.W. of Chelyabinsk. 'Upper' and 'Lower' K. are copper-mining settlements 2 m. apart on the K. riv. K. is also the centre of a gold-mining dist. and has ironworks. Pop. 15,000.

Kythai, see KATHAL.

Kzyl-Orda, Region of the Kazakh, S.S.R. On the Syr-Darya it has been built a large dam and hydro-electric station. Irrigation for 100,000 ac. of rice plantations will be provided; the irrigated area of the region will subsequently be increased to 375,000 ac.

L, the twelfth letter of the Eug. alphabet, is called 'liquid.' The *l*-sound may be made either on the teeth or behind them; it is produced by a lateral emission of the breath, while the tip of the tongue is brought into contact with the front of the palate. In Eug. it is always voiced, but it is quite possible to expel the breath from the same tongue position without vibrating your vocal cords. If this is done there results what is known as a 'voiceless *l*,' which exists in Welsh (written *ll*). The original N. Semitic *lamed* was written *l*, while the Gk. *lambda* was inverted thus: *λ*, *λ*, *λ*, developing to *Λ*. The Etruscan *l* was written *λ* (like the Semitic *lamed*), which developed in Lat. to its present form *l*. O.E. initial *hl*, *wl* is represented in N.E. by *l*, e.g. O.E. *hlant*, *hlac*; N.E. *laughter*, *lake-warm*. *l* medially before a consonant, pronounced in O.E. has frequently become silent, after having modified the preceding vowel, and in some cases has been dropped, e.g. O.E. *wolde*, *swile*, *healf*; N.E. *would*, *such*, *half*. In Scotland, the *l* is sometimes retained, though lost in N.E., e.g. O.E. *felc*, N.E. *each*, Scottish *ilka*. In Scotland, too, final *l* is often dropped, as in *a'*, *aus'*, for *all*, *awful*.

L, as a symbol, often written *℥*, denotes pound, from Lat. *librum*; in Rom. figures it equals fifty, and in chem. *La*, *Li*, and *Lu* are the symbols for one atom of *lanthanum*, *lithium*, and *lutecium* respectively.

Laager (Dutch *leger*, Ger. *Lager*), temporary camp in S. African campaigning, formed by a ring of ox-wagons set close together. First adopted by the Dutch pioneers in 'trekking.' Later used to describe the defensive system for the night encampment of armoured forces in N. Africa in the Second World War.

Laaland, or Lolland (low land), Dan. is, to the S. of Sjælland at the S. entrance to the Great Belt, with an area of about 150 sq. m. It is difficult of access by reason of the surrounding shallows. The surface is very flat and the soil fertile. Cap. Maribo. Produces corn, hops, apples, sugar, hemp, etc. Pop. 87,100.

Laar, or Laer, Pieter van, see BAMBROCCIO, PETER DE LAERNE.

Labadie, Jean de (1610-74), Fr. mystic and Protestant reformer, b. at Bourgn-Genne. He was originally a Jesuit, but joined the Reformed Church in 1650. He became pastor at Middelburg in 1666, but was soon compelled to resign on account of the singularity of his views. His doctrine received the name of Labadism, and he founded a sect known as the Labadists, which disappeared about the middle of the eighteenth century. Among his works are *L'Empire du Saint-Esprit* and *Le Héraut du Grand Jésus*.

Labarum, name applied to the sacred military standard of the early Christian Rom. emperors. Constantine the Great was the first to use it, to commemorate his miraculous vision in 312. It had the form of a long gilded spear or staff, with a bar crossed at the top, from which hung a square purple cloth, richly jewelled.

On the point of the spear was the sacred monogram formed of the first two letters of the name of Christ, encircled by a golden border. The cross was substituted for the Rom. eagle.

La Bassee, see BASSÉE, LA

Labé, Louise (1526-66), celebrated Fr. poetess, surnamed La Belle Cordière, b. at Lyons.

From an early age she had a love of adventure, and is said to have followed the Fr. Army in Roussillon, being known as Capt. Loys. On her return from soldiering she married a wealthy rope-maker, and gathered around her all the distinguished and literary society of Lyons.

She wrote some of the finest love poems in the Fr. language, and is the most famous Fr. female poet of the sixteenth century. Her poetical works were pub. in 1553, and she also wrote a prose work entitled *Débat de la folie et de l'amour*. See G. Boy *Recherches sur la vie et les œuvres de Louise Labé*, 1887, and study by Dorothy O'Connor, 1926.

Label, or Lambel (Fr. *lambeau*), mark of cadency in heraldry, indicating the eldest son of a family. It is a fillet from which hang three pendants, formerly placed at the top of the shield but now borne rather lower. The sons and daughters of the royal house of England bear their arms differenced by a *l.* of three points argent. The *l.* of the eldest son, the Prince of Wales, is plain, that of the younger princes variously charged. In Scotland differencing is more varied, and the

LABARUM

modern marks of cadency are less in use.

Labeo, Marcus Antistius (c. 50 B.C.-A.D. 18), famous Rom. jurist, whose father figured in the conspiracy against Julius Caesar, and after the battle of Philippi committed suicide. Entered public life at an early age as a member of the plebeian nobility, and before long rose to the praetorship. He was an ardent republican, and for that reason failed to find favour with Augustus, who did not promote him to the consulate in the year he should have held office. It is probable that the *Labeo* is inscribed of Horace was levelled against the jurist in order to please the emperor. L. devoted nearly all his time to the study of jurisprudence and is said to have written over 400 books. His most important literary work was the *Libri Posteriorum*. See van Eck, *De vita, moribus, et studiis M. Ant. Labeonis*, 1692.

Laberius, Decimus (c. 105-13 B.C.), Rom. knight, famed for his mimes or burlesque dramas; the chief of those who introduced the mimes into Lat. literature, and a man of learning and culture. At the command of Julius Caesar he appeared, in 45 B.C., in one of his own mimes in a public contest with the actor, Publius Syrus, and was courageous enough to point his satire against Caesar, who awarded the victory to Publius. Only fragments of his writings remain. See O. Ribbeck *Comicorum Latinorum reliquiae*, 1873.

Labiateæ, name given to an important order or family of dicotyledonous plants, consisting of about 3000 species which thrive in all parts of the world. The species are herbaceous or shrubby, the majority are land plants, but a few are found in marshes; they are characterised by their square stems and opposite decussate leaves as well as by the flower. Many are aromatic. The inflorescence is a verticillaster of bilabiate ringent flowers; the sepals and petals are each five in number and united, there are four didynamous and epipetalous stamens; the superior ovary consists of two united carpels and is quadrilocular; the fruit is a caecum. Some of the chief genera are *Lamium*, e.g. dead-nettle; *Salvia*, e.g. sage; *Mentha*, e.g. thyme.

Labiche, Eugène Marin (1815-88), Fr. dramatist. In 1835 he pub. a novel entitled *La Cef des champs*, and in the same year he made a double venture on the stage with a drama, *L'Avocat Louhet*, and a vaudeville, *Monsieur de Coislun ou l'homme infinitement poli*, both of which found popular favour. In 1851 appeared his farce, *Le Chapeau de paille d'Italie*, a fine specimen of Fr. burlesque, followed by *Embrassons-nous, Folleville* (1857); *Le Voyage de M. Perrichon* (1860); *La Cigale chez les journaux* (1876); and sev. others. See preface to the *Théâtre complet* (1878) by Emile Augier.

Labienus, Titus Atius, Rom. general, tribune of the plebs, 63 B.C. Under the consulate of Cicero he distinguished himself as Caesar's legate in the Gallic war, twice defeating the Treviri (54 B.C.), and taking part in the campaign against Verdingetorix. At the outbreak of the civil

war he sided with Pompey (49 B.C.) and displayed great cruelty in his treatment of Caesar's soldiers. He went to Africa after the defeat of Pharsalia, and finally fought against Caesar at Munda in Spain, where his troops were routed and he was killed.

Lablache, Luigi (1794-1858), Franco-It. operatic singer, b. at Naples, where he studied at the Conservatorium under Gentili and Valesi. At the age of twenty he had developed a magnificent bass voice, and made his first appearance at Naples in Floravanti's opera, *La Molinara*. In

LUIGI LABLACHE

1830 he appeared in London and Paris, meeting with great success and being engaged to appear annually in both these cities. He taught Queen Victoria singing for a time. On the operatic stage he was equally successful in tragic and comic parts, among his prin. roles being Leporello in *Don Giovanni* and Coliban in *Il Tempest*, though Don Bartolo in *Il Barbiere* is considered his best creation.

La Bostie, Etienne de (1530-63), Fr. writer, b. at Sarlat, Dordogne, France, and friend of Montaigne. His *Discours de la servitude volontaire*, or *Contr'un* (1548), a youthful criticism of tyrants, was written under the influence of revolutionary ideas which were current in the early part of the sixteenth century. In his *Requies*, Montaigne after La B.'s death tried to protect the memory of his friend as a model and peace-loving citizen, but even he implies that La B. was at heart a republican: 'oust mieux aymé estre nay à Venise qu'à Sarlat.'

Labor, Department of (U.S.A.), was created as a separate executive dept. by Act of Congress, March 4, 1913. It has jurisdiction over matters pertaining to

promoting the welfare of wage earners, improving their working conditions, and advancing their opportunities for profitable employment. It also directs investigation of matters pertaining to child welfare. The prin. bureaux and divisions of the dept. are Bureau of Labor Statistics, which collects statistics on all matters pertaining to labour, earnings, hours of labour, and moral welfare of wage earners; Children's Bureau, which investigates and reports on child life and welfare, including infantile mortality, juvenile courts, employment, etc., and administers the child-welfare services under the Social Security Act of 1935 and the provisions of the Fair Labor Standards Act of 1938 relating to child labour; Div. of Labor Standards, which develops labour standards in industrial practice, labour law, and labour legislation; Public Contracts Div., which administers the Walsh-Healey Act requiring gov. supply contracts to contain maximum hour, minimum wage, child labour, safety and health stipulations; United States Conciliation Service, which deals with industrial controversies; Wage and Hour Div., which enforces the wage and hour provisions of the Fair Labor Standards Act of 1938. Its duty is to see that employers engaged in interstate commerce or producing goods for interstate commerce conform to the wage and hour standards; and Women's Bureau, which is charged with formulating standards and policies for promoting the welfare of wage-earning women, increasing their efficiency, improving their working conditions, and advancing their opportunities for profitable employment.

Laborde, Henri François de, see DE LABORDE.

Labori, Fernand Gustave Gaston (1860-1917). Fr. advocate, b. at Rheims, where he was educated. Subsequently he spent two years in Germany and England. He was called to the Bar in 1884 and won celebrity in many famous cases, notably in his defence of Zola, accused of libelling the Fr. executive and army; in the Dreyfus appeal; and in the Humbert case (1903). He pub. the *Répertoire encyclopédique du droit français*, and was editor-in-chief of the *grande Revue*.

Labouchère, Henry Dupré (1831-1912). Eng. journalist and politician. Educated at Eton, he entered the diplomatic service in 1854, being attached to the embassies of St. Petersburg and Dresden. In 1864 he entered Parliament on the Liberal side, being one of Gladstone's most faithful supporters, and from 1867 to 1868 represented Middlesex; he was a member for Northampton from 1880 to 1905, when he retired. He was editor and proprietor of *Truth*, a society paper, founded in 1870, successful in the exposure of scandals of various natures. Also part proprietor of the *Daily News*, he contributed a series of letters to that paper during the siege of Paris in the Franco-Ger. war, as 'A Besieged Resident.' In 1896 was a member of the Jameson Raid Commission. See lives by A. L. Thorold, 1913, and E. Jerningham, 1913; also H. Pearson, *Labby*, new ed., 1946.

Labour. In the language of political economy L. is one of the two requisites of production, the other being, in Mill's words, 'appropriate natural objects.' In short, L. is the motive power of man upon the objects of the physical world, for, as Mill points out, all the L. of the world could not produce one particle of matter, e.g. to weave broadcloth is but to rearrange in a peculiar manner the particles of wool. In the space of a brief article it is impossible to expatiate on Jevons's thesis of the 'period of production' (as to which see It. G. Hawtrey's *Capital and Employment*, 1937), but it may here be noted that implicit in this thesis is the consequence that 'land and labour' or, more comprehensively, human effort and natural resources are the only original factors of production. L. is said to be either productive or unproductive. By the latter is meant that L. which does not augment the material wealth of the community. The former is further subdivided into directly and indirectly productive L., the former category comprising all that manual work which is especially employed on material processes, the latter 'nervous' or mental work. In common parlance the term appears to have become exclusively appropriated to manual work, a limitation of meaning which, taken with the fact that the Socialist schools of thought ordinarily use the term worker as a synonym for manual worker, has not only resulted in bringing into sharp political juxtaposition those who work with their hands and those who do not, but has also fostered a very general sympathy with the former on the ground that though they are the actual physical producers of utilities, they enjoy the minimum share of the profits accruing therefrom. The orthodox economist regards unproductive L. as L. that not only does not render the community richer in material products, but poorer by all that is consumed by the labourers while so employed; but, as Mill points out, unproductive L. may well be as useful as productive, or more so, even in point of permanent advantage, for not all utility can be measured by material embodiment. Economically the most striking feature of L. is the fact that as society progresses it becomes increasingly divided, a fact which really renders the actual operation of a worker on a single process a less valuable factor in the final result (see also DIVISION OF LABOUR). Co-operation of L. is, in the view of many economists, a still more effective agent in increasing the efficiency of L. than that of the div. of L. There are two kinds of co-operations of L.: (a) simple co-operation, or that which takes place when sev. persons assist each other in the same employment, and (b) complex co-operation, when they assist each other in different employments, e.g. one set of persons may sow cotton-seed, another set pack it, and other sets manuf. it into cloth. Karl Marx pointed out the dual nature of the L. of a community, the concrete L. which creates 'use-values' and counts qualitatively, being work, while the abstract L. which creates value and

counts quantitatively is L. This formula leads to his analysis of the 'errors' of the orthodox economists and his fundamental axiom that the economic structure of society is, and has always been, the basis upon which everything else rests.

As regards technological progress in relation to L., it is to be noted that, for any product, as cost declines and output is increased, demand must eventually become inelastic, and cost-saving inventions tend ultimately to displace L. Only if the new process offers such attractive prospects of gain that it invites speculative borrowing and supplements the resources of the investment market with a creation of credit, will additional employment be given. The adaptability of L. to new occupations and its willingness to move into them depend on circumstances. But experience in wartime shows that an enormous amount of skilled and semi-skilled L. is rapidly made available for the purposes of war industries; and even under more normal conditions every new industry and in great part any rapidly expanding industry must be supplied with L. by transfer from other industries. On the relation of the monetary factor to the demand for L., see A. C. Pigou, *Theory of Unemployment*, 1933.

Labour, or Farm, Colonies existed, mainly on the Continent, for the purpose of reforming or punishing vagrants. The more important L. C. on the Continent were those in Holland, Belgium, Germany, and Switzerland. In 1818 Gen. van den Bosch estab. in Holland under royal patronage a charitable organization, 'the Society of Beneficence,' for the purpose of employing the poor on the land. Colonies were acquired by the society in Holland, and it estab. others at Wortel and Merxplas in Belgium. The Dutch L. C. were divided into (a) free colonies for indigent persons, and (b) beggar colonies for the repression of mendicancy. The scheme was not successful, as the original entrants remained in the colony and few fresh cases were received. The beggar colonies were intended for the compulsory detention of vagrants. The chief of these colonies were at Ommerschans, Veenhuizen, and Merxplas. The colonies were penal rather than reformatory, and a severe discipline was maintained by the society.

In Belgium, under the law of Nov. 27, 1891, state institutions of two kinds were estab.: (1) *Dépôts de Mendicité*, and (2) *Maisons de Refuge*. The former were intended for the reception of able-bodied professional beggars, vagrants, and certain other classes of people, such as inebriates and persons convicted of immoral offences. The chief depot was at Merxplas. The intention of the Act was to treat habitual vagrants and beggars not as criminals requiring punishment, but pathologically, as persons requiring treatment on account of their mode of life. The work of the Merxplas colony consisted of land reclamation, farming, and the manuf. of all kinds of articles required in the colony itself. The purpose of a *Maison de Refuge* was to receive men too

old or infirm to work, or who through want of work or misfortune had been driven to begging or vagrancy. It was in most respects similar to the Eng. workhouse. The chief *Maison de Refuge* was at Hoogstraeten, the Wortel section of that institution being reserved for able-bodied colonists. There was also a depot and refuge for women at Brugos on similar lines. All the L. C. of Belgium were subject to state inspection and control.

In Germany there were some thirty L. C. under the management of the Labour Colony Central Board, with accommodation for about 4000 persons. The system was less developed than in Belgium or Holland, and effected less practical good, because there was no compulsion to remain in the colony, and admission was voluntary. The colonies were supported out of grants by the prov. and municipal authorities and voluntary subscriptions. Most of the colonies were agric., but there were some industrial colonies such as those at Berlin and Magdeburg. The bulk of the inmates appear to have been unemployed workmen and tramps. Habitual vagrants and persons who neglected to maintain themselves were far more effectively dealt with in the *Arbeitshäuser* (literally work-houses) which corresponded not to the Eng. workhouse, but to the forced labour farms of Switzerland and the compulsory L. C. of Belgium and Holland. They were penal in character and intended for the detention of persons after imprisonment for certain specified offences.

In Switzerland from 1906 there were both voluntary and compulsory L. C. The voluntary numbered only three and were managed by philanthropic societies. Nearly every canton had a compulsory colony or forced labour farm, managed by a cantonal council, the federal gov. neither taking any share in the management nor inspecting the farms.

In England the closest approach to the continental forced L. C. were the old houses of correction, but at the present time the convict estab. alone resemble such colonies in the fact that a great deal of convict labour is carried on. There are, however, certain institutions estab. by charitable agencies for vagrants. The largest of these latter institutions is the farm colony of the Salvation Army at Hadleigh in Essex, with accommodation for sev. hundred inmates. The Eng. colonies differed from the continental in that there was no power of compulsory detention, and also in the fact that they were not primarily intended for the vagrant class. The Majority Report of the Poor Law Commission recommended the institution of labour penal colonies for such persons who were unemployed and vagrants who accepted relief while refusing to fulfil the conditions of work attached to such assistance. The recommendation was not proceeded with.

The Borstal institutions (see BORSTAL) are in some respects forced labour colonies. Their undoubted superiority to adult continental colonies is partly due to the introduction of the recognized courses of the Ministry of Labour for trade training.

See L. Twining, *Workhouses and Women's Work*, 1858; C. J. Hibdon Turner, *History of Vagrants and Vagrancy*, 1887; *Board of Trade Report*, 1904; W. H. Daulson, *Vagrancy Problem*, 1910; *Report of the Departmental Committee on Vagrancy*, 1926, and *Minutes of Evidence taken before the Committee*, and *Appendices*; J. Flynn, *Tramping with Tramps*, 1900; Weston-Thomas, *Report on the Methods of dealing with Vagrancy in Switzerland*; and J. S. Hoyland, *Digging with the Unemployed*, 1934.

Labour Day, legal holiday in all the states and territories of Canada and the U.S.A. which is observed on the first Monday in Sept. It is observed by labour processions and organisations which parade the streets and hold meetings, and all banks and gov. offices are closed. Outside the U.S.A., Canada, and Italy L. D., or the day generally fixed on by all Socialist and Labour organisations for a public holiday, is celebrated on May 1st. The reason for choosing May Day is very obscure, though attempts have been made to identify L. D. with the old May Day festivities.

Labour Disputes between employers and workers arise chiefly from dissatisfaction of the workers with their conditions of employment, or from an attempt on the part of the employers either to reduce wages or to increase hours. A dispute originating in one trade sometimes spreads to others whose members have no grievance, but who 'come out' in sympathy with their fellows. When the stoppage of work is the initiative of the workers, a strike results, but where the employers close their works upon the refusal of their employees to submit to unpopular wages the stoppage is called a 'lock-out.' Disputes are settled by arbitration, when a third party is mutually appointed to decide the issue, or by conciliation (q.v.), where discussion under an impartial chairman takes place, or by the final defeat through lack of resources of one of the disputants. The gov. sometimes intervenes where the stoppage threatens to endanger civil welfare. The possibility of direct action (q.v.) involving national strikes took place in the years immediately preceding the First World War after the national coal strike of 1912, when a minimum wage demand was made. Conciliation proved fruitless, and the Prime Minister, Asquith, introduced the Coal Mines (Minimum Wage) Act, by which minimum wage boards were set up. Railway workers in 1907 declared a strike on the question of recognition of their union. Lloyd George intervened, and a railway conciliation scheme was set up for the ventilation of further disputes. The Dublin strike, led by James Larkin of the Irish Transport Workers' Union, after a bitter struggle ended in its collapse consequent upon the starvation of the strikers. During the First World War the outstanding dispute was that of the Clyde workers, who demanded an increase in wages because of the increased cost of living. Gov. intervention took place, and the increase

was secured. Thereafter munition workers were controlled by the Munitions of War Act of 1915, and compulsory arbitration was applied to all future disputes. Under the chairmanship of J. H. Whitley, an attempt was made to reorganise the relationship between employer and workers by co-operation through Standing Joint Industrial Councils. The scheme is known

THE GENERAL STRIKE, 1926

Police escort a petrol lorry through a road in Southwark, London

as 'Whitleyism,' and has since been found to be inadequate. In 1921 a great lock-out of miners occurred, which ended in the defeat of the miners, though the famous Sankey Coal Commission was appointed. Its recommendations, which included nationalisation of coal-mines, were favourable to the miners, but were not acted upon by the gov. until after the Second World War. The great strike of 1926 is dealt with in detail under STRIKE, GENERAL (1926). The outcome of this strike was the passing of the Trade Disputes and Trade Unions Act, 1927, which declared general and sympathetic strikes unlawful, restricted picketing, and made the law courts the arbiters of legality or

illegality of strike activities. The 'contracting-in clause' stipulated that only those trade unionists might contribute to the political funds of the unions (that is to the fund of the Labour party) who declare in writing their willingness to be levied for that purpose. The T.U.C. repeatedly pressed for the amendment of this Act, but in 1940 Neville Chamberlain (the Prime Minister) pointed out to a T.U.C. deputation that it would be impracticable to introduce amending legislation during wartime. The Labour Gov., which came into power in 1945, passed a two-clause Act repealing the Act of 1927, which received the royal assent on May 22, 1946. During 1929, among a number of smaller disputes, the most extensive was that of the master cotton spinners, 355,000 workers being affected. After three months a specially appointed board secured half the demanded increase of wages. 'Unofficial' strikes became rather prevalent in 1913, but though they were not important individually they seemed to indicate that something was amiss with industrial relations. Some of these strikes were deliberately provoked by employers from ulterior motives such as to procure an alteration of contracts, while others were organised for political reasons and in order to impede the nation's war effort. But considering the difficulties that had arisen from the transference of labour and the entry into industry of new people, who were unaccustomed to discipline and to trade union negotiations, it was perhaps remarkable that there had been so few disputes up to that time. But public confidence in the ultimate issue of the war undoubtedly emboldened some to launch unofficial strikes. In 1944 there was discontent in the minefields, whose workers exposed themselves to the charge of placing their own sectional interests before the national welfare. On Jan. 22 the National Reference Tribunal for the coal-mining industry produced its wages award, but the miners rejected it and many ceased work, the chief centre of unrest being S. Wales, where 75,000 men were on strike by March 8, 1944; and by the time they had returned to work the disputes had caused a loss of 800,000 tons of output. It was always difficult to decide whether, for securing the smooth working of industry in wartime, it was necessary to introduce military control or whether the joint industrial relations machinery could be relied upon. The General Council of the T.U.C. issued a statement in April 1944, pointing out that unauthorised stoppages of work had gravely impeded the preparations for a concerted attack on Nazi-fortified Europe and if continued might produce a national disaster and imperil the victory of the allied cause. As a precaution against the outbreak of industrial trouble the minister of labour, after consultation with the T.U.C. and the Brit. Employers' Confederation, issued (April 18) a new defence regulation (12a), giving him strong powers for dealing with persons responsible for inciting strikes or lock-outs which interfered with essential services. This

was aimed, however, solely at promoters of so-called 'unofficial' strikes. A petty dispute, which broke out on Sept. 28, 1945, at Birkenhead docks, led to an extended strike of dock workers in most of the large ports. This strike was entirely unofficial, and towards the end of the month 40,000 were on strike and 20,000 soldiers had taken their places. The refusal of the minister of labour to intervene until the men went back to work proved effective, and the men returned to work, accepting, after prolonged negotiations, terms very little higher than those offered *ab initio* by the employers. In the period immediately succeeding the end of the war there were numerous demands from different trades for wage increases, sometimes leading to strikes, official or unofficial, and mostly the latter. Thus in Oct. 1947, 21,000 Scottish miners went on strike but resumed work in a week after the National Coal Board and the miners' leaders had agreed on an increase of 15s. weekly in the minimum wage of underground workers and of 10s. a week for surface workers. The T.U.C. General Council, however, expressed (Feb. 5) general agreement with the declared aim of the Lab. Gov.'s wages policy to avoid inflation, and the T.U.C. executive, by 5,421,000 to 2,032,000 votes, endorsed the T.U.C. council's recommendation to support the gov.'s policy on wages and prices. But there were many more strikes notwithstanding this co-operative attitude of the T.U.C. Most unrest prevailed among the dockers, and on June 11, 1948, an unofficial strike began in the Port of London owing to the suspension of eleven men after a dispute over payment for handling 'dirty cargo'. During the fortnight of the strike in the London docks service men unloaded foodstuffs. This had its sequel in 1949 when 9000 men of the Port of London went on strike in a fight which was represented by their unofficial leaders as one to 'resist the employment of blackleg labour.' Mr. Isaacs, labour minister, in the House of Commons described the dockers' claim that the stoppage was in fact a lock-out as nothing but a Communist manoeuvre, and emphasised that the men were acting in breach of their agreements. The continuance of the strike and an increase in the numbers of men involved forced the gov. to employ troops for loading and unloading cargo, and the king declared a state of emergency on June 11. *See also* INDUSTRIAL RELATIONS.

United States of America.—Labour disputes in America are examined by a Board of Mediation formed under an Act of Congress passed in 1926. Individual unions appear to have freedom of action, and most disputes are settled by the states concerned. Between 1921 and 1928 stoppages involving 4,500,000 workers were settled by the Congress Board of Mediation, under whose powers the secretary of labour is authorised either to mediate himself or to appoint special commissioners. Mediation boards have also been set up by individual states, and disputes are usually settled either by conciliation

or voluntary arbitration. In the five-year period 1935-40 strikes averaged about 2875 annually: 1936, 2172 strikes, involving 788,000 workers; 1937, 4740 strikes, 1,860,000 workers; 1938, 2772 strikes, 688,000 workers; 1939, 2613 strikes, 1,170,000 workers; 1940, 2088 strikes, 491,000 workers. But when the threat of war became obvious, the ship-building and other strikes, which occurred about the time of the presidential election, were soon settled and the return of Roosevelt for his third term indicated that Amer. labour appreciated the fact that it was the Democratic gov. that had guaranteed collective bargaining and the minimum wage and fixed a maximum work week of forty hours.

The best known example of compulsory arbitration is the system in New Zealand, where such a scheme has existed since 1897. Recourse must be made to a specially appointed conciliation board under an impartial chairman, who, on failure to reach an agreement, refers the dispute to the court. New S. Wales and Victoria have similar systems. See Askwith, *Industrial Disputes*, 1911; G. D. H. Cole, *Short History of British Working-class Movement*, 1927; R. Rayner, *Story of Trade Unionism*, 1929; and Margaret Cole, *Makers of the Labour Movement*, 1948.

Labourdonnais, Bertrand François de, Count Mahe (1699-1755), Fr. naval commander, b. at St. Malo. He went to sea at an early age, and in 1718 entered the service of the Fr. India Company. In 1724 he attained the rank of captain and displayed great bravery at the capture of Mahe, adding the name of the fr. to his own. In 1735 he served as governor of the Ile de France and Bourbon, an office he continued to hold for five years. At the end of this period he began a conflict with Britain for the naval sovereignty of the Indies and captured Madras in 1746. He was accused by his general, Duplex, of peculation and maladministration of affairs in India, arrested, and imprisoned for two years. He wrote *Traité de la manœuvre des vaisseaux* (1723), and left valuable memoirs, pub. by his grandson.

Labourers and Labouring Classes. The definition of a labourer, so far as legal rights are concerned, is of but little importance, and decisions involving a definition relate almost exclusively to the liability of employers for accidents under the Employers' and Workmen's Act, 1875, the Employers' Liability Act, 1880, and the Workmen's Compensation Acts (now repealed and re-enacted as the National Insurance (Industrial Injuries) Act, 1946). The accepted definition is 'a man who digs and does other work of that kind with his hands.' But a motor-omnibus driver has been held to be a manual labourer within the Act of 1880. The term labourer is used in the Sunday Observance Act, 1877, in section 1, which forbids any 'tradesman, artificer, workman, or labourer' to exercise his 'ordinary calling upon the Lord's Day,' but the few decisions on that Act do not assist one to arrive at the meaning, for it has even been judicially doubted whether an 'agricul-

tural labourer' is a 'labourer' within the meaning of the Act. The term is of no importance as regards the Housing Acts, for it has long given place to 'working classes,' which latter phrase has been judicially defined to mean 'the class of persons who ordinarily live in such a state and condition of life that overcrowding was likely to take place,' and by statute (Housing Act of 1903) as including 'mechanics, artisans, labourers, and others working for wages,' and also others working at some 'trade or handicraft whose income does not exceed on an average 30s. a week.' Politically if the meaning of the terms may be inferred from the persons represented in Parliament by a Labour M.P. it may be said that all are labourers who either belong to a trade union or could belong to one if they chose.

Labourers, Statute of. At the Conquest agric. services were paid for in kind, the labourer or villein being really a serf attached to the soil. After these services were commuted for low money payments the better-class villeins became copyhold tenants, while the rest gradually obtained better terms. The Black Death, however, caused a great dearth of agric. labour and wages went up, with the result that the Ordinance (see LEGISLATION AND LEGISLATIVE PROCEEDINGS) of Labourers was issued in 1349 and re-enacted in 1351 as the S. of L., with the object of securing an adequate supply of field labour at the wages current prior to the plague. It provided that able-bodied persons should work in their own dist. at the accustomed rate of wages, while those who gave alms to 'sturdy beggars' should be punished with imprisonment. The consequence, however, was the rise of a class of really free labourers, in spite of the low rate of wages. See H. St. C. Feilden, *A Short Constitutional History of England*, 1899.

Labour Exchanges, see EMPLOYMENT EXCHANGES.

Labour, Hours and Wages of. Ever since workers have been organised, agitation to restrict hours of labour has been a prominent feature of industrial disputes. During the latter part of the nineteenth century, Robert Owen (q.v.) led a movement for an Eng. eight-hour day. Since 1921 a forty-eight-hour week has been enforced in many trades in most countries. These restrictions cover either all workers, as in France and Spain, or certain trades, as in Great Britain under various Factory Acts (see FACTORY LEGISLATION). The Brit. Gov. did not favour the draft convention of the International Labour Conference in 1937 for a forty-hour week for the textile industry, the policy of the Brit. Gov. having always been to build up in industry a vast machinery of collective bargaining between employers and employed, and a reduction of hours to forty would probably lead to reduced wages and a rise in costs of production such as would increase unemployment. In Australia agreements as to hours of labour are reached by arbitration, while in Germany (before the Nazi regime) mutual agreements as to hours of labour were reached by collective bargaining between the

workers and their employers. In Brit. coal-mines hours are regulated by the Coal Mines Regulation Act of 1908, but a new Mines Bill was put before the House of Commons in 1931 embodying a continuance of the seven-and-a-half-hour day pending ratification of the draft convention of the Geneva Convention. In July 1936 the conference of the Mineworkers' Federation approved a motion for a six-hour day in order to absorb the unemployed within the industry. The Shops Act of 1912 and the Trade Boards Act ensure a forty-eight-hour week generally.

In the U.S.A. most states have an eight-hour day. A threat of a railway strike in 1916 resulted in an eight-hour day for railways under the Adamson Act. In 1927 an Act was passed in New York state enforcing a forty-eight-hour week. Fifteen states have a maximum of ten hours a day, while many well-organised workers have secured a five-and-a-half-day week of forty-four hours. In 1937 the United Mine Workers, led by John Lewis, demanded a six-hour day and a five-day week in place of the existing working week of thirty-five hours. Legislation, following recommendations of the International Labour Organisation, was in operation, before the Second World War, in Italy, Belgium, Czechoslovakia, India, Bulgaria, and Chile; Austria and France had made conditional agreements.

Wages.—The term wages is usually confined to the pay of workers in manual trades, and they are paid weekly. Economic consideration of wages is involved and intricate. Wages must have some relation to the cost of living, and standards vary in different localities. Organisation into trade unions gave workers power to improve their wage standards and most industrial disputes (see LABOUR DISPUTES) are mainly concerned with wage adjustments.

Statistics.—The International Labour Organisation of the United Nations issues comprehensive tables of movements of wages in most countries. In the case of France and the U.S.A. earnings are variously calculated hourly, daily, and weekly, and produce severally results which differ widely. But broadly the following table shows money wages and real wages for the chief manufacturing countries as they were in 1937, the figures being index numbers and the rates for 1929 being represented by 100:

	Money Wages	Real Wages
Great Britain (weekly rates)	104	113
France (hourly rates)	146	134
Germany (hourly rates)	79	105
Italy (hourly earnings)	101	105
Russia (monthly wage)	315	c. 320
Sweden (hourly earnings)	103	108
United States (weekly earnings)	95	107
Japan (daily earnings)	93	93

Hours of labour in Great Britain have altered but little in recent years (apart, of course, from conditions during the Second World War). The 48-hour week, estab. in

most industries soon after the First World War, was, up to 1940, still in operation in most factories. In 1916 there was a movement for the reduction of normal weekly hours of labour. It was accentuated in 1917; in 1948 there was comparatively little continued movement in that direction, and by 1949 it was almost negligible. Over this period the reduced basic normal weekly rate was reduced from 48 or 47 hrs. to 44, the average difference for many millions of workers being 3½ hrs. a week. It may be mentioned that the actual hours worked did not fall to anything like the same extent as the normal weekly hours; thus in early 1917 the average hours of men were 46½; in Oct. 1948 they were 46½; and in June 1947 one out of every ten workers in the manufacturing industries was working at least 7 hrs. overtime. The working of extensive overtime, notably in armament works, in Fr. factories nullified the operation of the 40-hour system introduced in 1936. The 40-hour week was very widely applied in the U.S.A., but transport workers generally worked 44 to 48 hrs. The Brit. dominions' week was uniformly 44 hrs., excepting in New Zealand, where the Labour Gov. introduced a 40-hour week. European industrialised countries (other than France) generally worked a 48-hour week. In the Balkans and S.E. Europe most working weeks were from 48 to 50 hrs. Much longer periods obtained in the Far E., especially in Japan.

See Labour Research Committee, *Wages, Prices, and Profits*, 1922; Bulletin of International Labour Office, *Statistical Tables*; and G. D. H. Cole, *A Short History of the British Working-class Movement*, 1927.

Labour Legislation is the outcome of the need to regulate conditions of contract between employers and workers and to secure for the worker conditions in accord with reasonable standards of remuneration, health, and safety. Until the advent of machine production in the eighteenth century there were protective regulations enforced by the craft guilds (*q.v.*) in co-operation with the gov. Machinery needed an immediate supply of cheap labour, and conditions rapidly became worse. Workers as a consequence combined to demand more reasonable terms, with the result that in 1799 the Combination Bill was passed, which threatened any worker with imprisonment if he attempted to combine with his fellows for the purpose of increasing his wages. Lord Shaftsbury (*q.v.*) took up the cause of children in factories, and in addition procured in 1812 a Bill to abolish the use of female and child labour in mines. In 1867 the Employers and Workmen Bill was passed, which removed concerted stoppages of work from the list of criminal actions. During the first ten years of the twentieth century the chief measures passed affecting labour questions were the Workmen's Compensation Act (*q.v.*), which granted compensation to all manual and many non-manual workers; the Unemployed Workmen Act of 1905; the Coal Mines Eight Hours Act of 1908, which ended a long struggle on the part of the

miners; the Trade Boards Act of 1909, resulting from agitations to combat sweated labour; the Labour Exchanges Act, the precursor of Unemployment Insurance, and a remodelling of the Fair Wages Clause. Then followed the Coal Mines Regulation Act and the National Insurance Act (*q.v.*). The Shops Act secured the long-wished half-holiday to tradesmen's assistants in 1912, in which year was also passed the Coal Mines

of Nations dealt with legislation to govern hours of labour. A recommendation to adopt universally a forty-eight-hour week was not ratified by the Brit. Gov. on account of the too wide scope in a single measure. The miners' dispute of 1920 resulted in the passing of the Emergency Powers Act, which enabled the gov. to take necessary steps to enforce peace and maintenance of essential supplies and transport. The Act was applied during the

Weaver Smith Ltd.

Lord Shaftesbury sees children working in coal-mines, 1840.

(Minimum Wage) Act, a result of the national strike. The First World War period brought its own special problems, to meet which the gov. passed the Munitions of War Act in 1915, by which compulsory arbitration was to be applied to the settlement of industrial disputes in the industries covered by the Act, which was repealed in 1918. As an attempt to keep pace with the increased cost of living, the Trade Boards Act of 1918 extended the Act of 1909, bringing many millions of workers into the protective scope of a legalised minimum wage. In the same year the Wages (Temporary Regulation) Act was passed to cope with the situation created by the change from war to peace conditions. The Act was passed originally for six months, but certain sections were continued under the Industrial Courts Act of 1919, which stabilised the existing rates of wages as a minimum until 1920. Many of the conventions drafted by the International Labour Conference of the League

disputes of 1921, 1926, and 1949. Following the General Strike (*see* STRIKE, THE GENERAL) the gov. repealed the Seven Hours Act of 1919, and the Trade Disputes and Trade Unions Act of 1927 proclaimed illegal general strikes, sympathetic strikes, and most forms of 'picketing.' Labour conditions in the two decades following the First World War seriously deteriorated in the N. of England in what became scheduled as special areas; and towards the close of 1934 an Act was passed to provide measures which, it was hoped, would facilitate the economic development and social improvement of these distressed areas. Training schemes were also part of the general plans for recovery. But it is doubtful whether these statutory provisions would ever have had any marked effect on the appalling total of the unemployed. It was the conditions imposed by the Second World War that solved that problem.

The war closed the ranks of the people

and, while many trades — engineers, miners, shop assistants, etc.—demanded and obtained higher rates of pay in 1939–1940 as a consequence of the increased cost of living, the peace-time advantages in hours and other conditions were sacrificed to some extent to the national needs. In May 1940 (after the Fr. resistance had collapsed) the Employers' Confederation and T.U.C. General Council both agreed to the minister of labour's appeal to suspend rules and regulations so as to throw their whole force into the national effort. But the National Union of Railwaymen in July 1940 demanded the repeal of the Trades Disputes Act, and the T.U.C., a few months later, urged the removal of restrictions imposed by the Act on unions. The Trades Disputes Act of 1927 was repealed by the Labour Gov. in 1946. See also FACTORY LEGISLATION; SHOPS ACTS; TRADE UNIONS; WORKMEN'S COMPENSATION. See H. Cresser and A. Henderson, *Industrial Law*, 1924; G. D. H. Cole, *A Short History of the British Working-class Movement*, 3 vols., 1927, and *Organised Labour*, 1928; C. R. Fay, *Great Britain from Adam Smith to Present Day*, 1928; *International Labour Review* (monthly), Geneva; *Legislature Series of the International Labour Office*, Geneva. Labour, Ministry of. The M. of L. was set up by Lloyd George in 1916 to deal with questions of labour administration, wage disputes, and awards, pensions, insurance, and all affairs hitherto under the direction of the Labour Dept. or the Board of Trade. The first minister was John Hodge, and the ministry was formed partly to ensure the co-operation of the Labour party in Lloyd George's Coalition Cabinet. Its efficiency, however, was hampered to some degree by the exemption from the authority of the new ministry of other special ministries, such as the Ministry of Munitions, which were allowed to appoint separate committees to deal with their individual labour organisation problems. Post-war difficulties and reconstruction programmes challenged every resource of the ministry, and the wide powers given to it later soon proved to be entirely justified. Its activities include the Industrial Court, which, through an umpire and referees, judges industrial claims and makes awards; unemployment and insurance, administered through labour exchanges, friendly societies, and trade unions; employment and training of juvenile workers; industrial relations, and the pub. of statistics upon every topic of labour concern. A special dept. works in connection with the International Labour Organisation of the League of Nations. The headquarters of the ministry are at Montagu House, Whitehall.

Labour Office, International, see INTERNATIONAL LABOUR ORGANISATION.

Labour Party. The name of a political organisation to be found in modern times in many countries which, broadly speaking, represents, or claims to represent, the interests and aspirations of Labour (i.e. the working class) as against

the interests and ideals of Capital (i.e. the employing, or master, class). The L. P. in Great Britain, which must be carefully distinguished from the Independent L. P. (the I.L.P.) (q.v.), is a purely Socialist body, consisting of trade unions, co-operative societies, and various Socialist bodies banded together to secure political representation. The first secretary of the L. P. was James Ramsay MacDonald (q.v.), and he held this position till 1911, when, on his becoming chairman of the party in the House of Commons, he was succeeded by Arthur Henderson (the present chairman is James Griffiths, M.P.). For the first six years of its existence the L. P. was known as the Labour Representation Committee (the L.R.C.). When formed in 1900 the membership was 375,000, and it succeeded in returning two members to the Commons in that year. As a parl. force it dates from the 1906 election, when its membership was 921,000, and when out of fifty parl. candidates twenty-nine were elected. The L. P. by its constitution is independent of all other political parties. The L. P. has no 'leader.' The National Executive Committee is elected by the ann. conference, and the committee chooses a chairman for the year. The chairman is not necessarily an M.P.; he is not normally re-elected and there is no suggestion that he has any kind of moral claim to become Prime Minister or even to hold office of any kind. The Labour members of Parliament—who are organised into the parl. L. P.—elect a chairman of the parl. L. P., or leader, every session and he is usually re-elected. He has some considerable claim to appointment as Prime Minister—thus Ramsay MacDonald became Premier twice (his later terms were as Prime Minister of National Govts.). It was made clear when Lansbury was elected in 1931, however, and still more clear when Mr. Attlee was elected in 1935, that the parl. L. P. reserved its full liberty of action to elect whom it pleased if the party secured a majority and thus to indicate to the king who was desired as Premier. The L. P. strongly supported the First World War, and its chairman, Arthur Henderson, with two other L. P. representatives, was included in the Coalition Gov. of 1915, and, when the new Coalition Gov. of 1916 was formed, Henderson continued in the Cabinet until June 1917, when he resigned upon his return from a visit to Russia. His place was taken by G. N. Barnes. At the conclusion of the armistice the L. P. withdrew its support from the gov. Up to 1918 it had been practically a federation of trade unions and Socialist societies, but the war had changed the national outlook, and in order to keep pace with the extended organisation of the trade unions, as well as to widen its field of recruitment, the L. P. revised its constitution, admitting individual members of all social grades. It increased its membership so considerably as a result that by 1924 it had achieved a brief period in office, with Ramsay MacDonald as

Prime Minister. Dependence upon Liberal support, which was never reliable, caused its defeat after ten months as a gov. The coal situation at this time brought the Miners' Federation into prominence, and this trade union dominated L. P. influence after the unsuccessful issue of the lock-out in 1921. Meanwhile the party had begun to realise the significance of municipal elections, and an attack was accordingly made upon municipal seats throughout the country, especially in mining and industrial areas, with marked success. Its membership in 1920 was well over 8,000,000, though this figure fell to 5,500,000 during the trade slump which followed. This figure, however, was more than twice the number before the First World War. Additional support was coming in from the co-operative movement, with its 1,000,000 members of 1924. During its short term of office the Labour Gov. passed four measures of importance, the Wheatley Housing Act, the Minimum Agricultural Wages Act, a measure increasing the range of old-age pensions, and an amendment to Unemployment Insurance. It granted formal recognition to the gov. of Soviet Russia, and carried through the plan for the stabilisation of Ger. finance under allied control, known as the Dawes plan. In the election of Oct. the party lost forty-two seats, and its supporters, particularly the L.L.P., became impatient for 'Socialism in our time.' As a result there appeared within the party a left wing opposition. In 1926 the General Strike (q.v.) severely tested the organisation of the L. P. and indeed the whole Labour movement was shaken. The storm, however, was weathered so successfully that the party found itself again in power in 1929, when it secured the return of 287 members. Ramsay MacDonald again became Prime Minister, and continued in office, even though, in Aug. 1931, the Labour Gov. resigned and was replaced by a National Gov.

The L. P. has had to demonstrate that it is 'constitutional' and not 'revolutionary,' and therefore it has been orthodox in its action, and indeed more so than any other party since the Reform Act of 1832. The conception of opposition for its own sake was abandoned. The majority principle is with the L. P. almost an article of faith; and the so-called 'discipline' of the party is simply a firm adherence to the principle of majority rule. It has been said that the L. P. is more of a 'class' party than the Liberal party was under Gladstone or Asquith. This is true in the sense that the proportion of income-tax payers in the L. P. was for long less than it was in the pre-1914 Liberal party (the incidence of income tax to-day has completely changed the situation); but it is not true that the L. P. has ever secured a majority of the wage earners. Though two-thirds of the electorate are wage earners (i.e. below the upper-age limit for unemployment insurance) and their dependants, the L. P. until 1945 never secured more than 37 per cent of the votes cast; and except in the election of 1918 the balance

between votes cast for the gov. and votes cast for the opposition has been very constant since 1885.

The rise of the L. P. shows that it is possible to achieve a large measure of support even with a completely hostile press. But the L. P. makes up for this deficiency by maintaining close contacts with the trade unions, which, in their turn, have sev. complete series of national and local organisations. The L. P. differs from the Conservative party in opposition because it usually accepts gov. proposals, especially in social legislation, as instalments of its own policy. Usually it does not wish to obstruct because it wants the legislation to be passed; it may and indeed usually objects to some of the proposals, but rarely to all of them; and its main cause of complaint is that they do not go far enough. It may be said that during the earlier months of the Second World War the fact that Labour was in opposition militated against a whole-hearted war effort by Britain. While the L. P. by no means disapproved of Brit. policy—indeed it was hotly opposed to Fascism or Nazism in all their forms—it had its own views on equality of sacrifice, profiteering, food distribution, exemptions from conscription, and so forth. When Winston Churchill succeeded Neville Chamberlain as Prime Minister in 1940 he at once formed a Cabinet largely composed of leading Labour M.P.s, and the price of their support may be inferred from the character of the emergency legislation, which empowered the new gov. to control persons and property unreservedly and increased the excess profits tax from 60 to 100 per cent.

The representative character of the L. P. is shown by the fact that a great variety of interests are represented—architects and engineers, the medical and legal professions, shipping, finance, the fighting services—though by far the largest group of members, comprising more than all the others combined, is the 'workers' group, which owes its representation almost entirely to the rise of the L. P.

In the general election of 1935 the votes cast for the L. P. numbered 8,325,260 as against 10,488,626 Conservative votes, 1,377,962 Liberal votes, and 866,624 Liberal National. In the general election of 1945 the figures for the chief parties were: Labour, 11,985,733; Conservative, 8,693,858; Liberal, 2,253,197; Liberal National, 759,884. In 1935 the L. P. had approximately 154 representatives in the Commons as against 387 Conservative members; in 1945 the positions were reversed, the L. P. having 393 members and the Conservative party only 189, the Labour majority in the House in 1945 being about 186.

La Bouverie, Belgian tn., situated in Hainaut 5 m S W of Mons. It has important coal-mines and manufs of Davy lamps. Pop. 7600.

Labrador, dependency of the prov of Newfoundland Canada, forming the most easterly part of the N Amer continent and extending from Blanc Sablon at the S W entrance of the straits of Belle Isle

St John's Newfoundland so far as prov relations are concerned.

L., regarded as part of Vinland or Wine-land (*qv*) was probably visited by the Vikings in the tenth or eleventh centuries. Many traces of stone houses and stone protected tombs, such as the Norsemen built and which the indigenous Eskimo never did have been found on the L. coast. According to Norse sagas the voyages of Bishop Erik Guupsson and his sons in the early twelfth century concern

High Commissioner for Canada

LABRADOR INDIAN HARBOUR

to Cape Chidley at the F entrance of Hudson's Strait. The name L. is also applied to the peninsula of which L. proper forms merely a coastal strip (1100 m in length) with an area of about 110,000 sq m. The greater part of the peninsula representing the ter. of Ungava (351,780 sq m) was annexed by Quebec in 1912 under the Quebec Boundaries Extension Act. By the decision of the Privy Council (March 1, 1927), settling the boundary between Canada and Newfoundland in L., the Atlantic watershed of the L. peninsula, including the basin of the Hamilton or Grand R. was awarded to Newfoundland, the remainder of the peninsula being awarded to the dominion. The accession of Newfoundland to the dominion of Canada (March 31, 1949) brings all L. automatically under the confederation, but the dependency or coastal strip of L. or L. proper is still administered from

L., but these are all songs glorifying the deeds of chiefs rather than satisfactory evidence of visits to the coast of what may have been L. It is commonly supposed that John Cabot sev centuries later sighted the coast and even visited it though there exist no real records of his voyages. Cortereal the Portuguese navigator, visited the country only twelve years after Cabot's voyage of 1498. Cortereal states that in Hamilton Inlet he found an old Venetian sword, some gold earrings and other 'small trink' which Cabot had very probably traded with the Indians. The story goes that the voyage of João Fernandez (a *labrador* or yeoman farmer) of the Azores, who signed on as pilot for Cabot, so interested King Mañuel on his return that the king granted letters patent for a Portuguese voyage—the letters, however, being granted to Gaspar Cortereal, who had greater social standing

than Fernandez. It is assumed that the king ordered Cortereal and Fernandez to follow Cabot's route and claim all that Cabot had found (including L.) as part of the legitimate property of Portugal. They sailed in 1501, but explored only the E. Greenland coast, which was named 'Labrador,' presumably after João Fernandez the navigator. However this may be, Greenland for many years afterwards was called on the maps of the period Terra Labrador. Cortereal, however, on a second voyage a year later, evidently sailed further N., and all that is known of this voyage accords well with the description of S. L., which for many years appeared on maps as Terra Cortereal. Jacques Cartier, some forty years later, cruised the W. coast of Newfoundland and the L. shore of the gulf in the search for the N.W. passage. After this L. (with the rest of explored Canada) fell under F. rule, but the peninsula was ceded to England in 1763 by the treaty of Paris.

Little is known about the geology of L. The archæan bedrocks belong to the continental foundation of N. America known as the 'basement complex,' composed mostly of metamorphic rocks and containing no fossil remains of animals or plants. This is overlaid at some places with a veneer of limestones, sandstones, and shales, some of which bear fossils of some of the earliest known organisms; but over 75 per cent of the L. peninsula this veneer has been eaten away by rain and ice so that the ancient and remarkably flat surface has been restored. The basement rocks were originally molten, but broke into crystalline masses containing granite, lava, limestone, syenite, diorite, and other minerals. Gabbro (g.r.), as dark as basalt, dominates the cliffs and mainland mts. all round Nain; but these high lands are bare of soil and vegetation. Most of the gabbro is a beautiful variety of felspar, called Labradorite, one of the abundant constituents of the world's crust. In Square Is. and on Mt. Pikey there are other considerable masses of the mineral. L. is very mountainous and very rugged, the mts. becoming highest in the N. It has many short, rapid rivers, but only a few break through the mts. from Quebec prov., Hamilton Is., on which are the magnificent Grand Falls, being the most notable. A recent power survey here indicates that the minimum hydro-electric energy available is 1,250,000 h.p. The coast is rocky, broken up with narrow inlets, and fringed with numerous small is.

The flora and fauna are alike varied. Among the prin. trees are white birch, larch (or tamarack), reaching 60 ft., balsam fir, white spruce—the best all-round tree in L. and growing to 70 ft.—balsam poplar, willow, alder, and mountain ash. Plants include reindeer, sphagnum, and other mosses, besides gentians, bluebells, wild rosemary, sundew, and also numerous edible wild fruits. The husky dog, most useful to traders, the caribou, and the reindeer are among the chief animals. Others are wolf, otter, beaver, musk-rat, black and polar bear, white fox,

karkajou or wolverene, lynx, mink, marten, weasel or ermine, and porcupine. Among the birds are numerous water-fowl, which, however, migrate in winter. There are also Arctic tern, golden plover, snow hunting, snipe, puffin, phalarope, merganser, and savannah sparrow, besides such birds of prey as hawk, eagle, owl, gull, jaquet, shrike, and gerfalcon. L. is noted for its fisheries. The waters near the coast are the resort of countless schools of cod. There are also valuable herring, trout, and salmon fisheries. The cod fishery employs about 1000 men and 230 vessels from Newfoundland. Other fish are many types of whale, halibut—a halibut bank covering hundreds of miles was discovered in recent years all along the middle L. coast—haddock, lung-fish, trout, and lump-fish. The rivers are stocked with salmon. The record cod caught was 102 lb. in weight and 5½ ft. long. There are numerous seal, the chief kinds being the harp and hood seal.

The fisheries are the most important industry. Other industries are fur trapping (beaver, otter, mink, seal, etc.) and agriculture on a minor scale, but showing signs of improvement. At the headwaters of the Hamilton R. an investigation is being carried out on an area geologically of the same age as part of the Lake Superior iron ore where the geological formations are structurally similar. Many deposits of high-grade iron ore are known to exist in the area and preliminary estimates indicate a minimum of a million tons of iron ore per vertical foot.

The climate is rigorous and the indigenous peoples suffered much from hardship and disease before the advent of the Moravian missions and the medical mission of Sir Wilfred Grenfell. There are Moravian mission stations at Nain, Okkak, Hopdale, Hebron, and other spots, which have been taken over by the Hudson's Bay Company. The labours of Sir Wilfred Grenfell in establishing hospitals, encouraging agriculture, promoting better education in Newfoundland for the benefit of the fishermen and other inhab. of L. have been the dominant feature in the life of modern L. (see GRENFELL, Sir Wilfred). There are no important towns. Battle Harbour, on the strait of Belle Isle and the cap having a pop. of about 1000. The total pop. is estimated at 5000. Near by is a model settlement in the basin of St. Mary's R., with a cottage hospital, boarding school, gardens, water reservoir, and splendid salmon-fishing. The total pop. is estimated at 5000, and is made up of Indians, Eskimos, and some whites. At the beginning of the eighteenth century the Eskimos were estimated at 30,000. When the Eng. took possession there were only five to eight thousand. To-day, over 150 years later, the only Eskimos left on the whole coast are about a thousand, all of whom are on the reservations of the Moravian Brethren, whose work began with the mission of the Christian Society of the Unites Fratrums. To-day 'the hospitable centres of the Unites Fratrums

are in every way oases in the desert to the traveller' (Grenfell). In 1921 a new church was built at Nain to celebrate the 160th anniversary of the Moravian Mission in L. See W. G. Gosling, *Labrador*, 1910; W. Grenfell, *Labrador: the Country and the People*, 1922, and *The Romance of Labrador*, 1934; and V. Tanner, *The Geography, Life, and Customs of Newfoundland-Labrador* (a systematic survey of the E. part of the L. peninsula), 1947.

Labradorite, soda-line felspar of the plagioclase group, mostly bluish and greenish in colour, abundant in St. Paul's Is., Labrador. Used in jewellery.

Labrador Retriever, powerful game-dog, having a wide head with a square muzzle, ears set high and hanging close to the cheeks, wide deep chest, muscular body, and tapering tail. The coat is short and thick, generally black, though a yellow sub-variety exists. Brought from Labrador over a century ago, its value as a gun-dog was quickly appreciated, and it is now the most popular of all retrievers, being strong, easily trained, and of exceptional intelligence. The curly and flat-coated types were formed by crossing the Labrador with other breeds.

Labrit, see ALBRET.

Labrunie, Gérard, see NERVAL, GÉRARD DE.

La Bruyère, Jean de (1645-96), Fr. essayist and moralist, b. in Paris, his father being controller general of finance to the *Hotel de ville*. He was educated at the univ. of Orleans, and called to the Bar in 1673. He abandoned this for a post in the revenue dept. at Caen, which he sold in 1686. He was then introduced by Bossuet to the household of the great Condé, to whose grandson, Henri Jules de Bourbon, he became tutor, and passed the remainder of his life in the household of the prince or at court. The first ed. of his *Caractères* appeared in 1688, and from the fourth to the ninth ed. he augmented and improved this work. His work deserves a high place in Fr. literature, and he excels in bringing out individual and picturesque traits of the innumerable persons portrayed in his *Caractères*. Cornelle, Fontenelle, and Benserade figure amongst them, together with other men and women of letters and of society. See E. Fournier, *La Comédie de la Bruyère*, 1886; M. Lange, *La Bruyère critique des conditions et des institutions sociales*, 1909; and studies by A. Gide (in *Divers*), 1932, and G. Michaut, 1926.

Labuan, is. 6 m. off the N.W. coast of Borneo, with an area of 35 sq. m. Ceded to Britain in 1846 by the sultan of Brunai; from 1890 to 1906 it was governed by the Brit. N. Borneo Company. It was then annexed to the Straits Settlements and became a separate settlement in 1912. The Jap. occupied it in 1942, and it was liberated by the Australian 9th Div. in June 1945. It is now part of the Brit. colony of N. Borneo. It has a fine harbour, which affords good anchorage for ships, and possesses extensive coal-beds and a railway. It is flat and thickly wooded and possesses a good supply of water. L. is an active market for the

products of the neighbouring is. of Borneo and the Sulu archipelago—edible birds' nests, camphor, india-rubber, wax, sago, hides, etc. The chief product is sago-flour. The is. is connected with Singapore, Hong Kong, and Landakan by telegraph cables and by weekly steamship service. Cap. Victoria. Pop. (1938) 8600 (Malays 5200, Chinese 3000).

Laburnum, genus of leguminous plants, containing only three species; they are natives of Europe and Asia, and one is common in Brit. shrubberies. This is *L. vulgare*, which is noted for its pendulous racemes of beautiful yellow papilionaceous flowers, and in all its parts it is highly poisonous.

LABURNUM

Labyrinth (Lat. *labyrinthus*), term applied by the Gks. and Romans, to buildings, chiefly subterranean, containing intricate chambers and passages difficult of egress. The most celebrated were the Egyptian, Cretan, and Samian, the first containing 3000 chambers and reckoned as one of the wonders of the world. A description of this is given by Herodotus and Strabo. It was built on the shore of Lake Meris, was the work of Amenemhet III. (2300 B.C.), and was discovered by the Egyptologist Lepsius. It was probably intended for sepulchral purposes. The Cretan L., even more famous, is said to have been the work of Daedalus, king of Minos. Similar in construction were the Samian and the It., the latter forming the tomb of Lars Porosena of Clusium. Modern Ls. or mazes in gardening are imitations of the Cretan, the celebrated maze at Hampton Court being the best known.

Lac, insect Lucifer, one of the *Coccidae*, which produces L. dye and L. resin, excreting the latter to form a crust on twigs and leaves. The dye is similar to that produced by the cochineal insect. The insect is cultivated in India, and about 30,000 tons of resin are produced per year.

Lac, or Lakh, derived from a Sanskrit word *laksha*, meaning 'one hundred thousand.' Generally used in India to signify

100,000 rupees, the nominal value of which is £10,000.

Lacaille, Nicolas Louis de (1713-82), Fr. astronomer, was b. at Rumigny in the Ardennes. In 1739 remeasured the Fr. arc of the meridian, an operation lasting two years. For this service he was admitted to the Academy, and obtained the mathematical professorship at Mazarin College. In 1750 he undertook a successful astronomical expedition to the Cape of Good Hope, which resulted in his *Celum australe stelliferum*. He also wrote *Astronomie Fundamenta* (1757); *Tabulæ Solares* (1758), etc. See R. Wolf, *Geschichte der Astronomie*, 1876.

La Calprenède, Gautier de Costes, Seigneur de (1610-63), Fr. novelist and

A coral reef extends round each of the ls. and forms a lagoon where *cotr* (coco-nut fibre), the staple product, is soaked. Other products are coco- and betel-nuts, sweet potatoes, and rice. Vasco da Gama discovered the group in 1499. Area (estimated) 80 sq. m. The inhab. are chiefly Muslims and number about 16,000.

Laccolith, or Laccolite, intrusion of igneous rock between two strata. The characteristic shape is that of a plano-convex lens, being flat underneath and arched above. Ls. were probably formed by intrusion of molten rock of a fair degree of viscosity, with sufficient internal pressure to cause arching of the superincumbent strata.

Lace, ornamental textile fabric with an

NEEDLE-POINT LACE. SEVENTEENTH CENTURY

dramatist, b. at the château de Tolgou, near Calvi, Lot, prominent among Fr. writers of the seventeenth century. Author of sev. long romances, viz.: *Cusandre* (1642-50); *Oléopatre* (1643); *Les Nouvelles* (1661); *Faramond* (1661); and sev. plays after the style of Corneille, including *Bradamante*, *Jeanne d'Angleterre*, *Le Comte d'Essex* (1658), etc. In *Cusandre* (1642), *Oléopatre* (1647), and *Faramond* (1661) La C. unfolds a sort of universal hist.: the dissolution of the Macedonian Empire, the decline of Rome's supremacy, and the foundation of the Fr. monarchy; but this is no more than the background, his heroes and heroines being mere idealisations of the lords and ladies he had met in the Parisian salons. Like all such prolix romances those of La C. are unreadable now, though his reputation endured till the eighteenth century. See E. A. Seillière, *Le Romanier du Grand Conde*, 1921, and S. Pitou, *La Calprenède's 'Faramond'*, 1938.

La Carlota, tn. in the prov. of Cordova, Spain, 16 m. S.S.W. of the tn. of Cordova, with manufs. of linen. Pop. 8000.

Laccadive Islands, group of fourteen low coral ls. in the Indian Ocean (nine inhabited), 200 m. W. of the Malabar coast included in the Madras presidency.

upon-work pattern produced by means of cotton, silk, rayon, flax, silver, or gold threads. There are three distinct varieties of L., needlepoint and pillow, made by hand, and machine lace, which is made in a large variety of types.

Needle-point or point L. dates from the sixteenth century. L. is mentioned in early Eng. documents prior to that date, but it was probably cord or braid twisted and plaited together and used as a strap or tie. Point L. made by the needle is associated with Venice, where the earliest point L. (*punto in aria*) was made. The design was drawn on parchment, which was then stitched to a piece of fine strong linen. The main lines of the design were stitched through on to the linen and afterwards the pattern was darned over, or sewn in with button-hole stitches, and finally the parchment cut away. The designs used in this kind of L. were generally stiff and geometrical in form. 'Rose' (raised) point L. (*gros point de Venise*) dates as far back as 1640, and was done in relief. The main pattern was held together by *brides* or *tyes*, while solid knots, stars, or flowers were worked into the design. This kind of L. was used principally for altar-cloths, eccles. vestments, and jabots. The art of making point L. spread through Italy into

France, where Alençon became the chief centre of L.-making (see Despierres, *Histoire du point d'Alençon*, 1886). One of the earliest pattern-books was pub. in 1527 by Pierre Quintz of Cologne, under the title *New and Subtle Book Concerning the Art and Science of Embroidery, Fringes, Tapestry-Making, as well as other Crafts done with the Needle*. The *point de France* was first produced in imitation of the Venetian designs, but later distinctive patterns came to be used in France and Flanders. Point L. was also made at Brussels, its distinctive feature being that the flower or star ornament was made separately and sewn on to the *réseau* or groundwork.

Pillow L. is made by hand with bobbins

main types of modern L. machine. The real beginnings of the modern machine L. industry dates from this invention. Within a few years another type of machine was invented by John Leavers; this used the same twisting principle, but did away with the necessity of traversing. In 1837 the invention of the Jacquard pattern apparatus was applied to Leavers's machine and enabled intricate patterns of L. to be made. The Nottingham L. curtain machine, embodying similar principles, and a Jacquard was patented in 1816. This enabled large-scale patterns to be made in contrast to the small patterns made on the Leavers machine. As a result of these inventions almost the whole range of hand-made L. types could be

BOBBIN LACE: SIXTEENTH-CENTURY ITALIAN

on a pillow. It is supposed to have been invented by Barbara Uttmann of Saint Annaberg, Saxony, in the mid-sixteenth century, but it must have been known in Flanders by the end of the fifteenth century, according to a picture painted in 1495 by Quentin Matsys. The parchment on which the pattern has been drawn is fixed on to a pillow or cushion in which pins are stuck at regular intervals. The various threads required are wound round sev. bobbins; as many as 1000 bobbins may be employed at a time in the more elaborate patterns. Much of the modern pillow L. has a machine-made background, instead of the former pillow-meshes made by twisted bobbin net. The flower embroidery worked on the net gives the effect of woven cloth.

Machine-made L. dates from the latter half of the eighteenth century, when many attempts were made in Nottingham to manu. a net on the stocking frame which could be used as a background for pillow L. The net made on this machine was not entirely satisfactory as it unravelled very quickly. In 1808 John Heathcoat invented the bobbin net machine; this machine was a departure from the principle of the stocking frame and substituted a twisting motion which has remained an essential part of the three

made on the machine: L. trimmings, mantilla L., curtains, table covers, wedding veils, and dress fabrics, and as the machine production was so much cheaper these luxury goods were made available to a very wide circle. Over the next hundred years the L. machine developed greatly in size until at the present time a large machine may have a working width of 480 in. and a weight of over 12 tons. In the period up to 1914 the industry expanded rapidly, though fluctuations in its fortunes occurred due to changes in fashion. Between the two wars, due to a variety of factors, such as the high tariffs in the Amer. market and lower wage costs of Fr. manufacturers, the size of the Brit. industry was reduced from a labour force of 40,000 in 1907 to one of 16,000 in 1935. In the post-war period the industry has been working to the full capacity of its available labour force and its available supplies. As the conversion value of L. is so very great it has been a most important export, and the target for this small industry for export in 1949 was of the order of £10,000,000 sterling.

See W. Felkin, *History of the Machine-trought Hosiery and Lace Manufactures*, 1867; A. Cole, *Ancient Needle-point and Pillow Lace*, 1875, and *Canta Lectures on the Art of Lace-making*, 1881; E. Lefebvre,

Embroidery and Lace (Eng. trans. by A. Cole), 1888; Dounert, *La Dentelle*, 1889; Mrs. B. Palliser, *History of Lace* (new ed.), 1900; Elizabeth Mincoff and M. Marriage, *Pillow Lace*, 1908; C. M. Blum, *Old World Lace*, 1920; G. Whiting, *A Lace-maker's Guide*, 1920; M. Schnelle, *Alle Spitzen*, 1920; A. von Honneberg, *The Art and Craft of Old Lace*; E. Page, *Lace-making*, 1930; F. A. Wells, chapter on 'The Lace Industry' in *Studies in Industrial Organisation*, ed. by H. A. Silverman, 1944; and J. C. MacCallum, section on 'The Lace Industry' in *Research in Industry*, H.M.S.O., 1948.

Lace Coral, see POLYZOA.

Lacedæmon, see SPARTA.

Lace-leaved Plant, see OUVERANDRA.

Lacépède, Bernard Germain Étienne de Laville, Comte de (1756-1825), Fr. naturalist, b. at Agen. In 1785 he was appointed curator of natural hist. in the Royal Gardens at Paris, and later held the position of prof. in the Jardin des Plantes and at the univ. At the outbreak of the revolution he retired to his country seat, but under the Directory became one of the first members of the Institution, Napoleon c. him upon him the dignity of grand chancellor of the Legion of Honour. He wrote *Histoire naturelle des poissons* (1798) and *Les Ages de la nature*; and continued Buffon's *Natural History*.

Lacertidæ, see LIZARD.

Lacewing Fly, see GOLDEN-EYE FLY.

Lachaise, François d'Aix de (1621-1709), Jesuit priest, confessor of Louis XIV., b. at Aix in Forey. L. had the reputation of a man of broad views and upright character, and always avoided extreme courses. Was a friend of Fénelon, fond of antiquarian pursuits, and a man of some learning, and founded the college of Clermont. On the property acquired by his society in 1826 stands the cemetery of Père Lachaise in Paris, called after him. See R. Chantelauze, *Le Père de Lachaise*, 1859.

La Châtre, Fr. tn. in the dept. of Indre, standing on the riv. of the same name, and situated to the S.E. of Châteauroux. Pop. 4000.

La Chaussée, Pierre Claude Nivelles de (1692-1754), Fr. dramatist, b. in Paris. The originator of modern Fr. drama. Produced his first play, *La Fausse Antipathie*, in 1731, followed in 1735 by *Le Préjugé à la mode* and in 1737 by *L'École des amis*. He also wrote *Mélanide* (1741), *L'École des mères* (1744), *La Gouvernante* (1747), *L'École de la jeunesse* (1749), and sev. *Contes* in verse. In his plays La C. combined the tragedy of common life and pathetic comedy, a type named *comédie larmoyante*, and Voltaire maintained that this pointed to the fact that La C. was unable to write either of the recognised kinds of drama. See G. Lanson, *Nivelles de la Chaussée et la comédie larmoyante*, 1887.

Laches (Fr. *lâche*, remiss, loose; Lat. *laxus*, loose, slow), in equity (q.v.) denotes such delay on the part of a plaintiff in seeking his remedy as will bar his claim to relief; for it is a maxim in equity that 'delay defeats equity.' Although analo-

gous to the various statutory terms the lapse of which by the Statutes of Limitations (q.v.) extinguishes rights or operates indirectly to transfer them to others, no precise period is necessary to amount to L. All that the equitable doctrine reprehends is unreasonable delay in the circumstances of the case, whereas rights may be barred under the Statutes of Limitations irrespective of the knowledge or means of knowledge of the circumstances of the person whose right is barred. It is not always easy from the decided cases to infer the basis of the maxim, but, generally speaking, the man who 'sleeps on his rights' is taken to have acquiesced, actually or constructively, in what he subsequently seeks to complain of. Hence fraud, whether on the part of the defendant or any one else, by which the plaintiff is rendered ignorant of his rights, will not, however long a time has elapsed, prevent the plaintiff from obtaining relief in equity; and this is also the case where the Statutes of Limitations apply. But another principle upon which the courts have acted is that he who delays ought not to be given a remedy when through his neglect or implied waiver of his rights other and innocent persons have acquired rights which, if disturbed, will result in such other persons being placed in an unfair or unreasonable position.

Lachesis, see MOIRÆ.

Lachine, tn. of Jacques-Cartier co., Quebec, Canada, on Lake St. Louis and the Canadian National railways, 7 m. S.W. by St. of Montreal, and a favourite summer residence. Steel bridges, wire, electrical apparatus, motors and equipment, engines, blinds, are manufactured, and boats are built. There is a canal hence to Montreal (9 m.) circumventing the L. Rapids of the St. Lawrence, through which all the water commerce between Montreal and the W. passes. This canal has five locks and a rise of 45 ft. Manoir-L. Museum is an old house built between 1671 and 1680. The tn. has also beautiful parks and playgrounds, and the promenade Père Marquette on the water front. There is a high school, the Collège Marie Anne for girls, and two hospitals. Pop. (1948) 24,000.

Lachish (Heb. *Lākish*), city of Judah, situated between Gaza and Eleuthropolis, and one of the caps. of the Canaanites. In 701 B.C. it was conquered by Sennacherib during his invasion of Judah, and it was to L. that King Hezekiah of Judah sent messengers with gifts, hoping thus to prevail upon Sennacherib to spare Jerusalem. L. is mentioned also among the cities resettled by the Israelites on their return from the Babylonian captivity. The tn. is now deserted, but is represented by the stone heaps of Tel-el-Hesi. Excavations have disclosed eight cities built one above the other, and afford our earliest knowledge of Palestinian ceramics. See W. Petrie, *Tel-el-Hesi*, 1891, and F. Bliss, *A Mound of Many Cities*, 1898.

Lachmann, Karl Konrad Friedrich Wilhelm (1793-1851), Ger. philologist and

critic, *b.* at Brunswick. After studying at Leipzig and Göttingen, in 1825 he was appointed extraordinary prof. of classical and Ger. philology at Berlin Univ., and ordinary prof. in 1827. He pub. *Betrachtungen über Homers Iliad*; ed. Catullus, Tibullus, Lucilius, Lucretius, etc.; and trans. Shakespeare's *Sonnets* and *Macbeth*. L.'s correspondence with the brothers Grimm was pub. in 1925, and a first vol. of letters in 1943. See M. Hertz, *Karl Lachmann, eine Biographie*, 1851; J. Grimm in *Kleine Schriften*, 1864; J. E. Sandys, *History of Classical Scholarship*, 1908.

Lachute, banking tn. in Quebec, Canada, cap. of Argenteuil co., 40 m. W.N.W. of Montreal. There are saw-mills and dairy produce is exported. Pop. 4000.

Lacium, promontory on the S. coast of Italy, 6 m. S. of Crotona; a bold and rocky headland, forming the termination of one of the offshoots of the Apennines. In anct. times it was crowned by the temple of the Lacinian Juno, the ruins of which have given name to its modern appellation, Capo delle Colonne.

Lackawanna: 1. Riv. in Pennsylvania, U.S.A., rising in the N.E. of the state and entering the Susquehanna R. at Pittston. Scranton and Carbondale are the chief tns. on its banks, and rich mines of anthracite occur in the valley. 2. City of Erie co., New York, U.S.A., at the E. end of Lake Erie. About one-twentieth of Amer. steel is produced at L., in the Bethlehem steel works. Pop. 24,000.

Lacock, vil. of Wiltshire, 2 m. from Melksham and 3 m. S. of Chippenham. L. Abbey retains its early thirteenth-century cloisters, sacristy, chapter-house, and nuns' parlour. After the Reformation Sir Wm. Sharington (c. 1540) built a Tudor mansion round these monastic ruins, and its chief features are the splendid octagonal tower overlooking the Avon and the large courtyard with half-timbered gables and clockhouse. It was at L. that Fox Talbot in 1839 invented the photographic process called after his name. The abbey and other properties here now belong to the National Trust.

La Condamine, Charles Marie de (1701-1774), Fr. geographer, *b.* in Paris. First served in the army, and then studied science and exploration. In 1731 took part in the expedition in the Levant, exploring the coasts of Africa and Asia, and making collections. In 1735, with Godin and Bouguer, he formed one of an expedition sent to Peru to measure the length of a degree of the meridian in the equatorial neighbourhood and show more accurately the shape of the earth. Chief pub.: *Journal du voyage fait par ordre du roi à l'équateur* (1751).

Laconia: 1. City in New Hampshire, U.S.A., co. seat of Belknap co., on the Winnepesaukee R., 24 m. N. by E. of Concord. Mt. Belknap is 5 m. distant. It has extensive manufs. of machinery, railroad cars, blinds, yarn, hosiery, woollen goods, etc. Pop. 13,500. 2. Prov. (anct. Lakodaimon) in Greece in the S.E. part of the Peloponnesus. Pop. 148,500. See SPARTA.

Lacordaire, Jean Baptiste Henri Dominique (1802-61), Fr. preacher, *b.* at Reccey-sur-Ouche, Côte-d'Or. He was ordained priest in 1827, and was chaplain to a convent and to the Collège Henri IV. He began his Christian 'conferences' at the Collège Stanislas (1834), which paved the way for his eloquent sermons delivered at Notre Dame (1835-36). In 1838 he joined the order of Friars Preachers or Dominicans, was clothed with the habit of that order at the Minerva in Rome, assuming the name Dominique, and prepared his *Mémoire pour le rétablissement en France de l'ordre des frères prêcheurs* (1839), and collected materials for his *Life of St. Dominic* (1841). From 1843 to 1851 he continued his 'conferences' at Notre Dame, his funeral orations being especially famous, but the best were his last, delivered at Toulouse in 1854, a series on the Christian life. In 1860 he was elected a member of the Académie, succeeding De Tocqueville. His works include *Considérations sur le système philosophique de M. de Lamennais* (1834); *Conférences de Notre Dame de Paris* (1835-51); *Conférences de Toulouse* (1854). His complete works were pub. in 1872. See lives by C. de Montalembert, 1862 (Eng. trans. 1863); B. Chocarné, 1866, and J. Honnêt; also G. Ledos, *Morceaux choisis et bibliographie de Lacordaire*, 1923.

Lacquer and Lacquering. L. is a composition which is used for the preservation and ornamentation of such substances as metal, wood, leather, etc. Lacquering has been practised for centuries in China, Japan, and many other E. countries. The famous lacquerware of the Jap. consists of wood which is coated with the juice of the L.-tree, *Rhus vernicifera*. This varnish makes the surface very hard, and differs from other varnishes in that it can endure heat. There are various kinds of lacquerware, the best being prepared by a process very tedious, owing to the number of coats it receives. One very well-known class of Ls. consists of various gums and resins, such as shellac and resin, which have been dissolved in solvents such as wood spirit. They have the advantage of drying quickly, but suffer from alterations caused subsequent to application by light, water, heat, and cold. The method of application is simple. Sev. coatings of the L. are laid on the material to be treated. Each coating is allowed to dry before the next one is superimposed. During the last few years rapid advances have been made with the introduction of partly nitrated cellulose preparations obtained by the action of sulphuric and nitric acids on cellulose. A typical L. of this basis contains, in addition to the nitrated cellulose (e.g. pyroxylin) dissolved in a suitable solvent, such as amyl acetate: (1) A plasticiser like castor oil, or linseed oil, whose function is to prevent cracking when the L. dries, as the solvent is removed. (2) Gums and resins like shellac and the modern synthetic resins, to lower the cost. (3) Pigments and dyes. (4) Diluents like toluene. These Ls. may be applied either (a) by brushing on; (b) by

dipping the article in the L.; (c) by spraying with a spray gun atomiser. At the present time the advance of the chem. of plastics has brought with it a number of new and important plastic l.s. suitable not only for wood but for metal surfaces; they are hard, resistant, and easy to apply. See also PLASTICS. See S. W. Bushel, *Chinese Art*, 1921, and E. F. Strange, *Chinese Lacquer*, 1926.

Lacretelle, Jacques de (b. 1888), Fr. novelist and essayist, b. at Château de Cormatin in Burgundy, of distinguished literary forbears, and educated at the Lycée Janson. Studied Eng. literature at Cambridge. His chief novels are *Silbermann* (1922), an objective study of a Jewish boy in conflict with his Aryan schoolfellows; and *La Bonifas* (1925), a study in introspective psychology. He shows a preference for solitaries, whose psychological constitution he acutely analyses; this is exemplified in his *La vie inquiète de Jean Hermelin*, his first novel (1920), and, much later, in *Le Retour de Silbermann* (1939), a story showing the influence of Gide. Other works: *Les Hauts-Ponts*, a novel in 4 parts (1932-33); *Quatre nouvelles italiennes* and *L'Âme cachée*, short stories (1928); *Lettres espagnoles* (1926); *Les livres étudiés* (1931), essays; *L'Écrivain public* (1936); and *Liberations* (1945). He was made a member of the Fr. Academy, 1938.

Lacretelle, Jean Charles Dominique de (1766-1855), Fr. politician and historian, b. at Metz. Became secretary to the duke of Rochefoucauld-Liancourt. In 1809 he was made prof. of hist. in the Paris Faculty of Letters; in 1810 censor of the press; in 1811 a member of the Fr. Academy, and in 1816 its president. His works include *Précis historique de la Révolution française* (1801-6); *Histoire de France pendant le dix-huitième siècle* (1808); and *Histoire de France pendant les guerres de religion* (1814-16).

Lacroix, Paul (1806-84), Fr. author, b. in Paris. He was a prolific writer, one of his chief works being *Le Moyen Âge et la Renaissance* (produced 1847, with Séré), a book on the manners, customs, and dress of those times. He also pub. elaborate works, *Histoire de la Prostitution* (1851-1852); *Histoire du XVI^e siècle en France* (1834-35); and *Histoire politique, anecdotique et populaire de Napoléon III.* (1853-1854). He is best known as 'P. L. Jacob. Bibliophile', a name suggested by his constant interest in libraries. In 1835 he was keeper of the Arsenal Library.

Lacroma, small Yugoslav ls. in the Adriatic, noted for its rich vegetation, its monastery, and its château.

La Crosse, co. seat of La C. co., Wisconsin, U.S.A., on the Mississippi R. near the mouths of the Ia C. and Black Rs., 130 m. S.E. of St. Paul. It is an important shipping point in the tobacco trade, and has very large lumber mills. There is trade also in dairy produce and cattle. Pop. 42,700.

Lacrosse, national ball game of Canada, derives its name from the resemblance of the curved netted stick, with which the game is played, to a bishop's crozier. The

game has its origin in a similar pastime of the N. Amer. Indians, in which whole tribes used to take part. In 1867 Governor Beers suggested the adoption of L. as the national game of Canada, and the National L. Association of Canada was formed; since then the game has flourished greatly in Canada and to a less extent in the U.S.A. The Eng. L. Association was formed in 1868, but the game was very little played in England until 1902. In that year the Toronto L. Club sent a team over to play the representative clubs of England and Ireland. The club's visit and that of the Ottawa club in 1907 have done a great deal to popularise the game. Matches between the N. and S. of England have been played since 1882 and a co. championship was started in 1905. England played Ireland for the first time in 1881, and intervarsity matches were instituted in 1903.

The object of the game is the same as that of football and hockey, to score goals. The goals must be at least 100 and not more than 150 yds. apart; they are 6 ft. by 6 ft., and are set up in the middle of the goal crease a space of 12 yds. square marked out with chalk. A net is drawn from the top rail and sides of the goal posts to a point 6 yds. behind the middle of the line between the posts.

The side boundaries are agreed on by the captains. No spikes may be worn on the shoes. The ball is made of Indian rubber sponge, and must weigh between 4½ and 4¾ oz., and be between 8 and 8½ in. in circumference. The 'crosse' is a light staff of hickory wood, with the top bent in the form of a hook, from the tip of which a thong is drawn down and fastened to the shaft about 2 ft. from the handle. It may be of any length, but must not be broader than 1 ft. in any part, and no metal may be used in its manufacture. Across this frame is a loose network of gut or raw hide. A team consists of twelve players—a goalkeeper, point, cover-point, three defence fields, a centre, three home fields, an outside home, and an inside home. Each player, save the goalkeeper, is directly marked by an opponent. The game is opened by the two opposing centres 'facing' the ball. Each centre stands with his left shoulder to his opponent's goal and his crosse held wood downwards on the ground; at a given signal each tries to get the ball. No player may handle the ball save the goalkeeper, and he only when saving a shot. For a foul the player is either suspended until a goal is scored or until the termination of the game, or a 'free position' (a free kick at football) is

THE CROSSE

given. No charging is allowed, but a player may stand in front of an opponent without touching him. If the ball crosses the boundary line it is 'faced' by the two nearest players, the rest remaining where they were. There is no 'offside' rule. The ball is carried on the cross with a peculiar rocking motion, which is only learnt by practice. See Sachse, *Lacrosse and Hockey*.

Lactantius, Lucius Caelius, or Caelilius Firmianus Lactantius (c. 250-330), writer and teacher of Lat. eloquence, was probably a native of Italy, but studied in Africa. About 301 he settled at Nicomedia at the invitation of Diocletian, and about thirteen years later went to Gaul to superintend the education of Crispus, son of Constantine. Previous to this he had become a convert to Christianity. His chief work is *Divinarum Institutionum Libri VII.*, the seven books being 'De Falsa Religione,' 'De Origine Erroris,' 'De Falsa Sapientia,' 'De Vera Sapientia et Religione,' 'De Justitia,' 'De Vero Cultu,' and 'De Vita Beata.' Other works of his are *De Mortibus Persecutorum*, an account of the persecutions from Nero to Diocletian; *De Ira Dei*; and *De Opificio Dei sive de Formatione Hominis*. There is a trans. by Fletcher in *Ante-Nicene Fathers*, vii.

Lactaeal, any one of the lymphatic vessels that take up the chyle absorbed from the mucous membrane of the intestines and carry it to the thoracic duct. Chyle, the product of fat-digestion, has a milky-white appearance, and this appearance is communicated to these vessels when full; hence the name.

Lactic Acid, molecular formula $C_3H_5O_3$, organic acid occurring in sour milk. The names ethylidenelactic acid and ethylene-lactic acid are sometimes applied to the isomers α -hydroxypropionic acid and β -hydroxypropionic acid respectively. The former, whose structural formula is $CH_3\cdot CH(OH)\cdot CO_2H$, is the one formed by lactic fermentation of sugars, starch, etc., and is more particularly entitled to the name L. A.; the latter, $CH_3(OH)\cdot CH_2\cdot CO_2H$, is not formed during lactic fermentation, but behaves in many respects like L. A.; it is otherwise known as hydracrylic acid. There are still two more isomers of formula $C_3H_5O_3$: sarcos-lactic acid, which occurs in extract of meat, and an acid of similar constitution formed in the lactic fermentation of cane-sugar; these are mainly to be distinguished by their optical properties. L. A. is a sour, syrupy liquid, miscible with water and alcohol in all proportions. It cannot be distilled, as it decomposes at a moderately high temp. It forms metallic salts, which are known as lactates, some of which are used in mordanting cotton, wool, and calico. L. A. is important in tanning, in medicine, and in the perfume industry. Esters of L. A. are used as plasticisers. It is manufactured by the fermentation of starch, maize, etc., by organisms such as *Bacillus acetii lactici*. The commercial acid contains 80 per cent L. A.

Lactic Acid Therapy, system of treating

intestinal disorders and general weakness by the administration of sour milk, or of preparations containing lactic acid. The sour milk theory owed its popularity to the writings of Élie Metchnikov of the Pasteur Institute at Paris. Many digestive troubles are due to the action of bacteria in causing putrefaction within the intestines, thus giving rise to changes which in the main are detrimental to health, though some of them undoubtedly assist the absorption of food material. Metchnikov proposed to fight the noxious bacilli with other bacilli whose action is conducive to good health. The precise manner in which the lactic bacillus or its products aids digestion is still a matter of doubt, and it may be said that the treatment cannot be unreservedly recommended in all cases. The marvellous longevity among peoples to whom sour milk is an everyday article of food, and the testimony of many patients who have experimented with the treatment brought Metchnikov's theories into good repute. Many preparations are now produced from soured skim milk under various trade names. The bacteria concerned are *Lactobacillus acidophilus* and *Bacillus bulgaricus*; they are usually obtained from pure cultures, and are introduced into the skim milk when it has cooled after boiling. The souring is then allowed to go on until the casein in the milk is on the point of coagulation. If the treatment does not cause amelioration of the distressing symptoms, it should not be continued. More recent work does not confirm all of Metchnikov's theories and claims that *L. acidophilus* is the only bacterium capable of producing beneficial results, and must be directly introduced into the intestine in specially inoculated soured milk. This is efficacious in curing constipation, diarrhoea, and some other intestinal disorders. See E. Metchnikov, *The Prolongation of Life* (trans.), 1907, and N. Kopelov, *Lactobacillus acidophilus*, 1926.

Lactometer, or Galactometer, contrivance for ascertaining the richness of milk. It generally consists of a graduated glass tube, the number of divs., as a rule, being 100. This tube is filled with milk to the top of the graduated part, and the liquid is then allowed to stand so that the cream may separate. After a time it may be seen how many parts in a hundred the cream occupies.

Lactose, or Milk-sugar ($C_{12}H_{22}O_{11}$), sugar found in the milk of all mammals to the extent of about 4 per cent. It may be prepared by separating the casein of milk with rennet, and evaporating the remainder; crystals of L. are formed and may be purified by recrystallising from water. L. is not so sweet as sucrose, but is much more easily digested by infants, so that cow's milk adapted for use in babies' feeding bottles is commonly sweetened with it.

Lacus Verbanus, see MAGGIORE, LAKE. **Lacy, Franz Mauritz** (1735-1801). Austrian soldier. B. at St. Petersburg, the son of Peter L. (q.v.), he entered the Austrian service and in 1758 became chief of staff to Daun, directing much of Austrian

strategy in the Seven Years war. After peace-time work in army reform L. commanded Austrian troops in the War of the Bavarian Succession, and against the Turks.

Lacy, Peter, Count (1678-1751), Irish soldier and Russian field marshal, *b.* in Limerick. He entered the Russian service in 1697, and in 1725 was appointed commander-in-chief in St. Petersburg, Ingria, and Novgorod. He took part in the war for the estab. of Augustus of Saxony on the throne of Poland (1733-35), and was made field marshal (1736). The same year he succeeded in reducing Azof, then in the hands of the Turks, and in 1741, being appointed to command against the Swedes in Finland, seized the important Swedish post of Wibmanstrand. L. has been called the 'Prince Eugene of Muscovy.' He did much to reform the Russian Army.

Ladakh, mountainous prov. in the valley of the upper Indus lying about 13,000 ft. above sea level, between the Karakorum and the Himalayas. It now forms part of Kashmir, but was originally a div. of the Tibetan Empire. The cap. is Leh. The chief riv. is the Indus. There are valuable gold mines, and iron, salt, and sulphur are also found. Sheep are reared, and barley, wheat, and millet cultivated. Area, 45,762 sq. m. Pop. 270,000.

Ladas: 1. Famous Gk. runner in the time of Alexander the Great, native of Laconia, who gained the victory at Olympia in the δολιχος (long course of twenty stades). A monument was put up to his memory on the banks of the Eurotas, and there was also a fine statue of him by Myron (c. 430 B.C.) in the temple of Apollo Lyceus at Argos. 2. Native of Argium in Achaia, who gained a victory in the foot race at Olympia in 280 B.C.

Ladd, George Trumbull (1842-1921), Amer. philosopher, *b.* at Palmyerville, Ohio. He held the chair of philosophy in Bowdoin College in 1879, and was Clark prof. of metaphysics and moral philosophy at Yale, 1881-1901, becoming prof. emeritus in 1905. Some of his works are *Elements of Physiological Psychology* (1887); *Primer of Psychology* (1894); *Psychology, Descriptive and Explanatory* (1894); *Philosophy of the Mind* (1895); *A Theory of Reality* (1899); *Philosophy of Religion* (1905); *Knowledge, Life, and Reality* (1909).

Ladders, see **SCALING LADDERS**.

Ladin, or **Ladino**, Romance dialect, found in its purest form in the Grisons, Switzerland, particularly in the Engadine and neighbouring valleys. It took its origin from the 'lingua rustica Romana' of the later empire. It has little literature, but among the writers in it have been Johann von Travers, Conrad von Flüel, and S. F. Caderes. An excellent L. dictionary by Zaccaria Pallioppi appeared in 1895. See C. Battisti, *Popoli e lingue nell'Alto Adige*, 1931.

Lading, Bill of, see **BILL**.

Ladismith, tn. of Cape Prov., S. Africa. In the Little Karoo, 1860 ft. above sea level, in the midst of fine mt. scenery. It is a farm centre, producing grain, fruit, feathers, and brandy. Like Ladysmith

(*q.v.*) L. was named in honour of the wife of Governor Sir Harry Smith. Pop. (all races) 1700, (whites) 1000.

Lado, tn. of E. Sudan, in the Bari country, on l. b. of White Nile, just below Gondokoro. It was founded by Gen. Gordon in 1875, and became his headquarters after he had abandoned Gondokoro. Altitude 1525 ft.

Lado Enclave, region W. of the Upper Nile and N.W. of Lake Abert. Originally administered by the Congo Free State, being leased in 1894 to the king of the Belgians for his life (Leopold II., *d.* 1909), but since 1910 by the Anglo-Egyptian Sudan. Part is now included in the Mongalla dist. of Sudan, part in N. Uganda, to which it was transferred in 1914. Lado, on the Nile, 11 m. S. of Mongalla, was the cap. It was named from Mt. Jebel Lado (2500 ft.), and had an area of 15,000 sq. m.

Ladoga, Lake, largest lake in Europe, lat. 59° 56' to 61° 48' N., long. 29° 53' to 32° 50' E., bordering upon the Leningrad region, R.S.F.S.R., and the Karelo-Finnish S.S.R. Area 7230 sq. m. The shores are generally low but rocky in the N.W. and are fringed by numerous small is. It receives about seventy rivs., of which the chief are the Volkhov, Svir, Wuoxen, Taipala, and Syas, and its outlet is by way of the Neva into the gulf of Finland. The depth is very unequal, the average being 300 ft. and the maximum (in the N.) is 780 ft. There are numerous rocks and quicksands, and the lake is subject to violent storms, which render navigation dangerous. It is frozen for about half the year. There is a chain of navigable canals round the S. and S.E. sides. The chief tns. on its shore are Novaya-Ladoga and Kexholm, both of which figured in the Russo-Ger. campaign, 1941-42. There was also much fighting for the lake between Russia and Finland (1939-40) and again in the summer of 1944. See **EASTERN FRONT, OR RUSSO-GERMAN CAMPAIGN IN SECOND WORLD WAR**.

Ladrones, or **Marianne Islands** (Marianas), group of is. in the Pacific Ocean. They are fifteen in number, ten of which are of volcanic origin, and of the 9 only four are inhabited, while the other five are coralline limestone is. All of them are densely wooded and the vegetation is luxuriant, the chief productions being coco-nut and areca palms, yams, manioc, coffee, cocoa, sugar, cotton, and tobacco. The is. were discovered by Magellan in 1521, and called 'Islas de los Ladrones' by his crew on account of the thieving propensity of the inhab. The seat of gov. is on the is. of Saipan. They were originally the property of Spain, but Guam, the largest, was ceded to the U.S.A. in 1898, and the rest were sold to Germany in 1899. Area (excluding Guam) 200 sq. m. Pop. (1940) 70,000 (natives 50,000, Jap. 20,000). Cap., Agaña. In 1914 they were occupied by the Australians, but after the First World War were put under Jap. mandate. In the Second World War the Amers., having reduced the Marshall Is. and, with them, the Jap. bases of Truk and Ponape, advanced to the Marianas. At the heart

of this group lay their main objective, the is. of Saipan, an air centre and one of the chief Jap. naval bases in the area N. of Truk and Palaw. Their strength and geographical position made the Marianas a highly strategic part of the Jap. system of its fortresses, and formed one of the main barriers defending the seas between Japan and the Philippines. On June 10, 1944, a strong Amer. task force of battleships and carriers began a sustained bombardment of Saipan and four days later three divs. landed on the is. The Jap. garrison of 20,000 was outnumbered by the invaders, but its resistance was savage and fanatical, the jungles and mt. ridges favouring the defence. The bitterness of the defence was a reflection of the importance which the Jap. attached to holding the Marianas, but though they now launched attacks with torpedo bombers they showed no disposition to risk their navy against the powerful Amer. force covering the invading troops. The sole Jap. hope lay in effecting a surprise attack with carrier planes launched at extreme range, but the assault failed of its purpose. Amer. carriers and battleships moved on Guam and Rota and destroyed the Jap. airfields there on which the Jap. carrier planes had counted on finding a refuge. In that engagement over 400 Jap. planes were destroyed (July 6). The remnants of the Jap. garrison, pushed to the N. tip of Saipan, delivered their last desperate counter-attack, but by July 8 the Amer. forces were in complete control of the is., having sustained casualties to the extent of over 16,000 (3000 killed). The Jap. lost nearly 21,000 in killed alone. With Saipan conquered the occupation of the remaining positions in the Marianas followed quickly. (See further under PACIFIC CAMPAIGNS OR FAR EASTERN FRONT IN THE SECOND WORLD WAR.) On July 19, 1947, the U.S.A. formally took over the rule of the former Jap. mandated is. in the Pacific under United Nations trusteeship. All these is. had been administered by the Amer. Navy since their capture. See L. M. Thomson, *Archæology of the Mariana Islands*, 1922, and *Guam and its People*, 1942; and T. Janahara, *Pacific Islands under Japanese Mandate*, 1940.

Lady, term used as the feminine of gentleman, or in a more confined sense as a title corresponding to lord. It is borne by the wives of peers and the daughters of dukes, earls, and marquesses, who are designated by the title L. prefixed to their Christian name. The wives of baronets and knights are also called L., but the title is prefixed to the surname only.

Ladybank, par. and tn. of Fifeshire, Scotland, 5 m. S.W. of Cupar. It is an important railway junction, and a picturesque summer resort. There are malting works and linen manufs. Pop. 1200.

Ladybird, popular name of the numerous species of polymorphous Coleoptera belonging to the family Coccinellidae, and remarkable for their beautiful variety of colouring. Their chief characteristic is the curious formation of the tarsal, of which only three of the four segments are visible,

the third being sunk in the second; the antennae are short and slightly clubbed, and the head is largely concealed by the thorax. There are 2000 species, generally of a bright red or yellow colour, with black or coloured spots.

Ladybrand, tn. of the Orange Free State, S. Africa, named after the wife of President Brand (as was Zastron, that being her maiden name). Its climate is extremely bracing, and on this account it is much frequented as a health resort. Petroleum and coal are obtained in the vicinity. Pop. (white) 2270, (native) 2300.

Lady Chapel, chapel dedicated to the Virgin Mary, usually a prolongation of the choir, built eastward of the high altar and projecting from the main building.

Lady Day (March 25), festival of the Annunciation of the Blessed Virgin Mary. It is one of the four Eng. quarter days.

Lady Margaret Hall, residence at Oxford for women students, named after the countess of Richmond and Derby, mother of Henry VII. It was founded in 1878 according to the principles of the Church of England, but with full religious liberty for the members of other denominations. All intending students must pass an entrance examination, 'Responsions,' and undertake, as a rule, to read for an honours degree. Women students are admitted to all the examinations of the univ. of Oxford and are allowed to attend the univ. lectures.

Lady's Mantle, see *ALCHEMILLA*.

Ladysmith, tn. in Natal, S. Africa, on the Klip R., 80 m. N.N.W. of Pietermaritzburg and 203 m. by rail from Durban. The tn. is named in honour of a Sp. girl, who was rescued by her future husband, Sir Harry Smith, after the storming of Badajoz in the Peninsular war. Sir Harry Smith afterwards became governor of the Cape Colony. L. was founded in 1831, and owes its growth to the opening of the railway from Durban in 1886 and the extension of the line to Johannesburg. It is now the third tn. in Natal, the trading centre of the N. part

of Natal, and the chief railway junction in the prov. Its tn. hall is a substantial building, which includes the administrative offices, hall, and theatre. The tn. gardens are well laid out. The appearance of the streets and the general aspect of the tn. have much improved in recent years. In All Saints Church, which has been enlarged since the Boer war, are memorial windows and tablets to the 3200 men who fell in the defence and relief of the tn. in the S. African war, 1899-1900. L. is a convenient centre from which to visit the neighbouring battlefields, sev. of which are close to the tn. Spion Kop (Jan. 20, 1900) is 18 m. distant, and Wagon Hill and Nicholson's Nek are within walking distance. The lych gate has been erected as a memorial to the fallen of the First World War. Planned on a slope near the Klip R. at a distance of 30 m. from the foot of the Drakensberg Range and sheltered from severe winds, with a dry, bracing, winter climate, L. has been recommended for patients suffering from phthisis or pulmonary disorders. Pop. (all races) 11,000, (white) 4250.

Lady's Tresses, see **SPRINKLES**.

Lae, seaport and cap. of the Australian mandated ter. of New Guinea. It is situated in the Morobe dist. at the head of Huon Gulf at the mouth of the Wussli (Markham) R. After the volcanic eruption of 1937 in Blanche Bay, it was decided to move the seat of gov. from Rabaul (in the is. of New Britain) to L. L. remained the seat of administration until it was evacuated after the Jap. attacks in Jan. 1942. It was recaptured by Australian forces on Sept. 18, 1943. (For an account of the fighting for L. and Salamaua, see under **PACIFIC CAMPAIGNS**, or **FAR EASTERN FRONT**, in **SECOND WORLD WAR**.) Little remained of L. after the war, and, except for the aerodrome there, L. has nothing to-day, not even a good harbour. The only building of former days is Guinea Airways' old workshop; all else was obliterated, although in the vast triangular area formed between the dist. called Milford Haven, the hotel, and Malahang native hospital, there are (1949) hundreds of buildings left behind by the Australian and Amer. troops, connected by what were previously good roads but now falling into disrepair.

Laeken, com. of Brabant prov., Belgium, 2½ m. N. of Brussels, of which it forms a suburb. L. Castle, the summer residence of the Belgian royal family, stands on a hill. There is a fine modern church; the suburb has a noted carpet-making industry. Pop. 30,500.

Laelia, a genus of Orchidaceae, is closely allied to the genus *Cattleya*. There are in all twenty species, all of which occur wild in tropical America, and many of which are epiphytes. The leaves are fleshy and the flowers very beautiful, for which reason they are often cultivated in Britain. *L. anceps* is a well-known species bearing lilac-coloured flowers.

Laënnec, René Théophile Hyacinthe (1781-1826), Fr. doctor, b. at Quimper in Brittany. He is famous as the inventor of the stethoscope, as well as for

his numerous writings, among which may be mentioned *De l'auscultation médiate* (1819), which made a great sensation at the time of its pub. and has been trans. into many languages; *Histoire d'inflammations de poitrine* (1801); and *Observations sur les fièvres intermittentes* (1807). L. also ed. the *Journal de Médecine*, and was prin. physician to the Hôpital Necker for some years. He occupied the chair of medicine at the Collège de France in 1822, and was a member of the Royal Academy of Medicine.

Laer, Pieter van, see **BAMBOCCIO**.

Laertes: 1. In anct. Gk. legend king of Ithaca and father of Odysseus. He was the son of Acrisius and Chalcomedusa and husband of Anticleia. In his youth he conquered Nerium and took part in the Calydonian hunt and the expedition of the Argonauts. While Odysseus was at Troy he lived in rustic retirement, but after his return was made young again by Athena. 2. Character in Shakespeare's *Hamlet*, brother to Ophelia.

Laertius, Diogenes, see **DIODEGENES LAERTIUS**.

Laeso, Dan. is. in the Cattegat. The inhab. are engaged chiefly in the production of salt. There is little good soil, for the surface of the is. has been denuded of trees to provide fuel for the boiling of sea-water for the salt industry. Pop. 3000. See H. Baurlein, *Lausfjalls and Furefjells*, 1919.

Laetare Sunday, see **GOLDEN ROSE**.

Lavulose, see **FRUCTOSE**.

La Farina, Giuseppe (1815-63), It. historian, who conducted sev. Liberal newspapers, ultimately removing to Florence. Here he estab. in 1847 *L'Alba*, a democratic jour. advocating It. freedom and unity, but went back to Sicily on the outbreak of the revolution, and was exiled in 1849. In 1850 he pub. his *Storia documentata della Rivoluzione Siciliana del 1818-19* (1850) and *Storia d'Italia dal 1815 al 1818* (6 vols.) (1851-55). Other works: *La Germania coi suoi monumenti* (1842) and *L'Italia coi suoi monumenti* (1842).

La Fayette, Gilbert Motier de (1380-1462), marshal of France, was descended from an anct. family of Auvergne. He served under Boucicaut and John I., who made him lieutenant-general in Langue-doc and Guienne. In 1420 he was created marshal of France for his successes over the Eng. and Burgundians on the Loire. He was in command of the troops at Baugé in 1422, and fought with Joan of Arc at Orleans and Palay in 1429.

La Fayette, Marie Joseph Paul Roch Yves Gilbert Motier, Marquis de (1757-1834), Fr. general and politician, b. in the château de Chavagnac in Auvergne. He inherited his estates at the age of thirteen, and having served as sub-lieutenant under Noailles for a period, quitted France and sailed for America in 1777 to aid the colonists. He distinguished himself on the side of Washington, especially at the defence of Virginia in 1781 and at the battle of Yorktown in 1782. He had been made a major-general in the Fr. Army (1781), and in 1787 took his seat in the

Assembly of Notables and demanded the convocation of the States-General, thus becoming a leader in the Fr. Revolution. In 1789 he was elected to the States-General, and being made vice-president of the National Assembly laid on the table a declaration of rights based on the Amer. Declaration of Independence. The same year he was chosen colonel-general of the new National Guard, and it was he who proposed the combination of colours now in the tricolour cockade of France. His position was difficult; although he struggled for order and humanity, the Jacobins detested his moderation, and the court hated his reforming zeal. He supported the abolition of title and all class privileges, but the hatred of the Jacobins increased and he was compelled to take refuge in Liège. He was imprisoned by the Austrians for five years, but released by Napoleon. and again was a leader of the opposition (1825-30). During the revolution of 1830 he resumed his leadership of the National Guard, but was as unsuccessful as before. See *Memoires, correspondances et manuscrits du general La Fayette*, pub. by his family, 1837-38; O. Roberts, *With Lafayette in America*, 1919; P. Guedalla, *Father of the Revolution*, 1926; B. Whitlock, *Lafayette*, 1929; and M. de la Bedoyere, *Lafayette, a Revolutionary Gentleman*, 1933. The life by A. Latzko, 1933, contains a bibliography.

MME DE LA FAYETTE

La Fayette, Marie Madeleine Pioche de la Vergne, Comtesse de (1634-83), Fr. author, b. in Paris. She studied Gk., Lat., and It., one of her tutors being Gilles de Ménage. She was friendly with Mme de Sévigné and intimate with La Rochefoucauld, which liaison lasted until his death. Her first novel, *La Princesse de Montpensier*, appeared in 1662, *Zayde* in

1670, and *La Princesse de Clèves* in 1678. The last, her *chef-d'œuvre*, which gives a vivid picture of the court life of her day, bears a striking contrast in its simplicity to the lengthy and extravagant romances of the time, and met with much criticism, even from Mme de Sévigné. In answer to this criticism she wrote her last novel, *La Comtesse de Tende* (1721). She also wrote *Histoire de Madame Henriette d'Angleterre* (pub. 1720). See C. Saint-Beuve, *Portraits des femmes*, 1869; D. Haussanville, *Madame de La Fayette*, 1891; H. Ashton, *Mme de La Fayette, sa vie et ses œuvres*, 1922; and F. Styger, *Essai sur l'œuvre de Mme de La Fayette*, 1911.

Lafayette: 1. Co. seat of Tippecanoe co., Indiana, U.S.A., on the Wabash R., 58 m. N.W. of Indianapolis. It stands on rising ground at the head of navigation on the riv. and is a shipping centre for the surrounding agric. area. There are various industrial plants, producing aluminium, motor accessories, electrical appliances, etc. The seat of Purdue Univ., noted for work in agric. science. Pop. 28,800. 2. City of Louisiana, U.S.A., on the Vermillion Bayou, 145 m. W. of New Orleans. It is an important shipping centre, and has railway shops, canneries, sugar refineries, and other plants. Pop. 19,200. **'Lafayette'** (Fr. liner), see 'NORMANDIE'.

Lafayette National Park. A gift to the U.S. Gov., this park consists of 12 sq. m. on Mt. Desert Is. off the coast of Maine. It contains many lakes, and was restored as far as possible to its pristine condition by reforestation by the U.S. Forest Service.

Laferte, Victor, see DOLGOROUKI.

La Ferte-sous-Jouarre, see FERTI-SOUS-JOUARRE.

Lafitte, Jean, see BARATARI.

La Follette, Robert Marion (1855-1925), Amer. politician, memorable in Amer. political annals as 'Fighting Bob,' b. Dane co., Wisconsin. Graduating from the univ. of Wisconsin in 1879, he was admitted to the Bar in 1880. Entering politics as a Republican, he served three terms in Congress from 1885 to 1891, after which he was governor of the state for three terms, from 1901 to 1905. In the latter year he was elected to the U.S. Senate, and served in that body until his death. In 1912 he and his friends founded the Progressive party, bitterly assailing President Taft for signing the Payne-Aldrich Tariff Bill, which revised the tariff upwards. In 1924 in the Republican convention he and his friends formed a new Progressive party, and he was nominated as president. He conducted a vigorous campaign, but only succeeded in capturing the electoral votes of his own state.

La Fontaine, Jean de (1621-95), Fr. poet, b. at Château-Thierry in Champagne. On both sides his family was of the highest prov. class, but was not noble. His father was *maître des eaux et forêts* and was well-to-do. Jean, who was the eldest child of his parents, was educated at the local grammar school of Château-Thierry and at the close of his schooldays entered the oratory and seminary of St. Magloire,

with a view to taking holy orders, but quickly found that he was entirely unsuited to that calling. He then studied law and was admitted *avocat* but did not practise, for about that time his father assigned his rangership to his son and arranged a marriage for him with a pretty girl of fifteen, Marie Héricart, of whom La F. soon grew tired (it was said that she was an idle housewife and read novels all day).

LA FONTAINE

One son was born to them and was taken care of wholly by his mother. In 1659 La F. agreed to a division of property and left his wife. He came to Paris where, under the influence of different patrons belonging to the nobility—the duchesse de Bouillon, the prince de Conde, Mme de la Fayette, and the beautiful Mme de la Sablière, a woman of high character and considerable intellectual power, who invited La F. to make his home in her house. Here he worked and lived for twenty years, drifting into that careless and easy-going existence which lasted till his conversion, just before his death, after an energetic young priest, M. Poucet, had brought La F. to realise and to acknowledge the impropriety of the *Contes*. Although Mme de la Sablière later had given herself up almost entirely to good works and religious exercises, La F. still remained an inmate of her house till her death in 1693. He himself only survived her about two years, and was buried in the cemetery of the Holy Innocents. From childhood he began to write verses, and in 1654 pub. a verse trans. of the *Eunuchus* of Terence. This got him an introduction to Fouquet, the Mæcenas of Fr. literature at the time, who awarded him a pension of 1000 francs for a piece of verse quarterly. After this he took up writing seriously for a time, and produced *Le Songe de Vaux* (1659), a medley of prose and poetry on Fouquet's country house, and *Les Rieurs du Beau-Richard*, a ballad, the same year. But La F., though a charming and gifted writer, was dissipated and idle, and it was not

until 1664 that he produced anything of importance. In this year the first book of his *Contes* appeared, the subjects of which are taken from Boccaccio, Ariosto, Machiavelli, and other writers. The stories are admirably told, but the book is coarse. In 1668 his *Fables choisies mises en vers* appeared, and in 1669 *Les Amours de Psyché et de Cupidon*. The *Fables*, which are free from the impropriety of the *Contes*, are known universally, and are generally regarded as his masterpiece. They exhibit the fecundity and versatility of the author, and what perhaps is the greatest praise, and this is given by De Sacy, they give delight to three sev. ages—to the child by their freshness and vividness, to the student on account of their perfect art, and to the man of the world on account of the subtle reflections on character contained therein. In his *Fables* La F. invented nothing. He found his subjects in numerous sources—Æsop, Phædrus, Babrius, and other ancients, or in sixteenth-century writers such as Des Périers, Rabelais, and Marot; but, having taken his subject, he transformed it by his wonderful gifts as a poet and psychologist. La F. was received into the Academy in 1681. See C. Walckenaer, *Histoire de la vie et des ouvrages de La Fontaine*, 1820; H. Talne, *La Fontaine et ses fables*, 1853, and many later eds.; R. Bray, *Les Fables de La Fontaine*, 1929; and J. Vianey, *La Psychologie de La Fontaine*, 1939; lives by G. Michaut, 1912-14, and A. Bailly, 1937; also Eng. trans. of the *Fables* by Sir E. Marsh, 1931.

LaFontaine, Sir Louis Hyppolyte (1807-1861), Canadian statesman, b. in Lower Canada; educated at Montreal; became a barrister. In 1830 he became a member of the Legislative Assembly, and about 1839 leader of the *parti prêtre*. He was opposed to the union of Upper and Lower Canada in 1840. He was an M.P. in 1841. In 1842 he joined with Robert Baldwin in forming the first Baldwin-L. administration, holding the portfolio of attorney-general for Lower Canada, but, disagreeing with Sir Charles Metcalfe, he resigned in 1843. In opposition until 1848, he was then called upon by Lord Elgin to form the so-called second Baldwin-L. administration, in which he was again appointed attorney-general; it was he who introduced the Rebellion Losses Bill of 1848, the passing of which finally estab. the triumph of responsible or parl. gov. in Canada. This marked the height of his parl. career and thenceforth he was more conservative in his outlook, particularly on the controversial questions of the abolition of seigniorial tenure and the secularisation of the clergy reserves. Resigned 1851 and withdrew from public life; but in 1853 became chief justice of Lower Canada, which position he held until his death. Baronet, 1854. He collaborated with Jacques Viger in *De l'esclavage en Canada* (1859). See S. Leacock, *Baldwin, LaFontaine, Hincks*, 1907.

Laforge, Jules (1860-87), Fr. poet, sometimes called by his enthusiastic friends the Fr. Heine, was b. at Montevideo, of Fr.

parents originally from Brittany. When a mere boy he returned to Tarbes, where he was educated, and afterwards lived in Paris, where he studied at the Lycée Condorcet. Through Paul Bourget he obtained the post of Fr. reader to the Ger. Empress Augusta. He held this post from 1881 to 1886. In his leisure moments he studied Eng. and Ger. and wrote verses. He married Leah Lee, a young Eng. girl, and settled in Paris, but succumbed to tuberculosis in a few months. His work is often marked by a bitter irony, the result of his foreknowledge that all things were to be brief for him. His best book of verse is his *Invitation de Notre Dame la lune* (1886). His most famous prose work is his short stories in *Mes moralités légendaires* (1887). See life by J. Ousiniar, 1925.

Lagarde, Paul Anton de (1827-91), Ger. orientalist, b. at Berlin, his real name being Botticher, and L. being assumed in 1854. He was a prof. at Göttingen Univ. from 1869 to his death. He ed. *Didascalia apostolorum syriace* (1854); *Prophetæ chaldaice* (1872); *Hagiographa chaldaice* (1874); Arabic, Syriac, and Coptic trans. of the scriptures, and also wrote many works on Persian and other oriental subjects. See lives by Anna de Lagarde, 1894, and J. Becker, 1935; also W. Mommsen, *Lagarde als Politiker*, 1927.

Lagemann, see LAYAMON.

Lager Beer, see BREWING, *varieties of Beer*.

Lagerlöf, Selma (1858-1940), Swedish novelist and poet, regarded as one of the foremost Swedish authors, b. at Morbacka, daughter of an army officer, educated at Royal Women's Superior Training College, Stockholm; taught at Landskrona, 1885-1895. In 1890 she received a prize in a magazine for some chapters of *Gosta Berlings Saga* (pub. in 1891), and took up literature in earnest after 1895. She received a doctor's degree from Upsala Univ. in 1907, and gained the Nobel prize in 1909. Her works include *Invisible Links* (1894); *Miracles of Antichrist* (1897); *From a Swedish Homestead* (1899); *Jerusalem* (1901); *Legends of Christ* (1904); *The Adventures of Nils* (1906); *The Girl from the Marsh* (1908); *Short Stories* (1915); *Lachris Toplevelius* (1920); *Charlotte Lovenskölde* (1925); *Harvest* (1933); and *The Diary of Selma Lagerlöf* (1937). Pub. her autobiography in 1924. L., whose work is essentially of the romantic order, was the forerunner of Sigrid Undset, author of the Nobel prize-winning novel, *Karin Lyvranddotter*. She was the first woman to be elected a member of the Swedish Academy. See lives by W. Berendssohn, 1928, and E. Wagner, 1943.

Laggan, Loch, lake in Inverness-shire, Scotland, situated 800 ft. above sea level and surrounded by deer forests. The shore is sandy and the dunes formed by S.W. winds give L. the appearance of a sea loch on the W. coast. Gooseander abound, and the waters, which receive Pateack R., are the haunt of the ferocious trout. L. is believed to have been the site of a hunting lodge of the ancient Scottish kings.

Laghout, or El Aghuat, military cap. of Algerian Sahara, 200 m. S.W. of Algiers. An important mart. Pop. 7000.

Lagny, tn. of France, in the arron. of Meaux, dept. of Seine-et-Marne, on the l. b. of the Marne, 17 m. E. of Paris. Manuf. of fine brushes. Close to L., at Pompoane, 1933, occurred the worst disaster in the hist. of Fr. railways, 15 m. from Paris, when 200 persons were killed in a collision. Pop. 7600.

Lago Maggiore, see MAGGIORE.

Lagoon (Fr. *lagune*, Lat. *lacuna*, a pool): 1. Shallow stretch of salt water near the sea. Such Ls. have been formed by the gradual raising of a sand-bar on the extension of a spit on a low shore, so that a sheet of water is isolated from the sea. 2. Sheet of fresh water at some distance inland, usually shallow and of small extent. Such are found in the old lake plains of Australia, and are the haunt of numerous aquatic birds. 3. The expanse of smooth sea-water enclosed by a coral reef or atoll in the S. Seas, etc.

Lagoon Islands, see GILBERT AND ELLICE ISLANDS.

E.N.A.

Lagos—THE OBUN OKE MARKET

Lagos: 1. Former Brit. crown colony on the Slave Coast, and after 1906 a W. prov. of S. Nigeria. In 1886 a separate colony and protectorate of L. was constituted; and in 1908 L. and S. Nigeria were united as the colony and protectorate of S. Nigeria; in 1918 the protectorate was united with that of N. Nigeria to form the colony and protectorate of Nigeria. It is the centre of the W. African palm-oil trade, and also exports oil nuts, rubber, cotton, coffee,

cacao, ivory, and gum-copal. The climate is very unhealthy for Europeans. Area 29,000 sq. m. Pop. 1,500,000 (500 Europeans). 2. Tn. and seaport of Nigeria, of which it is also the cap. It stands on an is. near the N. shore of the bight of Benin, and is joined to the mainland by a bridge. It has large docks, floating docks, and wharves, and is connected by rail with Kano, 700 m. to the N.E. It does a large and lucrative trade with all parts of Nigeria, especially in exporting palm oil and palm kernels, cocoa, ground nuts, hides, etc. L. is included in the old colony of Nigeria, but it is the headquarters of the whole protectorate. An attempt has been made to develop an African municipal corporation on the European model. Municipal administration began about sixty or more years ago with a 'Board of Health' which subsequently developed into a tn. council of five official, four elected, and four nominated members; this council is responsible for health and employs two medical officers of health as well as inspectors and social workers. Tn.-planning and slum clearance are in the control of an official body, the Lagos Executive Development Board. There is a wireless station under the control of the E. Telegraph Company, and secondary schools for boys and girls. Pop. 137,400 (500 Europeans). 3. Fortified seaport of Algarve prov., Portugal, on S. coast, 110 m. S. of Lisbon. There are old walls and an aqueduct, and near by is the site of anct. Iacobi. Pop. 8,500. 4. Tn. of Jalisco, Mexico, on Mexican Central railway, 100 m. N.E. of Guadalajara. Near it are some famous silver-mines, and the tn. is noted for its churches. Also called L. de Morena. Pop. 15,000.

Lagrange, Joseph Louis, Comte de (1736-1813). Fr. mathematician, b. of Fr. parents at Turin, where he received his education. At an early age he became prof. of mathematics in the Royal School of Artillery and there formed an association which rose to the status of an academy of sciences. He contributed largely to the *Memoirs of the Academy of Turin*, investigating, among other subjects, the propagation of sound, the vibration of chords, the motion of fluids. In 1764 he gained a prize offered by the Fr. Academy of Sciences for a *Theory of the Libration of the Moon*. In 1766 he became a director of the Berlin Academy of Sciences, in 1772 a foreign associate of the Academy of Paris, and in 1787 settled in Paris, where he became in 1791 prof. of geometry at the Polytechnic School. Author of *La Mécanique analytique* (1788); *Théorie des fonctions* (1798); and *Traité de la résolution des équations de tous degrés* (1798). His great discovery was the method of variations. See memoir by J. B. J. Delambre, 1876-77.

La Grange: 1. Co. seat of Troup co., Georgia, U.S.A., 60 m. S.W. of Atlanta. It has cotton mills and various manufs., and contains sev. educational establs. Pop. 22,000. 2. Tn. of Cook co., Illinois, U.S.A., on the Burlington route, 15 m. S.W. of Chicago. Pop. 10,500.

La Guardia, Fiorello Henrico (1882-1947), Amer. lawyer and politician, b. in New York and educated at New York Univ. Deputy attorney-general of New York, 1915-17. Member of Congresses, 1917-21, 1923-25. In the First World War he commanded the 8th Centre Aviation School and the Amer. Flying Force on the It. front. He was the first Republican for twenty years to be elected president of the Board of Aldermen of New York city (1921). Elected mayor of New York city, 1933, and re-elected, 1937, he initiated a federal housing scheme and measures for safeguarding labour interests. He was also a successful mediator in labour disputes. His address (March 1937) before the Amer. Jewish Congress, in which he attacked Hitler's anti-Semitic policy, induced Germany to make diplomatic protests. From 1940 he was chairman of the U.S. section of the Canada-U.S.A. Defence Board, and director of U.S. civil defence from 1941 to 1942. He was director-general of U.N.R.R.A. from March 31, 1946, until the end of that organisation on Dec. 31, 1946.

La Guayra, or La Guaira, chief seaport of Venezuela, on the Caribbean Sea, 10 m. N. of Caracas, of which it is the port. It is connected with Caracas by the La Guaira and Caracas railways, one of the most picturesque mt. railways in the world. It is closely surrounded by mts. except to seaward. There is an excellent harbour of 90 ac. with a depth alongside the quays of 10 to 10 ft., formed by a breakwater constructed in 1885 by a Brit. company. A large export trade is done in coffee, cacao, indigo, cotton, sugar, and hides, and there are rich oil-fields in the vicinity. There is a wireless station. The tn. was founded in 1588 by Diego de Osorio. It was the scene of much fighting during the War of Independence. Pop. (including the suburb of Maiquetia) 25,000.

Laguna: 1. Prov. of Luzon, Philippine Is., on the lake known as Laguna de Bay, which extends almost across the is. The dist. is mountainous (chief peaks, Banajao, 6000 ft., and Maquillin, 350 ft.), with fertile valleys, and rice, coffee, and cacao are produced. Cap. Santa Cruz. Area 752 sq. m. Pop. 150,000. 2. Tn. of Tenerife, formerly cap. of Canary Is., situated at an altitude of 1790 ft. A bishop's see. Pop. 14,000.

La Habana, see HAVANA.

La Halle, Adam de (c. 1240-87). Fr. poet and dramatist, commonly known as the hunchback of Arras. He was b. at Arras, and in 1283 followed Robert II. of Artois to Naples, where he died. He is notable as the originator of comic opera in *Le Jeu de Robin et de Marion*, and of modern comedy in *Le Jeu Adam, ou de la fustelle*, which is partly autobiographical. His works were ed. by L. Bahlson (1885), A. Rambaud (1886), and E. Langlois (1924).

Laharpe, Jean François de (1738-1803), Fr. dramatist and critic, b. at Paris, educated at Collège d'Harcourt. In 1766 he became a member of the Fr. Academy, and in 1786 began to lecture on literature at the Lycée of Paris. He was active in

the revolution, and was imprisoned in 1793. His works include *Warwick* (1763); *Timoleon* (1764); *Pharamond* (1765); *Gustavus Vasa* (1766); *Mélanie* (1770); *Élopes* (1779); *Tangu et Féline* (1780); *Philocèle* (1781); and *Cours de littérature* (18 vols.) (posthumously). See life by A. Boottlingk, 1925.

Lahn, riv. of Germany and a trib. of the Rhine. Rising in the Jagdberg in the Rothaargebirge, Westphalia, its direction is generally W.S.W. It passes through the tns. of Giessen, Marburg, Wetzlar, and Ems, and eventually joins the Rhine at Niederlahnstein, 6 m. above Koblenz. The length of the riv. is 135 m., of which the part from Giessen is canalised.

Lahnda Dialect (of Punjabi language), see under INDO-EUROPEAN LANGUAGES.

La Hogue, Battle of, sometimes called **Barfleur**, fought between the Eng. and Dutch fleets, numbering in all ninety-nine ships, on the one side, and the Fr. under Tourville with forty-four ships, on May 14-16, 1692. The Eng. and Dutch advanced towards La Hogue to destroy the armament which was being prepared to invade England. Tourville was unaware of the union of the allied fleets, and left Brésc confident that treachery would prevail in the Eng. ships, through supposed Jacobite sympathies in England. Off Barfleur he was undeceived, when he came in sight of the allied fleets under Russell. A running fight ensued for three days, during which the Fr. lost twenty-five ships, eighteen of them running aground near the camp of the 'Irish Brigade' and Fr. troops concentrated for transport across the Channel. These eighteen ships were followed up by the Eng. sailors in boats, and were burned under the eyes of the exiled James II.

Lahore, div. of W. Punjab, Pakistan, extending along the r. b. of the Sutlej from the Himalayas to Multan. It contains the seven dists. of Multan, Montgomery, Jhang, Gujranwala, Lahore, Amritsar, and Gurdaspur. The extremes of temp. are very great, and the rainfall uncertain so that the dist. is naturally parched and arid; but it is well irrigated by the Bari Doab canal, and produces large crops of cereals, pulse, and cotton. Area 2700 sq. m. Pop. 1,130,000.

Lahore, city of Pakistan. Prior to the creation of the independent state of Pakistan, L. was the cap. of the dist. of the same name and of the prov. of Punjab, besides being the headquarters of the following dists.: Lahore, Amritsar, Gurdaspur, Gujranwala, Shikhapura, and Sialkot. It is on a trib. of the Ravi, 32 m. W. of Amritsar. It stands in a populous and fertile plain at the junction of sev. railways. The city has two parts, the old tn. and the new, the former, which was of great importance under the Mogul emperors being surrounded by walls until 1881, and including the citadel, where the palace of the Sikh sovereigns stands. It has narrow and winding streets, and contains some splendid mosques and interesting ruins. The new European quarter includes Naukha, Anarkali, and Donald Tn., and contains the Gov. House, the Lawrence Gardens, Punjab Univ., Central

Museum, the new public buildings, etc. The architecture of L. is hardly comparable with that of Calcutta, still less with that of Delhi; and the buildings of recent date, except the high court, are of no particular style or beauty. There are, however, some impressive buildings in the fort built in the period of Jehangir and Shah Jahan. The mosque of Wazir Khan, of the early seventeenth century, and the N. wall of the fort contain fine examples of encaustic tile work. The Bádshahi Masjid of Aurangzebe is a large building but devoid of detailed ornament. Outside the walls, some 8 m. E. of the city, are the tomb of Jehangir at Shahdara and the Shulamar Gardens. The main street of the European quarter known as Donald Tn. is locally called the Mall, and both it and its vicinity were much improved in more recent times, particularly in the lieutenant-governorship of Sir Charles Rivas (1902-7). There is a medical school as well as a univ. There are numerous manu. and its trade is important. It has large railways, being the headquarters of the N.W. railway system, which runs out of L. in three directions. It is the headquarters of the Moslem League and it was here, on March 23, 1940, at their 1. session that the league attacked the federal constitution of the 1935 Gov. of India Act and passed a vague but destructive resolution against it. Yet in the same month, at L., Mr. Jinnah clearly implied that only the Brit. Raj stood between the Moslems and the most hideous exploitation. A para-militarist movement, known as the Khaksar movement, was organised in 1931 to further the interest of the petty bourgeoisie of Indian Islam. In 1939 they attempted to defy the prov. gov.'s ban on all non-official military parades and there were serious riots in L. (Feb. 1940). L.'s most influential newspaper is the anti-Brit. *Zamindar*, founded at the opening of this century. With the approach of Indian independence in 1947 there were disorders in L., especially when it was announced that the Boundary Commission had assigned L. to Pakistan. While the rest of India was celebrating independence, L. was bathed in blood, and for sev. days it was the scene of one of the ugliest outbreaks of communal slaughter in India's hist. (Aug. 1947). By that time there were fewer than 10,000 Hindus remaining of the 300,000 who formerly lived in the city, all who were able having fled into Hindustan. The number of persons killed is not certainly known, but officials estimated the deaths at 3000 inside the ter. for which the boundary forces were responsible. It is probable that the total was at least four times greater, while, but for the presence of boundary forces, the figure would have been forty-fold that number, particularly as there was at the time a vast influx of Moslem refugees into L. from the Indian side of the new frontier. Pop. 671,700.

Lahr, tn. of Germany in Baden, on the Schutter, 9 m. S. of Offenburg. The prin. industries are lithography and printing, and manu. of woollens, leather, tobacco, etc. Pop. 15,000.

Laibach, see LJUBLJANA.

Laidlaw, William (1780-1845), Scottish farmer-poet, a friend of Sir Walter Scott, b. in Selkirkshire, and took up farming. In 1817 he became a kind of steward at Abbotsford, acting as Scott's amanuensis and general adviser. He wrote sev. lyrics and ballads, notably *Lucy's Plittin'*, and compiled part of the *Edinburgh Annual Register* under Scott's direction. After Scott's death he was factor on two Ross-shire estates, and d. at Contin. See the selection from his prose writings with a biographical sketch by Sir G. B. Douglas, 1901.

Laigle, tn. of the dept. of Orne, France, on the Rille, noted for the manufr. of needles. It suffered much damage in the Second World War. Pop. 5900.

Laing's Nek, pass through the Drakensberg, Natal, S. Africa. Altitude from 5400 to 6000 ft. The railway, opened in 1891, pierces it, and previously the road over it was the chief means of communication between Durban and Pretoria. It figured in the Boer war of 1880-81.

Lais, name of two famous courtesans of ant. Greece: 1. Native of Corinth (b. c. 480 B.C.), famous for her greed and heartlessness; among her lovers were the philosophers Aristippus and Diogenes. 2. Native of Hyccara, Sicily (b. c. 420 B.C.), taken to Corinth after the Athenian expedition to Sicily. She was the rival of Phryne, and numbered the painter Apelles among her lovers. She was stoned to death by some jealous women of Thessaly.

Laissez-faire, Fr. phrase meaning 'let alone,' an axiom of some political economists deprecating state attempts to regulate or restrict trade competition. Its origin is attributed to Legendre about 1680, who, in an interview with Colbert respecting gov. interference with commerce, remarked: 'Laissez-faire, laissez-passer.' See also ECONOMICS.

Lalty, *Th*, strictly speaking, means all persons who are not clergy, but the term has been extended to mean all persons who are not of a certain profession, such as law or medicine, as distinguished from all belonging to it.

Lai-yang, city in the prov. of Shantung, China, 60 m. W.S.W. of Weihaiwei. It has manufr. of silk and a peculiar type of wax. Pop. (estimated) 50,000.

Lake, still sheet of water lying in a hollow of the ground and not in direct communication with the sea. Ls. are almost universally distributed, although most common in high lats., and are due to various causes. Crater Ls. are formed by volcanic activity, and are found in Italy, France, Oregon, U.S.A., and in many places where there are dormant volcanoes, while Ls. formed by the subsidence of the roofs of subterranean limestone caves are found among the Jura Mts. The gradual movement of the earth's crust in the formation of mts. is responsible for such Ls. as that of Geneva, while a landslide damming up the course of a riv. is the cause of such L. basins as the Gohna, formed in the Himalayas in 1894. In N. lats. and in the Alps a glacier often forms a dam in a riv. valley, and the

deposit of glacial drift left by a retreating glacier is a very common cause of L. formation, especially in N. America, while glacial erosion is probably the cause of many of the Ls. of Switzerland and Scotland. Underground Ls. are due to a similar decomposition of the rock. The L. waters are either fresh or salt. Salt and bitter Ls. abound in regions where there is small rainfall and no draining riv. Such Ls. as the Dead Sea and Great Salt L. are descended from fresh-water Ls., only becoming saline when the rate of evaporation exceeded the rate of the inflow. The Caspian and Ural Seas are really only isolated portions of the ocean. When the rate of inflow exceeds that of evaporation the L. grows gradually fresher. The greatest group of fresh-water Ls. in the world consists of Ls. Superior, Michigan, Huron, Erie, and Ontario on the E. border between the U.S.A. and Canada. Usually referred to as the Great Ls., they are really inland seas of fresh water. Steamships of ocean-going size traverse them, carrying huge cargoes of wheat and iron ore. L. Superior is 350 m. long and 160 m. wide, with a total area of 31,820 sq. m.; Michigan is 307 m. long and 118 m. wide, with an area of 22,400 sq. m.; Huron is 206 m. long and 101 m. wide, with an area of 23,010 sq. m.; Erie is 211 m. long and 57 m. wide, with an area of 9940 sq. m.; Ontario is 193 m. long and 53 m. wide, with an area of 7540 sq. m. Deepest soundings in L. Superior are 1290 ft. See F. A. Forel, *Handbuch der Seenkunde*, 1901, L. W. Collet, *Lacs*, 1925; and P. T. Jones, *The English Lakes*, 1933. For movements of L. water see SEICHES, and for the forms and biology of fresh-water Ls., see GEOGRAPHICAL DISTRIBUTION.

Lake, in dyeing, an insoluble coloured compound deposited in the fibres of a fabric, soaking the latter first in a solution of a mordant (e.g. alum) and then in a solution or suspension of a dye. Different mordants often give Ls. of different colour with the same dye; thus alizarin with alum gives the L. known as Turkey red, while with a ferrous salt instead of alum the alizarin L. is violet.

Lake Charles, city and par. of Calcasieu, Louisiana, U.S.A., 190 m. W. of New Orleans. It is the centre of a big lumber trade and rice-producing dist., and has rice mills, car shops, and a large woollen industry. There are sulphur mines and oil-fields in the neighbourhood. Pop. 22,000.

Lake City: 1. Tn. and co. seat of Columbia co., Florida, U.S.A., 59 m. W. of Jacksonville. Vegetables and fruits are grown, and cotton and tobacco produced in the neighbourhood. The tn. has some trade in lumber, phosphates, and turpentine. Pop. 6000. 2. Tn. of Wabasha co., Minnesota, U.S.A., 58 m. S.E. of St. Paul. There are flour-mills and carriage factories. Pop. 4000.

Lakedion, see under JEW, THE WANDERING.

Lake District, *The*, in England, lies in Cumberland, Westmorland, and the Furness dist. of Lancashire, and embraces all the prin. Eng. lakes, although its area is

only about 700 sq. m. The scenery and character of the lakes are very varied, ranging from wild, picturesque, rocky precipitous to flat or softly sloping wooded banks. Windermere, the largest of the lakes (10½ m. by 1 m.) lies in the S.E. corner of the dist. and is connected with Rydal Water, Grasmere, Fetherwater and Fathwaite. To the W. rises the Scafell range terminating in the Old Man of Conistone, which rises above Conistone Water and to the E. of the Scafell range lies Westwater (3 m. long) the deepest of all the lakes. In the N.E. is Ullswater with the sequestered Hawes Water to the

(222 ac.) under the foothills of Scafell was acquired in 1912 as also was Wharfedale (208 ac.) Pennine Hill on the opposite bank of the lake was left to the trust. In 1941. See Wordsworth's *Descriptions of the Scenery of the English Lakes* 1823. W. Knight *Through the W. of the Lake District* 1901. A. Bradley, *The Lake District* 1901. W. Collingwood, *The Lake Country* 1902. W. B. Collingwood, *The Lake Country* 1902, 1945. H. Ravenhill *Round the Lake Country* 1909. W. J. B. Baddeley, *The Lake District* 1913. G. Horn, *English Lakes* 1923. H. H. Symonds *W. of the Lake*

DERWENTWATER

On the left is Skiddaw, in the distance is Borrowdale

S.E. To the W. of Helvellyn is Thirlmere which is the reservoir for the water supply of Manchester dammed in 1890-1894. The R. Derwent rising in the Scafell range flows N. through Borrowdale and farms I. Asenithwaite and Derwentwater, the most beautiful of the lakes. Westwards from Borrowdale opens a valley in which the Butterfield and Crummock Water and between these and the Derwent Valley is Linnardale Water. There are several waterfalls the chief being Lodore. Near Derwentwater lies Keswick the chief town of the dist. while Ambleside and Bownes (Windermere) and Hawkshead (Fathwaite) are other places of importance. The chief mts are Scafell Pike (3210) the highest summit in England, Scafell (3162), Helvellyn (3118), Skiddaw (3054) and Great Gable (2949). Rock climbing is practised chiefly on the Scafell rock faces, the Pillar rock, Great Gable and the Langdales (see special guides issued by the Fell and Rock Club). Large tracts of mt. country have been acquired for the public through the National Trust. These include much woodland, farmland, and parkland by Derwentwater, including the famous Friar's Crag, and nearly 600 ac. of Lakdale (qv), Taw House Farm

District 1913. J. H. B. Bell, *The Bozeman and J. Halifax Blackborough British Hills and Mountains* 1940 and A. Lunn and W. V. Harker, *The English Lakes* 1943.

Lake Dwellings, houses built on flat forms supported by piles. See PILLAR DWELLINGS.

Lake Fisheries, see FISHERIES.

Lake Geneva, see GENÈVE.

Lakeland Terrier, wire haired terrier of medium size weighing about 16 lb. The skull is moderately broad, the ears small and V shaped, the eyes dark, the body is short and the tail docked. It evolved as an attendant to the packs of foxhounds in the Fell country, the breed makes a good sporting companion as well as a house dog, being hardy and easily trained.

Lake of the Thousand Islands, see THOUSAND ISLANDS.

Lake of the Woods, lake in the S.W. of the prov. of Ontario, Canada, situated between Lakes Winnipeg and Superior. It is 70 m. in length and owing to its irregular shape the breadth varies from 10 to 50 m. The total area is 1500 sq. m. and the lake contains numerous is., on many of which summer residences have been built. The chief riv. flowing into the lake is Rainy Riv. from the E., and it

discharges into Lake Winnipeg by Winnipeg R. on the N.E.

Lakes (dry powder colours), see **PIGMENTS**.

Lake School of Poets, name given to a group of poets of whom Wordsworth was the acknowledged head and founder, and so called because his home for sixty years was in the Lake Dist. Southey, Samuel Taylor Coleridge, and De Quincey were the chief of the group, and Shelley, Scott, Carlyle, Mrs. Hemans, Matthew Arnold, Edward Fitzgerald, Tennyson, Gray, and Charles Lamb, although not directly associated with the school, were connected with the dist.

Lakewood: 1. Tn. of Ohio, U.S.A., in Cuyahoga co., 7 m. S.W. of Cleveland, of which it is a residential suburb, with a wine industry. Pop. 69,100. 2. Tn. of Ocean co., New Jersey, U.S.A., 30 m. E. of Trenton; a famous winter health resort. Pop. 6700.

Lakh, see **LAC**.

Lakhimpur, dist. in the Brahmaputra valley in Assam, India. It is a prosperous tea-growing centre and has rich coal-mines. There are large oil wells at Digboi, and the oil is refined at Assamerita into kerosene and paraffin. There are also brick and pipe manufact. and extensive timber cutting. In 1833 the dist. was taken under Brit. administration and the headquarters estab. at Dibrugarh. Area 1529 sq. m. Pop. 894,000.

Lakshmi, in Hindu mythology, the goddess of fortune, and the wife of Vishnu, representing his creative energy. She was the mother of Kama, the god of love. The festival of L. is celebrated by the writer caste in Bengal, who, in her honour, purify all writing materials and abstain from using them during the feast.

Lalande, Joseph Jérôme Lefrançois de (1732-1807), Fr. astronomer, b. at Bourg, Ain. After qualifying as an advocate, he was sent to Berlin in 1752 to make observations on the lunar parallax there, and on the successful completion of his task was appointed adjunct-astronomer to the Academy of Paris. He succeeded Delille at Collège de France. In 1802 he instituted the L. prize for the chief astronomical performance of each year. Among his pub. are *Traité d'astronomie* (1762); *Histoire céleste française* (1801), containing his observations of 50,000 stars; and *Bibliographie astronomique* (1803).

La Libertad, see **LIBERTAD**.

Lalin: 1. Tn. in the prov. of Pontevedra, N.W. Spain. It is the centre of a highland agric. dist., and has tanneries and paper mills. Pop. 18,500. 2. Walled tn. in the prov. of Kirin, Manchuria, 120 m. N. of Kirin. Pop. 22,000.

La Linea, see **LINEA**.

Lalita-Vistara, one of the most celebrated works in the literature of Buddhism, being an account of the life and doctrines of the Buddha, partly in prose and partly in verse, and dating, probably, from about the time of Christ. A Tibetan version has been trans. into Fr. by P. E. Foucaux, and there is an Eng. trans. of the Sanskrit version. See *Transactions of the Bengal*

Asiatic Society and E. Burnouf, *Introduction à l'histoire du buddhisme indien*, 1844.

Lalitpur, tn. in the United Prov. of India, in the Jhansi div., 110 m. S.E. of Gwalior. It contains beautiful Jain and Hindu temples, and its chiefs were prominent in the Indian Mutiny. There is a trade in oil-seeds, hides, etc. Pop. 16,800.

Lallans, Germanic tongue, akin to Eng., spoken in S. Scotland and on the coast up to Buchan. It is itself broken into dialects with marked differentiation. It is broad Scots, the Doric; it is the language of some two dozen Scottish poets including Burns, Ferguson, Ramsay, and the early Scottish poets; but it is no longer the speech of the 'educated,' being discouraged by schools, the press, and broadcasting. There is a movement to restore the tongue, led by Hugh MacDiarmid (*q.v.*) and other Gaelic poets.

Lally-Tollendal, Thomas Arthur, Comte de (1702-66), Fr. general, b. at Romans, Dauphiné. He inherited his title from his mother, his father being an Irish Jacobite, Sir Gerard O'Lally. He entered the Fr. army in 1721, served in the war against Austria (1734), and took part in the battles of Dettingen (1743) and Fontenoy (1745). He accompanied Prince Charles Edward Stuart to Scotland in 1745, and was present at the battle of Falkirk. When war was declared between France and England (1736) L. was sent as commander of the Fr. expedition to India. At first he met with some success, but, deserted by the fleet, under Lache, was forced to retire from the siege of Tanjore and of Madras (1758). He was defeated at Wandiwash (1760) and forced to surrender Pondicherry in 1761. As an Eng. prisoner on parole he returned to France to answer charges of treachery, was imprisoned in the Bastille for two years, and finally tried and executed in 1766. See F. M. de Voltaire, *Œuvres complètes*, 1785-89; also h/o by T. Hamont, 1887.

Lally-Tollendal, Trophime Gérard, Marquis de (1751-1830), Fr. politician and author, son of the above, b. in Paris. After his father's execution he devoted himself to proving his innocence, but without complete success. In 1779 he held the office of *grand bailli* of Etampes, and in 1789 was deputy to the States-General for the noblesse of Paris. He took part in the early defeat of Louis XVI., but in 1791 retired to Switzerland and later to England. He returned to Paris during the Consulate, and was created a peer by Louis XVIII. In 1816 he became a member of the Academy. He pub. *Plaidoyer pour Louis XVI.* (1793); *Défense des émigrés français* (1794); and *Le Comte de Strafford* (1795).

Lalo, Edouard (1823-92), Fr. musical composer, b. at Linc. He began composition with chamber music, but, Meyerbeer's and Halévy's music being in vogue, he did not attract any attention until he produced *Fléau* (1865), an opera conceived in the style of symphonic music. But the style was too unorthodox for his critics, and a greater measure of success

came with his concerto in F, *Le Divertissement*; and his striking *Symphonie espagnole*; then followed two operas, *Roi d'Ys* and *Namouna*, the latter his chief work. He was gifted with remarkable novelty in orchestration and warm vivid melody, and his music excited enthusiasm among the younger generation, including such men as Debussy and D'Indy. The *Roi d'Ys* was not performed until the late eighties, so great were the difficulties of securing a *corps de ballet* and of overcoming the prejudices of the management of the Opéra. L. is considered the real precursor of the modern Fr. school, and his influence on Debussy and Dukas is unmistakable. See studies by O. Séré (in *Musiciens français*), 1911, and G. Serivieres, 1925.

La Louvière, industrial tn. in Belgium, in the prov. of Hainaut, 11 m. E. of Mons. It has collieries, blast-furnaces, and stone-lime, and moulding-clay quarries. The chief manufs. are iron, steel, glass, ceramics, and drop-proof products. The second hydraulic lift on the Canal du Centre is at L. L. (see HOUDENG-ATMERIES). Pop. 101,300.

Lama (priest), see under LAMAISM; (animal of Peru), see LLAMA.

Lamachus, Athenian general during the Peloponnesian war and the son of Xenophanes. He was sent into Sicily with Nicias and Alcibiades, and displayed great courage and ability throughout the campaign, but was killed before the walls of Syracuse (414 B.C.). See Thucydides, Aristophanes's *Acharnians*, and Plutarch's *Nicias*.

Lamaism (Tibetan *llama*, spiritual teacher), corrupt form of Buddhism, the religion prevalent in Tibet and Mongolia. Its headquarters are at Lhasa, the cap. of Tibet, where the Dalai Lama ('ocean priest' or 'sea of wisdom') resides. Every one who has taken a vow to attain Buddhahood is a bodhisattva and is repeatedly reborn in order to teach others. The Dalai Lama is the reincarnation of the great bodhisattva Avalokitesvara, the ancestor of the Tibetans, and enjoys supremacy in all temporal affairs. The Tesho Lama, or Pantshen Lama, the incarnation of Amitabha, is regarded as the great spiritual teacher, and though in theory he holds the same rank as the other grand lama, virtually he is less powerful. On the death of either his spirit passes into the body of a male child, who is ascertained by means of the oracles, prayer, and the drawing of lots. Next in rank to the grand lamas are the Chutuktus, who correspond to the cardinals of the Rom. Catholic Church. The Chubul Khans, or priests, are also incarnations, and have under them four orders of lower clergy. There are numerous lamaseries which are the educational as well as the religious institutions of Tibet. At the head of each is a living Buddha in the person of a Chubul Khan. The worship of Buddha and of spirits and saints takes the form of incantations and the beating of diverse musical instruments. A person who is dying must be attended by a lama, so that his spirit may not wander restlessly, but

find a happy dwelling-place in some other human form. See C. F. Köppen, *Die Lamaische Hierarchie und Kirche*, 1859; L. A. Waddell, *The Buddhism of Tibet*, or *Lamaism*, 1895; P. Landen, *Lhasa*, 1906; A. H. Francke, *History of Western Tibet*, 1907; E. Amundsen, *In the Land of the Lama*, 1910; C. Bell, *Tibet Past and Present*, 1924, and *The Religion of Tibet*, 1932; and A. K. Gordon, *Iconography of Tibetan Lamaism*, 1939.

Lama Miao (Mongolia), see DOLON-NOR.

La Mancha, see MANCHA, LA.

Lamarck, Jean Baptiste Pierre Antoine de Monnet, Chevalier de (1744-1829), Fr. naturalist, b. at Bazentin in Picardy. In 1760 he entered the army and won great distinction, but owing to illness he was obliged to leave the service, and subsequently devoted himself to the study of natural science. In 1778 he pub. his *Flore française*. In 1781-82, as tutor of Buffon's son, he visited most of the famous botanical gardens of Europe, and on his return began his elaborate series of contributions to botany, i.e. the *Dictionnaire de botanique* and *Illustrations de figures* (pub. in the *Encyclopédie méthodique*, 1785). In 1779 he became custodian of the Jardin du Roi, and, on the reconstruction of that institution in 1793, was appointed prof. of zoology. In 1809 he pub. his *Philosophie zoologique*, and between 1815 and 1822 his *Histoire des animaux sans vertèbres* (7 vols.). See also LAMARCKISM. See E. Haeckel, *Die Naturanschauung von Darwin, Goethe, und Lamarck*, 1882, and *Lamarck, par un groupe de transformistes, ses disciples*, 1887; E. Perrier, *Lamarck et la transformisme actuel*, 1893; and A. S. Packard, *Lamarck, the Founder of Evolution*, 1902; see also lives by G. F. Kuhnert, 1913, and E. Perrier, 1925.

Lamarckism is a philosophical concept of evolution in which is postulated the theory that evolution is a direct result of such causes as heredity, adaptation, and change of environment. In 1809 Lamarck in his *Philosophie zoologique* stated that nature in bringing forth all kinds of animals improved their organisation gradually, and that these animals were subject to the influence of their environment and were modified in form and habits by this influence. Lamarck assigns as the chief causes of such transformation the use and disuse of particular organs during long periods and the transmission by heredity of such changes. He alleges, for example, that birds which were forced to seek food from water gradually adjusted their forms to the necessity. He rejected the explanation of change of type by great geological changes, and likewise denied the truth of such statements common up to the time of Lyell that some 'vital force' was responsible for the gradual development of type. Instinct, he claimed, was a result of inherited characteristics of habit, proceeding to the conclusion that cellular tissue is the parent of all organic things and the nervous system is the *vera causa* of all acts of intelligence, and that the will is therefore never wholly free. His theories were attacked vigorously at the time of their pub., though prejudice

rather than science informed such opposition; but, with the great interest aroused by Darwin's later discoveries, a mass of support was brought to his teaching, particularly in America, and it is now claimed that Darwin's doctrine of natural selection is strengthened more by Lamarck's conclusions than by Darwin's own collected evidence, which is trans. as manifestations of chance as opposed to cause and effect. In 1876 Darwin himself admitted that further research led him to identify himself with Lamarck's earlier statement that evolution was a result of environment, and it seems there is some justification for the claims of Lamarck's disciples that, whilst Darwin revealed only one aspect of evolution, Lamarck revealed the formations which bear the structure of natural selection. If recent work by the Russian school of plant breeders under Lysenko (q.v.) were confirmed, it might provide support for L. It is clear that the theory of heredity known as Mendelism (q.v., and BREEDING; HEREDITY) is based on a very firm ground, and there seems no place in it for L. See F. Buchner, *Last Words on Materialism*, 1901; E. Haeckel, *Das Weltbild von Darwin und Lamarck*, 1909; - Butler, *Evolution, Old and New*, 1911; and C. E. M. Joad, *Mind and Matter*, 1925. See also bibliography for LAMARCK.

La Marmora, Alfonso Ferrero (1804-1878), It. general and statesman, b. at Turin. He entered the Sardinian army in 1823, and distinguished himself during the Sardinian war of independence (1848). In that year and again from 1849 to 1855 he held the portfolio of war, during which period he reconstructed the Sardinian army. In 1855 he was in command of the Sardinian forces during the Crimean war, and on his return again became minister of war. In 1866 he concluded an alliance with Prussia against Austria, but was defeated by the latter at Custoza, after which he was accused of treason. He wrote in self-defence, *Un po' più di luce sugli eventi militari e politici dell'anno 1866* (1873), which irritated Bismarck, who charged him with having revealed state secrets, and *Un episodio del risorgimento italiano* (1875). See G. Massani, *Il generale La Marmora*, 1880, and M. Straganz, *Zur Geschichte der 'Stossins-Herz'-Despache*, 1922.

Lamartine, Alphonse Marie Louis de Prat de (1790-1869), Fr. poet, b. at Mâcon. His father had been imprisoned for his royalist leanings during the revolution, and L. followed the family traditions by entering the bodyguard of Louis XVIII. in 1814. The success of his *Premières Méditations poétiques* (1819) led to his being appointed attaché to the Fr. embassy at Naples, and during the supremacy of the Bourbons he occupied sev. important diplomatic posts. His *Nouvelles Méditations poétiques* (1823), *La Mort de Socrate* (1823), *Le Dernier Chant du Pèlerinage de Childe-Harold* (1825), and *Harmonies poétiques et religieuses* (1829) led to his being admitted a member of the Academy (1829). A long-projected voyage to the E. led to the *Voyage en Orient* (1835, in

prose). His *Jocelyn* (hist. of a country parson) was pub. in 1836, *La Chute d'un ange* in 1838, and *Les Hébreux poétiques* in 1839; but during this period it was as an orator, not as a poet, that he enjoyed the greatest popularity. In 1835 he was elected 'député' for Bergues, from 1837 to 1848 he was 'député' for Mâcon, and at the revolution of Feb. 1848 he was considered 'the man of France,' as the defender of the 'tricolore' against the 'rouges.' In the provisional gov. he wished to play the role of a Moderate, and lost his popularity, securing very few votes in his candidature for the presidency of the republic. After the *coup d'état* of Dec. 1848 he retired permanently from public life. In his retirement he wrote a series of novels: *Raphaël* (1849); *Les Confidences* (1849); *Les Nouvelles Confidences* (1851); and *Gratiella* (1852). Under the empire he fell into great poverty and wrote such prose works as *Cours familier de littérature* (1858), and inferior poetry, *Les Visions* (1854), to support himself. In 1868 he was voted a generous pension by the gov., but his privations had worn him out, and he did not long enjoy it. In addition to the works already mentioned, he wrote *Histoire des Girondins* (1817); *Trois Mois au pouvoir* (1819); *Histoire de la révolution de 1848* (1849); *Généralie* (1850); *Le Tailleur de pierres d. Saint-Point* (1851); *Histoire de la restauration* (1851-52); *Histoire des constituants* (1854); *Histoire de la Turquie* (1855); *Histoire de la Russie* (1856), all in prose, and the tragedy *Toussaint Louverture* (1856). His *Œuvres complètes* were pub. by Didot in 11 vols. (1849-50). See Lurme, *Histoire poétique et politique d'Alphonse de Lamartine*, 1818; C. Sainte-Beuve, *Causeries du lundi*, vols. i. and iv., 1851-62, and *Portraits contemporains*, vol. i., 1870; C. Alexandre, *Souvenirs sur Lamartine*, 1884; Lady Dornville, *Life of Lamartine*, 1888; A. France, *L'Éclair de Lamartine*, 1893; F. Brunetière, *L'évolution de la poésie lyrique au XIX^e siècle*, 1894; L. Barthou, *Lamartine, orateur*, 1916; A. Pirazza, *The Influence of Italy on the Literary Career of Lamartine*, 1917; J. Bailion and E. Harris, *État présent des études Lamartiniennes*, 1933; M. Bouchard, *Lamartine ou le sens de l'amour*, 1940; and A. J. George, *Lamartine and Romantic Uranianism*, 1940. See also lives by Falconnet, 1840; E. Deschamps, 1893; R. Doumic, 1912; H. R. Whitehouse, 1918; P. Hazard, 1928; L. Larquier, 1929; and L. Bertrand, 1940.

Lamb, Charles (1775-1831), Eng. essayist, b. in Crown Office Row in the Temple, London, and educated at Christ's Hospital. The best record of his school-days will be found in his own essays, *On Christ's Hospital and the Character of the Christ's Hospital Boys and Christ's Hospital Five and Thirty Years Ago*. He was happy there, where he made the acquaintance, which ripened into friendship, of Samuel Taylor Coleridge. L. left the school in the winter of 1789, and in 1792 was appointed to a clerkship in the India House, where he was employed for thirty years. His salary was small, and he had to contribute to the maintenance of his

family, with whom he lived, but he seems to have been fairly contented. The serenity of his mind was, however, rudely disturbed in 1796 when his sister, the poor half mad Mary in a fit of ungovernable temper, killed her mother with a carving knife. A verdict of temporary insanity was brought in and, by the exercise of much kindly influence, the girl was not sent to an asylum but was mercifully handed

CHARLES LAMB (1798)

over to the custody of her brother Charles, who lived with her for the whole of his life. Insanity was in the blood of the family for in the winter of 1795-96 L. himself was confined for six weeks.

The first appearance of L. in print was in the latter year when Coleridge, in the *Poems on Various Occasions*, included four of his sonnets. In 1795 was issued *Blank Verse* by Charles Lamb and Charles Lloyd. His next pub. was *A Tale of Rosamund Gray and Old Blind Margaret* (1798). Soon L. began to augment his income by contributing to the periodicals and news papers and in 1802 he printed his blank verse play *John Woodvil* a tragedy. He was now living with his sister in King's Bench Walk and there and afterwards in Inner Temple Lane they resided for eighteen years. In 1807 the farce *Mr H.* was produced and damned at Drury Lane, but two years later Godwin brought out the famous *Fables from Shakespeare* written by L. and his sister, which work was at once successful, and brought in its train many welcome offers of hack work. He gradually began to develop the vein that reached its greatest heights in the *Essays of Elia* (1823), and he wrote in this style

for Leigh Hunt's *Reflector* and for the *Gentleman's Magazine*. A new periodical, the *London Magazine* was brought out in 1820 and L. was an early contributor his first paper 'Recollections of the South Sea House' being signed 'Elia'. He wrote for the *London Magazine* regularly, and in 1823 collected these essays. In March 1825 he was retired with a pension from the India House on the grounds of ill health. After thirty three years slavery, he wrote to Wordsworth 'here am I, a freed man with £441 a year for the remainder of my life. He did various miscellaneous work during the next years. In 1830 appeared *Album Verse* in the following year *Satan in Search of a Wife* and in 1833 *The Last Days of Elia*. His health now failed, dyspepsia supervened and he died on Dec. 27. One of the brightest features in the last years of his life was the friendship and companionship of Emma Trollope whom L. and his sister Mary had adopted and whose marriage in 1833 to Edward Moxon though welcomed by L. with characteristic unselfishness left him more than ever alone. L. was buried in Edmonton churchyard.

The essays of L. — and it is by his essays that he takes the high place in literature that is his — are universally read and admired. Their humour and literary finish which never suggests the burning of mind night all their individuality each and all endear them to countless thousands for if L. is one of those writers who peculiarly appeal to their brother authors he is one of such writers who appeal also to the larger public. A combination rare among essayists. In all his best writings his personality can be detected and his personality is very attractive. The hard working clerk who devoted his life to the care of his half mad sister is one of the most pathetic pictures in the annals of literature and it is small wonder that Thackeray spoke of him as 'saint Charles'. His personal charm is undoubted and he numbered among his friends and correspondents men so various as Wordsworth, Southey, Coleridge, Hazlitt, Hood, Leigh Hunt and Procter. Indeed to know him was to love him and the circle of those who delighted in him was bounded only by the limits of his gregariousness. The most humane of men he was a looker on at the life that was everywhere around him. He was in the world but never quite of it. He was always detached from reality and had a curious rich vein of phantasy that often revealed itself in his writings. His delightful intimate *Correspondence* was ed. by Canon Linger from 1883 to 1889, and a more complete ed. was brought out by Wm. McDonald (1903 and 1907), who also ed. the *Works* in 12 vols.

Ridgway (editor), *bibliography in Essays of Phil* (Kings Treasures Series), 1920.

Lamb, Sir Horace (1847-1934). Brit. mathematician and physicist. Educated at Stockport Grammar School, Owens College, and Trinity College, Cambridge, where he was second wrangler and Smith's prizeman, 1872. He was prof. of mathematics at univ. of Adelaide, 1875-85, Owens College and univ. of Manchester, 1885-1920, and a member of the council of the Royal Society at different periods between 1894 and 1922. He wrote on hydrodynamics, the infinitesimal calculus, sound, higher mathematics, etc.

Lamb, Mary Anne (1764-1847). Eng. writer, was the sister of Charles L., the essayist, whose senior she was by eleven years. Mentally unbalanced, she first gave signs of her desperate condition when in 1796, in a fit of fury, she mortally wounded her mother by stabbing her with a knife. She was tried, and a verdict of temporary insanity was brought in; but instead of being consigned to an asylum, she was so fortunate as to be handed over to the custody of her brother, who took charge of her as long as he lived. They stayed always together, went about together, and were devoted to each other. Charles L., if sometimes he found the task of looking after her irksome, never repined. In 1807 she assisted him in the preparation of the *Tales from Shakespeare*, and while he wrote about the tragedies, she dealt with the comedies. She helped her brother to educate his ward, Emma Isola, who made her home with them until 1833, when she married Edward Moxon, the publisher. Mary L. survived her

brother about thirteen years, and d. in St. John's Wood, London. See G. G. Frend, *The Lambs, Fanny Kelly, and some Others*, 1926; W. R. Riddell, *The Tragedy of Mary Lamb*, 1928; and E. V. Lucas, *The Letters of Charles Lamb, to which are added those of his Sister, Mary Lamb*, 1935; life by Mrs. A. Gilchrist, 1883.

Lamb, William, see MELBOURNE, VISCOUNT.

Lamballe, Marie Thérèse Louise, Princesse de (1719-92), daughter of the prince of Carignan, b. at Turin. In 1767 she married Stanislaus, prince of Lamballe, who d. the next year. She was the devoted companion of Marie Antoinette, and was appointed by her superintendent of the royal household. Refusing a means of escape, she was imprisoned with her mistress in the Temple for a week, then removed to La Force and beheaded, and her head, on a pike, was placed in front of the queen's apartments.

Lambarde, William (1536-1601), Brit. jurist and antiquary, b. in London. In 1556 he was admitted into the Society of Lincoln's Inn, and in 1568 he pub. a collection and trans. of Saxon laws. In 1570 he was living near Girenwich, where he founded a hospital for the poor in 1574. His best known book, *A Perambulation of Kent*, was pub. in 1576. In 1578 he became a benchet of Lincoln's Inn, and in 1579 a magistrate of Kent, publishing a treatise on the duties of his office in *Eirenarcha* (1581). In 1600 he became keeper of the Tower records.

Lambart, Frederick Rudolph, see CLAVAN, EARL OF.

Lambayaque: 1. Dept. of N.W. Peru, with an area of 4614 sq. m. It is very dry, and a large portion is desert waste. Cap. Chucayo. Pop. 192,800. 2. Tn. in the above dept., 7 m. from the mouth of Lambayaque R. It contains a fine cathedral and college. The chief manu. are textiles and soap; quinine is also exported. Pop. 9000.

Lambel, see LABEL.

Lamber, Juliette, see ADAM, JULIETTE.

Lambert, Constant (b. 1895). Eng. composer, conductor, and critic, b. in London, son of G. W. Lambert, A.R.A., educated at Christ's Hospital and the Royal College of Music. He is one of the most promising of the younger school of Eng. musical composers. His *Home and Juliet* ballet was produced for Diaghilev at Monte Carlo in 1926, and was followed by *Pomona* at Buenos Aires in 1927. He is a musical director of Vic-Wells ballet. His best known work, *Two Grande* (1929), is an adaptation of jazz idiom to serious music for chorus, pianoforte, and orchestra. Other compositions include *Music for Orchestra* (1931); *Summer's Last Will and Testament* (1936, masque for chorus and orchestra); *Horoscope* (1938, a ballet for Sadlers Wells); a piano sonata, piano concerto, Chinese songs, etc. He has written *Music Ho! A Study of Music in Decline* (1934).

Lambert, Johann Heinrich (1728-77), Ger. physicist, mathematician, and astronomer, son of a tailor and educated at a free school in Mühlhausen, where he was b.

Editor of *Ephemeris*. Much favoured by Frederick the Great, but early d. of tuberculosis. Conducted researches in heat and light and discovered a method of measuring the intensity of light, the 'Lambert,' a unit of brightness, being named after him. (See his *Photometrie*, 1760; *Pyrometrie*, 1779.) His mathematical researches were also useful, but were carried much further by his contemporaries; thus he demonstrated the irrationality of π , but the method of proof of Legendre was simpler. His geometrical researches are valuable, notably the conception of hyperbolic functions in trigonometry. See on this his work *Die freie Perspective* (1750-74). His research in astronomy is reflected mainly in his theorem on the motion of the planets. See M. Steck, *Johann Heinrich Lambert: Schriften zur Perspektive*, 1943.

Lambert, John (1610-94), Eng. general, b. at Calton Hall, Kirkby Malham, Wiltshire. At the outbreak of the Civil war he joined the army of the Parliament, took part in the battles of Nantwich and Bradford, and greatly distinguished himself at Marston Moor (1614). In 1617 he was appointed major-general of the N. forces, and in 1648 was in command of Cromwell's army in Scotland. He fought at Preston and Dunbar, and commanded the right wing at Worcester (1651). He opposed Cromwell's assumption of supreme power, and retired to his villa at Wimbleton during the Protectorate. Under Richard Cromwell he was a member of the 'Committee of Safety.' At the Restoration he was arrested and banished to Guernsey. See life in T. Whitaker's *History of Craven*, ed. P. Morant, 1878.

Lambessa, or Lambèse, tn. of Algeria in the dept. of Constantine, is 5 m. S.E. of Batna. It contains the ruins of an old city. Lambis, formerly the cap. of Numidia, a place of importance in the Rom. Empire. The ruins were discovered by De la Mare. Trade in wines. Pop. 1700.

Lambeth, metropolitan bor. of London, on the S. bank of the Thames, opposite Westminster. L. Palace, the official metropolitan residence of the archbishop of Canterbury since 1179, has a fine portrait gallery and a valuable library. The gardens are open to the public. The great hall and twelfth- (or thirteenth-) century crypt, seriously damaged in the Second World War, have been restored, and the residential part, largely destroyed in 1910, reconstructed. On the riv. bank at L. are the London County Hall, St. Thomas's Hospital (seriously damaged in air raids, 1940-41), and the headquarters of the London Fire Brigade. It is mainly an industrial dist., making soap, chemicals, pottery, and earthenware. L. returns three members to Parliament. Pop. 203,700.

Lambeth Conferences, assemblies of Anglican bishops of the United Kingdom, the Brit. dominions and colonies, and America, held periodically at Lambeth Palace. The idea was suggested by Bishop Hopkins of Vermont in 1851. The first assembly met at the invitation of Archbishop Longley in 1867. Out of 144 bishops of the Anglican Communion,

seventy-six attended the conference. Many Anglican bishops, including the archbishop of York, refused to attend on conscientious grounds, and Dean Stanley declined to allow the closing service of the conference to be held in Westminster Abbey. At the fifth conference, convened by Archbishop Davidson (see DAVIDSON, RANDALL THOMAS, LORD), 241 bishops were present. Matters of urgent and practical interest are discussed, but the conference has not the functions of a synod. See Archbishop R. T. Davidson, *The Lambeth Conferences of 1867, 1878, and 1888, 1896, and Conference of Bishops of the Anglican Communion, Encyclical Letter, etc.*, 1897, 1908.

Lambis, see under LAMBESHA.

Lambrequin, see MANTLING.

Lambton (afterward Meux), Sir Hedworth (1856-1929), Brit. admiral, third son of the second earl of Durham. Joining the navy in 1870, was present at the bombardment of Alexandria and the battle of Tel-el-Kebir, 1882, and became private secretary to the first lord of the Admiralty, successively Earl Spencer and Lord Goschen, 1894-97. He commanded the naval brigade in the defence of Ladysmith during the Boer war. He contested Newcastle in the Liberal interest in 1900; was in command of the royal yacht, 1901-3; second in command of the Channel fleet, 1903; rear-admiral of the cruiser div. of the Mediterranean fleet, 1904-6. He was awarded the K.C.V.O. 1906 and the K.C.B. in 1908, being appointed to command the China station in that year. He became vice-admiral 1911 and commander-in-chief at Portsmouth, 1912-16. In 1911 he assumed the name of Meux. He became admiral of the fleet, March 15, 1915, and was one of the few to hold that high rank in active command. M.P., 1916-18.

Lambton, John George, see DURHAM, EARL OF.

Lamellibranchiata, see BIVALVIA.

Lameness may be due to some deformity of the leg, or to some disease of the structures of the leg. The commonest deformity of the leg which causes L. is the shortening that is likely to follow a fracture. Very many ingenious forms of extension apparatus have been invented to overcome the tendency to shortening. There are also various forms of congenital deformities, such as club-foot, which cause L. In young people disease of the joints causing L. is either tuberculous or acute rheumatoid arthritis. In tuberculous joints there is nearly always permanent L., for the spontaneous cure of the disease is often bony union in the joint, so that no movement is possible in that joint. The commonest example is hip-disease. In older people L. is often due to the various forms of chronic arthritis, and also to degenerative changes in the joints. Nervous disease may produce complete paralysis, or every degree of disturbance of the gait. A limp is often a deliberate gait adopted to avoid pain to some injured part. This group of limbs includes all the minor and transient forms of L.

Lameness, Groggy, see NAVICULAR DISEASE.

Lamennais, Hugues Felicité Robert de (1782-1854), Fr. abbé and philosophical writer, actually named La Mennais, b. at St. Malo, Brittany. His horror at the revolution was occasioned less by his monarchical leanings than by his dismay at the overthrow of religion, and is expressed in his *Réflexions sur l'état de l'église en France pendant le 18^{ème} siècle et sur sa situation actuelle*, pub. anonymously in 1808. At the commencement of the 'Hundred Days' he fled to London, where he fell under the influence of the Abbé Carrou, who induced him to be ordained priest on his return to Paris. The first vol. of his great work, *Essai sur l'indifférence en matière de religion* (1817), stirred all Europe in its violent denunciation of religious toleration. After the revolution of 1830 he founded, in conjunction with Montalembert and Lacordaire, the paper *L'Avenir*, with its motto 'Dieu et Liberté,' advocating an aggressive democracy. His appeal to the pope to support the paper against the Conservative bishops failed, and L. completely severed himself from the Church. His remarkable *Paroles d'un croyant* (1834) marked his new attitude, and henceforward he belonged to the extreme Democratic party, attacking all the opinions which he had hitherto upheld. At the revolution of 1848 he sat as a representative on the extreme left in the assembly, until the coup d'état of Napoleon III. In 1851 finally crushed his hopes for the sovereignty of the people. Among his later writings were *Le Livre du peuple* (1837); *De l'esclavage moderne* (1839); *Politique à l'usage du peuple* (1839); *Le Pays et le gouvernement* (1840); *Une voix de prison* (1840); *Esquisse de philosophie* (1810); *Le Deuil de la Pologne* (1816); and his trans. of *Les Évangiles* (1816) and Dante's *Divina Commedia*. Two so-called *Œuvres complètes de Lamennais* appeared in 1836 and 1844, and *Le Portefeuille de Lamennais, 1816-36*, in 1930. See C. Sainte-Beuve, *Portraits contemporains*, 1846; and lives by P. Mercier, 1891; C. Routard, 1905; F. Dunne, 1922; C. Maréchal, 1925; R. Vallery-Radot, 1931; also L. Ahrens, *Lamennais und Deutschland*, 1930, and G. Goyan and P. de Lallemand, *Lettres de Montalembert à Lamennais*, 1933.

Lamentations, The Book of, called in the Heb. Bibles 'Echah,' from its first word, belongs to the group known as the Megilloth. It consists of five poetical laments dealing with the various calamities which the Judeahites underwent after the capture of Jerusalem by the Chaldeans in 586 B.C. The first three dirges are alphabetical acrostics, each containing twenty-two verses. The fourth is constructed on the same plan, but in this case the verses are arranged in groups of three, each having the same initial letter. There are thus sixty-six verses in all. The fifth lament, which takes the form of a prayer to Yahweh, is not acrostic, but contains the same number of verses as each of the first three. Late tradition ascribes the authorship of Lamentations to the prophet Jeremiah. There are commentaries by Kalkar (in Lat.), 1836; J. Neumann,

1858; Ewald (in his *Dichter*, vol. i., part 2 (2nd ed.), 1866; Engelhardt, 1867; and, particularly, C. Nagelsbach, 1868 (Eng. trans. 1871); C. F. Keil, 1872 (Eng. trans. 1874); and J. Chapman, 1908.

Lamia, L. Ælius (d. A.D. 33), Rom. magistrate, consul in A.D. 3 and prefect of Rome in A.D. 32. He was a friend of Horace, who dedicated an ode to him (i. 26). See A. W. Verrill, *Studies in Horace*, 1884.

Lamia, in Gk. mythology, a female phantom. Logos said that she was a queen of Libya beloved by Zeus, whose jealous wife, Hera, robbed L. of her children, in revenge for which the Libyan queen seized and killed every child she could find. In later Gk. legend she was regarded as a female bogey, and so passed into Rom. mythology, where the Lamie were represented as demons in the form of beautiful women who enticed young men to their arms in order to feed on their blood. In this form L. is represented by Goethe in *Die Braut von Corinth* and by Keats in *Lamia*. See Theodoros; Plutarch, *De Curiosis*; G. F. Abbott, *Macedonian Folklore*, 1903; and J. C. Lawson, *Modern Greek Folklore and Ancient Greek Religion*, 1910.

Laminaria, group of large brown seaweeds (genus of Algae) and typical one of the family Laminariaceae. Some of which (*L. digitata* and *L. saccharina*, called tanglers) are edible, but more generally useful in the manuf. of kelp (q.v.) and manure. The ribbon-like *L. bullosa* and *digitata* attain to a great length. These seaweeds provide the kelp and manure from which are derived chemical salts by burning, the ash yielding soda, iodine, and potash.

Lamination: 1. term in geology for a special formation in the beds of clay or shale strata. In which the bed is formed of thin layers or plates, called laminae, lying parallel to its plane and separating easily when exposed to the weather. They may be the result of separate layers of deposit being placed one on top of the other in successive periods, or they may be due to the pressure of the later deposits. See CLAYAGE. 2. Industrial process by which successive layers of thin materials, paper, glass, wood veneers, etc., are banded together by some adhesive substance.

Laminitis, see HORSES (DISEASES).
Lammas Day, or The Feast of the Wheat Harvest, one of the oldest of church festivals, occurring on Aug. 1. The name is probably derived from the A.-S. *hlaf-mæsse*, or 'loaf mass'; it was customary to offer loaves of bread made from the fresh wheat.

Lammas Lands, lands which were enclosed during the growth of corn and grass, but open for pasture during the rest of the year. Upon Lammas Day (Aug. 1) the fences were taken down from the corn fields and on Old Midsummer Day (July 6) from grass fields.

Lammermoors, or Lammermuir Hills, range of hills in E. Lothian and Berwickshire, Scotland, which extend in an E.N.E. direction from the vale of Gala Water to St. Abb's Head on the North Sea. The

chief summit, Lammer Law, reaches a height of 1733 ft.

Lamond, Frederic (b. 1868), Scottish pianist and composer, b. at Glasgow. He received lessons from Liszt and von Bülow, and though primarily a pianist has composed a symphony, sev. overtures, trios, and sonatas. He was prof. at the Haque Conservatoire in 1917, and at the Scottish National Academy of Music from 1939.

Lamont, Johann von (1805-79), Scottish-gier, astronomer and magnetician, b. at Braemar, Aberdeen-shire. He was sent to be educated at the Scottish monastery in Regensburg, and never returned to Scotland. In 1810 he estab. a magnetic observatory at Bogenhansen. He executed comprehensive magnetic surveys of Bavaria, France, Spain, N. Germany, and Denmark (1819-58), the results of which were pub. in three vols. (1854-59). He announced the discovery of a magnetic decennial period in 1850, and his discovery of earth currents, in 1862, of which his *Handbuch des Erdmagnetismus* (1849) is the standard text-book. He was appointed prof. of astronomy at the univ. of Munich in 1852, and prepared his eleven zone catalogues of 31,674 stars (1866-71).

Lamorcieres, Christophe Leon Louis Juchault de (1806-65), Fr. general and politician, b. at Nantes. He distinguished himself at Jely (1814), and effected the capture of Abd-el-Kader in 1847. He was minister of war under Cavaignac. L. was a leading opponent of Louis Napoleon, who exiled him in 1851. In 1860 he accepted the command of the papal army, but was completely defeated by the Its. at Castelfidardo. His sentence of exile was revoked in 1857, and he d. in retirement near Amiens. See lives by E. Keller, 1875; Flornoy, 1903; and P. J. L. Azan, 1925.

La Motte, Antoine Houdar de (1672-1731), Fr. poet and dramatist, b. in Paris. His first comedy, *Les Originaux* (1693), was a failure, and he contemplated entering a monastery, but the success of his ballet, *L'Europe galante* (1697), led to a series of successful operas and tragedies, of which the most famous is *Indes de Castro* (1723). Other works are a verse trans. of the *Iliad* (1714), founded on Mme Dacier's trans., 1699; *Odes* (1707); *Réflexions sur la critique* (1715); and *Fables* (1719).

La Motte Fouqué, see FOUQUE, FRIEDRICH HEINRICH KARL DE LA MOTTE.

Lamoureux, Charles (1834-99), Fr. violinist and conductor, b. at Bordeaux. He became first conductor of the Opéra at Paris (1878). In 1881 he inaugurated the *Nouveaux Concerts*, better known as *Concerts Lamoureux*. In continuation of the work begun by Colonne. See H. Imbert, *Portraits et études*, 1894.

Lampblack, black pigment consisting of finely divided carbon, and obtained by the incomplete combustion of carbonaceous compounds, the finest L. being obtained in the distillation of coal-tar. It is used mainly in the manuf. of printing ink and as a pigment for oil-painting.

Lampedusa, is. in the Mediterranean Sea, situated between Malta and the African coast, and belonging to Italy, to

the prov. of Girgenti, Sicily. It is 7 m. long and 2 m. wide, with an area of 11½ sq. m. An It. penal colony is here. Pop. 3100. In the Second World War the It. garrison surrendered to the allies on July 12, 1943, after a sharp bombardment from sea and air. Its fall followed very soon after that of Pantelleria. See also ITALIAN FRONT, SECOND WORLD WAR CAMPAIGNS ON.

Lampeter, or Lampeter Pont Stephen, municipal bor. and assize tn. of Cardigan-shire, Wales, situated on the R. Teifi. The name Pont Stephen is derived from an anct. stone bridge over the riv., which was constructed for King Stephen. St. David's College (1822-27) is affiliated to the univs. of Oxford and Cambridge. Pop. 2200.

Lampman, Archibald (1861-99), Canadian poet, b. at Morpeth, Ontario, Canada. Graduated at Trinity College, Toronto, and entered the gov. post office. His prin. poetical works are *Among the Millet and other Poems* (1888); *Lyrics of Earth* (1895); and *Allegory*. See memoir by D. C. Scott, 1900; and life by C. Y. Connor, 1929.

Lamprey, or Petromyzon, animal which is often regarded as a fish, but which in fact differs from the true fish in the absence of jaws, paired fins, and scales, and in the presence of the round mouth, a suctional action, and of the peculiar gill-pockets, as well as sev. marked internal differences. The L. and the hag (*q.v.*), to which it is closely allied, are in consequence placed in a class by themselves, known, on account of their round mouths, as *Cyclostomata*. There are three Brit. species, the sea L. (*Petromyzon marinus*), a mottled greenish-brown in colour and over 3 ft. long; the riv. L., or more often lampren, of two varieties (*P. fluviatilis* and *P. planeri*), much smaller. All the varieties are alike in their slimy skins and eel-like forms, with seven pairs of gill-pockets connected internally by a tube and a piston-like tongue. They feed on small animals and the dead bodies of larger ones, but will often fix themselves to living ones, and feed themselves by scraping holes in the skin. They were long regarded as a palatable article of food.

Lamps have from early times been used for illumination indoors, just as torches and lanterns were used in the streets. The word lamp is derived from the Gk. *λαμπάς*, a torch, which, in its turn, is connected with *λαμπεύω*, to shine. A very primitive bronze lamp, found at Enkomi in Cyprus and belonging to the prehistoric age known as the Mycenaean, would seem to refute Athenæus's assertion that *λυχνία* (lamps) were a comparatively recent invention. Yet they did not come into common use till the fourth century B.C., and undoubtedly most of the specimens which have come down to us belong to the Græco-Rom. period. The L. supplied to the humbler citizens were made of clay or terra-cotta. Bronze was used for better-class work. Excavations in Pozzuoli, Rom. sarcophagi, and in Rom. settlements of Britain, have yielded L. of bright green enamel, many of them iridescent, whilst

one of yellow enamel was found at Cyprus. The lamp wrought about 400 B.C. by the sculptor Callimachus for the Erechtheum of Athens was of gold. But this was clearly exceptional, as much for the metal as for the beauty of its design. In size there is considerable variation. Thus the L. preserved in the Brit. Museum vary from 1½ to 11½ in. in height, whilst the length or diameter ranges from 4 to 13½ in. Normally the height is from 3 to 7 in., the length being somewhat more.

It is at least likely that the Gks. borrowed the shape of their L. from the

Ashmolean Museum

A LAMP IN TERRA-COTTA OF THE FIRST OR SECOND CENTURY A.D.

The decoration shows basileia and boatmen in relief: conjectured Roman

Egyptians, for the L. of ant. Egypt are substantially the same as those of later Hellas. The typical lamp consists of a spheroid body, which is the well for the oil, a spout or nozzle (*μυστήριον*), an opening to receive the wick (*θρναλλή*), and a round hole, through which to pour the oil. The round hole is on the upper surface, surrounded by a circular space; opposite the spout, which is a projection from one side of the round body, is the handle, usually ring-shaped so as to receive the forefinger, and with a palmette or some other spreading design on top to give support to the thumb. The Gks. also adopted or invented a beautiful type of pendant lamp. This was supported by chains fixed at opposite ends of a diameter of the well, which was fashioned like a shallow basin. A small flat stand was usually attached

to the base to correspond with the under surfaces of the clay L., which were invariably flattened to allow of their being set on a table. But the above are only types, and the few illustrations that have lasted to our day afford ample proof that the Gk. craftsmen were far too ingenious and artistic merely to reproduce year in and year out the same patterns. And the same holds good of the Rom. artificers, who carried on the traditions of their predecessors. Sometimes the nozzles were multiplied to two, seven, or even sixteen, and were skilfully contrived so as to have a place in the general scheme of design. There are L. in existence in the form of a dog curled up, a captured deer, an elephant, a ram's and a greyhound's head, and a snail shell. Others represent the head of Pan, grotesque heads, or the head of Negroes. One is shaped like a fir-cone, another like a knight on horseback, and a third like Selene with her bull-drawn chariot. All kinds of places are found for the hole leading to the oil well, as, for instance, the top of the figure's head, or the mouth of the cup which some devotee of Bacchus holds before him. A favourite ornament was the figure of a god or goddess, like Zeus or Demeter, or of a mythological hero like Hercules. An exquisite bronze lamp, found in the *Thermae of Julian* at Paris, gives an excellent idea of the standard of domestic art to which the ancients arrived. It may be seen in the Brit. Museum, but a bare description is here appended. Spouts, decorated underneath with heads of satyrs, project gracefully at either side of the main bowl springing out from the bowl in front and behind are vigorously carved lions. In place of the usual chains are two dolphins, whose heads rest one on each spout and whose tails meet in mid air above the bowl's centre. A single chain attached to the fishes' tails served to suspend them. A very elaborate and beautiful Etruscan lamp, believed to date back to the fifth century B.C., was found in 1810 at Cortona. On the under surface is the head of Medusa, whilst the sixteen spouts are decorated alternately with a satyr and a siren, and between them are masks of riv. gods.

One or two interesting customs, which the old Gks. and Romans observed in connection with L., have been handed down to us by Pausanias and others. Men used to honour their dead by placing lighted L. with incense on their tombs. A New Year's gift sometimes took the form of a lamp. A favourite device for such a present was that of two Victories holding a tablet bearing the motto 'ΑΝΝΥ ΝΟΒ ΕΛΛΕΥΡΕ ΦΕΛΙΧ'. L., moreover, seem to have played a part in religious ceremonial. Thus there were bronze L. hanging from the marble altar in front of Hermes's statue in the market-place of Pharos in Achaea. Whenever a believer came by night to consult this oracle the first step in his ritual was to light the lamp that he might see the object of his prayer. L., little different from those described above are still used in Palestine, Persia, and other countries of the E. In medieval times

cathedrals and castles were often illuminated by highly decorated hanging L., iron being a favourite material. In Rom. Catholic churches an oil-burning lamp must be kept burning before the Blessed Sacrament, and this practice is being revived in the Anglican Church. In the early days of Christendom the monogram of Christ was a common motive for decoration. See H. B. Walters, *Greek and Roman Lamps* (Brit. Museum), 1914.

In the combustion of a fixed oil in L., the oil undergoes destructive distillation, and at the burning point is resolved into a gaseous mixture. The viscosity of fixed oils makes it necessary to adopt some device supplementary to the capillary action of the wick for maintaining at the level of the burner a supply of oil sufficient to support uniform combustion. But the mineral oils are sold as mixtures of volatile hydrocarbons which give off inflammable vapours at comparatively low temps., and in consumption in L. they come to the burning point in the condition of vapour. In the Argand burner (*q.v.*), patented first in England in 1784, the inner tube is open throughout and to it a current of air passes from below, and, being carried upwards by the draught of the flame, atmospheric oxygen for combustion is supplied as well to the inner circumference as to the outer side of the flame. It then remained to devise means by which the current supplied to the outer circumference of the flame could be regulated and strengthened, and this was effected by a glass chimney which rested on a perforated gallery fixed below the level of the burner.

Lampsacus, anc. Gk. colony in Mysia, Asia Minor, on the Hellespont and opposite the modern Gallipoli. The modern vil. of Lapsaki probably stands near its site.

Lamp-shell, genus of Brachiopods.

Lampyrus, see GLOW-WORM.

Lanark, royal, municipal, and police burgh, and co. tn. of Lanarkshire, Scotland, situated on high ground near the r. b. of the Clyde 31 m. S.E. of Glasgow by rail. It is a famous holiday haunt on account of the falls of Clyde, and its historical association with Wm. Wallace. The chief industries are cotton spinning, druggery and winey weaving, nail making, and there are large cattle and sheep markets. It has a golf-course and a good race-course, while the presence of the Glasgow consumption sanatorium just outside the tn. is a proof of its healthiness. Pop. 6000.

Lanark, New, 14 m. S.W. of Lanark, was founded by David Dale and Richard Arkwright in 1783 as a cotton-spinning centre. Robert Owen, the social reformer, was manager of the mill from 1799 to 1828. Pop. included with Lanark.

Lanarkshire, S.W. inland co. of Scotland, bounded N. by Dumbartonshire and Stirlingshire. The shire is divided into three wards, the Upper, which lies to the S. and includes more than half the co., the Middle, and the Lower. The greatest elevations are to be found in the S., Culter Fell (2454 ft.) being the highest on the borders, and in L. itself Green Lowther

(2403 ft.). The valley of the Clyde (Clydesdale) runs through the co., and the surface slopes gradually from the heights in the S. to the firth of Clyde in the N.; the Clyde with its numerous tribs., of which the chief are the Medwin, Mouse, Calder, and Kelvin on the right, and the Douglas, Nethan, and Avon on the left, drains the co. There are a few lochs in the N., but they are unimportant, and the falls of the Clyde at Bonnington, Corra, Dundoff, and Stonebyres are the most famous features in the scenery. Grain is not grown very largely, oats being the main crop, but cattle and sheep are reared extensively, also pigs, and a fine breed of draught horses known as Clydesdales. Dairy farming is productive, especially certain kinds of cheese, and fruit-farming is carried on in the Clyde valley, strawberries being grown in great quantities. In the N. market-gardening flourishes, a considerable amount of glass being in use. The main industries are the coal and iron fields, of which Glasgow forms the centre; shipbuilding at Glasgow, Govan, and Partick; cotton, woollen, and linen manuf. at Glasgow, Rutherglen, Hamilton, Lanark, etc.; engineering at Coatbridge, Kinning Park, Wishaw, etc. The canals include the Monkland Canal in the N., and the Forth and Clyde Canal in the N. and N.W. The co. is divided into six parl. divs., each returning one member, and there are sixteen burgh constituencies. The co. has been the scene of some stirring historical events, Wallace being one of its chief heroes, while Mary Queen of Scots was defeated at Langside in 1568, and Claverhouse was defeated at Drumclog in 1679 by the Covenanters, who in their turn were defeated at Bothwell Brig the same year; it also contains, among others, the castles of Bothwell and Douglas. The area is 882 sq. m. Pop. 1,517,900—the most populous co. in Scotland. See C. V. Irving and A. Murray, *The Upper Ward of Lanarkshire*, 1864, and W. A. Cowan, *History of Lanark* (Glasgow), 1893.

Lancashire, maritime co. in the N.W. of England, bordering on the Irish Sea. The coast-line, though flat, with fine stretches of sand, is broken by inlets, of which the largest are Morecambe Bay and the estuaries of the three rivs., the Uddon, the Ribbles, and the Mersey. Morecambe Bay also divides the dist. of Furness with the is. of Walney from the rest of the co. There are many popular seaside resorts on this coast, the chief of which are Blackpool and Southport. The most important rivs. are the Mersey, into which flow the Irwell and Sankey, and the Ribble, rising in Yorkshire and flowing down to Preston, into which flow the Hodder, Calder, and Darwen. The surface of the co. is varied, the N. being hilly, except near the coast, and including part of the beautiful Lake District, Conistone and part of Windermere being in L. The E. boundary is also hilly, taking in part of what is known as the Pennine uplands, the highest point being Blackstone Edge (1323 ft.). In the S. there are some beautiful stretches of moorland, and along the coast and the R. Mersey there is a plain, once peat

mosses, but now partly reclaimed; the largest of these is Chat Moss (q.v.), between Liverpool and Manchester.

L. contains one of the largest of England's coalfields, covering about 400 sq. m., and in its area are included all the big cotton-manufacturing towns, Manchester, Burnley, Blackburn, Wigan, Bolton, Preston, etc. Fire-clay, sandstone, limestone, slate, particularly a fine blue slate, and salt are quarried. Fire-clay, clay, and stoneware are worked. In Furness red hematitic iron is found. Cattle are reared in considerable numbers, cows being kept to supply the large demand for

John H. Stone

THE TOWER AT BLACKPOOL, LANCASHIRE

milk, and the hill pasturage is good for sheep; oats and wheat are the chief crops. L. is one of the centres of the cotton trade for the world. Before the First World War 400,000 hands were employed in this manuf. The figures for April 1949 were: in cotton spinning, doubling, etc., 180,900; in cotton weaving, etc., 142,200; giving a total of 323,100. The industry dates from 1611, though it is not until 1789 that we find steam first used at the mills in Manchester, and a rapid development followed. There is a large manuf. of all implements and machines used for the weaving industry; iron and steel are manufactured at Barrow-in-Furness, there are glass works at St. Helens, watch-making at Preston, and leather works at Warrington. There are also numerous alkali, soap, candle, oil, and other chemical works. L. contains the great seaport of Liverpool with its vast shipping trade, and the lesser ports of Manchester, connected with the sea by means of the Ship Canal (1894), Barrow-in-Furness, Heysham, and Fleetwood, with their steam-

ship services to Belfast. The Bridge-water Canal is an important means of communication. The co. is one of the eos. palatine, and is part of the duchy of Lancaster, the office of chancellor of the duchy and co. palatine dating back to 1351. It is divided into six hundreds, and returns sixteen members to Parliament. It contains some fine ruins and anc. churches, and is famed for the number of its old co. families. The area is 1887 sq. m. Pop. 4,829,500. See H. Fishwick, *A History of Lancashire*, 1894; *Victoria County History: Lancashire*, 1906 7; B. Bowker, *Lancashire under the Hammer*, 1928; J. C. Walters, *Lancashire Ways*, 1932; W. Smith, *Lancashire*, 1911; A. Mee, *Lancashire*, 1942; and H. C. Collins, *The Roof of Lancashire*, 1950.

Lancashire Fusiliers, The. Raised in 1688 to support William III, the regiment early saw service in the W. Indies, and later at Dettingen (1743), Fontenoy (1745), and Culloden (1746). Wolfe was lieutenant-colonel for a time. It distinguished itself at Minden (1759). Under Gen. Burgoyne, it served in the Amer. war, and in 1782 was styled the E. Devon Regiment. It served under Abercromby in Egypt in 1801 and in 1806 it took part in the battle of Maida; it then went to the Peninsula, where it served under Wellington from 1808 (Vimiera) to the end of the campaign in 1814. It formed Napoleon's guard during the last two years of his captivity (1820-21), furnished the guard at his residence on the night of his death, and its grenadiers bore him to his grave. Further honours were won in the Crimea, at the battles of Alma and Inkerman, and at the siege of Sebastopol. It went to India in 1857, and took part in the siege and capture of Lucknow during the mutiny. A battalion served in China and Japan during the occupation of the treaty ports after 1863. It took part in Kitchener's advance on Khartoum (Egypt) and his victory at Omdurman. During the S. African war, 1899-1902, it took part in the relief of Ladysmith. During the First World War it raised thirty battalions, which served in France, Flanders, Macedonia, Gallipoli, and Egypt. The name 'Lancashire Landing' in Gallipoli commemorated its bravery in that historic campaign (see also GALLIPOLI CAMPAIGN). During the Second World War eight battalions were in service in various theatres. At the outbreak the 2nd Battalion went to the W. front with the 4th Div. Three Territorial battalions, the 1st/5th (Bury), 1st/6th (Rochdale), and the 1st/8th (Broughton), soon followed. After the evacuation of Dunkirk the 1st/5th and 1st/6th were converted to the 108th and 109th Regiments (I. F.). Royal Armoured Corps, while the 9th was transferred to the same corps as the 143rd Regiment. The 7th (Salford) Battalion, or, strictly, the 39th Searchlight Battalion, Royal Engineers, became in 1940 the 38th Searchlight Battalion, Royal Artillery (I. F.), and, after serving in the defence of S. England for three years, reverted to its original status in 1941. The 1st/8th and the 10th (Exeter) Battalions

sailed to India, where the 1st Battalion had been stationed since the beginning of the Sino-Jap war. Meanwhile the 2nd Battalion after secret training in Scotland took part in the invasion of N Africa in 1942. After serving also in the invasion of Sicily and the whole of the It campaign this battalion was selected from the famous Eighth Army (qv) to be the Brit garrison force in Vienna. It was during the storming of the Gustav line that 1 Fusilier Frank Jefferson was the VC. The 1st 1st/8th and 10th later served in India or Burma, the 11th in Italy, and the 2nd 5th in the battle of Normandy. After the termination of hostilities the 1st 5th 2nd/5th, 1st 6th 7th 9th and 11th Battalions were disbanded. See J C Lister *The History of the Lancashire Fusiliers 1914-18, 1919*.

Lancaster, Sir James (d 1618), Eng navigator and statesman first sailed in a disastrous expedition to the E Indies in 1591. Lancaster found a channel 50 mi wide in the Arctic regions leading from Baffin Bay between N Devon and Corkbura Land and continued W by Harrow Strait was named after him by Baffin on account of L's voyages in search of the N W Passage. See *Voyages of Lancaster* ed by Sir Clements Markham for the Hakluyt Society (1877).

Lancaster, Joseph (1775-1839) Quaker educationist, founded a school in London to carry out his principles. His vanity and improvidence however soon involved him in debts but in 1808 these were paid by wealthy patrons who founded the Royal Lancasterian Institution later known as the Brit and Foreign School Society. In 1818 he became bankrupt and emigrating to Canada founded a school in Montreal which failed financially.

Lancaster 1 City, nkt tn and riv port of Lancashire, England, and also the co tn. At the head of the Lune estuary, 7 m from the sea, 52 m N W of Manchester and 230 m from Lond in by rail, situated on rising ground crowned by its old castle and church. It commands a fine view of the surrounding country and of Morecambe Bay some 3 m below. The riv is crossed here by a five-arched bridge built in 1788 and to the N of the tn a canal is carried over the riv by an aqueduct.

The castle which with the adjacent priory and par church of St Mary is the dominating feature of L stands high above the city. Beneath Hadrian's Tower there is evidence of Rom construction and some of the foundations are said to be the work of Constantine the Great. But the castle as it exists to day was begun by Roger de Poitou (c. 1094), though the only Norman work remaining is the Lungess Tower used as a beacon at the time of the Sp Armada. The gateway, with its massive towers and 9-ft thick walls, is one of the finest medieval houses in existence. The Gateway Tower was planned by John of Gaunt and in 1822, a statue of him was erected over the gateway. The gatehouse gives access to what was for some years a prison. The castle contains a court-room in which are

held the assizes, quarter sessions, and court. The famous Lancashire wethers were tried here in 1612, when seventeen persons were condemned for witchcraft on the evidence of one boy. The castle library possesses a unique collection of Eng laws dating from 1221, and in the museum in Hadrian's Tower is a Rom altar and a varied collection of instruments of torture. The priory church

JOHN OF GAUNT'S GATEWAY
LANCASTER CASTLE

stands on the N side of Castle Hill. Although the present edifice is mainly Perpendicular (fifteenth century) there has been a Christian shrine here for thirteen centuries and it also incorporated the ancient Rom basilica of the Rom camp. The tower of the priory was built in 1759. The delicately carved canopies of the chancel stalls dating from about 1340 are probably the finest of their kind in the country. Notable too are the old font, cover, the pulpit, the Saxon doorway and a wealth of monuments, brasses and stained glass windows. A striking feature of the church is the memorial chapel of the King's Own Royal Regiment, one of the earliest regimental chapels to be erected. The imposing Rom Catholic cathedral of St Peter in East Road was erected in 1859, the seat of the Rom Catholic diocese of L, dating from 1921. Remarkable for colouring and workmanship are its chancel roof, frescoes, and canopies.

The tn hall and its surroundings were presented to the tn by Lord Ashton (qv) at a cost of £155,000, the architect being L W Mountford, designer of the Central Criminal Court, Old

Bailey. In the group of buildings known as Storey Institute (after the donor Sir Thomas Storey) are the school of arts and crafts, the technical college, and the art gallery. The L. Royal Grammar School (accommodating 500 boys) was founded as an old 'free grammar school' under the will of John Gardynier of Bailrigg, dated 1472, rebuilt in 1882; in 1881 the school was moved to its present site on the outskirts of the city. The public library in Market Square is a modern building opened in 1932. Also in Market Square is the L. museum, once a tn. hall, erected in 1781. In the elaborate domed Ashton Memorial in Williamson Park, designed by John Belcher at a cost of £87,000, are a natural hist. collection, palm house, and observatory. Another public park is Ryelands (45 ac.), including a former residence of Lord Ashton. Although still engaged to a certain extent in shipbuilding and repairs, the prosperity of L. to-day mainly depends on oilcloth and linoleum manuf., cotton spinning, furniture and cabinet making, textile manufacturing and dyeing, rayon, plastics, and engineering. L. is not, however, wholly industrial, although in recent years new and important industries have been estab. in the city. There can, however, still be found many of the attributes of an old Eng. market tn. and L. itself is the centre of a large agric. community.

History.—L. has a long hist. and even before the Rom. occupation the tn. was of some importance. As *Loyn-castre*, *Lone-castrum*, or *Lancecastrum* it was fortified by the Romans, and traces of their walls are still to be seen. Rom. remains in the shape of Samian ware and tombs leave no doubt that it was a Rom. station of great importance. Before the union of England and Scotland L. was often the quarry of Scots raiders, who on sev. occasions (1311, 1322, and 1389) destroyed the tn. It suffered also in the Wars of the Roses, when it was more or less depopulated, and in the Civil war, when it was captured by Cromwell in 1643, retaken by the earl of Derby in the same year, and again taken by the parl. troops in 1648. In both Jacobite rebellions, the 'Fifteen and the 'Forty-five, the rebels occupied the tn. L. received its first charter in 1193 from King John, then earl of Mortain, and the second in 1199, also from John. Henry II granted the ownership of the tn. and castle to his son Edmund, first earl of Lancaster. In 1267, and they have been part of the duchy of L. since its creation. The castle devolved by marriage to John of Gaunt and, from the reign of his son Henry IV., it has been vested in the Crown, all the subsequent holders of which have been dukes of Lancaster. In 1937 the title and dignity of a city were conferred on the borough by King George VI. on the occasion of his coronation. Population 51,000. See S. Clarke, *Lancaster*, 1811; S. C. Hall, *Lancaster Castle*, 1843; and R. Simpson, *History and Antiquities of Lancaster*, 1852.

2. Co. seat of L. co., Pennsylvania, U.S.A., on the Conestoga R., 69 m. W. of Philadelphia. It is a thriving industrial

tn. with large tobacco warehouses, cotton mills, breweries, tanneries, iron works, machine works, silk mills, and chocolate factories. There are also cork and linoleum works, umbrella factories, and plants for making watches, clocks, etc. It possesses trade schools and a theological college. Pop. 61,300. 3. Co. seat of Fairfield co., Ohio, U.S.A., on the Hecking R., 31 m. S.E. of Columbus. There are various industrial concerns. Pop. 22,000.

Lancaster Bomber, chief R.A.F. heavy bomber of the Second World War, the L. was a product of A. V. Roe & Co. Powered by four Rolls-Royce Merlin or Bristol Hercules engines, it carried a load of 10 tons; its extreme range, with a smaller load, was 3000 m., and its top speed 275 m.p.h. The fuselage housed three power-driven gun-turrets and was 60 ft. 4 in. in length; the wing-span was 102 ft. Though participating in some daylight raids, it was chiefly employed in night operations, being introduced in 1942. The Lancastrian and York transports, and the Lincoln bomber, were variations of the L. design.

Lancaster, House and Duchy of. The house of L. originated in the second son of Henry III., Edmund Crouchback, who was created earl of L. and Leicester in 1267. The duchy of L. was created by royal charter in 1362, when John of Gaunt, who married Blanche, the sole heiress of the Lancastrian estate, was made duke of L. in default of male heirs. Their son, Henry IV., seized the throne from Richard II., reigned from 1399 to 1413, and was succeeded by Henry V. (1413-22). During the reign of Henry VI. (1422-61 and 1470-71), the Wars of the Roses broke out, in which the Lancastrians were opposed by the house of York, descended from Lionel, duke of Clarence, elder brother of John of Gaunt. The duchy of L. was annexed to the Crown by Edward IV. in 1461, but up to the present time the revenues are held separately from the hereditary revenues of the Crown. Formerly the chancery court of the co. palatine was held at Preston and the duchy court at Westminster, but since 1873 the administration of justice has been assimilated to that of the rest of England. The office of chancellor of the duchy, being a political appointment, is generally held by a member of the Cabinet, and the stipend is £5000 per annum. See T. Taswell-Langend, *Constitutional History*, 1875; W. Stubbs, *Constitutional History*, 1875; J. Gardner, *The Houses of Lancaster and York*, 1886; Sir J. H. Ramsey, *Lancaster and York*, 1892; and J. E. A. Jolliffe, *Constitutional History*, 1937.

Lancaster Regiment (The King's Own Royal Regiment). This famous regiment, the old 4th Foot, was raised in 1680 for the defence of Tarror. Later it fought under William III. in Ireland and Flanders; and Namur, 1695, is its first battle honour. Its badge, 'The Lion of England,' is supposed to have been granted about this time. Under Queen Anne it became the Queen's Marines, and served under Adm. Rooke at the capture of

Gibraltar, 1704. George I. conferred the title of the King's Own in 1715. During the Amer. War of Independence it served in the prin. actions. During Moore's retreat on Corunna it distinguished itself, and later under Wellington in the Peninsula and at Waterloo. Further honours were gained in the Crimea, Abyssinia, and S. Africa. During the First World War it raised sixteen battalions which served in France, Flanders, Macedonia, Gallipoli, Egypt, and Mesopotamia. In the Second World War the regiment was part of the Chindit force in Burma. Other battalions were part of the Fifth Army and fought on the It. front. The king is colonel-in-chief of the regiment.

Lance, George (1802-64), Eng. painter, b. at Little Easton, Essex. He studied under Haydon, confining himself to historical art, but discovering where his real bent lay by the copy of a group of fruit merely as a study of colour, he afterwards devoted himself entirely to still life and fruit studies, sev. of which are in the National Gallery and Tate Gallery.

Lance-corporal, in the Brit. infantry, a non-commissioned officer below the rank of corporal, or an acting corporal; those on the estab. of a battalion wear a single chevron on each sleeve. A lance-sergeant is a corporal acting as a sergeant.

Lancelet, see AMPHIOXUS.

Lancelot du Lac, famous knight of the Round Table, and secret lover of Queen Guinevere. He was the son of King Ban of Benic and Queen Elaine, who were driven out of their kingdom by Claudas. L. was brought up at the court of a water-fairy, the Lady of the Lake, and when he reached manhood he offered his services to King Arthur, who made him a knight. His love for Guinevere was disclosed to Arthur by the sons of Lot, and at the end of the ensuing war he retired to a monastery. He was, by Elaine, the father of Sir Galahad. The story of L. belongs to the later romance of the Arthurian cycle. See eds. of the prose *Lancelot*, 1468 and 1533, and Dutch trans. by M. Jonckbloet, *Roman van Lancelot*, 1850; H. Hahn (ed.), *Lancelot*, 1845; J. L. Weston, *The Legend of Sir Lancelot du Lac* (vol. xii. of Grimm Library), 1901; and J. Boulenger, *Romans de la Table ronde*, 1922-23.

Lancers, cavalry regiments so named from their prin. arm being, or having been, the lance. In the days of chivalry the long lance was the chief weapon of offence, but in 1597 it declined in importance, owing to the introduction of a serviceable firearm, with which Dutch and Eng. carabiniere defeated the Spaniards in the Netherlands. At the battle of Dunbar, 1650, however, Cromwell's troops suffered severely from Scottish L. Frederick the Great included a lancer troop in each of his hussar regiments, the men of which were armed with a long pistol, sword, and lance. At this time there was no pennon on the lance. During the Napoleonic period the lance was seen on many battlefields in the hands of Poles, Cossacks, and Arabs. After Wagram L. began to appear in the Fr. ranks. A regiment of

Polish L. was raised in 1807 in the Fr. service, and in 1811 Napoleon converted nine dragoon regiments into L. The Fr. L. in the Peninsular war were very prominent at Albuera, and again at Waterloo they sorely tried the Brit. dragoons and hussars. Soon after Waterloo a few regiments of Brit. dragoons were converted into lancer regiments.

The lance, though a good weapon of offence, is very difficult for parrying. The long lances of the Cossacks proved a hindrance to them in the Moscow campaign of 1812 for this reason. During the first half of the nineteenth century the 16th L. distinguished themselves in India by their work with the lance. The 9th and 12th L. also gained fame in India and on S. African fields. In the Khartoum expedition, under Lord Kitchener, the 21st Ls. charge was a notable feature of the campaign. During the S. African war, 1899-1902, the 5th L. made a very effective charge at Eland-laagte in 1899. In spite of these achievements the lance declined in favour soon after this campaign. The lance found little scope in the First World War. During Aug. and Sept. 1914 in France the 12th L. at Cerniz and the 9th L. at Moncel afforded the only instances of effective charges. The 21st L. also found employment on the N.W. frontier of India against the Mohmands, and the 2nd Indian L. under Allenby in Palestine wrought havoc amongst the Turks with their charges. Later the lance was retained solely for ceremonial purposes, but to-day it has disappeared with the conversion of lancer regiments into armoured units. As armoured troops or armoured car units the L. fought in many great battles of the Second World War, notably in the heavy fighting in Normandy in the difficult bocage country, June-July 1944, where the 24th L. especially distinguished themselves. As part of the famous Eighth Army in N. Africa and on the It. front the 9th Queen's Royal L., 12th Royal L., 16th/5th L., 17th/21st L., and 27th L. were all conspicuous.

Lancers, square dance of Fr. origin, consisting of five figures, each consisting of sev. steps, eight people composing the set. It was highly popular in the nineteenth century and, like other old-time dances, would appear to be coming back into favour.

'Lancet, The', a leading Brit. medical jour., founded in 1823 by a surgeon named Thomas Wakley, who used it to attack the gross abuse then existing in the administration of hospitals. Wakley was assisted by Cobbet, Wardrop, Sir Wm. Lawrence, and Dr. Arthur Hill Hassall, and was succeeded as editor by his son and grandson.

Lancet Window, see ARCH and ARCHITECTURE, Early English.

Lancewood, straight-grained wood of great strength and flexibility. The wood is obtained from two trees belonging to the order Anacaceae, the black L., which is used mainly by coachbuilders for the shafts of traps, being obtained from the *Quaeria virgata* of Guiana and the W. Indies, and the yellow L. (*Duguetia*

quitlarensis), also found in (Gulana, and used by the Indians for arrow-heads.

Lanchester, Henry Vaughan (b. 1863), Eng. architect. He was educated privately and began practice in 1889. Among his works are Cardiff city hall and law courts; Central Hall, Westminster; council hall, Lichnow; and Leeds Univ. F.R.I.B.A., 1906. He was a member of the committee which advised on the site for New Delhi. He ed. *The Builder* (1910-1912), and was consulting architect to London Univ., 1929-31. Pubs.: *Town Planning in Madras* (1918); *Talks on Town Planning* (1924); and *The Art of Town Planning* (1925).

Lanchester, rural dist. and tn. of Co. Durham, England. In the neighbourhood are remains of a Rom. station, and Rom. relics have been found. The tn., situated near Durham, is industrial, and contains coal-mines, steam saw-mills, and timber yards. Pop. 16,300.

Lanchow, cap. of Kansu prov., China, on the Yellow R., situated in a country of red loam hills from which the wind and river have for centuries carried the soil which now covers most of N. China. Its natural potentialities are almost unlimited. Industrial co-operatives are gradually opening up the heart of the country from L. as centre. L. is the terminus of the Russian highway into China, the one land route into modern China. Transport, however, from L. into China is very primitive and there is as yet no railhead. There is an airport near the tn. from which aircraft fly to Russia. It is the trade centre of the dist., which produces coal, silk, turs, and coarse textiles. Pop. 500,000.

Lanciano, tn. in the prov. of Chieti, Italy, is 13 m. S.E. of Chieti. It is the old Anxanum, and contains Rom. remains and a cathedral, the facade of which was struck by a bomb in the Second World War. It manufs. linen and hemp, and trades in country produce. Pop. 20,000.

Lancing College, public school near Shoreham, Sussex, was founded in 1848 by the Rev. Canon Woodard in connection with an educational scheme in Sussex which embraces the schools of Hursley and Airdingley. There are eight leaving scholarships, of £50 per annum, to Oxford Univ.

Lancet, Nicolas (1690-1715), Fr. painter of *filles galantes*; b. in Paris. Studied under Pierre d'Ulin, an Academy prof., but left him for Claude Gillot because the latter was the master of Watteau whom he met and whose style very strongly attracted him. The friendship between L. and Watteau does not, however, seem to have endured; it is said that the success L. achieved with two works which he exhibited and which were attributed to Watteau caused the rift. L. was a most laborious worker and his pictures numbered about 800. His first important works were 'Le bal champêtre' and 'Une Dame dans un bosquet' (1714). His 'Four Ages of Man' is in the National Gallery and the Wallace Collection has his 'Une Conversation galante.' L. shows truth and naturalness and easy and

graceful movement, but he lacks the peculiar charm of his exemplar Watteau.

Land, as the ultimate source of all wealth, has necessarily, throughout all time, been the most coveted kind of property. It has the characteristic of immovability which no other species of property possesses, and with the guarantee of state protection for all individual rights affords its owners an element of security and permanence in their proprietary estate altogether unique. And the more modern inventions increase the productive power of L., and the further the margin of cultivation is pushed by inventiveness and enterprise beyond its old limits, the keener becomes the desire to hold it. Conversely the further back the hist. of L. is traced the less valuable will it appear to have been to those who occupied it, more especially seeing that in primeval times there was ample for all. The hist. of every civilisation is that of the subordination of crude nature to human art, and it is clear from such records as are extant (chiefly Caesar and Tacitus) of the manners of tribal organisations that these quickly learnt the value of such L. as was capable of producing natural food for their subsistence. Even with tribes whose sole occupation was the chase, we see the germ of territorial property in the defence of hard-won L. against hostile aggression by less fortunate adventurers. In the pastoral stage that germ had developed into the tenure of the vil. community, the more civilised and developed organisation of which is to be found even at the present day, especially among Slavonic and Hindu peoples. In general the common field system of cultivation obtained as the most advantageous system of husbandry, i.e. the system by which fields were divided into three narrow strips, owned in severalty but cultivated by co-operation.

In primitive societies both the arable and pasture Ls. have remained the joint property of the community, and in an ideal state when those appointed to cultivate the L. or tend the cattle had been respectively best fitted for those purposes, and willing to perform the duties for the general benefit, the need for private ownership might not have been felt. The change comes with the apportionment of the arable L. among the households comprising the vil., while the pasture, woods, and forests remain common property. The principle of joint ownership, however, survives in the system of cultivation of crops by rotation, the Ls. apportioned for culture lying fallow for a succession of years, other Ls. being assigned by the vil. rulers for cultivation. This immature system becomes definitely that of private property as soon as L. is appropriated permanently to separate families, the less fortunate or more idle 'villagers' being relegated to the waste Ls., or forced to labour for the landowners. From this appropriation springs all wealth, and the very notion of money, which in the Lat. word *pecunia* is cognate with *pecus*, cattle (see on this Sir E. Pollock and F. Maitland, *History of English Law down to the Thirteenth Century*, 1895). The general

result of this course of evolution, where the vil. community has not become a permanent institution, is the tendency everywhere for huge landed estates to become concentrated in the hands of a few powerful families, and, indeed, for most of the rest of the L. occupied by any particular nation to fall into the hands of comparatively few of the people, with the consequence that political control falls to the owners of L., and the very qualifications for office are based upon the possession of a certain amount of L. It is then that ownership or tenure of L. is regulated by legislation, and, whether we are dealing with the agrarian reforms of the Gracchi or the fiscal proposals of our own times, it is not difficult to appreciate why laws relating to L. must almost inevitably be at the same time laws that vitally affect the very polity and constitution of the state, and inevitably rouse the angriest passions. It is not, however, to be assumed that the same course of evolution is traceable in the hist. of the L. of all existing nations, though there may well be certain fundamental similarities in the earliest stages. But unquestionably feudalism lies at the root of L. tenure in most European nations, although in practically every case nothing but faint traces still remain, e.g. in Scotland, where the Scots L. law still speaks of *feu duties* being payable by a *vassal* to his *superior* or *lord*, while in England we still speak of a lord of the manor. (For the relation between the Rom. tenure of L. and continental feudalism, see under LAND LAWS.) The break-up of feudalism may be said to have begun from the time knight service became commuted for a money rent, and practically completed when terms of years or leases were granted by landowners; for these were indications of speculation in L. as a source of profit—a state of things entirely opposed to the spirit of commendation. The whole hist. of Eng. L. during the Middle Ages is that of a struggle between feudal overlords and their tenants, the former endeavouring to exact to the letter all the aids, reliefs, and other burdens imposed on the tenants by the L. laws, the latter endeavouring to evade all such quasi-public obligations and consolidate their holdings into private property in the fullest sense of that term, an endeavour which was partly accomplished by the devices of conveyancers in frustrating the common law rules as to tenure, and partly through alienations in mortmain (q.v.), and the doctrine of uses and trusts (see EQUITY). The idea that L. in England was merely held or loaned of a superior lord on certain conditions practically received its death-blow by the rule of primogeniture—at first a mere corollary of feudalism—and the judicial interpretation of words of grant (see DE DONIS). The later concession that L. might be disposed of by will completed the conception of a tenure of L. as a species of private property. As to the effect of marriage settlements, and wills customarily made in the manner of settlements, in keeping estates in the hands of wealthy families, see under LAND LAWS and ENTAIL.

In Franco there is a system of petty entails in vogue which, taken with the conformity of landowners to the spirit of the rule of succession of all the issue equally, results in the existence of a great number of private estates of no great size; whereas in England the effect of primogeniture and settlements made conformably to that doctrine is the aggregation of huge landed estates in the hands of comparatively few.

There were, especially in the late nineteenth and early in the present century, suggestions put forward with a view to remedying the real or supposed evils of private ownership of L. The propositions generally urged were: (1) To abolish entails and primogeniture which has now been achieved, and other legal difficulties in the way of sales, now much modified. The Land Transfer Act (see LAND REGISTRY) has done something to lessen expense. (2) To legalise and extend tenant-right (see under LAND LAWS). (3) To establish tribunals of arbitration to decide upon appeals as to the rent to be paid (see CROFTERS and under LAND LAWS as to tenant-right). (4) To have the state buy out the landlords and either sell again to the tenants, or itself remain the landlord. As to taxation of L. values as a step to nationalisation of L., the expenses of nationalisation, and the extent to which state ownership and control actually prevail, see under LAND LAWS. See also LAND COMMUNITIES; LAND FOR MILITARY PURPOSES; LAND LEAGUE; LANDLORD AND TENANT; LAND NATIONALISATION.

Venn, *Foundations of Agricultural Economics*, 1923; F. Gearn, *Land Tenure and Unemployment*, 1925; Lord Ernle, *The Land and the People*, 1925, and *English Farming*, 1927; Sir W. Holdsworth, *History of English Law*, 1927; and G. C. Cheshire, *Law of Real Property* (4th ed.), 1935.

Land Army, see WOMEN'S LAND ARMY. Landau, tn. in the Rhineland, formerly of Bavaria, Germany, 17 m. S.W. of Speyer. It has ant. historical associations. Founded in the thirteenth century, it was made an imperial city and fortified. It played an important part in the Thirty Years war. Bavaria entered into possession of it in 1816 and destroyed the fortifications in 1871. It is a trading centre, has iron foundries, and manufs. machinery. Pop. 16,000.

Landaur, cantonment and sanatorium in the Dehra Dun dist. of the United Provs., India, 75 m. E. of Umballa. Altitude 7159 ft. Pop. 5000.

Land Banks are conducted for the purpose of lending money to farmers who wish either to buy land or to embark upon development of land already owned by them. In Great Britain there are no L. B. exclusive to that class of business, the farmers conducting their business through the ordinary joint-stock banks, most of which advance money on mortgage, holding the title-deeds as security, or by

local credit societies affiliated to such concerns as the Farmers' Land Purchase Company and the Lands Improvement Company. But there are agricultural banks, whether called by that name or some other name indicative of their function in six British colonies notably in Barbados (ordinances of 1907 and 1936), Cyprus (ordinances of 1890 and 1925), Kenya (ordinance of 1931), Mauritius (ordinance of 1946), Seychelles (ordinance of 1937), S. Rhodesia (ordinance of 1924), Trinidad (revised laws cap 132) and Transjordan. Germany had the *Landschaften* (credit union of Germany) and the *Raiffeisen Bank*, which controlled a great number of credit societies. L. B. operates extensively however in the U.S.A. where the Federal Land Bank is the most prominent. In 1923 gov. control was imposed over the movement and the capital was subscribed by the Treasury. Intending borrowers are required to take up 5 per cent of the loan in Federal Land Bank stock, such facilities being available only to farmers. There are too many privately owned joint stock L. B. authorised by the Federal Farm Loan Act. Borrowers from these banks are under no obligation to make a subscription and loans are made for the purpose of development including expenditure upon seeds, machinery, etc. as well as for the purchase of land.

Land Commissioners. On the passing of the Tithe Act 1836 commissioners were appointed to administer its provisions and when the Copyhold Act 1841 was passed the tithe commissioners were entrusted with the duty of administering that Act.

LAND CRAB (*GECAECINUS LATERALIS*)
FROM THE GABOON
On sixth natural size

as well. When later additional duties, relating to the enclosure of commons and land drainage devolved upon them they became styled tithe, copyhold, or enclosure commissioners according to the particular functions they happened to be exercising at the moment. On the passing of the Settled Land Act, 1882 (see under LAND LAWS), they received the name of L. C. for Landland. Finally, in 1884 the commission became merged in the Board of Agriculture.

Land-crab, popular name given to the species of Gecarcinidae, a family of

malacostracan crustaceans which only occasionally visit the sea or fresh waters. They have a square convex carapace and moderately large eyes. The species of *Uca* are found in the mangrove swamps of S. America, and those of *Gecarcinus* inhabit the forests of the W. Indies.

Land Drainage, see DRAINAGE AND DRAINAGE, LAND RECLAMATION.

Lander, Richard Lemon (1804-34) Eng. explorer b. at Fermo Cornwall. In 1825 he accompanied Hugh Clapperton on his second expedition to W. Africa and was with his leader at his death at Sokoto (1829), publishing Clapperton's journal in the same year with additions of his own as *Journal of Richard Lander from Kano to the Coast* followed by *Records of Captain Clapperton's Last Expedition to Africa* (1830). In that year L. was sent with his brother John (1807-39) by the Brit. Gov. to explore the lower course of the Niger an account of which they pub. in 1832 as *Journal of an Expedition to Explore the Niger*. During a second expedition to the Niger, in 1834 L. was killed by natives.

Landes, maritime dept. of S.W. France bounded on the W. by the bay of Biscay. It is divided into two parts by the R. Adour. The portion to the N. includes three-fifths of the dept. and is composed of tracts of heath and sand interspersed with forests of oaks and cork trees and numerous marshes which are being gradually drained into the shallow lagoons which fringe the sea coast. The S. part is hilly and covered with oak plantations and vineyards. The mining of iron ore and bituminous coal is an important industry. There are mineral springs at Dax, and rock salt is obtained there and at Tescourre. There are two arrons. Mont de Marsan (the cap.) and Dax. Ar. 3604 sq. m. Pop. 248,800.

Landeshut, Landshtut (Polish Kamienna Gora), tn. of Silesia, Poland (formerly of Germany) on the Bober at the base of the Riesenberg 30 m. S.W. of Liegnitz (Lignitz). It has manufs. of linens and cotton goods. From 1921 the Cistercian abbey of Grüssau was occupied by Benedictine monks expelled from Prague. Pop. 13,900.

Land for Military Purposes. Under various statutes the Crown has power to interfere with a landowner's rights, or acquire his land by compulsory purchase for purposes relating to military administration. There are a number of provisions to be found in the Military Forces Localisation Act, 1872; Ranges Act, 1891; Military Lands Acts, 1892, 1900 and the Military Manoeuvres Act, 1907, for the purchase of land for ranges, for volunteers military manœuvres barracks or other use for the localisation of the military forces, and generally for military purposes. Under the Defence (Barracks) Act, 1935 land may be acquired compulsorily for barracks for any of the three services. There are ancillary provisions in these Acts authorising the taking, closing, or diversion of highways, the making of by-laws relative to practice ranges and the assessment of compensation for

damage done in the course of military manoeuvres. Also the secretary of state for war has power, under the Military Tramways Act, 1887, to purchase land for military tramways (as to acquisition of land in case of invasion, see under DEFENCE ACT, 1842). The procedure for the acquisition of land and the mode of assessment and payment of compensation is for the most part to be found in the Defence Act, 1842. Generally speaking, assessment is either by jury or two justices, but in the case of land acquired under any Act which incorporates the Lands Clauses Acts (*q.v.*), the authority acquiring the land may require the assessment to be settled not by jury but by arbitration. See also under LAND LAWS as to compensation for 'injurious affection.'

Landgrave, old Ger. title of nobility. After the time of the Carolingian kings the term was used for a governor in the interior, under a duke, in contradistinction to a margrave, or keeper of the frontier. But the Ls. soon made themselves independent and all such distinction was lost. In the eleventh century the margraves of Thuringen assumed the title of L., and in the next century the Graves of Hesse obtained the title.

Land Laws. In no respect does the peculiar genius of a powerful nation manifest itself so much as in its L. L. Land in relation to the notion of proprietorship stands upon so different a footing from all other kinds of property that fundamental diversities in the L. L. of great states at different periods have almost necessarily existed. The traditional Eng. conception of a fee simple owner whose right of disposition is absolute, and whose rights of user are conditioned solely by the prohibition of injuring others in exercising them, or of an eldest son under a strict settlement whose rights are hardly inferior, would have astonished a Rom. aristocrat. Yet in the later period of the Rom. system it is possible to see in the emphyteutic (see EMPHYTEUTIC TENURE) by which the proprietor alienated all his rights, except the bare ownership, for a long term in consideration of a yearly rent (*pensis*), not only an approximation to the Eng. long leasehold, but the link between the Rom. and the feudal systems of land holding (see also Sir H. S. Maine, *Ancient Law*, Chap. VIII.), which latter lies at the root of the whole Eng. L. L. In the earliest times the arable lands of the Roms. were cultivated in common by the sev. clans, each clan distributing its produce among the sev. households belonging to it. This was a system essentially suited to an agric. community where wealth was measured not in terms of money or rent, but in cattle and the usufruct of the soil. The constitution itself was based on clanship and this communal system of husbandry, but even before the Servian constitution this system had yielded to a process of distribution of land by which estates were for the most part no larger than could be farmed by a paterfamilias aided by his sons and slaves (generally about 20 *jugera* or 12½ ac.). But side by side with these smaller farms there existed,

somewhat later in the regal period, the *latifundia*, or broad ac., of the Rom. patricians, though exactly how and when they were formed is a matter lost in obscurity. It was from the great Rom. landlords that the Rom. nobility sprang, much as the territorial aristocracy of England was evolved. At first, however, the great Rom. landlords and senators, among whom had been distributed the clan lands, were literally 'fathers from the fields' which they parcelled out among the common people as a father among his children. The fundamental distinction between the older Rom. individual ownership by a senatorial father and the landholding aristocrat of later times is that the former was sole owner, though his 'tenants on sufferance' had *de facto* rights and privileges of no mean order, while the ownership of the latter is based upon the leading characteristic of both the feudal system and the L. L. founded upon that system of double ownership. The tenant was treated as a true proprietor so long as he paid the quit-rent to the grantor of his lease, while the reversionary ownership of the grantor is kept alive by a power of re-entry on non-payment of rent. This double ownership was essential to the feudal system wherever it obtained and at all its periods of development, whether the rent or *redditus* (*reddire*, to give back) was returned in the form of money or personal services, as by knight service (see under KNIGHTHOOD), or by agric. services as in socage tenure (see also GRAND SERJEANTY and HILLOT). In England at the time of the Conqueror the feudal system of L. L. may be said to have allowed of a treble ownership; the double ownership of the superior lord and his vassal co-existing with the general overlordship of the king.

Although the later Rom. L. L. may have evolved a system in some respects not dissimilar to continental feudalism, there was in them nothing like the Eng. system of subinfeudation under the supreme ownership of the king. It is true that the practice of commendation and mutual oaths of fidelity and protection, and the obligations of military service, were features common to Eng. and Teutonic feudalism. But the conception of England as the hereditary fief of the king was quite indigenous; and the subsequent evolution of the Eng. L. L. through the principle of primogeniture into a hard and fast system of succession in a strict line of devolution, which served to keep great landed estates concentrated in the hands of a single member of a country family, was no less peculiar a feature of the Eng. feudal organisation.

The greatest interest which an Eng. subject can have in land, viz. an estate in fee simple, is theoretically short of being absolute, in that it is subject, to the shadowy ownership of the king. But such interest confers almost plenary rights on the owner. It confers free enjoyment, consistent with security to the persons and property of others, and disposition, and is characterised in all but form by all the incidents of absolute ownership. An owner in fee simple can

freely dispose of his land in his lifetime, or by his will, either for his whole interest or for any part of it, or for a term of years (see CHATTEL INTEREST; LANDLORD AND TENANT), though this right of disposal is subject to the operation of the bankruptcy laws against voluntary assignments or conveyances in fraud of creditors. His ownership in the soil extends without limit above and below (*ius est solum, ejus est usque ad cælum et ad inferos*). The right to the air above has hitherto been merely one way of expressing the owner's right to erect buildings to any height he chooses, subject, of course, to any limitation on that right which he may have imposed upon himself by covenants with grantees of adjacent land, and subject to the right to light gained by prescription by other persons; but in these days of the development of the art of flying the right may conceivably require a more liberal interpretation. The right to the actual soil in the case of a highway is subject to the public right of way (see HIGHWAYS), but it is otherwise unimpaired, though mining operations must not be carried out so as to break up the highway. The right to the minerals is subject to the Crown's right to any gold or silver mines (called 'royal mines'). The Crown is also entitled to buy copper and other ores at a valuation. The freeholder may also except out of a conveyance of his land the mines lying under it, and they will then remain his corporeal property, subject to the duty of working them in such a way as to leave sufficient support to the surface. Where copyholds (q.v.) were enfranchised (converted into freeholds), the lord of the manor or paramount freeholder continued entitled to the mineral. Copyhold tenure was, however, abolished by the Law of Property Act, 1922, by its enfranchisement on specified terms. Water is technically land covered with water (see LAND), but the owner's right to water depends on whether it is percolating, or running in a defined stream or channel; if the former he may do as he will with it, notwithstanding the detriment to others who may have relied upon it previously for water-supply, and notwithstanding that his drainage operations may cause a subsidence of neighbouring property (see DAMNUM ABSQUE INJURIA). But if the latter he has no right to exhaust the supply or pollute the stream, or divert or dam the water, unless the diversion causes no material injury to other landowners over or through whose land the stream also flows, or unless he has obtained a right to divert or pollute by prescription (uninterrupted user for forty years); and whether the water be tidal and navigable or not, every other riparian owner has an equal right to take a reasonable quantity for domestic or business purposes.

But all these incidents of absolute ownership may be limited in a number of ways by the owner himself, who besides being able to grant portions of his land to others for any estate, may grant rights of way or other easements (see also INCORPOREAL HEREDITAMENTS). Lands may also be subject to commonable rights or

profits à prendre (see COMMONS; EASEMENTS). Various rights against an owner of land may also be gained by prescription, i.e. uninterrupted user for a certain number of years. A right of way is gained in twenty years, a watercourse in forty. A right to light for any dwelling-house or other building in twenty years (subject to the right having been enjoyed by some consent or agreement expressly given in writing). Where the owner of a house and adjoining vacant land sells his house, a right to light over the land arises by implication, but if he sells the land such easement arises only where he expressly reserves the right to light over the land sold.

In regard to the right of an owner to carve out of his own estate or interest lesser estates, it is to be observed that there exists in our L. L. a fundamental rule against what are called perpetuities. An owner may grant by deed or will a number of life estates to existing persons and thereafter interests in 'remainder' and 'reversion'; the whole forming, as it has been aptly said, a series of estates projected on the plane of time; but in so doing he must take care that no interest given to some unborn person is so remote that it cannot arise within the compass of existing lives plus twenty-one years, with an added nine months for the period of gestation. This rule against perpetuities which was early designated in the interests of the free circulation of land, is capable of less scientific expression by saying that an estate granted (see GRANT) to an unborn person for life cannot be followed by any estate to any child of such unborn person. But this rule is subject to a practical limitation imposed by the conveyancing device of the strict settlement, by which the substance if not the shadow of perpetual estates is preserved. Briefly a strict settlement is, or was, a mode of keeping landed estates in the hands of a family by creating life estates in existing or living persons, followed by estates tail in remainder given to unborn persons in a regular order of succession, together with clauses for pin money, jointure (q.v.), and portions (see also HORRORUM) for younger sons. (Since the Law of Property Act, 1925, no new entail can be created.) See further under SETTLEMENTS; PERPETUITIES; LIMITATION.

The rights of a lessee are determined by the conditions of his lease, and need not be further discussed here, except to notice that where there are no restrictions by the lessor, the lessee's right to use the land is as unfettered as that of a freeholder.

Enough has been said above to show how valuable the legally safeguarded rights of a landowner are, and it is not surprising that economists and publicists have at various times endeavoured to prove that private property in land is naturally inequitable. In England a movement was set afoot by Lloyd George to tax land values. A tentative step in this direction was taken in his budget of 1909, which not only provided for an original valuation of every acre of land in the kingdom, with a differentiation between site and 'total' value, but

imposed some four new land taxes (since repealed) directly aimed at the land monopoly in the interests of the developer of land (see LAND TAXES). Some have gone so far as to assert that land is so different from all other kinds of property that it not only can but ought to be the exclusive source of taxation. This 'single tax' movement originated in the teaching of Henry George (see his *Our Land and Land Policy, National and State*, 1871, and *Progress and Poverty*, 1880), and, broadly speaking, it may be said that George's idea was that land should be progressively taxed up to its full capital value, until ultimately property in land values was taxed out of existence, and land thereby became wholly state-owned.

This article is not concerned with the reasons for and against the 'single tax' movement, the principles of taxation of land values in general, or land nationalisation, except in so far as they have found expression in L. L. The undeveloped land duty was designed to force all land into its best use, and thereby to free land on the margin of cultivation; the increment value duty recognised what may be called the social aspect of private property, by forcing the owner to give to the State a proportion of the gain that accrued to him by reason rather of the collective action of the community than by his own exertions; and these are some of the essential principles of the 'single tax' movement. Again the germ of nationalisation is clearly recognisable in the creation of small holdings and allotments, and indeed in the very principle of the compulsory purchase of land for any public purpose. That principle would in all probability have been carried very much further, at all events in the direction of purchase for small holdings, tu.-planning schemes, housing schemes, and other public purposes, were it not for the heavy payments by way of compensation.

Under the Lands Clauses Acts (q.v.) compensation has to be paid not only to owners of land purchased compulsorily, but also to owners whose land is 'injuriously affected' by the scheme or purpose for which land has been purchased. But the decided cases establish that compensation for 'injuriously affected' is payable only when the injury is actually due to the execution of the works contemplated by the scheme; is actionable but for the statute or private act authorising such works to be executed; and constitutes an infringement of a right incident to land, i.e. a mere personal injury though connected with the enjoyment of particular land (e.g. a contract to erect a building on land is not ground for compensation). Again 'special adaptability' is an element to be taken into consideration in assessing compensation, e.g. where land is compulsorily taken for the purpose of making a reservoir, the fact that the land has peculiar natural advantages for supplying a dist. or area, apart from any value created or enhanced by the scheme or act for appropriating the water to a particular local authority, may be taken into account in awarding compensation. But, on the

other hand, persons whose property has obviously been increased in market value by a particular tn. or other public or quasi-public improvement are required to pay a special charge, called 'betterment charge', assessed in such improved value. Betterment charges are analogous to increment value in principle, but whereas the latter indicates an accretion of value due to some origin which cannot be traced, or to a cause not specially connected with the owner, such as the general progress in wealth of the community, the former implies that an accretion of value has accrued from some specific cause, e.g. a laying out or widening of streets in the vicinity. A local authority may under the Housing Acts recover part of the increase in value due to the making of a tu.-planning scheme from the owner whose land has been so enhanced in value. (See HOUSING.) This principle has been carried further by the legislation on tn. and country planning introduced by the Labour Gov. in 1917. The Town and Country Planning Act is a comprehensive code for the use of land and regulates the compensation of owners for loss of development value or for compulsory acquisition. It provides that compensation may be paid for loss of 'development value' and that a levy should be made on improved site values due to development. See further under TOWN AND COUNTRY PLANNING and the references in that article to the report of the Uthwatt Committee.

The mode of disposing or conveying land is more fully discussed under CONVEYANCE, CONVEYANCING, but on this part of L. L. it is to be observed that there is a very general tendency to simplify the archaic form of conveyancing as far as possible by the system of registration of title (as distinct from that of deeds), a system which obtains in the co. of London, Germany, Austria, Hungary, Australasia, Switzerland, and Canada (see REGISTRATION OF TITLE). Land is necessarily not a subject-matter capable of such simplified modes of disposition as other property, and to obtain a good title it is necessary to employ a solicitor to trace back for a certain number of years the hist. of the land that is being negotiated for. This hist., or 'abstract of title,' is sometimes of great length, and not seldom contains some hiatus in the chain of devolution which may not inconceivably vitiate the purchaser's title. But if once a system is adopted of requiring the compulsory registration of every transfer of land, the hist. of any parcel of land or hereditament will become notorious and the title immeasurably simplified.

See T. Mommsen, *History of Rome*, 1853-56; J. Muirhead, *History of Roman Law*, 1886; Sir F. Pollock and F. Maitland, *History of English Law*, 1898; Hood and Challis, *Conveyancing, Settled Land, and Trustee Acts*, 1909; J. Williams, *Real Property*, 1926; Sir H. Maine, *Ancient Law* (new ed.), 1930; and see also the article on 'Tenant-Right' in Wood-Kentou's *Encyclopedia of English Laws*.

Land League, The, formed by Michael Davitt and other Irish politicians in 1879 as an organisation for promoting reforms of land tenure in Ireland. The agitation of its members resulted in Irish tenants forming a kind of trade union, by the rules of which they were bound to refuse dealings with any tenant who had taken land from which its former occupier had been evicted. One of the first victims was Capt. Boycott, whose name has ever since been a synonym in the Eng. language for shunning a person. According to modern historians of Irish affairs, the L. L. did its utmost to warn the peasantry against deeds of actual violence, but the gov., full believing that its members had encouraged and incited tenants to commit outrages, instituted a prosecution against Parnell, Biggar, Sexton, Dillon, and the entire executive body of the L. L. The prosecution produced no result, for, as Justin McCarthy (*History of Our Own Times*, 1892-97, 1905) points out, the Crown could never have found a jury in Leinster, Munster, or Connaught to convict Parnell of sedition, unless it had "packed" the jury. The L. L. was a great factor in the hist. of agrarian reform in Ireland, and one of the first legislative fruits resulting from it was the concessions in Gladstone's Land Bill, 1881, though Parnell himself did not deem it polite to accept the Bill in the name of his revolutionary followers as anything more than a small instalment of their just demands. The L. L. through Parnell then advised Irish tenants generally to abstain from litigation against landlords until certain test cases had been decided. The result was that the gov. interpreted Parnell's advice as an attempt to thwart its legislation, and promptly imprisoned him under the Coercion Act. Later, when other prominent members of the L. L. were imprisoned, the league was dissolved.

Landlord and Tenant. Technically an owner in fee simple (see **ESTATE**; **INHERITANCE**; **INHERITANCEMENTS**) who leases his land to another for 999 years at a nominal rent stands to that other in the relation of L. and T. In this article the relationship L. and T. will be restricted to its popular connotation of a grant so limited in duration, and so burdened with reciprocal obligations or covenants (*q.v.*) for rent, repairs, and the like, that the grantor or landlord retains an appreciable or substantial interest in the land leased. Any landowner may grant a lease to another for a term not exceeding in duration the interest or estate he himself holds in the land; but a tenant-for-life under the Settled Land Acts can, under certain conditions, grant building leases for 99 years, mining leases for 60 years, and occupation leases for 21 years, and such leases will stand good even though they may endure beyond the life of the lessor, for they are made for the benefit of the inheritance rather than that of the tenant-for-life, and the latter will have to set aside a certain portion of the rents from mining leases and fines reserved on those and building leases as capital moneys. Under the Settled Land Act, 1925, leases of settled land may be made and leases accepted by

the tenant-for-life or by trustees of the settlement. With certain exceptions any one may become a tenant; but an infant (see **INFANCY**) may, on coming of age, repudiate within a reasonable time leases taken by him while under age.

Tenancies are either for a fixed term of years, commonly called a leasehold (see **LEASEHOLD**), from year to year (yearly tenancy), or for a shorter term than a year, including the tenancy of a lodger. No precise or technical form of words is required to constitute a leasehold, but it is unwise, especially from the tenant's point of view, not to be guided by precedent, for omissions almost inevitably throw further burdens upon him and not on the landlord. A lease for a term not exceeding three years, taking effect in possession at the best rent which can be reasonably obtained without taking a fine, may be by parol or in writing under hand only; but leases without a saving clause for the doctrine of part performance (see **FRATERNITY**, **STATUTE OF**) must be under seal by deed, and also leases for a term over three years. Agreements for a lease are not enforceable by action unless evidenced by a memorandum in writing (Law of Property Act, 1925), though this does not apply in certain cases of leases by persons under disability; but if the tenant enters into possession it takes effect as a tenancy at the will of the landlord, and if he pays rent it becomes a yearly tenancy. If in writing, though not under seal (*i.e.* not a deed), the tenant can get the agreement to grant a lease enforced by a court of equity (*q.v.*) The advantage of a deed is that it gives the *legal estate*, and where two innocent persons are defrauded by a landlord purporting to grant the same land to two persons at once, he who has the legal estate prevails. If both have deeds, the first in date prevails; otherwise a deed is now of no great importance. As to building leases granted in consideration of a ground rent, see **under** **GROUNDS** **RENT**. By the Law of Property Act, 1922, perpetually renewable leases are convertible into terms for 2000 years; and by the Act of 1925 leases for lives are converted into leases for ninety years determinable by notice on the ceasing of the life. Leases are generally prepared by the landlord's solicitor, who submits a draft lease to the tenant's solicitor for approval or amendment. The lease is then engrossed (formally written out) in duplicate, the counterpart being retained by the landlord and the lease delivered to the tenant. The latter, if he does not employ a solicitor, should see that the engrossed lease contains all the amendments or alterations agreed upon. The tenant pays the expenses of the landlord's solicitor according to a fixed scale (see **FEES**). Leases usually contain covenants (*q.v.*) by the tenant to pay rent, rates, and taxes (except landlord's property tax); to keep the premises in tenable repair, and at the end of the term to deliver up the premises in good repair; to insure the premises against fire; to permit the landlord on giving notice to enter and view the state of repair; and not to assign or underlet

without the landlord's consent; and a covenant by the landlord that the tenant shall have quiet possession. Under the Landlord and Tenant Act, 1927, a landlord may not unreasonably withhold consent to assignment; and the Law of Property Act, 1925, provides against the exactation of a fine for the landlord's consent save where the lease expressly provides for such payment. In any event, a reasonable sum for legal or incidental expenses must be paid by the tenant. An agreement to assign must be in writing. In the absence of express agreement the tenant and not the landlord is bound to do repairs. Most leases also contain a proviso for re-entry by the landlord on the tenant failing to perform his covenants; but this is not to be interpreted literally, as the landlord must first give the tenant notice of the breaches (*q.v.*) complained of, and reasonable time to remedy them, and then, if the tenant continues to make default, take proceedings in ejectment (*q.v.*). As regards 'decorative repairs,' when a landlord seeks to forfeit a lease on the ground of the tenant's failure to execute such repairs, the court may in certain cases give relief to the tenant; but no relief will be granted when the covenant to put in repair has never been performed nor when the tenant has covenanted to yield up the premises in a specified condition, nor again when sanitary considerations enter into the case (Law of Property Act, 1925). The Leasehold Property (Repairs) Act, 1938, restricts the enforcement by lessors of repairing covenants in long leases of small houses. The Act applies to houses of a rateable value of £100 or less, with five or more years unexpired, and is invoked where the lessor serves a notice under the Law of Property Act, 1925. The lessor can defeat the restriction by proving that the breach of the repairing covenant substantially diminishes the value of his reversion or on various other grounds specified in the Act, as that he cannot otherwise give effect to some enactment or by-law providing for the safety or sanitary condition of the house. Forfeiture for a breach of conditions other than by non-payment of rent is regulated by the Act of 1925. With certain exceptions, the landlord may give the tenant notice of the breach and demand compensation, calling upon the tenant to remedy a remediable breach; but a tenant who has tried to comply with the notice may get relief in the courts.

It is to be observed that in practice the above covenants are often varied by agreement, and of course it is to each party's interest to throw as many of the burdens as possible on the shoulders of the other. The prin. bone of contention is the repairing covenant; and in this connection it should be noted that a covenant to yield up in a good state of repair does not mean that the tenant is under an obligation to renovate the premises, for the nature and age of the premises and the class of neighbourhood will be taken into account by a court of law in deciding what repairs the tenant was bound to execute. If the premises are burnt down,

the tenant will still be liable to pay rent in the absence of express stipulation in the lease to the contrary; and if he is under a repairing covenant, he will also have to pay so much of the expenses of repair as are not covered by insurance moneys. (*See also under War Damage Act, 1939.*)

A yearly tenancy is one which is expressed to be from year to year, or in respect to which the tenant pays a yearly rent. A clear six months' notice is necessary to determine a yearly tenancy. A tenancy for one year certain, and thereafter from year to year, is not a yearly tenancy, but operates as a tenancy for two years at least, and the earliest moment at which it can be determined is at the end of two years by notice given at the end of the first year. Quarterly, monthly, and weekly tenancies may be determined by a clear quarter's, month's, or week's notice respectively. The liability for repairs in the case of a yearly tenancy is usually a matter of express agreement, in the absence of which neither landlord nor tenant is liable, though the tenant must make good actual damage caused by him.

Lodgers have the same rights, and are under the same liabilities as other tenants, except that in the absence of contract the estab. custom of the locality determines what notice to quit must be given. Generally speaking, if the hiring is from year to year, six months' notice must be given, if quarterly a quarter's notice, and so on; and a lodger who quits without giving notice is liable for six months', a quarter's, or a week's rent according to his contract.

Tenancies at will (apart from the case of verbal contracts, noticed above) arise where a tenant is let into possession of land on the terms that he is either bound to quit at the will of the landlord, or entitled to go at his own will. At law the payment and acceptance of rent will convert such precarious tenancy into a yearly tenancy. Tenancies at will do not often occur in practice, any more than tenancies by *sufferance*, *i.e.* where the tenant holds over after expiry of his lease. Most lawyers regard the tenancy by sufferance as a legal fiction to explain feudal archaisms, and in practice it may be safely assumed that the law will construe a tenancy of holding over to be continued on the same terms as the expired tenancy, or else as a yearly tenancy, subject, of course, to there being clear evidence of a merely contumacious holding over against the will or knowledge of the landlord, in which case the tenant will be liable for double rent where he has himself determined the tenancy by notice; and for double the ann. value if the landlord gave the notice. Except in the case of furnished houses and dwellings under the Housing of the Working Classes Acts, there is no implied warranty on the part of the landlord that the premises are fit for occupation. Under the Housing Act, 1925, the landlord covenants that the premises are and shall throughout the term remain in a state fit for human occupation and he may not contract out of this obligation (*see also under Housing*),

and it is to be noted that a person who knowingly lets for hire premises in which any person has been suffering from any infectious disorder without having duly disinfected the premises and articles contained therein to the satisfaction of a medical practitioner, is liable to a penalty not exceeding £20, or to one month's imprisonment.

The right of distraining for rent upon goods situate on the premises is subject to a great number of limitations. As a rule distress is levied through a certificated bailiff armed with a written warrant. (For a list of things not liable to be distrained upon and the law of distress generally, see DISTRESS.) The law of L. and T. remains unaffected in principle by the Rent and Mortgage Interest (Restriction) Acts, but is considerably affected in practice.

Rent Restriction Acts.—The house shortage, resulting from the cessation of building in the First World War, led to the passing of a number of Acts which have given to tenants of property of a certain value security of possession, subject to payment of rent. The prin. Act, Increase of Rent and Mortgage Interest (Restriction) Act, 1920, gave this protection to tenants both of business premises and of dwelling houses; but only residential premises let unfurnished and parts of houses so let as separate dwelling houses are now protected. Formerly the landlord who wished to resume possession for his own personal use could do so on finding the tenant alternative accommodation, but this provision was repealed. If the tenant sublets part of the premises the sublet part will not remain protected. Protection is conditional on a number of events, most of which are within the tenant's control; and the landlord, in proceedings for eviction, must satisfy the court that it is reasonable in all the circumstances to make an order. The rent of protected tenancies may be raised on various grounds, especially in respect of repairs effected by the landlord. Provision for "decontrol" or removal of protection is made both by the prin. Act and by the Rent Restriction Act of 1923. Substantial reconstruction of premises in actual and lawful possession by the landlord puts an end to the status of protection. The Act of 1927 contains special provisions, to come into force when control ceases, designed to prevent wholesale evictions. Subject to a month's notice by the landlord, the Rent Restriction Acts ceased to apply, as from Michaelmas 1933, to houses where both ann. rent and rateable value exceed certain amounts; below which amounts houses could still become decontrolled under the Act of 1923 when the landlord came into possession, provided they were not below certain still lower limits in rent and rateable value. The Act of 1933 expired in 1938, the new Act of that year extending decontrol still further, but maintaining control in respect of houses of a rateable value in 1931 of over £20 and not more than £35 in the Metropolitan Police area or over £13 and not more than £20 elsewhere. Under this

Act some 400,000 to 500,000 houses were entitled to become decontrolled. (See further RENT RESTRICTION ACTS.) But when the Second World War broke out in 1939 an Act of that year was passed to continue the prin. Acts until six months after the emergency period (as declared by Order in Council). This resumption of the Act means, therefore, that the restrictions apply to dwelling houses of which the rateable value does not (a) in the Metropolitan Police dist., or in the city of London exceed £100; (b) in Scotland, £90; (c) elsewhere, £75. It may here be mentioned that under the Furnished Houses (Rent Control) Act, 1946, provision is made for the appointment of rent tribunals by the Ministry of Health, to whom may be referred for decision questions of the appropriate rent of houses or parts of houses let at a rent which includes payment for the use of furniture or for services.

The Landlord and Tenant (Rent Control) Act, 1949.—This act provides in certain cases for the determination by the tribunal of standard rents for the purposes of the Rent and Mortgage Interest Restriction Acts, 1920-39. It also restricts the requiring of premiums in connection with tenancies; makes further provision for the purposes of the above mentioned Acts where the tenant shares part of his accommodation with his landlord or other person or sublets part of his dwelling-house furnished. It also amends the Rent of Furnished Houses (Control) (Scotland) Act, 1943, and the Furnished Houses (Rent Control) Act, 1946, as respects security of tenure and the requiring of premiums and as respects the district for which tribunals are constituted.

Compensation for Improvements.—The Landlord and Tenant Act, 1927, gives to tenants of business premises compensation for such improvements as enhance the value of the property; but the landlord has a right to object to the improvement before it is actually effected. The principle is the same as that embodied in the Agricultural Holdings Acts, but the recognised improvements are defined in the later Acts and some of them may support a claim for compensation even though the landlord has no use of them. Goodwill, due to the tenant's efforts, gives him a right to compensation in all lease cases and sometimes to a new lease; but the claim may be resisted on various grounds, such as the personal character of the tenant or the use to which the landlord intends to put the property. The tribunal for these claims is the co. court, the dispute being referred to a referee for report.

Agricultural Tenancies.—Agric. tenancies or holdings stand on a somewhat special footing. In the absence of agreement to the contrary a tenancy from year to year can only be determined by a year's notice expiring with the year of the tenancy. The Agricultural Holdings Act, 1908, gives the tenant a right to compensation from the landlord at the expiry of the lease, for certain improvements made by the tenant, the compensation payable being

based on the market value of the improvements to an incoming tenant, less a sum representing any benefit extended by the landlord to the tenant in consideration of improvements. In the event of dispute as to the amount of compensation, the matter must be settled by arbitration. As to the tenant's right to remove agric. fixtures and the law of fixtures,

compliance is impracticable, or only practicable at an unreasonable cost. Further, a tenant under a lease may serve a notice on the landlord, stating that war damage has been done so that the landlord may make it good. War damage occurring to 'settled land,' or land held on trust for sale, may be defrayed out of capital moneys. In certain cases the tenant may

	Term not exceeding 35 Years or Indefinite, no Consideration other than the Rent	Term not exceeding 35 Years or Indefinite; Consideration payable in addition to Rent	Term exceeding 35 Years but not exceeding 100 Years	Term exceeding 100 Years
	£ s. d.	£ s. d.	£ s. d.	£ s. d.
Not exceeding £25 per annum; for every £5 or fraction of £5	0 1 0	0 2 0	0 12 0	1 4 0
Exceeding £25 but not exceeding £100 per annum; for every £25 and fraction of £25	0 0	0 10 0	0 0	6 0 0
Exceeding £100 for every £50 and fraction of £50	1 0 0	1 0 0	0 0 0	12 0 0

generally, see **FIXTURES**. The old statutory law of agric. fixtures, contained in the Landlord and Tenant Act, 1851, is extended by the Allotments and Small Holdings Act, 1922, and the Agricultural Holdings Act, 1923, so as to give the tenant the right to remove certain fixtures before the term expires. In the case of agric. holdings (and market gardens) the tenant must give one month's notice and the landlord may purchase the fixtures at a reasonable price. Renewable fixtures are excepted from those improvements which ground a claim for compensation under the Landlord and Tenant Act, 1927. Under the Agricultural Holdings Act, 1923, a landlord may give the tenant notice to quit part of the holding, in which event an apportionment of the rent is to be made. A comprehensive Agriculture Bill, which was introduced by the Labour Gov. in 1946, makes substantial amendments to the Agricultural Holdings Act, 1923, particularly in the provisions relating to security of tenure for the tenant farmer. The Bill provides for the setting up on a permanent basis of co. agric. committees appointed by the Ministry of Agriculture, but including a number of members drawn from panels nominated by the farmers, agric. workers, and landowners. Independent agric. land tribunals are also to be set up to hear appeals on the more important issues arising under the Bill, for instance, dispossession of owners and farmers and the operation of notices to quit.

War Damage Act.—The Landlord and Tenant (War Damage) Act, 1939, modifies the rights and liabilities of landlords, tenants, and other persons interested in property in case of war damage. It gives relief from the obligation to repair where

elect to disclaim his lease where the land in question is unfit by reason of war damage. Within a week of serving the notice of disclaimer the tenant must also serve notices on his assignees (if any), mortgagees, or lessees holding under him or make good any damage suffered by these persons by reason of his omission. The co. court has power to modify the operation of a notice of disclaimer on terms specified in the Act. Alternatively the tenant may serve on the landlord a notice of retention, stating that he elects to retain the lease on the terms specified in the Act. Contracting out of the provisions of the Act is prohibited.

Courts (Emergency Powers) Act, 1939.

Under this Act a landlord must obtain the leave of the court before he may proceed to execution or enforce any judgment or order for the recovery of possession of land in default of payment of rent.

Stamp Duty.—The stamp duty on a lease or tack (*q.v.*): (1) For any definite term not exceeding a year: of any dwelling-house or part of a dwelling-house at a rent not exceeding the rate of £40 per annum is 2d. (2) For any definite term less than a year: (a) of any furnished dwelling-house or apartments where the rent for such term exceeds £25, is 10s.; (b) of any lands, tenements, or heritable subjects otherwise than as above, the same duty as a lease for a year at the rent reserved for the definite term. (3) For any other definite term or for any indefinite term: of any lands, etc.: Where the consideration (*q.v.*), or any part of the consideration moving either to the lessor, or to any other person, consists of any money, stock or security: in respect of such consideration the same duty as a conveyance on a sale for the same consideration (Revenue Act,

1911, s. 15); where the consideration or any part of the consideration is any rent: in respect of such consideration, if the rent, whether reserved as a yearly rent or otherwise, is at the rates in the table set out opposite, the duties are as there set forth. (1) Of any other kind whatsoever, 40s. (Note: Where the agreement for lease is fully stamped *ad valorem*, the lease itself requires 6d. only, but the denoting stamp is necessary.) (5) Building lease: *ad valorem* on the rent.

To come under the provisions of the Stamp Act, 1891, and of the Finance Act, 1921, the document must operate as a lease or a tenancy agreement.

Blundell), 1939; H. A. Hill, *Complete Law of Landlord and Tenant* (ed. by W. J. Williams and M. M. Wells), 1916; E. Fox, *General Law of Landlord and Tenant* (7th ed. by A. H. Forbes), 1947.

Landnáma-Bók, or the Book of Settlements, written by Alf F. Ǫhl (1067-1118), who is truly called the tatar of Icelandic saga. It is the earliest historical record of Iceland, and is written in the Norse tongue. The first part tells of the discovery of the Is., and the other four parts are detailed and faithful accounts of the settlers in its four quarters, with mention of their dwellings, palaces, temples, and descendants.

Land, Nationalisation of, term used to denote the abolition of all private ownership in land and the vesting of all landed property in the State. Socialists argue that the N. of L. or state ownership of land has a different complexion from state ownership of movables or 'created commodities,' it being assumed that land is the ultimate source of supply of man's entire material needs, and that therefore a land monopolist is a potential danger to the community, because he can, by exploiting his ownership for purposes other than agric. or industrial, deprive his fellow man of the necessities of life. The assumption that no man has the moral right to private ownership of nature's resources is the chief inspiration of those who advocate state ownership. Most arguments for the N. of L. spring from the theories of J. S. Mill, Henry George, and Herbert Spencer, and proposals for nationalisation (as contradistinguished from complete Socialism) have attracted only small attention outside the U.S.A. and Great Britain, or, in other words, have acquired favour only in those conditions where certain land values, owing to the rapid economic progress of the past century, have risen phenomenally, while yet remaining in the hands of relatively few owners. This condition has therefore favoured arguments founded on Mill's proposals for the taxation of unearned increment, but going further, in that Mill did not advocate more than the nationalisation of a proportion of the increment. In Russia, where all land was

confiscated under the regime of the U.S.S.R., small holdings are let out to peasant agric. workers on conditions that tend to assimilate the tenant to a landowner. Notwithstanding the Utopian appearance of such schemes, the Central Committee of the Communist party of the Council of People's Commissars had to take action in 1930 to 'protect the common lands of the collective farms from misappropriation' by individuals who unlawfully exceeded the limits allowed for the personal use of their households. It may be noted that farms in the U.S.S.R. are mainly of two kinds, the *Kholhoz* (collective farm), owned and managed by the peasants collectively and run by a committee, and the *Soykhoz* (usually larger than the average *Kholhoz*), owned by the State and directed by a manager appointed from above. Each collective farm household has for its personal use a plot of land up to a full hectare.

Landon, Letitia Elizabeth, afterwards Mrs. Maclean (1802-38), Eng. writer, began to publish verses when she was in her eighteenth year, under her initials 'L. E. L.', and in 1821 brought out *The Fate of Adelaide*, and between this date and 1829 issued other vols. of poetry. Her first novel, *Romance and Reality*, appeared in 1831, and was followed three years later by *Francesca Carrara. Traits and Trials of Early Life* (1836) is said to be autobiographical. In fiction her best work was *Ethel Churchill* (1837), which was reviewed by Thackeray (*Fraser*, Jan. 1838). See life by L. Blanchard, 1841.

Londor, Walter Savage (1775-1861), Eng. author, was educated at Rugby and Trinity College, Oxford. He declined to be called to the Bar, and preferred to live on a small allowance from his father. He stayed for three years in the country, and in 1798 pub. his first poem, *Cebir*, which, though highly praised by the few, including Southey, Shelley, and Coleridge, did not attract the many. He spent a wandering life for many years, staying at Bath and other Somersetshire towns, and visited Paris in 1802. On the death of his father in 1805, he came into a handsome competence, and three years later went to Spain and served as a volunteer against the Fr. In 1811 he pub. his second book, *Count Julian*, a tragedy, which met with the same fate as its predecessor. He now bought the estate of Manthony Abbey, married, and settled down as a country gentleman, but in 1814 he went abroad, where he resided until 1835. In 1824 he issued two vols. of *Imaginary Conversations*, and three more in 1828-29. This was his chief work, and in the 'conversations' a great profusion of noble and gracious forms, of widen times and of a later day, pass sweetly or sadly before us. If the characters have little individuality, many of the dialogues show L.'s unfeeling instinct for the heroic or tender; yet beneath every mask—Cicero, Diogenes, Lucian—the great solemn, flexible, and

harmonious voice of 'that deep-mouthed Boeotian Savage Landor' is plainly heard. From 1835 until 1858 he lived at Bath, and then went abroad, where he *d.* six years later. He was hopelessly irascible, but he contrived, by some happy chance, to remain on good terms with Dr. Parr, and, later, with Browning. His poems are little read, but his prose has survived. He cared nothing for popularity or popular feeling, and was always convinced that his great merits as a writer would be recognised, as indeed they have been, by posterity. In his prose L. certainly found

W. S. LANDOR

the manner most suited to his thoughts—in itself a rare achievement. The commentary on Trotter's *Life of Fox*, for example, is written in the same language as that used by him in later life. It is a prose style 'at once condensed and lucid, weighty without emphasis, and stately without effort or inflation' (Colvin). Where he falls in prose it is not in style but in temper and in discretion, by harping too much on one point without at the same time revealing any critical power, though criticism was essentially a part of his *métier*. In style, however, as distinct from treatment, he was a prose master, and his individual stamp is at once easily recognisable in any detached passages. With his verse the case is different. He never attained that mastery over verse which would have made it the fitting medium of his thought and fancy. Indeed he was himself sensible of this deficiency, and never spoke of his verse so confidently as he did of his prose, of which, in fact, he was not a little vain-glorious; for he ranked himself as the best of contemporary prose writers. But if he mistrusted his hand in verse, it is admitted that he is above the second rank of poets; and there is no Eng. poet capable

of the perfection and force he shows in his shorter poems, and, since Milton, only Keats has written blank verse of so majestic and harmonious a tone. In this respect his *Gebir* (1798) is to be ranked with Keats's *Hyperion*, while his *Count Julian* is wellnigh unrivalled in its own vein. In the same style as *Gebir* is *From the Phorceans*, but far behind it, showing indeed that his two best known pieces were solitary efforts; for the *Phorceans* is involved in style and narrative, is generally obscure and often unnatural. Another poem in the epic style, *Chrysaor*, is distinctly more successful; and perhaps the value to L. of these attempts at epic style is that he thereby found that his real powers as a poet lay rather in the short poem—much the more appropriate instrument for the expression of his turbulent and rugged thoughts. He wrote a large number of brief poems and some of the best known of these have one source in common, his love for Ianthe, the most enduring feeling of his life. L. wrote a lot of Lat. verse, especially epigrams, in the style of Martial and Catullus. His *Hellenics*—a group of narrative poems—in treatment sometimes recall the work of Ovid, but are more direct. Other works were *Pericles and Aspasia* (1836); *Pentameron* (1837); and *Poemula et Inscriptiones* (1847). For selections from his works, see C. G. Gump (ed.), *Poems, Dialogues, in Verse and Epigrams*, 1872, and the Golden Treasury Series, ed. by S. Colvin, 1882; Havelock Ellis (ed.), *Imaginary Conversations and Poems*, 1933; F. A. Cavenagh and A. C. Ward (eds.), *Imaginary Conversations*, 1934. See also R. Bulwer-Lytton, *Reminiscences of Walter Savage Landor*, 1883; A. H. Mason, *Walter Savage Landor, poète lyrique*, 1921; G. J. Becker, *Landor's Political Purpose*, 1938; and lives by J. Forster, 1869; S. Colvin, 1881; H. C. Minchin, 1934; and M. Elwin, 1942.

Landrail, see CORNCHAKE.

Landrécies, tn. in the dept. of Nord, France, which has been the scene of many battles. It was in L. during the First World War that Brit. Guards first met the Gers., when, on Aug. 25, 1914, they repulsed a night attack in the streets. Brit. force captured L. on Nov. 4, 1918. Pop. 3700.

Land Reclamation. The hist. of L. R. goes back to the anc. Egyptians, who are believed to have drained the Nile valley. The Romans had extensive drainage systems, from which some countries still benefit. In more recent years Holland is the outstanding example of a country's enterprise in L. R. In 1853 the Lake of Haarlem was drained, and in 1931 an ambitious scheme was launched for the reclamation of the Zuider Zee by means of dykes. Under this scheme large portions of the Zuider Zee were reclaimed before the Second World War, it being the intention eventually to reclaim the whole of it for agric. purposes. In April 1915 the Gers. flooded the land behind the Grebbe in the hope of holding out behind the water barriers, but after an allied warning to their commander (Gen.

Blaskowitz) that the opening of the dykes would constitute an indelible blot on his military honour while in no way impeding the coming collapse of Germany, there was no further flooding. In 1919 Marshall aid was granted to the Dutch to pay for projects begun in 1948. These projects included the reclamation of no less than 120,000 ac. of farmland in the Zuider Zee to be added to the area of the Netherlands, and the redistribution of farmland on Walcheren. The Allies had flooded Walcheren at the end of the war because it was a strategic point held by the Gers. Its flooded fields were drained by 1919 and were once more in production. The fen lands in the E. of England are another example of L. R. by drainage. It has taken 200 years to reclaim this dist., consisting of 2000 sq. m. or more of marshland, from salt and sea water. Other countries in which vast areas of land have been reclaimed by drainage are Italy and America. In 1925 502,453 hectares of land in Italy were estimated to require urgent drainage, and more than 300,000 hectares of this land were reclaimed by 1931 and the rest not long afterwards. In 1920 53,000,000 ac. of farmland were reclaimed to be provided with a drainage system, but a large extent of land still requires drainage. Land is also made more fertile by irrigation, and desert land has thus been reclaimed for agric. purposes. The irrigation method of L. R. is as time-honoured as that of drainage. Thus, in the U.S.A. the Bureau of Reclamation serves 4,000,000 ac. of lands in the arid and semi-arid regions which were once desert. Since 1902 the bureau has constructed nearly 190 dams, five of which are the largest concrete structures in the world: Grand Coulee, Washington; Boulder, Arizona-Nevada; Shasta, California; Friant, California; and Marshall-Ford, Texas. In the U.S.A. in 1914 the power output from over thirty plants located on reclamation projects approximated 14½ billion kilowatt hrs. of energy or half as much again as in 1943. The war industries in the S.W. Pacific were dependent for 50 per cent of their power on the Boulder Dam (q.v.), Parker Dam, and other installations. At the beginning of 1945 the bureau had in operation, under construction or authorised, some seventy-eight irrigation and multiple-purpose projects. (See IRRIGATION.) Another form of L. R. is in the reclaiming of out-over forestlands. Such land may be sown with grass and used for pasture, or the stumps of trees may be removed by blasting or firing, and the ground so reclaimed used for agriculture. See also COAST PROTECTION.

Land Registry. This official registry was estab. by an Act of 1862 as the outcome of the recommendation of a royal commission. The purpose of the Act was to simplify and cheapen transactions in land by setting up a state register of landowners, who voluntarily submitted the titles to their land for examination and approval by the registrar on behalf of the State. The L. R. was re-formed by the Land Transport Act, 1875, which, while

effecting changes in the system, continued its voluntary basis. The Land Transfer Act, 1897, however, introduced the principle of compulsory registration, and by four orders in council made under that Act between 1898 and 1902 the system was made compulsory on sale of land in the administrative co. of London. By another order in 1925 registration was made compulsory on sale in Eastbourne; in Hastings (1928); in the administrative co. of Middlesex (1936); and in Croydon (1938). The Land Registration Act, 1925 consolidated the previous Acts, and made such changes in the system as experience had shown to be necessary. The gist of the system is that the machinery for the purchase and sale of land is assimilated to the sale of stocks and shares. Absolute titles granted by the L. R. are guaranteed by the State. Simple forms, analogous to those used on transfers of stocks or shares, are provided. The cost of buying, selling, or mortgaging registered land is much less than the cost in the case of unregistered land. It is open to a co. council or co. bor. council to apply to the Privy Council for an order making registration of title compulsory in its area. The L. R. is administered under the lord chancellor by the chief land registrar, who also controls the Land Charges Dept. under the Land Charges Act, 1925, and the Agricultural Credits Act, 1928.

Landsberg: 1. Tn. in Bavaria, Germany, on the Lech, 22 m. S. of Augsburg, making agric. implements and machinery. Pop. (1939) 8000. 2. Tn. in Brandenburg, Germany, on the Warthe, 40 m. N.E. of Frankfurt-on-the-Oder. Its manufactures include furniture, bricks, and machinery, and it also has foundries and breweries. Pop. (1939) 35,000. It was the scene of heavy fighting during the Russian advance on Berlin in 1945.

Landscape (O.E. *landscap*, *landscipe*; Dutch *landschap*), term in art applied to a picture representing a view of a country as seen by the artist. Among the most famous of L. painters are Hobbema and Ruysdael of the Dutch school, Claude, Corot, Cézanne, and Rousseau of the Fr. school, and the Eng. artists Constable, Turner, Richard Wilson, Bonington, and Gainsborough. The Eng. L. style, which Wilson was the first to bring to perfection, gradually displaced the classical L. and, among other artists, was adopted by the water-colour school, from Paul Sandby to Cotman. The Wil-on natural L., as developed by Constable and Turner, grew into Fr. Impressionism and in that form was returned to this country notably in the work of Sisley. See also WILSON, RICHARD.

Landscape Gardening is gardening on a large scale, its aim being to produce a beautiful effect by means of the right juxtaposition and combination of open space, trees, water, and buildings. Such gardening was practised in early times by the Assyrians, Jews, and anc. Gks., but little authentic information is available with regard to the style of their gardens. It is possible that they paid greater attention to architecture, to the external

appearance and internal comfort of a house than they did to the artistic arrangement of an estate. The Romans of the Augustan period and later built their luxurious villas amid a garden of shady trees with cool porticoes, fountains, and marble terraces. They probably introduced the art of L. G. into Great Britain. The ruins of a Roman villa were discovered over a century ago on the Blenheim estates, and it is conjectured that it was the central feature of Henry I's magnificent park at Woodstock. The ruins of

Repton *On Landscape Gardening* 1840, J. R. Elliott and H. F. Milner *Landscape Gardening* 1890, T. H. Wharson *The Art of Garden Making* 1912, 1926, and R. Sudell *Landscaping Gardening* 1935.

Lands Clauses Acts comprise a series of Acts. The Lands Clauses Consolidation Acts 1845 and 1869, the Lands Clauses

LANDSCAPE GARDINING RIDDLIF, IFFSHURST, ABOUT 1850

The gardens made by Mr Wells in the early nineteenth century. From London's *The Villa Gardener*.

A the house, B the English garden and summer house in an allanquay, C the Dutch garden with rustic oranges, D the dairy and billiard room, E a garden with rock work, F the experimental garden, G the kitchen garden, H the conservatory, stores and outhouses, I the rock work garden, J the wood with exotic trees, K the pasture lawn with ancient trees, W the water.

the fifteenth century cultivated the art of L. G. Marble which needs the back ground of an It sky to set off its beauty was used to great effect in terraces, fountains, and steps. The gardens of Fontainebleau, set out by Francis I in direct imitation of those he had seen in Italy, were subsequently altered by Henry IV and Napoleon. Dutch gardening is characterized by its prim neatness, its smooth carefully kept lawns, and trim hedges, and bushes cut into fantastic shapes designed to represent animals. In Great Britain the gardens of Hampton Court and St James's were made by William III in emulation of the beautiful gardens of Versailles. Of modern Eng landscape gardeners the greatest have been Win Kent (1684-1748), who planned Richmond Park, and Lancelot Brown (1715-1783), commonly known as 'Capability Brown,' who remodelled Blenheim. See also GARDEN ART. See J. C. Loudon (q.v.),

Consolidation Amendment Act 1860, the Lands Clauses (Improvement) Act 1894, Lands Clauses (Fixation of Costs) Act 1895, the Acquisition of Land (Compulsory Purchase) Act 1911, and the Acquisition of Land (Authorisation Procedure) Act, 1946, the object of which is to provide legislative clauses for incorporation in special or private Acts of Parliament authorising land to be acquired either by agreement or compulsorily for the purpose of railways, harbours, waterworks, gasworks, cemeteries, electric lighting, markets and fairs, tramways, canals, housing schemes, small holdings, or any other public undertaking, whether national, local or municipal or for commercial purposes of public utility. In the case of compulsory acquisition by the promoters of the undertaking, the Acts provide for compensation to be paid to the owners, the amount of which is generally settled by arbitration. The only persons entitled to take lands under

the Acts are the 'promoters of the undertaking,' i.e. the persons or corporations authorised so to do by the general or special Act (i.e. a private Act for a commercial undertaking) incorporating by reference the Lands Clauses Acts. In the case of a special Act no lands or easements (q.v.) can be taken by the promoters unless actually required for the undertaking, and lands taken must be delineated on the plans deposited with the Board of Trade, the Ministry of Health, or the Private Bill Office of Parliament, according to the standing orders. But in the case of public Acts it is not necessary to deposit plans, and, generally speaking, the powers given by such Acts are more literally construed than those given by special Acts. Lands required for extraordinary purposes incidental to those of the undertaking may be acquired by private treaty. Under the Act of 1845 the promoters may be required to take the whole of a building if they propose to take any part of it; but, if not, the compensation will include payment for 'injurious affection' (as to which see under LAND LAWS). The days of extensive railway construction have passed, but wide statutory powers exist authorising gov. depts. and public and local authorities to acquire land compulsorily for public purposes. The Act of 1845 applies to all such cases in so far as there are no special provisions in the Acts which authorise the public and local authorities to purchase such land compulsorily, and another Act is now particularly applicable to cases where gov. depts. or local public authorities possess those powers. This is the Acquisition of Land (Compulsory Purchase) Act, 1919. The provisions of this Act apply to the determination of the amount of rent or compensation payable in respect of land authorised to be hired compulsorily under the Small Holdings and Allotments Act, 1908, or any Act amending that Act. But the Act of 1919 does not apply to the determination of a dispute as to the amount of compensation payable on the withdrawal of a notice to treat under the Act of 1908 (Small Holdings and Allotments Act, 1908). The official arbitrator, by virtue of the Acquisition of Land Act, 1919, has very wide powers in the cases submitted to him, and the provisions of the Small Holdings and Allotments Act, 1908, show that his powers extend to arbitrations held in matters arising out of that Act and the prin. Small Holdings Act of 1908.

The Restriction of Ribbon Development Act, 1935, empowers the highway authority to acquire land within 220 yds. from the middle of any particular road, where purchase is necessary for constructing or improving the road or preventing the erection of buildings detrimental to the view from the road. The appropriate provisions of the Lands Clauses Act and Acquisition of Land (Assessment of Compensation) Act, 1919, are modified as to the manner of compensation by the arbitrator. The Air Navigation Act, 1936, empowers local authorities to acquire land

compulsorily for the purpose of constructing aerodromes, and under the Air-raid Precautions Act, 1937, compulsory powers are given to co. or co. bor. councils for A.R.P. purposes, but both these Acts provide that compulsory purchase orders must be confirmed by the secretary of state. As to the many purposes in relation to public health for which a local authority can purchase land compulsorily by means of a provisional order made by the minister of health and confirmed by Parliament, consult the Public Health Act, 1936 (consolidating and amending previous Acts). See Reports of the Defence of the Realm Losses Royal Commission, 1916-20; R. A. Gordon, *Compulsory Acquisition of Land* (2nd ed.), 1936, and *Encyclopedia of Planning Law and Computation*, 1949; and C. A.ripps, *Law of Compensation for Land acquired under Compulsory Powers* (9th ed.), 1948 (in preparation).

Landseer, Sir Edwin Henry (1802-73), Eng. animal painter, was already sketching cows and horses from life at the age of six, and eight years afterwards became an exhibitor. He passed through the academy schools, took lessons from Haydon, became an associate of the Royal Academy at the earliest age possible (twenty-four), was an A.R.A. in 1826, and in 1830 was elected a full member. His early work, as, for example, 'Dogs of St. Gothard discovering a Traveller in the snow' (1820), and the diverting 'Cat's Paw' (1821), is informed with a spirit of masculine animalism, and excels in high finish and most accurate modelling. The pictures of his maturity are tinged with sentiment, which sometimes sinks to sentimentality, and the dogs delineated are rather those whose spirits have been tamed by civilised domesticity than brutes of primal instincts. He developed, moreover, an amazing facility; the much-admired 'Cavalier's Pets' (1845) was begun and finished in two days. In 'High Life' and 'Low Life' (1829) and the splendid 'Drover's Departure' (1835) L. carefully interweaves a human with the animal interest, whilst 'Jack in Office' (1833) and 'Dignity and Impudence' (1839) afford delightful illustration of his humorous vein. 'The Monarch of the Glen' (1851) nobly evinces his sense of the dramatic, and 'The Old Shepherd's Chief Mourner' (1837) is a masterpiece of pathos. It is said that L. was a neurotic and that in 1840 he had a severe breakdown, from which he seemed to make a complete recovery; but twenty years later his mind again became seriously disordered and there were seasons when his depression was so extreme that he became the victim of hallucinations and delusions that bordered on actual dementia. It may be mentioned that in 1856 he refused the position of president of the Royal Academy. He was buried with considerable ceremony at St. Paul's Cathedral and a special L. sermon was preached the day after his funeral.

L. emerges out of almost any drawing test as a good artist. But handling of paint is his really strong point, and in fact his colour has a much underestimated

vitality and charm. His chief defect as a painter lies in his inadequate grasp of large-scale structure, and usually his landscape background has an unsatisfactory wooliness of form. But landscape was only an accident of his work, which was mainly concerned with dogs and stags, and here sometimes he distorts the forms of his animals for sentimental, non-aesthetic reasons and as if to give expression, not to the animal's emotions, but to his own or his public's favourite emotions. Yet for most of his life L. was the most popular animal painter in Europe. His reputation was to some extent helped by his coming from a family of engravers who could popularise his work, and partly by his great vogue with the queen and Prince Albert, some think, however, that the real reason for his fame was that his trick of reducing human situations and human emotions to animal proportions was congenial to a polite society which was beginning to avoid the promiscuous display of these emotions itself. It would seem, however, that there is no reason to inquire so subtly into what after all must be evident—the excellence of his forms apart altogether from the occasionally mawkish sentimentalism, and also the universal fondness for dogs, and for stags as monarchs of the glen. See lives by F. G. Stephens, 1880, and J. A. Manson, 1902. See also *Landseer and Animal Painting in England*, 1891.

Land's End, promontory of S.W. Cornwall, England, which forms the most westerly point of the country. It is 9 m. S.W. of Penzance. The End is a turf slope ending in a granite cliff about 60 ft. high. A natural tunnel pierces the headland, and there are interesting caves which can be visited at low tide. Dangerous rocks lie off the point; the Longships lighthouse (erected 1793) is situated about a mile out.

Landshut: 1. Tn. on the Isar, Upper Bavaria, Germany, 38 m. N.E. of Munich. It contains many beautiful churches, the castle of Trusnitz (thirteenth century), and a monastery, formerly the seat of a univ. and later the gov. offices. Here the Austrians defeated the Bavarians and were defeated by Napoleon in 1809. The chief manufs. include machinery, rope, tobacco, chemicals, safes, and beer. Pop. 30,800. 2. In Silesia, Poland; see *LANDESHUT*.

Landskrona, seaport on the E. side of the Sound, in the prov. of Malmöhus, 15 m. N.E. of Copenhagen, in Sweden. It has an excellent harbour and is engaged in sugar-refining, tanning, and other industries. It has large dockyards and an important bacon-exporting industry. It also makes tobacco and iron-castings. Many battles took place in its neighbourhood during the sixteenth and seventeenth centuries, and in 1687 it was the scene of a great naval victory of the Swedes over the Danes. Formerly it was called Landor and was strongly fortified. Its old castle has been transformed into an arsenal and prison. Pop. 21,500.

Landslips, falls of rock and large portions of land, which, for various reasons,

have been detached from their original position or broken away from a cliff. One of the natural causes in producing L. is water, consequently they are frequent on the coast, where the continuous wash of the waves gradually undermines the rocks or soil and makes deep cracks in the base of the cliffs. The cliffs of the S. of England, consisting of chalk and greensand on a bed of lassic clay, are particularly liable to L., which are continually altering the outline of the coast. These are partly due to the rainfall, which saturates the clay until the superincumbent mass lurches forward, and forms an under-cliff. L. are not uncommon in mountainous dists., where overhanging rocks that for centuries have withstood the elements suddenly become displaced by a heavy rainfall or by the melting of the snows.

Landsteiner, Karl (1868–1943), Amer. pathologist, b. in Vienna, where he studied at the univ. He worked as a pathologist in Vienna (1900–19) and at The Hague before going in 1922 to the U.S.A., where his early work on serology and immunology came to its fruition at the Rockefeller Institute. His work on human blood groups was the foundation of the great progress made in more recent years in blood transfusion. His classification of blood groups made it possible to determine accurately whose blood could be safely given to any particular sufferer. His discoveries in this field were the outcome of thirty years' research, while he also made important contributions to treatment of infantile paralysis. His Nobel prize (1930) was only the most famous of the many honours conferred on him by scientific foundations in Europe and America, including the Paul Ehrlich medal of the Ger. Academy of Natural Science; he was elected a foreign member of the Royal Society in 1911.

Land Taxes. 'Land tax' under an Act of 1798 is payable upon all freehold and leasehold property, in respect of which such tax has not been redeemed. This tax is assessed upon the ann. value of freeholds and leaseholds in every par.; each par. is liable to pay a fixed proportion of the tax, which is raised by an equal pound rate which must not exceed 1s. nor be below 1d. in the £. A landowner whose ann. income does not exceed £150 is exempt from payment, and a remittance of one-half of the tax is allowed where his income does not exceed £400. Prior to the Finance Act, 1938, relief had to be claimed before actual payment of the tax, but now refund of tax is made even though the amount has been collected. Lands or tenements, the yearly value of which is below 20s., are not liable to assessment. The tax may be redeemed as to any lands or houses by payment to the inland revenue commissioners of a capital sum equal to thirty times the tax charged upon such lands or houses, and such sum may be paid either in one sum or by four equal ann. instalments of not less than £5 each or by ann. instalments of not less than £60 over a period over four but not exceeding sixteen years, with interest at

3 per cent on the balance after payment of each instalment.

Under the Finance Act, 1910, there were four new duties: (1) Increment Value Duty. (2) Reversion Duty. (3) Undeveloped Land Duty. (4) Mineral Rights Duty. These taxes, however, were repealed by the Finance Act, 1920, owing to the unsatisfactory results and assessment difficulties, and the duties which had been collected were returned. L. T. on undeveloped land were under consideration by the Labour Gov. of 1929-1931 shortly before that gov. went out of office. The implementing Bill, however, threatened, apart from the nation's ever-increasing financial responsibilities, to imperil the Labour party's tenure of office and its attempted passage was, moreover, beset with amendments from the Liberal party, without whose support it was doomed.

In Australia in 1910 the Commonwealth levied a tax of 1d. to 6d. in the £, in addition to the L. T. levied by the separate states. In an attempt to break up large estates to the advantage of smaller settlers. In Germany in 1911 an imperial general tax was levied on increased value of land upon the occasion of its sale, while the states were given optional powers to impose their own L. T.

There are no L. T. as such in America, duties on land and real estate being included in the General Property Tax. Most of the revenue of the cos. comes from this source.

The net receipts from land tax, land values, and duties in the United Kingdom from 1924 to 1910 average £1,000,000. The most recent revenue returns are: 1938-39, £1,550,000; 1939-40, £1,300,000.

Land Tenure, see LAND; LAND LAWS; LANDLORD AND TENANT.

Land Tenure, Primitive or Colonial. The forms of L. T. in backward cos. are closely related to social institutions, and the study, by the tutelary power, of the various forms which exist or have existed and their effects is important if the development of primitive or backward indigenous peoples is to be guided along the right lines. The primitive system under which no claim to particular pieces of land is made, every man cultivating the soil or pasturing cattle where he chooses, though not infringing the equal rights of other members of the same community, may be designated 'communal tenure' (V. Liversage). To-day this tenure is found for the most part among pastoral or hunting communities and in regions where the supply of land is plentiful. Thus in Brit. Guiana the aboriginal tribes moved about the country as their fancy dictated, 'squattling' where their inclination took them and moving again in the same way (Thurnwald), and this un-economic practice of 'shifting cultivation' was followed by the manumitted slaves of Jamaica (Anthony Trollope). The communal element operated only within the particular tribal group and was accompanied by the delimitation of 'spheres of influence' based on original hunting or grazing rights, rights which eventually

developed into tribal tenure. Thus all the clans of the Kikuyu Prov. (Kenya) trace their land claims principally to an original exercise of hunting rights. Tribal tenure shows a remarkable resemblance everywhere in its basic principles. The relative importance of the different elements may vary in different groups—the influence of magic and ancestor worship, the degree of patriarchal or feudal control, etc.; but everywhere, whether among the Nilotes in E. Africa, the Bantu in E. Africa, or the Negritoes and mixed races in the Pacific Is., the broad principles are similar (Liversage).

An important element in tribal tenure is the right of usufruct accorded to the person who actually undertakes development. The recognition of this right is almost universal in primitive systems. Thus in the N. Provs. of Nigeria the general principle governing the tenure of native lands is that title to land is based on a communal usufructuary right, and whatever radical right the chief may have in legal theory it does not amount in practice to anything more than an administrative control over vacant lands in the interests of the whole community. The chief is bound to assign land, when available, without rental charge, to any one who requires it (C. K. Meek). It may be mentioned that in some areas in N. Nigeria occupation conferred more than a mere usufructuary right and this conception would seem to have received some sanction from Muslim law.

It must not be supposed that undeveloped land has no claimants. Such land is used for grazing livestock, or as a source of fuel and building materials and also as a reserve for potential needs; and all these claims may be exercised by tribes or clans, being in effect common rights, or by family groups, though seldom by individuals. There has always been controversy over the question as to whether the tenure in a particular tribe is individual or not. On this it may be said that in most cases under tribal custom (prior to modification by foreign conceptions) the rights of an individual cultivator, even though he might regard himself as the owner of the land, were immeasurably less than those of a full owner in the modern sense. Under ant. native custom land was never saleable, nor could it be disposed of by will. A transaction in land could take place only by a tribal act, involving full and public discussion with the family or tribal elders and even communion with spirits. Even among the Kikuyu, where there was never tribal tenure nor any law which gave any particular chief or group of chiefs any power over land other than the land of their own family groups, the power to decide land disputes was vested in the councils of elders, who conducted all land transactions. Kikuyu tenure presents some differences from other forms of tribal tenure. The Kikuyu unit is the *githaka* which represents a land claim staked out by an original founder, modified by subsequent div. among his descendants, a custom which results in too great

fragmentation (see on this the Morris Carter Report or Kenya Land Commission Report, (Ind. 4556). In Kikuyu ter. a man can acquire cultivation rights as a *mukoi* (tenant at will); no true rent is paid, but the rightful ownership is admitted by handing over a contribution of first fruits or a portion of beer from each brew (Liversage).

There is no clear dividing line between tribal and feudal tenure; in most of the former seignior is a characteristic feature; the chief or headman allots land for cultivation and settles disputes or, alternatively, these functions are exercised by an elder or council of elders. The distinction between feudal and tribal systems is mainly in the extent to which a political system is imposed upon ancient tribal practices, particularly in relation to military requirements, and systems in some respects similar to the 'manorial system' of N. Europe existed also in Africa, e.g. in Buganda prior to the establishment of the Brit. protectorate and in Basutoland. See W. H. R. Rivers, *The History of Melanesian Society*, 1914; H. M. Leake, *Land Tenure and Agricultural Production in the Tropics*, 1927; B. Malinowski, *Coral Gardens and their Magic* (agric. methods and rites in the Trobriand Is.), 1935; R. Land Titles, see CONVEYANCING; REGISTRATION OF TITLE.

Land Transfer Acts, see CONVEYANCING; REGISTRATION OF TITLE.

Lane, Edward William (1801-76). Eng. Arabic scholar, began life as an engraver, but finding this profession too much for his health went abroad to Egypt (1825-1828). On this occasion he explored the Nile, making many sketches. During his second visit (1833-35) he made Cairo his centre. Later (1842-49) he spent seven years in Egypt and conducted himself in every way like a true oriental. Most of his time was spent in laborious research, of which the chief fruit was his monumental Arabic lexicon (1863-74), which was unfinished when he d. It is based on the careful compilation of Sheikh Murtada, who lived in the preceding century. Other of L.'s works are *Modern Egyptians* (1836) and a trans. of *Arabian Nights* (1838-40).

Lane, Sir Hugh Percy (1875-1916), Irish art connoisseur and collector; b. at Ballybrack, co. Cork, son of Rev. James Wm. L., rector. Entering Colnaghi's, Pall Mall, in 1893, he set up for himself at 2 Pall Mall Place, in 1898, and made a fortune. In 1903 he exhibited pictures in Dublin, and bought most of them as nucleus of a gallery. Failing an arrangement for a Dublin gallery, he deposited the pictures in the National Gallery, London, where they still remain. Knighted

in 1909, in that year he advised Johannesburg Corporation on the formation of their gallery, and collected for Cape Town gallery. Director, Irish National Gallery, 1914. Returning from America in the *Lusitania*, he was drowned in the torpedoing of that ship.

Lane-Poole, Stanley (1854-1931), Brit. historian and archaeologist, b. in London. He was educated privately and at Corpus Christi College, Oxford. As a member of the coin dept. of the Brit. Museum he went on gov. archaeological missions to Egypt in 1883 and to Russia in 1886. From 1895 to 1897 he undertook research work for the Egyptian Gov. at Cairo. From 1898 to 1904 he was prof. of Arabic at Trinity College, Dublin, and from 1901 to 1902 was also examiner in Arabic for the univ. of Wales and secretary to the council of the Royal Irish Academy. His works include biographies of Stratford de Redcliffe (1888) and Saladin (1898), and works on Egyptian life (1883) and Sarcenet art (1886).

Lanercost, par. of N.E. Cumberland, England. Traces of the Rom. wall are to be found. L. Priory, founded in 1169 by Robert de Vallibus, governor of Carlisle, now forms part of the church of St. Mary Magdalene. The *Chronicle of Lanercost*, 1201-1346, an important historical authority, was composed at Carlisle. Pop. about 1000.

Lanirano (c. 1007-89), archbishop of Canterbury, b. at Pavia, where he was educated for the legal profession. In 1039 he founded a school at Avranches, but three years later entered the Benedictine monastery at Bec and was chosen prior in 1046. He defended the doctrine of transubstantiation in the controversy raised by Berengarius, afterwards publishing his theories in a tract *De corpore et sanguine Domini* (1079). William of Normandy appointed him prior of an abbey at Caen (1062), and after the Conquest created him primate of England (1070). One of L.'s achievements was to arouse an enthusiasm for learning, and he had a worthy successor in Anselm. Working closely with William, L. ensured that the Church in England should support the Conqueror; foreign ecclesiastics were introduced, and an extensive programme of reform was undertaken against laxity and indisciplin. L.'s works were pub. by d'Archery in 1648, and there is a later ed. by J. A. Giles (1844). See lives by A. Charma, 1849; J. Crozals, 1877; and A. J. Macdonald, 1926. See also J. P. Migne, in *Patrologia Latina*, vol. cl., 1851.

Lanfrey, Pierre (1828-77), Fr. historian, was expelled from the Collège de Chambéry because he attacked the Jesuits, his schoolmasters. He later studied law at Grenoble and Turin. His *L'Eglise et les philosophes au XVIIIe siècle* (1855) and his *Essai sur la révolution française* (1857) at once gave him a position among contemporary men of letters. But his *magnum opus* was his *Histoire de Napoléon Ier* (1867-75).

Lang, Andrew (1844-1912), Scottish man of letters, b. at Selkirk in Scotland and educated at the Edinburgh Academy,

St. Andrews Univ., and Balliol College, Oxford. He took a first class in the final classical schools (1888), and was elected a fellow of Merton College. He then entered on a literary career, and soon estab. a reputation of being one of the most versatile of modern journalists. His earliest pub. was a vol. of dainty and graceful verse, *The Ballads and Lyrics of Old France* (1872), which were followed by *Ballads in Blue China* (1880); *Helen of Troy* (1882); *Ballads and Verses Vain* (1884); *Rhymes à la Mode* (1884); *Grass of Parnassus* (1888); and *New Collected Rhymes* (1905). His delightful selections of fairy-tales began in 1889 with the pub. of the *Blue Fairy Tale Book*, followed by others, all tastefully bound and illustrated, and written with classic simplicity, down to the *Olive Fairy Book* (1907). In the realm of folklore L. produced sound scholarly work in his *Custom and Myth* (1884); *Myth, Literature, and Religion* (2 vols.) (1887); and contributed to the study of primitive religion and anthropology in *The Making of Religion* (1898); *Magic and Religion* (1901); *Social Origins* (1903); and *The Secret of the Totem* (1905).

As an historian L. was keenly interested in mysteries, to the unravelment of which he brought great ingenuity as well as a scholarly accuracy in detail. He brought fresh light to bear upon Mary of Scotland in *The Mystery of Mary Stuart* (1901) and *Portraits and Jewels of Mary Stuart* (1906). Mention may also be made of his *History of Scotland from the Roman Occupation*, in 4 vols. (1900-7). He also contributed to the controversy on the 'Man in the Iron Mask' (q.v.) in his *The Valer's Tragedy* (1903). Interested himself on behalf of the Young Pretender in *Pickle the Spy* (1897), *The Companions of Pickle* (1898), and *Prince Charles Edward* (1900). L. was also a classical scholar of high standing, which is testified in his *Homeric studies*, *Homor and the Epic* (1893) and *Homor and his Age* (1906), in his trans. of *Theocritus*, *Bion*, and *Mochus* (1880), *The Homeric Hymns* (1899), and, in collaboration with S. H. Butcher, of the *Odyssey* (1879), with E. Myers and Walter Leaf, of the *Iliad* (1883). In 1888 he was elected the first Gifford lecturer of the Univ. of St. Andrews. He ed. the Eng. Worthless Series, the works of Scott, Burns, and Dickens, and the *Life and Letters* of J. G. Lockhart and Sir Stafford Northcote. He was at one time literary editor of *Longman's Magazine*, and up to the time of his death contributed to the *Morning Post* and various other papers. His other writings, of a miscellaneous character, each in its particular way of real merit, are too numerous to mention. See G. Saintsbury, *Andrew Lang*, 1923, and *Andrew Lang in the 'Seventies—and After*, 1929; M. Beerbohm, *Life and Letters of Andrew Lang*, 1929; R. S. Rait, *Andrew Lang as Historian*, 1930; A. B. Webster, *Andrew Lang's Poetry*, 1937; and R. L. Green, *Andrew Lang, a Critical Biography*, 1946.

Lang, Cosmo Gordon (1864-1945), Eng. archbishop, son of Very Rev. John Marshall J., D.D., principal of Aberdeen

Univ. and some time moderator of the Church of Scotland; b. at Fyvie, Aberdeenshire. Educated at Glasgow Univ. and Balliol College, Oxford, he became a law student of the Inner Temple; but, undertaking social work in the E. End, he became increasingly aware of a vocation for the Church and on the eve of his call to the Bar he withdrew his name. He entered Cuddesdon Theological College and was ordained priest in 1891. He was curate at Leeds from 1891 till 1893, when he returned to Oxford, and was successively

Tupical Press

COSMO GORDON LANG

fellow and dean of Magdalen and vicar of St. Mary's. He then exchanged the academic atmosphere so congenial to him for parochial activity as vicar of Portsea, where he laboured till 1901, when he was appointed bishop of Stepney and canon of St. Paul's. He was now recognised as one of the great preachers of the day, happy in the possession of a voice of singular purity of tone and of a diction plain but dignified. His experiences as the coadjutor of the bishop of London in Stepney were to stand him in good stead when, at the age of forty-four, he was translated to the archiepiscopal see of York where he succeeded Dr. MacLagan. From 1908, when he was installed at York, the story of his activities is the story of the Church of England. Despite the pressure of diocesan responsibilities, his work was at the heart of every movement in the Church. As vice-president of the Church Assembly he showed a balance of mind which proved of immense value in what had become the legislative body of the Church. Not a little of the enrichment of the liturgical portion of the revised Book of Common Prayer, its adaptation to modern usage and thought, and its preservation of the Catholic interpretation of the Church's standards, was attributable to his moderating influence. His sympathies

were with the High Anglican section, but he held that a national Church must be wide enough to embrace all varieties of thought, consistent with the belief in the essential dogmas of the Apostles' Creed. Only twice previously, in nearly two centuries, had a primate been translated from York to Canterbury: but when in 1928 Dr. Randall Davidson resigned, L. became his successor. Difficult situations arose both in Church and in national affairs, occasions when he had to exercise his full archiepiscopal authority. The illness and death of King George V. brought him much before the public with his impressive broadcasts during that period of national anxiety. The abdication of King Edward VIII. made the position of the head of the Church one of extreme difficulty. Resentment at his attitude was shown in many quarters, but, with the passage of time, public opinion showed clearly that in the judgment of the majority L. had taken the right course in his support of the standards of the Church and in his interpretation of his function as head there. In politics other than eccles., L. was deeply interested, and he served on the joint committee on Indian reforms which sat for eighteen months, besides working strenuously to promote closer relationships between the Eng. and Presbyterian Churches. An outstanding incident of his career when archbishop of York was a visit he paid to the U.S.A. early in 1918 to emphasise the spiritual issues of the First World War, a tour which was admitted to have been an immense success. He was an ardent supporter of the alternative prayer book, which was ultimately rejected by Parliament in 1928, but his speeches on its behalf in the Church Assembly and in the House of Lords were less persuasive than those of Archbishop Davidson, being rather the speeches of a skilful advocate. His hold, however, on the Church Assembly was remarkable on highly controversial questions, his incisiveness and devastating criticism always winning the day and provoking the defeated minority to complain that the archbishop ought not to double the roles of Speaker and Prime Minister. In 1912, feeling that great tasks of reconstruction in Church and State must follow the second World War, when the Lambeth Conference would meet, and that such work needed a younger man, he decided to resign. His resignation took effect on March 31, 1912, and he was created Baron L. of Lambeth. His publs. include *The Miracles of Jesus as Marks of the Way of Life* (1900); *The Parables of Jesus* (1906); and *The Opportunity of the Church of England* (1906).

Langdale Pikes, two hills at the head of Great L. in Westmorland, England, known as Pike o' Stickle and Hailson Stickle, the former 3320 ft., high and the latter 2400 ft.

Langdon, John (1741-1819), Amer. merchant and politician, b. at Portsmouth, New Hampshire. After leading a seafaring life he became a merchant, and took part in the first overt acts against the Brit. Crown committed in his native

colony. He became a member of the Continental Congress, and in 1776 was made an agent of prize money for New Hampshire, and also naval agent for the Continental Congress, securing the building of some of the ships used by the famous John Paul Jones. He served for a time in the War of Independence, took part in the Constitutional convention, was in Congress for sev. terms, and then U.S. Senator from New Hampshire, being at one time president *pro tem.* of that body. In the latter part of his life he served as governor of his state.

Lange, Christian Louis (1869-1938), Norwegian pacifist and historian. Taught hist. at the Nobel Institutes, Oslo, from 1890 to 1909. Secretary of the Nobel Commission of the Storting from 1900 to 1909, and also a member of the Nobel prize committee. In 1907 he was Norwegian delegate to the International Peace Conference at the Hague, Secretary-general of the International Parl. Union from 1900 to 1933. From 1917 to 1930 he was European correspondent for the Carnegie peace movement. He represented Norway at the League of Nations from 1920. Awarded the Nobel peace prize in 1921. Author of works on international relations: *The European Civil War* (1915); *History of Internationalism* (1919); *International Politics* (1921), and *Imperialism and Peace* (1938).

Langeland, or Long Island, Dan Is. in the Great Belt between Fünen and Langeland, has an area of 106 sq. m. It is cultivated, and exports corn, flax, and timber, dairy produce, and fish. Rudkjøbing on the W. coast is the chief tn. Pop. about 21,000.

Langenbielau (Polish *Bielszawa*), tn. in Poland, consists of five contiguous vils., 3 m. S.W. of Reichenbach (Dzierżonów). There are limestone quarries and textiles are produced. Pop. 19,100.

Langendreer, com. in the prov. of Westphalia, Germany, 7 m. S.W. of Dortmund. Pop. 30,000.

Langensalza, tn. in Ger. Saxony, is 13 m. N.W. of Gotha. Textiles, machinery, bricks, tobacco, tin, and leather are produced. In the neighbourhood are sulphur springs. The Prussians defeated the Habsburgians here (1866) in the Austro-Prussian war. Pop. 12,700.

Langenthal, com. in the canton, and 24 m. N.E. of Berne, Switzerland; is a health resort, with mineral springs. Pop. 7900.

Langerfeld, tn. in Westphalia, Germany, is 24 m. E. of Barmen. Pop. 12,000.

Langevin, Paul (1872-1946), Fr. physicist, b. in Paris. Joining the Curies (q.v.) in research work, he was made assistant prof. in the Collège de France in 1902, and appointed to the chair of general and experimental physics in 1909. In 1925 he became director of the school of physics and chem., succeeding Curie. He discovered the secondary rays of X-rays and introduced Einstein's (q.v.) theory of relativity in France, also doing research into supersonic waves and applying the results to the detection of submarines. Later he became scientific adviser to the Fr. atomic energy commission.

Langham, Simon de (c. 1310-76), archbishop of Canterbury, *b.* in Rutlandshire. He became prior and abbot of Westminster in 1349, and carried out important works in the abbey, including the completion of the cloisters. In 1360 he was appointed treasurer of England, in 1362 elected bishop of Ely, and in 1363 became chancellor. In 1366 he was chosen archbishop of Canterbury, and during his primacy is said to have removed John Wyclif from the headship of Canterbury Hall. In 1368 he was made cardinal, leaving England in 1369 for Avignon, where he *d.* His tomb is the oldest in Westminster Abbey.

Langholm, mrkt. tn. on the R. Esk, Dumfriesshire, 22 m. N. of Carlisle. L. Lodge, close by, is the seat of the duke of Buccleuch. It has famous sheep fairs, tanneries, and a distillery. It is noted for its tweed. Pop. 2500.

Langhorne, John (1735-79), Eng. poet and divine; *b.* at Kirkby Stephen, Westmorland. He was educated at Appleby and Cambridge, and after filling several curacies became rector of Blagdon, Somersetshire, in 1766. He wrote for the *Monthly Review*, and pub. sev. vols. of popular poetry including *Annals* and *Virtue*. His most important work is the trans. of Plutarch's *Lives*, written in conjunction with his brother.

Langkat, port on the N.E. coast of Sumatra, near the frontier of Aceh. At the entrance to the harbour is a dangerous bar. The chief exports are tobacco, and petroleum from wells near by.

Langland, William (c. 1332-c. 1400), Eng. poet, the probable author of the allegorical alliterative poem *The Vision of Piers the Plowman* and of *Richard the Redeless*. The *Vision* exists in about forty MSS., but there are three distinct versions, known as the A, B, and C texts, each of which is divided into prologues and *passus*, and consists of a *Vision of Piers the Plowman* and a *Vision of Douelle, Doctour, and Doleful*. B is nearly three times the length of A, and C contains a few hundred lines more than B. The evidence as to authorship is almost entirely internal. In B xv. 148 is the line, 'I have lyved in lond, quod I: my name is longe Wille,' and the Dublin MS. contains an entry concerning 'pater Willielmi de Langlond qui . . . moribatur in schipone under Whitewode . . . qui predictus Willielmus fecit librum qui vocatur Perys Ploughman.' Thus it is deduced that Wm. L. is the author and lived at Wyckwood in Oxfordshire, near the Malvern Hills, which are frequently mentioned in the poem. From the references to current events, A must have been written by 1362, B by 1370-77, and C by 1392, or possibly 1398. Dr. Skeat has argued that L. also wrote the alliterative poem on Richard II., in which case he was alive in 1399. It had always been assumed that the B and C texts were later productions of A and written by the same hand, until Prof. Manley, in his article in the *Cambridge History of English Literature*, argued that the poem was the work of at least five men, basing his arguments on certain

discrepancies between the three texts. His theory was attacked by M. Jusserand and by R. H. Chambers, and is not now generally accepted. The standard ed. of *Piers Plowman* is that of W. W. Skeat (1886, 1905). There are also eds. by J. F. Davis (1896); C. D. Parnely (1930); and N. Coghill (1949). See E. Bernard, *William Langland, a Grammatical Treatise*, 1874, and A. Bright, *Langland and the Seven Deadly Sins*, 1930.

Langley, Samuel Pierpont (1834-1906), Amer. astronomer, *b.* at Roxbury, Boston, Massachusetts. He was prof. of mathematics at the U.S. Naval Academy (1866), director of the Allegheny Observatory, Pittsburgh (1867-87), and secretary to the Smithsonian Institution, Washington (1887-1906). He made a special study of aeronomics, and succeeded in showing the feasibility of mechanical flight. He carried out his experiments on the Potomac R., and, after making sev. attempts with various machines, flights of over half a mile were made in 1896. L. invented the bolometer, with which he discovered, in 1881, the new spectrum, an extension of the invisible infra-red rays. He also observed the total solar eclipses of 1869, 1876, and 1878.

Langmuir, Irving (b. 1881), Amer. physicist, who has carried out researches upon the nature of valency, the structure of the atom, atomic hydrogen, etc. His invention of the atomic hydrogen blowpipe has proved of great commercial and industrial importance as a means of obtaining very high temps.

Langnau, com. in the canton and 16 m. E. of Berne, Switzerland, on the R. Rhodan. It manufs. cheese, thread, and all kinds of woodwork. It is the agric. centre and cap. of the Emmen-Tal. Pop. 8700.

Langport, mrkt. tn. of Somerset, England, on the R. Parrot. It was the scene of an engagement during the Civil war on July 10, 1645, in which the parliamentarian forces were victors. About 4 m. N. of L., near High Ham, is Turn Hill, from which a view is obtained across the battlefield of Sedgemoor to the Quantock Hills, Priest's House, Murchelney, 1½ m. S. of L., was acquired by public subscription in 1911. Pop. 800. L. Beds is the name given to a local facies of the white lias, about 20 ft. in thickness, of white or grey or cream-coloured limestones, with marl. The whole series is well developed near L. and Charlton Mackrell in Somerset.

Langreo, tn. of Spain in the prov. of Oviedo. It is a hilly agric. and fruit-growing place, and is also noted for coal-mines and iron industries. Pop. 43,700.

Langres (anc. Andematunum), tn. in the dept. of Haute-Marne, France, 40 m. N.E. of Dijon. It is strongly fortified, contains a fine cathedral, and interesting Roman remains. Diderot was *b.* here. It is celebrated for its manuf. of fine cutlery; also it makes leather goods and vinegar and has other brewing works. Pop. 7500.

Langson, or Langshon, tn. of Tongking, Viet-Nam. It is 82 m. N.E. of Ha Noi in the centre of a small plain on the Sunchi Kiang. Pop. 3500.

Langton, Stephen (c. 1150-1228), archbishop of Canterbury, rendered his life of vicissitudes famous by the strong stand he made in opposing authority, whether of king or pope. In the univ. of Paris he attained to a high rank by his proficiency in theology and philosophy, and in 1207 was consecrated to his archbishopric by Pope Innocent III. It was not till 1213 that L. was formally recognised by King John. At a meeting in St. Paul's (1214) he urged the confirmation of Henry I.'s charter, a suggestion which directly inspired certain of the barons to draw up the Great Charter, and in the following year was suspended from his see for not enforcing the papal censure of the barons. See F. M. Powicke, *Stephen Langton*, 1928.

Language. This term indicates a highly symbolical method of articulate utterances for conveying ideas. Some scholars define L. as a system of arbitrary vocal symbols by which members of a social group co-operate and interact. There are other means of expressing ideas, such as signs and inarticulate sounds. The former may take the place of articulate speech, or, more commonly, emphasise or modify the sense of the uttered word. The latter belong principally to animals, and in the human species express the simple ideas of infants and of those under stress of emotion preventing more deliberate utterance, but neither of them is as complete as L. It will suffice to point out the contrast of the immense variability of human speech with the simplicity, the invariability, and monotony of animal cries.

Jespersen, *Language, its Nature, Development, and Origin*, 1922, and *Mankind, Nation and Individual*, 1946; A. Trombetti, *Elementi di glottologia*, 1922-3; C. K. Ogden and I. A. Richards, *The Meaning of Meaning*, 1923; K. Britton, *Communication: a Philosophical Study of Language*, 1939; L. H. Gray, *Foundations of Language*, 1939; M. Schlanoh, *The Gift of Tongues*, 1943; and E. H. Sturtevant, *An Introduction to Linguistic Science*, 1918.

Language, Origin of. Since ant. times various theories have been advanced as to the origin of L. It was formerly assumed, and it is still believed by some people, that ready-made speech was a direct gift from the Creator to the first man (Gen. xi. 1-9). This theory, upheld for instance in 1766 by Stussmühl, has been accepted as recently as in 1918 by H. Homyer. The ant. Egyptians attributed the creation of speech to Thoth; the ant. Indians to the god Indra; Chinese myths to a demigod who first gave names to animals and plants; Gk. tradition to Hermes; the ant. Scandinavians to the 'third son of Borr,' who gave men 'form, speech, hearing, and sight.' Another theory, the 'conventional' one,

suggested that L. was a conscious invention of man; far from being a gift from the Creator to mankind, it was a gift from mankind to the Creator. It is interesting to note that some scholars found in Gen. ii. 19-20 'an adequate and straightforward account of the human invention of speech': '... and whatsoever the man called every living creature, that was the name thereof. And the man gave names to all cattle, and to the fowl of the air, and to every beast of the field. . . . On the other hand, in the opinion of the eminent linguist Richard A. Wilson, the emergence of consciousness in human beings freed man intellectually, via the process of language, from space and time and set him apart from other animals.

The third main theory, that of the 'naturalist' school, is that L. was a spontaneous product of human nature. When Darwin pointed out the biological kinship of man with lower animals, it became the intellectual fashion to look for 'evolution' in all matters concerning living things, including L. There was the *bow-wow* theory (derisively so called by Max Müller) suggesting that primitive words imitated natural sounds, especially those made by animals. This is also known as the 'onomatopoeic' theory and is exemplified by such words as lullaby. There was the *pooh-pooh* theory (also Müller's term), propounding that the primitive words were ejaculations called forth by strong emotions, such as surprise, joy, grief, pain, dread. This theory is also known as 'interjectional.' Some scholars suggested that the expression of fear was connected with a high sound like *Eng. ee*, lament by a deep one resembling *Eng. oo*, joy by a series of repeated *ah*. Müller himself at first suggested (but soon abandoned) the 'nativistic' or 'echo' theory, called derisively by his friends the *ding-dong* theory. It is the theory of typical sounds, according to which there is an inner harmony or agreement between sound and sense; an 'instinct of speech' led to the first utterance, which was a 'sonant sign' of the consciousness of some common act. 'There is a law which runs through nearly the whole of nature, that everything that is struck rings. Each substance has its peculiar ring.' Similar is the *yo-ho* or *yo-he-ho* theory. 'Under any strong muscular effort it is a relief to the system to let breath come out strongly and repeatedly, and by that process to let the vocal chords vibrate in different ways. . . . The sounds 'would come to be associated with the idea of the act performed and stand as a name for it; the first words would accordingly mean something like "heave" or "haul."'

Other scholars suggest the 'gestural' or 'gesture' theory, which 'cannot explain many particular points of various languages, but it does clearly show the principle at work in the creation of languages.' In Sir Richard Paget's opinion, 'the original form of expression of all human ideas must be supposed to be that of bodily pantomime. . . . As he acted with his body, and more particularly with his hands, his tongue followed suit without

his knowing it. . . . The combination of mouth gesture and air current then produced speech.' Finally Jespersen's 'inductive' theory suggests the inferring of a general law from a number of particular instances. He traces the modern Ls. as far back as possible, until he reaches 'uttered sounds of such a description that they can no longer be called a real language.' This may be considered as scientific, but it is far from providing a solution of the vexed problem.

All these theories indeed explain only a very small part of L.: they hardly touch the core. Linguists now agree that the data at our disposal do not provide sufficient material for the solution of the problem of the origin of human speech; but during recent decades much knowledge has been gained of the prehistoric stages of the linguistic families (q.v.). Jespersen has suggested the following three main fields of investigation which, in his opinion, may help to solve the problem; but none of them has, so far, yielded any positive results. (1) *The language of children*: 'Here, in the child's first purposeless murmuring, crowing, and babbling, we have real nature sounds; here we may expect to find some clue to the infancy of the language of the race.' However, as Eric Partridge pointed out, 'mankind started from scratch, mankind had no words and no teacher; a child learns an already existing language, hears words all around him, has several teachers.' (2) *The language of primitive races*: Prof. E. H. Sturtevant rightly points out that 'as far as we know there is no indication that any language spoken to-day has had a shorter history or a slower development than any other.' (3) *The history of language*: 'The recorded history of language, even when supplemented by the prehistoric reconstructions of the comparative method (. . .), covers only a small fraction of the development to which language has been subjected since its origin. We can learn from the total of our material a great deal about the latter stages of this development, but it does not carry us appreciably nearer the beginning' (Sturtevant).

The problem of the origin of L. is strictly connected with the problem of its *monogenetism* or *polygenetism*, i.e. Was there a single or multiple origin of speech? Have all the existing forms of speech, and those which existed in the more or less distant past, descended from one L.? Is every L. thus related to every other? No answer can be given to these questions. Apart from the scholars who still believe in their own interpretation of the biblical story (see above), the theory of linguistic monogenetism has been upheld by eminent linguists such as the It. Prof. Alfredo Trombetti, while the polygenetic theory has been propounded by other scholars such as Friedrich Müller.

Piaget, *Language and Thought of the Child*, 1948.

Languages, Classification of. L. can be studied either for practical purposes, i.e. as means of communication between members of a social group, or as a branch of knowledge in which they cease to be a means and become themselves the chief object of inquiry. They may be classified either according to their structure or according to their relationship with other L. (see LINGUISTIC FAMILIES).

Classified according to their structure, the 2500 to 3000 languages of the world fall into three groups, known as *isolating* or *monosyllabic* (neither of these terms is exact), *agglutinating* (or *agglutinative*), and *inflecting* (or *inflective*). The type specimen of isolating L. is Chinese. There are various other more or less isolating L. in S.E. Asia and in Africa (where there are 700 different L.). Many of these L. are monosyllabic; Chinese, which was probably once an agglutinating language, is not pure monosyllabic, i.e. the suffix -ch'ü, corresponding to Eng. '-ness', freely attached to adjectives, transforms them into nouns: hán-ch'ü, 'goodness' (from hán, 'good'), ch'ang-ch'ü, 'length' (from ch'ang, 'long'). There are bisyllabic compounds having quite different meanings from those of their component parts, i.e. t'ung-hsi means 'thing', although t'ung means 'east' and hsi means 'west'. However, by far the greatest number of words are either rude monosyllables (exactly as 'housemaid' is made from 'house' and 'maid'). Moreover, the root never changes; the same word can be a verb, a noun, an adjective, an adverb (e.g. ta means 'great' or 'greatly' or 'greatness' or 'to be great', etc.). The meaning of a word is determined only by its place in the sentence (e.g. wó p'ü p'à t'ü means 'I not fear him'; t'ü p'ü p'à wó means 'he not fears me'). There is thus no Chinese grammar apart from syntax.

In speaking Chinese or an allied language (such as Burmese) voice inflection is of importance in giving the proper meaning to a word. The characteristic Chinese 'tones' are indeed just as important as the vowels themselves; they are so characteristic in some L. that the latter are sometimes termed polytonic. A word

pronounced on a level tone (˘) means one thing; on a rising tone (ˊ) another; on a dipping tone (ˋ) another; and on a falling tone (ˊˋ) another. Without the tone, the word has some other meaning, or, rather, no meaning at all. These tones have nothing to do with stress or length or abruptness of the Indo-European L.; they are indeed acoustic pithches or musical stresses, or changes of pitch and pitch only. The number of tones varies from language to language, from dialect to dialect. While, for instance, Burmese has only two tones, Siamese and Cantonese have each six.

The agglutinating L. form the largest of the three groups. To it belong those L. (e.g. Jap., Korean, the Caucasian forms of speech, the ant. Sumerian and Elamite, the Ural-Altaic family, various Amerindian linguistic groups, and many others) in which root words are united by juxtaposition only, i.e. if it is desired to modify the sense of a word in respect to time, place, or other relation, this is done by adding a prefix or a suffix, i.e. by incorporation of a vowel or a syllable with the main word. Many Eng. words, once classed as compounds, are agglutinated words, e.g. aforementioned, offshoot, matter-of-fact, fishmonger, homesick, and so forth. Various Amerindian dialects are not only agglutinating but polysynthetic or incorporative, i.e. many single words incorporate the conception of a whole sentence. This may be seen, for instance, in such names as that of the famous Aztec 'emperor' Montezuma or Montecuzoma (really Montecuzomal-thucamina), meaning 'When-the-chief-is-angry-he-shoots-to-heaven.'

Inflecting (from *inflect*, meaning to bend, to change the form of, to vary) L. are those in which words are susceptible of some slight modifications, which are known to grammarians as inflections, or flexions, or internal changes. This term may be applied to the changes in verb forms (by conjugation) or in noun forms (by declension) by the addition of one or more letters (school, schools; class, classes; (to) love, (he) loves; loved, beloved), or by changes within the words themselves (man, men; foot, feet; (to) write, wrote; may, might). Inflecting L., however, contain both monosyllabic and agglutinate as well as inflected words. In modern Eng. we have few inflections left, though at one time the language had many. The major ones are those which have to do with numbers and tenses respectively. Ant. Indo-European L. (e.g. Sanskrit, Gk., Lat.), and the modern Ger., Russian, Polish, or Lithuanian, have numerous inflections. The Lat. noun, for instance, had seven declensional endings, nominative, vocative, accusative, genitive, dative, ablative, and locative. Lat., Gk., Ger., Polish, and other verbs have many suffixes to show tense, number, gender, mood, activity, or passivity of the action, and so forth.

In the other main inflecting linguistic family, that is in the Semitic L., internal variation in the roots plays the most important part in inflection. One striking feature of grammatical structure is

common to all Semitic L., i.e. a marked preference for verbal roots using three consonant sounds. The characteristic core of the word, be it a noun or a verb or an adjective, called the trilateral root, gives us the fundamental conception, and is represented by consonants, while the vowel sounds (either as prefixes or suffixes or as changes within the words) give us only the complements, the details, such as the part of speech, the voice, the mood, the tense, the declension, i.e. in Heb. the consonantal abstraction of the root k-t-b indicates any word having a meaning connected with writing, although there is no such word as ktb. On the other hand ktb means '(I am, you are, he is) writing'; 'ktb means 'I shall write'; katab 'he wrote'; ketabim 'writings,' and so on. See also INDO-EUROPEAN LANGUAGES; LANGUAGE; LANGUAGE, ORIGIN OF; LINGUISTIC FAMILIES; and bibliographies of these articles.

Languedoc, former prov. of France, which became united under one authority about the beginning of the thirteenth century. The name is 'Provencal' and means 'the tongue of oc,' oc being the S. form of the N. *out*. In 1591 L. disappeared, being replaced by the eight depts. of Haute-Loire, Lozère, Ardèche, Aude, Tarn, Hérault, Gard, and Haute-Garonne.

Languet, Hubert (1518-81), Fr. Huguenot, writer and diplomatist, b. at Vitteaux in Burgundy. He studied at the univ. of Poitiers, Bologna, and Padua, and spent much time in travelling through France, Italy, Spain, Germany, Sweden, Finland, and Lapland. In 1559 he entered the service of Augustus I., elector of Saxony, and showed great ability in organising the Protestants. He represented the elector at the Fr. court (1561-1572), and was with him at the siege of Gotha (1567), about which he wrote in *Historia Descriptio*. His speech on behalf of the Protestant princes in 1570, before Charles IX. of France, nearly cost him his life, and he narrowly escaped death on St. Bartholomew's Day, 1572. He was at the imperial court as representative of the elector (1573-77), after which he spent most of his time in the Netherlands. His writings, which consist chiefly of letters to Augustus of Saxony, the chancellor Mordelien, Camerarius, and Sir Philip Sidney, are important for the hist. of the sixteenth century.

Lanids, see SHRIKE.

Lanier, Sidney (1842-81), Amer. poet and prose writer, made an heroic struggle against the ravages of consumption, which finally mastered him. He graduated with honour from Oglethorpe College, and on the outbreak of the civil war joined the Confederate army. In 1864, whilst acting as a blockade runner, his ship was captured, and for five months he was confined in a Federal prison. Here his fate, which he had learned to play as a boy, helped to lessen the tedium of imprisonment. In 1873 he was flautist in the orchestra at the Peabody concerts, Baltimore, and in 1876 became lecturer on Eng. literature

at Johns Hopkins Univ. Such poems as *The Marshes of Glynn* (1881) and *The Revenge of Hamish* entitle him to the first place after Poe among the poets of the S., whilst the *Science of English Verse* (1880) exhibits his mastery over prose, and his *Letters* (1899) illustrate the charm of his personality and his Stevensonian pluck.

Lankester, Sir Edwin Ray (1847-1929), Eng. zoologist and biologist; b. May 15, in London; eldest son of Dr. Edwin L., coroner for Central Middlesex. Educated at St. Paul's School, Downing College, Cambridge, and Christ Church, Oxford. Fellow and lecturer of Exeter College, 1872; he accepted in 1874 the chair of zoology and comparative anatomy at Univ. College, London. F.R.S. 1875. In 1890 he gave up his work in London, and, for the next seven years, lectured on comparative anatomy at Oxford. He was director of the natural hist. depts. in the Brit. Museum, 1898-1907. He founded the Marine Biological Association and became its president, 1892; he became vice-president of Royal Society, 1896. From 1869 he ed. the *Quarterly Journal of Microscopical Science*. Mude K.C.B. 1907, in which year he presided over the Brit. Association. His pubs. include *Comparative Longevity* (1871); *Degeneration* (1880); *Extinct Animals* (1905); *Science from an Easy Chair* (1910-12); *Diversions of a Naturalist* (1915); and *Great and Small Things* (1923). He ed. the well-known *Treatise on Zoology* (1900-1909).

Lannes, Jean, Duke of Montebello (1769-1809), Fr. marshal, was one of Napoleon's greatest generals: 'I found him,' said the emperor, 'a dwarf, and lost him a giant.' B. of humble parents, he was bred to the dyer's trade, but in 1792 joined the army. The times were auspicious for the rapid rise of any youth of talent. According to Bonaparte he fought in fifty-four battles and 300 combats, among them being Montenotte and Millesimo (1796), Aboukir (1797), Châtillon, Montebello, and Marengo (1800), Wertingen and Austerlitz (1805), Jena (1807), Tudela (1808), and Eckmühl (1809). The finest thing he ever did, after his defeat of the Austrians at Montebello, was his brilliant assault of Saragossa (1809). His fall at the battle of Essling was a disaster which Napoleon was the first to appreciate. See lives by C. Thoumas, 1891, and C. von Montebello, 1900.

Lannion, riv. port in the dept. of Côtes-du-Nord, France, on the Léguer, 54 m. E.N.E. of Brest. It has a harbour, fisheries, and considerable trade. The manufs. are linen, leather, rope, etc. Pop. 6400.

Lanolin (E) consists of the purified wool-wax of sheep containing about one-fourth of water. The rude wax is taken from the wool by extraction with a volatile liquid or a soap solution, the latter being treated with acid to precipitate the wax, which is then purified by boiling with caustic soda. The crude wax, free from water, is styled in pharmacy *adeps lanae* or *anhydrous l.* It is a yellow greasy solid with a characteristic odour,

which will form emulsions with a high percentage of water. The purified wax consists essentially of a mixture of sterols and aliphatic alcohols with their esters. Potassium, sodium, and calcium soaps may also be present. L. is used in pharmacy as a diluent for surface application, and in leather-dressing.

Lanrezac, Charles Louis Marie (1852-1925), Fr. general, b. at Pointe-à-Pitre, Guadeloupe. Entering St. Cyr in 1869, he fought in the Franco-Ger. war and in Tunis. On the outbreak of the First World War he was in command of the Fifth Army, on the right of the Brit. expeditionary force. He was removed by Joffre, Sept. 3, 1914. In 1920 he wrote an account of the early months of the war.

Lansbury, George (1859-1940), Eng. Labour leader; b. in a tollhouse between Halesworth and Lowestoft, in Suffolk, son of George L., railway contractor's time-keeper. He spent his childhood in Sylsbury, Greenwich, Bethnal Green, and Whitechapel, attending elementary schools. As a lad worked at many jobs, including unloading coals for a railway company. Married at twenty-one, he emigrated in 1884, and worked at various kinds of heavy labour around Brisbane. Returning in 1885 he agitated against emigration practices, the result being the estab. of the Emigrants' Information Office. He worked for the Liberal party and agitated for an eight-hour day at the National Labour Conference, Manchester, 1889. Later he joined the Socialists. He was a poor law guardian from 1892, and hor. councillor from 1903. In 1910 he was elected to Parliament as Labour member for Bow and Bromley. He was mayor of Poplar, 1919-20, and, with the bulk of the hor. council, was imprisoned for six weeks, autumn 1921, for refusing to pay co. precepts because of the hor.'s poverty. Ed. *Daily Herald* (weekly *Herald* during the First World War), 1912-22, and *Lansbury's Labour Weekly*, 1925-27. He re-entered Parliament for Bow and Bromley, 1922, and became first commissioner of works, 1929-31, as such gaining prominence by projects designed to popularise London parks and open spaces. After the general election of 1931, he became leader of the parl. Labour party, resigning in 1935, as his strongly pacifist views were not accepted by the majority of the party, and he was succeeded by Clement Attlee. In 1937 he visited Hitler and Mussolini in an attempt to persuade them towards peace. His integrity and idealism earned him the respect of members of all political parties, and he was especially beloved in the E. end of London, where his humanitarian work had been carried on for nearly half a century. See his *What I saw in Russia* (1920); *My Life* (1928); *My England* (1934); and *My Quest for Peace* (1938, an account of his visit to Hitler and Mussolini). A life by his son appeared in 1934.

Lansdown, eccles. par. in the N.E. of Somersetshire, England. It forms a N.W. suburb of Bath, and is noted for its race meetings which take place on L. Hill about 2 m. from the tn. Pop. 1400.

Lansdowne, Baron, *see* GRANVILLE, GEORGE.

Lansdowne, Henry Charles Keith Petty Fitzmaurice, fifth Marquess of (1845-1927), Brit. statesman, b. Jan. 14, eldest son of fourth marquess, was a favourite pupil of Dr. Jowett at Balliol College, Oxford. When he first interested himself in politics, he joined the Liberal party and served

WILLIAM PETTY, FIRST MARQUESS OF LANSDOWNE

the gov. as lord of the treasury 1869-72, under-secretary for war 1872-74, and under-secretary for India 1880. Governor-general of Canada 1883-85, then viceroy of India until 1894. When Gladstone introduced Home Rule for Ireland he became one of the Liberal Unionist party. From 1895 to 1906 he was once more a member of the Cabinet, at first as secretary for war (until 1900), and afterwards as foreign secretary. After Lord Salisbury's death he was Unionist leader in the House of Lords. He joined Asquith's Coalition Gov., 1915, as minister without portfolio. On Nov. 29, 1917, the *Daily Telegraph* pub. his remarkable communication known as the L. letter (*q.v.*). He was profoundly anxious for the reform of the House of Lords. *See* life by Lord Newton, 1929.

Lansdowne, Henry Petty-Fitzmaurice, third Marquess of (1780-1863), Eng. statesman, one of the most prominent and influential members of the Whig party in his time. A fellow member with Brougham and Sidney Smith of the Speculative Society of Edinburgh, he left the univ. of that city and went to Trinity College, Cambridge, where he graduated as M.A. in 1801. Having early entered Parliament, he was a member of Grenville's short-lived ministry of 'All the Talents' (1806-7). Throughout his public life he was a zealous advocate of Free Trade, the abolition of slavery, and Catholic emancipation. It was his enlightened views on this last question which lost him his seat for Cambridge Univ. (1807). President

of the council from 1831 to 1841, and again from 1846 to 1852, he assisted in the passage of the Reform Bill (1832), and refused the premiership and a dukedom.

Lansdowne, William Petty, first Marquess of (1737-1805), Irish statesman, attended Christ Church, Oxford, and later joined Wolfe's regiment. In 1760 he rose to colonel, having greatly distinguished himself during the Seven Years war at Minden and Kloster-Kampen, and in the same year entered Parliament. In his principles he was closely associated with Pitt, whom he supported on the question of Wilkes's expulsion. When Pitt became Premier Earl Shelburne, as he then was, accepted the secretaryship of state (1766), but resigned two years later, as his colleagues persisted in a policy of aggression towards the Amer. colonies. For a few months in 1782 he was Premier, but the coalition of Fox and North secured his speedy downfall.

Lansdowne Letter, letter written by Lord L. (*q.v.*) to the *Daily Telegraph*, Nov. 29, 1917, arguing from the duration of the war the necessity for a revision of the Brit. war aims, and, inferentially, admitting that the freedom of the seas did not exist before the First World War. The views expressed in the letter were speedily repudiated by the Brit. Gov., which declared its unswerving adherence to its war policy as previously stated. The letter caused astonishment both in Great Britain and in the U.S.A., but was soon forgotten.

Lansford, bor. of Pennsylvania, U.S.A., in Carbon co., 4 mi. N.E. of Tamaque. It has important coal-mines. Pop. 8700.

Lansing, Robert (1864-1928), Amer. politician and lawyer. Early in his legal career he devoted himself to international law, and represented the Amer. Gov. in various state arbitrations. In 1893 he was associate counsel in the Behning Sea Arbitration, and later was appointed counsel in the Behring Sea Claims Commission. Later he became adviser to the U.S. Gov. on international law, and from 1912 to 1914 he was U.S. agent in the Anglo-Amer. Claims Arbitration. He was counsellor to the state dept. until 1915, when he succeeded Wm. Bryan as secretary of state. He was chosen as one of the five delegates to represent America at the Inter-Allied Peace Conference in Paris in 1919. He pub. *The Peace Negotiations* (1921) and *The Big Four and Others of the Peace Conference* (1921). His *War Memoirs* appeared in 1935 and *The Lansing Papers, 1914-20*, in 1939-40.

Lansing, cap. of Michigan, U.S.A., in Ingham co., situated on elevated land on both sides of the Grand R., 68 mi. S.S.W. of Bay city. It is an important manufacturing centre, owing to its fine water power, and manufs. all kinds of automobile machinery as well as building materials, leather goods, garments, etc. The state library and state agric. college are here. It is an air port. Pop. 78,700.

Lansburg, tn. of New York, U.S.A., in Rensselaer co. It is situated on the Hudson R., opposite the mouth of the Mohawk R. There are manufs. of brushes,

oil-cloth, and clothing. It now forms part of Troy. Pop. 13,000.

Lanson, Gustave (1857-1934), Fr. literary critic, b. at Orleans; educated at the lycées of Orleans and Charlemagne. Director of the École Normale Supérieure. Prof. of Fr. literature at the Sorbonne and, after the death of Brunetière, the chief influence in guiding students of Fr. literature. His method of criticism was essentially one of historical and biographical research, a method which in less able hands might tend to subordinate literature to the catalogue label. His *Histoire de la littérature française* is unrivalled by any other work of similar range. In addition he wrote valuable studies of *Nivelle de la Chaussée* (*Nivelle de la Chaussée et la comédie française*, 1887), *Bosquet, Boileau, and Corneille*; an ed. of the *Lettres philosophiques de Voltaire* (1908); critical eds. of the *Méditations de Lamartine* (1915); and a *Manuel bibliographique de la littérature française moderne* (new ed. 1921). Vice-president of the Société d'histoire littéraire de la France and president of the Société des textes français modernes.

Lanterloo, see LOO

Lantern, name given to a case to contain a light. It generally consists of a framework of metal with glass, horn, or mica windows, or some other transparent material. The light may be supplied by a candle, oil, etc. In engineering, any L-shaped construction is often called a L., e.g. a L. pinion. See also LAMP.

Lantern, in architecture an ornamental turret erected on the roofs or domes of churches for the purpose of ventilating and giving light. They are most commonly octagonal in shape and with glazed or unglazed windows. Ls. may be found in England, at York and Ely; in France, at Coutances and St. Ouen; and in Spain, at Salamanca.

Lantern-fly (*Fulgurina*), family of tropical insects of the order Hemiptera, in many of which there is a large outgrowth from the head, once believed luminous.

Lantern, Magic, see MAGIC LANTERN.

Lanthanum, symbol La, atomic number 57, atomic weight 138.9. One of the commonest of the rare-earth elements. Discovered in 1839 by Mosander by extraction from crude ceria. It is a white malleable metal which tarnishes in air, and is acted on slowly by water. Chemically it is very like cerium, and forms a basic oxide La_2O_3 , which dissolves in water to give a fairly 'strong' hydroxide. Forms many salts and a hydride, LaH_3 .

Lantsangkiang, see MEKONG.

Lanuvium, or **Lanivium**, anc. city of Italy, situated about 20 m. S.E. of Rome, southward of the Via Appia. It stood upon a hill, from which was obtained an extensive view of the surrounding country, and had a celebrated temple of Juno. The present vil. is noted for its vineyards.

Lanz, Luigi (1732-1810), It. archaeologist, was educated by the Jesuits for the priesthood, but the order being suppressed, he became keeper of the galleries of Florence (1775), and henceforward devoted his life to literature and the study

of antiquities. His *Storia Pittorica della Italia* (completed in 1796) has been widely trans., and, in that it was the first attempt to treat the schools of painting with historical sequence, is a landmark in art criticism. L. wrote also on the language and vases of anc. Etruria.

Laosag, tn. and port of Luzon, Philippine Is., in the prov. of Ilocos Norte. It is situated on the L. It. and includes the municipality of San Nicolás. There is a shipping trade in rice, Indian corn, sugar, and tobacco, cotton is extensively grown in the dist. Pop. 41,800.

Laocoon, in Gk. legend a priest of Apollo, who incurred the anger of that deity by his marriage and also by the solemn warning he delivered to the Gks. against admitting the treacherous wooden horse within the walls of Troy. Accordingly the vindictive god drove two huge serpents out of the sea to the altar of Poseidon at which L. with his two sons was officiating. The ghastly story of their death agonies, as the monsters coiled themselves about their limbs, forms one of the most tragic and vivid episodes in Virgil (*Æneid* II, ll. 199, et seq.). The contortions of father and sons are further illustrated in the famous 'Laocoon' group of the Vatican, which was discovered in 1506 near the baths of Titus. Pliny tells us it was fashioned by three Rhodian sculptors, Polydorus, Agesander, and Athenodorus. Curiously enough Lessing, when in his *Laocoon* he was discussing the limits of sculpture and poetry, chose this group as a type of excellence in statuary, although archaeologists now agree in assigning it to the decadent period of Gk. art. See H. Keller, *Goethe und das Laocoonproblem*, 1933, and study by M. Bieber, 1933.

Laodamia, in Gk. heroic legends the daughter of Acastus and the wife of Proteus. When her husband was struck down by a Trojan and slain in the very act of landing from his vessel, she prayed the gods to restore him to life, if only for three hours. The boon was granted, but, as Wordsworth tells, L. d. and went with her husband on his second journey down to Hades.

Laodicea, name of sev. cities most of which were founded by the Seleucid kings of Syria. The founder of the dynasty, Seleucus, is supposed to have named five of them after his mother, Laodice. The chief cities so called are: (1) *Laodicea ad Lycum*, on the banks of the Lycus in Phrygia, 6 m. S. of Hierapolis. It is supposed to have been founded by Antiochus II. (261-246 B.C.). It is famous as one of the seats of early Christianity, and, being favourably placed on the road leading from the Ionian cities to the Euphrates, it became a great commercial centre. The association of Laodiceans with lukewarmness originated in a reference in Rev. iii. 14-16. In early times there was a medical school here and a school of Sceptic philosophers. It was destroyed by an earthquake during the reign of Nero, but was rebuilt. Afterwards its prosperity declined owing to Turkish invasions, and it is now a pile of ruins,

known as Esk-Hissar. (2) *Laodicea Combastia*, in Lycania, on the borders of Phrygia and Paidia, modern Sorgan Ladik. (3) *Laodicea ad Mare*, named by Seleucus Nicator about 800 B.C. It is on the coast of Syria, about 75 m. N. of Tripoli, modern Latakia. See W. M. Ramsay, *Cities and Bishopricks of Phrygia*, 1895-97.

Lao-Ling Mountains, see CHANG-PAI-SHAN.

Laomedon, son of Ilus and the father of Priam, appears in Gk. legend as king of Troy. Poseidon built his city walls and Apollo tended his flocks. But the faithless ruler denied them their hire. Accordingly the sea-god dispatched a dragon to lay waste his country and Apollo sent a plague. Finally L. was slain by Heracles. The demi-god had rescued the king's daughter, Hesione, who was to have been sacrificed to Poseidon, and had not received the promised reward.

Laon, city of France and cap. of the dept. of Aisne, situated on a limestone rock, rising 650 ft. from the plain. Its cathedral, dating from the twelfth to the fourteenth centuries, is a fine specimen of Gothic architecture. On March 1814 a battle was fought here between the allies under Blücher and Napoleon I., the latter being defeated. L. was a place of importance under the Fr. kings. Captured by the Gers. early in the First World War, in 1916-17, it formed the S. pivot of the Hindenburg line (q.v.), which was attacked by the Fr. on April 16, 1917, under Gen. Nivelle, when launching the second battle of the Aisne (q.v.). The Fr., under Journaud (q.v.), entered the tn. on Oct. 13, 1918. The manufs. are nails, leather, earthenware, biscuits, etc., and there are numerous vineyards. Pop. 17,400.

Laos, general term for the former Fr. ter. of central Indo-China. The country is watered by the Mekong and its affluents, the Nam-Hlon and Nam-Ta, and by the Menam and Salwin. The Fr. protectorate existed from 1893 to 1940, but in 1946 N. and S. L., united into a single state, became part of the federation of Indo-China. The country was, prior to 1940, divided into twelve provs., the affairs of each being administered by a Fr. commissioner, assisted by native nobles, elected by the people. The pop. consists of Thais, Khas, and various mixed Indian and Chinese races. The chief products of the soil are tea, tobacco, cotton, rice, maize, and indigo. Fruit trees are abundant and teak forests provide material for an important industry. Gold, copper, tin, etc., are found, but are not exploited to any great extent. The most important industry is cattle-raising. A railway has been built on Rhone Is. A telegraph line connects Hué on the coast and railway in Annam with tns. on the Mekong. Area 83,604 sq. m. Pop. 1,023,300. See C. Gosselin, *Le Laos et le protectorat français*, 1900, and L. de Reinach, *Notes sur le Laos*, 1906.

Lao-Tze, or Lao-Tzu, Chinese philosopher, was the author of *Tao Teh King*, a treatise which has exercised the interpretative faculty of many learned commentators. According to Sze-ma Ch'ien

(c. 100 B.C.), L. was b. in 604 B.C. and was keeper of the royal library at the court of Chou in the prov. of Houan. In 517 B.C. he had an interview with Confucius, and in his old age, when the dynasty he served was growing weak, he left the royal domain and went into 'the regions beyond.' 'The Venerable Philosopher'—for such is one meaning of his name—taught the beauty of action free from selfish motive and having as an end only its own accomplishment: the world must roll on 'without striving or crying,' according to L., which is the 'way,' or 'word' (compare *Logos* of the N.T.). He inculcates the virtues of compassion and humility and the Christian doctrine of requiring good for evil, yet he was ever looking away from culture and back to pre-cultural times for his ideals. The polytheistic Taoism has little to do with his ethics. See also CHINA, *Chinese Literature*. See trans. by P. Carus, 1898, 1913; R. Wilhelm, 1911 ff.; A. Waley, 1934, 1942, and *Chinese Philosophy* (in Everyman's Library); and W. Bryner, 1947; also study by H. Stube, 1912, and R. Wilhelm, *Laotse und der Taoismus*, 1925.

La Pampa (Santa Rosa), ter. in the Central Argentine Republic, bounded by the Rio Colorado on the S. The surface is varied, with extensive forests, numerous streams and lakes, and fertile pasture lands. Breeding asses, mules, goats, sheep, cattle, horses, and pigs is an important industry. Wheat, alfalfa, and oats are the most important crops. The cap. is Santa Rosa de Tomy. Area 53,700 sq. m. Pop. 166,900.

Laparotomy, in surgery the operation of cutting through the abdominal wall, particularly by way of the flank or loin. It is frequently performed in order to enable the surgeon to discover by feeling the real cause of an intestinal disorder, and in the hands of a capable operator is not dangerous.

La Paz: 1. Dept. of N.W. Bolivia. An extensive plateau forms the N. portion, while it is mountainous in the S. Only potatoes, barley, and quinoa grow in the W. regions, which are watered by the Titicaca, and include part of Titicaca Lake. Eastward wheat, Indian corn, and fruits grow in plenty, whilst in the S. tobacco, sugar-cane, cacao, oranges, and other tropical products are freely cultivated. Illimani, Sorata, and other lofty peaks crown the Cordillera Real, whose main spurs run from N.W. to S.E. The celebrated Corocoro copper-mines lie near Desaguadero R., whilst the profitable tin-mines of Huayna Potosi and Chocobitaga are within easy distance of L. P., the cap. Area 43,000 sq. m. Pop. 1,173,300. 2. Cap. of Bolivia, situated on the Rio de la Paz, 30 m. S.E. of Lake Titicaca. The L. P. or Chuqulapo R. upon which L. P. is built in the deeply wooded valley of the Cordillera Real, was, it is supposed, the outlet of Lake Titicaca in earlier times. L. P. was founded in 1548 by Alonso de Mendoza who was drawn there by the rich alluvial gold ore. It lies 12,120 ft. above the sea and has a short and cold summer season, which accounts for the

prevalence of pneumonia and other lung diseases, though the incidence of pulmonary disorders is probably lessened by the fact that the inhab. abstain from house-fires as being conducive to disease. Only a relatively short time ago L. P. was an isolated tn., relying on coach and mule roads. To-day it has three routes of access by rail: it is served by a line from Antofagasta, Chile, a seaport formerly belonging to Bolivia; also by the railway which reaches the tn. from Ynini and Oruro (a former cap. of Bolivia) and Lake Poopo; the more recently built line from Arica and the S. railway of Peru (through Ynini and Oruro) both link L. P. with the Pacific coast. The transverse streets of the city are steep and irregular, the ground rising rapidly from the riv., and are mostly narrow and roughly paved, with numerous small bridges. The cathedral was begun in the seventeenth century when the mines of Potosí yielded abundant wealth, but it was never completed owing to subsequent poverty, though L. P. has been the seat of a bishop since 1603. The cathedral has a finely carved stone façade, facing on the great plaza. L. P. has a univ. and two mus., including a mineralogical museum. The old San Andrés Univ. has preserved many relics of the Inca ruins of Tiwanaco and other sites, rescued from the vandalism of railway builders. Degrees may be obtained in law, medicine, and theology, and there is also a commercial faculty. There is a normal school for training teachers of Indians. The successful school known as the Amer. Institute is subsidised by the gov. L. P. became the seat of gov. of Bolivia after the revolution of 1898, being the commercial metropolis and more accessible than the old cap., Sucre. Like Quito and Arequipa, L. P. has a large Indian pop., whose dress and occupations are in striking contrast with those of the Europeanised upper classes. The total pop. in 1946 was 300,000. The white (about 50,000) constitute the ruling and professional classes; they are descendants of Spaniards and other Europeans who have remained unmixed or but partially mixed with the aboriginal inhab. The *mestizo* class forms some 33 per cent of the pop.; they monopolise the petty tn. industries of small shopkeeping and are also artisans and mechanics. 3. Tn. in the Entre Ríos prov. of Argentina, situated on the Paraná, 530 m. N. by W. of Buenos Aires by riv. Pop. 9000. 4. Tn. on the Río Tunuyán, 75 m. S.E. by E. of Mendoza in Argentina. Pop. 4000. 5. The cap. of Lower California, Mexico. The tn. is tastefully laid out, has an excellent harbour in the bay of L. P. and does considerable trade in silver and agric. produce. There are pearl fisheries in the bay. Pop. 6000.

La Pérouse Island, see under LORD HOWE ISLAND.

Lapis Lazuli, highly prized ornamental stone of an azure colour, the sapphire of the ancients. A favourite stone with the Egyptians for amulets and ornaments, as well as scarabs, and also used by the Assyrians and Babylonians. L. L. usually

occurs in compact masses of a granular structure; the mineral is opaque with slight transparency at the thin edges. It has a hardness of 5 to 5.5 and a sp. gr. of 2.45. Its chemical composition varies, but the prin. constituent is *lazurite*, $\text{Al}_2(\text{SiO}_4)_3\text{Na}_4(\text{Al}_2\text{Si}_2\text{Na})$. Powdered L. L. was formerly the source of the blue pigment *ultramarine* (q.v.), but the latter is now made synthetically (see J. W. Mellor, *A Comprehensive Treatise on Theoretical and Inorganic Chemistry*, vol. vi., pp. 585-91). Medals, engraved gems, vases, and other ornaments have been made from L. L., being especially esteemed in Italy, and in Russia magnificent examples of its decorative use are to be seen on the columns of St. Isaac's Cathedral, Leningrad. L. L. occurs in Badakshan, in part of Siberia, and in the Andes. The name L. L. is also sometimes loosely applied to other minerals of a similar colour though of different chemical nature.

Lapithæ, The, were a mythical race of people inhabiting the mts. of Thessaly. Pirithous, son of Ixion and half-brother of the Centaurs, governed them. The legend runs that upon his marriage with Hippodamia, the Centaurs tried to carry off his bride and the other women. A fierce battle ensued, in which the L. were victorious. A symbolical meaning has been attached to this struggle, typifying the conflict between the Gks. and Persians.

Laplace, Pierre Simon, Marquis de (1749-1827), 1. a mathematician and astronomer, b. in humble circumstances at Beaumont-en-Auge, near Trouville, Normandy. As a youth he taught mathematics in a military school at Beaumont, and in 1767, through the influential assistance of D'Alembert, was appointed prof. of mathematics in the École Militaire, Paris. In 1796 he pub. his *Exposition du système du monde*, in which he stated the chief astronomical facts and theories, and in a note at the end expounded his famous 'molecular hypothesis.' His *Traité de mécanique céleste* (1799-1825) made him world-famous. Apart from his extraordinary analytic skill and far-sighted scientific sagacity, L. had a pure literary style which places his works on a level with Newton's *Principia*. His other treatises include *Théorie du mouvement* (1781) and *Théorie analytique des probabilités* (1812-1820). His (*Œuvres complètes*) were issued (1878-1901) in 13 vols. In his earlier years, it may be said that L.'s work was directed towards an explanation of the secular changes in the motion of the heavenly bodies, especially of the moon. It was during these years, too, that he collaborated with Lavoisier in carrying out experiments in the then new science of heat, which are still described in present-day text-books. His monumental work, the *Mécanique céleste*, was pub. in 1799, and the last of its five vols. in 1825. It covers all the problems of the solar system and is reckoned second only to Newton's *Principia*. But from the modern standpoint its most significant contribution to knowledge is the development of the idea of the potential; it is not too much to say that his equation of the potential

function is the most important single equation in the whole of physics. The *Mécanique céleste* is a most difficult book to read, and this is the more curious because he had previously pub. his popular account of celestial mechanics, the *Exposition du système du monde*, which book may be described as, in effect, the *Mécanique céleste* without any mathematics and is easy to follow. L.'s brilliance as a scientist remains undimmed

MARQUIS DE LAPLACE

with the years. His work on surface tension and on the velocity of sound, as well as his more important studies on attractions and probability, are still important, and in his own lifetime had a profound effect on the progress of knowledge. The Eng. school, hampered by the allegiance to the fluxions of Newton, and by anti-French sentiment, had made no progress, but L.'s work encouraged a new outlook. This began with the collaboration of Woodhouse, at Cambridge, with Babbage, John Herschel, and Peacock, in founding a new school of analytical methods, and had remarkable results in the hands of Adams and Clerk-Maxwell. (See 'A Very Extraordinary Man,' by J. G. Porter, in *The Listener*, March 23, 1949.) See also COSMOGONY. See Baron Fourier, *Eloge*, 1831; D. F. J. Arago, *Report*, 1842, trans. amongst his *Biographies* by Smyth and Grant; I. Todhunter, *Elementary Treatise on Laplace's Functions*, 1875; and D. V. Widder, *The Laplace Transform*, 1912.

Laplace's Equation, partial differential equation in connection with the theory of attractions discovered by P. S. Laplace (q.v.). By his discovery that the attracting force in any direction of a mass upon a particle could be obtained by the direct process of differentiating a single function, he made an important addition to every branch of physics, and more particularly heat, electricity, and magnetism. C. F. Gauss employed it in the calculation of the magnetic potential of the earth, and Clerk-Maxwell's interpretation of harmonics with reference to poles on the sphere threw

new light upon it. See SPHERICAL HARMONICS.

Lapland, name applied to an extensive region of N. Europe, inhabited by the Lapps. It has no political existence, and covers ter. in Norway, Sweden, Finland, and Russia, the first portion consisting of bold headlands and fjords, deep glaciers, long mt. lakes, and lake-fed rivs. Russian and Finnish L. is similar to the low-lying parts of Swedish L., but the surface is more level; marshes and the barren tundras of the Arctic Ocean become more frequent, and forests of fir and spruce abound. The climate is of a typical Arctic nature. For seven or eight weeks in winter the sun does not rise above the horizon and comparative darkness prevails except when the aurora borealis illuminates the snow-covered landscape. The cold is excessive. The summer lasts during three months, and is comparatively hot; during eleven weeks of it the sun never sets. L. gives little scope for husbandry, the soil being frozen a foot below the surface; the fisheries are important, and there are extensive copper-mines and iron deposits. The latter occur principally in Swedish L. where are some of the richest iron-mines in the world. At Kiruna and Gollvaren are mt. of ore said to be two-thirds pure iron. To serve the mining communities an electric railway has been constructed from Luleå on the gulf of Bothnia to Narvik on the Norwegian coast. The Lapps, a people of Finno-Ugrian stock, mostly live a nomadic life, fishing, fur-trapping, and hunting. The reindeer supplies most of the needs of the inhab., providing them with flesh, milk, and garments, and acting as a beast of burden. They are remarkably short in stature, and they have high cheekbones, wide mouths, small elongated eyes, and snub noses. They are a quiet, inoffensive people, and are extremely susceptible to religious impressions of a sensational character. To-day they all profess Christianity. The number of Laplanders is not supposed to exceed 30,000—19,000 in Norway, 6,100 in Sweden, 1,600 in Finland, and the rest in Russia. From the thirteenth to the seventeenth century they were practically in a state of slavery under the Swedish adventurers, the Birkarians. A flourishing colony of them has been estab. in Alaska. See Sir A. de Brooke, *A Winter in Lapland*, 1827; G. von Düben, *Om Lappland och Laparne*, 1873; E. Rac, *The White Sea Peninsula*, 1882; F. H. Butler, *Through Lapland with Skis and Reindeer*, 1919; H. Sutherland, *Lapland Journey*, 1939; and H. A. Bernatzki, *Lapland*, 1940.

La Plata, cap. of the prov. of Buenos Aires, Argentina, 30 m. E.S.E. of the city and 5½ m. from the coast, with which it is connected by railway and the port Ensenada. It was founded in 1882, and has grown into a city with a pop. of about 200,000. It has fine gov. buildings, theatres, a library, and a race-course; also a large museum rich in geological and archaeological collections and an astronomical observatory (founded in 1897), both of which have been taken over by the

univ. of L. P. A petroleum distillery, the largest in the world, was opened in 1925, and by the middle of 1926 was heating 2300 tons of crude petroleum daily. Many automatic petrol supply stations were opened in the streets of L. P. in 1926.

La Plata, Rio de, or Plate River, see PLATA, RIO DE LA, or PLATE RIVER.

Lapointe, Ernest (1876-1941), Fr.-Canadian statesman, b. in Temiscouata co., Quebec, and educated at Rimouski College, and at Laval Univ., Quebec. Called to the Bar, but took up politics and then set himself to master the Eng. language, of which he knew not a word. His reputation was well estab. at the end of the First World War, especially over the conscription controversy, and he might have succeeded Laurier (*d.* 1919) but for the importance of keeping him as leader of the Liberals. He was at once accepted as leader of Fr.-Canadian Liberalism and was returned for Quebec E., the constituency which Laurier had represented for forty years. A dominant figure in the govt. of Mackenzie King, he was minister of marine and fisheries and, later, of justice, a post he held until 1930 and again from 1935 till his death. Experience of wider fields of statesmanship began in 1922 when he was one of the Canadian delegates to the League of Nations. He signed a fishery treaty with U.S.A., the first treaty ever signed by a dominion minister endowed with plenipotentiary powers from the king. He was chief Canadian delegate to the Imperial Conference, 1929; Canadian delegate to the unveiling of the Vimy Memorial in 1936; and attended the coronation, 1937. In Sept. 1939 he made a great speech in the Canadian House of Commons arguing eloquently in favour of Canadian participation in the Second World War.

La Porte, city of Indiana in L. P. co., U.S.A., situated 16 m. E.S.E. of Chicago. There are beautiful lakes to the N. of the city, and it is frequented as a summer resort. It manufs. flour, woollen goods, and machinery, and is the centre of a farming dist. Pop. 16,100.

Lappa, port of China, at the entrance of the Canton R., opposite Macao.

Lappmark, name of five dists. or marches in N. Sweden inhabited by Lappa. They are known under the names of Asele, Umea, Pitca, Lulea, and Tornea, and cover an area of 14,667 sq. m. Pop. 6100 (all Lapps).

Lapps, see LAPLAND.

Lapse. A devise of real estate and a bequest of a legacy are said to L. where the devisee or legatee *d.* in the lifetime of the testator. But by the Wills Act, 1837, no L. occurs: (a) when the donee is a child or other issue of the testator and dies leaving issue at the testator's death; and (b) when the gift is of an estate tail (see ESTATE, ENTAIL) and the tenant in tail leaves issue living at the testator's death capable of inheriting under the entail. In both (a) and (b) the property passes just as if the donee had *d.* immediately after the testator. Lapsed legacies fall into the residuary estate.

Lapwing, see PLOVER.

Laquedem, see under JEW, THE WANDERING.

Lar, or Lars, Etruscan word meaning lord, king, or hero. It was employed as a prenominal and borne by Persena (I. Persena of Clusium), Tolminius, and others. See C. O. Muller and W. Deoche, *Die Etrusker*, 1877.

Lara, stato of Venezuela, bounded to the S. by Portuguesa and to the N. by Falcon. The Tocuyo R. traverses L. and there is a railway to the coast at Turacas. The cap. is Barquisimeto. Area 7612 sq. m. Pop. 332,900.

Laraiche, or El Araish (the garden of pleasure), fortified seaport tn. of the Sp. zone of Morocco in Africa, overlooking the Atlantic Ocean, 45 m. S.S.W. of Tangier. There are ten military forts. The tn. has a spacious market-place. Pulse, beans, wheat, wool, hides, and wax are exported. L. is the terminus of a railway 40 km. long and has an air-line to Seville. Pop. 29,100.

La Ramée, Louise de, see OUIDA.

Laramie: 1. Co. seat of Albany co. Wyoming, U.S.A., 40 m. N.W. of Cheyenne on the Union Pacific railway. Has an altitude of 7000 ft., and is enclosed by mts. and is in the midst of picturesque scenery. Contains the Wyoming Univ. and Wyoming Agric. College, and has manufs. of glass, leather, flour, large machine shops, and oil refineries. It is the centre of a stock-raising, lumbering and mining dist. Pop. 10,600. 2. Riv. in Colorado, flowing N.E. through S.E. Wyoming; it is about 200 m. long, and drains part of L. co.

Laramie Strata, appearing in the intermediary age between the Cretaceous and Tertiary, containing seams of lignite. They are well developed in Utah and Wyoming, U.S.A.

Larat Island, see under MOLUCCAS or SPICE ISLANDS.

Larbaud, Valéry (b. 1881). Fr. writer, b. at Vichy. Educated at his native tn. and at the Sorbonne, he has trans. Coleridge, Samuel Butler, and James Joyce from Eng. and Ramon Gomez de la Serna from Sp. His first considerable original production was *Poesies de A. O. Barnabooth* (1905), 'Barnabooth' being a reputed S. Amer. millionaire in search of happiness. The poems are written in free verse, showing the influence of Walt Whitman. Some years later he pub. the prose work, *J. O. Barnabooth, son journal intime* (1913). He has also written a short novel, *Fernanda Marquez* (1906), sev. vols. of short stories, and a collection of critical essays.

Larbert, par. and vil. of Stirlingshire, Scotland, on the Carron, 3 m. S.E. of Stirling. Coal-mining is extensively carried on. Pop. 12,000.

Larboard, obsolete nautical term, now superseded by 'port,' that side of a vessel which is on the left hand of an observer facing forward, while starboard refers to the right-hand side.

Larceny, or Theft, wilfully wrongful taking and possession of the goods of another against his will and with the intention

of depriving the owner of his property in them. L. is either simple or compound, the latter being theft accompanied by circumstances of aggravation, e.g. robbery with violence, theft by a public servant. L. is distinguishable from: (a) false pretences, in that possession only is obtained, while in the latter crime the owner intentionally parts with his right of property as well, although induced so to do by some

LARCH II

false representation; and (b) embezzlement, in that L. by a clerk or servant connotes the stealing of property which at the time is in the actual possession of the master, while in embezzlement the property is intercepted. Only personal goods can be the subject of L. There were formerly a great number of things, like trees, plants, deeds, fixtures, coal from a mine, chattels real (q.v.), choses in action (q.v.), wills, animals *feræ naturæ* (i.e. wild or unreclaimed), and dogs, or other domesticated animals not ordinarily used for food, which at common law could not be the subjects of L. The theft of most of these things is now, however, punishable as for simple L., while the theft of coal or other ore from mines, wills, records, and deeds is met with much heavier punishment than L., that of wills being punishable to the extent of a life term of penal servitude. If the taking is bona fide under some colour of right, it might ground a civil action in trespass (q.v.), but would not be larcenous. If the goods are taken by a trick, the owner not intending to part with the ownership of the goods, it is L., e.g. A gets half a dozen pairs of boots sent to him ostensibly for the purpose of buying one selected pair and then converts all of them to his own use. Welshing is a common form of L. by trick. To constitute L. there must be a complete physical taking (called asportation). This, however, is in law interpreted to mean merely that the goods must have been

bodily displaced as distinguished from being merely handled, or if attached or connected in some way (e.g. watch and chain) completely severed. It is not essential that the taking be for the sake of gain, e.g. to take a man's motor-car and run it into a deep riv. merely to spite him is L. if done with intent permanently to deprive the owner of his property. L. by finding is the offence of appropriating goods, the true owner of which may be found by inquiry. If, at the time of appropriation, the finder really believes that the owner cannot be found, it is not L. (Baron Parke in *R. v. Thurborn*, Warburton's *Leading Cases*, 157).

Larch, common name given to species of *Larix*, a genus of coniferous plants found in N. parts of Europe, Asia, and America. The plants are hardy trees, much resembling species of *Cedrus* in habit, but they are not evergreen, and the cones ripen in one year. The wood is hard and tough, the leaves are bright green in colour and linear in shape, and the flowers are monocious. *L. Europæa*, the common L., grows to a height of 100 ft., and is valued for its wood, its bark used in tanning, and for the turpentine which it yields. *L. pendula*, the black L., is common in America.

Larcom, Lucy (1826-93), Amer. poet, b. at Beverly Farm, Massachusetts. From 1866 to 1874 she ed. *Our Young Folks*. Her poems include *Riverside Poems* (1876) and *Hillside and Seaside in Poetry* (1877). See her autobiography, *A New England Girlhood* (1889).

Lard, fat of the hog melted down and strained, the best quality being prepared from the 'leaf' or fat of the bowel and kidneys. L. should contain about 60 per cent of olein and 40 per cent of palmitin and stearin. Adulteration is frequently resorted to in the manu. of this commodity, the stearin of beef or mutton being used. The best quality of L. is used for making oleomargarine, whilst the inferior sort is used for making candles. An artificial L. is made by the action of hydrogen upon cotton-seed oil in the presence of nickel shavings, which act as a catalyst (q.v.); though wholesome, it lacks the vitamins of the animal product.

Lardner, Dionysius (1793-1859), Irish scientific writer, b. in Dublin. Entered Trinity College, Dublin, and took orders, but preferred to write contributions to the *Edinburgh Review* and various encyclopædias. In 1827 he became prof. of natural philosophy and astronomy in the univ. of London (afterwards Univ. College), and in 1829 began his great work, *The Cabinet Cyclopædia*, which was finished in 133 vols. twenty years later.

Lardner, Nathaniel (1684-1768), Eng. divine, ecclesiastically a Presbyterian, but theologically a Unitarian. He wrote *Credibility of the Gospel History* (1727-57) and *Jewish and Heathen Testimonies in favour of Christianity* (1764-67).

Lareau, Edmond (1848-90), Canadian politician of Fr. extraction. Called to the Bar in 1870, and was appointed six years later prof. of law in McGill Univ. In 1886 he was elected to the prov.

legislature. He wrote *Histoire of Canadian Law* (1888) as well as *Mélanges historiques et littéraires* (1877).

Laredo: 1. City of Texas, U.S.A., and the co. seat of Webb co., 150 m. S.E.W. of San Antonio. It is a garrison tn., and a port of entry on the Rio Grande. It is a centre for trade between Mexico and U.S.A., and its industries include antimony smelting and car works, cattle raising, and fruit growing, it is especially famous for early grapes and Bermuda onions. In 1936 was opened the new highway (770 m.) between Mexico city and L., on the Amer. border. Pop. 35,000. 2. Fortified seaport tn. of Spain, in the prov. of Santander, 20 m. S.E. of the cap. Santander, on the coach road to Bilbao. Rope and sails are manufactured, and fish preservation is carried on. Pop. 6000.

Lares, The, Rom. tutelary deities, originally gods of cultivated fields, worshipped by each household. From early times a distinction existed between public and private L., the latter being worshipped by families alone as representing the spirits of departed ancestors. The public L. belonged to the state religion, and their influence included the entire surrounding dist. of the tn. and country in which they were situated. They had a special annual festival with public games. In the later period of the republic they are confounded with the Penates, though in earlier times there was a marked distinction between the two. The name seems to be identical with the Etruscan *lar* (q.v.), king, lord. See G. Wissowa, *Religion und Kultus der Römer*, 1902.

Largentière: 1 Tn. in the dept. of Hautes Alpes, France. Pop. 1000. 2 Tn. and dept. in Ardèche, France. The tn. is noted for its ancient church and castle, and also for its fruits, tanneries, and silk factories. There are lead mines in the neighbourhood. Pop. tn. 2500, dept. 95,000. 3. Glacier of Mont Blanc.

Largo, part and market of fisherie, Scotland, situated on Largo Bay, 1 m. from Leven. The tn. consists of two vills, Upper Largo, containing the principal buildings, and Lower Largo a summer resort and fishing vill. with a small harbour. Alexander Selkirk ('Robinson Crusoe') was b. here. Pop. of par. 3000.

Largo and Larghetto, It term in music used as a direction of tempo. It is generally understood to denote a broad style as well as a slow pace. Larghetto is the dimin. of largo, meaning less slow than the latter.

Largs, par. and watering-place of N. Ayrshire, Scotland, situated on the firth of Clyde, 12 m. S.S.W. of Greenock. There is a small harbour, which affords a good anchorage for yachts. Pop. 9700.

Lari, market tn. of Italy, in the prov. of Pisa, 11 m. N.E. of Leghorn. Pop. 8600.

Laricio, see PINE.

Laridae, see GULL.

Larino, tn. of Italy in the prov. of Campobasso, on the R. Biferno. It suffered destruction by an earthquake in 1300. It is an episcopal see. Pop. 7000.

La Rioja: 1. Andine prov. of Argentina,

situated between Cordoba, San Juan, and Catamarca. In the N.W. is the Sierra Famatina (20,000 ft.). Gold, copper, silver, and iron are found, and the soil is fertile in vines, maize, cotton, etc. Area 37,839 sq. m. Pop. (1928 estimate) 94,793. 2. (cap. of above prov., at the side of the Sierra Velasco at an altitude of 1670 ft. Pop. 3000.

Larissa, chief tn. of Thessaly in ancient Greece. It is now the cap. of the prov. of L. (pop. 312,200), and stands on the r. h. of the R. Salambria (ancient Peneus), 35 m. N.W. of Volo. L. was under Turkish authority until 1881, when it was ceded to the Gks. There are still evidences of its Turkish occupation in the minarets, empty mosques, and Muslim burying grounds. L. lies not far from the Homerio Argissa, and was a name applied to other Pelasgian cities; it signified a fort. tn. or burgh. Bombed by the Gks. on March 2, 1941, and overrun by the Gers. on April 20. Pop. prov. 312,000; tn. 23,000.

LARK

Laristan, maritime prov. in Persia, on the Persian Gulf. Its cap. is Lar. It is for the most part desert land. Salt and alk form the chief products. Area (estimated) 20,000 sq. m.

La Rive, Auguste de (1801-73), Swiss chemist, b. at Geneva. He became prof. of natural philosophy in his native city in 1823, and made a special study of electricity. His chief work is *Traité de l'électricité théorique et appliquée* (3 vols.), 1854-58.

Larivey, Pierre (c. 1640-1813), Fr. dramatist, descended from the Giunta, the famous Florentine and Venetian printers. He became canon of the church of St. Etienne. His comedies were rather adaptations from It. plays than works of creative art. His prin. work, *Comédies françaises*, appeared in 1570.

Lark, popular name given to the species of Alaudidae, a family of passerine birds inhabiting the Indian, Palearctic, and Ethiopian regions, *Otocorys* being the only

Amor. genus and *Mirafra* the only Australian one. *Aldaia arensis*, the familiar Brit. skylark, nests in a hollow in the ground, usually among grass or cereals. Its rapid, pleasing trill is generally uttered while the bird is soaring, and occasionally it emits a plaintive call. *A. arborea*, the woodlark, *A. cristata*, the crested lark, and *A. alpestris*, the shore lark, belong to the same family.

Larkhall, tn. of Lanarkshire, Scotland, 3 m. S.E. of Hamilton, with collieries, bleach-works, and a silk factory. Pop. 14,000.

Larkspur, see DELPHINIUM.

Larmor, Sir Joseph (1857-1942), Brit. physicist, b. in co. Antrim, N. Ireland, and educated at the Royal Belfast Academical Institution, Queen's College, Belfast (graduating with the highest honours), and St. John's College, Cambridge, where he was senior wrangler. He was prof. of natural philosophy, Queen's College, Galway, and later at St. John's, Cambridge. His *Ether and Matter*, pub. in 1900, on electromagnetic theory is a systematic working out of the idea, then gaining favour, that matter is essentially an electrical structure; while Clerk-Maxwell's theory, which postulates electricity as a continuous fluid, becomes, with L., an electron theory, postulating electricity as atomic in character like matter. L. proved that, if matter be electrically constituted, any moving object must minutely contract in the direction of its line of motion and this phenomena was the foundation of Einstein's theory of relativity (formulated in 1905). Among other contributions of L. were his formula for radiation of energy by an accelerated electron, and his theory of the precession of electron orbits in a magnetic field. L. also wrote notable papers on hydrodynamics and waves. He was elected to Parliament for Cambridge Univ. as a Unionist from 1911 to 1922. Secretary of the Royal Society, 1901-12. See also his vols. of scientific memoirs, 1927-29.

Larnaca, or **Larnaka**, prin. port of the is. of Cyprus, in the Mediterranean Sea. There is a pier 450 ft. in length, and excellent anchorage is afforded. Cable lines connect L. with Alexandria in Egypt, and also with Latakia in Syria. The tn. is the anct. Citium, and numerous objects of antiquarian interest have been found. Pop. 14,700.

Larne, par. seaport and mrkt. tn. of Antrim, N. Ireland. The port has become one of the chief passenger ports of the country, and is 1½ m. S. of the tn. of Larne. The market-place covers over an acre of ground, and there are linen and woollen manufs.; trade is also carried on in lime, iron-ore, flour, dairy produce, and linen. The tn. possesses a marine zoological station. Pop. 11,000.

La Rochelecauld, François, Duc de (1613-80), most accomplished of the maxim and memoir writers of France, b. at Paris. Bore the title of Prince de Marsillac. He joined the army at an early age, and soon began to make a figure in public life, becoming engaged in intrigues against Richelieu and in the plots

of the Fronde. He was severely wounded at the siege of Paris and again at the night at the Port Saint-Antoine in 1652. He then retired to the country for a while, but returned to court before the death of Mazarin and became a prominent leader of the literary *salon* of Mme de Sablé. In 1665 he pub. his famous *Maximes* anonymously and under the title of *Reflexions, ou sentences et maximes morales*. They passed through five eds. in the author's lifetime, and are as remarkable for their literary excellence as for their acuteness of thought. His *Memoires* were pub. in 1817, and are among the best of a time rich in writings of this kind. His *Lettres* are also of great historic and social interest. La R.'s *Œuvres complètes*, ed. by Gilbert and Gourdaill, appeared in 1868-1884. There are numerous eds. of the *Maximes*, the finest being the *Édition des bibliophiles*, 1870 (Eng. version by G. H. Powell, 1903). See lives by J. Bourdeau, 1893, and J. Hémon.

La Rochele, see ROCHELLE, LA.
Larousse, Pierre Athanase (1817-75), Fr. grammarian and lexicographer, b. at Toucy, Yonne. His greatest work was the *Grand Dictionnaire universel du XIX^e siècle*, 15 vols. (1866-76), supplemented 1877 and 1887. From 1895 to 1907 appeared the *Nouveau Larousse illustré*, editor C. Augé. The publishing house which he founded has continued to issue dictionaries and encyclopedias.

Larsen, Karl (1860-1931), Dan. prof., poet, and novelist; b. July 28, at Rendsborg; son of a lieutenant of engineers. He studied law and political science at Copenhagen and Berlin; Ph.D. Travelled, 1883-88. Editor of *Juleorser* (1900-15); *Turistræde* (1911-21); president, Dan. Authors' Society, 1902-8. His poems, dealing with tn. life, are highly esteemed; his novels include *Cirkler* (1893) and *Doktor Is* (1896).

Larsen, Kay (b. 1879), Dan. author; son of P. H. L., linen-draper. A member of the council of Dan. Authors' Society, 1915-19, and its secretary 1916-19. He writes on Dan. voyages and colonisation, and has made many 'study voyages' under the auspices of the Ministry of Marine. Works include *Glimt* (1904); *De Danskostindiske Kolonier Historie* (1907-8); *De Danske i Guinea* (1918); *Kroniker fra Dansk Guinea* (1924); and *Dansk Vestindien, 1666-1917* (1928).

Larva (Lat., a ghost, a mask), name applied, first by Linnaeus, to the young form of any animal which has left the egg and which at that stage does not resemble the parent. It is given more particularly to insects, but refers also to tadpoles of frogs, nauplii and zoeae of crustaceans, the young of chelicerates, the ammocoetes of the lamprey, the trochophore of annelids, etc. The larvae of Orthoptera and Hemiptera bear a strong resemblance to the imago, or perfect insect, except in the absence of wings, and the metamorphosis is slight; such forms are best described as *nymphs*. Lepidoptera in the larval form possess a head, legs, and prolegs and are popularly known as caterpillars; the larvae of Coleoptera, which have heads

and may or may not have legs, are called grubs, and those of Diptera, which are legless and frequently without a head, are called maggots. Occasionally larvae are able to produce a phenomenon known as *neoteny* or *pedogenesis*, the best known example is the Mexican axolotl

of foreign bodies can be determined and suitable treatment decided upon. The instrument was first used by Manuel Garcia to examine the state of the larynx in singing, and was adapted to medical purposes by Dr Czermak of Pest.

Larynx, organ of voice situated in the

Larvik, see **LARVIX**.

Laryngismus stridulus, spasmodic aff. of the larynx that occurs in young children. It may attack tickly or nervous children but is especially associated with adenoids. It is characterised by a sudden arrest of respiration, the child becomes blue in the face owing to imminent asphyxiation and breathing is resumed by long crowing inspirations. The cause of these attacks is somewhat obscure, it consists of a reflex spasm of the glottis, and may or may not be accompanied by a preliminary catarrh. The attacks are likely to be recurrent, or may cease without any obvious reason. Treatment during an attack is usually impracticable, as the termination whether fatal or the reverse is very rapid. After recovery the patient should be examined for adenoids, and these should be removed if present.

Laryngitis, see under **LARYNX** in horses; see under **HOUSE** (DISEASES).

Laryngoscope, instrument by which the condition of the larynx may be observed. It consists of a small mirror attached to a long handle at an angle of about 120°. The instrument is first warmed to prevent obscuration by the condensation of moisture, and then introduced into the throat with its back against the soft palate and uvula. At the same time a strong light is directed against the mirror from a lamp placed on the shoulder or forehead of the observer, so that the light is reflected towards the larynx and back again to the mirror. By this means the extent of laryngeal inflammation or the presence

upper and front part of the neck. It consists of a framework or box of cartilages with their ligaments and muscles and is in the direct course of the current of air from lungs to mouth and vice versa. It opens above into the cavity of the pharynx at the base of the tongue and connects that cavity with the trachea or windpipe. The cartilages are movable with regard to each other and this motion, together with differences in the tension of the elastic ligaments, causes those modifications in the resistance to the air current which give rise to the phenomena of voice. The cartilages comprising the framework of the L. are the thyroid, the cricoid, the epiglottis, the two arytenoids, the two cornicula laryngis, and the two cuneiform cartilages. The thyroid is the largest, and consists of two lateral plates united in front to form a ridge causing the projection known as 'Adam's apple'. Each of the lateral plates has projecting pieces at its upper and lower corners. The cricoid is a ring situated below the thyroid to which it is connected in front by thick fibrous tissue, while it is joined to the trachea below by fibrous membrane. The arytenoids are two smaller cartilages of great mobility resting upon articular surfaces in the posterior part of the cricoid and bound to it by fine elastic ligaments. The epiglottis is a thin cartilage with many perforations, which serves as a valve or covering for the laryngeal cavity, during respiration it is raised so as to admit of the passage of air, but the action of swallowing brings it down so as to enable the food to pass through the gullet behind

The most important ligaments are those known as the vocal cords. The true vocal cords, or inferior thyro arytenoid ligaments consist of fine elastic fibres joined behind to the base of the arytenoid cartilages and in front to the middle of the angle between the wings of the thyroid cartilage. They divide the cavity of the L into an upper and lower part which communicate with each other by the lottis a chink or aperture between the vocal cords. The size of the glottis is an important factor in voice production. In the adult male it measures about 23 mm from front to

THE LARYNX (SEEN FROM BEHIND)

A trachea B thyroid cartilage
C arytenoid cartilage D arytenoid
cartilage E larynx
F hyoid bone G epiglottis

back, and from 6 to 12 mm transversely. In females and males before puberty the length of the aperture is about 17 mm and its width about 4 mm. The muscles of the L may be divided into two groups, the extrinsic muscles which move the L as a whole and the intrinsic muscles which move the cartilages with respect to one another. It is by certain of these latter muscles that the tension of the vocal cords is regulated and the size and shape of the glottis altered in the production of different sounds. The voice mechanism therefore consists of the modifying processes in the course of the blast of air from the lungs. The pressure of the air passing upwards through the trachea distends the margins of the elastic membranes constituting the vocal cords; the aperture is therefore opened momentarily while the air passes through, and thus a series of vibrations is produced. The pitch of the sound is determined by the number of vibrations in a second, while the intensity is determined by the amplitude of those vibrations. Inflammation of the L is known as laryngitis. It may be caused by excessive use of the voice, irritating vapours, or dust, chill, or by microbic infection. The symptoms are pain and difficulty in phonation, and swelling of

parts of the L. The treatment includes rest for the voice and antiseptic throat washes. Laryngitis is always worthy of attention as excessive inflammation causes great difficulty in respiration not unaccompanied by danger, while a succession of attacks is apt to lead to a chronic form in which the voice is in seriously affected more or less permanently. The L may also be the site of various tumours including cancer. Hoarseness is an important symptom and should not be neglected if it persists for more than a few weeks. See (ROUT 110481) 1193 LARYNGISMLYSTRIDULUS, LARYNGO SCOLF

Larzac Breed, see SHILL

La Salle, Jean Baptiste de la (1633-1719) French canon of Rheims and founder of the Brothers of the Christian Schools. In 1684 he resigned his canonry and with twelve others took a vow to devote himself for life to the teaching of the poor being in fact the forerunner of modern primary education. The headquarters of the institution since 1700 has been at Saint Yvon (Rouen). La S. was canonised by Leo XIII (1900). See life by Rivet (Paris) 1858 and W. J. Battersby, *De La Salle Saint and Pioneer in Education* 1915.

La Salle, René Robert Cavelier, Sieur de (1633-87) one of the greatest of the explorers and adventurers who opened up paths in the trackless Amer wilderness was b in Rouen France. At the age of twenty three he went to Montreal where he secured a grant of land on the St Lawrence R. In 1670 he began the first of his explorations through the country in the vicinity of the St. Lawrence and Ontario. He then went further S and was at one time supposed to have discovered and explored the course of the Ohio R. It is doubtful he ever went on this. A close friend of Frontenac, governor of Canada, he made six trips back to France in the former's interest. His last trip brought for himself the grant of a monopoly of the trade in the Mississippi valley. La S. thereupon worked his way partly overland and partly by portage on some of the lakes and explored the Mississippi down to its mouth. He took possession of this vast area in the name of his sovereign King Louis and named it Louisiana in his honour. He attempted to consulate for the king both the ter of Louisiana and that other ter vaguely known as Illinois and was the first to build a post on the site of what is now the great city of Chicago. Frontenac being succeeded by a new governor who was not friendly to La S. the latter once more went to Paris and secured from the king the title of governor of Louisiana and Illinois. He set forth with an expedition which was a failure from the start. The commander of the fleet refused to obey his orders. La S. lost his way to the Mississippi, landing instead in Texas. With a miserable remnant of his expedition he sought to find his way back to Canada, but was treacherously assassinated by his own men on March 20. See L. V. Jacks, *La Salle*, 1931.

La Salle, city of Illinois, U.S.A., 84 m. W.S.W. of Chicago, and the terminus of the Illinois and Michigan Canal. It has extensive manufactories of clocks, Portland cement, and zinc, and the surrounding country abounds in coal. It has a large shipping trade, and is the centre of a farming dist. Pop. 12,800.

La Sallette, see **SALETTE-FALLIVAUX**, LA.

Lascar, name adopted in England into the Merchant Shipping Acts, signifying a soldier or camp-follower. Originally used by the Portuguese for an inferior class of men in military service, it is now generally applied to Indian sailors serving on Brit. ships. They are generally Muslims.

Lascaris, Andreas Johannes (c. 1445-c. 1535), surnamed **Rhynadaenus**, Gk. scholar of noble birth. He was a fugitive to the court of Italy in 1454, and was patronised by Lorenzo de' Medici. Later he went to Paris, where he taught Gk., and in 1508 Leo X. placed him at the head of a Gk. college in Rome. Remembered as editor of *The Greek Anthology*, commentaries on Sophocles, etc. See A. F. Villenain, *Lascaris*, 182.

Lascaris, Constantine (c. 1434-1501), Gk. grammarian, and a pioneer of Gk. studies in the W. Fled to Italy in 1453, after the capture of Constantinople by the Turks, and taught at Milan, Rome, Naples, and Messina. He is best known by his celebrated Gk. grammar (1476), the first work printed in Gk. characters. See A. F. Villenain, *Lascaris, ou les Grecs du XVe siècle*, 1825, and J. Symonds, *Renaissance*, 1877.

Las Casas, Bartolomé de (1471-1566), Sp. missionary, b. at Seville, noted for his zeal on behalf of the oppressed Indians. Studied at the univ. of Salamanca, and in 1502 went to Hispaniola, where he became a planter and preached the gospel to the natives. In 1516 he returned to Spain to lay before the king the cause of enslaved Indians, but his zeal and plain speaking stirred up powerful enemies and his efforts were unavailing. Notwithstanding he repeatedly crossed the ocean to plead their cause, and addressed sev. letters and treatises on the subject to Charles V. In 1544 he accepted the bishopric of Chiapa, Mexico. Three years later he returned to Spain and passed the remainder of his life in the Dominican college at Valladolid. His works include an unfinished *History of the Indies*, an important source of information on Sp. discoveries and conquests. See lives by A. Helps, 1868; F. A. MacNutt, 1909; A. Barros-Arma, 1924; and R. Schneider, 1938.

Las Casas, Ciudad de, see **SAN CRISTOBAL**.
Las Cases, Emmanuel Augustine Dieudonné Marin Joseph (1766-1842), Fr. officer, and historian, b. near Revel, Haute-Garonne, the companion of Napoleon at St. Helena. He served in Condé's army in 1792, and then spent some time in England, and fought for the royal cause at Quiberon (1795). He returned to France at Napoleon's accession, and worked at his famous *Atlas historique*

(1802), pub. under the pseudonym *Lesage*. After Waterloo he shared Napoleon's exile, and pub. the ex-emperor's memoirs under the title of *Memoirs of St. Helena* (1828).

Lascaux Caves, near Montignac-sur-Vézère, in the Dordogne, France, in which in 1940 were discovered rock paintings of the palaeolithic and other periods, preserved under a glaze of stalactite formation. Since many are painted over former works, it is possible to trace the development of style, particularly in the treatment of horns, antlers, and hooves over a period of more than a thousand years. There is much artistic quality in the later paintings, which feature bulls, bison, stags, and horses, along with symbols and signs which may be tribal marks or methods of sympathetic hunting magic. The colours were probably blown on to the surface by a tube. See also under **DORDOGNE**. See F. Windels, *The Lascaux Cave Paintings*, 1948; also A. H. Brodrick, *The Caves of Lascaux*, 1948, and *Lascaux: a Commentary*, 1949.

Lascelles, family of Yorkshire, England, earls of Harewood since 1821, when Edward L. became the first earl, having been made Baron Harewood in 1796. The chief seat is at Harewood House, near Leeds. Henry George Charles L., the sixth earl (1882-1947), succeeded, in 1929; in 1916 he inherited from his great-uncle, the marquess of Chauliardo, an estate of £2,500,000. As Viscount L. (the title of the eldest son) he married Princess Mary (q.v.), daughter of George V. He was personal A.D.C. to King George VI., lord lieutenant of the W. Riding from 1927, K.G. (1922), G.C.V.O. (1931), and grand master of the united freemasons' lodge of England (1943). George Henry Hubert, the seventh earl, was born in 1923 and succeeded in 1947. Serving in the Second World War, he was a prisoner during 1944-45, and then became A.D.C. to the governor-general of Canada, the earl of Athlone.

Lascelles, Sir Frank Cavendish (1841-1920), Brit. diplomatist, son of Rt. Hon. W. S. S. Lascelles and grandson of second earl of Harewood. Entering the diplomatic service in 1861, he was appointed consul-general in Bulgaria, 1879. He was appointed minister to Rumania in 1887, minister to Persia in 1891, ambas. to Russia, 1894, and to Germany, 1895, a post he held for twelve years. K.O.M.G., 1886; G.C.M.G., and P.C., 1892.

Lasco, or **Laski, Johannes** (1499-1560), Polish reformer, b. at Lask, nephew of Archbishop Laski (1456-1531). Studying abroad, he became imbued with the doctrines of Zwingli and Erasmus. Nevertheless he was made bishop of Veszprem, but soon fell into disfavour with the archbishop upon discovery of his secret marriage. A refugee in England, he became a friend of Cranmer and helped compile the Prayer Book and Articles of the Church of England. He tried hard to win Poland over to the Protestant faith, superintending the trans. of the Bible into Polish. He wrote *History of the Cruel Persecution of the Church*

of God. See study by K. Volker in *Kirchengeschichte Polens*, 1930.

Laser, or *Asaduleis*, gum-resin obtained from the umbelliferous plant *Thrasia gargarica*, common to N. Africa, and was esteemed by the ancients as a drug.

La Serena, see COQUIMBO.

Lashio, important tn. of Burma, connected by rail with Rangoon, situated about 50 m. from the Chinese frontier. Being the terminus of the Burma road (q.v.), it was a vital strategic centre during the Jap. invasion of Burma in the Second World War. It was captured by the Jap. on April 28, 1942. It was bombed frequently by the Amer. Air Force later in the same year. See further under BURMA, SECOND WORLD WAR, CAMPAIGNS IN.

Lashkar, see GWALIOR.

Lasker, Eduard (1829-84), Prussian Liberal politician, b. at Posen of Jewish descent; educated at the univs. of Breslau and Berlin. He lived for three years in England. In 1865 entered the gov. service and was elected to the Lower House. Two years later he entered the Ger. Reichstag and headed the secessionists from the National Liberal party in 1880. L. took an active part in the civil consolidation of the Ger. Empire. He pub., among other works, *Zur Verfassungsgeschichte Preussens* (1874).

Lasker, Emanuel (1868-1941), Ger. chess player, b. at Berlinchen. Studied at the univs. of Berlin, Göttingen, and Heidelberg, chiefly mathematics; became a doctor of mathematics and by profession was a univ. lecturer; but most of his career was taken up by chess. One of the greatest of all players, his active career was probably unique, and from about 1889 until 1914 his pre-eminence was unchallenged. He won his first tournament at the age of twenty-one in Berlin. Both in match play and in tournaments for the ensuing twenty-five years he was invincible—winning decisive victories over such players as Blackburne, Mieses, Bird, Showalter, and Janowski. He won the world championship title by defeating Steinitz in 1894 by 10 games to 5 and defended his title again in 1897 by defeating Steinitz by 10 games to 2. Subsequently he defeated Marshall (U.S.A.) and Tarrasch, but drew with Schlechter in 1910. He met Capablanca (q.v.) in 1920 after protracted negotiations and lost by 4 games to nil, 10 games being drawn. His opponent's technique, coupled with the heat in Havana had something to do with his defeat, for his powers were undiminished, and in 1924 at the New York tournament he won first prize with the remarkable score of 16 out of 20, 1½ points ahead of Capablanca and 4 points ahead of Alekhine. The next year, in Russia, he was second to Bogoljubov and again ahead of his great rival Capablanca. In 1935, again in Moscow, he was unbeaten, being third with 12½, half a point behind Botvinnik and Flohr. A Jew, he left Germany owing to the Nazi persecutions and became a chess prof. in Moscow, but on the fall of his friend, Krylenko (q.v.), he went to the

U.S.A. Pub. works on chess, science, and philosophy.

Lashkari-Bazar, dist. of Afghanistan, notable for the discovery in 1919 by the director of antiquities, Daniel Schlumberger, of the extensive ruins of a palace of the sultans of Ghazni of the tenth and eleventh centuries. The palace measures 164 yds. by 92 yds. and is surrounded by fortifications. Fragments of the decoration by stucco and painting have survived. There are other extensive ruins in the neighbourhood. What has already been excavated shows that this was the palace of Mahmud of Ghazni, the Moslem invader of India.

Laski, Harold Joseph (b. 1893), Eng. political economist. B. at Manchester, he was educated at its grammar school and at New College, Oxford. From 1914 to 1916 he lectured in hist. at McGill Univ., Montreal, at Harvard from 1916 to 1920, and at Dublin in 1936. Connected with the London School of Economics from 1920, he became prof. of political science at London Univ. in 1926. He became a member of the executive of the Fabian Society in 1922 and of the Labour party in 1936. He played a major part in his party's success in the general election of 1945, being chairman of the party from 1945 to 1946. His keen insight into the problems of political thought and the progressive nature of his viewpoint have placed him in the first rank of writers on his subject. His works include *The Problem of Sovereignty* (1917), *Authority in the Modern State* (1919), *Political Thought from Locke to Bentham* (1920), *Letters of Burke* (ed.) (1922), *The Defence of Liberty against Tyrants* (ed.) (1924), *Autobiography of J. S. Mill* (ed.) (1924), *A Grammar of Politics* (1925), *Communism* (1927), *The Dangers of Obedience* (1930), *An Introduction to Politics* (1931), *Studies in Law and Politics* (1932), *The Crisis and the Constitution* (1932), *Democracy in Crisis* (1933), *The State in Theory and Practice* (1935), *The Rise of European Liberalism* (1936), *Parliamentary Government in England* (1948), *The American Presidency* (1940), *Reflections on the Revolution of Our Time* (1943), *Faith, Reason, Civilisation* (1944), *Liberty in the Modern State* (new ed.) (1948), *The Communist Manifesto: Socialist Landmark* (1949), *The American Democracy* (1948); and many articles to the *Harvard Law Review*, the *Nation*, *Manchester Guardian*, etc.

Las Palmas, cap. of Gran Canaria Is. and the cap. of the Sp. prov. of the same name, is situated on the N.E. coast and is distinguished for its beautiful scenery. It possesses a theatre, cathedral, and various hospitals and educational institutions. It owns a large shipbuilding trade, and there are many steamboat excursions. The climate is delightful. Exports fruit and vegetables and wine. Pop.: tn. 84,000; prov. 375,700.

Lassa, see LIAHA.

Lassalle, Ferdinand (1825-64), Ger. Socialist, b. at Breslau of Jewish extraction and one of the founders of the Social Democratic party in Germany. Studied philosophy at Breslau and Berlin Univs.

His philosophical work on Heraclitus the Obscure was pub. in 1838. In the same year appeared his remarkable pamphlet *The Italian War and the Mission of Prussia*, in which he showed himself an ardent patriot and fanatical advocate of Ger. unity. In 1861 he pub. *Das System der erworbenen Rechte*, an able legal work. L. was an ardent disciple of Marx, though there is a vast difference in their methods and ideas. As a political movement modern socialism owes much to him. He met his death in a duel when only thirty-nine years of age. His unhappy love-story with Helene von Dönniges is the theme of Meredith's *Tragic Comedians*.

began his musical education at Brussels at a very early age, and in 1851 won the Prix de Rome. Through the good services of Liszt, his opera, *Le Roi Edgard*, was produced at Weimar in 1857, and in 1878, on the retirement of Liszt, L. was made kapellmeister to the court, retiring in his turn in 1895. Among his chief works are the operas *Landgraf Ludwigs Brautfahrt* (1857); *Frauenlob* (1861); *Le Captif* (1868), and he also wrote two symphonies, music for Sophocles's *Oedipus* and Goethe's *Faust* (1876), and a large number of songs—*All Souls' Day* being one of the best known.

Lassigny, tn. in the dept. of Oise.

where L. figures as Dr. Alvan. See W. H. Dawson, *German Socialism and Lassalle*, 1888; P. Lindau (ed.), *Lassalle's Diary*, 1891, and D. Footman, *The Primrose Path*, 1916, also life by G. Brandes (Eng. trans.), 1941.

Lassen, Christian (1800-76), Norwegian orientalist, b. at Bergen. With Eugène Burnouf he deciphered many Pali MSS., the result of their combined labours being pub. in an *Essay on the Pali or Sacred Language from the Peninsula beyond the Ganges* (1826). *Ramayana* (1829-38) and the *Hitopadesa* (1829-31) were pub. in conjunction with Schlegel. L.'s numerous and valuable works relate to a variety of oriental languages and ant. hist., the most important being *Persian Cuneiforms* (1836); *Prakrit* (1837), *Indian Civilization* (1847-61), etc.

Lassen, Eduard (1830-1904), Dan. musical composer, b. at Copenhagen. He

Franc, 10 m. W. of Novon. The scene of a battle in the First World War begun by the Fr. under Gen. Humbert on Aug. 9 1914, and ended on the 16th, when the Gers fell back.

Lassuthion, prefecture of Greece, in the E. of Crete; cap. Hagios Nicholas. Pop. 75,900.

Lasso, plaited rope of raw hide used by the Amer. cowboys and S. Amer. gauchos for catching wild cattle. It measures 60 to 100 ft. long, and a noose 8 ft. wide is made at one end to entrap the horns of the animal.

Lassus, Orlando de (c. 1532-94), Flemish composer, b. at Mon. After travels in Italy and England he entered the service of the duke of Bavaria, becoming kapellmeister in 1563. His works include masses, motets, *suave cantiones*, psalms, madrigals, It. canzoni, Fr. chansons, and Ger. songs for sev. voices. He

contributed much to the development of modern harmonised music, ranking next after Palestine (*q.v.*)

Lastra, com., Italy, 3 m W of Florence. It is the centre of a large straw hat industry. Pop 12 000

Last Supper, memorial meal celebrated by Jesus on the eve of His betrayal at which He blessed the bread and wine offered thanks to God and commanded the perpetual repetition of the act in memory of Himself. The Christian sacrament or ordinance variously known as the mass, eucharist or communion service is the renewal of the sacramental meal.

Las Vegas 1 tn of New Mexico U.S.A. in the co. of San Miguel 44 m E by S of Santa Fé. There is a large metal industry, and the tn is noted for its hot springs. It ships raw wool and is an important agricultural and lumber tn. The L.V. has railroad shops, the Montezuma Baptist College, and the Wormal Univ. Pop 8400. 2 Cap. of Clark co., Nevada, U.S.A., 35.5 m E of Los Angeles and 30 m W of the Boulder Dam (*q.v.*) The surrounding region produces cattle, gypsum, borax, silver and gold. There is an airport. Pop 8400.

Las Villas, prov. of Cuba. Area 5264 sq. m. Pop 938 581.

László de Lombos, Philip Alexius (1869-1938), Hungarian painter b. at Budapest, studied at Munich and Paris. At first a genre painter he subsequently became a portrait painter. Shortly after the outbreak of war in 1914 he became a naturalised Brit subject. He was a popular society painter and painted the portraits of the members of the British royal family. See O. Rutter *Portrait of a Painter*, 1939.

Latacunga, cap. of Leon prov. in Ecuador. This tn mostly constructed of dark coloured pumice stone has been the scene of many mud eruptions from the volcano Cotopaxi. Pop 26 000.

Latakia (Turkish *Latakia*) or **Lattakieh**, seaport tn of Syria 75 m from Tripoli. Tobacco stores, silk and cotton form the exports. The tobacco which takes its name from the tn is much used in pipe mixtures. It occupies the site of Laodicea and excavations have revealed remains of the earlier city. Pop 22 000.

Lateen-sail (Fr. *voile latine*) lat. sail so called as the chief form of rig in the Mediterranean) triangular sail suspended to the mast by a long yard, and rigged so that the upper end is raised in the air and the lower brought down to form the tack. A vessel rigged with a L. sail and yard is known as a lateener. It is still the typical sail of the felucca of the Mediterranean and the dhow of the Arabian Sea.

Late Latin Language, see under **LATIN LANGUAGE AND LITERATURE**.

La Tène, early Iron Age settlement at the E end of Lake Neuchâtel, Switzerland. From this type-station the name was given to a culture which in Britain is dated c. 550-75 B.C. The type of ornaments and weapons discovered at L.T. is found across Europe from Hungary to

Britain, the scroll-work marks a period of Celtic art which later achieved its highest standard in pre-Roman Britain. See also **IRON AGE**. See P. Vouga, *La Tène monographie de la station*, 1923.

Latent Heat, heat that is evolved or absorbed by unit mass of a substance during a change of physical state (*e.g.* solid \rightleftharpoons liquid, liquid \rightleftharpoons gas). The application of heat ordinarily raises the temp. of a body but when a change of state is imminent it is found that heat is applied without any corresponding change in the thermometric reading until the change is complete. On the old assumption that heat was an imponderable substance introduced into the body heated such heat was called 'latent', that is, it concealed itself from the thermometer. The principle has important applications for instance water on evaporating abstracts heat from surrounding bodies, hence the danger of chill when wet clothes are allowed to dry on the body. Conversely heat is given out when a vapour condenses or when a liquid solidifies. The L.H. of fusion of ice is about 80 calories per gm. that is, it takes eighty times the amount of heat required to raise the temp. of water 1°C. to melt the same weight of ice. The L.H. of vaporisation of water is about 536 times per gm.

W. H. Mansell

VATICAN CHURCH OF ST JOHN

Lateran Church of St John, most important of the Rom. churches in so far as it (and not St Peter's) is the pope's cathedral as bishop of Rome. This church was originally dedicated to the Saviour and occupied the site of what was once a magnificent palace belonging to Plautius Lateranus. It was afterwards rebuilt in the middle of the twelfth century by Lucius II, and was dedicated to St John the Baptist. It was completely destroyed

by Pope Sixtus VI. in 1586 and reconstructed, together with the adjoining Lateran Palace. Five acrimonial councils were held here.

Lateran Treaty, bilateral agreement signed at the Lateran Palace, Rome, on Feb. 11, 1929, by Cardinal Gasparri on behalf of the pope, and Mussolini as plenipotentiary for United Italy. The latter recognised the former's sovereign rights over a newly created Vatican City State, extraterritoriality of the Apostolic Palace and various other buildings in Central Italy, while the Holy See acquiesced in the occupation by the House of Savoy of the rest of the former papal states. A concordat regulating relations between Church and State in United Italy was organically incorporated in the treaty. A financial convention, by which reparation was made for losses since 1870, was also signed. In virtue of the L. T., the Holy See issues a currency legal in Italy, has its own postal system and radio broadcasting station, and enjoys the right to direct communication with other states, even in time of war, while cardinals and officials of the Roman Court enjoy civil immunities in different parts of Italy.

Laterite (Lat. *later*, a brick), superficial deposit of red or brown clay, produced on the surface of rocks by their decomposition common in tropical regions, such as India, Arabia, and the Sahara. L. is usually soft and friable, and rich in iron, though hard masses occasionally occur. The depth of the beds varies up to 30 or 40 ft.

Latex, see RUBBER.

Lathe (etymology uncertain, possibly a modified form of *lath*, or may be derived from Dan. *lad*, a framework, as in *sarelad*, a saw bench; *verelad*, loom, etc.), mechanical appliance for holding and rotating any material to be worked upon by a tool, for the purpose of cutting, polishing, etc. In the anc. 'bow and cord' and 'pole' l.s. the movement was alternately forward and backward; the wheel-driven L. was not used until the fourteenth century. The essential principle of all modern L.s. is that of two point centres in which the work rotates, and a rest to support the tool operating on its surface. If the work revolves between fixed centres the L. is termed a 'dead-centre' one, but very few are of this class. It consists usually of a bed carrying a tailstock and headstock, by which the work is supported and driven. The tool is held and moved by a tool-rest, which is mounted on the saddle.

In the capstan lathe the tools required for various operations are held in a holder which resembles the old-fashioned capstan, the tools taking the position of the capstan handles. By revolving the capstan the various tools can be brought into position in the proper sequence. The turret lathe is a capstan L., in which the capstan head is automatically operated by power-turning of the tools in correct sequence for the job in hand. The work usually done by a L. includes turning, screw-cutting, facing, and boring. L.s. may be operated by treadle, bolting from a line shaft, or by electric

motor, the motive being transmitted by belt cones, with or without back gears, chains, or gear wheels.

See P. N. Hasluck, *Lathe Work*, 1927; E. J. Westbury, *Automatic Lathes and Screw Machines*, 1940; and E. Molloy (ed.), *Lathe-work*, 1941.

Lathom, tn. in Lancashire, 13 m. N.N.E. of Liverpool. The seat of the earl of L. is a mansion built in the Gk. style and dates back to 1750. Another mansion occupied the same site as far back as 1644, when the countess of Derby held out against Fairfax in the Civil war. Pop. 4500.

Lathrop, George Parsons (1851-98), Amer. journalist and poet, b. at Honolulu. He was assistant editor of *Atlantic Monthly* and wrote *A Study of Hawthorne* (whose son-in-law he was) (1876); *A Masque of Poets* (1878); *Spanish Vistas* (1883); and *Behind Time* (1888).

Laths (It. *latta*, Fr. *latte*), thin strips of wood employed in building, forming a foundation for plaster, or tiles, slates, and similar covering for roofs. Lattice-work or bars of Venetian blinds and shutters are made from L.

Latimer, Hugh (c. 1485-1555), Eng. reformer, son of a yeoman, b. at Thurcaston, near Leicester, educated at Cambridge; elected a fellow of Clare College in 1519, and appointed a univ. preacher in 1522. He took priest's orders in Lincoln at a date unknown. In 1529 he incurred disavowal as being known to sanction Henry VIII.'s divorce. He was consecrated bishop of Worcester in 1535 and preached powerful sermons, urging on the Reformation. He was impeached and sent to the Tower twice during Henry's reign, and on the accession of Edward VI. resigned his episcopal functions and devoted himself to preaching and works of benevolence. Under Mary in 1555 he was found guilty of heresy, together with Bishops Ridley and Crammer, and burned at Oxford, an event commemorated by the Martyrs' Memorial. See J. Foxe, *Book of Martyrs*, 1563 (new ed. 1877); J. Stow, *Chronicle*, 1631; and J. C. Ryle, *Bishops Latimer and Ridley*, 1925; and monographs by A. J. Carlyle, 1899, and R. Demans, 1869.

Latin America, name given to the twenty republics of S. and Central America, together with Mexico, Cuba, Haiti, and the Dominican Republic. This whole vast area of 8,278,000 sq. m., of which one state alone, Brazil, is larger than the U.S.A., has an unevenly distributed pop. of 125,000,000, and though a high proportion of these are aboriginals, a high percentage of the whites owe their origin to their Sp., Portuguese, and It. immigrant forefathers. Hence the broad generic description Lat.-Amer., though there is no juridical significance to be attached to the description and, strictly, no such citizen or 'national' as a 'Lat.-Amer.' But the term has an importance as denoting among the states a common ideological outlook, a pride in independence, and an approach to political

solidarity in their joint and sev. relations to the U.S.A. and in their European relations.

Bound together as they are by common ties of race, language, and character, these Lat.-Amer. states may be regarded as forming a natural, although not a political, federation, with a well-marked distinctive civilisation opposed to, but not necessarily clashing with, that of their Anglo-Amer. neighbours in the N. The economic and social development of eighteen of these independent republics (i.e. excluding Haiti and the Dominican Republic), upon which Spain and Portugal so indelibly impressed their languages and social systems, has become of increasing interest and importance to the world, and they have now in the last decades begun to play their part in the community of nations, although some of their own problems remain unsolved. To the student of the sociological problems which are everywhere presenting themselves with increasing urgency, the progress of self-governing democracy as represented by L. A. offers conditions and comparisons of growing interest and value. The problems of life and economic development in L. A. differ greatly from those which fall within the experience of European nations, for great variations of topography and climate characterise the S. half of the New World, such as are unknown in the densely settled countries of the Old World, or even by the people of the U.S.A. and Canada. The condition of high elevation, which offsets the heat of the torrid zones, must be one which will profoundly affect the future of the Lat.-Amer. countries and people; and the great differences of elevation, which account for the variations of climate such as correspond practically to differences of lat., render many of these countries complete entities as regards their food products and other resources.

The Lat.-Amer. peoples are commonly subject abroad to certain misconceptions concerning their racial composition. They are regarded on the one hand as Spaniards or Portuguese, or on the other as merely half-breeds. Neither description is correct; the great mixed race of European and Indian blood, the *mestizos*, which forms the bulk of the Lat.-Amer. nations, is too far removed from the original stocks to be specially identified with either. With the stock formed by admixture of white and coloured races, other races are mingling in increased degree, due to immigration, especially that of its., who have greatly modified the composition of the people of Argentina, Brit., Gers., Fr., Arabs, Austrians, Slavs, and a sprinkling of all nationalities are found in smaller degree. The Negro element is derived from slaves and is especially strong in Brazil, where a new race may be said to be coming into being, formed by the union of the Portuguese, the Indian, and the Negro. There are also blacks in Colombia, Venezuela, and on the coast of Ecuador, and in Peru, where they were introduced as slaves. The distinguishing types of people in-

habiting L. A. are the whites, more or less pure; the *mestizos*, formed by the union of white and aboriginal; and the pure Indian; then come the *mulatto*, formed by the union of black and white, and the *zambo*, from the union of Indian and black. The first three are those of national importance, but it is to the *mestizo* that the future of L. A. belongs; and it is this class which constitutes the Mexican, Brazilian, Peruvian, Chilean, and other specially designated people of the New World. It is commonly said that the mixed race of L. A. has inherited the vices of both of its ancestors, but this is too sweeping a characterisation. Rather is it an evolving race, full of life, with the extravagances of a people in the making, in whose hands, too, lies the development of half the W. hemisphere. The character of the ruling classes of the Lat.-Amer. people, formed by the whites and better class *mestizos*, is a complex one, with marked virtues and defects. They are a people full of imagination, creatures of impulse, moved by sentiment and easily stirred to love or hate, both of which extremes are generally short-lived. Their ideals are high, but in practice they may easily follow tortuous methods and opportunism. The constant plunging of the communities into civil war and the sacrificing of the working pop. as 'cannon fodder' has held back the industries and development of the Lat.-Amer. states. The hist. of these republics, since the time of independence, is made up of such struggles. The abuse and neglect of the Indians in L. A. is notorious and certainly the Indian has vices which keep him backward, notably his abuse of alcohol, in which abuse the lower-class *mestizo* shares equally. But abuse of the Indians is a short-sighted policy in regard to a people who occupy large portions of the continent, and in certain regions no race could replace them. The political difficulties of the Lat.-Amer. nations and their backward sociological conditions cannot be ascribed to their form of gov., for as far as statutes and theories are concerned these are excellent. The Lat.-Amer. constitutions are, on paper, 'counsels of perfection.' It is in the application of theory to practice, and statute to common behaviour, that failure in self-gov. has so often been due. The man of Sp. race makes excellent laws for the community, but frequently appears to reserve the right to contravene them himself.

Historically L. A. was once the sole possession of Spain. The Sp. conquistadores, after brutally conquering the Indians, Aztecs, Incas, and Chibchas, exploited the Indian tribes by compelling them to labour as miners and agriculturists. But at the beginning of the nineteenth century, long after Sp. and native blood had mingled, out of a total pop. of 17,000,000 only 3,250,000 were white to 7,500,000 Indians. Immigration into L. A. on any appreciable scale was a late development of the nineteenth century, and the main stream of immigrants flowed into S. Brazil, Argentina, Uruguay, and Chilo. Spaniards and Portuguese

predominated, but there were also large elements of Itals and Germs. Indeed a third of the pop. of Argentina to day is of It descent and more than a third of the immigrants into Brazil between 1830 and 1930 was It. Germs number 750,000 in Brazil, and in Argentina there are some 250,000. Ger speaking people including Swiss and Austrians Brazil also has 200,000. Jap. the outcome of an intensive colonising drive concentrated within the present century. Immigration has given an almost European outlook to Argentinian society, besides conducing greatly to the material and social welfare of the R.

Economic and administrative reforms were made at long last in the eighteenth century, but they came too late to save the empire which collapsed in the beginning of the nineteenth. The immediate causes of the collapse were Spain's monopolistic myopia and the plunder of her foes. These latter included many great leaders famous in the annals of the Sp Amer. struggle for independence, particularly San Martin and Simon Bolivar, liberators respectively of the S. and the N. of S. America, revered not only as great leaders in the field but as statesmen. But having achieved independence in the

Plate countries and S. Brazil. But it has to be borne in mind that L. A. is not a unity despite the prevailing descent from the Lat. races of the old world. The different states differ widely in wealth and power and also in social and political development.

Spain's great Amer. empire was more or less completely explored and colonised by the end of the sixteenth century. It was of long duration and amazingly wealthy, mainly through its exploitation of the precious metals. But essentially the Sp. overseas empire of L. A. was a failure. Its potentialities excepting metals were neither realised nor exploited; there was no such principle as trusteeship in the relations of their Sp. masters to the indigenous people or even to the European settlers. Spain administered her Amer. empire as a centralised absolutism; colonials were excluded from all share in the work of government or even of administration.

Sp. Amer. revolution. The Lat. Amers. were faced with the still greater task of organising their states in their newly won freedom, and in this task were associated many Brit. names, notably those of Lord Cochrane who commanded the Chilean Navy, Adm. Brown, who commanded the ships of Argentina, and the Brit. legionaries who fought under Bolivar. The independence of L. A. was assured by Brit. sea power and by Lord Castlereagh's note to the European chancelleries in 1817 saying that no other power than Spain would be allowed to use force against the Sp. colonies. Some few years later President Monroe of the U.S.A. sent his famous message to Congress which has come down to posterity as the Monroe Doctrine (q.v.), a still further guarantee of the independence of the new states, albeit conceived rather in the interests of that of the U.S.A., whatever its implications to day.

By 1830 twelve new republics and one new empire had been added to the number of independent states. There were sixteen new republics if the five republics of Central America are counted separately. These latter, in 1823, were theoretically united in the confederation of Central America, which survived only till 1838. Cuba did not attain self-government till 1902 and Panama not till 1903. Haiti declared its independence of France in 1804, but the Dominican Republic fell under the dominion of Haiti and later was again incorporated with Spain for a few years. The great republic of Colombia, the creation of Bolívar, split into the three states of Ecuador, Colombia, and Venezuela. Brazil threw off the Portuguese yoke by a peaceful revolution and, by 1822, had estab. an empire under the house of Bragança. The boundaries of the new S. Amer. States followed, in the main, the old colonial administrative divs., but they were ill-defined and the source of innumerable inter-state conflicts. But though independent the states were far from prosperous. The masses were for the most part poor and ignorant; their politicians lacked experience in autonomy; dictatorship was not only inevitable but necessary to their welfare. But the eventual independence of L. A. justly ranks with the Amer. and Fr. Revolutions as one of the chief formative influences of modern hist. Capital flowed from Europe into the new states. Already by 1825 more than £20,000,000 had been invested by Brit. capitalists in L. A. Foreign immigrants, together with foreign investments in S. Amer. shipping, ports, and public utilities, have all played a decisive part in the spectacular rise of some of these states. Even if the republics of L. A. show very different degrees of progress, politically, economically, and socially, all profess a common democratic faith, though dictatorship remains in those which have a large aboriginal pop. There are still great difficulties, economic, psychological, and practical, to be mastered in the relations of the Lat.-Amer. States to one another, to the U.S.A., and to the world around them. Before it can be assumed that they have evolved out of the stage of political instability. Poverty and ignorance remain widespread in the midst of great cultivation and great wealth. A high percentage of the people in Brazil, Peru, and Ecuador are illiterate. Yet there is a high degree of literary attainment among Lat.-Amer. writers generally.

Politically, economically, and intellectually these Lat.-Amer. republics are destined to play an increasing part in world affairs. Between L. A., the U.S.A., and the Brit. Commonwealth of Nations there are traditional and permanent bonds of mutual sympathy, mutual interests, and mutual ideals. The development of the Monroe Doctrine into what once seemed to be an assertion by the U.S.A. of sovereignty and supremacy in the Caribbean area, roused the greatest resentment in L. A., for it was regarded by the republics as a threatened infringement of their equality in international law and of their

political independence. But the U.S.A.'s policy was profoundly modified under both Wilson and Franklin Roosevelt, their 'good neighbour' policy bringing about a remarkable change in inter-Amer. relations, as was exemplified in recent Pan-Amer. conferences and especially after Amer. troops were withdrawn from the Dominican Republic, Haiti, and Nicaragua. Recent political developments in inter-Amer. relations were the inter-Amer. conference for the maintenance of peace at Buenos Aires in 1931, and the declaration of Lima in 1938, which was a striking pronouncement of inter-Amer. solidarity in face of the Nazi threat to the world. Finally in the interests of what is known as 'hemisphere defence,' all the Amer. states have shown an increasing tendency towards the co-ordination of their military and naval resources.

Conspicuous changes have been wrought in L. A. since the two world wars: civil aviation is revolutionising S. Amer. life to an extent greater than in any other part of the world. The effect of rapid travel over the S. Amer. countries, with their vast distances and lack of ground and water communications, can hardly be exaggerated. The second great change is industrialisation. Hitherto this continent has mainly produced foodstuffs and raw materials, depending for its manufactured goods on Europe and N. America. The two world wars, by almost paralysing sea-borne trade, compelled these countries to adopt a policy of industrial self-sufficiency. Since then local industries, especially in the Argentine and Brazil, have made great advances. Thus São Paulo, the industrial cap. of Brazil, has increased its pop. from 200,000 to 2,000,000; while the industrial production of the Argentine has exceeded the combined value of its agriculture and stock-raising. These developments naturally present economic problems to countries like Great Britain which formerly supplied L. A. with most of their imports of manufactured goods, especially as in every country of L. A. the govt. are active supporters of local industry and the chief distributors of commercial and industrial orders—the natural consequence of the parallel growth of Nationalism (q.v.) and State Socialism. It would appear that the solution of this problem, at least for Britain, can lie only in a more discriminating co-operation between her importers and the S. Amer. market than was necessary in the past. Yet despite the confidence in Lat.-Amer. countries, for which there is much sound reason, there are also obstacles to progress imposed by natural conditions which may discourage the European immigrants whom it is the avowed policy of many Lat.-Amer. countries to encourage in ever increasing numbers. For within even a short drive of, for example, Rio, most civilised of cities, there is virgin forest. European immigrants could not live in savage places unless civilised life were made possible for them. If they came to the continent to-day most of them would drift into the great Lat.-Amer. cities and make the urban

pop. even more disproportionate than ever in its relation to the pop. of the country. Only a long, patient, and consistent programme will people the vast expanse of forest jungle and impenetrable swamp that covers so much of the surface of L. A. to-day. (For the physical features and description of L. A. see under SOUTH AMERICA and under the names of the states individually.)

Latin Empire, see BYZANTINE EMPIRE.

Latini, or **Latino**, **Brunetto** (1230-94), famous It. poet, orator, and grammarian, b. at Florence. Here he taught philosophy and grammar. Dante figuring amongst his pupils. He was attached to the Guelph party and held some of the most important offices in the republic. His most noted work is an encyclopaedia entitled *Li Livres dou trésor* (ed. by P. Chabaille, 1863), written in Fr., which contains extracts and trans. on rhetoric, hist., and philosophy from the classic authors. L. was also the author of a treatise on rhetoric and a poem entitled *Il Tesoretto*. See G. Negri, *Storia degli scrittori Fiorentini*, 1722; G. Tiraboschi, *Storia della Letteratura Italiana* (1805-15); G. B. Zannoni, *Il Tesoretto e il Favolotto di ser Brunetto Latini*, 1924; and G. Bertoni, *Il Ducento*, 1940.

Latini, name of one of the oldest nations in Italy, viz. the inhab. of Latium, a country of Italy near the Tiber, comprehending the ters. of the Volsci, Aequi, Hernici, Ausones, Umbri, and Rutuli. **Latinus**, the king of the first inhab., gave the country its name, and under him Laurentum was the cap., changed by Æneas to Lavinium, and by Ascanius to Alba.

Latin Language and Literature.—*Language.*—Lat. belongs to the Italic (in the wide sense of this word) branch and the Latinian sub-branch (the Faliscan dialect being its other member) of the Indo-European linguistic family (see INDO-EUROPEAN LANGUAGES and LINGUISTIC FAMILIES). It was originally spoken by the inhab. of the ant. city of Rome (founded according to tradition in 753 B.C.) and by the Italic tribe called Latini, who dwelt S. of the R. Tiber on the plain to which they gave the name Latium. Curiously enough both the Lat. language and the Lat. alphabet (see under ALPHABET; PALÆOGRAPHY; and WRITING), which have such a great importance in the hist. of civilisation, had a very poor beginning and a very poor hist. during the first half millennium of their existence. Indeed the records are too scanty to trace the detailed linguistic hist. of Lat. in the first period of its development, which lasted till about the middle of the third century B.C. In this period Lat. was still as crude and undeveloped as any other Italic dialect; as far as it is possible to judge from the extant inscriptions and other records the more important Italic dialects, i.e. proper Italic (Umbrian, Oscan, Siculan, Sabine—there were some minor dialects, such as Pelignian, Volscian, Marrucinian, and others), indicate a greater grammatical competence than existed at the time in Rome. There are many differences between the Italic and the Latinian dialects, both in the structure and in the grammar: (1) for instance, the Indo-European velar-guttural sounds represented in the Latinian dialects by qu and u or gu, following n, are represented in the Italic dialects by p and b respectively (the former thus constituting the Q-group, the latter the P-group); a preceding nasals was preserved in Italic but not in Lat.; syncope is much more frequent in Italic than in Lat.; and so forth; (2) the Italic dialects have different verb formations (-f, -t, -l, -nk) where Lat. has -ui (-vi); they have futures in -s, instead of the Lat. -b-, and future perfects in -ust; they retain -s in the nominative plural of o and ā stems, and the short -es in the nominative plural of consonant stems; their genitive ends throughout in -s; they do not have the new genitive plural of Lat. in -orum; and so on.

On the other hand, Lat. of this early period was not quite the same as that of the later periods: intervocalics has not yet become r; the old ending of the dative -ol still remains; qui is used for qui, reos for regi; there are archaic forms such as sakros (for later sacer), iouxmenta (for iumentum), diuxesto (for iusto), and so forth. This archaic Lat. can be studied in a few inscriptions which have been preserved. The oldest record is to be found in the Praeneste fibula (found in 1880), a gold brooch dating probably from the seventh century B.C., rather than from the sixth or even the fifth century, as some scholars were inclined to think. The inscription runs from right to left and reads MANIOS: MED:

FHEFHAKED: NUMASIOI, i.e. in classical Lat., *Manius me fecit Numerio* ('Manus made me for Numerio's'). The most interesting feature of this inscription is the use of the device of combining the letters *f* (digamma) and *h* to represent the sound *n*. Not much later is the famous inscription from the Rom. Forum, belonging to the sixth century B.C. (some scholars, however, assign it to the fifth century B.C.). It is engraved vertically on the four faces of a *cippus*, a broken pyramidal stone found in 1899. The inscription is in boustrophedon style, i.e. in lines alternatively reading from right to left and left to right, or rather, in this case, upwards and downwards. The loss of the upper part of the *cippus* makes every line incomplete, and therefore the meaning of the whole inscription cannot be clearly ascertained. Another inscription, known as *Duenos* (the most intelligible part reads *DUENOS MEN PICEIO*), is on a vase found in Rome, near the Quirinal, in 1880, and seems also to belong to the sixth century B.C., although it is dated by some scholars as late as the fourth century B.C. The direction of writing is still from right to left. There are about thirty words, but as there are no spaces or interpunctuation between them (as on the preceding two inscriptions), the exact wording and the general interpretation are much disputed.

Some Sabine inscriptions, among them one on a vase found at Tivoli, another on a plate of bronze found in the lake of Fucino, and a few inscriptions dedicated to Juno or Juno Lucina, belong to the end of the fifth or to the fourth century B.C. There are also a few inscriptions belonging to the third century B.C. and to the second century B.C. Among the former there are the inscriptions on the tombs of the Scipios, the oldest being on the tomb of L. Cornelius Scipio Barbatus, who *d.* in 298 B.C.; this inscription, originally painted on and afterwards engraved, is assigned to about 260 B.C. (or slightly later); there is also the inscription of the tomb of the famous consul L. Cornelius Scipio, who *d.* in 259 B.C. Only from the first century B.C. onwards do the Lat. inscriptions become so numerous all over the world that they cannot be counted. Sometimes, however, documents were preserved which originally were composed in much earlier times. For instance, the very ant. hymn of the Arval brethren is found in a very corrupt form dating only from A.D. 218. The fragments of the laws of the twelve tables come down from 450 B.C., but the documents preserved cannot be assigned to an earlier period than the first century B.C. The second period of Lat., which may be termed the pre-classical period, lasting from c. 250 to 90 B.C., contains a considerable mass of literature; only a small fraction has been preserved. Rom. power, which constantly was spreading, had already extended to a large part of Italy and Sicily. Lat. became more and more adapted to the needs of legal, administrative, historical, and rhetorical writing of a great empire. The ant. dialects had not perished under the influence of Rom.

civilisation and government: only with Sulla's victory in the Social war (82 B.C.) had the last chance of any Italic dialect of achieving supremacy over Lat. for ever passed away. At the same time the Lat. literary language separated from the vulgar dialect of Rome; the latter, also called *sermo cotidianus*, or daily life language, became general throughout Italy, although in each region it borrowed considerably from the previously spoken languages. The peasantry, without doubt, spoke dialects in which the inflections had never been developed or had been dropped. Some scholars doubt whether the literary language was ever spoken. However, literary men had attempted to improve the methods of recording the language; some reforms (those introduced by Accius and Lucilius) failed, others were successful (the introduction of double consonants by Ennius). Many old forms died out or were retained only in legal, religious, or poetical language. L. Aelius Stilo, b. c. 151 B.C. at Lanuvium, may be considered as the first Lat. philologist. The literary language slowly acquired various characteristics, which remain typical of it, but it has not yet been reduced to a uniform system, and many irregularities appear in structure, grammar, and syntax. It is, however, symptomatic that the most important authors, Plautus, Terence, Ennius, were not Romans, nor even Lat. by birth; Plautus especially is generally regarded as writing excellent Lat. The third period of Lat., the classical or golden age of Lat. language and literature, roughly extends to the Christian era. In the hands of Lucretius, Catullus, Virgil, and Horace Lat. received its finest form as a poetic instrument. Lucretius and Cicero created the Lat. philosophical language, the latter, however, representing nearly all sides of Lat. styles, and especially excelling in oratory and the high polished language used in the law courts. He may be considered as the greatest artist in Lat. prose. Sallust, Caesar, and Livy are the great artists of the Lat. historical style. Lat. prose reached its full maturity in the reign of Augustus, when it attained perfect clarity while keeping its former solidity and dignity. The fourth period of Lat. may be termed its silver age. 'The prestige of the older writers prevents the new from attempting to rival them on their own lines; all that is left for them to do is to express the old ideas in a new way' (Giles). Literary Lat. more and more became marked by an affectation of ornament and straining after rhetorical effect. Partly Livy, but particularly Propertius may be considered as the forerunners of the Lat. silver age. An exaggerated consciousness and point take the place of the more elaborate periods of the past. It would, however, be wrong to assume that there were no great Lat. writers in this period; it is sufficient to mention Tacitus, Suetonius, or Quintilian to prove that there were still great masters of Lat., although there was no hope for a new writer of surpassing his predecessors on their own ground.

The Expansion and Decline of Latin.—

With the conquests of the Rom. legions, Lat. had spread into countries far from Rome, and was almost universally adopted throughout the W. civilised world. In a few countries (Gaul, Spain, and Rumania) Lat. replaced the languages of the natives, and it became the ancestor of the modern Romance languages (besides It. Sp., Portuguese, Provençal, Fr., Rumanian, Rumanian, and minor dialects). At the same time, however, with the increase of commerce and travel, the Lat. vocabulary became increased by borrowings from foreign languages, and many words of common use crept into the literary language; its simplicity and purity were gradually disappearing.

Late Latin.—The tradition of writing in Lat. was kept up by Christian and by medieval scholars, who, however, used an impoverished and disorganised form of the language known as Late Lat. Churchmen and missionaries carried the Lat. language further afield for many more centuries. Catholic Rome was then the light of the W. world, the centre whence religion and learning were disseminated to all parts of W., central, and N. Europe. In consequence Lat., the language of the Rom. Church became and remained for many centuries the international tongue of the European higher intellectual world, and it was the language of the higher schools in W. Europe until the time of the Reformation. Schoolboys everywhere from Italy to Scotland read Lat. and were taught Lat. grammar. Before the invention of printing nearly all important MSS. in the W. world were written in Lat. The first book printed was a Lat. Bible. Univ. profs. lectured in Lat. It was the language of diplomacy until the end of the seventeenth century. (Milton was employed by Cromwell as the Lat. secretary to translate state papers received from other countries and to write replies in Lat.) Even nowadays Lat. is still used extensively for learned works and the theological treatises in the Rom. Catholic Church, although it lost its dominant position in consequence of the natural development of the last three centuries.

Lat. is a highly inflectional language (see LANGUAGES, CLASSIFICATION OF). Nouns have three genders, but only singular and plural numbers, the dual number (still preserved in Gk.) being only present in one or two Lat. words, such as *ambo*, 'both.' Lat. has six cases, nominative, genitive, dative, accusative, vocative, ablative (lacking in Gk.), with traces of a locative. Unlike Gk. Lat. has no article, no aorist tense, and only traces of an optative mood and of a middle voice; it has also less facilities than the Gk. of making compound words and expressing abstract terms: it is also less free in verbal syntax. On the other hand, it has fuller passive inflections than Gk.; it has five declensions of nouns (Gk. has only three). Although it has not that variety of particles and prepositional usage which make Gk. a perfect instrument for expressing the subtlest philosophical thought, it has greater conciseness and precision.

For Lat. writing see under ALPHABET and under the single letters (A, B, C, D, etc.). See H. S. Roby, *A Grammar of the Latin Language from Plautus to Suetonius*, 1887; F. Giles, *A Short Manual of Comparative Philology for Classical Students*, 1901, and 'The Languages of Italy' in S. R. Sandys's *A Companion to Latin Studies*, 1925; F. Skutsch, *Die Kultur der Gegenwart*, I. 8, 1905; O. Wiedemann, *Historische Lautlehre der Lateinischen*, 1907; O. Klemm and P. Lejay, *Syntax Latine* (5th ed.), 1908; O. Weise, *Language and Character of the Roman People* (trans.), 1909; F. Stolz, *Geschichte der lateinischen Sprache*, 1910; and D. Döring, *The Alphabet*, 1918 (with copious bibliography).

2. Literature.—It is impossible to fix with any precision the beginning of Lat. literature in Rome and the neighbouring Lat. communities, that is to say, the date when the art of writing was employed consciously in literary form. Of Lat. inscriptions the earliest known to us are the 'Forum Inscription,' engraved on a brooch found in a Praeneste tomb of the seventh century B.C., and the 'Duenos Inscription' on a clay vessel dating back to the fourth century B.C. Many inscriptions of various kinds, belonging to a period prior to the third century B.C., have been preserved. Some on tablets commemorate victories; others on coffin lids or on busts take the form of epitaphs and eulogies. The text of the famous Twelve Tables (451–450 B.C.) has unfortunately come down to us only in the form of quotations (editor, R. Schoell, 1866). A great advance in the art of writing may be seen in the *Annales*, which are private records of family hist., of brave deeds, of funeral orations, and the like. There is no doubt that a primitive kind of poetry also existed in very early times. Lat. comedy may be traced back to the *saturne*, which took the dramatic form, and were contests of wit and invective, interspersed with songs and dances. But these early writings were only the crude efforts of a young race; the literature of the Rom. people did not, strictly speaking, begin till the middle of the third century B.C.

The first period of Lat. literature, commonly called the pre-classical period, extends from about 250 B.C. to about 85 B.C. During this time the Romans made experiments with various literary forms, with tragedy, comedy, satire, and epic and didactic verse. At the close of the Punic war in 241 B.C., Rome having secured her position as mistress of the Mediterranean, her more wealthy citizens turned to the leisurely pursuit of learning. The only literature that was available to them was that of Greece, and Gk. culture continued to hold sway over Rom. thought to the end. It is a significant fact that the hist. of Lat. literature begins with the name of Livius Andronicus . . . 284–204 B.C.), a Gk. captive of Tarentum, who is celebrated for having produced, in 240 B.C., the first drama on the Rom. stage. His plays were adaptations from the Gk., and achieved such success that theatrical performances became a permanent institution

in Rome Andronicus also trans the *Odyssey* into Saturnian verse and is said to have addressed a lyric poem to Juno Regilla. Considerable progress in the development of the drama and the epic was made by his two younger contemporaries Gnaeus Naevius (c. 270-200 B.C.) and Quintus Ennius (239-170 B.C.). Naevius wrote a great number of comedies and some tragedies, the majority of which were based on Gk originals. But in two cases at least, he handled materials provided by the hist. of his own country and

CATO THE CENSOR
Lateran Museum

may therefore be said to have founded the national drama. His *Ilmonium Romuli et Remi* treats of the legendary founding of Rome, and the *Clustidium* deals with a contemporary historical event, namely the victory of M. Marcellus over the Gallic tribes in 222 B.C. Naevius also laid the foundation of the Latin national epic. His *Bellum Punicum* a verse chronicle narrating the events of the first Punic war in which he himself had taken part, was an acknowledged classic in Horace's days and was undoubtedly an important source of Virgil's *Aeneid*. Only a few fragments of his works remain.

Ennius 'the father of Roman poetry, was b. in dist. of Calabria, known as Magna Graecia on account of the number of Gk colonies that had sprung up in the neighbourhood. Consequently in early life he was as familiar with the Gk as with his native tongue, and when he came to write his *Annales* an epic of Roman hist. in eighteen books he chose the Gk hexameter in preference to the native Saturnian metre. Ennius showed considerable power,

too as a writer of tragedies. These were modelled chiefly on the dramas of Euripides but were infused with the true Roman spirit. A more important branch of his work must be mentioned. His *saturni* differed from the musical 'medleys' which have already been noted in connection with the early beginnings of Latin literature. They were really collections of miscellaneous poems on fabular, philosophical, didactic and various other subjects. A few of these written probably through the influence of Aristophanes and Cratinus dealt with contemporary events in a satirical tone and hence prepared the way for the satire proper a purely native product of ancient Italy. The satire as he used it was later developed by Gnaeus Lucilius (c. 180-100 B.C.) who employing the dactylic hexameter brought all spheres of political, social and literary life within his range of discussion and ridiculed pitilessly all the vices and absurdities of his time. Naevius and Ennius were succeeded by Marcus Pacuvius (c. 220-150 B.C.) and Lucius Accius (170-c. 105 B.C.) who were regarded as the most important tragedians of Rome but whose works have unfortunately been lost. Pacuvius who was a nephew of Ennius wrote imitations of Gk plays as well as *praetexta* (i.e. plays whose plots are derived purely from Roman hist. and in which the hero wears the *toga praetexta* the official robe of a Roman magistrate). Accius was apparently a far more prolific writer. His tragedies were chiefly imitated from Gk models but some were on Roman subjects. He wrote *Terentia* and *Decius* examples of the *praetexta* tragedies of which the titles and fragments of newly-discovered remain and poem on miscellaneous subjects such as grammar, poetry, acting, metrics, antiquities, etc. which have been lost.

The chief exponent of Roman comedy was Titus Maccius Plautus (c. 254-184 B.C.). Of his plays twenty are extant, which are all included in the list of genuine plays compiled by Varro. The best of these are the *Capituli*, *Menecmi*, *Miles Gloriosus*, *Amphitruo*, *Bacchides*, *Trudens*, and *Pseudolus*. They are excellent examples of the *fabula palliata* a particular class of Roman comedy so called from *pallium* a Gk mantle because it was derived from Gk sources. Plautus modelled his style on the New Attic Comedy of Menander, Philomena and other Athenian poets. Though in form and matter Plautus followed Gk models he nationalised his plays by introducing incidents, situations and customs peculiar to the life of Rome. His work is not infrequently slipshod but he had a masterly command over language and an inexhaustible fund of lively though often coarse, wit. Plautus's influence on modern comedy is inestimable. To the dramatists of the Renaissance Plautus was with Aristophanes the model for comedy. His influence is manifest in the work of Shakespeare and Molière as well as in the Restoration Comedy of Manners.

Plautus's immediate successor in Rome was Statius Caecilius (d. 168 B.C.), an

Insubrian Gaul, who had been brought captive to the city about 184 B.C. He is to us, however, hardly more than a name. The titles of some forty of his plays have survived, and he appears to have been held in high esteem. A more cultured, but less virile, writer was Publius Terentius Afer (c. 185-159 B.C.), who, according to tradition, produced his first comedy, *Andria*, under the patronage of Cæcilius. Terence was a Carthaginian prisoner of war, and received his emancipation and education from the senator Terentius Lucanus. His literary gifts admitted him when a youth into the most aristocratic circles of Rome, and he became an intimate friend of men like Gaius Lælius and the younger Scipio Africanus. Besides the comedy already mentioned, he wrote *Hecyra*, *Heautontimorumenos*, *Eunuchus*, *Phormio*, and *Adelphi*, all of which are extant. Terence adhered more closely than Plautus to the Gk. originals, retaining also the Gk. background to his scenes. His plays are chiefly distinguished by their elegance and artistic finish; he lacked the vigorous originality of Menander, and the fresh wit of Plautus.

After the death of Terence a new kind of comedy sprang up, known as *fabula togata*, the form of which was still Gk., but the life and characters lt. Examples of it remain only in fragments, and it is improbable that it ever had any literary value. The earliest representative of this latter form of Lat. comedy was Titinius, who flourished about 150 B.C. His most important successors were Quinctius Atta (d. 77 B.C.) and his contemporary, Lucius Afranius, who was praised by Cicero and retained some of his popularity as late as Nero's time. However, the development of Lat. comedy virtually ceased with the death of Terence. The Rom. populace preferred for holiday entertainment the more sensational performances of mimi, jugglers, and gladiators, and literary enterprise was therefore obliged to seek fresh channels of expression.

Lat. prose, not unnaturally, was of late growth. From the very earliest times prose was used in the necessary business of city life. As has been noted, the earliest inscriptions, epitaphs, laws, and records were written in prose, but the development of prose style, the recognition of prose as a literary medium of expression, took place late in the hist. of Lat. literature. A prose style was gradually formed by the practice of public speaking, oratory being an art in which Romans excelled. It is noteworthy, then, that the first written prose of any real literary importance is the speech of Appius Claudius opposing the proposals of Pyrrhus for peace. This was known to Cicero, but has unfortunately been lost. Marcus Porcius Cato (234-149 B.C.), commonly known as 'Cato the Censor,' was regarded as the founder of Lat. prose literature. About 160 of his speeches were extant in Cicero's time, but have not come down to us. Cato's contemporary orators included C. Lælius and the younger Scipio, who were succeeded by Marcus Lepidus Por-

cius (fl. 137 B.C.) and the famous Gracchi (Tiberius, 163-133 B.C., and Gaius, 154-121 B.C.). The oratory of the next generation, and in particular of Marcus Antonius and Lucius Crassus, attained a higher level of literary perfection, until we reach the unrivalled speeches of Cicero.

Meanwhile scientific treatises were written on the rules of rhetoric, only one of which is extant, namely the *Rhetorica ad Herennium*, formerly ascribed to Cicero, but probably the work of one Quintus Cornificus. The early annalists, who include Fabius Pictor, the historian of the second Punic war, and Cincius Alimentus, who was taken prisoner by Hannibal and narrated his personal experiences, wrote in Gk., probably because Lat. was not sufficiently developed to meet the requirements of prose composition. Cato the Censor was the first to write a hist. of Rome in Lat. prose. His *Origines*, in seven books, brought the hist. of the city down to his own time and comprised the result of his wide study and personal experience. The only work of Cato which has survived is a treatise on agriculture, *De Re Rustica*, to which Virgil probably had recourse in writing his *Georgics*. But Cato's influence prevailed chiefly as an historian, and his successors, Cassius Hemina, Calpurnius Piso Frugi, Cælius Antipater, and others, borrowed freely from the *Origines*. An advance is seen in the work of Claudius Quadrigarius (fl. 90 B.C.), who showed judgment in his choice of material by rejecting all legendary and doubtful records. Sulla, the dictator, who lived about the same time, wrote a memoir of his own life and times, entitled *Rerum Suearum Commentarii*. Sempronius Asellio (fl. 100 B.C.) in his *Rerum Gestarum Libri* was not content with giving facts in chronological sequence, but attempted to explain the cause and effect of events. Other annalists of this period are Valerius Antias, Licinius Macer (d. 66 B.C.), Cælius Antipater, and Cornelius Sisenna (d. 67 B.C.), whose works are lost but for a few fragments.

During the first century B.C. a new impulse was given to the writing of poetry, which for a time had made little or no advance, by renewed study of Gk. and Alexandrian poetry. There existed in Rome at this time a friendly group of poets united by their common enthusiasm for Gk. culture. It included Valerius Catullus (87-54 B.C.) who adapted to his own purpose and obtained complete mastery over various forms of Gk. lyric metres. He wrote passionate love songs to one Lesbia; an epithalamium to Peleus and Thetis, and another in honour of Manlius and Vinia; a paraphrase of Callimachus's *Coma Berenices*, and the *Attila* in galliambic metre, which is as remarkable as a *tour de force* in metrical form as for its dramatic force and vividness of conception. Other members of this group were Gaius, Helvius, Cinna, and Lucius Macer Calvus, whose work has not come down to us. Very different from any of these, both as a poet and as a man, was Titus Lucretius Carus (98-55 B.C.), the author of one of the greatest philosophical

poems in any language. His *De Natura Rerum* in heroic hexameter (14) compounds the physical structure of the universe according to the teaching of Epicurus. Lucretius died before the poem was completed, and it is, probably in consequence, very unequal in quality. Lucretius regarded the graces of poetry as subordinate to the truths of his philosophy, so that it is remarkable with what genius he gives poetic form to an unpoetic subject and a subject moreover, which had not hitherto been treated in the Latin tongue. Catullus and Lucretius died within a year of each other, both forerunners of the great poetic outburst which glorified the age of Augustus.

During the first century B.C. at the close of the republican period Latin prose reached its zenith. Marcus Terentius Varro (116-27 B.C.) was a most prolific and versatile writer. He wrote on philology (*De Lingua Latina*), on agriculture (*Rerum Rusticarum Libri*) on antiquity (*Antiquitates Rerum Humanarum et Divinarum*), and philosophy (*Libri Logistici*). He also published an encyclopaedia of the arts (*Disciplinarum Libri*), and portraits of famous Greeks and Romans (*Imagines*). As a poet and a satirist Varro showed considerable ability. His *Satura Menippeæ*, moral essays written partly in prose and partly in verse, are in imitation of the comic Menippus of Gadara, and are important as marking the development of the Latin 'satire'. The treatise on agriculture is the only one of Varro's works which has been preserved in its entirety and, of the 490 books he is said to have composed, only two have come down to us, the other, *De Lingua Latina* being in a mutilated form.

Marcus Tullius Cicero (106-43 B.C.) made an indelible impression on the literature as on the history of Rome. His literary work may be classified under three headings, his speeches, philosophical treatises, and letters. Oratory had already attained a high perfection in Rome and at the time of Cicero's entrance into public life Quintus Hortensius Hortalus (114-50 B.C.) had no rival in the forum. Hortensius indulged in the florid mannerisms of Attic rhetoric, and his fame was soon eclipsed by the young orator who aimed at polished and correct composition. Of Cicero's speeches fifty-seven are extant, the most famous being the Verrine and Philippic orations, the four speeches delivered against Catiline, *Pro Murena*, *Pro Lege Manilia*, *Pro Archia*, *Pro Sestio*, *Pro Plancio*, and *In Pisonem*. Of his philosophical treatises the chief are *De Oratore*, *De Republica*, *De Legibus*, *De Natura Deorum*, and *De Officiis*. Cicero's letters, *Familiares ad Familiares*, edited by his secretary Tiro, are, of course, unequal in style and very different from his speeches, but they are of inestimable importance to the student for the vivid picture they give of contemporary Roman life among the upper classes. As letters they stand the supreme test, and have long been regarded as the model of epistolary style. They reveal the man himself, in his strength and in his weakness. Cicero's great achievement was the creation of a prose style which

was adapted to all the needs of life. He was sensitive to the dignity and harmony of Latin prose, and avoided all that was merely florid and declamatory. His style is lucid, reflecting every passing emotion of the writer; it is used with consummate ease to convey wit, humour, tenderness, pathos, anger, vehemence, invective, at his will. Thus Cicero made Latin the written vehicle of the civilised world for centuries to come.

Julius Caesar (c. 102-44 B.C.), a colossal figure in the history of Rome is second to Cicero as a writer of Latin prose. Caesar wrote personal memoirs of his campaigns in Gaul, (*Commentarii de Bello Gallico*), in a clear and simple style, admirably suited to the subject. His *Commentarii de Bello Civili* (49-48 B.C.) have also survived, but his other works which include *De Analogia* and *Anticatores* have not come down to us. As a historian Caesar is incomparably superior to any of his predecessors, but like them his main object was to narrate the chief events in due order. Gaius Sallustius Crispus (86-34 B.C.) was the first Roman to attempt an interpretation of historical events. Modelling his work on that of Thucydides, Sallust attempted to give it an artistic unity. Unfortunately he affected an archaic style in imitation of the elder Cato, and not infrequently sacrificed accuracy for the sake of producing an artistic effect. His works were *bellum Catilinæ*, *Bellum Jugurthinum*, and *Historia*. The last-named comprised five books but only fragments of it have survived. Of the other prose writers who flourished towards the close of the republican period brief notice may be given to Cornelius Nepos (c. 99-24 B.C.) the author of an extensive biographical work entitled *De Viris Illustribus* and Julius Iulius (d. 43 B.C.), who added an eighth book to Caesar's *Commentarii de Bello Gallico* and probably wrote the *Bellum Alexandrinum*.

The Augustan period may be said, roughly speaking, to have begun with the victory of Augustus at Actium in 31 B.C. His death in A.D. 14 marked its close. This period was distinguished by a remarkable output of verse only to be compared in its fertility with that of the Elizabethan age in England. Publius Vergilius Maro (70-19 B.C.), in his expression of the Roman spirit, of the national sense of duty and honour, is the most representative poet of his age. His earliest publication, a number of bucolic poems, called the *Eclogues*, which were written in imitation of the Idylls of Theocritus, established his fame. He won a patron in Mæcenas, to whom he addressed his *Georgics*. The *Æneid* was written in imitation of the *Odyssey* and *Iliad*, and was intended to arouse patriotism by a glorification of the origin of the Roman people in the founding of their city by Romulus, the descendant of Aeneas, and by a comparison between the Trojan hero and the Emperor Augustus. It was unfinished at the death of Virgil, and was published under the command of Augustus under the editorship of Varius Rufus and Plotius Tucca. The *Æneid* has stood the test of time, and is

now ranked with the great epics of the world, with the *Odyssey* and the *Iliad*, with Dante's *Divine Comedy*, and with Milton's *Paradise Lost*.

Quintus Horatius Flaccus (65 B.C.-A.D. 8) was, like Virgil, a man of humble origin who, through his literary ability, was admitted to the inner circle of the highest society in Rome. About 35 B.C. Horace pub. his first book of satires, dedicated to Maecenas, who in return made him the gift of a small Sabine estate, henceforth his favourite abode. They were written in hexameters, and owed their form to the satires of Lucilius. Horace himself called them *Sermones*, or conversations. Between 30 and 29 B.C. his second book of *Satires* and his *Epodes* were completed, while the *Odes* (*Carmina*) were pub. in 23 and 13 B.C., and the *Epistles* (*Epistulae*) in 20 and 15 B.C. As a metrist Horace was unrivalled. His verses are lively and graceful, and so finely polished that they give the effect of spontaneity and ease, but the wings of his Pegasus are clipped so that he never soars to the loftiest heights of poetry. He has an extraordinary gift of words; his style is epigrammatic and terse, 'neat because homely.' His poems give us a very clear picture of contemporary life, and afford delightful reading for their revelations of his personality. Horace also pub. a work of literary criticism, the famous *Epistula ad Pisone*, better known as the *Ars Poetica*, which has exercised a powerful influence on subsequent literary criticism and creation, particularly in France and England. Its immediate aim was to give guidance to young dramatists.

Tragedy was again in vogue, and was being attempted by Aulus Pollio (76 B.C.-A.D. 5), Varius Rufus (74-11 B.C.), and Augustus himself. The younger generation of poets were, however, chiefly attracted by elegiac poetry, which had been cultivated in the Ionian cities and in Alexandria. The chief representatives of the Rom. elegists are Tibullus, Propertius, and Ovid. Albius Tibullus (51-19 B.C.) sung poems to his mistress *Delia*, and lamented her faithlessness in *Nemesis*. His poems are marked by their sincerity; the versification is polished, while the language is simple and homely. The poet, when not in mind of his love, sang the praises of country life. Sextus Propertius (49-15 B.C.) had no metrical skill, but possessed greater political genius. His chief theme was his mistress Cynthia. His style is often harsh and umbrous, but he was stirred by a great, if sensuous, passion, and his poetry at its best is fresh and vigorous and rich in imagery. Publius Ovidius Naso (43 B.C.-A.D. 18), unlike the two fellow poets of his youth, lived to a ripe old age. His early life was spent in Rome where his amatory poems—*Amores* addressed to Corinna and Heroides, a series of fictitious love letters, the *Ars Amatoria*, and *Remedia Amoris*—as well as the *Metamorphoses*, a collection of stories from Gk. and Rom. mythology, and the *Fasts*, a poetic exposition of the Rom. calendar, were produced. In A.D. 8 he was suddenly

banished from Rome for an unknown offence to Augustus, and spent the remainder of his life in exile at Tomi on the Black Sea. There, in his loneliness, he gave expression to his grief in the *Tristia*, *Epistulae ex Ponto*, and *Ibis*.

The prose of the Augustan period is today represented by one great writer, Titus Livius (59 B.C.-A.D. 19), of Patavium (modern Padua). He began his hist. of Rome, *Ab Urbe Condita* (from the foundation of the city), about 26 B.C., and did not publish the first twenty-one books until after the death of Augustus (A.D. 14). The hist. was originally in 142 books (only books i.-ix. and xxi.-xiv. are extant) and extended from the arrival of

Anderson

VIRGIL

Capitoline Museum, Rome.

Enneas down to the death of Diuus in 9 B.C. The faults of the work are obvious. Livy had no idea of historical research, and his chronology and description of places are often inaccurate. Moreover, he had little grasp of the Rom. law and the Rom. military system. But he is a consummate artist in the arrangement of his material and in the dramatic presentation of his characters. Minor prose writers include Vitruvius Pollio, the author of *De Architectura*; Annæus Seneca, father of the philosopher and author of *Oratorum et Rhetorum Sententiae Divisiones Colores*; Pompeius Trogus, who wrote the first general hist. in Lat. *Historia Philippica*, of which only an epitome by Justin is extant; and Marcus Verrius Flaccus, who wrote the first Lat. lexicon, *De Verborum Significatu*, most of which is lost.

The period immediately succeeding that of Augustus was barren of first-rate literature. There were numerous minor writers, but under the suppressive and jealous rule of Tiberius literature could not flourish. The most notable of the prose

writers were Vellius Paterculus who wrote a compendium of Roman hist., and Valerius Maximus, who made a collection of anecdotes, *Factorum et Dictorum Memorabilium Libri*. The poets included Phaedrus, the fabulist, and Germanicus, the emperor's nephew, who trans. the *Phaenomena* of Aratus into Lat. hexameters. A more prominent figure was Lucius Annaeus Seneca (1 B.C. - A.D. 65), the philosopher, whose numerous prose writings included discourses on philosophical and moral subjects, *Questiones Naturales*, and letters. The tragedies ascribed to him (*Medea*, *Agamemnon*, *Phaedra*, *Edipus*, etc.) are the only tragedies in Lat. literature which have come down to us. Seneca's nephew, M. Annaeus Lucanus (A.D. 3-65) wrote an unfinished epic poem in ten books on the struggle between Caesar and Pompey, entitled *Pharsalia*. Aulus Persius Flaccus (34-62), the friend of Lucan, left six vivacious *Satires*, which still retain their interest.

After the death of Nero (68) a more serious tone was reflected in literature. During the reign of Vespasian the only writers of any note were Plinius Secundus (23-79) Pliny the Elder, whose *Historia Naturalis* is a storehouse of learning, and C. Valerius Flaccus, the author of an unfinished poem, *Argonautica*, who endeavored to maintain the tradition of the Virgilian style. In the reign of Domitian there began a revival of letters. The most original genius of his age was M. Valerius Martialis (c. 40-102). Martial was the creator of the epigram in its modern sense. His satire invariably had a sting in the tail. He combined a brilliant and caustic wit with the technical skill of Ovid, but his poems are frequently marred by his fulsome flattery of men in high place and by his vulgar lack of reticence. His contemporary poets were of a secondary order. Silius Italicus (c. 25-101) wrote a lengthy and unimpaired poem on the Punic war, and Papinnus Statius (c. 40-96) left two mythological poems, *Thebais* and *Achilleis*, which are blighted here and there by a purpurine punniness and a collection of shorter poems, entitled *Silvae*. The most influential prose writer was Fabius Quintilianus (35-95) whose *Institutio Oratoria* (The Training of an Orator) has remained a standard work on the subject.

A more complete literary revival took place in the reigns of Nerva, Trajan, and Hadrian. The prominent figures of this so-called Silver Age are Tacitus, Juvenal, and the Younger Pliny, who add 'as it were, a sunset splendor to the literature of Rome'. Cornelius Tacitus (c. 54-120) is known principally by his *Historiae*, extending from Galba to the death of Domitian, and *Annales*, a hist. of the Julian house, beginning with the death of Augustus. He also wrote an account of Germania and a beautiful memoir of his father-in-law, Agricola, besides a dialogue, *De Oratoribus*, his earliest extant work. Tacitus is a careful, though not an impartial, historian. His deep scorn for the emperors, whom he regards as the greatest enemies of Rome, cannot but make itself

felt. The spirit of the age is again prevalent in the work of Decimus Junius Juvenalis (c. 60-140). He has not the good-natured cynicism of Horace. Juvenal's *Satires* paint with pitiless scorn and moral indignation the degraded state of Roman society. Plinius (Aulus Secundus) (c. 62-113), the nephew of Pliny the Elder, gives us in his *Letters* a more pleasing picture of the public, social, and literary life of his time. The only remaining literary men of note who flourished during the reign of Hadrian are Suetonius Tranquillus (c. 75-160), fragments of whose *De Vita Caesarum* have come down to us, Cornelius Fronto (100-75), whose letters to his pupil Marcus Aurelius are of some interest, and Aulus Gellius (130-70), the author of *Noctes Atticae*, a series of quotations and excerpts from miscellaneous Greek and Latin authors.

With Gellius the literature of classical Lat. is closed. For many centuries works in Lat. were still produced. At the time of the Renaissance European scholars wrote in Lat. believing that only by so doing would their work endure and since then controversial works as well as theological and scientific treatises have been written in Lat. in order that they may be understood by educated men of different nationalities. But all such late Lat. literature is outside the scope of the present sketch.

Teuffel, *Geschichte der römischen Literatur* (sev. eds., the last complete one being the 6th, rev. ed. by W. Kroll and L. Skutsch 1910-16, vol. II has appeared in a 7th ed., 1920, Eng. trans. by C. C. Warr, of an older revision by L. Schwabe), the best general hist. is by M. Schanz (*Geschichte der römischen Literatur bis zum gesetzgebungszeit des Kaisers Justinian*) in I. V. Müller's *Handbuch der Altertumswissenschaft*, new (11th) ed., revised by C. Housman, began to appear in 1927. See also I. V. Wright and T. A. Sinclair, *A History of Later Latin Literature*, 1931; J. F. D. Alton, *Roman Literary Theory and Criticism* 1931 and H. J. Rose, *Handbook of Latin Literature*, 1936.

Latin Union, political monetary union entered into in 1865 by France, Belgium, Italy, and Switzerland, by which the amount of silver to be coined yearly was fixed for each member, in order to protect them against the relative appreciation of silver to gold, due to the gold discoveries in Australia and California. A few years later Greece, Serbia, Rumania, and some of the S. Amer. states also joined the union. The unit of coinage was the franc. In 1874 the members agreed to suspend the free coinage of silver owing to the fall

in this metal which made it depreciate relatively to gold. See Bimetallism.

Latinus, son of Faunus and of the Nymph Marica, but other legends say of Hercules and Fauna, or of Odysseus and Circe, king of Latium, father of Lavinius, the wife of Aeneas. See Virgil, *Aeneid*, vii.-viii.

Latitude and Longitude. The lat. of a point on the earth's surface, in the simplest language, is its angular distance, N. or S., from the equator, measured on the curved surface of the earth, along the meridian of the point in question. It is measured and recorded in degrees (°), minutes (′), and seconds (″) (60 seconds = 1 minute; 60 minutes = 1 degree). Direct measurement, whether on sea or land, is virtually impossible, so that astronomical observations and calculations are needed. Lat. may be variously regarded and described. Thus the lat. of a place is equal to the angle between the direction of a plumb-line at the place and the plane of the equator. This is equivalent to the angle between horizontal planes at the place and at the equator and also to the elevation of the celestial pole above the horizon. *Geographical lat.*, as used in maps, is based on the supposition that the earth is an oblate spheroid, of which the compression and the angle which the normal makes with the equator are known. It differs from *astronomical lat.* only in being corrected for local deviation of plumb-line. The *geocentric lat.* of a place is the angle which a line from the earth's centre to the place makes with the plane of the equator. The lat. of a celestial object is its distance from the ecliptic measured by the arc of the great circle which passes through the pole of the ecliptic and the object.

The following is an outline of a few different practical methods used for determining the lat. of a place or ship. (1) *Observation of the stars.* This method is one of the easiest and quickest, as star tables are worked out in the *Nautical Almanac* for all stars of the first magnitude in both hemispheres, and for navigation stars of the second and third magnitudes, with the astronomical apparent times at which they cross the observer's meridian on the first day of each month in the year. All stars come to the meridian four min. earlier each day. The altitude of the star on the meridian is observed, and the lat. calculated from its known polar distance. (2) *Observation of the Pole Star.* The true altitude of the star is observed; the local apparent time is obtained and converted into astronomical time. To this is added the sun's right ascension, from the *Nautical Almanac*. Apply this result (minus 24, if necessary) to the table of Pole Star corrections, and then add the degrees and minutes to, or subtract from, the true altitude already determined. (3) *Observations of the sun at meridian.* The corrected altitude, which is called the true central altitude, is obtained by the use of the sextant, and subtracted from 90°. The zenith distance, N. or S. as the case may be, is given by the result. The

angular distance of the sun from the celestial equator (the corrected declination) is then taken from the *Nautical Almanac*. If both the declination and the zenith distance be the same, N. or S., add them together; if one is N. and the other S., subtract the lesser from the greater and the result is the lat. N. or S. as the case may be. If the sun be obscured by a cloud at the meridian, an observation is taken of it as near as possible to the meridian, and its altitude at the meridian then worked out. The same principles are observed if observations are made of the moon, or a planet. (1) *Observation by means of an artificial horizon.* This method, which is employed on land, is carried out by the aid of a basin, etc., filled with some reflecting medium, such as liquid tar, quicksilver, etc., and protected from the wind to keep it still. The observer should walk backwards, facing the celestial body from which observations are to be made, until its image can be seen in the reflecting medium. The sextant is then brought to bear on the celestial body, the image of which is brought down to coincide with the reflected image. The altitude of the body observed in degrees is half that shown on the sextant except in those instruments which are specially graduated to make this adjustment automatically. From this and the star's declination the lat. can be calculated.

Variability of Terrestrial Latitude.—The lat. of a point on the earth's surface is measured from the equator, which is defined by the condition that its plane is at right angles to the axis of rotation of the earth. Therefore if the points on which this axis intersects the earth, i.e. the poles, are not fixed, the position of the equator will change, and consequently the lat. It was shown by research about the end of the nineteenth century that such a change, very minute but measurable, does take place; the N. and S. poles wander round in a circle with a radius of approximately 25 ft. The theory regarding the periodicity of the change is briefly as follows. The fourteen months' (429 days) term is a result of the fact that the axes of rotation, and of the figure of the earth, do not strictly coincide, but make a small angle (about 0° 13 on the average) with each other. If the matter on the surface of the earth were immobile, the result of this non-coincidence would be the revolution of one pole round the other in a circle of radius 0° 13 (equal to 15 ft.) in a period of 429 days; this is known as the Eulerian motion from the name of the astronomer (Euler) who discovered it. But owing to meteorological causes the motion is subject to ann. change. Apart from the statical causes, that is to say, the changes of position of the deposits of snow and ice on the earth, the causes of this change are dynamical. The statical causes change the position of the pole of figure of the earth, but to an infinitesimal and negligible degree. The dynamic causes are the atmospheric and oceanic currents. If these were invariable the effect would be the Eulerian motion, not exactly round the mean pole of figure of earth, but a point

slightly apart. The currents, however, vary annually, and the motion of the pole of rotation varies also. The International Geodetic Association estab. a series of stations round the globe, as nearly as possible at the same lat., to make similar observations, in view of the importance of the fluctuations in position of the poles. The prin. stations are at Carloforte, in Italy; Midusawa, in Japan; Gathersburg, in Maryland; and Ukiah, in California, all situated about $39^{\circ} 8'$ lat. N.

The length of a minute of arc, measured along the equator (which for all practical purposes is invariable), is known as a geographical mile; but a statute or 'land' mile, being an arbitrary unit introduced by Queen Elizabeth, is 5280 ft. This statute mile is never used in navigation. The standard nautical or 'sea mile' is, strictly, the length of a minute of arc measured along a meridian, but as this length varies from about 6046 ft. at the equator to about 6108 ft. at the poles the approximate mean value is therefore taken as 6080 ft. as the standard nautical mile for measuring distances at sea. When lat. is expressed in minutes it gives the distance in nautical miles. Thus if the lat. of a place is $50^{\circ} 45' N.$, then it is $(50 \times 60 + 45) = 3045$ nautical miles N. of the equator. Places having the same lat. clearly lie on a 'small circle' (as it is called) the plane of which is parallel to the plane of the equator. This small circle is called a parallel of lat.

The long. of a place on the earth is the angle which the terrestrial meridian from the pole through a point on the earth's surface makes with some standard meridian. As the earth runs through 360° of long. in twenty-four hours, if the sun is on the meridian at any place it will be at the meridian on another place $15^{\circ} W.$ of the first one hour later. Thus 15° of long. represent one hour of difference in apparent time; all methods of determining long. are based on this fact. Formerly each nation took its own standard meridian, but the meridian of Greenwich is now used as the standard. It is important to remember that the astronomical day starts at midnight and the hours are reckoned from mean midnight, which is 0 hr., up to 24 hrs. later. Thus 9 a.m. Jan. 1 (civil time) is Jan. 1 day 9 hrs. astronomical time, but 3 p.m. Jan. 1 14 Jan. 1 day 15 hrs. astronomical time. Greenwich time, which is all-important in the navigation of ships, has customarily been obtained from the set of chronometers which every ship carries; but Greenwich time is now broadcast twice a day from Rugby (England). In astronomy the long. of a celestial body is the distance in degrees of its projection upon the ecliptic from the vernal equinox, counted in the direction W. to E. See *The Nautical Almanac* and *Inman's Nautical Tables*, 1873; J. Gill, *Textbook on Navigation*, 1898; H. Roper, *Navigation and Nautical Astronomy*, 1908; and *Navigation Manual*, vol. II. (Admiralty), 1938.

Latitudinarians (Lat. *latitudo*, breadth), name applied to a school of Eng. theologians in the seventeenth century who

endeavoured to inculcate a more broad-minded and liberal spirit into the Eng. Church. They opposed both the High Church party and that of the Dissenters, and strove to minimise the importance attached to particular doctrines and ceremonies. The chief representatives were Hales, Chillingworth, More, and Tillotson. Their movement was closely allied to the philosophical school of the 'Cambridge Platonists,' and they may be considered the forerunners of the Broad Church. See J. Tulloch, *Rational Theology in England in the Seventeenth Century*, 1872.

Latium: 1. (It. Lazio, the country of the Latins), div. of anct. Italy, about two-thirds the size of Wales, which extended along the coast of the Tyrrhenian Sea, south-eastward from the mouth of the Tiber, which formed the inland boundary of the N. half. See *ROME*. 2. Region of modern Italy, which includes the Vatican city. Area 6634 sq. m. Pop. 3,159,000.

Latona, see *LITON*.

La Tour d'Auvergne, Théophile Malo Corret de (1713-1800), Fr. captain of grenadiers, b. at Carhaix, Brittany. He served with the Republican army in the Pyrenees and Alps, leading with great success his 'Infernal Column.' As he obstinately refused to be promoted, Napoleon bestowed upon him the title 'Le Premier Grenadier de France.' He was killed at Oberhausen, Bavaria. He pub. sev. books on the Bretons. See lives by E. Simond, 1899, and C. le Goffic, 1928.

La Trappe, see *TRAPPISTS*.

Latreille, Pierre André (1762-1833), Fr. entomologist, b. at Brives. In 1788 he became a priest, but spent most of his leisure studying insects. During the revolution he suffered imprisonment, but arousing interest through his entomological studies was released. He was appointed to take charge of the insects at Jardin des Plantes, Paris, and succeeded Lamarck as prof. of zoology. He wrote *Genera crustaceorum et insectorum*, the portion 'Insecta and Crustacea' in G. de Cuvier's *Régne animal* (1829).

Latrobe, (n. in Westmoreland co., Pennsylvania, U.S.A., 35 m. E.S.E. of Pittsburgh. It is a mining and coking dist. and has large collieries, steel and glass works, saw mills and lumbering mills, etc. Pop. 11,200.

Latter Day Saints, see *MORMON CHURCH*.

Latice, see *OUVRANDA*.

Latvia, Soviet Socialist Republic on the E. and S. coast of the gulf of Riga, and, prior to the First World War, part of the Russian Empire. The surface of L. is mostly flat and marshy, with many lakes. The chief occupation is agriculture, including numerous dairy farms. There is also a thriving fishing industry. Flax, butter, timber, paper, and glass are the chief exports. L., however, is developing its industries, notably metallurgical, textile, and chemical. Imports are mainly agricultural machinery and implements, coal, cotton goods, and herrings—the last three categories being from Great Britain, which country takes a fair quantity of Latvian pit-props, flax, and sawn timber. The Letts are an Indo-European people of the

Lithuanian race, and were Christianised by the Teutonic knights. The Gers, after defeating the Letts in the thirteenth century, set up a federal republic consisting of L and the other Baltic republics of to-day. This federation endured for three centuries, and L then fell under the rule of the Lithuanian Poles. In the eighteenth century it was assigned to Russia and remained under Russian rule until Nov 18, 1918 when it was proclaimed an independent state. The majority of the European powers recognised its sovereignty as being in conformity with Lettish public opinion. The constitution passed by the Constituent Assembly Feb 15, 1922 was that of a democratic republic with universal suffrage and proportional representation. The president was elected by the *Saima* (parliament) and held office for three years but no president might remain in office for more than six consecutive years. The *Saima* was composed of a hundred representatives. This constitution was suspended in 1924 and all political parties were dissolved. A Conservative agrarian and national group then exercised dictatorial rule. Shortly after the Second World War broke out Stalin availed himself of the opportunity to establish a protectorate over L and the other Baltic states. In June 1940 L was completely occupied by Russian troops and a new gov. was set up. Shortly afterwards L was incorporated in the U.S.S.R. as a federal republic. The German minority was evacuated to Germany by order of Hitler. In 1941 the Gers, invading Russia, overran L and the other Baltic States. L was always an important port to Russia on account of the strategic centres of Riga, Libau (Liepaja) and Windau, of which ports the two latter are free ports. L was retaken by the converging forces of Maslennikov and Iermenko on Oct 15, 1944 and the remaining Gers in L were penned in a hopeless condition in the peninsula above Libau. Other (the) District (Dangavpils) and Mitau (Jelgava) Area 24,840 sq. mi. Pop. 1,950,000. See R. O. G. Urich, *Lithuania Country and People*, 1938. B. Newman, *Baltic towns*, 1939, and *Lithuania*, 1948, and I. W. Peck, *The Baltic Nations*, 1948.

Lauban, See Libau.

Laube, Heinrich (1807-91), Ger. journalist, novelist and playwright, b. at Sprottau in Silesia. In spite of a somewhat interrupted career his output of dramas and novels was considerable; the most famous being *Gruf Ixer* (1846) and *Montrose* (1859). His romances in 111 *Die Bohminger* and *Der Schallert Hühner*. L. was noted for his ability in stagecraft. His collected works were ed. in 50 vols by H. H. Houbon (1910-12). See I. Reich, *Das Burgtheater unter Heinrich Laube und Adolf Wilbrandt*, 1925, also life by M. Krammer, 1926.

Laud, William (1573-1645), Eng. prelate, archbishop of Canterbury, b. at Reading, Berkshire. He was educated at Reading Free School and St John's College, Oxford, becoming a fellow in 1592, graduated

B.A. in 1594, M.A. in 1598, ordained in 1601, graduated D.D. in 1608. After holding various livings, he was made archdeacon of Huntingdon in 1615, and dean of Gloucester in 1617. In 1621 he became prebendary of Westminster and bishop of St. David's in 1626 being transferred to the see of Bath and two years later to that of London. In 1630 he was elected chancellor to the univ. of Oxford, and finally archbishop of Canterbury (1633). Through out Charles I's reign L.

WILLIAM LAUD

was one of the king's most faithful supporters. He instituted rigorous proceedings against all who refused to conform to the Church of England and endeavoured to extinguish all forms of dissent by means of fines, exile and imprisonment. In 1640 he was impeached for high treason by the Long Parliament and committed to the Tower (1641) tried in 1641 and executed in 1645. L. set himself the task of raising the Anglican Church to a position as a branch of the Church Catholic in opposition to the Puritan or left wing eccles. movement of the times. Of his works the most interesting is his *Diary* pub. by H. Wharton (1652-60). See also his biography by his disciple and admirer Heylin, under the title of *Cyprianus Anglicus*. His works were pub. in 5 vols. (1847-60). See lives by A. Benson 1887, C. Simkinson, 1894, W. Hutton 1899, W. L. Mackintosh, 1907, R. P. Collins, 1940, and H. R. Trevor Roper, 1940.

Laudanum, tincture of opium in dilute spirit, and is a brown coloured liquid with the characteristic smell of opium. It contains about 1 per cent of morphine. It is administered as a soporific and for relief in gastric troubles. Its use in the case of young infants, once common, is now recognised as dangerous and has been replaced by morphine. L. poisoning should be treated by an emetic, for which purpose apomorphine is best. The stomach should be washed out with a salt

solution and caffeine introduced by the mouth or in the form of strong coffee per rectum. The patient should be kept awake and walked about if possible. Failing this artificial respiration should be resorted to.

Lauder, Sir Harry MacLennan (b. 1870), Scottish comedian and singer, b. at Portobello. He worked as mill-boy and miner. His first appearance on the stage was at Arbroath. His first success was in Belfast, Ireland; and since then his imitable impersonations of Scottish characters on the vaudeville stage (especially at the old Tivoli) have won him deserved popularity. He has written both words and music of many of his songs. *Stop yer ticklin', Jock, Ma Scotch Bluebell, Rounin' in the Gloamin', and A wee Doch-an-Doris* being some of his best. L. first went to America in 1907 and was a great favourite there. His only son, Capt. John L., was killed in the first World War. 1916. L. was knighted in 1919.

Lauder, William (c. 1710-71), notorious would-be detractor of Milton's honesty and literary achievement. He wrote *An Essay on Milton's Use and Imitation of the Moderns in his 'Paradise Lost'*, in which he used falsified quotations from various seventeenth-century writers, to prove plagiarism on the part of Milton. Dr. Douglas exposed Lauder, and Dr. Johnson made him sign a retraction.

Lauder, royal bor. of Berwickshire in Scotland, is situated on the R. L. It was the historical scene of the brutal murder of Robert Cochrane and six others before King James III in 1482. Pop. 13,000.

Lauderdale, John Maitland (1616-82), second Earl and first Duke of Maitland, b. at Lettington (Lennoxlove) near Haddington. In 1643 he was named one of the commissioners for the Solemn League and Covenant. In 1645 he succeeded his father as second earl of L. In 1651 he followed Charles to Worcester, where he was taken prisoner and detained for nine years. He became Scottish secretary of state at the Restoration, and laboured with unceasing persistence to bring about the absolute power of the Crown in Church and State. He was a member of the Privy Council and had a seat in the Cabal ministry. In 1672 he was created duke. Intrigues were levelled against him in 1674, and in 1678 a vote was carried in the Commons asking for his removal from the royal presence, which, however, was thrown out. Chief authorities for his life are Sir G. Mackenzie, *Memoirs*, 1821; R. Baillie, *Letters and Journals*, 1637-72, ed. by D. Laing, Bannantyne Club, 1811-2; and the Lauderdale papers in the MSS. room at the Brit. Museum.

Laudon, Gideon Ernst, see **LOUDON, FREIHERR VON**.

Laupe, see BREVART.

Laue, Max von (b. 1879), Ger. physicist, b. at Pfaffendorf, near Koblenz. As a physicist of high standing he is chiefly known as the pioneer of modern X-ray crystal study. He surmised that the regular arrangement of points in a crystal would serve to produce diffraction effects

on incident X-radiation. Success was expected because of the comparable values of point distances in a crystal and the supposed wave-length of X-rays. The experiment performed by Friedrich and Knipping (1912), at his suggestion, vindicated his theory. He was awarded the Nobel prize for physics in 1914. He has pub. *Die Relativitätstheorie* (1911, 1921); *Über die Auffindung der Röntgenstrahlinterferenz* (Nobel lecture, 1920); *Röntgenstrahlinterferenz* (1941); and *Materiewellen und ihre Interferenz* (1944). See K. Schiebold, *Die Laue-Methode*, 1932.

Lauenburg, Duke of, see **BISMARCK, OTTO EDUARD LEOPOLD VON**.

Lauenburg, or Saxe-Lauenburg, Duchy of, well-cultivated and fertile dist. of Schleswig-Holstein, Germany. It was formerly united with Holstein under the Crown of Denmark, but by the treaty of (Gastein) (1865) it was ceded to Prussia. The allied 8th Corps launched an attack across the Elbe at L. on April 29, 1915, encountering only weak opposition. Chief towns: Lauenburg and Ratzeburg. Area 453 sq. m. Pop. 52,000.

Lauenburg: 1. Tn. on the Elbe, 25 m. S.E. of Hamburg, Germany, formerly cap. of the duchy. Here are ruins of the twelfth-century ducal palace. Pop. 5390. 2. Tn. on the Leba in the prov. of Pomerania, Poland, 35 m. W.N.W. of Danzig. Pop. 11,000.

Laughing Gas, gas used as an anæsthetic by dentists, so called because it is apt to produce hysterical laughter when inhaled. Technically, nitrous oxide.

LAUGHING-JACKASS

Laughing-jackass, Great Kingfisher, or Kookaburra, popular name of the species of *Dacelo*, an Australian genus of coraciiform birds belonging to the family Alcedinidae. They are so called because of their extraordinary gurgling notes. *D. quays*, the prin species, has brown plumage, with a white stripe on each side of the head. It nests in shady forest-creeks, but will also frequent the vicinity of houses.

Laughton, Charles (b. 1899), Eng. actor, b. at Scarborough. He was educated at Stonyhurst and the Royal Academy of

Dramatic Art, and made his first appearance in 1926. Married Elsa Lanchester in 1929. His film roles include *The Private Life of Henry VIII.* (1933); *The Barretts of Wimpole Street*; *Tuggles of Red Gap*; *Midway on the Bounty*; and *Rembrandt*. In 1937 he formed his own film company, the Mayflower Pictures Corporation, in partnership with Erick Pommer. See Elsa Lanchester, *Charles Laughton and I*, 1938.

'Launay, Vicomte de' (Delphine Gay), see under GIRARDIN, EMILE DE.

Launce, see SAND LAUNCE.

Launceston: 1. (Anct. Dunneheved), municipal bor., Cornwall, England. 22 m. W. of Plymouth. It played a part in the Civil war. There are copper mines and ruins of a castle and priory. Pop. 4600. 2. Chief city of N. Tasmania, beautifully situated in a valley at a confluence of the N. Esk and S. Esk Rs., which form the estuary of the St. Tamar. It is a thriving up-to-date city, being the second city in the state and is often referred to as the northern capital. It was founded in 1806 by Col. Paterson and named by him after Governor King's native son in Cornwall, England. The right of self-government was granted in 1852. It became a fn. in 1858 and was declared a city in 1859. It is well laid out and has all modern utilities, such as electricity, gas, tram and bus services, filtered water supply, sewerage, beautiful parks, good theatres and excellent schools, modern crematorium and cemetery, a museum and art gallery and free library. It has made rapid strides in its industries, which include textile mills, pottery works, concrete and earthenware pipes manuf., tennis rackets and other sporting goods, brewery, timber mills, railway workshops. It is the terminus of the prin. steamship lines operating between Tasmania and the mainland of Australia. Agric. produce, fruit (principally apples), minerals, tin, beryl, wool, and woolen goods are the main exports of the port. Pop. (with suburbs) 40,400.

Launch (Malay *lanchar*, quick, speedy), name given to one of the largest size of ship's boats, or to a boat propelled by electricity or steam.

Launch, Motor, see MOTOR BOATS.

Laundries (Lat. *lavandus*, things to be washed, *lavare*, to wash), establs. for the washing of soiled body and table linen. Articles formerly rubbed by the hands of the laundress, or stirred and beaten with a 'dolly' (viz. a wooden rod with a series of spokes at the lower end and a cross-bar handle at the upper), are now commonly treated in rotary washing-machines driven by power. The best type of rotary consists of an outer cylinder of wood or metal containing an inner horizontal cylindrical cage, in which the clothes are placed. Then the doors are closed, the machinery is set in motion, and steam is admitted, the clothes being tumbled on each other in the soap and water contained in the outer casing, which enters the cylinder through perforations. The clothes are soaked in alkaline water, washed, boiled, and rinsed, all without

removing them from the machine. Next comes the process of drying. The linen is taken from the machine and placed in a washer or centrifugal extractor, which consists of a perforated copper basket revolving rapidly inside an iron or steel case. The water is thrown out through the perforations in the basket by centrifugal force and the linen is ready to be taken out in about twenty minutes, the drying being completed in an apartment through which dry air is forced by fans. The next item is the ironing. The ironing machines generally consist of a polished metal roller, heated by gas or steam, working against a felted surface in the form of another roller or flat table; or (Decoudun type) of a felted metal roller rotating against a heated concave bed of polished steel. Hand-ironing, notwithstanding, is still very general, and time is saved by continuously heating the irons by means of gas or electricity. In Great Britain L. are inspected by public health officials, and there are legal provisions on the hours of employment and the workers' conditions. See also DRYING MACHINES, and for home laundry work, under HOUSEWIFERY. See Agnes Jackman and B. Rogers, *Principles of Domestic and Institutional Laundrywork*, 1934; P. F. Jolly, and W. Burt, *Laundrywork*, 1934; and A. Harvey, *Laundry Chemistry*, 1935.

La Union (anct. *Herreria*), tn., Spain, prov. of Murcia, 6 m. E. of Cartagena. Iron, manganese, calamine, sulphur, silver, and lead are mined. Pop. 30,000.

Laura (*Λαῖα*, alley, possibly from Lat. *lura*, mouth of a bag), name given to a number of cells which were inhabited by ascetics or monks in the deserts of the E. St. Charito appears to be the first to have founded a L.

Lauraceae, order of dicotyledonous plants containing over 1000 species. They are all evergreen trees and shrubs, many are aromatic, and the climate they prefer is a temperate one. Two of the chief genera are *Cinnamomum* and *Laurus*.

Laurahutte, see SIEMIANOWICE.

Laureate, poet (Lat. *laureatus*, from *laurus*, the laurel-tree), title conferred by letters-patent from the Eng. Crown on the poet attached to the royal household. Its origin is obscure. In anct. Greece the laurel wreath was the crown of honour of poets and heroes, and thus the word laureate came to mean in Eng. eminent, generally, though not always, in a literary sense. The medieval kings had poets or minstrels attached to their households who received pensions, though the appointment was not official. In this way Ben Jonson was looked upon as the first L., but the title seems never to have been really conferred upon him, John Dryden being the first Eng. poet to receive the title by letters-patent in 1670. It is interesting in this connection to draw attention to the position of John Skelton, who, about 1500, seems to have been called P. L., or King's Orator, and insisted on being so called. He certainly was awarded by the univs. of Oxford and Cambridge the degree of L., a degree in grammar, including rhetoric and

versification, and at the award of which the graduate was presented with a laurel. In 1493, however, Skelton was granted the distinction of wearing a white and green dress with the name Calliope embroidered on it and he soon after became tutor to the future Henry VIII (see P. Henderson's ed. of Skelton's works, 1931). From Divden onwards the post became a regular institution, the most celebrated ts being

Laurent, Auguste (1807-53), Fr. chemist, b. near Langres, France. He is chiefly noted for his discoveries with Gerhardt in connection with the homologous series and the theory of types. He was appointed prof. of chem. at Boideaux in 1838, and warden of the mint, Paris, in 1848. L. did important research work on naphthalene, paraffin, and phenol.

National Film Board Canada

LAURENTIAN SHIELD

Yellowknife on the Great Slave Lake, North west Territorys. The sparse coniferous forest, the large areas of bare rocks, the lakes in the glaciated landscape, are all typical of the region.

Souther (1813-43), Wordsworth (1843-1850), Tennyson (1850-92), and Alfred Austin (1896-1913). Dr Robert Bridges (1913) followed Austin, and the present holder of the title is John Masefield (q.v.), appointed 1936. The P. L. generally produces formal and appropriate verses on public and state occasions, though the custom at the present day is not obligatory.

Laurel, term properly applied to the two species of *Laurus*, the chief genus of Lauraceae, but it is also used in a compound name of other plants, e.g. cherry-L (*Prunus*), hawthorn-L (*Daphne*) and scabious-L (*Phyllanthus*). *L. nobilis*, the true L. or sweet bay, is to be found round the Mediterranean, and its aromatic leaves are used in condiments; *L. canariensis* is a native of the Canary Is.

Laurel, Cherry, or *Prunus laurocerasus*, species of Rosaceae, closely allied to the bird-cherry, almond, and plum. See CHERRY.

Laurencekirk, tn. in Kincardineshire, Scotland, 26 m. S.S.W. of Aberdeen. Pop. 2000.

Laurentian Rocks, vast series of pre-Cambrian rocks 30,000 ft. in thickness and covering an area of over 200,000 sq. m. in the highlands N. of the St. Lawrence estuary. They now rank as the undermost archaean rocks upon which an upper or Labradorian series rests unconformably. The L. group consists of an immense series of crystalline rocks, gneiss, quartzite, mica-schist and limestone, and is divided into Upper and Lower L. The Upper L., over 10,000 ft. thick, consists of stratified rocks, in which no organic remains have been found. The rocks are chiefly felspars, with a small percentage of potash and soda. The Lower L., about 20,000 ft. thick, consists mainly of a reddish gneiss, with orthoclase felspar, interstratified with thin hornblende- and mica-schists, with beds of usually crystalline origin, and others of plumbago. *Eozoon canadense* is the only known fossil or pseudo fossil. The L. R. of Ottawa and Argenteuil consist of dark greenstone or dolerite, varying from a few feet to 300 ft. in thickness. Sir R. Murchison

and Sir A. Geikie advanced the theory that a primitive land mass, called Laurentia, existed from Canada to the Scottish Hebrides, its shores receiving the earliest paleozoic sediments.

The L. R. area, known as the L. Shield, has a N.W. trend. Vast areas of Quebec, Ontario, and Manitoba remain bare rock, with numerous lakes.

'Laurentic,' auxiliary cruiser which was sunk off the Irish coast by a Ger. submarine or mine on Jan. 23, 1917. She carried a cargo of gold bars to the value of £6,000,000. £1,958,000 worth were recovered in one of the most successful salvage operations of recent years.

Laurentum, cap. of the anet. kingdom of Latium, Italy (*q.v.*). L. was made the chief tn. of the kingdom under Latinus, the first king. Later the cap. was changed to Lavinium, and again to Alba.

Lauria, city of Potenza prov., Italy, 42 m. S. of Potenza. It has an important textile industry. Pop. 11,000.

Laurier, Sir Henri Charles Wilfrid (1841-1919), Canadian Liberal statesman; b. at St. Lin near Montreal; only son of Charles L., Catholic and Fr.-Canadian land surveyor. He was educated at Assumption College and McGill Univ. He practised law for a while in Montreal, but ill health obliged his removal to Arthabaska, prov. of Quebec. He was not in favour with the higher clergy of his church, and his weekly paper, *Le Dériveur*, was banned. In 1871 he was elected to the prov. legislature for Drummond and Arthabaska cos., and from 1874 he represented the same constituency in the Dominion Parliament. He was minister for inland revenue in the Mackenzie Cabinet, 1877-78, but had to find another seat on his appointment at Quebec P., which he represented for the rest of his parl. life. In 1887 he succeeded Edward Blake as Liberal leader. His policy of unlimited reciprocity with the U.S.A. was not successful at the elections of March 1891, just before Sir John Macdonald's death. L. always favoured free trade; and in 1896 he won the elections against the tariff-maintenance policy of Sir Charles Tupper, and became Prime Minister. He remained so until 1911—visiting London and being knighted in 1897. After 1900 his gov. gave much aid to the Grand Trunk Pacific Railway and the Canadian N. Railway in order to develop the N.W. His sending of troops to aid the Brit. in S. Africa was not approved by his native prov., which was better pleased by his resistance, at the Imperial Conference of 1902, to Chamberlain's scheme of unified empire defence. He carried the general elections of 1900 and 1903, being hotly opposed by the nationalist leader Bourassa for 'supporting British Jingoism.' His once-popular policy of reciprocity with the U.S.A. was defeated at the elections of 1911, in which year he attended an Imperial conference for the last time. During the First World War Sir Robert Borden, the Conservative Premier, invited L. to form a coalition with him, but the invitation was declined. See O. D.

Skelton, *Life and Letters of Sir Wilfrid Laurier*, 1922.

Laurine, fatty principle of laurel berries; in appearance it is crystalline, and to the taste it is bitter.

Laurion, see ERGASTERIA.

Lauriston, Jacques Alexandre Bernard Law, Marquis de (1768-1828), general and ultimately marshal of France, b. in Pondichéry, India. He distinguished himself in the Republican army campaigns, becoming aide-de-camp to Napoleon in 1800. In 1802 Napoleon sent him to England with the ratified treaty of Amiens. He also went on diplomatic missions to Denmark and Russia. He commanded the rearguard in the retreat from Moscow.

Laurium, tn. in Houghton co., Michigan, U.S.A., 42 m. N. of L'Anse. Here is situated one of the largest copper-mines in the U.S.A. Pop. 4600.

Laurium, mt. in the S. of Attica, Greece. In anet. times its silver-mines produced large supplies, but were subsequently abandoned. During the second half of the nineteenth century, however, they were again worked, and silver, lead, cadmium, and manganese were found. There is a railway connection between these mine and Athens.

Laurvik, seaport in the prov. of Jarlsberg, Norway, standing on a fjord to the S.W. of Oslo. It is noted for its sea baths, while among its industries, are ship-building. It exports timber among other products. Pop. 10,000.

Lausanne, cap. of the canton of Vaud, Switzerland, on the N. shore of Lake Geneva. It has a very fine cathedral dating back to the thirteenth century, the restoration of which was completed in 1926, a univ., a museum of natural hist., and an art gallery. It is the seat of the Federal tribunal, and was the residence of Gibbon, who wrote part of his *Decline and Fall of the Roman Empire* here. It manufs. tobacco, machinery, and chocolate. Pop. 100,000.

Lausanne, Treaty of (1923), officially terminated the state of war between the Allies and Turkey by bringing to an end the difficulties outstanding between the Allies and the Angora Turks. Though Turkey surrendered unconditionally to the Allies in Oct. 1918, the Angora Turks declined to accept the treaty of Sévres, which mandated Smyrna to Greece, and made war on Greece (see GRECO-TURKISH WAR). After the evacuation of Smyrna a convention was signed between the Allies and Kemal Ataturk at Mudania, thereby availing further war (Oct. 1922). The Lausanne Conference between the Allies and the Kemalists began Nov. 20, 1922, the chief Brit. delegate being Lord Curzon, who was then foreign secretary, and dragged on to April 1923. The treaty, which was signed on July 24, 1923, ceded E. Thrace (including Adrianople) to Turkey, but took away from Turkey Palestine and Iraq, which were mandated to Great Britain, Syria, which was mandated to France, and also the rest of Arabia. The treaty left the N. frontier of Mesopotamia to be settled by later negotiation or, failing agreement, by

reference to the League of Nations. This matter was eventually settled by a tripartite treaty between Great Britain, Turkey, and Iraq signed at Ankara in June 1923. It also confirmed the possession of the Dodcanne (Dardanelles) and Gallipoli (Gallipoli) except Imbros and Tenedos formerly held by Turkey in the Aegean. All Turkish rights over Egypt, the Sudan and Cyprus were surrendered. But the most vital clause was that which concerned the straits. This clause guaranteed the freedom of the straits zones on each side of the Bosphorus and the sea of Marmora were demilitarised by special convention and rules were laid down for preserving the freedom of the straits in both peace and war. Such rules to be applied by a mixed commission of the League of Nations. But by the Montreux Convention 1936 Turkey regained the right to fortify the straits. For the rest the minorities clauses were similar to those of the Versailles and other first World War treaties. Turkey secured the abolition of the long standing capitulations or extra territorial privileges of foreigners (see CAPITALISMS) and ground notably at Ankara was ceded by Turkey for the purpose of military cemeteries. See H. W. V. Temperley, *History of the Peace Conference of Paris* (vol. vi), 1924. Earl of Ronaldshay, *Life of Lord Curzon* 1928-29 and H. N. Colson *Curzon the Last Phase* 1931-2-1934.

Lausitz, see LUSITANIA

Lava, substance which is emitted in a liquid state from the crater of a volcano. Lava is divided into different classes the quality of the lava depending on the amount of silica which it contains. Those which are known as 'basic' contain less silica than the others and consequently flow for much greater distances as they make much longer to solidify. The exterior or crust of a stream of lava cools quickly when exposed to the air and the molten lava which is underneath often cracks through this crust and continues its course thus disturbing the evenness of the original surface and forming loose blocks of material.

Lavadores, in the prov. of Pontevedra, Galicia Spain situated on the coast. Pop. 15,000.

Laval, Gilles de (c. 1375-1419)

Laval, Pierre (1853-1931) French politician and arch traitor to the Chetolm near Vichy, son of a butcher. Both his parents were of the poor peasant class with a strong first strain common in Auvergne. Laval began work as a school teacher in Auvergne but having gained a fortune in trade union circles as a militant socialist he went to Paris and became a lawyer. In 1908 he was elected mayor of Aubervilliers. In 1914 he was elected to the Chamber of Deputies supporting Jaures in his opposition to the three year period of military service. He went to his regiment at the front but was on the suspects list till 1918. Having failed in 1919 to secure election as a Socialist he stood again in 1921 but this time as a Moderate, and was successful. His progress was then rapid. In 1925 he was minister of public works under Painlevé, and after this his life becomes a self centred quest

for power and money. However often the French Gov changed Laval kept reappearing and he was Prime Minister in 1930-1931, 1932-1935 and 1936 and foreign minister for a time in 1934-1935 and 1936. Concurrently with this accession of power his private fortune grew enormously and he bought the historic castle of Chatillon, overlooking the tiny cottage where he was born and as his wealth increased, his left wing principles were forgotten. He was responsible with Sir Samuel Hoare for the abortive Hoare Laval plan for satisfying Mussolini's Ethiopian ambitions in 1935 and in 1936 he resigned to give way to Leon Blum after the left victory at the elections in that year. There is no doubt that his bitter hatred of Britain owed much to his frustration of his appeasement policy. When the Second World War came he began the underground intrigues so suited to his character but as every German conquest multiplied he became less discreet and began to sound various politicians on the feasibility of forming a French gov. to organise a truce with Mussolini and Franco and thereby to leave Britain to face Germany single handed. When France collapsed Laval was at once called into Léon Blum's Cabinet as minister of state and deputy Prime Minister. Laval's time in proving to Hitler that he was not too willing to collaborate for a time everything seemed to play into his hands and he even induced Léon Blum to nominate him as his successor in the event of his disappearance. He was appointed foreign minister, but Pétain's suspicions grew and the climax came on Dec. 11 1940 when he was suddenly dismissed and arrested. But the Gestapo soon secured his release and Laval fled to Vichy France to Paris. In August 1941 he and Marcel Déat the Fascist leader were shot at during a military ceremony at Versailles, but he had no sooner recovered from his injuries than he resumed his intrigues to regain power. Pétain who disliked Laval on personal grounds resisted all efforts to secure Laval's appointment but in April 1942 he had to yield to the German ultimatum and the Vichy Gov. was reconstituted with Laval as head. Laval then sought to undermine the remnants of Pétain's power and prestige. Laval made a bargain with Hitler to provide the conscripted labour for Germany as a result of which a great many Frenchmen were forced to go to the Reich. In Nov. 1942 Laval signed constitutional Acts giving the power to make laws and issue decrees on his signature alone. Thus at last Laval was dictator of France and like Hitler, above the law, and to strengthen his position he put himself at the head of a national militia or private army 10,000 strong. But by the spring of 1944 though he still spoke of the German Army as 'unbeatable' he had begun to realise that he had backed the losing side and when the Allies occupied Paris he found himself on the run. He fled to Germany and was soon afterwards sentenced to death in his absence by a Mannheim court of justice. In his frantic struggle to save himself when

Germany collapsed he fled by aeroplane to Spain, but after a long delay Franco's hand was forced and L. had to surrender himself into Fr. hands. After that the end was inevitable. He was again put on trial, this time in the high court in Paris, before three judges and twenty-four assessors, and found guilty on all the main charges preferred against him—conspiracy against the security of the State, collaboration with the enemy, and armed action against the Fr. resistance movement—and condemned to death (Oct. 9, 1945). On the morning of the day of his execution he tried to take his own life by poison but was not successful, and soon afterwards met his fate before a firing squad (Oct. 15), dying with calm and courage. There can be no doubt of the absolute justice of his sentence, despite his efforts to cover his traces in a detailed defence which he left for pub. after his death—for he refused to remain in the court. In this 'defence' he paid a warm tribute to Britain and her statesmen, denied that he ever hated that country, declared that the policy of collaboration was engineered at Montolieu between Hitler and Pétain, and averred that in 1941 Darlan, then in power, went to Hitler to confer on an extensive scheme for a real alliance with Germany. See *The Unpublished Diary of Pierre Laval*, 1948.

Laval, cap. of the dept. of Mayenne, France, on the Mayenne, 45 m. E. of Rennes. It possesses a castle and cathedral. It is also engaged in the manu. of linen and cloth. Pop. 32,660.

Lavalleja, inland dept. of Uruguay (cap. Minas). It is chiefly an agric. region, producing wheat, maize, linseed, and oats. Area 4819 sq. m. Pop. 115,800.

La Vallière, Françoise Louise de Lebaume Le Blanc, Duchesse de (1611-1710), famous mistress of Louis XIV. When Athénais de Montespan became a royal favourite La V. retired to a Carmelite nunnery in Paris, where she lived the remaining thirty years of her life. She pub. *Réflexions sur la miséricorde de Dieu par une dame pénitente* (1680). See G. Basset d'Auriac, *Les Deux Pénitences de Louise de la Vallière*, 1924; also lives by A. Houssaye, 1860; J. Lalr, 1891 (Eng. trans., 1908); and J. Châtel, 1912.

Laval-Montmorency, François Xavier de (1622-1708), Fr.-Canadian bishop, native of Laval. Ordained priest in 1647, he became archdeacon of Evreux, France. He went (1659) to Canada as vicar apostolic of New France and titular bishop of Petrua. His authority being contested by the archdeacon of Rouen, the pope made L. first bishop of Quebec (1674) and immediately responsible to Rome. A great educationist, L. founded the seminary of Quebec (1663), a junior seminary (1668), and an industrial school (1678). He resigned in 1688, but returned to Canada to work under his successor. Laval Univ. (Quebec) is named after him.

Laval University, Fr. Catholic institution, founded in 1852 at Quebec, Canada, and maintained by the Quebec Seminary. By a papal bull of 1876 its constitution was extended; it is under the supervision

of the cardinal prefect of the propaganda at Rome, and is controlled by a council composed of the archbishops and bishops of the prov. of Quebec. There are faculties of theology, law, medicine, and arts, and the usual degrees are conferred.

Lavater, Johann Kaspar (1741-1801), Swiss Protestant clergyman and writer, native of Zurich. After finishing his education he took orders in the Protestant Church in 1762 and was afterwards appointed to the church of St. Peter. He had before this, however, begun his career as a writer by a book of Swiss poems called *Schweizerlieder* (1767). His other works are *Aussichten in die Ewigkeit* (1768-78) and *Physiognomische Fragmente zur Beförderung der Menschenkenntnis und Menschenliebe* (1775-78), the latter being his great work on physiognomy. A selection of his works was ed. in 1913 by E. Stahelin. See studies by O. Guinand, 1924; C. Janetzky, 1928; O. Farner, 1938; and T. Hasler, 1942.

Lavaur, tn. in the dept. of Tarn, France, situated on the Agout, 25 m. E. by N. of Toulouse. It is engaged in the silk manu., and possesses a thirteenth-century cathedral. Pop. 6000.

Laveld, see LAWFELT.

LAVENDER

Lavender, name given to the various species of the labiate genus *Lavandula*, which consists of hoary, narrow-leaved, fragrant bushes, inhabiting S. Europe, the Canaries, Barbary, Egypt, Persia, and W. India. The flowers are generally blue and yield much honey to bees. *L. vera*, the common L., and *L. spica*, the spike L., are the two best known species, and yield the oil used in the manu. of L. water.

Lavenham, vil. of Suffolk, England, 10 m. S. of Bury St. Edmunds. In the sixteenth century L. was a noted woollen tn., and it is perhaps the finest example of such a tn. still existing. Its par. church is an excellent example of the late Perpendicular style; there are streets of timbered

houses and a pre-sixteenth-century guild hall, scheduled for restoration.

La Verendrye, Pierre Gaultier de (1690?-1743?), Canadian explorer, b. at Three Rivers. Serving as a soldier he was wounded at Malplaquet. Prompted by an Indian's tale, he set out for the W. with three sons in 1731, starting from Montreal and Lake Superior. He reached Lake Winnipeg, but had to return to Montreal to be examined by his financial helpers. He returned to establish Fort Rouge (Winnipeg) and Fort La Reine (Portage la Prairie). In the winter of 1738 he set out S. westwards from Fort la Reine and reached the Missouri R., suffering great hardships on the return journey. Two of his sons then began exploring alone, and on Jan. 1, 1743, sighted the Rocky Mts. To La V. and his sons is due the credit for opening up the great W. plains. See A. C. Lant, *Pathfinders of the West*, 1904, and G. Dugas, *The Canadian West, and its Discovery by De La Verendrye* (trans.), 1905.

Lavery, Sir John (1837-1941), portrait painter, native of Belfast, Ireland. Studied in Paris and, about 1881, became acquainted with Sir James Guthrie and the 'Glasgow School' of artists. He rapidly made a name for himself and received many official commissions; but it was in his smaller studies of interiors with figures, such as those of 'The House of Lords' and 'The House of Commons,' and impressions of jockeys in the weighing-room, that he showed his more characteristic powers. Among his best portraits are those of Lord Melchett and Mr. Cunningham (Graham and (for the National Gallery of Ireland) of Arthur Griffith and Michael Collins. In 1883 his 'Two Fishers' was exhibited in the New Salon, and 'The Tennis Party' (Munich Pinakothek) at the Royal Academy, 1887. Among his other best known works are 'Mother and Son,' 'White Feather,' 'A Lady in Black,' 'The Visit of Queen Victoria to the Glasgow Exhibition' (1888) is hung in the Glasgow Gallery. He was commissioned by the Free State (now Eire) Gov. to design the first currency notes in that country. Knighted, 1918. R.A., 1921. He wrote *The Life of a Painter* (autobiography, 1940). See W. S. Sparrow, *John Lavery and his World*, 1911.

La Villemarqué, Théodore Claude Henri Hersart, Vicomte de (1815-95), Fr. scholar, b. at Quimperle. One of his earliest works was a collection of Breton songs, *Barzaz Breiz*, 1839. Among his other works are *contes populaires des anciens Bretons* (1842); *Poèmes des bardes bretons* (1850); and *Poèmes bretons du moyen-âge* (1850). He also ed. *Dictionnaire français-breton* (1857).

Lavinium, old Rom. tn. of Latium, Italy, 16 m. S.E. of Rome. In the time of the Emperor Trajan Laurentum was united with L. The modern tn. on the site is called Pratica.

Lavisse, Ernest (1842-1922), Fr. historian. He was prof. of modern hist. at Paris in 1888 and elected a member of the Fr. Academy in 1892. From 1904 to 1919 he was director of the École

normale supérieure. Among his works are *Études sur l'histoire de la Prusse* (1879); *Trois empereurs d'Allemagne* (1888); *La Jeunesse du grand Frédéric* (1891); *Histoire de France depuis les origines jusqu'à la Révolution* (1900); and in collaboration with A. N. Rambaud, *Histoire générale du V^e siècle à nos jours* (1893-1901).

Lavoisier, Antoine Laurent (1743-94), Fr. chemist. He was b. in Paris of a wealthy family, his father being an advocate and his mother the daughter of an advocate; but he was brought up by his maternal grandmother. He was educated at the Mazarin College, then notable for its excellent teaching in science. At

ANTOINE LAURENT LAVOISIER

Engraving after a painting by J. L. David.

first he was most drawn to mathematics and meteorology and assisted his geological teacher, Guettard, in a survey for a geological map of France. Later he carried out much work for the Fr. Gov. In 1788 he became a member of the Royal Academy of Science, though he had not yet done any scientific work of real importance, and shortly afterwards he was appointed one of the *fermiers-général*s and commissioner of powder to the Fr. Gov. His chief theories and discoveries relate to the nature of the atmosphere and the process of combustion; he showed that combustion was the union of the burning substance with atmospheric oxygen. L. also discovered the composition of water independently, or partly so, of Cavendish and Watt, and to him is due in large measure the modern system of chemical nomenclature. In his famous work, *Traité élémentaire de chimie* (1789) he gave chem. its modern form, and indeed his great services to chem. have tended to obscure his achievements in other fields; for living in the age of the Encyclopédistes his natural ambition and curiosity took him into many fields of inquiry, and the

six great vols. of his writings, collected under the auspices of the Royal Academy of Science between 1864 and 1893, are largely devoted to his many investigations in applied science; and the fact of their pub. by the academy illustrates the prevalent and doubtless sound idea that it was a matter of public importance to have existing knowledge summarised and rationalised for the public benefit. In his researches in chem. he soon hit on combustion as the outstanding problem to be solved; and the explanation that combustion and calcination consist in the union of the combustible or metal with oxygen, though strongly opposed by older chemists, soon gained acceptance after the pub. of J.'s *Traité* and no less rapidly in Germany, the home of the old phlogiston doctrine. L. explains the appearance of heat and light, or fire, in combustion, by assuming the existence of imponderable elements, caloric and light, which bore a strong resemblance to the old phlogiston. Chemists had universally accepted a theory that things burn because they contain inflammable principle called phlogiston. L.'s experiments showed him that phosphorus and sulphur increased in weight during burning. The experiment of Cavendish in the formation of water from hydrogen and oxygen (pub. 1781) enabled L. to complete his so-called anti-phlogistic theory and played an important part in leading to its acceptance. Cavendish's discovery in 1783 that water was formed when inflammable air from metals was burnt with oxygen gave L. the clue he needed and he named the inflammable air hydrogen, or water-producer. Thus if the vital clue came from England--from Priestley and Cavendish in particular--it was L. who interpreted their work and grasped its wider implications. L.'s surmise that the earths are oxides of unknown metals received striking confirmation in Davy's isolation of the alkali and alkaline earth metals in 1807-8. During the revolution L. continued to work for the State, but he was soon attacked by Marat, whose theory of fire had been unfavourably criticised by L. In the end no more could he charge against him than that he had, as a *fermier*, adulterated tobacco with water, and on that petty accusation the great Frenchman was condemned and, on May 8, 1791, guillotined. In 1795 his property, previously confiscated, was restored to Mme L.--it was in 1791 that he married the beautiful and accomplished Marie Anne Paulze, daughter of a member of the *ferme* and then only fourteen. She helped him in his researches and the illustrations in his *Traité* are from her drawings. Some time after his death she married the Amer. scientist, Benjamin Rumford, but this second marriage proved unhappy. See lives by E. Grimaux, 1895; J. A. Cochrane, 1931; and D. McKie, 1938.

Lavoro, Terra di, part of Italy now forming the prov. of Caserta (q.v.).

Lavos, tn. in Beira, Portugal, on the Mondego R., and about 24 m. S.W. of Coimbra. Pop. 6000.

Law, Andrew Bonar (1858-1923), Brit. Conservative statesman; b. Sept. 16 in New Brunswick, Canada; son of Rev. James L., Presbyterian minister. Educated New Brunswick; Gilbertfield School, Hamilton; High School, Glasgow. Entered iron merchant's business in Glasgow. At one time chairman of the Glasgow Iron Trade Association. In 1900 retired from business and entered Parliament as member for the Blackfriars div. of Glasgow. From the first he was remarkable for his ability to speak without notes. In 1902 he became parl. secretary to the board of trade. He was the most enthusiastic supporter of 'Tariff Reform' left in the industry when Joseph Chamberlain resigned. Defeated in Glasgow, 1906, he was returned almost immediately afterwards for Dulwich. At the second general election of 1910 he deserted Dulwich and lost at N.W. Manchester. From 1911 till 1918 he represented Borth. On Balfour's resignation of the Conservative leadership, 1911, L. was selected to succeed him as the only means of reconciling the supporters of Walter Long with those of Austen Chamberlain. Before the First World War he was one of those who advocated resistance by Ulster to Home Rule. In 1915 he joined Asquith's War Coalition as colonial secretary, and he carried the Compulsory Service Bill through the Commons. He originated and took part in the Economic Conference of the Allies, 1916, and he supported Lloyd George for the premiership. In 1916-18 he was chancellor of the exchequer, member of the War Cabinet, and leader of the Commons. In 1917 he announced the gov.'s acceptance of the principle of imperial preference. He signed the treaty of Versailles, 1919, and had much to do with the shaping of the last Irish Home Rule Act (which never operated). From 1918 until his death he represented Central Glasgow. Lord privy seal, 1919-21; taken ill, resigned. Recuperated, and, when Coalition fell in Oct. 1922, became Prime Minister. Failing health caused him to resign May 20 following. He d. in London, Oct. 30, and was buried in Westminster Abbey.

Law, Edmund (1703-87), bishop of Carlisle. In 1743 he became archdeacon of Carlisle, and returned to Cambridge in 1756 as master of Peterhouse; he was appointed librarian to the univ. in 1760 and Knightbridge prof. of moral philosophy in 1761. He became bishop of Carlisle in 1768 and was an earnest student of Locke, whose works he ed. in 1777. His own most important philosophical work is *Considerations on the State of the World with regard to the Theory of Religion* (1745).

Law, Edward, see ELLENBOROUGH, BARON.

Law, John (1671-1729), originator of the Mississippi scheme, was b. at Edinburgh. Having killed his antagonist in a duel, he fled to Holland in 1694, where he studied banking. After a few years returned to Scotland and in 1700 proposed to the Scottish Parliament a system of paper currency. In 1716 he set up a

private bank in Paris, and soon afterwards persuaded the regent to found a national bank, which issued banknotes and raised the credit of the gov. His Mississippi scheme, which was at first enormously popular, proved a disastrous failure and L fled from Paris in 1720 and died in poverty at Venice. He wrote *Money and Trade* (1705) and *Lettres sur le nouveau système des finances* (1720). See *Thurs*, *Lau et son système des finances* 1826. A. W. Winstanley, *John Law of Lauriston* 1907, G. Goudard, *La vie de Curieuse Vie de Law* 1927, and H. Montgomerie Hyde, *The Amazing Story of John Law*, 1948.

Law, William (1686-1761) Eng. divine b. at Kingscliffe in Northamptonshire. In 1711 he was ordained and elected fellow of Emmanuel College, Cambridge, but on the accession of George I. being unable to take the oath of allegiance he forfeited his fellowship and became a nonjuror. About 1721 he became private tutor to Edward Gibbon, father of the historian. After the death of Edward Gibbon (1757) L. retired to Kingscliffe where he was joined by Mrs. Hutchinson a widow and Miss Heaster Gibbon who devoted themselves to charitable works and holy meditation. L. was a keen dialectician. His controversial writings include *Three Letters to the Bishop of Bathurst* (1717), *Remarks on Manducell's Faith of the Jews* (1723) (republished by J. D. Munk 1844), and *Case of Isaac* (1752) written in reply to Tindal's *Christianity as old as the Creation*. His *Treatise of Christian Perfection* (1726) and the *Serious Call to a Devout and Holy Life* (1721) which had a profound influence on the leaders of the Evangelical revival and moved Dr. Johnson and Lord Lyttelton and Gibbon, still remain the most popular of L.'s works. The influence of Jacob Boehme is seen in the mysticism of his later works *The Spirit of Prayer* (1741), 1752, *The Way to Divine Knowledge* (1752), and *The Spirit of Love* (1752, 1754). A list of his works was pub. in 9 vols. (1772-76) and an ed. by G. B. Morgan in 1893. See C. Walton, *Notes and Materials for a Complete Biography of W. Law*, 1818, J. H. Overton *William Law: Nonjuror and Mystic*, 1881, A. Whyte, *Character and Characteristics of William Law*, 1894, K. Minkner *Die Stufenfolge des mystischen Lebens bei William Law* 1939, and H. Pallen *William Law: a Neglected Master of English Prose*, 1943.

Law. Two ideas may be said to be connoted by the term L. (1) command (2) order. The former is implicit in the body of principles observed and acted upon by the State in the administration of justice. The Eng. school of analytical jurists of which Austin was the head, defines positive L. as a command imposed upon an inferior by a superior. Modern thought regarding sovereignty, as inherent in the people and gov. as resting purely on consent, denies the validity of this definition, and perhaps the following definition by Prof. Holland is more in accordance with fact. 'Law in general is the sum total of those general

rules of action as are enforced by a sovereign political authority' (see on this *Legislation, Jurisprudence*). The continental jurists regard positive L. (*positus* i.e. settled by man) as only a narrow species of L. proper and when talking of L. in the abstract devote into selective conceptions of rights and justice, giving to morality a positive force disguised under the name of natural L. The connotation of order is uppermost in ancient nomology (Gk. νόμος, law). Classical jurists and philosophers, observing an inevitable sequence in the operations of nature, referred that sequence to the will of some anthropomorphic deity, then later when they abandoned the notion of a supreme lawgiver to activities of a universe moving according to L. They either recognized no separation of varied phenomena into physics, theology, ethics and jurisprudence, but divided everything to be of divine contrivance, the later distinguished between sciences relating to external nature and those relating to human activities, but L. was the common term, denoting in the one the method of the phenomena of the universe, in the other the abstract idea of rules regulating the actions of mankind.

In the development of a system of L. much was achieved by medieval lawyers. As far as England and N. Europe were concerned, Roman civilization at the beginning of the Middle Ages lay in ruins. Successive waves of barbarians had introduced new races whose invasions had brought social and political collapse and economic chaos. Yet by the close of the Middle Ages L. had become a science with a massive literature, a precise technique and a succession of eminent men all over Europe who devoted great skill to the solution of legal problems. This great revolution which gave us rational L. instead of the primitive folklore which characterized the Dark Ages, was for the most part a slow and gradual process, although sometimes a decisive step was taken as for example, when Pope Innocent III by a single decree in 1215 condemned the use of trial by ordeal. One of the chief means by which medieval lawyers achieved the new rational outlook was through the Church, with its deep roots in the Roman tradition, particularly when the full heritage of Roman L. came to the hands of medieval scholars with the recovery of the text of the *Institutes, Digests and Novels* of Justinian. In some places there was an unhesitating replacement of crude old L. by the new scientific Roman learning, sometimes the native system as in England, resisted so drastic and hasty a remedy, but even unromanised England, like other countries, regarded her own L. as a rational study, to be expressed in precise technical language, in orderly treatises fit to take a place beside those of logicians and philosophers, as was recognised by Bracton (qv). Another means by which L. was developed by the lawyers of the Middle Ages was through custom, and in no sphere of L. was this more evident than in the L. merchant (qv). In making L. rational,

therefore, the medieval lawyer based it firmly in the midst of the reasonable order of things, which had all been designed for an end. That philosophy of L. was trans. into personal and imperative terms by religion, and from the Rom. texts these lawyers constructed systems of L. which prevail to-day, not only in continental Europe, but also in Scotland and S. Africa, in Japan and Lat. America' (T. F. T. Plucknett).

L., in the sense of a general rule of external human action enforced by a sovereign political authority, and enforced by 'sanctions,' has its source in legislation by statute or other ordinance of the sovereign authority, or in precedent (Bentham's 'judge-made' L.). Equity is, in effect, a form of L. by judicial decisions (*see* EQUITY). The 'Common Law' of England is the resultant of the development of a body of principles based on past decisions in particular cases (*see* COMMON LAW). The volume of Statute Law in Great Britain, as in other countries, has grown enormously in recent years, especially in the shape of comprehensive codifying Acts, and is supplemented constantly by orders-in-council and by-laws.

A practical div. of the field covered by the *corpus juris* of a state is that into (1) private L., further divided into civil L. and criminal L. (for civil L. *see* ROMAN LAW) which, in their turn, are subdivided into substantive L., or rights and duties, and 'procedure' (adjective L.), or remedies; and there are still other divs. into 'property' (real and personal), 'obligations' (contractual relationships, torts or actionable wrongs, etc.), and 'status' (e.g. the L. of husband and wife, master and servant, etc.); and (2) public L.—i.e. constitutional L. and administrative L. By public L. is meant not the whole of the L. that is applicable to the state and to its relations with its subjects, but only those parts of it which are different from the private L. concerning the subjects and their relations to each other. Administrative L. is concerned with the forms and instruments in and through which the lower ranges of governmental activity manifest themselves.

Most questions which arise for determination in a L. court are questions of L. or of fact, meaning by the former a question as to what is the L. on a particular point: questions of fact, where there is a jury, are for its decision; questions of L. are for the court to decide. *See also* INTERNATIONAL LAW; JURISPRUDENCE; JUS GENTIUM.

Law, Degrees in, *see under* LEGAL EDUCATION.

Lawman, *see* LAYMAN.

Lawes, Henry (c. 1586-1662), Eng. composer, b. at Dilton, Wiltshire, was a pupil of Coperario, and in 1626 became a gentleman of the chapel. In 1633 he, with Simon Ives, wrote the music for a masque which was played at Whitehall, and in the next year composed the music for Milton's *Comus*. He wrote, among other works, *Choice Psalms put into Music for Three Voices* (1648).

Lawes, Sir John Bennet (1814-1900), Eng. agriculturist, was educated at Eton and Brasenose College, Oxford, and after spending some time in the study of chemistry began in 1831 a regular system of agricultural experiments. These he carried on at Rothamsted, on the family estate. He was assisted in his efforts, both literary and agricultural, by Dr. Gilbert. Their joint work on artificial manures revolutionised agric. practices, and has been carried on since their time at Rothamsted, which is now a state experimental station.

Lawfeldt, or **Laveld**, vil. of Belgium situated near Maastricht, in the prov. of Limbourg. Here in 1747 the duke of Cumberland was defeated by the Fr.

Law Lords, those members of the Brit. House of Lords who act as lords of appeal. The body comprises nine lords of appeal in ordinary, with a salary of £6000 a year, either former judges or law officers of the Crown. To these are joined the lord chancellor and any peers who have formerly held high judicial office or have been lord chancellor. The nine ordinary lords are made peers for life on appointment. *See* WENSLEYDALE PEERAGE.

Law Merchant. The L. M., or *Lex mercatoria*, was developed in the Rom. Empire and was that part of the Law of Nations (*see* JUS GENTIUM) which regulated the affairs of commerce. In England it was largely rooted in mercantile customs and administered by special courts outside the jurisdiction of the common law. Under the celebrated Chief Justice Lord Mansfield (q.v.) the special courts gave place to the common law courts, and the floating customs of the L. M. were crystallised into a system and incorporated into the body of the common law. Eng. mercantile law (the term L. M. is never used at the present day) no longer pays any regard to international customs, relying solely on Eng. trade usage. Any fresh custom which satisfies certain conditions will become part of the law, e.g. certain instruments may by custom become negotiable (*see* CUSTOMS and MERCANTILE LAW).

Lawn, a fine lawn (q.v.).

Lawn, close-mown, turf-covered plot, usually in a garden. The Eng. climate is specially favourable for the cultivation of a good L. Grass has now quite superseded the canonilla Ls. popular in Shakespeare's day. Though the seed is

THE SERVICE

The first photograph shows the correct sideways position, the flexing of the knees, and the transference of weight to the forward foot as the racket swings towards the ball. The second photograph shows the moment of impact in which the weight of the server still completely on the forward foot.

expensive camomile is very attractive and excels grass on poor soils and in drought. A grass L may be made by sowing seed in Sept or April or by laying turf between Oct and March. By laying turves evenly and closely on a firm bed and beating them thoroughly a fine L can be had in a few weeks. To make a L from seed naturally takes considerably longer. The land should be perfectly level and be properly drained and it is most important that the soil be well prepared. It is best to do the work early in Sept., first digging the whole plot, then applying a dressing of manure, humus or hop manure and crumbling and treading the soil until it is quite fine. The seed should be sown thickly—1½ lb or even more to the square rod, then lightly raked and protected from birds. The best possible grass seed should be obtained but even so weeds are likely to appear and it is best to remove them at once. The prin rolling should be done in spring and mowing will probably be needed at least once a week from April to Oct. Young fine grass can be encouraged by feeding with a good complete L manure during showery weather every few weeks. See L. G. Lewis, *Lurf*, 1949.

Lawn Tennis is one of the most popular games of the twentieth century. It originated from such games as racquets and tennis, the idea being to play the game on any large level piece of turf, without the need of a costly built wall. The game is played by two or four persons with racquets and ball across a net stretched over

a court. It is in out of door summer game and may be played on a grass lawn, on asphalt, cinders or gravel. In winter the game may be played indoors on a covered court. The court must be kept perfectly smooth and firm and is marked with right hand and left hand courts and a service line. A court should be 78 ft long and 36 ft wide for a double game, 27 ft for a single handed game. The height of the net in the centre is 3 ft. The ball is not less than 2½ in in diameter nor more than 2 in and not less than 2 oz in weight nor more than 2 oz. In a single handed game the server must stand behind the base line, beginning the game from the right hand court and afterwards serving from alternate courts. He must serve the ball diagonally across the court so that it falls within his opponent's service court or upon the lines enclosing the service court. If the ball touches the net, the server otherwise fulfilling the above conditions, it is counted as a 'let' and the server serves again from the same court. If the server fails to fulfil any of the above conditions the service is a 'fault'. Two faults count a point to the opponent. If the first service however, fulfils the required conditions it 'counts', the server may not serve again and his opponent or the 'striker-out' must hit back the ball after the first bounce. Afterwards the ball may be volleyed on either side, or it may be hit after it has touched the ground once. If either player fails to hit the ball over the net, or only hits it after the second bounce, or hits it

FORWARD DRIVE AND BACKHAND VOLLEY

The first photograph shows the correct position of the feet and drive horizontal racket toes point to the sidelines and the shoulder is the net. The low backhand volley shows the knees well flexed and the racket held above wrist level. Photographs by courtesy of the Dunlop Sports Company

so that it falls outside his opponent's bounding lines his opponent wins a point. In a four handed game the service is taken alternately by the two opponents who keep to the same side of the court to receive the service. The service is arranged so that each player serves one game out of four, thus if A and B play C and D the order of service is A C B D.

The Method of Scoring. A player on winning his first point counts 1; on his second 30; on his third 40; if he wins a fifth stroke before his opponent has reached further than 30 the game is his. If however both players have won three strokes the score is 'deuce'. Whoever wins the next stroke is scored 'advantage'. If he is giving 'advantage' out if he is the striker out. The game is not completed until one player has won two points in succession after 'deuce'. The player who first wins six games wins a set. The increased speed of play is one of the most marked developments of L. T. in recent years. There are some L. T. professionals who are chiefly cricketers, many of whom belong to Queen's Club London but L. T. has remained almost entirely in amateur game. The British L. T. championships are played off at Wimbledon at the All England L. T. and Croquet Club which was founded towards the end of the last century. This famous club still keeps its status as a private club, although it has moved and enlarged its grounds.

Service. The server stands to the right or left of the centre line (according into which court he is serving). The ball should be thrown four or five feet up and about one foot in front of the hitting shoulder. The hit should then be made with arm and racket at full stretch, care being taken that the foot opposite to the striking arm is behind the base line and in contact with the ground until the hit is completed. The perfect service combines high speed with accuracy of placing.

Strikes. Other basic strokes are the forehand and backhand drive and the forehand and backhand low volley. In the forehand drive the hitting arm is extended fully, in line with the shoulder and swung across the body over the opposite shoulder. The weight should be allowed to follow it naturally without muscular tension. To avoid this it is well slightly to bend both knees rising as the weight carries one on to the balls of the feet. In the backhand drive the hitting arm is carried across the body upwards towards the opposite shoulder and back again across the line of the stomach but rising to finish level with the hitting shoulder. Both forehand and backhand low volleys are made in a more or less crouching position. The latter is simply the reverse of the former, the hitting arm is not swung across the body and there is little movement of the feet. For particulars of advanced strokes (arm spin, chop, etc.) the bibliography of the game should be consulted.

Tactics will largely depend upon the class of game played, men's or women's singles or doubles or mixed doubles. The following three general rules however, are indispensable to the successful player at all times and in all circumstances. (1) Learn to attack with an all court game, relying upon winning shots rather than upon the mistakes of an opponent. (2) Try to find out as quickly as possible an opponent's peculiarities, what are his best and weakest shots, and generally what kind of game needs to be played in order to defeat his efforts. (3) Concentration upon the game from start to finish to the exclusion of all distractions and annoyances. Broadly speaking, in the singles game the aim is to secure a good length drive. This not only is more difficult to return, but gives one time to come up to the volleying position from which it is easiest to produce decisive shots. In

doubles the return of service is probably the most important shot.

Practice.—A practice wall with a net-high line chalked or painted on it is an excellent means of improving ground shots and teaching correct stroke-making. For practice of service much benefit can be derived from 15 min. serving from alternate ends into alternate courts of a vacant court. A player may also use a friendly match to improve his defects rather than with a view to beating his opponent; and watching an expert player will perhaps prove the best of all methods of learning the game.

The winners of the All-England Championship since the opening year (1877) are S. W. Gore, 1877; P. F. Hadow, 1878; J. T. Hartley, 1879-80; W. Renshaw, 1881-86, 1888-89; H. F. Lawford, 1887; W. J. Hamilton, 1890; W. Baddeley, 1891-92, 1895; J. Pim, 1893-94; H. S. Mahony, 1896; R. F. Doherty, 1897-1900; A. W. Gore, 1901, 1908-9; H. L. Doherty, 1902-6; N. E. Brookes, 1907, 1914; A. F. Wilding, 1910-13; (no competition 1915-1918); G. L. Patterson (Australia), 1919, 1922; W. T. Tilden (U.S.A.), 1920-21, 1930; W. M. Johnston, 1923; J. Borotra (France), 1924, 1926; R. Lacoste (France), 1925, 1928; H. Cochet (France), 1927, 1929; S. B. Wood (U.S.A.), walk-over, 1931; H. Ellsworth Vines (U.S.A.), 1932; J. Crawford (Australia), 1933; F. J. Perry, 1934-36; J. D. Budge (U.S.A.), 1937-38; R. L. Riggs (U.S.A.), 1939; Y. Petra (France), 1946; J. Kramer (U.S.A.), 1947; R. Falkenburg (U.S.A.), 1948; F. Schroeder (U.S.A.), 1949.

Women Champions.—Miss Maud Watson, 1884-85; Miss Bridget, 1886; Miss L. Dod, 1887-88, 1891-93; Mrs. Hildard, 1889, 1894, 1897, 1899, 1900; Miss Rice, 1890; Miss C. Cooper, 1895-96, 1898; Mrs. Sterry, 1901, 1908; Miss M. E. Robb, 1902; Miss D. K. Douglass, 1903-4, 1906; Miss M. Sutton, 1905, 1907; Miss D. Boothby, 1909; Mrs. Lambert Chambers, 1910-11, 1913-14; Mrs. Larcombe, 1912; (no competition 1915-18); Mlle Lenglen (France), 1919-23, 1925; Mrs. L. A. Godfree, 1924, 1926; Miss H. Wills (U.S.A.), 1927-30; Frl. O. Aussem (Germany), 1931; Mrs. H. Wills Moody (Miss H. Wills), 1932-33, 1935, 1938; Miss D. Round, 1934, 1937; Miss H. Jacobs (U.S.A.), 1936; Miss A. Marble (U.S.A.), 1939; Miss P. Betz (U.S.A.), 1946; Miss M. Osborne (U.S.A.), 1947; Miss L. Brough (U.S.A.), 1948-49.

Men's Doubles. (from 1897).—R. F. Doherty and H. L. Doherty, 1897-1901, 1903-5; S. H. Smith and F. L. Riseley, 1902, 1906; N. E. Brookes and A. F. Wilding, 1907; A. F. Brookes and M. J. G. Ritchie, 1908; A. W. Gore and H. Roper Barrett, 1909; A. F. Wilding and M. J. G. Ritchie, 1910; M. Decugis and A. H. Gobert (France), 1911; H. Roper Barrett and C. P. Dixon, 1912-13; N. E. Brookes and A. F. Wilding, 1914; (no competition 1915-18); R. V. Thomas and R. O'Hara Wood, 1919; R. N. Williams and C. S. Garland, 1920; R. Lycett and M. Woosnam, 1921; R. Lycett and J. O. Anderson, 1922-23; V. Richards and F. T. Hunter

(U.S.A.), 1924; J. Borotra and R. Lacoste (France), 1925; H. Cochet and J. Brugnon (France), 1926; W. T. Tilden and F. T. Hunter (U.S.A.), 1927; H. Cochet and J. Brugnon (France), 1928; W. Allison and J. van Ryan (U.S.A.), 1929; W. Allison and J. van Ryan (U.S.A.), 1930; G. M. Lott and J. van Ryan (U.S.A.), 1931; J. Borotra and J. Brugnon (France), 1932-33; G. Lott and L. Stoeffen (U.S.A.), 1934; J. H. Crawford and A. K. Quist (Australia), 1935; G. P. Hughes and R. Tuckey, 1936; J. D. Budge and G. Mako (U.S.A.), 1937-38; E. T. Cooke and R. L. Riggs (U.S.A.), 1939; T. Brown and J. Kramer (U.S.A.), 1946; R. Falkenburg and J. Kramer (U.S.A.), 1947; J. E. Brownlie and F. Sedgman (Australia), 1948; R. Gonzales and F. Parker (U.S.A.), 1949.

Women's Doubles (from 1919).—Mlle Lenglen and Miss Ryan (1919-23, 1925; Mrs. Wightman and Miss H. Wills, 1924; Miss Ryan and Miss M. K. Browne, 1926; Miss Ryan and Miss H. Wills, 1927; Mrs. M. Watson and Miss P. Sanders, 1928; Mrs. M. Watson and Mrs. Mitchell, 1929; Miss J. Fry and Miss E. H. Harvey, 1930; Mrs. D. C. Shepherd-Barron and Miss P. E. Mudford, 1931; Mme F. Mathieu and Miss Ryan, 1932-34; Miss Stammers and Miss James, 1935; Miss Jacobs and Miss Babcock, 1936; Mme F. Mathieu and Miss A. M. Yorke, 1937; Mrs. S. P. Fabian and Miss A. Marble, 1938-39; Miss L. Brough and Miss M. E. Osborne, 1940; Mrs. P. C. Todd and Miss D. Hurt, 1947; Miss L. Brough and Mrs. Dupont (Miss M. E. Osborne), 1948-49.

Other famous L. T. competitions are the Davis Cup (see DAVIS CUP) and the Wightman Cup, which is a similar competition for women, the Amer. championships, and the Fr. championships.

Lawrence, St. (d. A.D. 258), early Christian martyr. He is said to have been b. at Huesca in Spain, and in the pontificate of Sixtus I. he became a deacon at Rome, and was called upon by Valerian to deliver up the church treasures. He brought forward the poor and the sick, his treasures, and was condemned to suffer death by burning on a gridiron. His feast day is Aug. 10. See ESCORTAL.

Lawrence, David Herbert (1885-1930), Eng. novelist; b. Sept. 11 at Eastwood, Nottingham; son of a coal miner. He went to Nottingham High School with a board-school scholarship and then to the local Univ. College. He became a clerk and later a schoolmaster. Coming to London, he wrote hist. books as *Lawrence II. Davidson*. His first novel was *The White Peacock* (1911). L.'s mother d. in the year of its pub., and this marked a crisis in his life. The demands of love which his mother made upon him and which he returned influenced his whole life and is the theme especially of his third

novel, *Sons and Lovers* (1913). L. describes man as a 'thought-adventurer,' and his novels and poems are records of his intense emotional experiences and thought-adventures. He is thus always an autobiographical writer. With *Sons and Lovers* he achieved fame, which, with *The Rainbow* (1915), was unjustly turned to notoriety. That book parallels the beautiful and penetrating series of poems, *Look! We Have Come Through* (1917, written between 1911 and 1915). L. was among the first six poets of the twentieth century, but he admittedly paid no attention to form. He was not concerned with art so much as with discovering a guiding authority for his own life and that of his generation whose difficulties from an ill-fitting morality he saw clearly. In *Fantasia of the Unconscious* (1922) he formulated the theories implicit in his novels. L. travelled much, finding sympathy and then disillusion. His intuition enabled him to penetrate and express the souls of the places and people he encountered. His travel essays show extraordinary descriptive powers: *Turkey in Italy* (1916); *Sea and Sandia* (1921); and *Mornings in Mexico* (1927). His sympathy with the traditions of the Aztec civilization encouraged him to found an ideal community in Mexico, while in his Mexican novel, *The Plumed Serpent* (1926), he expounds a mystical and yet physically satisfying religion. In his last works, *Lady Chatterley's Lover* (1928) and *The Escaped Cock* (1930), he returned without mysticism but with tenderness to the themes of human and divine love.

His primitivism, which led him to ignore character as conceived consistently and in a certain moral scheme, was apparently suggested by Maimon's physiology of matter, and therefore had its counterpart in the futurist movement which later developed into open Fascism. Hence the amorphism and incoherence of such novels as *The Rainbow* and *Women in Love*, the characters in which seem to belong to a sub-human world, having but little relation to true life. Even in the more coherent *Lady Chatterley's Lover* the characters exist solely as symbols of fecundity or otherwise, the proletarian alone offering vitality and rejuvenation; the fact being that L., struck by the corruption of capitalist society in its degenerate phase, concluded that all civilization was equally false. He rejected the intellect and, in reverting to what is irrational, superstitious, and rudimentary in man, himself became an embodiment of the very degeneration he sought to escape—a latter-day Baptist and a Noble Savage culling upon the world to repent of its intellectual pretensions and put its trust in the blood. His 'Fascist' sympathies are obvious in his Mexican story, *The Plumed Serpent*, in which the chief character, Kate, seems to represent reaction from the dry-rot of the world's sterility; but L.'s attribution of blood-lust to Mexican Indians is as remote from truth as are his characters. Although his genius as a lyrical rhapsodist and as a writer of peculiar sensibility is undoubted, much of

his work is marred by a sensationalism and excess that are usually associated only with vulgar art; while the novel, as he handles it, degenerates into formulae and an unrestrained flow. But this is really explained by the fact that L., far from solving his intellectual problems by presenting an objective picture, hurled himself at his task, thinking aloud as he writes so that, as has been well said, 'his battle with himself takes place in public and is itself the novel.'

D. H. Lawrence, 1931; *A. Huxley* (ed.), *The Letters of D. H. Lawrence*, 1932; *K. Merrild, Poet and Two Painters*, 1938; and *H. Kingsmill, D. H. Lawrence*, 1938; also a selection (Everyman's Library), 1939. L.'s oil-paintings have been reproduced and pub. with an introductory essay by L. (1929).

Lawrence, Ernest Orlando (b. 1901), Amer. physicist. Educated at S. Dakota, Minnesota, Chicago, and Yale univs. National research fellow, Yale, 1925-27. Associate prof. and prof. of physics, univ. of California, 1928. Invented the cyclotron (q.v.) (1931), by means of which he made researches into the structure of the atom, produced artificial radioactivity, and brought about the transmutation of certain elements; applied radiations in the study of problems in biology and medicine. Made director of radiation laboratory, 1936, and fellow of Amer. Association for the Advancement of Science and of the Amer. Physical Society. Awarded Elliott Cresson medal of the Franklin Institute, 1937; Comstock prize of the National Academy of Science, 1937; Hughes medal, Royal Society (of Britain), 1937; Research Corporation prize, 1937; and the Nobel prize for physics, 1938.

Lawrence, Mrs. Gerald, see **BRAITHWAITE, LILIAN**.

Lawrence, Sir Henry Montgomery (1806-1857), Brit. soldier and statesman, elder brother of the first Lord L., was b. at Matara in Ceylon. He joined the Bengal Artillery at Dum-Dum in 1823, and took part in the first Burmese war (1823), the first Afghan war (1838), and the Sikh wars (1845, 1849). In 1842 he was appointed resident at the court of Nepal, and about this time founded his famous philanthropic institutions, the L. military asylums, in the Punjab, Rajputana, and Madras. He prophesied the Indian mutiny in two articles, pub. in 1856, and it was through his forethought that the Lucknow residency withstood the besiegers for four months. He himself was mortally wounded by a shell on July 2, 1857, and d. two days later. See lives by Sir H. B. Edwards and H. Morville, 1872; J. J. M. Innes, 1898; and J. L. Morrison, 1934.

Lawrence, James (1781-1812), Amer. naval captain, b. at Burlington, New Jersey. When in command of the *Hornet* he captured the Brit. ship *Pearcock*, but as commander of the *Chesapeake* was defeated by the *Shannon* and d. of his wounds.

Lawrence, John Laird Mair, first Baron (1811-79), viceroy and governor-general of India, was b. at Richmond, Yorkshire. He entered the Indian civil service in 1829, and acted as magistrate and land revenue collector in the neighbourhood of Delhi. When the news of the mutiny reached him he raised a new army of 59,000 men, and after a siege of three months captured Delhi. On his return to England (1858) the 'saviour of India' was created a baronet and granted a life pension of £2000 a year. He succeeded Lord Elgin as governor-general of India (1863), and was promoted to the House of Lords in 1869. See lives by B. Smith,

1885; Sir R. Temple, 1889; and Sir C. Alchison, 1892.

Lawrence, Mrs. Pethick-, see **PETHICK-LAWRENCE, MRS.**

Lawrence, Sir Thomas (1769-1830), Eng. portrait painter, b. at Bristol. He entered the Royal Academy in 1787, and was elected an associate in 1791 and a full member in 1798. He succeeded Reynolds as prin. painter to the king (1792), and became the fashionable portrait painter of his age. From 1820 till his death he was president of the Royal Academy. A representative collection of his work may be seen in the Waterloo Gallery, Windsor. See D. E. Williams, *Life and Correspondence of Sir T. Lawrence*, 1831; R. Gower, *Sir T. Lawrence*, 1900; and H. Layard, *Sir Thomas Lawrence's Letter Bag*, 1906.

Lawrence, Thomas Edward (1888-1935), Brit. oriental traveller and soldier, popularly known as 'Lawrence of Arabia'; b. at Tremadoc, Carnarvonshire. His father, described as 'a sportsman,' came from Meath, and had five children, all boys. L.'s childhood was spent in Jersey, Scotland, France (where, though no Catholic, he attended a Jesuit school), Hampshire, and Oxford. While attending City of Oxford School, he cycled for archaeological purposes. Graduated from Jesus College, where he became acquainted with D. G. Hogarth (q.v.). In 1909 he first visited Syria and narrowly escaped being murdered while tramping. Obtaining a travelling scholarship at Magdalen, he went excavating with Hogarth at Carchemish, and in Egypt with Petrie in 1910. He was mostly in the E. until the First World War began. When Turkey entered the war L. was sent to Cairo to assist Hogarth in the Arab Bureau; and in Oct. 1916 he began, at Jiddah, his extraordinarily successful activities in the insurgent Arab cause. He gathered recruits from beyond Haalbek, and, returning with them, fought a battle near Ma'an, Aug. 1917. He was made a lieutenant-colonel attached to the staff of Sir F. Wingate, and in 1918 transferred to that of Allenby. He was the channel through which flowed the Brit. subsidies that kept the Arabs in the field, being specially intimate with Faisal (q.v.); and he became famous as a wrecker of Turkish railway trains. He figured at the peace conference; but, because he thought the Arab interest neglected there, in 1922 he renounced rank, together with the surname Lawrence—which had been assumed by his father—took (by deed-poll) the name of Shaw, and joined the air force as a craft-man. He d. as the result of a motor-cycle accident. His complex literary gifts were displayed in *Seven Pillars of Wisdom* (i.e. Cairo, Smyrna, Constantinople, Beirut, Aleppo, Damascus, and Medina), issued to subscribers only in 1926. An abridgment, called *Renolt in the Desert*, was pub. 1927; *The Odyssey of Homer* in 1935; and *Crusader Castles* in 1936. His letters were ed. by D. Garnett in 1938. See A. W. Lawrence (ed.), *Lawrence by his Friends*, 1937; E. Graves and B. H. Liddell Hart, *T. E. Lawrence*

to his *Biographers*, 1941; and J. Boussard, *Le Serret du colonel Lawrence*, 1940; also lives by L. Thomas, 1924; R. Graves, 1927; H. H. Liddell Hart, 1934; V. Richards, 1936; and J. T. Gorman, 1940.

Lawrence, Sir William (1783-1867), Eng. surgeon, b. at Cirencester. He became demonstrator in anatomy at St. Bartholomew's Hospital (1801), member of the College of Surgeons (1805), F.R.S. (1813), assistant-surgeon (1813), surgeon (1824-1866), and lecturer on surgery (1829-62) at St. Bartholomew's. Baronet, 1867. His most important works are *Treatment of Hernia* (1800); *On the Venereal Diseases of the Eye* (1831); and lectures on anatomy (1816 and 1819), and on surgery (1863).

Lawrence: 1. Co. seat of Essex co., Massachusetts, U.S.A., on both sides of the Merrimac R., 26 m. to the N. of Boston. It has some of the largest mills in the world, the 28-ft. fall of the riv. and a large dam providing excellent facilities for working them. The manufs. include cotton, woollen, and worsted cloth, and paper, as well as steam engines and machinery, and shoes. Pop. 11,400. 2. Tn. in New Zealand, on the E. Is., with rich gold-mines near. Pop. 1200. 3. Co. seat of Douglas co., Kansas, U.S.A., on the Kansas R. It possesses the Kansas Univ., one of the largest Indian schools, and the Haskell Institute. It manufs. paper, flour, carriages, and iron. There are coal-mines in the dist. and farming is carried on. Pop. 11,100.

Lawrence, St., River, see ST. LAWRENCE. **Lawrenceburg**, co. seat of Dearborn co., Indiana, U.S.A., 22 m. W. of Cincinnati. It is one of the oldest tns. in Indiana. The manuf. of flour is the chief industry. There are also crackeries and veneer and furniture works. Pop. 4000.

Law Reports are to be distinguished from the reports of legal proceedings in newspapers. L. R. are concisely written accounts of the arguments and judgments in such cases before the courts as involve in their decision some new legal principle or the novel application or the extension or limitation of an existing principle. Such reports are essential in any system which pays regard to precedent and recognises the value of judicary or 'judge-made' law. There are in England at the present day multitudinous reports both private and official. Among the best of the unofficial reports are those of the *Law Times*, *The Law Journal*, *The Justice of the Peace*, and *The Times*, cited respectively as L.T.R., L.J., J.P., and T.L.R. The abbreviated citations of the official reports are A.C. (appeal cases), L.R.K.B. (King's Bench), and L.R.C.D. (Chancery Div.), with the year and number of vol. preceding. The official L. R. only commenced on Nov. 2, 1865, and their institution was due to the exertions of W. T. S. Daniel, Q.C., a former co. court judge. Law reporting is an art requiring considerable legal training and an acute eclectic power. Many barrister-reporters of the Council of Law Reporting have subsequently acquired judicial or professional distinction. There are also the

official Irish reports, but the various Scottish L. R. pub. for the faculty of advocates are not official. The Indian L. R. are pub. under the authority of the governor-general by the legislative dept. of the Bengal secretariat, the Ontario L. R. under that of the Law Society of Upper Canada, Quebec reports by the Quebec Bar. A similar system of federal and states reports has reached its full development in the U.S.A. It is to be observed that official L. R. have, as such, no superior title to judicial respect to such unofficial reports as have gained a first-rate reputation.

Laws of War, see AERIAL WARFARE; CHEMICAL WARFARE; INTERNATIONAL LAW; PRISONERS OF WAR; REPRISALS; CRIMES, WAR.

Lawson, Cecil Gordon (1851-82), Eng. landscape painter, b. at Wellington, Shropshire. His pictures were first hung at the Royal Academy in 1870; after this, however, sev. of them were rejected, and in 1875 he sent up a much larger work, entitled 'The Hop Gardens of England,' painted at Wrotham in Kent. This also was refused until the following year. 'The Minister's Garden' was one of the first pictures to bring him fame. See memoir by Sir E. Gosse, 1883.

Lawson, Sir Wilfrid (1829-1908), Scottish politician, was first returned to Parliament as a member for Carlisle in 1859. From 1886 to 1900 he represented Cuckermouth, and from 1903 to 1905 the Camborne div., Cornwall. He was an ardent advocate of teetotalism, and in 1861 introduced a local veto bill which provided that the public-houses in any dist. should be closed where two-thirds of the inhab. expressed a wish to this effect. The bill was thrown out by a great majority. In 1867 he succeeded to the baronetcy. Denounced as a faddist, he was nevertheless always listened to in the House. See memoir by G. W. E. Russell, 1909.

Law Terms, see TERMS.

Lawyer, generic term embracing any one versed in the law, or who follows the profession of the law, or practises in the law courts. It now includes jurists, judges, barristers or counsel, and solicitors, though formerly there were also attorneys, special pleaders, and proctors. Attorneys corresponded to the procurators of the civil and canon law, but by the Judicature Act, 1873, they were denominated solicitors, a term once appropriated exclusively to a legal agent who practised in the courts of equity. Special pleaders were those members of the Inns of Court whose occupation was confined to giving opinions and drawing pleadings. These functions are now performed by counsel in the ordinary course of their duties. Proctors, who were analogous to solicitors, and practised in the Court of Arches, are now classed as solicitors.

Laxatives, see under APERIENTS.

Layamon, **Lawman**, or **Lagemann** (M.E. *Lasamon*, judge, juror) (fl. c. 1200). Eng. priest, famous as the author of a semi-Saxon paraphrase of Wace's poem, *Roman de Brut* (1155). A poetical version

of the legendary hist. of Britain, it recounts the doings of Brutus (Brit), great-grandson of Eneas, his landing in Britain, and the hist. of the land down to Cadwalader's death. Two valuable MSS. are in the Brit. Museum, and were ed. with trans. by Madden (1847). See G. Marsh, *Origin and History of the English Language*, 1865.

Layard, Sir Austen Henry (1817-94), Eng. archaeologist and diplomatist, noted for his discoveries in Asia Minor. He began his excavations at Nineveh in 1845 and made further discoveries at Bagdad, Kuyunjik, and near Mosul. L. was under-secretary for foreign affairs (1852, 1861-66), M. P. for Southwark (1860-1870), minister to Spain (1869-77), and ambas. at Constantinople (1877-80). He was commissioner of public works under Gladstone (1868). His publs. include *Nineveh and its Remains* (1848); *The Monuments of Nineveh* (1849-53); *Inscriptions in the Cuneiform Character, from the Assyrian Monuments* (1851); and *Discoveries in the Ruins of Nineveh and Babylon* (1853). He secured many ant. sculptures and bas-reliefs, now in the Brit. Museum. He was in the Crimea during the war, and on the committee appointed to inquire into the conduct of the expedition. See *Autobiography and Letters*, 1902; life by W. Bruce and A. Otway, 1903; and S. Lane-Poole, *Life of Stratford Canning*, II, 1888.

Lay-reader, in the Anglican Church a layman licensed by the bishop to read morning and evening prayer (except the absolution), to officiate at funerals, and to read the sermons of approved divines. In the time of St. Cyprian Ls. were an inferior order of clergy. The reformed Prayer Book of Edward VI. contained an office for the admission of readers, which became extinct in the eighteenth century.

Layton, Sir Walter Thomas Layton, first Baron (b. 1854), Eng. economist and newspaper proprietor. He was educated at King's College School, Westminster City School, Univ. College, London, and Trinity College, Cambridge, where he was lecturer in economics from 1912. He was a member of governmental missions to Russia and the U.S.A. in 1917, and delegate to the World Economic Conference in 1927. C.B. 1919. From 1922 to 1928 he was editor of the *Economist*, and in 1930 became chairman of the *News Chronicle* and the *Star*, and a director of Reuters. From 1940 to 1942 he was a member of the Supply Council and director-general of programmes at the Ministry of Supply. In 1947 he was raised to the peerage. He has written *An Introduction to the Study of Prices* (1921, 1938) and *Relations of Capital and Labour* (1944).

Lazaretto: 1 Lazar-house or hospital for lepers, dedicated to St. Lazarus (q.v.). These houses existed throughout Europe in the Middle Ages, and were estab. not solely for lepers but for the sick poor. Since about the fourteenth century leprosy has been steadily declining in Europe and is found only in limited dists. in Norway, Iceland, Russia, and a few

other countries. Modern leper hospitals exist at Bergen (Norway), Truacade (New Brunswick), Robben Is. (Cape Town), and sev. are in India. 2. Place for the performance of quarantine, estab. for the reception of goods or passengers or crew of a ship suspected of certain infectious diseases, such as yellow fever, plague, or cholera.

Lazarus, St., the poor man in the N.T. parable (Luke xvi.). The military order of S. L., founded during the crusades, one of whose duties was to take care of lepers, was named after him. See also LAZARETTO.

Lazulite (a mineral), see AZULITE.

Lazzaroni (It. beggars), name given to the lowest class of the pop. in Naples. The name originally signified lepers.

Lea, or Leo, riv. of England rising in S. Bedfordshire. It flows S.E., past Luton into Hertfordshire, E. past Hertford and Ware, S. between Hertfordshire and Essex, bounds Hertfordshire and Middlesex on the E., finally joining the Thames at Blackwall, below the Isle of Dogs. It is navigable for 28 m., and noted for fish.

Leacock, Stephen Butler (1869-1944), Canadian economist and humorous author; b. at Swanton, Hampshire, England; son of W. R. L., of Oak Hill, Isle of Wight, who migrated to Canada in 1876, and took a farm near Lake Simcoe, Ontario. He was educated at Upper Canada College, Toronto, and the Univ., graduating in 1891. He was on the teaching staff of Upper Canada College till 1899, and joined McGill Univ., Montreal, as lecturer, later becoming head of dept. of economics and political science. He wrote on economics and Canadian hist., but is best known for a genial iconoclast, not unlike Mark Twain, through such books as *Literary Laptes* (1910); *Nonsense Novels* (1911); *Sunshine Sketches of a Little Town* (1912); *Moonbeams from the Larger Lunacy* (1915); *Further Foolishness* (1916); *Unimpaired Wisdom* (1926); *Short Circuits* (1928); *Elements of Hicconomics* (1936); *Humour and Humanity* (1937); *Model Memoirs and other Sketches from Simple to Serious* (1939); and *Our British Empire* (1940). See his autobiography, *The Day I Left Behind Me* (1947).

Lead, city of Lawrence co., S. Dakota, U.S.A. Has one of the largest gold-mines in the world, and carries on manuf. of gold jewellery. Pop. 7600.

Lead (symbol Pb; atomic number 82; atomic weight 207.2, sp. gr. 11.4, an average value. See RADIOACTIVITY). L. was one of the metals known to the ancients. It can easily be scratched by the nail and marks paper. It is malleable, tough, and flexible, but not ductile nor tenacious. It melts at 325° C., and at temps. just below this point it becomes very brittle. Dry air at ordinary temps. has no effect on it, but when exposed to moist air it becomes covered with a white film of basic carbonate. Ordinary water attacks the metal, and as soluble lead salts are poisonous, this may be dangerous. Ammonium nitrate in solution exerts a powerful solvent action. If water

contains only small amounts of ammonium salts and a fair amount of hardness, temporary and permanent, it is fairly safe for drinking. On heating it reduces in air it oxidises readily and forms litharge. It is dissolved by nitric acid and slightly attacked by strong sulphuric acid, but dilute hydrochloric or sulphuric acid does not attack it.

Commercial L is one of the purest metals of commerce, impurities being usually the inconstant traces. Copper is sometimes present, which is objectionable when the L is required to form white L or red L. The most widely distributed ore is galena (PbS) and smelting processes are all designed for the treatment of this compound. The galena always carries more or less silver so that the separation of this element is nearly always involved in the process. When the crushed ore is delivered to the smelting house it will be found to contain nearly 80 per cent of L as the earthy material (gangue) is easily removed owing to the high density of the galena.

There are three processes for the smelting of the L: (1) The Flintshire air reduction process, (2) the blast furnace process, (3) the Scotch process. These smelting processes differ in the type of furnaces used. The Flintshire process has been used for a very long period in N. Wales for the reduction of the unusually pure L ores found there; the gangue in this case being mainly a carbonate of lime. The furnace is a large reverberatory one having a hearth which slopes to a well from which the molten L is tipped. A lining of grey slag is used to prevent contact with the brickwork. The charge consisting of about a ton of galena is roasted at a dull red heat for two hours during which period it is frequently turned. The fire is then made up and the L begins to run down to the well on the surface of which there floats a mass of clotted galena and gangue. At this time is added the mixture again roasted and the cycle completed as above. This process is called the air reduction process because no external agent except air is employed. The galena is oxidised into the oxide and sulphate of L with the evolution of sulphur dioxide, and these compounds further react with more galena forming pure L and sulphur dioxide.

In the N. of England a small blast furnace is used simply consisting of a brick shaft with a sloping iron bed plate. This shaft is lined with fire brick for a height of about 1 ft. Through the back comes a single tuyère about a foot above the bed and a charging space is left above the iron plate called the fore stone, which closes the front. The L trough is an iron pan, the larger part of which is filled with coarse cinders, and separated from the rest by a vertical partition, which does not quite reach the bottom. The bed plate is now covered with a sloping mass of coal ashes to about 1 in. below the tuyère the fire is then made up with coals and peats, and the blast is turned on. When the furnace is hot slag, ore, and the fused

mass over from a previous charge (browse) are introduced. As the reduction goes on the L sinks through the ashes on the bed plates and runs into the troughs and filters through the cinders into the smaller dy where it is tapped into moulds. The L so obtained is hard and somewhat impure.

The last process is the Scotch one in which there is an iron sump set in a square and 6 in. deep set in masonry and

Australian News and Information Service

LEAD MINES AT BUCKING HILL,
NEW SOUTH WALES

surrounded on three sides by iron bars about 8 in. square. The bars are called the side stones and the back stones. In the back stone is the single tuyère. The front of the hearth has a sloping plate in which is a gutter down which the L flows into a trough. The open back opposite to the back stone carries a gutter which supports a small tube for carrying off the fumes.

L produced by these processes is nearly always hard and has to be softened. This is quite a simple process as the impurities which render the L so hard will all oxidise if the L be kept heated for several hours or days as the case may be. Any amount of L can be treated at once, the oxides rising to the top and being skimmed off.

L being very malleable is easily rolled into sheets. L for this purpose is first cast into cakes about 5 ft. square. L piping is common because L, when hot, flows easily under pressure. Such pipes are usually forced out by strong hydraulic pressure, the L being squeezed between the core and the die. Shot is made by pouring molten L into a perforated ladle containing cinders; the L finds its way through the perforations, and if allowed to fall through about 150 ft. the drops become spherical. Those which are not true are separated by rolling down an inclined plane having a gap in it. The true ones will gather enough impetus to jump it, but the oblate ones fall through and are re-made.

L forms numerous alloys and in particular: *Bronze bearing metal* (Cu 77, Sn 8, Pb 15), *solders* (Pb and Sn), a common one being composed of equal amounts

of the two metals; *pester* (Sn 75, Pb 25), and *fusible alloys* of many kinds. It forms a basic oxide PbO (litharge; massicot) from which the many salts of L. can be obtained by interaction with appropriate acids. In such compounds the valency of the metal is two. In addition there are the oxides L. 'peroxide' or dioxide, PbO_2 , a pure coloured solid; Red L. (Pb_3O_4), both of which can be made to yield oxygen either when heated alone or with concentrated sulphuric acid. The sulphate and carbonate

(qv) a L. Q is one which by its form suggests to the witness the answer required by counsel for the purposes of his case. For example if, in an action for damages for personal injuries alleged to have been sustained by the negligence of a motor-bus driver, the plaintiff's case is that the bus was being driven at an excessive speed, a witness for the plaintiff should be asked not 'Was the bus going at a furious pace?' but 'At what speed was the bus going?' L. Qs are, however, put by mutual consent as to matters not

LEAF PARTS AND VENATION

Leaf parts 1, (pansv) A, axil of leaf between stem and petiole L lamina or blade V, vein or nerve, P, petiole or leaf stalk, S, stipule at base of petiole SI, term of plant
Venation of leaves 2, Reticulate or net venation of iv (palmate), 3, reticulate venation of oak (pinnatifida), 4, parallel venation of ba 100 MR mid rib

of L. can be obtained by double decomposition, and are almost insoluble in water. White L. (qv) is an important white pigment made by the action of acetic acid (vinegar), air, and carbon dioxide on the metal.

Production—The U.S.A. produces over one-third of the world's L. output, Mexico following with about one eighth. Other leading countries are Australia, Spain, and Germany. See also **ACCUMULATOR**. See J. W. Gough, *The Mines of Mendip*, 1930.

Lead Chromate, see **CHROME YELLOW**.

Leadgate, c. 1845, par. and mining tn. of Durham, England, 11 m. from Newcastle. Both coal and iron are found. Pop. 5000.

Lead-glance, see **GALENA**.

Leadhills, vil. of Lanarkshire, Scotland, 18 m. S. of Lanark. It is about 1320 ft high, and its lead mines have been worked since the early seventeenth century. Some silver is also mined. Pop. 1000.

Leading Question. In the law of evidence

contested or merely introductory, and may also be put to refute evidence already given by an opposing witness. L. Qs may, however, be put without restriction in cross examination.

Lead Plaster (*Emplastrum plumbi*), made of lead acetate, soap, and water, and is used as an external application to raw and irritated surfaces. It has practically no effect on the unbroken skin, but when applied to sores has the effect of coagulating the albumen and so contracting the small blood-vessels. *Emplastrum plumbi iodidi* is made from lead iodide, and has much the same curative effect.

Lead Poisoning, or **Plumbism**, form of poisoning due to the introduction of lead into the system. It is an occupational disease and specially affects workers in potteries, where lead glaze is used, painters, plumbers, glaziers, printers, and others. In such cases the disease is the result of minute doses of lead being absorbed over a long period of time. The

symptoms vary with the extent of the poisoning, and also with the constitution of the individual. A common form is painter's colic, which is attended with frequent intestinal pains and obstinate constipation. The poison proceeds to produce anæmia, wasting, muscular tremors, and ultimate paralysis. Among characteristic signs are the blue line on the gums and the presence of 'wrist-drop,' in which the hands become useless and the joints deformed. A test for lead in the system is provided by painting a small area of the skin with a 6 per cent solution of lead sulphite; if lead be present the area will darken in a few days. The treatment

an anti-knock it is mixed with ethylene dibromide, which carries off the lead in the exhaust gases.

Lead, The, instrument for discovering the depth of water at sea. It is a large piece of elongated lead, something the shape of an old-fashioned clock-weight, attached to a line called the lead-line, generally about 20 fathoms long. It weighs from 7 to 11 lb. There is a cavity at the lower end, filled with tallow to ascertain upon what sort of ground the soundings are struck. The weights for different depths of sea sounding naturally vary. When the depth is great the deep-sea L., weighing from 25 to 30 lb.,

LEAF: SHAPES OF BLADES AND THEIR MARGINS

1, linear; 2, lanceolate; 3, oblanceolate; 4, ovate; 5, obovate; 6, sagittate; 7, elliptical; 8, spatulate; 9, hastate; 10, cordate; 11, crenate; 12, entire; 13, serrate; 14, dentate; 15, crenate.

in acute cases consists of the administration of potassium iodide. Lead colic may be alleviated by administration of belladonna; for paralysis strychnine is used in conjunction with potassium iodide, and electro-therapy has proved a valuable aid in restoring the use of muscles. The treatment should in all cases be prescribed by a doctor. Preventive measures employed in factories include the wearing of overalls and respirators, the provision of baths and insistence on their use by employees, frequent medical examinations, and the provision of acid drinks tending to remove lead from the system.

Lead tetraethyl, $Pb(C_2H_5)_4$, was first made in 1859, but only in recent years has it been utilised as an anti-knock constituent of motor fuels, a very small percentage of the compound being enough to allow greater compression without the disadvantage of self-ignition. It is manufactured by heating an alloy of lead and sodium with ethyl chloride in a closed vessel at 40° – 60° C. It is a poisonous liquid, immiscible with water. For use as

is used, the line being marked by knots every 10 fathoms. One of the regulations prescribed by the navy is that ships shall constantly keep the hand-lead going, when near land or shoals, or in pilot water.

Leadville, co. seat of Lake co., Colorado, U.S.A., founded in 1859 as 'California Gulch', 76 m. S.W. of Denver. Gold, silver, and lead abound, and there are large smelting furnaces. It is 10,200 ft. above sea level. Pop. 5600.

Leaf, in botany is a term applied to various lateral outgrowths of the stem, e.g. bracts, sepals, and petals, all of which are considered under their individual headings, but in its best known sense it is applied to those members of the plant which constitute its foliage. The foliage L. consists typically of three parts, the *lamina* or L.-blade, *petiole* or L.-stalk, and the L.-base. The latter frequently bears two lateral outgrowths known as *stipules*, e.g. rose; when the petiole is absent, as is often the case, the L. is said to be *sessile*, e.g. honeysuckle. The shape of the lamina varies greatly, but the different

forms are divided sharply into two as *compound* or *simple*, the former indicating that the lamina is split up into a number of distinct parts called leaflets (as in the horse-chestnut, which is palmately compound, and the ash, which is pinnately compound), while the latter indicates that however much the blade may be indented it is not split up into leaflets. The venation of L.s. is necessarily related to their form: in the typical L. of a Monocotyledon, e.g. iris, the veins run parallel to one another, and the L. is long and undivided, while in a Dicotyledon the venation is always reticulate and the L. may be greatly divided, e.g. horse-chestnut. The same plant may bear several types of L.s., and one which grows with part of its foliage in a submerged condition will be noticed to have its aquatic L.s. very finely divided to withstand the force of the water (e.g. water crowfoot). The functions performed by L.s. are of the greatest importance to the life of the parent plant. Most of the carbon dioxide absorbed from the atmosphere is taken in by the Ls. during photosynthesis; respiration or the exchange of carbon dioxide for oxygen is also effected by them, as well as transpiration or the giving off of large quantities of surplus water. The development and arrangement of leaves are associated with these functions. To use carbon dioxide the L. must have light, and Ls. form a mosaic to secure as much as possible without directly overshadowing one another. Plants growing in dry situations (xerophytes) frequently have Ls. which are reduced in size, or provided with hairs, sunken stomata, or thick cuticles. These were formerly regarded as devices which reduced water loss during transpiration, but experiments show that such plants may actually transpire rapidly, and it seems that the problem is more complex than was at first thought. Ls. may be variously modified, e.g. into the fleshy parts of bulbs, or into tendrils or thorns; reduced (scale) Ls. also occur.

Leaf Insect, insect genus (*Phyllium*) of the family Phasmidae, which, on account of its resemblance to a leaf, conceals itself from its enemies. The leaf-like appearance is chiefly due to the arrangement of the veins in the front wings, especially in the female. The vegetable mimicry is carried out even in the eggs, which, in many species, closely resemble seeds.

League (Lat. *lueca*, a Gallic m.), measure of length of great antiquity, estimated by the Romans at 1500 paces, or 1376 Eng. m. It was introduced into England by the Normans, and was then equal to 2 O.E. m., or about 3 modern m. It is now a nautical measure, the twentieth part of a degree, i.e. 3 geographical m., or 3.456 statute miles. The Fr. and other nations use the same nautical measure.

League of Nations. The desire for the cessation of war became general throughout W. Europe during the nineteenth century, and at the Hague Conferences of 1899 and 1907 attempts were made to lessen the probability of war, but when the third Hague Conference was about to

meet, the First World War broke out. After the armistice in 1918 associations to prevent wars were formed in England, France, Germany, and Scandinavia, while in the forefront of the Versailles peace treaty were placed President Wilson's proposals for a L. of N. (see COVENANT OF THE LEAGUE OF NATIONS). The L. of N. formally came into being on Jan. 1, 1920, when the treaty of Versailles came into force, and it consisted of twenty-eight allied states and fourteen neutral states. The U.S.A. was not a member. The membership of the L. of N. was later increased to some sixty states, the Brit. Empire and the dominions (including Eire, together with India) being each an independent member, with separate voting power and representation. Japan and Germany withdrew in 1933; Russia and Afghanistan became members in 1934. Membership was open to fully self-governing states, dominions, and colonies, provided effective guarantees were given on intentions to observe international obligations and to accept the ruling of the League in matters concerned with the military services, but the subsequent hist. of Europe made these and many other conditions of purely academic interest. A two-thirds majority in the assembly was required to secure membership. The purpose of the L. of N. was 'to prevent future wars by establishing relations on the basis of justice and honour and to promote co-operation, material and intellectual, between the nations of the world.' The official seat of the L. of N. was at Geneva and the official languages were Fr. and Eng. The names of Earl Balfour, Aristide Briand, Lord Robert Cecil, Lord Gray of Fallodon, Dr. F. Nansen, Dr. Gilbert Murray, and F.M. Smuts are among those especially associated with the development of the League. Under the covenant of the League (q.v.) a member state undertook never to go to war with a fellow state until all possibilities of a peaceful settlement had been exhausted, and then only after an interval of nine months. With a member state which broke this pledge, the other states guaranteed to discontinue financial and economic relations. The covenant of the League was the final successor of the treaty of Westphalia and the treaty of Vienna which also set forth general international policies; but it differed from these earlier documents in that its signatories constituted the majority of the world's govts.; that its provisions were more far-reaching, including the estab. of a permanent administrative, deliberative and judicial organisation; and, also, in that it was based implicitly upon an agreed philosophy of government. The League was not an executive body. It had no Cabinet. It was not an instrument of international policy. League or no League, policies continued to be framed in the different caps. and by the ministers and foreign offices of individual states. That could not but continue however much the League or any analogous body might gain in authority, for many world problems are too great to allow of cen-

tralised direction. The mutual relations of two or more states are of no concern to the society of states unless and until they involve danger of a breach of the world's peace. The function of the League was, in this sphere, not positive but negative. It did not conduct policy. It served as the limiting factor of policy. But the prevention of war cannot be dissociated from the positive organisation of society. Hence the concern of the League for the limitation and control of armaments and the obligation of its members to interchange full and frank information on this subject. The League was, in essence, an association for mutual protection. It was based on the conception of co-operative defence and it was pledged to embody that conception in a practical system. All treaties which a member state contracted with other states were to be registered with the League for immediate publication. Members of the L. of N. were to direct international interest and action towards such questions as labour conditions, public health, communications, economic and financial questions, the traffic in arms, the traffic in women and children and the traffic in dangerous drugs. The primary organisations of the L. of N. were as follows: (1) The Assembly, consisting of delegations from all the member states. Each delegation consisted of three delegates and each state had one vote. The Assembly met usually at Geneva on the first Monday in Sept., and the president was elected at the beginning of each session. The Assembly was divided into six principal committees concerned with jurisdiction, technical organisations, disarmament, budget and staff, social questions, political questions, and the admission of new members (these committees were, of course, suspended after the outbreak of the Second World War). The decisions of the Assembly had to be unanimous except on questions of procedure when a majority vote only was required. (2) The Council, consisting of permanent members and non-permanent members, while any state might be represented at meetings at which matters affecting that state were discussed. The Council met in Jan. May and also before and after the meetings of the Assembly in Sept. (3) The secretariat, the permanent civil service of the L. of N., was composed of the secretary-general and 100 officials selected from citizens of the member states and from the U.S.A. It was the working instrument of the League, with head-quarters in Geneva. (4) The International Labour Office, which had a working staff almost as large as that of the secretariat. (5) The Permanent Court of International Justice (see INTERNATIONAL JUSTICE, COURT OF). There were other secondary organisations belonging to the L. of N., such as technical organisations, permanent and temporary advisory committees, administrative commissions, international institutes, and an international bureau. The expenses of the L. of N. were shared by the member states, and the annual expenditure was about \$1,000,000. In

1928 John D. Rockefeller, Junior, gave £2,000,000 for the endowment of the League library.

The chief function of the L. of N. was the prevention of war, although its important social and economic work must not be overlooked. The League, working through the council, did prevent war in six instances— as in 1921 when Yugoslavia invaded Albania and in 1925 when Bulgaria invaded Greece. Other political disputes which were settled were in 1920, between Sweden and Finland concerning the Åland Is. and later a frontier question between Turkey and Iraq. Other work of the L. of N. consisted in arranging mandates for various countries in investigating the minority question of certain countries, and in assisting reconstruction work in Austria, Hungary, and N. Greece. The constitutional and co-operative work of the League embraced valuable contributions to child welfare work and public health instruction. Many years' study was given to the question of disarmament in preparation for the Disarmament Conference of 1932, but the doctrine of collective security was doomed to frustration. The L. of N. soon began to encounter failure when the vital interests of powerful totalitarian nations were involved, as for example when Italy disavowed its intervention over the murder of Italmi and Greece was forced to pay indemnity of 4,000,000. Also the League never arrived at a just settlement of the Polish-Lithuanian quarrel occasioned by the seizure of Vilna in 1920. One of the chief causes of failure on the constructive side was that its economic conferences had little effect on the tariff policies of individual nations. The L. of N. did not but ought to have forced its decisions on member states. In fact all conventions (international agreements) sponsored by the League had to be ratified and ratification was optional at the discretion of each gov. Thus a member state was not allowed to interfere with tariffism, but once a convention was ratified the contracting states were bound to carry it out. If they failed to do so other states might lodge a claim against them. What happened instead was that reluctant states merely withdrew their membership or went to war in spite of the League's decisions. In 1933 the Disarmament Conference broke down. In the same year Mussolini invaded Abyssinia regardless of economic sanctions. Germany, who was now rearming at top speed, gave notice of secession from the League and she was followed by Japan who had invaded N. Manchuria in defiance of a European Commission and the adverse judgment of the League. (See ITALO-ABYSSINIAN WAR, 1935; SINO-JAPANESE WAR.) Again when Paraguay and Bolivia went to war over their rival claims to the Gran Chaco no power intervened and the warnings of the League were innocuous. When Japan occupied Manchuria the League instituted no economic sanctions, nor made any effort to expel Japan from her, which Japan asserted to be vital to

her national existence.' Italy gave notice of withdrawal in 1937 as a consequence of her *entente* with Germany and the League's half-hearted efforts to thwart her Ethiopian adventure. Sev. of the S. Amer. states also left the League or gave notice of their intention to do so. The prestige of the League never recovered from the blow of the It. conquest of Abyssinia—for a League that took care to confine sanctions to a restriction of trade as opposed to military sanctions had, in reality, abjured the covenant. The result was that the different nations reverted to the policy of alliances and blocs. 'Perhaps nothing bore clearer witness to the continuance of the rule of material force,' writes Bernard Pares about the disarmament proposals, reparations, and the restrictions on Germany. 'than the fact that not one of the major questions which concerned the major powers was settled by the L. of N.—if we except Locarno and the temporary acceptance of the demilitarisation of the Rhineland, which was certainly achieved under its influence, but in no way applied to E. Europe. It was only the minor states that had to obey the League—not even Poland in the matter of Vilna. But so far, the territorial provisions of the treaty of Versailles stood. It was only with the advent of Hitler that we had to face the question on whether they were to go the way of the rest.' The annexation by Germany of Austria and Czechoslovakia met with no opposition from the League, which was again supplanted when Germany invaded Poland in 1939. Yet curiously enough, after the Russian invasion of Finland, the League Assembly was convened on Dec. 11, 1939, Russia's action was condemned and she was expelled from the League—the one member which had made the strongest appeals for disarmament. It might seem small ground for surprise that, since then, the League displayed no activity. In 1938 the League was operating through a permanent council comprising only Great Britain, U.S.S.R., and France, with twelve other states elected annually. In 1940 some of the offices of the League were transferred to New York. The final meeting of the League Assembly was held on April 8, 1946. The states remaining members of the League to the last sent strong delegations to this final meeting, thereby attesting at the last solemn obsequies the importance they attached to its principles; for although the League was now disappearing, the United Nations Organisation (*q.v.*) had already replaced it and was now to take over the material assets of the League and assume some of its political and technical functions. The necessary decisions had to be taken as quickly as possible so that essential work might be carried on without interruption. All through the war the League had kept alive the machinery and technical services it had estab., for a long period with the hostile Gers, only ten minutes' walk from the Palais des Nations. Far-reaching powers were entrusted to the League by nations or groups of nations

under treaties, conventions, and other international political instruments. The League's Treaty Series, almost the only part of its activities that had, for obvious reasons, not been kept fully abreast of events during the war, needed to be taken over by the U.N.O. so that the valuable international code might be completed. Even before this closing meeting of the League Assembly the U.N.O. decided to take over the technical sections of the League, notably the economic, social, health, and opium sections—together with the League Library of more than 300,000 vols. and the archives of the League. It seems that in spite of the great difficulties which attended the League's finances during the war the accounts were kept in a highly satisfactory manner: and thanks to a policy of drastic economy, by which the budget was reduced by 20 per cent of that of 1939, the financial position remained sound to the last. The total value of the assets was about 47,000,000 Swiss francs. It may be that, on balance of opinion, the acting secretary-general in his final report on the work of the League was justified in his view that the League may be held not to have failed, but that it was the nation that failed the League—failure being due to the fact that statesmen and peoples contented themselves with lip service, while some states foolishly imagined that they could be lookers-on. The success of U.N.O. will also depend on how it is used, for it is a continuation of the first effort to organize the nations, the basic problem remaining the same, the objects being unchanged, and the available methods hardly any different.

Historical Analogies to the League of Nations.—The concept of the L. of N. of 1920 was new, but more or less remote analogies may be sought in former schemes or projects for a European federation. This project indeed has a long hist. 'Since the fourteenth century the idea of bringing the states to federation has been in the European mind. As early as 1307 the Fr. *legiste*, Pierre Dubois, had drafted a scheme for forming a union of Christian nations under the lead of the king of France' (J.S. Ross Hoffman, *The Great Republic*, 1942—Chapter I, of which describes the deeply settled objection of western man through the centuries to a world state). At the end of the sixteenth century Henry IV.'s minister, Sully, set forth a comprehensive plan: 'Europe would be composed of fifteen dominions nearly equal in size and strength and those would be constitutionally integrated in a permanent league.' The proposal was adapted to the needs of the eighteenth century by the Abbé de Saint Pierre. After the War of the Sp. Succession, which ended in 1714, he proposed to form 'a permanent league of European states on the basis of the *status quo*, which league would command an international army and have power to enforce submission to its collective will.' After the Napoleonic wars these ideas influenced the conception of the Holy Alliance, and after the First World War they were revived by Aristotle

Briland (q.v.). (See W. Lippmann, *U.S. War Aims*, 1944.)

For centuries past, indeed, mankind has searched for some means of preventing war. Repeatedly in the last four centuries there has been held up as the ultimate ideal the conception of an association of nations co-operating for their common good and bound together for the fundamental purpose of making war impossible. Some former plans still have more than an historical interest. Research to-day will find something of practical value in such conceptions as those embodied in Wm. Penn's plan for a federal union of Europe, made known in 1693, or again in the scheme for a federation of free and democratic peoples pub. in 1795 in Kant's *Critique of Pure Reason*. The chaotic period which followed the Fr. Revolution and Waterloo gave a new impulse to the search. But the only solution forthcoming was that submitted by the Vienna Congress in the shape of the Holy Alliance. This was foredoomed to failure in that it perpetuated a reactionary *status quo* and through a military alliance repressed human freedom. In the second half of the nineteenth century, Europe was spared any general war as a result of the armed truce brought about by the Brit.-sponsored balance of power system. Some progress at least toward international co-operation was made as a result of the suffering caused by the Crimean war; for international agreements for the adoption of more humanitarian standards in the conduct of war were concluded at the conference of Paris of 1864. The first major achievement in the sphere of international co-operation for avoiding the causes of war came, however, through the Hague Conferences of 1899 and 1907, held on the initiative of the Russian Gov. The agreements reached in these conferences provided machinery for the pacific adjustments of international controversies through arbitral tribunals set up at The Hague. Progress would have been made too in the field of international disarmament but for the unyielding opposition of the Ger. Gov. When the third Hague Conference was about to meet, the First World War broke out.

See *Handbook on the League of Nations*, 1920-21; *League of Nations Year Book*, 1925 and later; also H. Williams, *The League of Nations To-day*, 1923; H. G. Alexander, *The Revival of Europe*, 1924; G. G. Butler, *A Handbook to the League of Nations*, 1925; F. Alexander, *From Paris to Locarno and After*, 1929; Robert de Traz, *The Spirit of Geneva*, 1935; and official publs. of the League.

League of Ten Jurisdictions, see TEN.

Leagues, Historical. League is a term which signifies a political alliance or coalition. The name has been given to numerous confederations, such as the Aetolian and Achæan L. of ant. Greece; the various holy L., of which the most famous are those formed by Pope Julius II. against Venice in 1508 (often known as the League of Cambray), and against France in 1511; commercial L., like that of the Hanse tns. (see

HANSEATIC LEAGUE); the Solemn League and Covenant between England and Scotland in 1643, for the estab. of the Presbyterian Church; the Smalkaldic League in Germany; the Catholic League in France; and the Protestant Union and Catholic League in Germany, which heralded the Thirty Years war. After the peace of Westphalia, while France and Spain were still at war, Mazarin helped to form the League of the Rhine, which included powerful Ger. princes, and was aimed against the emperor. Many L. were formed during the latter part of Louis XIV.'s reign to check the growing power of France, the most important being the League of Augsburg (1686), which was formed after Louis had seized Strasburg and Ger. lands in the period of peace after the treaty of Nimègue, and the Grand Alliance (1701-2) headed by William III. of England. The most famous league of the eighteenth century was that of France and Spain, which were allied by a series of family compacts. The name has been adopted by various political associations, such as the Anti-Corn Law League, the Irish Land League, the Primrose League, the United Irish League, etc. See A. Sorel, *L'Europe et la Révolution française*, 1895-1904; Cambridge *Modern History*, 1903-10; C. Seligsohn, *Histoire politique*, 1814-1914, 1924-6; W. L. Langer, *European Alliances*, 1871-1890, 1931; B. Croce, *Europe in the Nineteenth Century*, 1934; A. J. Grant and H. V. Temperley, *Europe*, 1789-1932, 1935; H. Pirenne, *Histoire de l'Europe*, 1936; R. Seton-Watson, *Britain in Europe*, 1789-1914, 1937; and E. H. Carr, *International Relations, 1919-1936*, 1937.

League, The, or properly, the Holy Catholic L., was a coalition organised in 1576 by the duc de Guise to suppress the reformed religion in France by denying civil and religious liberty to the Huguenots, and particularly to prevent the accession of Henry of Navarre, a Protestant, to the Fr. throne.

Leake, William Martin (1777-1860), Brit. officer and archaeologist, b. in London. Having obtained the rank of lieutenant-colonel in the army, he travelled in Asia Minor, the Morea, and other parts of Greece, surveying the coasts and fortresses and making collections which are now in the Brit. Museum. He retired in 1823 and pub. sev. valuable works, among them being *Researches in Greece* (1814); *Topography of Athens* (1821); *Travels in the Morea* (1830); *Travel in Northern Greece* (1835); and *Numismatica Hellenica* (1859). See memoir by J. H. Marsden, 1864.

Leamington Priors, or Royal Leamington Spa, municipal bor. and health resort of Warwickshire, England, on R. Leam, 2½ m. from Warwick. The mineral springs (saline, sulphurous, and chalybeate), discovered 1874, are much frequented. Cooking ranges are extensively manufactured. Pop. 33,000. See C. James and S. Rowland, *Royal Leamington Spa*, 1947.

Leander, see HERO AND LEANDER.

Leap Year, also known as Bissextile, name given in England to every year

which has 366 days. In 46 B.C. the calendar was reformed by Julius Caesar. The solar year was settled at 365½ days, and under the new arrangement the Feb. of every fourth year was to have twenty-nine days instead of twenty-eight; the calendar thus taking a leap of one day every fourth year to balance its being six hours too short in each ordinary year. A L. Y. is divisible by four without a remainder, excepting in the case of those years ending in 00, of which only every fourth is a L. Y., i.e. those in which the number of the century is divisible by 4. See also CAL. D.R.

EDWARD LEAR

Silhouette by an unknown artist

Lear, Edward (1812-88), Eng. writer and artist, exhibited at Royal Academy (1850-73). As a young man he was for a time art master to Queen Victoria. He early made ornithological drawings in the Zoological Gardens, and assisted Gould as draughtsman in his *Birds* (1832-36). L. produced his delightful *Book of Nonsense* (1846) for the grandchildren of his patron, the earl of Derby, and drew the plates to *The Knowsley Menagerie* for him. Ruskin said of *The Book of Nonsense* that it was 'first in the list of a hundred delectable volumes of contemporary literature.' It was this book rather than his paintings and drawings and other writings which gained him fame. Other works were *Journal in Greece and Albania* (1851), praised by Tennyson in his 'Lines to E. L. . .', *Journal of a Landscape Painter in Southern Calabria* (1852), *In Cornua* (1870), *More Nonsense Rhymes* (1871), *Laughable Lyrics* (1876). See Lush-

ington's memoir prefixed to *Poems* . . . 1889, *Letters*, ed. by Lady Strachey, 1907, and H. Jackson, *The Complete Nonsense of Edward Lear*, 1947.

Learning (mental process), see under PSYCHOLOGY.

Leasehold, in law a chattel (*q.v.*) real, not strictly speaking, an estate in land nor properly involving tenure, though the phrases 'estate for years' and 'leasehold tenure' are common. Ls are all of one kind, and, being personality (and not real property), the tenant, for however long the term is 'possessed,' not 'seised.' The very name term implies a definite date of ending, as opposed to the indefinite end of freehold estate by death or failure of heirs. Ls are (a) tenancies from year to year, (b) leases for years, (c) long terms. Tenancy from year to year arises (1) by operation of law, on demise at ann. rent without express term, or (2) by act or parties under verbal or written lease. It is determined by half a year's notice, which may be a 'customary half-year,' i.e. from one quarter day to the next, but always so as to end with the current year of the tenancy. Lease for years arises mostly by express demise, which if for more than three years and not at a rack rent must be in writing. Lease for years determines by efflux of period or on fulfilment of a condition (if any), e.g. lease to B for sixty years, if he shall so long live, or to C for twenty-one years, provided that on non-payment of rent, or breach of covenant, the lessor may re-enter, etc. It may also determine by merger and by surrender in fact (deed) or in law (accepting a new lease on different term before the old one expires). As to covenants on leases see COVENANT. Long terms are chiefly (1) terms of 100 to 1000 years, formerly created by way of mortgage as security for an advance; (2) terms created in the sixteenth century as a device for making a personal interest in land divisible as if simple; (3) terms in settlements (*q.v.*) limited to trustees as security for raising portions (*q.v.*), jointure (*q.v.*), annuities. These are the most frequent and the most important. No rent is reserved on (1) or (3) and on (2) only a nominal or 'peppercorn' rent, if any. On (3) there are, as a rule, no covenants. See also LANDLORD and TENANT.

Leasehold Enfranchisement. From the end of the eighteenth century and onward the practice of leasing land for ninety-nine years for building purposes became fairly general in London and other urban areas. The extraordinary increase in the built-over area in London resulted in an enormous increase in the value of the site and in many cases an equal extraordinary increase in the value of the premises for business and residence. The Bedford and Westminster estates in London are typical instances. When in the eighties and nineties of last century leases fell in the ground landlords required extremely heavy payments for renewals. Goringes in Buckingham Palace Road was an instance much discussed at the time. As a result of the public interest, it was mooted that freeholders should not

be permitted to lease land in this fashion, and that existing leases should be converted into freeholds at a fair valuation, much in the same way as under the Law of Property Acts, 1925, copyholds have ceased to exist. Up to the present nothing has been achieved in this direction, but the sting of the grievance is removed by the Landlord and Tenants Act, 1927, which provides for compensation of the tenant in respect of enhanced value of the property due to his business when the lease falls in unless it is renewed without fine.

Lease-Lend, see LEND-LEASE.

Least Squares. This is a rigid and mathematically laborious method of eliminating all errors (of various kinds) in a geodetical survey. Some preliminary considerations, involving questions of probability and the nature of errors, first call for attention.

A discrepancy is the observed difference between two like measurements, each of which contains an error that may or may not be appreciable. A discrepancy is not an error; a large discrepancy indicates a mistake in the observations; and a small discrepancy between two measurements is no criterion that the error is small. Errors of measurements are of three kinds: (1) mistakes; (2) systematic errors; and (3) accidental errors. (1) Mistakes are errors which originate in the mind of the observer, and arise from carelessness, inexperience, and mental confusion. (2) Systematic errors arise from known sources, and can be eliminated, as in the cases of incorrect length or stadia interval, imperfect adjustments, etc. (3) Accidental errors are those which remain after mistakes and systematic errors have been eliminated. They are due to imperfections of human sight and touch, imperceptible changes in the instruments, indeterminate variations of temp., pull, etc.

Whenever the value of a quantity is found by adding together the measurements of its sev. constituent quantities, any source of accidental error becomes a source of compensating error, since the sign is as likely to be plus or minus in each of the sev. measurements; but any source of systematic error becomes a source of cumulative error since, under certain conditions, systematic errors have always the same sign. Cumulative errors from any one source affect the total result in the same way, whereas compensating errors tend to balance one another. If the measurement of a quantity is greater than the true value of that quantity, the error is *plus*; if less than the true value, the error is *minus*. The total error is not due to any one cause; it is the algebraical sum of errors due to different causes.

Systematic errors have always the same sign and the same magnitude when the measurements are repeated under precisely the same conditions, and are not affected or reduced by taking the mean of all the measurements. On the other hand an accidental error is as likely to be plus as minus, and the accidental error of the mean is likely to be less than the accidental error of a single measurement.

Mistakes are detected by checking results with existing data and known conditions. Systematic errors are avoided or eliminated partly by systematic operations and partly by calculation and correction. Accidental errors cannot be eliminated; but experience has shown that they follow certain mathematical laws which are fundamental in the theory of L. S., viz.: (1) Small errors occur more frequently than large ones; (2) positive and negative errors are equally numerous; (3) very large errors never occur.

The probable error of a measured quantity is a magnitude such that the chances are even that the true error contained in that quantity is greater or less than the probable error. It is therefore the limit within which the probability is one half ($1/2$) that the truth will fall, since a probability expressed by $1/n$ indicates a certainty, a probability of $0/1$ an impossibility, and generally $1/n$ that the event will occur, on the average, once out of n times. The error of sighting a signal will vary with the nature of the signal, the distance, the atmospheric conditions, and the power and quality of the telescope. It may vary from 2 secs. to 10 secs. in ordinary work and may be taken at 6 secs. on the average with a 5-in. or 6-in. vernier instrument. In addition there is the error of centring the theodolite over the station. The exact ascertainment of the probable error in any geodetical survey requires a complicated series of computations involving the differential and integral calculus which cannot be detailed here. Probable error also determines the relative weight that should be given to different sets of observations, since the weights of observations vary inversely as the squares of their probable errors. It can be shown from the probability equation that the most probable values of a series of errors arising from observations of equal weight are those of which the sum of the squares is a minimum. This, applied in practice, is known as the method of L. S. In theory the rigid application of this method in one mass to a geodetical survey—all the angles being simultaneously considered—produces the most accurate results, but involves an incredible amount of mathematical work. In its application to the Ordnance Survey of the Brit. Isles the triangulation was divided into twenty-one 'figures,' each with its own staff of computers. The triangulation of the great Trigonometrical Survey of India was worked out, with complete thoroughness, by the method of L. S. See also GEODESY. See J. Whitlaw Junior, *Surveying*, 1902; A. R. Hinks, *Maps and Surveying*, 1923; and A. L. Higgins, *Higher Surveying*, 1914.

Leather (a word common to all Teutonic languages; Ger. *Leder*, Dutch *leer* or *leder*, Swedish *läder*, etc.; cf. Welsh *lladen*), name given to the imputrescible substance which is prepared from the skins of various animals by means of different processes. The skins of Mammalia consist broadly of two layers—the upper, containing

colouring matter and the roots of the hair, being cellular in structure, the thicker under layer being of fibrous structure. The upper layer is known as the epidermis, the under as the corium. The former is valueless from the tanner's point of view, and as it is decomposed much more easily than the latter by the action of alkalies, it is removed; the latter is soluble in water after protracted boiling, and yields a solution which gelatinises upon cooling. Moist skin putrefies on exposure to the air, and dried skin becomes hard and brittle. Before L. can be produced the skin must be cleansed thoroughly, and all the hair, together with the epidermis, removed. The skins used by the tanner are principally those of cattle, but those of horses, pigs, goats, kids, calves, sheep, crocodiles, snakes, lizards, seals, deer, and some fish are also employed. After they have been washed and dried skins must be soaked for a period for the fibres to absorb water and separate from each other. Loose flesh, blood, and dirt are scraped off with a blunt knife before the skins are placed in pits or paddles containing milk of lime. The cells of the epidermis are thus dissolved and the hair loosened, and the gelatinous fibres swollen and separated into their finer fibrils. This process occupies a length of time varying from one to three weeks, according to the nature of the skin, and the longer it is carried on the softer is the L. Ox and cow hides for 'sole' L. are sometimes 'sweated' instead of being exposed to the action of lime; they are hung in a warm moist atmosphere until putrefaction is begun, when the hair is removed. The fibres are not swollen by this method, and the resultant L. is of a very firm nature. Sheep skins are often 'sweated,' so that the wool may be removed without injury, and afterwards 'fined.' As substitute or assistants to lime, alkaline sulphides are sometimes used. After liming the skins are 'unhaired' by the mechanical action of a machine or by hand over a wooden beam. All hides go through the above process, with modifications of detail, but those required for softer Ls. are now treated in a different manner from the thick sole Ls. The latter are merely washed with water or a very dilute acid liquid in order to remove as much of the lime as possible. The hides for softer Ls., however, require to be brought into a softer condition, and all trace of lime removed. Previously fermenting infusions of excrement were used, but these have been superseded by artificial 'murrys' and 'bates' which are used to remove alkaline swelling and certain constituents of the skin not required in the finished L. and to ensure that the pelt is in a non-alkaline condition immediately prior to tanning. The prepared hides may now be tanned by the action of different materials. There are three main processes named according to the material used: (1) vegetable tanning; (2) tanning by means of chemical preparations; (3) 'chamoising,' or 'shamoising,' when oils and fats are the agents.

Vegetable Tanning.—Tannin is obtained

from various vegetable products, the choice depending partly on price and partly on the qualities thereof. The bark of the oak is one of the oldest tanning materials, but other products are largely used, including valonia (the acorn cup of the Levantine *Quercus agrifolia*), oak wood, and chestnut extracts, sumach, cutch, gambler, myrobalans, quebracho, etc. Vegetable tanning of hides can take up to two years but, more normally, occupies three months. Lighter skins are tanned in two to seven days.

Chemical Tanning.—(a) Chemical tanning is now largely used for light Ls., particularly for shoe uppers. The skins, after being steeped in a solution of common salt acidified with sulphuric acid, are transferred to a revolving drum containing a solution of basic chromium sulphate. The finer Ls. then undergo the process of 'fat-liquoring' in an oil emulsion. For chrome calf sulphated oil and egg yolk are used. (b) 'Tawing' is the term applied when aluminium salts are used, but this method is now usually included with other chemical methods employed. The more delicate kinds of L. are sometimes tanned by immersion in alum, salt, flour, and egg yolk. (c) Synthetic tans have increased in range and popularity during the last twenty years and are widely used for certain purposes, although they cannot replace the chrome and vegetable tanning processes. They produce a light tannage that does not dye too readily. Other solutions employed in tanning are those of formaldehyde and iron salts.

Chamoising.—'Wash L.' or chamois L., is prepared from the skins of deer, sheep, calves, etc., by tawing them with oil. The skins are prepared in the usual way and are then repeatedly rubbed with animal oil; the oil employed is usually a fish oil, to which a little carbolic acid is sometimes added. The oil is sprinkled on the skins and rubbed in by hand, after which they are placed in the tawing machine and exposed for some time to the action of the beaters. This process is repeated until there is no longer any fleshy odour from the skin. A process of gentle fermentation is then originated in the skins by exposure to a warm atmosphere; the pores are thus opened and the oil thoroughly penetrates the skin. Washing with a dilute warm caustic ley removes any excess of oil, and the skins are then dried and dressed.

Leather Dressing.—After tanning the L. is dried and sorted into its different classes according to its suitability. The first finishing process is shaving, in which the skins are thoroughly wetted down and put through a machine where a rapidly revolving cylinder reduces the substance of the skin and cleans off any remaining pieces of loose flesh. The skins are next dyed: this is done with artificial organic dyestuffs in revolving drums or paddles. The dyes are dissolved in boiling water and introduced into the drum through its hollow axle. To dry the skins excess moisture is mechanically removed in a striking-out machine and they are either

hung up as in the case of gloving Ls. or nailed out on drying boards. There are very many finishing processes, some of the most important being 'duffing,' 'striking,' 'spraying,' 'plating,' 'ironing,' 'graining,' 'glazing,' 'boarding,' etc. Dyed skins very often need to have the dyed colour levelled, and this is done by the application of pigment finishes, either on the table with a brush or plush pad or by air pressure spraying, the latter being quicker and more level. Morocco grain goats have a coat of cellulose sprayed on to them so that, after glazing to make the grain surface bright and sparkling, they can be soaked in water and grained in a wet condition. This graining is done on a table with a graining board and results in a well-known Morocco or 'hard grain' goat.

Hides for sole Ls require little finishing, a heavy rolling and brushing usually sufficing. Furniture hides are machine grained, pigmented, reglained, and finally sprayed.

Skivers are the grain split taken from a sheepskin in the limed condition, the flesh split is tanned with oil by pounding in the stocks and becoming what is known as chamois L. Skivers are usually tanned with sumach and then dressed into various finishes, but L., while the essential feature is fastness of the finish to perspiration, fancy Ls for covering card cases, photo frames, and many other articles. For most skiver finishes imitation grains are embossed on to the skin.

The essential feature of bookbinding Ls is that they should be dressed free from any material that might cause the L. to rot. Sulphuric acid is so often employed to assist in dyeing will shorten the life of the L. and cause rotting within a very few years. Iron salts should also be excluded from this type of leather. As often as possible bookbinding Ls are made with a straight finish (that is, without using any pigments) a glazed finish being produced by the aid of the friction of glass or agate on a top finish consisting of blood, egg, albumen and milk. Goat skins are also used for glazed kid as well as Morocco grain, a very much more mature skin being used for the latter although glazed kid is not necessarily made from kid skins.

Patent and enamelled Ls. are made by applying many successive coats of varnish in dust proof and heated rooms. Some can be applied to any type of L. Some imitation 'patent L.' finishes can now be produced by the application of two or three coats of very bright cellulose L. in use needs little care or attention. It should be kept clean and any natural oils removed ought to be replaced. Dirt and stains can be removed with a mild solvent such as carbon tetrachloride, applied with a rag and gently rubbed. Stubborn stains can be removed with petrol, but any natural oils removed should be replaced by rubbing with a rag dipped in olive oil. L. may stain and discolour if exposed to very strong sunlight. Most pigment finishes will rub off if scrubbed with water, but washable finishes are now available. See J. W. Waterer, *Leather*

in Life, Art and Industry, 1946, and H. A. Carnell, *Leather*, 1949.

Leather, Artificial, is a cotton or linen fabric treated with a solution of pyroxylin. The solvents usually employed are a mixture of alcohol and amyl acetate or one of wood spirit, acetone, and amyl acetate. An insoluble dyestuff is added to the solution, and after the material has been coated it is run through a machine with a pattern of 'grain,' which is impressed on the fabric. A L. can be used for some of the purposes served by real L. It does not crack easily, is pliable, and water-proof. One form of A. L. is known as 'rexine.'

Leatherhead, par and tn of Surrey, England 3 mi from Epsom on the Mole. There are brick works, tanneries, and breweries. Pop 6000.

Leather-jackets, see under CRAFT-PLA.

Leatherwork. Of recent years the art of creating goods from leather has become increasingly popular as a hobby, and indeed as a profitable enterprise for the amateur. Leather is pleasant and easy to handle, and a minimum of tools and very little skill are required to produce useful and decorative articles. L. falls roughly into three classes. The first and now it is probably the largest class is that which concerns itself with the making of handbags, purses and holdalls. There are many leathers which can be used for this purpose, the most popular being calf pigskin, cowhide, and embossed sheep skin. The simple basic tool required for handbag making are a good knife, steel ruler, cutting board, awl, and a six way plier punch. The materials for an average thonged handbag consist of (a) Leather (usually sold by the square foot). It is always wise to buy the best quality leather possible, and to reject skins with holes or other blemishes. (b) A skiver or lining leather. The skiver is attached to the leather with paste, and a press is used for drying. (c) Thonging. This is made in leather and plastic. (d) Glue. (e) A fastening. There is a wide variety obtainable. Studs are used a special fix can be purchased. The process of making a handbag consists of placing the pattern on the leather and skiver, cutting out, pasting them together, then sewing the bag by threading the thonging through a series of holes made by a plier punch. The edges of the leather which are to be punched and thonged are glued together and held in place with bull dog clips before being punched. Accurately combined with practice is needed to ensure that holes are a uniform distance apart, and to keep the stitches at an even tension. A stitch marker can be used if necessary.

The second class of L. is artistic L. This embraces to be and decorated leather, modelled, appliquéd, hammered and punched leather, blind tooling and gold tooling. This type of work is more specialised. It is particularly suitable for book covers and finely modelled bags, pockettes, comb cases, etc. The best skins for general artistic decorative work are calf or cowhide, calf is very malleable

Dull-surfaced cowhide is used for modelling. The tools required by beginners are also simple and few: a good knife, tracer, steel ruler, set-square, punch, and modelling tools.

The third category in amateur L. is glove-making. Hand-made gloves are always popular for many reasons, one of the most important being that individual fittings can be used. The most popular leathers for gloving are Cape tan, nappa, gloving lambs, coloured and washable does, and chamois leathers. A good pattern, a really sharp pair of scissors, needles, and good strong thread are adequate equipment for simple types of gloves. The secret of glove-making lies in the cutting and in the correct method of stitching. The 'stretch' must always be across the width of the hand, and it is essential to know where the stretch of a gloving skin lies when laying on the pattern. See Botty Dougherty, *Four Leatherwork*, 1947; F. R. Smith, *Leatherwork*, 1949; and R. L. Thompson, *Leathercraft*, 1949.

Leaven (through Fr. *levain*: from Lat. *levamen*, solace, *levare*, to lift up), substance which produces fermentation; also an underlying element or influence which produces a subtle change over anything. To the Heb. the word suggested corruption, hence leavened bread was not permitted in sacrifices. At the Feast of the Passover or of Massôth unleavened bread was eaten. In the N.T. the kingdom of heaven is compared to L. (Matt. xiii. 33), signifying a good influence. The idea of corruption is suggested in the reference to the L. of the Pharisees in Matt. xvi. 6.

Leavenworth, co. seat of L. co., E. Kansas, U.S.A., on the R. Missouri, 25 m. N.W. of Kansas city. Fort L. to the N. has a military prison and strong garrison. Coal is mined, and machinery, engines, bricks, furniture, flour, woollens, and vehicles are manufactured. Pop. 19,300.

Lebanon: 1 Co. seat of L. co., in S.E. Pennsylvania, U.S.A., 25 m. from Harrisburg; produces iron, copper, marble, coal. Manuf. include machinery, stoves, chains. Pop. 27,200. 2. Co. seat of Grafton co., New Hampshire, U.S.A., 50 m. N.W. of Concord. Machinery, woollens, and farm implements are manufactured. Pop. 7600. 3. Co. seat of Boone co., Indiana, U.S.A., 25 m. N.W. of Indianapolis. Manuf. washing machines, flour, etc. Pop. 6600.

Lebanon, or Lebanese Republic, one of the four constituent states of Syria. It comprises the sanjaks of Bekaa and N. L. Area 4300 sq. m. Pop. 603,000 (Christians, 343,000; Muslims, 263,000). The L. Mts. or Mt. L. occupy the greater part of the country, but there are sev. seaports, including Beirut (cap.), Tripoli, Sur (Tyre), and Sidon (Sidon). Olives, oranges, grapes, tobacco, and other crops are produced. Beirut and Tripoli are centres of the silk industry. Iron and lignite are the chief minerals. Coal, asphalt, and amber are also found. The inhab. are mostly Christians (Maronites and Gk. Catholics), but a few Druses

remain in the S. From 1861 to 1914 a Christian governor under the protection of the European powers was appointed. With the rest of Syria, L. came under Fr. mandate after the First World War; in 1920 it was proclaimed a state with its own assembly and president. In 1936 a treaty was arranged with France whereby L. was to attain independence after three years. In 1941 it was invaded by Brit. troops and, after resistance by the Vichy Fr. troops, surrendered. See also SYRIA.

E. Buchanan

CEDARS IN LEBANON

Lebanon, Mount (*Libanus*, the White Mt.), mt. chain of Syria and Palestine, parallel with the Mediterranean coast with spurs projecting to the sea, the Jebel-Liban or Jebel-el-Gharbi of the Arabs. It stretches from the Nahr-el-Kebir, near Tripoli, and Homs to the Litany (anot. *Leontes*), near Tyre, and the range is continued by the hills of Palestine, the biblical mts. of Naphtali, Ephraim, and Judaea. To the E. is the Anti-Libanus range (Jebel-esh-Sharki), with El-Buka'a (anot. *Cele-Syria*), a narrow, fertile valley, between. The average height of L. is 7000 ft., its chief peaks, Dahr-el-Kodib and Jebel-Makmal, being about 10,000 ft. The formation is limestone, sandstone, and basalt. Only a few groves of the once noted cedars now remain. The villa on the slopes of L. are favourite summer resorts for the people living in Beirut. See E. Fraas, *Drei Monate im Lebanon*, 1876; J. Porter, *Handbook for Travellers in Syria and Palestine*, 1875; and A. K. Hourani, *Syria and Lebanon*, 1945.

Lebbeke, tn. in the prov. of Flanders, Belgium. 6 m. N.E. of Alost. Engaged in agriculture and manuf. of furniture and lace, in tanneries and oil-mills. Pop. 11,800.

Lebda, see LEPTIN.

Lebedin, tn. in the Kharkhov Region of the Ukrainian S.S.R., 90 m. W.N.W. of Kharkhov, trading in tallow, sugar, and grain. It figured in Peter the Great's campaign against Mazepa and Charles XII. (1709). Pop. 14,000.

Lebedyan, tn. in the Vorenesk Region of the R.S.F.S.R., 110 m. W. by N. of Tambov. There is trade in cereals, fur, leather, livestock. Pop. 16,000.

Le Bel, Joseph Achille (1847-1930), Fr. chemist who shares with J. H. van't Hoff, a Dutchman, the honour of having originated an important theory of the arrangement of atoms in space. In 1893 he was presented with the Davy medal of the Royal Society.

Lebensraum, or Living-space, slogan of neo-Ger. Imperialism. The word really denotes two different things: (a) the alleged over-pop. of Germany in comparison with her arable soil -whence the need for territorial expansion; (b) the Ger. claim to control various neighbouring zones in the E., S.E., N., and W. of Europe—a claim based on strategic or economic interests.

Even if living-space be measured by relating the pop. to the area of the metropolitan country and all dependencies combined, it remains the fact that the shares of the various nations differ enormously. The position in 1939 was that the Ger. Empire comprised hardly 5 per cent of the world area but 4 per cent of the world pop.; the corresponding figures for Japan were 1.5 and 6.4 per cent. Other 'have-haves' included China, Holland, Poland, Turkey, and Spain. The Brit. Commonwealth of Nations, with 26 per cent of the world area and 24.6 per cent of the world pop., had only its due share and, similarly, the U.S.A. Most other nations, including Italy, were 'have's,' i.e. had more than the average 'living-space.' It is noteworthy, however, that though the Ger. Empire was the most densely settled empire in the world, the opinion has never prevailed in Germany that the country was over-populated. Indeed for years before the Second World War the emigration of 'Aryans' was practically forbidden. Italy too restricted emigration and, like Germany, even adopted measures to increase the birth-rate. 'What,' asked Mussolini, 'are 40,000,000 Italians against 90,000,000 Germans and 200,000,000 Slavs? Italy, if she wants to count for anything, must have at least 60,000,000 inhabitants by the beginning of the second half of this century' (speech in the It. Chamber, 1927). At that time emigration was restricted, but later, in accordance with the expansionist policy, the It. Gov. tried to foster emigration from the densely settled mother country to the thinly settled African colonies. In 1939 Germany no longer, even if ever, regarded herself as overcrowded. She sought no outlet for her pop. (hardly any Ger. ever settled in Germany's former colonies), she recruited labourers from her new territories in Europe and continued to restrict emigration. The assumption sometimes made that the Ger. claim to restoration of colonies was related to living-space is untenable. Hitler, at first, contemplated only an extension of Germany's living-space in Europe. The argument for the return of the Ger. colonies was and remains that Germany wanted access to tropical products—a hollow claim in view of the small proportion of her imports which she obtained from her colonies; and as a fact the share of Germany in the imports of the

Brit. Cameroons, in 1939, was no less than 48 per cent. The degree of self-sufficiency in foodstuffs was much higher in Germany than in many other countries possessing no colonies. Her colonies could provide next to no foodstuffs and, judged by Ger. requirements, only an equally negligible fraction of raw materials could be produced by the colonists except by forced labour, when the output would not have been very much greater. Germany's reason for demanding the return of her former colonies overseas was principally to further her strategic situation for a world war; but in any case the doctrine of trusteeship, familiar in Brit. colonial administration, had, and would have had, no place in the Ger. dispensation. From the economic standpoint Germany's demand, had it been assented to, would only have led to the exploitation of the indigenous pop. as was the case in Europe during the Second World War. 'Even if she recovered the sovereignty over those territories, and even if she conquered in central and eastern Europe an area five times as large as her present area, her "living-space," as she defines it, would still be grossly inadequate' (Kuczyński). See also 'MEIN KAMPF.' See C. Schmitt, *Grossraum gegen Universalismus*, 1939, and R. R. Kuczyński, 'Living-space' and Population Problems, 1939.

Leblanc, Nicolas (1742-1806), Fr. chemist who invented an important method of manufacturing washing soda from common salt. This method is now obsolete but was worked for over a century. L. was ruined by the revolution and finally committed suicide.

Lebœuf, Edmond (1809-88), marshal of France, b. in Paris. He entered the army in 1832, and after services in Algeria was made colonel. He directed the Fr. siege operations around Sebastopol in the Crimean war and was made brigadier-general. He rose to be commander-in-chief of the artillery and served with distinction at the battle of Solferino. In 1869 he became minister of war and the following year marshal. Before the Franco-Ger. war he claimed France to be in perfect readiness, so that he was largely blamed for the disasters of his country. After resigning he fought bravely at Noyseville and Gravelotte, and was taken prisoner at Metz.

Le Bossu, René (1631-80), Fr. writer and critic, b. in Paris. He joined the canons-regular of St. Geneviève in 1649, and taught the humanities in various schools. His *Traité du poème épique* (1675) won for him a European reputation. It was trans. into Eng. by 'W. J.' in 1695, and there was a later version in 1719. Its thesis was that the subject should be chosen before the characters, and the action arranged independently of them; it was known to Dryden, Addison, and Pope. See memoir by Le Courayer, prefixed to the 6th ed. of the *Poème épique*.

Lebrat, see ALBERT.

Lebrija (anc. *Nébrissa*), tn. of Seville prov., Spain, 16 m. from Jerez. There is

a ruined castle. It trades in cattle, grain, wine, and oil. Pop 11,000.

Lebrun, Albert (b 1871), Fr statesman and former president of France, b at Mercy le Haut, Meurthe-et-Moselle. After being a mining engineer and prof he became a deputy of the moderate right in 1900. He was minister of colonies during the Agadir incident (qv). In 1932 he became president of the republic, averting the 1934 crisis of the Paris riots by calling a national gov. In 1940 his authority was superseded by that of Pétain (qv) and he was arrested by the Germans in 1943. In 1944 after his release he retired from public life.

Le Brun, Charles (1619-90), Fr historical painter, pupil of Vouet. He designed many of the decorations at Versailles (1679). In 1645 he helped found the Académie etab the Fr school at Rome, became court painter to Louis XIV and director of the Gobelin manufactory (1660). His works include 'Massacre of the Innocents,' five pictures illustrating the hist of Alexander (1661-66), in the Louvre), 'The Family of Darius,' 'The Repentant Magdalen.' See *Blanc Histoire des Peintres*, 1849-75; *Bavie, Historical and Critical Dictionary*, 1696, also lives by Genéve, 1885, and Jouin, 1890.

W. F. Mansel

ELISABETH VIGÉE LEBRUN

(Self portrait)

Lebrun, Marie Louise Elisabeth (née Vigée) (1755-1842), Fr. portrait painter. She painted her first portrait of Marie Antoinette (1779), and was admitted to the Académie (1783) with 'Peace Bringing back Plenty.' She travelled much in Europe. Her portraits include Lady Hamilton, Mme de Staël, herself and her daughter, J. Vernet, Lord Byron, the Prince of Wales, Marie Antoinette

and her three children. She pub. her *Souvenirs* about 1835.

Le Caron, Henri (1841-94), adopted name of Thomas Miller Beach, Brit secret service agent, b at Colchester. He served with the N. Army in the Amor civil war (1861-64), and afterwards, having given information to the Brit Gov concerning the Fenian plot against Canada, he was employed as a military spy. The Painell Commission of 1889, when he was brought forward as a witness, put an end to his exciting career. See his *Twenty-five Years in the Secret Service* (1892).

Le Cateau, see CATIAU, LE BATTIF OF Lecce (ancient Lupiae), tn and archiepiscopal see of Apulia, cap of the prov of L. S. Italy. 24 m S. J. by rail of Brindisi. The church of S. Nicola (13th c) is also built by the Lancers in the twelfth century. There is also the cathedral of S. Oronzo and the Prefettura with its valuable collection of old pottery. L. trades in oil, wine, tobacco, woollens etc. Pop 49,800. The prov. has an area of 2623 sq m and a pop of 527,000.

Lecco, tn in the prov of Como, Italy, 15 m S. by N. of Como, standing on an arm of the lake. The tn manufs iron, brass, and copper goods, has silk and cotton factories and oil mills. Pop 31,500.

Lech, one of the tribes of the R. Danube, about 170 m long. It rises in Vorarlberg and flows through Bavaria in a northerly direction, joining the Danube near Donaueschingen.

Lechytza, see LECHYTZA

Lecky, William Edward Hartpole (1818-1903), Eng. historian and philosopher, b near Dublin, his family being of Scottish origin. Educated at Armagh School, Cheltenham and Trinity College, Dublin. He attributed much of his success to his study of the works of Bishop Butler, Hobbes, Bacon, Whately, and Buckle. His earliest pub. *Religious Tendencies of the Age* (1860) revealed a spirit of tolerance and a liberal outlook, as also did his *Declining Sense of the Miraculous* (1863), which work later formed the early chapters of his *History of Rationalism* (1865). This latter book put L. in the front rank as an author who knew how to present hist and philosophy with unity of conception, power of thought and a method of cultural evolution. The book indeed is a striking contribution to the hist of the human mind and of human society. His *History of European Morals* (1869) is an expansion of the earlier work, and purports to show that moral intuitions are susceptible of development and that hist demonstrates continual progress in moral concepts. This work was adversely criticized by the orthodox, but met with as great a success as its predecessor. He now worked unremittingly at the collation of material for his great work, *The History of England in the Eighteenth Century*, one purpose of which was to refute what he described as the anti-French calumnies of Eroude. The 8 vols. were pub between 1878 and 1890 and were described by Lord Acton as 'fuller of

political instruction than anything that had appeared for a long time.' The work certainly set the seal on L.'s fame as an impartial historian, thorough in research, and able to present summaries and deductions in philosophical language and with the soundest judgment. Other works: *Leaders of Public Opinion in Ireland* (1861) (revised, 1903); *Democracy and Liberty* (1890); *The Map of Life Conduct and Character* (1899); *Historical and Political Essays* (1908). He was M.P. for Dublin Univ. in 1895 and 1900. One of the original members of the Brit. Academy. See memoir by Mrs. L., 1909, and life by J. J. Auchmuty, 1946.

Leclair, see under EDWARDSVILLE.

Leclanché Cell, see under CELL.

Leclerc de Hauteclouque, Philippe (1902-1947), Fr. soldier, b. of an old Picardy family, his true name being Philippe, Vicomte de Hauteclouque. Passed out of St. Cyr, 1924. At the outbreak of war in 1939 he was a captain. Wounded and taken prisoner, he escaped to England and offered his services to Gen. de Gaulle, adopting the name of L. to avoid reprisals against his wife and family; and at the end of the Second World War he changed his name to L. de H. Sent by de Gaulle to the Cameroons, he played a prominent part in setting up the new regime under the Free Fr. movement. His first great military exploit was the capture of the Kufra oasis (g.v.) during Gen. Wavell's offensive, but he had to retreat when the Brit. retreated. The march of his motorised column from Fort Lamy (g.v.) in Fr. equatorial Africa to join the Eighth Army (g.v.) at the Mareth line was a magnificent achievement and one which had great moral value to France. Its *déclat* should not, however, obscure the fact that it was the outcome of organising power and immense labour, necessitating the transport of vehicles and heavy stores up the Congo for a distance of 1000 m. After the N. African campaign he came to England to raise and train the famous Fr. 2nd Armoured Div. and indeed it was a brilliant divisional commander that he will be remembered. His div. took part in the invasion of Normandy (1944) and made its spectacular dash to liberate Paris (Aug. 24-25). Later the div. joined the Fr. Army, which had landed in the S. of France from the Mediterranean, and were the first troops to enter Strasbourg (Nov. 23). For a time in 1945 L. was governor of Strasbourg. Later in that year he was sent to Fr. Indo-China as commander-in-chief, where his stern measures against the Viet Nam insurgents excited criticism in left wing quarters. He was killed on Nov. 28, 1947, in an aircraft accident in Fr. N. Africa, where he had been inspector of the forces of land, air, and sea since April 1947. His leadership and achievements did much to restore Fr. confidence in the glories of the Fr. Army, which had suffered eclipse in 1940, a reputation which was enhanced by youth and charm (see *The Times*, Nov. 29, 1947. See *Le Général Leclerc vu par ses compagnons de combat* (Paris) 1948.

Le Clerc, Jean (1657-1736), Swiss theologian, b. at Geneva, and after completing his studies became a prof. at the Remonstrant seminary at Amsterdam, 1684. Among his numerous works are *Bibliothèque universelle et historique* (1686-93); *Bibliothèque choisie* (1703-13); *Arts Crutici* (1712-30); and *Bibliothèque ancienne et moderne* (1714-28).

Le Clerc, Sebastian (1637-1714), Fr. designer and engraver, b. at Metz. In 1694 his *Géométrie pratique* in eighty plates attracted the notice of Colbert, who procured for him a post in the Gobelins tapestry manufactory. Le C. also pub. a number of scientific treatises and a *Traité d'architecture* (1714). See C. A. Jombert, *Catalogue raisonné de l'Œuvre de Sebastian Le Clerc*, 1774.

Lecluse, see CLUBIA.

Lecoq, Alexandre Charles (1832-1918), Fr. musical composer, b. in Paris; pupil of Bazin, Halévy, and Benoist. His first operetta appeared in 1857, *Le Docteur miracle* (which won, at the same time as Bizet, a prize offered by Offenbach, 1857), followed by many others, notably *Fleur de thé* (1868), *Les Cent Vierges* (1872), and best known of all, *La Fille de Mme Angot* (1872), produced in Paris and London (1873), which was never equalled in his subsequent pieces, including *La Petite Mademoiselle* (1879), *Le Jour et la nuit* (1881), *Le Cygne* (1899), and *Yetta* (Brussels, 1903).

Lecoq de Lisle, Charles Marie (1818-1894), Fr. poet, b. in the Is. of Réunion. He settled in Paris in 1846. His first work, *La Vénus de Milo* (1848), gained him many friends, especially amongst the devotees of classical literature, and he produced his *Poèmes antiques*, which contain some of his best work, in 1852. These were followed by *poèmes et Poèmes* (1855); *Le Chemin de la croix* (1859); *Poèmes barbares* (1862); *Les Erinnyes*, a tragedy after the Gk. model (1872); *Poèmes tragiques* (1884); and *L'Apollonide* (1888). Besides this he trans. Theocritus, Anacreon, the *Iliad* and *Odyssey*, Hesiod, Eschylus, Horace, Sophocles, and Euripides. *Derniers poèmes* appeared posthumously (1895). His poems had a great influence on the young poets of his time, and are marked by classic regularity and faultlessness of form. He was made assistant librarian at the Luxembourg in 1873, and succeeded to Victor Hugo's chair at the Academy in 1886.

Le Corbusier (pseudonym of Charles Edouard Jeanneret) (b. 1887), Swiss architect, b. at La Chaux de Fonds, near Neuchâtel. Settled, 1916, in Paris. For a while a painter of the modern school. Then he and his cousin, Pierre Jeanneret, set up together as architects, professing to discard all style, in a purely engineering spirit. However, Le C.'s books (in the Fr. paragraphic style) disclose a hankering after 'proportion' and 'variety': *Vers une architecture* (1925), *Urbanisme* (1925); trans. as *The City of To-morrow*, (1929); *L'Art décoratif d'aujourd'hui* (1928); and *Une Maison—un palais* (1928).

Le C.'s advanced architectural theories have never been accepted without reserve.

In Moscow, New York, and Rio de Janeiro his work has been criticised as warmly as it has been praised. In his own country he is meeting with both fierce criticism and enthusiastic support for a gigantic new building in Marseilles which he styles his 'vertical community.' More like a small tn. than an apartment building, it stands in the middle of 8 ac. of gardens

AN OLD LECTERN IN BURY CHURCH,
HUNTINGDONSHIRE

and will house 1600 persons in 330 separate flats. A shopping centre will occupy one entire storey, including food shops, a chemist, laundry, post office, hairdresser, florist, and newsagent. Many other amenities are to be provided on the roof—a 330-yard running track, a solarium, gymnasium, crèche and youth club. The building's twenty-seven storeys will be supported, 23 ft. clear of the ground, on thirty-six concrete pylons, and the whole structure will be 455 ft. long, 80 ft. wide, and over 200 ft. high. In this 'vertical community' Le C. is not merely trying to provide the maximum material comfort; indeed the whole project embodies and exemplifies in concrete form the results of his entire architectural experience and theory. For him its value lies in its contribution to the fulfilment of his own philosophy of life and happiness. Criticism, however, has taken a practical form and work on the building was stopped by the Committee of Public Hygiene, who were not satisfied with the lighting and ventilation of the lower floors, the lighting arrangements in the corridors, and the air-conditioning system. In the result, however, after the committee's reports had been sent to the minister of reconstruction and town planning, the committee's decision was reversed. See also ARCHITECTURE.

Lecouvreur, Adrienne (1692-1730), Fr. actress, b. near Châlons. After making her début in 1717 she was received into the Comédie française, where she attained an extraordinary popularity. She was extremely fascinating, but her success was largely due to the naturalness of her delivery and her simple pathos. Her death was supposed to have been due to poison administered by a rival, the Duchess Bouillon. Scribe and Legouvé's play, *Adrienne Lecouvreur* (1849), gives an account of her life.

Le Creusot, see CREUSOT.

Lectern (Fr. *lutrin*, It. *leggio*, Ger. *Lesepult*), reading desk in the Anglican Church, practically confined to the reading of lessons. It came into use in the fifteenth century, and was made either of wood or metal, the commonest type being in the form of an eagle with outspread wings, on which the book rested, raised on a moulded stem and carrying three projecting ledges with lions on them.

Lectiary, book containing portions of scripture to be read during the course of the year in the public service of the church. The custom of reading the books of Moses in the synagogues on the Sabbath day was an ant. one, the addition of lectures (readings) being of later date. In the Anglican Church the form of L. was fixed in 1661 and revised in 1867. In 1879 a new table of lessons was drawn up and became obligatory.

Lectures (Lat. *lectura*, from *legere*, to read; compare Fr. *lecture*), discourses or addresses of a formal nature, given from an educational point of view, to distribute information on a variety of subjects. Lectureships were endowed at most univs. with a view to spreading the particular opinions of the founder, and nowadays they are attached to practically every branch of learning, though formerly they were of a theological or religious kind only. Of the latter variety are the Bampton, delivered at Oxford, the Hulsean at Cambridge, the Boyle at London, the Hibbert (in comparative religion) at Oxford and London, the Bonnellian at Dublin, and the Gifford and Burnett L. in connection with the Scottish univs. Of more recent date are the 'Univ. Extension' L., inaugurated in 1885 at Oxford, mainly owing to Max Müller. Cambridge also has a Univ. Extension scheme, with centres at Derby, Exeter, Hull, Newcastle, and other important tns., and the London Univ. has a similar scheme.

Lecythis, typical genus of the Lecythid, an order of epigynous exogens, allied to the Myrtales. Some forty species are known, mostly giant trees of Brazil, Venezuela, and the Guianas. The great woody pericarps of the various species are used by the natives as drinking vessels. The seeds are large and eatable but leave an unpleasant bitter taste. *L. ollaria*, the sapucaia, is the largest tree in the Brazilian forests (see also SAPUCAIA NUT). It is also known as monkey-pot. The bark is cut by the Indians into thin layers and used as wrapping for cigars or for cigarette wrappers.

Leda, in Gk. mythology a daughter of

Thestius and Eurythemis, and wife of Tyndareus, king of sparta. Zeus visited L. in the form of a swan, and by him she became the mother of Castor and Pollux. The story is recounted by Homer, Hesiod, Euripides, Ovid, and other anc. writers.

Ledbury, tn. in Herefordshire, England, at the S. extremity of the Malvern Hills. Fine elder orchards and hop grounds are in its immediate neighbourhood. There is a fine timbered market house of 1633. Pop. 3300.

Lede, Belgian tn., situated in E. Flanders, 3 m. N.W. of Alost. There is agriculture and the manuf. of linen, lace, tobacco, and chicory. Pop. 8600.

Ledeberg, suburb of Ghent, Belgium, engaged in floriculture, cotton-mills, manufs. of machinery, chemicals, sugar, and dye-works. Pop. 12,200.

Ledochowski, Mieczyslaw, Cardinal Count (1822-1902), Polish ecclesiastic, b. in Gorki in Galicia. He was educated at Warsaw, finishing at Rome, where he was ordained in 1845. In 1845 became archbishop of Gnesen-Posen, and in 1876 was made a cardinal. He championed the cause of his religion against the gov., and suffered imprisonment in 1873 during the Prussian and Ger. *Kulturkampf*, on refusing to lay aside his office. Being released in 1876 he went to Cracow, but on being expelled from Austria went to Rome, finally resigning his archbishopric in 1885. In 1892 he was made prefect of Propaganda.

Ledru-Rollin, Alexandre Auguste (1807-1874), Fr. politician, b. at Fontenay. He was admitted to the Bar in 1830, and became conspicuous as a democratic agitator. In 1846 he pub. *Appel aux travailleurs*, in which he advocated universal suffrage. On the outbreak of the revolution in 1848 he became a member of the provisional gov., aiming at the presidency, against Louis Napoleon, later in the year. On his defeat he came to London, where he joined 'Le Comité de la République universelle,' returning to France after an exile of twenty years. He wrote *De la décadence de l'Angleterre*, besides many contributions to Fr. jurisprudence. His *Discours politiques et écrits divers* appeared in 1879.

Ledward, Gilbert (b. 1888), Eng. sculptor, b. in London, was the second son of Richard Arthur L., sculptor. He obtained the first Brit. School of Rome scholarship in sculpture, the R.A. travelling studentship and gold medal, both in 1913. In the First World War he was a lieutenant in the Royal Garrison Artillery. He designed, with H. Chilton Bradshaw, the Guards' Div. memorial on the Horse Guards Parade. He also designed war memorials in five Eng. tns. and at Grahamstown (S. Africa), as well as the Marquis of Ormonde memorial in Kilkeny Cathedral, the Dean Spence memorial in Gloucester Cathedral, the Alfred Milner memorial in Westminster Abbey, and bronze statues of King George V. at Kampala, Uganda (1939), and at Nairobi, Kenya (1940). From 1928 to 1929 he was prof. of sculpture at the Royal College of Art.

Ledyard, John (1751-88), Amer. traveller, b. at Groton, Connecticut. In 1776 he accompanied Capt. Cook on his last voyage, on his return publishing a jour. of the voyage with an account of Capt. Cook's death. In 1786 he set out on an expedition to the Arctic regions, arriving at Irkutsk after a journey of great hardships, where he was arrested as a spy and forbidden to re-enter Russia. Returning to London, almost immediately he started on another expedition to the interior of Africa, but d. at Cairo.

Lee, Ann (1736-84), Eng. Quaker b. at Manchester. After persecution as a Quaker and religious eccentric she left for America, and in 1776 founded the Amer. Society of Shakers.

Lee of Fareham, Arthur Hamilton Lee, first Viscount and Baron (1868-1947), Brit. soldier and parliamentarian. He was prof. of strategy and tactics at the Royal Military College, Kingston, Canada, 1893-98, and Conservative M.P. for the Fareham div. of Hampshire, 1900-18. He was civil lord of the admiralty, 1903-5, director general of food production, 1917-1918, minister of agriculture and fisheries, 1919-21, and first lord of the admiralty, 1921-22. In 1921 he gave 'Choquers estate, Buckinghamshire, for a country residence for prime ministers. He was created viscount in 1922. His autobiography, *A Good Innings, 1868-1940*, was pub. in 1940.

Lee, Fitzhugh (1835-1905), Amer. general, b. at Clermont, Virginia. He served throughout the Virginian campaigns of 1862 and 1863, becoming major-general the same year, and led the last charge of the Confederates at Farmville in 1865. He was governor of Virginia, 1886-90, consul-general at Havana, 1896, and military governor of Havana and Pinar del Rio, 1899. He wrote *Robert E. Lee* (1894), and *Cuba's Struggle Against Spain* (1899).

Lee, Frederick Richard (1799-1879), Eng. landscape painter, b. at Barnstable. He became a student of the Royal Academy in 1818, and first exhibited in 1824. He was elected an academician in 1838. His works were chiefly of Eng. scenery, the cattle in many of them being painted by Sidney Cooper. Some of his pictures are 'The Cover Side' (dog, etc., by Landseer), 'Showery Weather,' 'Evening in the Meadows,' 'A River Scene' (all of which are in the National Gallery, London), 'Near Redleaf,' 'Gathering Seaweed,' 'Distant View of Windsor' (Victoria and Albert Museum).

Lee, Henry (1756-1813), Amer. soldier known to every Amer. schoolboy as 'Light-Horse Harry Lee,' was b. near Dumfries, Virginia. He graduated from Princeton, and when the Amer. colonists began their war for independence served for a time under Washington. Later given independent command of a mobile troop, he captured the fortress of Paulus Hook from the Brit., and then distinguished himself by his dash into the Carolinas. After the war had been won he became governor of Virginia, and took a leading part in suppressing the so-called

whisky rebellion in Pennsylvania. In Congress he delivered the funeral oration on the death of Washington. He was the father of Robert E. Lee (q.v.), commander-in-chief of the forces of the S. Confederacy.

Lee, Nathaniel (c. 1653-92). Eng. writer of drama. He produced his first play, *The Tragedy of Nero, Emperor of Rome*, in 1675. He next pub. *Sophonisba* (1675) and *Gloriana* (1676), but he made his reputation by *The Rival Queens*, a blank verse tragedy in 1677. Many others followed, his last being *The Massacre of Paris* (1689). L. also collaborated with Dryden in *Edipus* (1679) and *The Duke of Guise* (1682). His works were collected in 3 vols., in 1722 and 1734.

Lee, Richard Henry (1732-94), Amer. statesman, was b. at Stratford, Virginia, being a scion of an old Virginia family of Cavalier stock. He was educated in England and returned to his country in 1752, having inherited large landed estates. He served in the Virginia legislative assembly and distinguished himself by leading the opposition to what he deemed the arbitrary acts of the Brit. governing authorities. He was a delegate to the first Continental Congress held in Philadelphia in 1774, and proposed the first and second addresses to the Brit. people. In the Congress of 1776 he introduced the resolutions which brought about the writing of the famous Declaration of Independence, mainly the product of his fellow Virginian, Thomas Jefferson. L. subsequently served a number of terms as Congressman and Senator.

Lee, Robert (1804-68), Scottish prof. and theologian, was b. at Tweedmouth, Northumberland. He was educated at St. Andrews Univ., and was minister of the old Greyfriars church, Edinburgh (1843-68). He tried to extend freedom of worship and thought within the Church of Scotland, and in order to improve the form of public worship introduced stained-glass windows in 1857 and an organ in 1864. He pub. *The Reform of the Church in Worship, Government, and Doctrine* (1864), as well as many other theological works and books of prayers.

Lee, Robert Edward (1807-70), Amer. soldier, perhaps the greatest commander the Amer. civil war produced, and acknowledged by European military critics to be one of the greatest generals of modern times, was b. at Stratford, Virginia. The L. family, originating in Shropshire, was among the early settlers of Virginia. L. himself married Mary Custis, daughter of the adopted son of George Washington, so that the young couple really represented the very flower of S. aristocracy. Graduating second in his class at West Point Military Academy L. won rapid promotion, until by 1838 he was a captain in the engineers corps. He won high praise for his services during the siege of Vera Cruz, and was wounded during the storming of the heights of Chapultepec. The close of the war found him a colonel, and in 1852 he had command of the U.S. Military Academy. When the civil war broke out he had much searching of heart. A lover of the Union and opposed to secession, he

nevertheless felt that he owed his first allegiance to the state which had given him birth and so highly honoured his ancestors.

In May the Confederacy named five generals, of whom L. was only third on the list. He was without any command at first, being engaged as military adviser to President Davis and to superintend the defences of Richmond and the coast defences of Georgia and S. Carolina. However, the severe wounding of Gen. J. E. Johnston, his intimate friend and classmate, caused L. to be placed in charge of the troops defending Richmond. In a brilliant seven days' series of battles he defeated the Union troops and wrecked the Peninsular campaign of Gen. McClellan. Later he crossed the Rapidan R. and defeated Gen. Pope at Manassas. He made an ill-advised invasion of Maryland, and had to retreat across the Potomac. He gained brilliant victories at Fredericksburg and Chancellorsville (1863). In response to pressure from public opinion in the Confederacy, he marched his armies into Pennsylvania, thereby giving the S. hope that the war would be transferred to N. soil. The bloody battle of Gettysburg followed. Though successful the first day L. was defeated on the succeeding days, and retreated to Virginia. The closing years of the war, 1864-65, found L. pitted against Gen. U. S. Grant in an ever increasing numerical inferiority. Antietam was a drawn battle, but Cold Harbor was a victory for the Confederates. When Grant took Petersburg in April 1865, and Richmond fell a few days later, L. recognised the inevitable by surrendering to him at Appomattox Courthouse, Virginia, with his ragged and exhausted army of 28,392 men. He had to start life all over again, and his beautiful home at Arlington, overlooking Washington, had been expropriated. He accepted the presidency of Washington College, Lexington, Virginia, later to be known as Washington and L. Univ. He d. there on Oct. 12, 1870. Between L. and Grant there was no bitterness. Great soldiers both they recognised that each had done his duty as he saw it. L. was the greater strategist and the greater master of the arts of war. The wonder was how, with inferior numbers and supplies, he managed to keep his army intact and fighting for so long a period. Apart from his skill as a commander there was something about his personality that appealed to his men. See W. H. Taylor, *Four Years with General Lee*, 1878; A. L. Long, *Memoirs of Lee*, 1876; R. E. Lee (his son), *Recollections and Letters*, 1904; and J. F. C. Fuller, *Grant and Lee*, 1933; also lives by F. Lee, 1895; W. P. Trent, 1899; P. A. Bruce, 1907; G. Bradford, 1912; F. Maurice, 1930; D. S. Freeman, 1934; and B. Moses, 1937.

Lee, Sir Sidney (1859-1926), editor of the *Dictionary of National Biography* from 1891, was b. of Jewish parents in London. Educated at the City of London School and Balliol College, Oxford, he became assistant editor of the *Dictionary of National Biography* in 1883 and joint

editor with Sir Leslie Stephen 1890-91. L. contributed numerous articles, and wrote the memoir of Edward VII. (1912). Other works of his are *Stratford-on-Avon from the Earliest Times to the Death of Shakespeare* (1885, new ed. 1906); *A Life of William Shakespeare* (1898, illustrated ed., 1899; popular ed., 1900, 1907); *A Life of Queen Victoria* (1902, new ed., 1904); *Elizabethan Sonnets* (1904); *Great Englishmen of the 16th Century* (1904); *Shakespeare and the Modern Stage* (1906); *The French Renaissance in England* (1910); *Principles of Biography* (1911, Leslie Stephen lecture at Cambridge). He was prof. of Eng. literature at E. London College, Univ. of London, 1913-24, and dean of the faculty of arts in the univ. of London.

Lee, William, Eng. inventor, was b. at Calverton, Nottinghamshire. Graduating from Cambridge he was ordained in 1582. About 1589, whilst holding the cure at Calverton, he invented the stocking-frame (see Hosiery). This machine he later improved, and in 1598 produced silk stockings. The opposition of the hand knitters drove him abroad and he d. in Paris.

Lee, dist. of London, in the bor. of Lewisham, 7 m. S. of the city on the S. E. London railway. There is a chapel built by Christopher Boone, and the Merchant Taylors' almshouses. The manor house, formerly a residence of the earl of Northbrook, is now a public library. Pop. 21,000.

Lee, term implying shelter or protection, usually from wind. It occurs principally in nautical expressions. Thus the *L. side* of a vessel (as contrasted with the windward side) is the opposite side to that on to which the wind is blowing—the sheltered side; *lee-way* is the sideways drift from a desired course occasioned by wind; a *L. shore* is a shore to leeward of a vessel, and therefore a shore on to which the wind is blowing from the sea.

Leech, John (1817-64), Eng. caricaturist, was educated at Charterhouse, London. In 1835 he began to exercise his gift of caricature, and in that year pub. *Sketchings and Sketches by A. Pen.* In 1837 he illustrated Theodore Hook's *Jack Brag*, and three years later, with Leigh, produced a *Comic Latin Grammar* and a *Comic English Grammar*. In 1841 *Punch* was founded and L. became its prin. artist and cartoonist until his death. It is said that he contributed no less than 3000 drawings to its pages. This, however, did not by any means exhaust his activities, and there is to his credit a long list of books which he illustrated, including Dickens's *Christmas Stories*; a Heckell's *Comic History of England*, and the *Bon Gaultier Ballads*. More refined than Cruikshank he was scarcely second to that great master, except in the range of his subjects. See life by W. P. Frith, 2nd ed., 1891, and G. Tidy, *A Little About Leech*, 1931.

Leeches. Leech is the common name of any class of the Hirudinea, a class of elongated, worm-like animals belonging to the group Annelida. They can be dis-

tinguished by their sucking disks, which are situated at each end of the body if there are two, and at the posterior extremity if only one is present. They occur in all parts of the world, and generally live in water, frequenting streams, ponds, marshes, and the sea, but land L. are also found, e.g. in Ceylon. Among aquatic forms the most familiar is the horse leech (*Hemopsis sanguisuga*), which inhabits fresh-water ponds and ditches, and unlike some other L. has a few small teeth of blunted form. The medicinal leech is known by its minutely ringed body, and by the presence of an anterior and posterior sucker. Its mouth in the anterior sucker contains three teeth, which are minutely serrated so that each tooth looks like a saw. It is these teeth which make the leech so useful in blood-letting, for with these it makes a wound in the skin, having first fixed itself by the anterior sucker, and sucks the blood into its own body. L. are usually of a dark olive colour, with patches or spots on a paler ground, but bright green specimens also occur.

Leeds, Francis Osborne, fifth Duke of (1751-99), known before he succeeded to the dukedom as Lord Carnarthen, entered the House of Commons in 1774, but two years later was called to the House of Lords as Baron Osborne of Kiveton. He was appointed in 1777 lord chamberlain to the queen, but, owing to his differences with the ministry, resigned that position in 1780. He was foreign secretary in Pitt's administration (1783), and while still in office succeeded in 1789 to the dukedom. He was an amiable man, and a favourite in society, but as a secretary of state he was little more than a figurehead.

Leeds, Thomas Osborne, first Duke of (1631-1712), Eng. statesman, was a son of a Yorkshire baronet. In 1647 he succeeded to the title and estates, became M.P. for York in 1665, and an opponent of Clarendon, under Buckingham's leadership. He held various offices in the navy administration, and on his appointment as lord treasurer in 1673 was created viscount, becoming earl of Danby in the following year. A strong partisan of the Church of England and its supremacy, he advised against Charles II.'s attempts to obtain toleration for Rom. Catholics. In foreign affairs he was an enemy of France, but his position was complicated by his keen royalism, and he must have been aware of the secret treaty of Dover. However, whilst obtaining Fr. subsidies, simultaneously he concluded a league with Holland for war against Louis XIV. His fall was engineered by Montague, in 1679 an act of attainder being brought in against him by the Commons on various charges, including the raising of a standing army, corruption, and embezzlement. He was released from the Tower in 1684 and took the lead of the moderate Tories in the House of Lords against James II. The king's attacks on Protestantism drove him into the camp of William of Orange, and he was one of the leaders who invited William to England in 1688. From 1690

to 1695 he was a chief adviser to William, regaining his post of lord treasurer and becoming duke of L. in 1694. After this period his power declined, a charge of bribery was brought against him in 1695, but not pressed, and in 1699 he was compelled to resign.

Leeds, city, parl. and co. bor. in the W. Riding of Yorkshire, on the R. Aire, 25 m. W.S.W. of York and an important railway centre. It is situated in beautiful country near the Yorkshire dales and the 'Brontë'

municipal bor., was granted by Charles I. in 1626.

To-day L. is the largest ready-made clothing centre in the world, giving employment (1939) to some 55,000 persons; while the woollen and worsted trades employ some 15,500. Large as the woollen trade is it is rivalled by the engineering trade and the manuf. of iron, which includes both the casting of metal and the manuf. of machinery and employs some 15,000 persons. L. is an important centre

LEEDS: ROUNDHAY PARK

Valentine & Sons Ltd., Dundee

land. It was made a city in 1593 and a co. bor. in 1899. It owes its modern development to its industries, being the seat of the Eng. woollen industry and noted for this manuf. for centuries. Situated about the centre of the national railway system, and having communication with Liverpool by the L. and Liverpool Canal and with the Humber by the Aire and Calder Navigation Canal, L. has valuable transport facilities, and the proximity of the great coal and iron fields has also been a most influential factor in establishing its prosperity. The early hist. of L. is obscure; apparently its original name was Loidis and at the coming of the Normans it was an agric. vil. of 1000 ac. cultivated by thirty-five farmers. In later years, with the introduction of the art of weaving and the development of cloth manuf., L. gradually rose to a prominent place among the tn. of England. The first royal charter, which formed the tn. and par. into a

for leather manuf., the printing trade, and furniture making; and among its other numerous industries are chemicals, soap manuf., coach-building, ferro-concrete construction, medicine, hairdressing apparatus, cardboard box making, mineral waters, carpets, scientific instruments, cameras, jams and sauces, hats, brushes, clocks and watches, fish canning, button making, and electrical appliances and accessories.

In the centre of City Square stands Brock's equestrian figure of the Black Prince, whose father Edward III. did much to establish the wool industry in L. Briggate, which crosses Boar Lane, is a leading shopping street, and Duncan Street—named after Adm. Duncan—is another chief shopping centre. Another, Kirkgate, leads to the markets and to the par. church. The church is said to be the fourth to be built on this site since Domesday Book recorded that L. possessed 'a priest, a church, and a mill.' In the

church is a pre-Conquest cross, the oldest political monument in L. Crossing Briggate is a new 80-ft.-wide street, called the Headrow because it runs along the line of old streets. This is now the main street leading to the city's shopping centre; its elevations are the work of Sir Rognald Blomfield. Above the Headrow is St. John's Church, the city's eccles. treasure, which was built and endowed in 1634 by John Harrison and is a complete example of seventeenth-century Gothic architecture. Running off the Headrow is King Charles Croft, the site of the Red Hall, formerly a mansion which received as a prisoner King Charles I. The L. museum, in Park Row, contains an Egyptian mummy of 1070 B.C., pottery, Yorkshire tokens, objects of Civita Lavina, zoological specimens, and much else of general interest. Near Park Row is St. Anne's Rom. Catholic cathedral. The tn. hall was designed by Guthbert Brodric and opened by Queen Victoria in 1858; it is in the classic style, with a tower 225 ft. high. At the rear of the tn. hall is the civic hall, the most modern public building, which was opened by King George V. in Aug. 1933. The main frontage has a portico with six columns and the twin towers are 170 ft. high, each surmounted by a large gilt owl, which is part of the arms of the corporation. Opposite the tn. hall are the municipal buildings, now occupied by the central reference and lending libraries, the commercial and technical library, and the art gallery. The 250 pictures in the gallery are representative almost entirely of Brit. art at the beginning of the twentieth century.

The univ. of L. (*see* LEEDS UNIVERSITY), which was incorporated in 1904, grew out of the Yorkshire College of Science founded in 1874, although still older is the L. School of Medicine founded in 1831 (*see* LEEDS UNIVERSITY). There are a girls' high school (1876) and a grammar school founded in 1552 and enlarged in 1863, as well as over 110 primary schools with accommodation for 92,800 children. There is a teachers' training college and a college of housecraft, and the Carnegie Physical Training College in Beckett Park was the first of its kind in the country. L. returns seven members to Parliament and is the second city of Yorkshire and the sixth in England. L. did not suffer extensive war damage compared with some other cities of the kingdom, the heaviest raid being on March 14-15, 1941. Altogether there were nine raids on L., in which seventy-seven persons were killed, over 300 injured, and 4800 rendered homeless; 170 houses were demolished and 4300 damaged; while twenty-two non-residential buildings were demolished and 3400 non-residential buildings were damaged.

The area of L. is about 38,300 ac. Of this over 3200 ac. are taken up by parks and open spaces. The two prin. parks are at Roundhay (629 ac.) and Temple Newsam (935 ac.). Roundhay Park has natural woodlands and two lakes and was formerly a royal hunting ground. Temple

Newsam, the largest of the city's open spaces, was acquired in 1922 from the Hon. E. F. L. Wood, later Lord Halifax. Another attractive piece of woodland is Middleton Park (316 ac.), lying to the S. of the city near an industrial dist. There is an aerodrome at Yeadon of some 200 ac. The pop. of L. in 1973 numbered 17,000; to-day (1949) it is 490,000.

Leeds, vil. in Megantic co., Quebec, Canada, 38 m. S. of Quebec. Pop. 1500.

'Leeds Mercury.' This was estab. in 1718 as a daily Liberal newspaper at 1d. When the stamp tax was imposed its price gradually rose until in 1797 it was 6d., with a circulation of only 800. In 1901 it was 1d. and was more profitable at that price than at 1d. It is now amalgamated with the *Yorkshire Post*.

Leeds University grew out of the L. School of Medicine, which was founded in 1831. In 1884 this was united with the Yorkshire College of Science, which was founded in 1874. The first Yorkshire College was predominantly scientific in its instruction, and the wider educational scope was a later development. Subsequently the college became federated with Owen's College, Manchester, and the Univ. College, Liverpool, to form together the Victoria Univ. This was dissolved in 1903, and the next year the univ. of L. was constituted by royal charter. All parts of York-shire outside the sphere of Sheffield have been recognised as entitled to a voice in its government. In time the accommodation became inadequate and a new scheme of buildings was designed to cover 16 ac., with an imposing frontage to Woodhouse Lane. The Brotherton Library (capable of housing 1,000,000 vols.) is part of the scheme that has been completed. Plans have been prepared for the central block and tower. L. U. is open to men and women. The number of students averages 2300 and the number of profs., lecturers, etc., is 443. There is a training dept. for men and women. There are faculties in science, technology (including mining, textile industry, etc.), medicine, and the arts (including economics and law). The univ. awards the customary degrees and also diplomas. There are affiliated colleges, such as the College of the Resurrection.

Lee-Enfield, standard Brit. rifle, *see* under GUN.

Leek, mrrkt. tn. in Staffordshire, 8½ m. from Burslem. The tn. is specially noted for its sewing thread and silk dye-works, and manufs. silks and ribbons. A branch of the Trent and Mersey Canal touches the tn. Pop. 17,000.

Leek, plant which is generally considered a cultivated variety of *Lilium ampeloprasum*. It is a biennial plant, and is largely grown for food, the whole plant, with the exception of the fibrous root, being utilised. M. Leek produces some very fine Ls. It is the national emblem of the Welsh, who wear it on St. David's Day; but some authorities maintain that the L. has been confused with the daffodil, which in Welsh is *Cenis Pedr*, St. Peter's L. *See also* HOUSE SAXONY.

Leer, tn. and riv. port of Lower Saxony.

Germany, on the R Leda 20 m S E of Emden. It has textile manufs and agric and other products are exported. Pop 13,200

Lees, urban dist., tn., and par of Lancashire, England, about 1½ m S E of Oldham, of which it is a suburb. Pop 4700

Leese, Sir Oliver William Hargreaves (b 1894) Eng soldier. After service in the First World War, in which he gained the D S O, L was appointed deputy chief of the general staff of the B L I in 1940, and a divisional commander. A lieutenant general in 1942 he commanded the 30th Corp of the Eighth Army from Alamein to Sicily. In Jan 1944 L became Eighth Army commander until transferred in Nov to Allied Land Forces S E Asia. From 1945 to his retirement in 1946 he was general officer commanding in-chief, E command. In 1937 he succeeded to the family baronetcy.

Leeuwarden, tn of the Netherlands and cap of Friesland 70 m N E of Amsterdam. The tn is intersected by numerous canals and is well built. It has an extensive trade in grain produce and cattle and has important manufs of gold and silver ware, musical instruments, cloth etc. Pop 75,800

C. A. Watts & Co. Ltd

ANTHONY VAN LEEUWENHOEK

Leeuwenhoek, Anthony van (1632-1723), Dutch naturalist, b at Delft. He was a cloth merchant by trade and as a hobby made magnifying lenses. He obtained quite high magnifications, even though his microscopes were of the simple type and contained only a single lens. The compound microscope, with separate eyepiece and objective, was invented a few years earlier by Galileo (1564-1642). L

ground his own lenses by a method which still remains a secret. He made many important discoveries in the anatomy of man and the higher animals and insects. He also discovered bacteria (*qv*). Most of his discoveries were pub in the *Philosophical Transactions* of the Royal Society, of which body he became a fellow in 1680, and in the *Mémoires* of the Paris Academy of Sciences, of which he became a member in 1697. Two collections of his works, one in Dutch and one in Lat., appeared in his lifetime, and a selection from them has been trans into Eng by S Hoole (1738-1801). His letters were pub in 1941 in Amsterdam. See C Dobell *Jan Van Leeuwenhoek and His Little Animals* 1932.

Leeward Islands, name given to the group of the Lesser Antilles which skirts the Venezuelan coast. The name—*Islas de Levante*—was formerly a geographical designation given by the Spaniards to indicate the sheltered position of the is. as opposed to *Islas de Barlovento* the Windward Is. It is now applied to the Brit colony comprising the four dependencies Barbuda and Redonda, St Kitts, Nevis and Anguilla, Montserrat and the Virgin Is. Dominica by her own wish ceased to be a presidency of the I L becoming a separate colony under the governor of the Windward Is. and an Act to that end was passed by Parliament in 1938. The federation of the I L was effected by an Act of the Imperial Parliament of 1871. In its geographical sense the I L also include Guadeloupe and Martinique and other is belonging to other European states. France possesses Guadeloupe, Martinique, St Bartholomew and part of St Martin while Holland has St Eustatius, Saba and the other part of St Martin and Denmark has a share in the Virgin Is. The chief productions are sugar, salt, phosphate of alumina (obtained from the rich deposits in the islet of Redonda), lime juice which is exported from Montserrat, rum, molasses, cacao, and oils the two last being from Dominica. St John in Antigua with a pop of 11,000 is the cap and residence of the commander in chief of the Brit colony. A commission appointed in 1932 recommended that the I L and the Windward Is should be united into one colony under a single governor with the headquarters at St Lucia, but the recommendation was not accepted. The total area of the Brit I L is 4,224 sq m and the pop 109,850. See A Macmillan *The West Indies Past and Present*, with *British Guiana and Bermuda* 1938.

Le Fanu, Joseph Sheridan (1814-73), Irish novelist, began writing at an early age, and in 1837 wrote the famous Irish ballad *Shamus O'Brien*. He was long engaged in journalism, amalgamating the *Warrior*, the *Evening Post* and the *Dublin Evening Mail* as the *Evening Mail*, but he pub two novels *The Cock and Anchor* (1845) and *Forlough O'Brien* (1847), neither of which attracted any particular attention. It was in 1863, with *The House by the Churchyard*, that he first secured public favour, and he followed up

this success with *Uncle Silas* (1864) and *Wylder's Hand* (1861), both popular, and sev. other works of fiction such as *Haunted Lives* (1868); *The Wyvern Mystery* (1869); *Willing to Die* (1870); and *Through a Glass Darkly* (1872). His popularity has now waned, and he is little read. Another member of the family, Brinsley le F., was well known as an illustrator of books. See J. M. Ellis, *Hilkie Collins, Le Fanu, and Others*, 1931.

Lefebvre, Pierre François Joseph, Duc de Danzig (1755-1820), marshal of France, b. at Rufach in Alsace. He fought at Fleurus in the revolutionary wars, and on his return to France assisted Napoleon in the *coup d'état* of 1799, becoming a marshal of the empire in 1801. In the war against Prussia he captured Danzig in 1808. He commanded the Imperial Guard in Russia, 1812, and fought through the last campaign of the empire. After Napoleon's abdication he was made a peer. See life by J. Wirth, 1904.

Lefroy, Mount, pe. cl., 11,660 ft. high, in the Rocky Mts., Alberta, Canada.

Left-handedness, see AMBIDEXTERITY.

Leg. In common speech the word leg is used for the whole of the hind limb; anatomically the word applies only to the shank, or portion between the knee and ankle. There is a great similarity in the anatomy of the hind limb in all animals. The thigh has one main bone, the femur, which enters into the formation of the hip-joint above and of the knee-joint below. The L. proper contains two bones, the tibia and the fibula. The tibia is the larger of the two bones and the more palpable. Its anterior border forms the shin. The upper part of the tibia forms, with the lower part of the femur, and with the patella or kneecap, the knee-joint; but both the tibia and the fibula enter into the formation of the ankle-joint, the tibia forming the inner and the fibula the outer malleolus. Below these two bones come the small bones of the tarsus and metatarsus, forming the framework of the foot, and below the metatarsus come the phalanges of the toes. The chief difference in structure of the hind limb is due to the fact that in the course of evolution it has rotated inwards. The anterior part of the L. of a lizard is represented in man by the inner part, whereas the homologue of the posterior part is the posterior outer and anterior parts of a man's L. There are two factors which account for the specific points in the structure of the human L.; first and most important is the adoption by man of the erect posture, and the second, the disuse of the climbing habits of his ancestors, the apes. The main arterial supply of the L. is from the common femoral artery, which runs in the anterior part of the thigh; the main nerve supply is the great sciatic nerve, running in the posterior part of the thigh. At the knee the artery is the popliteal artery, a direct continuation of the femoral artery. The nerve supply from the knee down-

wards comes from the popliteal nerves, branches of the great sciatic. The artery with its vein and the two nerves are to be found in the popliteal space at the back of the knee. The venous return is by deep and superficial channels. The superficial group of veins, which end in the long saphenous vein, are those which are liable to become varicose.

BONES OF THE LEG

A, ilium; B, sacrum; C, femur; D, patella.
E, tibia; F, fibula; G, tarsals; H, metatarsals;
I, phalanges.

Legacy (Lat. *legatum*), in Eng. law bequest of personal property made by a testator in his will to be paid by his executor. Ls. may be specific, general, demonstrative, or cumulative. A specific L. is a gift of a specified object, such as a particular picture or certain shares. Such a L. is liable to ademption, that is to say, if the picture should have been destroyed by fire or the shares sold in payment of the testator's debts, no compensation is made. But if the specific L. exists it must be paid in full in preference to all other Ls. A general L. is a gift payable out of the assets and not particularly distinguished from the whole of the personal estate. It is liable to abatement only when there is not sufficient to pay all the general Ls. A demonstrative L. is primarily payable out of a specified fund, but if there is any balance to be paid recourse must be made to the residue of the estate. A cumulative L. is a second or further L. to the same person. If the two Ls. are of equal amount or bequeathed by the same instrument, it is assumed that the second is a mere repetition of the first; but if they are bequeathed by different instruments or are of unequal amounts it is assumed that the second L. is in addition to the first.

A L. is not payable till a year after the death of the testator. A L. to a creditor is regarded as payment of the debt, provided it is not less than the sum owing. See also LEGACY AND SUCCESSION DUTY. See Jarman, *On Wills*, 1930, and Theobald, *On Wills* (9th ed.), ed. by J. H. C. Morris, 1939.

Legacy and Succession Duty. L. D. was first imposed in 1780, and was charged on personality only. The statutory provisions and rates were as follows: If death took place on or after June 1, 1881, every resultant pecuniary legacy or residue, or share of residue, although not of the amount or value of £20, was chargeable with duty, except in the case of small estates. No succession duty was payable where the principal value of all the successions on the same death did not amount to £100.

The following rates of duties were payable on legacies, annuities, and residues, and of succession duties where deceased *d.* before July 1, 1888, or where estate duty under the Finance Act, 1891, was payable:

To husband or wife or children of the deceased or their descendants, or to the father or mother or other lineal ancestor of the deceased, £1 per cent. (Except in the case of estates not exceeding £15,000—legacies and accessions of less than £1000 (£2000 in the case of widow or child under the age of twenty-one of deceased) whatever might be the value of whole estate.) To brothers and sisters of the deceased or their descendants, £5 per cent. To brothers and sisters of the father or mother of the deceased or their descendants, £10 per cent. To brothers and sisters or the grandfather or grandmother of the deceased or their descendants, £10 per cent. To any person in any degree of collateral consanguinity, or to a stranger in blood to the deceased, £10 per cent. Where death took place on or after July 1, 1888, and probate or estate duty was not payable, succession duties for the relationships set out above were at rates of 1½, 4½, 6½, 7½, and 11½ per cent. respectively. These rates, except in gifts to charitable or public purposes, were doubled by the Finance Act (1947). The husband or wife is chargeable with estate duty and L., and S. D.; and the husband or wife of a relation is chargeable at the rate at which the relation would be charged. L. and S. Ds. no longer exist, having (in 1919) become consolidated into estate duty (*q.v.*).

Legal Aid, see POOR PRISONERS' DEFENCE.

Legal Education, in England, is under the direction of the council of L. E., a body which is controlled by the four Inns of Court (*q.v.*). In order to become a practitioner at the Eng. Bar the applicant must gain admission to an Inn of Court as a student and pass the requisite examinations. There is no residential qualification, but the student must keep terms by attending dinners in Hall to the number of twenty-four a year for three years, with a remission of six months in the event of his winning a studentship.

After passing his examination and paying stamp and registration fees the student is "called," at his particular Inn, and so acquires the degree of barrister-at-law. The possession of a law degree of a univ. is not accepted as a substitute for the Bar examinations, though such degrees and even the possession of a matriculation certificate would exempt the applicant from the entrance examination, which latter is an elementary general test. The Masters of the Bench of the Inn may, in any individual case where, in their view, special circumstances justify such a course, dispense with educational tests. This, for example, was done in the case of the celebrated Amer. lawyer Judah Philip Benjamin (*q.v.*), who, very soon in his career at the Eng. Bar, acquired a commanding practice in cases before the Judicial Committee of the Privy Council. Membership of the Inn of Court of N. Ireland is a sufficient qualification for membership of any Eng. Inn. An applicant for admission as a student must produce a certificate of character to the satisfaction of the Masters of the Bench of the Inn to which he seeks admission, and, if still receiving a general education, a certificate from the school or college at which he is attending. There are special regulations for Indian native students. Further applicants must make a declaration that they are not, and do not either directly or indirectly, act as solicitor, attorney, clerk of the peace, publ. agent, or in any similar capacity, nor as chartered accountant, actuary, land agent, surveyor, patent agent, or consulting engineer.

For the purpose of providing for students' education in the general principles of law and its practical administration, a system for instruction, under the supervision and direction of the council of L. E., is given in Rom. Law, Jurisprudence, International Law, and Conflict of Laws (*q.v.*); Constitutional Law and Legal Hist. (Eng. and colonial); and Eng. Law (civil and criminal) and Equity. Students are recommended also to read in the chambers of a barrister or pleader so as to study the practice of the law. The examinations which must (subject to the qualification noted above) be passed by all students for the degree of barrister-at-law are divided into two parts. Part I. comprises (1) Rom. Law; (2) Constitutional Law (Eng. and colonial) and Legal Hist.; (3) Elements of the Law of Contract and the Law of Tort. Part II. comprises (1) Common Law; (2) Equity; (3) Law of Evidence and Civil Procedure; (4) A general paper on the three immediately foregoing sections; (5) Real Property and Conveyancing or Hindu and Islamic Law or Rom.-Dutch Law. The council may accept equivalents for Rom. Law such as a univ. degree including Rom. Law. The council may award certain prizes and also studentships of 100 guineas a year tenable for three years to the student who passes best in the Part II. examination and who is under twenty-five years of age. Winners of studentships and certificates of honour take rank in seniority over all other students called to the Bar on the same

day; but this privilege has no effect on their legal careers, for the student with the highest academic honours may never get a brief while the student who barely satisfies the examiners may rise to be a law officer of the Crown or a high court judge.

Canada.—Owing to the complicated character of their legal systems, good law schools are more difficult to organise in Canada and in the U.S.A. than in England. But in one respect the question is simpler in Canada than in the U.S.A., because Canada has a unified system of courts instead of a dual state and federal system. In Canada, as in the U.S.A., the attempt to divide the legal profession in the manner in which it is divided in England has failed. There are no barristers in the Eng. sense, practitioners being really attorneys and solicitors, who exercise the functions of an Eng. barrister without his distinctive privileges. The Canadian Bar Association, organised only in 1914, has not been supplemented by an independent association of law schools, as in the U.S.A., but it already includes a much larger proportion of practitioners than its Amer. prototype. The minimum period required by graduates of an Eng.-speaking high school to complete all requirements both of general education and of law study varies from four years in Newfoundland to as much as seven in Ontario and Manitoba and Saskatchewan. There are ten law schools, viz. the legal faculties of Montreal and Laval Univs. (graduation from a college, or examination, followed by three years law); the legal faculty of New Brunswick Univ. and the Osgoode Hall Law School, Toronto (two years of college followed by three years law); Vancouver Law School (one year of college followed by three years law); the legal faculties of Dalhousie, McGill, and Alberta Univs., and the College of Law of Saskatchewan Univ. (two years of college followed by three years law); and the Manitoba Law School, Univ. of Manitoba (two years of college followed by four years law).

See A. Z. Reed, *Present-Day Law Schools in the United States and Canada*; Bulletin No. 21 (New York city), 1928, and *Annual Review of Legal Education*, 1930, issued by the Carnegie Foundation for the Advancement of Teaching.

Le Gallienne, Richard (1866-1947), Eng. author and journalist, b. in Liverpool, son of a merchant. Literary critic for the *Star*, 1891, he joined the staffs of the *Daily Chronicle* and the *Speaker*. The range and quality of his general criticism were well represented in *Retrospective Reviews* (1896). His romantic novel, *The Quest of the Golden Girl*, which appeared in 1896, won not only a succès d'estime but popular favour as well. He visited the U.S.A. on a lecture tour in 1898, afterwards taking up his residence in New York and later in France. His works also include *My Lady's Sonnets* (1887); *Robert Louis Stevenson and Other Poems* (1895); *Travels in England* (1900); *George Meredith: some Characteristics* (1902); *Fantastic Roads*, etc. (1915); *Pieces of Eight* (1918); *The Romantic Nineties* (1928); *The Magic*

Sean (1930); and *From a Paris Garret* (1943).

Legal Tender, see TENDER.

Legate (Lat. *legatus*, ambas.), title now confined to the ambas. or diplomatic representative of the pope. Ls. are of two classes, *legati nati* (i.e. b.) and *legati missi*, or *dati* (dispatched Ls.). The former title is now almost honorary. *Legati nati* were formerly attached to some auct. see, such as that of Canterbury, and the title still attaches to the sees of Seville, Rheims, Cologne, etc. *Legati missi* may be (1) *Legati a latere*, that is, dispatched 'from the side' of the pope. A cardinal is generally employed, and he is the plenipotentiary representative of the pope, with full papal jurisdiction within his prov. (2) *Unci or internunci apostolici*, whose jurisdiction is limited, according to the terms of his mandate. (3) *Apostolic delegates*, whose duty it is to supervise ecclcs. matters and inform the pope thereon. (4) *Ratones extraordinary* are apostolic delegates charged with some definite ecclesiastico-diplomatic mission. The functions of Ls. are generally performed to-day by the lesser representatives known as nuncios, or internuncios.

Legato (It., noun, tnd), musical term indicating that the passage is to be rendered in a sustained manner, the notes being given as if tied together, the one leading into the other without a perceptible break.

Legend (Fr. *legende*; Lat. *legenda*, from *legere*, to read), originally the term applied to a narrative of a religious kind in the early days of Christianity, and hence used for portions of scripture and lives of the saints as read in public worship. The word later came to be applied to a story without any foundation in hist., but popularly supposed to be true, handed down from one generation to another. These Ls. were at first brief and simple, but gradually developed into long and imaginative tales of a more and more exaggerated description, so that by degrees the word came to mean a narrative, professedly historical, but in reality only traditional. The famous *Golden Legend*, a medieval collection of the lives of the saints, was composed towards the end of the thirteenth century by Jacobus de Voragine or Varagine (b. at Varesio, in Genoa) (1230-98). The title of his collection, in Lat., was *Legenda Sancta*, but it became so popular that it was called *Legenda Aurea*. The word L. is also used in connection with coats of arms and shields, by numismatists for inscriptions or mottoes on coins or medals, and by printers for the title or descriptive matter accompanying an illustration. See A. H. Guerber, *Myths and Legends of the Middle Ages*, 1906; J. G. Frazer, *Folk Lore in the Old Testament*, 1919; W. R. Halliday, *Indo-European L. & Tales and Greek Legends*, 1933; G. Frenken, *Wunder und Taten der Heiligen*, 1935; and E. Morris, *Legends of the Bible*, 1935.

Legendre, Adrien Marie (1752-1833), Fr. mathematician, b. at Toulouse. Through the influence of D'Alembert he obtained the professorship of mathematics at the

École Militaire, and afterwards at the **École Normale**. He was admitted to the **Académie des Sciences** for a brilliant paper on the attraction of spheroids in revolution (1783), and in 1787 was appointed to the commission to connect geodetically Greenwich and Paris. In *Nouvelles Méthodes pour la détermination des orbites des comètes* (1806) he propounded his method of least squares. Perhaps his greatest works were his *Traité des fonctions elliptiques et des intégrales Eulériennes* (1827-1832) and *Essai sur la théorie des nombres* (1830).

Leger Lines and Spaces, in music the short lines and spaces above or below the staff, used to express notes outside the staff.

Legge, George, see DARTMOUTH, BARON.

Legge, James (1815-97), Brit.-Chinese scholar, b. at Huntly, Aberdeen. In 1839 he went as a missionary to the Chinese. Until 1842 he was stationed at Malacca, when he moved to Hong Kong, where he remained for many years. His trans. of the Chinese classics, completed a few years before his death, secured him a world-wide reputation. In 1876 he became prof. of Chinese language and literature at Oxford. Among other works L. wrote *The Sacred Books of China and The Texts of Confucianism* (1879-58); *The Religions of China* (1880); and *A Record of Buddhist Kingdoms* (1886). See life by H. E. Legge, 1903.

Leghorn (It. Livorno), seaport of Tuscany, the chief tn. of the prov. of the same name, on the W. coast of Italy, 12 m. S.W. by rail of Pisa. The most interesting of the buildings are the seventeenth-century cathedral, with its façade designed by Inigo Jones; the sixteenth-century *Fortezza Vecchia* overlooking the harbour; and the *Torre del Marzocco*. The N.W. portion of the tn. is traversed by many canals. In the fourteenth century L. was under the dominion of Pisa. At the beginning of the next century it came into the hands of France, who sold it to the Genoese in 1407. It was purchased by the Florentines in 1421, from which time its prosperity dates. In 1606 the port and harbour were opened to traders of all nationalities, and it was a free port from 1691 to 1867. Fortifications were built by the sea front, and there are numerous shipbuilding yards and warehouses. The chief industries before the Second World War were the manuf. of glass, cement, electric plant, porcelain, etc. The exports include 'Leghorn' hats, olive oil, wine, timber, silk, preserved fruits, coral, etc. New harbour works were completed before the First World War. L. is a popular sea-bathing resort.

In the Second World War the Fifth Army broke through the Ger. line S.E. of L. on July 10, 1944, and Amer. troops entered the city on the 19th. The city suffered heavily from bombing and shell-fire. The cathedral was very heavily damaged; there was a large gap in the façade of the S. transept and the gilded ceilings were totally destroyed. The church of S. Annunziata was half destroyed, but the rear portion remained standing. A near-miss brought down the

apse of S. Giovanni Battista and sev. other churches sustained severe damage. Heavy damage was done to that part of the Palazotto which faces the sea, to the *palazzi Granducaio*, del Monte di Pietà, and the *Tre Palazzi*. The Labronica library was almost totally destroyed by bombs, but 100,000 vols. were saved from the ruins. Pop. 135,360.

The prov. of L., consisting of the com. and the Is. of Elba and Gorgona, has an area of 471 sq. m. and a pop. of 240,000.

Legion (Lat. *legio*), div. of the Rom. army. The legionaries were regarded as the pick of the army. They were Rom. citizens, and received greater privileges and higher pay than the auxiliary troops (*auxilia*). At the time of the republic a L. numbered four to six thousand men, comprising *equites*, cavalry drawn from the noble families of Rome; *triarii*, or *pilani*, veterans forming the reserve; *principes*, highly trained infantry; *veteres*, skirmishers; and *hastati*, inexperienced troops. At the death of Augustus (A.D. 14) there were twenty-five Is. About 290 Diocletian reduced the strength of each L. but greatly increased their number. The L. lost its importance when the barbarian invasion of the third and fourth centuries altered the character of warfare and gave increased importance to cavalry.

THE LEGION OF HONOUR

Legion of Honour, order of merit created by Napoleon in 1802 as a reward for military and civil services. At present it embraces five classes: *Grands Croix*, *Grands Officiers*, *Commandeurs*, *Officiers*, and *Chevaliers*. A pension is granted to the military members according to their class, and free education is given to 400 of the daughters or sisters of its members. The president of the republic is grand chancellor of the order.

Legion of Merit, U.S. decoration instituted in 1939.

Legislation and Legislative Processes. Legislation means the making of laws by a sovereign body elected or otherwise existing for that purpose. Although at the present day legislation popularly connotes exclusively the formal rules promulgated by parliaments or analogous institutions, a connotation justified by the

overwhelming importance of this one process of legislation, it is to be noted that there co-exist other sources of new laws, or at all events newly applied legal principles. In England the Crown still possesses, by virtue of its prerogative (*see under Crown*), some ill-defined power of legislating in an emergency by proclamation, though it would do so only on the advice of the ministry and its action would probably be endorsed by an Act of Indemnity. Again, the judges have a covert and unavowed power of legislation. It is an axiom of legal administration that the Eng. judges only *declare* law; but a study of the law reports makes it apparent that old *rationes decidendi*, or principles, are constantly undergoing a slow but gradual reversal or modification by the process of engrafting so many exceptions on them as ultimately to render the old principles unrecognisable. At one time the Eng. judges were so confident of the perfection of the common law that they began to act on the principle that statutes were nugatory unless their meaning was clear to the mind of the judge himself. This principle of interpretation was not long encouraged. It obviously opened the door to prejudice. Modern Eng. judges either interpret enacted law 'grammatically,' i.e. according to the letter, or if that is logically defective by reason of ambiguity, inconsistency, or incompleteness, then either (a) literally or strictly applying the more natural meaning, or (b) equitably, where the natural meaning is rejected in favour of one more consonant with the intention of the legislature. Generally speaking, however, judges have no concern with legislative intentions if those intentions have not found expression in enactments.

In progressive societies legislation, according to Maine, comes last in historical order among the agencies by which law is brought into harmony with society (*see Equity; Fiction; Customs*), the other agencies being legal fictions and equity. The characteristic difference of legislation from the other agencies is that its obligatory force in no way depends upon its principles, for theoretically parliament or an autocratic prince can legislate in defiance of public opinion. That legislatures, in democratic countries at least, do not in fact do so at the present day is because their enactments are in accordance with the morality and sentiments of either the actual majority or at least a very respectable proportion of the people at large. It would be an interesting but speculative inquiry to investigate the actual relations of custom or customary law (*see Customs; Customary*) and legislation. Customs have frequently crystallised into legislative enactments, and on the other hand general enactments have often expressly respected customs. At all events one assertion of Maine's seems historically accurate, that generally speaking the epoch of customary law is everywhere the immediate predecessor of the era of codes (*q.v.*).

Legislation in the sense of enacted law everywhere tends to absorb all other

sources and even forms of law. Rights and duties may, of course, be created by private bodies in whom has been vested a restricted autonomy. For example, the shareholders of a company may, by a resolution at a general meeting, alter the Articles of Association, and such alteration will, even if not unanimous, be binding on the minority if not otherwise *ultra vires*. But even in these exceptional modes of legislation, or quasi-legislation, the hand of enacted law is discernible, e.g. in the minute details to be found in the Companies Consolidation Acts, relating to the manner of altering the articles of a company. Statute law in England, as will be seen in the year books, occupied quite a minor position as compared with common law in the Middle Ages. Practically two-thirds of the Acts recorded on the statute book between the middle of the thirteenth and the middle of the nineteenth century were passed in the last 200 years of that period. The rate is now considerably accelerated, and it is not surprising that, in the present state of society, social relations should in all conceivable cases be regulated by legislation. Even if legislative Acts in England are not imposed by consent in quite the same degree as Acts imposed through a referendum (*see Initiative*), the principle of representation ensures the almost completely consensual nature of modern statute law. Further the principles of status or caste having at all points yielded to those based on agreement or contract, it follows that fresh rights and duties will, for the most part, have to be embodied in legislative expression before they will be respected. It is public opinion which gives the real sanction and seal to legislation, and the morality manifested by that opinion is the whole principle of the science of legislation.

Legislative Processes.—In anct. Rome there was but little direct law-making, except to meet temporary emergencies. Such laws as were made were first proposed and determined on by the senate, under the guidance of the king as the chief magistrate, and then submitted to the supreme council of the *gentes* (*comitia curiata*). The king himself as *pontifex maximus* promulgated laws (*leges regie*) relating exclusively to religious ceremonies. Later, and after the assembly of the tribes had superseded that of the centuries, the chief process of legislation was by *plebiscita*, though the ordinances of the senate (*senatus consulta*) from being of doubtful authority were gradually acquiring importance. The senate also issued injunctions in the form of directions to particular magistrates, and, according to Puchta, before the era of the republic had closed, made independent enactments by decree in matters concerning religion, police, and civil administration. After the republic gave way to the empire, the method of legislation, as well as its source, changed completely. The emperor, nominally only chief magistrate, acquired the *imperium*, or supreme command in the state, and

gradually absorbed the sole legislative authority, dictating to the senate what it was to enact or else enacting law himself. The processes by which the emperor's will expressed itself in legislation were by *edicts*, enunciated in his capacity as magistrate, *mandates*, or orders, directed to particular officers, *epistles* addressed to individuals or public bodies; *decrees* or judicial sentences having the force of precedents; and *rescripts* to magistrates by way of answer on points of difficulty. Nominally the people continued to make laws, but they were no more than laws passed at the bidding of the emperor. The process of legislation was for the emperor to lay a bill or *lex* before the senate in an *oratio* or *epistula*, after which it received the more or less formal *auctoritas* of the senate.

In England legislation under the Norman kings was by charter issued by the king and assented to by the barons; these charters were hardly more than confirmations of customs and liberties (see under *FRANCHISE*). The Angevin kings made laws by *assize* (*assisa*, statute) issued by the advice and consent of the barons, archbishops, abbots, and other members of the royal council, and proclaimed in the shire courts by the sheriffs. According to Stubbs they remained in force during the royal pleasure. In Henry III.'s reign legislation was, by a form, called *provisions*, e.g. the provisions of Oxford; and towards the end of the thirteenth century by statute and ordinance. Statutes were enacted by the assent of the prelates, earls, barons, and the commonalty of the realm. They were generally founded on petitions addressed to the king by the Commons, with the assent of the prelates, earls, and barons. The petitions were referred to a committee of the peers and answered by the king on their advice, the statute itself being framed from the petition and its answer (see J. E. Jolliffe, *Constitutional History of Medieval England*, 1937, and Stubbs, *Select Charters*). The prerogative power of legislation by ordinance was of short duration, and the enactments so made were not enrolled in the year books, unless ultimately converted into Acts of Parliament. When the executive and legislative functions became more clearly separated, and the Commons had gained the controlling power in initiating legislation, they protested against legislation in the guise of an executive ordinance, and accordingly ordinances ceased in the fifteenth century. Legislation by ordinance was revived in the sixteenth century in the shape of *proclamations* issued by the Crown in council by way of supplement to statute law, and later as completely independent autocratic enactments. Charles I. issued many of these illegal proclamations, but they disappeared after 1640. The claim of the Stuart kings to dispense with the operation of particular statutes in individual cases, or to suspend an Act altogether, was abrogated by the Bill of Rights in 1689. The Crown can, however, still manifest the residue of its discretionary power by means of Orders in

Council and Proclamations; but they are probably made subject to the assent of Parliament, and in any case are revocable by statute. Legislation is now by Bill passed in both Houses of Parliament, or under the Parliament Act, passed in the Lower House, and thrice within a period of two years submitted to the Upper House and assented to by the king. (For the procedure see under *PARLIAMENT*; *COMMITTEES*, *PARLIAMENTARY*; also *CODES*; *CUSTOMS* or *USAGES*; *EQUITY*.)

Following the example of Great Britain the process of legislation in the U.S.A. both in the states and the federal legislation, is by Bills presented to and passed by two chambers, a House of Representatives and a Senate. The subjects of state legislation, as distinct from federal legislation, are limited to those which do not relate solely to the collective life of the nation, and all powers not expressly allotted to the federal gov. are left automatically to the states as of right. The two federal assemblies of the central gov. together form Congress. Every Bill introduced in the House of Representatives is referred to one of some sixty different committees, and then comes up for deliberation by the whole House. It seems that very few of the vast number of Bills brought in actually pass. A Bill that passes is then sent to the other House and goes through a similar process. A compromise by conference may be effected where the Bill as passed in each House differs. If the Bill passes both Houses it is sent to the President, and if approved by him, and not returned within ten days, automatically becomes law. If vetoed by the President it is sent back to its House of origin, and if again passed by a two-thirds majority is referred back to the other House, and if there passed by a like majority becomes law without the President's assent. Changes in the constitution require for their validity the sanction of three-fourths of the states, after having been adopted by a two-thirds vote of both Houses of Congress. The courts have the final decision as to whether enactments, either federal or state, are constitutional. Legislation in pre-Nazi Germany, and in France and most other democratic nations of to-day, is fundamentally similar in process to that of the bicameral and representative systems of Great Britain and the U.S.A. See also *LEGISLATURE*, and under the respective countries.

Legislature, body of men in any state constitutionally vested with the power to make amend or repeal laws. Constitutionally the sovereign L. in England is the House of Commons the House of Lords and the king. But the king's veto is never exercised (see also CROWN) and the Parliament Act has cut down the power of the Upper House to the extent that Bills three times sent up to that House within the space of two years automatically became law. (Under a Bill introduced by the Labour Gov. in 1918 it was proposed to reduce this period to six months). There is theoretically nothing which a sovereign L. cannot do, but in those states where the L. is representative the will of the L. is more or less a faithful reflection of the will of the political sovereign, i.e. the electorate (q.v.). In England there is no law that the L. cannot make or abrogate, but in the U.S.A. laws may be declared by the courts as unconstitutional and therefore void, and in Switzerland the federal assembly cannot alter a constitutional principle without the consent of the people (see also INITIATIVE). There are analogous limitations on the powers of the L. in respect of the Australian Commonwealth Constitution and under the British America Act on the Canadian parliament's powers. As to the relations of the L. to the Executive, see under CABINET and EXECUTIVE and for the L. of the Crown colonies see under that title. See also LEGISLATION AND LEGISLATIVE PROCESSES.

Legitim, or Burr's part of Gear, in Scots law that portion of the free movable property of the father to which L. children are entitled at his death. If the father leaves one or more children but no widow the former get one half of their L., the other half being dead's part (q.v.). If he leave both widow and children the widow takes one third and children the children's L. and the remaining third is dead's part (see also TESTATE). There is no right of representation in the L., and hence the children of a deceased child have no claim to that part of their grandfather's estate which their parent would have been entitled to as L. if he survived. The right to L. is defeated if the father makes provision however small for his children in an ante-nuptial contract of marriage expressly by way of substitution for L. but if he settles the whole of the property on the children by such contract, even though subject to a life rent (q.v.) for the wife the right to L. is excluded by implication. Generally speaking children claiming L. must collate any separate provision received by them from, or any advancement made to them

by, the father (see HORTUPORE), and this applies to the heir in heritage, who must collate the heritage, unless he be an only child. Like other legal systems deriving directly or indirectly from Rom. law, Scots law prevents a parent from willing away from his children more than a fixed proportion of his estate. See Bill *Principles of the Law of Scotland* and J. L. King, *Principles of the Law of Scotland*, 1711.

Legitimacy By Eng. law a child born anywhere in lawful wedlock is legitimate, i.e. to quote a hypothetical case in Foulke's *Medical Jurisprudence* if a couple are married at two o'clock, and a child is born at three o'clock on the same day, that child is legitimate. Prior to 1927 there was no law in England for legitimating a child born out of wedlock, although Scots law has long recognised *legitimation per subsequens matrimonium*, i.e. legitimization by the subsequent marriage of parents. Legitimation *per subsequens matrimonium* is now an accepted principle in Eng. law. By the Legitimacy Act, 1926 which came into operation on Jan. 1, 1927 an illegitimate person is rendered legitimate if the parents marry or have married whether before or after Jan. 1, 1926 but the father must at the date of the marriage be domiciled in England or Wales, and the legitimization dates either from Jan. 1, 1926 or from the marriage whichever best suits the case. This Act does not legitimate a person whose father or mother was married to a third person at the time when the illegitimate person was born. The legitimated person may take property under intestacy occurring after legitimization or under any disposition coming into operation after legitimization. The legitimated person is legally bound to maintain all persons whom he would be bound to maintain if he had been born legitimate. The Act specially provides that no man is to be taken any person capable of success to or transmitting a right to any dignity or title, but otherwise legitimacy issues as under no legal disability. Questions of L. have frequently arisen in lawsuits when though a child has been born in wedlock, the parties have not been accessible to each other. But a man's accessibility to his wife is by the Eng. law of evidence taken for granted if he uses a quaint old phrase: he was within the four seas of the realm. Eng. law, however even before 1927, recognised as legitimate children born out of wedlock but whose parents subsequently married if both the law of the father's domicile at the date of birth and that of his domicile at the date of his marriage concur in allowing legitimization by subsequent marriage. In cases relating to disputed title to land the question of L. is determined exclusively by the law of the place where the property is situate (see *lex loci rei sitae* under *LEX LOC*) and if that law allows legitimization the child is legitimate. And generally it is a principle of the comity (q.v.) of nations to recognise the L. of children who are legitimate by the law of their place of origin, i.e. the father's domicile. Again

even before the Act of 1926 the only consequences of illegitimacy were in regard to the devolution of property on intestacy (see *INHERITANCE*; *HEIR*; *DISSENT*). No person born out of wedlock could, prior to 1927, be an heir to Eng. real property, though such property could, prior to 1927, be validly left to him by will. Peerages or other hereditary dignities, not being the subject of testamentary disposition, could not devolve on an illegitimate person, and, as we have seen, they are excluded from the operation of the new Act. The Deceased Wife's Sister's Marriage Act, 1907, has the effect of legitimising the issue of any union with a deceased wife's sister, whether contracted before or after the Act was passed (see also under *DECEASED WIFE'S SISTER*). Applications to the divorce court for declarations of L. or validity or invalidity of marriage are made under the provisions of the Judicature Act, 1925 (re enacting the Legitimacy Declaration Act, 1859). Under that Act a person may also claim to establish his right to be deemed a natural born subject (see also as to Scottish law under *DECLARATION*).

Legitimation, in Scots law, is the act by which children born out of wedlock are made lawful for the purpose of extending to them the privileges of truly lawful children. L. *per subsequens matrimonium* is a process derived from the canon law, which allowed the L. of all bastards, whether the offspring of concubinage or not, if the parents were capable of marrying at the date of conception (some authorities say the date of birth) and afterwards actually married. L. *per subsequens matrimonium* gives the bastard the full rights and status of lawfully begotten children. Where parents are domiciled, have bastard children, and then marry in a country the law of which does not recognise L., the children are not capable of succeeding to real estate in Scotland, for the law applicable is the *lex loci rei sitæ*. Another mode of L. recognised by Scots law is by letters of L. from the sovereign (L. *per rescriptum principis*). Generally speaking, the only effect of this mode of L. is to defeat crown rights to property on intestacy, for in form letters of L. confer a right on a bastard who has no lawful issue to dispose of his property during his lifetime or by will, which right he enjoys independently of such letters. It may be mentioned here that the Age of Marriage Act, 1929, which nullifies marriages between persons either of whom is under the age of sixteen, does not affect in Scotland any right or capacity of L. *per subsequens matrimonium*. See W. M. Gloag and R. C. Henderson, *Introduction to the Law of Scotland*, 1946.

Legitimists (fr. *legitimistes*, from *legitime*, lawful, legitimate), name applied to a party in France, who, after the revolution of 1830, continued to uphold the claims of the elder branch of the Bourbon house. The position of Napoleon III. at the head of affairs retarded its cause, but on his fall in 1871 its hopes were raised. The Comte de Chambord gave them his support, but on his death in 1883 it

was practically dissolved, only an insignificant remnant remaining (see *BOURBON FAMILY*). The word legitimists has now spread beyond France, and is applied in England to any supporter of monarchy by hereditary right as against a parli. or other title. It is also used especially with regard to the Habsburg followers in Hungary and Austria.

Legnago, tn. in Verona prov., Italy, 33 m. S.E. of Verona, on the Adige; one of the fort. tns. of the so called 'Quadrilateral'. Pop. 19,000.

Legnano, tn. of Milan prov., Italy, 16 m. N.W. of Milan. Pop. 27,250.

Legnone, Monte, mt. in the Alps, the highest summit of Italy, on the E. side of Lake Como, has an altitude of 8565 ft.

Legouvé, Gabriel Jean Baptiste Ernest Wilfrid (1807-1903), fr. dramatist and academician, b. in Paris. In 1832 he pub. a little vol. of verses entitled *Les Mots bizarres*, followed by a succession of novels, the chief being *Edith de Felsen*. In 1819 he made his mark as a dramatist with *Adrienne Lecouvreur*, written in conjunction with Scribe. In 1855 appeared his tragedy of *Midée*, which achieved a great success. Later he became less prominent as a playwright, and was known for his studies on the character and needs of women and children in France. His *La Femme en France au XIX^e siècle* (1861), *Messieurs les enfants* (1868), *Conférences parisiennes* (1872), *Nos filles et nos fils* (1878), and *Une Éducation de jeune fille* (1881), were works of wide-reaching influence in the moral order. See J. Quéraud, *La France littéraire* (1827-1864).
